DAMNATIO MEMORIAE. This formed part of the penalty of *maiestas* in the graver form of *perduellio* (qq.v.). It implied that the *praenomen* of the condemned man might not be perpetuated in his family, that images of him must be destroyed and his name erased from inscriptions. Bad emperors were not exempt from such a fate. Nero (Suet. *Nero* 49) and Didius Julianus (Dio Cass. 73. 17) were declared *hostes* and condemned to death by the Senate in their lifetime. In other cases the Senate voted a posthumous *damnatio memoriae* (which included *rescissio actorum*). Claudius prevented the Senate from condemning the memory of Gaius (Dio Cass. 60. 4. 5); but formal decrees were passed after the deaths of Domitian (Suet. *Domit.* 23), Commodus (*Vita* 20), and Elagabalus (*Vita* 17).

F. Vittinghoff, *Der Staatsfeind in der röm. Kaiserzeit* (1936).

J. P. B.

DAMNUM. Some cases of unlawful damage to property were dealt with in the XII Tables, e.g. damage committed by quadrupeds or in violation of agricultural interests (illicit cutting of trees or crops, grazing on another's pasture, and the like). But these were only special provisions; general rules on this matter were first laid down by a statute of unknown date (probably of the 3rd c. B.C.), *Lex Aquilia*, which introduced civil liability of the wrongdoer for wrongful killing or injuring another man's slave or beast (belonging to a herd), and for damage done to other kinds of property by burning, breaking, or destroying. The interpretation of jurists and the praetorian edict considerably extended the narrow provisions of the law to other kinds of damage, enlarged the circle of persons qualified to bring into operation the *actio legis Aquiliae* or the corresponding praetorian *actio in factum*—originally only the proprietor of the damaged object could require indemnity—and reformed the manner of appraising the value of the damage. The title IX. 2 of the *Digest* demonstrates how fertile was the contribution of the classical jurisprudence in the evolution of these doctrines.

H. F. Jolowicz, *Law Quarterly Review* 1922; D. Daube, *ibid.* 1936. A. B.

DAMOCLES, courtier of Dionysius I. When he excessively praised the tyrant's happiness, the latter symbolically feasted him with a sword hung by a hair over his head (Cic. *Tusc.* 5. 61, and *passim*).

DAMON (1), Pythagorean from Syracuse, famous for his friendship with Phintias (not Pythias). An oft-told story: Phintias, sentenced to death by Dionysius (I or II), and reprieved, comes back at the last moment to save Damon who had gone bail for him.

DAMON (2), Athenian musician, teacher of Pericles, later ostracized for his influence on him. Also called Damonides.

Protop. Att. 3143.

DAMON (3), Athenian, one of the earliest and most important Greek writers on music, a pupil of Prodicus, much esteemed by Socrates and Plato. Plato ascribes to him (*Resp.* 400 a-c) views about the ethical effects of various rhythms, and Plato's own views about the ethical effects of different scales can probably also be traced to Damon (*Resp.* 424 c). Much in Aristides Quintilianus is probably due to him. He is said to have invented the 'relaxed Lydian' mode (ἡ ἐλαττωμένη Λυδία).

Testimonia and frs. in Diels, *Vorsokr.* i. 381-4. *PW* iv. 2072.

W. D. R.

DAMONIDES, see **DAMON** (2).

DAMOPHILUS, a celebrated painter and modeller of doubtful date. Pliny says that he and a certain Gorgasus 'united both arts in the decoration of the temple of Ceres at Rome near the Circus Maximus' (*HN* 35. 154). He may perhaps be identified with the painter Demophilus of Himera (*ibid.* 61) and with Demophilus the author of a treatise on proportion (Vitruvius, bk. 7 praef.). H. W. R.

DAMOPHON (2nd c. B.C.), sculptor, of Messene, repaired Phidias' Zeus at Olympia. Made statues of gods and goddesses for Messene, Aigion in Achaea, and Megalopolis, and large groups for Messene, Megalopolis, and Lycosura in Arcadia. The last comprised Demeter and Despoina enthroned, Artemis, and a Titan Anytus. The heads of Demeter, Artemis, and Anytus and part of Despoina's veil have been discovered (Winter, *KB* 373. 1-4). The style is academic in its reminiscences of the fifth and fourth centuries. The veil accurately copies contemporary textiles. Other works have been attributed to Damophon on grounds of style.

Overbeck, 745; 1557-64; B. Ashmole in *Greek Sculpture and Painting* (1932), 91; the veil, A. J. B. Wace, *AJArch.* 1934, 107; other works, A. W. Lawrence, *Later Greek Sculpture* (1927), 121.

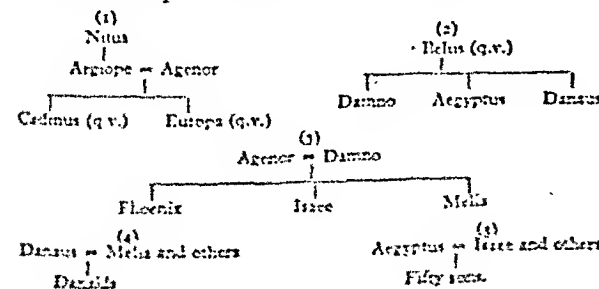

T. B. L. W.

DAMOXENUS, New Comedy poet, foreign to Athens, as his name signifies; he mentions Epicurus, and Adaeus of Macedon who perished at Cypsela, 353 B.C. Fr. 2, a cook philosophizes; fr. 3, a handsome youth plays ball.

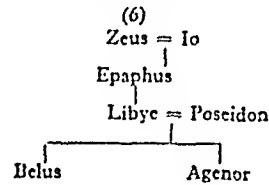

FGC iv. 529 ff.; *CAF* iii. 348 ff.

DANAË, see **ACRISIUS**, **PERSEUS**.

DANAUS. The following genealogy, artificial but not very late (it is due to Pherocydes, fr. 21 Jacoby), shows the relationships of Danaus.

Since the names Aegyptus, Danaus, and Phoenix are simple eponyms of the Egyptians, Danai, and Phocnicians, the artificial nature of the whole is clear; but it may be taken as representing the historical theory of the day. Danaus' direct ancestry is:

This adds the eponym of North Africa to the complex; this detail is as old as Aeschylus, *Supp.* 313 ff.

Of Danaus' daughters, only two are named in any old source (the lists in Apollod. 2. 16-20 and Hyg. *Fab.* 170 are late and artificial). These are Amymone (q.v.), and Hypermestra. Of Aegyptus' sons, only Lynceus has a real name; the rest are given names in the above lists. The two fathers quarrelled; to settle the dispute Aegyptus was desirous that his sons should marry Danaus' daughters, while Danaus and his offspring were strongly opposed. (This has no sociological significance, see Rose in *Folk-Lore* xxvii. 226 ff.) As the weaker party, Danaus and his family fled to Argos, where they claimed help and shelter from their kin; the story, with numerous subsidiary details, is in Apollodorus (2. 12 ff.), Pausanias (2. 16. 1 ff.; 19. 3-7; 25. 4; 37. 1-2); Hyginus (*Fab.* 168 ff.). The oldest parts of it doubtless go back to the *Danais* (Rose, *Handbook of Greek Lit.* 69) and much is due to the Aeschylean trilogy of which the *Suppliants* is the surviving part. Aegyptus' sons pursued them, and Danaus consented to the marriage, secretly instructing his daughters to kill their husbands on the wedding night. Except Hypermestra, who spared her husband Lynceus and helped him to escape, they obeyed him. Danaus imprisoned Hypermestra, but finally, perhaps through the intervention of Aphrodite (Aeschylus, fr. 44 Nauck), released her.

So far the story is fairly consistent in its main outlines, though many details differ in different authors. It now divides into three main accounts. (a) Lynceus returned, killed Danaus and his daughters except Hypermestra, and became king and ancestor of the royal Argive line (schol. Eur. *Hec.* 886). (b) The daughters were purified by Athena and Hermes (Apollod. 22) after burying the heads of their husbands in Lerna, their bodies outside the city, a strange detail never satisfactorily explained. Danaus married them off by offering them as prizes in a foot-race (Pind. *Pyth.* 9. 112 ff.). (c) They were punished in Hades by being set to fill a leaky jar with water ([Plato], *Axiochus*, 371 e, and often later, as Hor. *Carm.* 1. 11. 22 ff.). Here again, no generally accepted explanation exists.

Campbell Bonner in *Harr. Stud.* xiii. 129 ff.

H. J. R.

DANCING. Ancient dancing bore little resemblance to that of the modern ball-room. It had some affinity with the ballet, but its scope was wider and it depended far less on musical accompaniment. Like the ballet it was an art of movement, a form of mental expression with the body as its medium.

At first the dance was a ritual ceremony. Such gods as Athene and Apollo were approached in the solemn measures of the *Hyporchema*, while Artemis and Dionysus were worshipped in the wild ecstasy of the Maenads' dance. From the temple it passed to the theatre, and the tragic dance came long before the tragic drama. There was the round dance of the dithyramb, *Turbasia*; the square dance of tragedy, *Emmeleia*; the single dance of comedy, *Kordax*; and the combined dance of the satyric chorus, *Sikinnis*. Every dance had two elements, movement

and gesture, the movements—*phorai*—being taught in the gymnasia, the gestures—*schemata*—reserved for professional dancers.

Under the Roman Empire the dance assumed a new form in the hands of the 'pantomimes', Pylades and Bathyllus. The subject was usually taken from Greek mythology, and there was a chorus of singers with an orchestra and elaborate stage setting. The interest centred in the chief dancer, who by gestures and conventional signs told the whole story, taking each character in turn.

Athenaeus, *Deipnosophistae* i. 25-7, 37-40; 14. 25-30. Lucian, *Περὶ ὀρχήσεως*. M. Emmanuel, *The Greek Dance* (Engl. Transl. 1916). F. A. W.

DANUVIUS, the Roman name for the Danube. Originally it referred to the upper course of the Danube only, the part below the Iron Gates being known as Ister (q.v.). The upper course of the Danube remained unknown to the Greeks. Herodotus (2. 33) said that its source was in Pyrene (the Pyrenees?), Ephorus in the 'Pillar of the North' (the Alps?), Timaeus in the Hercynian Forest (q.v.), Timosthenes in a Celtic lake, Apollonius Rhodius in the Rhipaean Mts. (q.v.). The identity of the Danuvius and the Ister was first asserted by Sallust (fr. 3. 79 M.), probably as a result of Octavian's Illyrian expedition in 35 B.C. In 16 B.C. Tiberius discovered the real sources, and in 13-12 the bend of the middle course (Strabo 7. 289). Strabo described the Danube with considerable accuracy and Ptolemy knew its windings (*Geog.* 3. 8. 3; 8. 7. 2). E. H. W.

DAPHNE ('laurel'), in mythology, daughter of a river-god (Ladon, generally; Peneus, Ov. *Met.* i. 452; but Phylarchus and Diodorus of Elaea made her daughter of Amyclas, eponym of the town Amyclae, Parthenius 15). Apollo loved her, and, as she would have none of him, pursued her; fleeing from him, she prayed for help and was turned into the tree bearing her name.

H. J. R.

DAPHNE, a park near Antioch, dedicated by Seleucus I to the royal gods, especially Apollo. It contained their temples, which were served by priests appointed by the Crown, and a theatre, stadium, etc., where the kings celebrated games in their honour. Daphne was famed for its natural beauties and was a favourite and not very reputable pleasure resort of the Antiochenes. Pompey enlarged its area, and it appears under the Principate to have been the property of the emperors, who had a palace there in the fourth century and protected its famous cypresses. The Antiochenes, however, celebrated their Olympia in its precincts. A theatre has been excavated.

Antioch on the Orontes ii (1938), ed. R. Stillwell. A. H. M. J.

DAPHNIS, in mythology, a Sicilian shepherd. According to Stesichorus (ap. Aelian, *VH* 10. 18) and Timaeus (ap. Parth. 29) he was son or favourite of Hermes, and loved by a nymph, Echenais, who required of him that he should be faithful to her. This he was, till a princess made him drunk and so won him to lie with her. Thereupon the nymph blinded him; he consoled himself by making pastoral music, of which he was the inventor, or it was first invented by the other shepherds, who sang of his misfortunes; the language of our sources is ambiguous. But Theocritus i. 66 ff. tells allusively a different story. In this, apparently, Daphnis will love no one, and Aphrodite to punish him inspires him with a desperate passion. Sooner than yield to it he dies of unsatisfied longing, taunting and defying her to the end, mourned by all the inhabitants of the country, mortal and immortal, and regretted by the goddess herself.

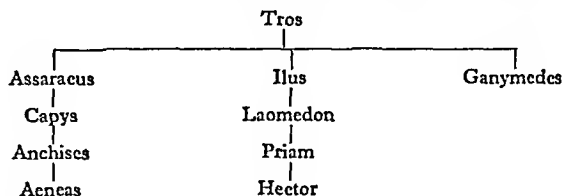

H. J. R.

DARDANI, a warlike Illyrian tribe, which was in its eastern parts intermingled with Thracians, in the south of Moesia Superior. The Dardani first appear as a united nation under a king in 284 B.C. Their frequent raids harassed the kingdom of Macedonia as well as the later Roman province. Thus they were fought by Sulla (85 B.C.), Appius Claudius Pulcher (78-76), C. Scribonius Curio (75-73); after unsuccessful campaigns under Antonius Hybrida (62) and L. Calpurnius Piso (57) the troops of M. Antonius engaged the Dardani (39); finally they were subdued by M. Licinius Crassus apparently without fighting (29 or 28). *Alae* and *cohortes Dardanorum* are known (see indexes of *CIL* xvi and Dessau, *ILS*).

Patsch, *PW*, s.v.; id. *Sitz. Wien*, 214. 1 (1932).

F. A. W. S.

DARDANUS. In *Iliad* 20. 215 ff. we have the genealogy Zeus-Dardanus-Erichthonius-Tros, and thereafter

But as Priam is regularly called *Δαρδανίδης*, which by Homeric usage is either son or grandson of Dardanus, this passage is probably an interpolation. Later authors give two accounts of Dardanus. (a) He was a Samothracian, son of Zeus and Electra and brother of Iasion; either because he was driven out by Deucalion's flood (Lycophron 72-3 and schol.) or because Iasion was killed by the thunderbolt for assaulting Demeter (Apollod. 3. 138, a later form of the old ritual myth in *Od.* 5. 125 ff.), Dardanus left Samothrace and came to the mainland; for another account, see Diodorus Siculus 5. 48-9. (b) He and Iasion (Iasion) lived originally in Italy, their real or reputed father being Corythus (1) (q.v.); either the brothers separate, Iasion going to Samothrace and Dardanus to the Troad, or Dardanus kills Iasion. Servius on *Aen.* 3. 167 mentions three other accounts, that he was an Arcadian, a Cretan, and a native of the Troad. The constants are that he was Electra's son and founded Dardania.

H. J. R.

DARES OF PHRYGIA, priest of Hephaestus at Troy (*Iliad* 5. 9) and reputed author of a lost pre-Homeric account of the Trojan War (Aelian, *VH* 11. 2). A supposed Latin prose translation survives, *Daretis Phrygii de Excidio Trojae Historia* (5th c.?), with an alleged dedication by Sallust to Cornelius Nepos. It has little merit, but was widely used by medieval writers on the Trojan War. See *DICTYS CRETENSIS*.

Text: F. Meister (Teubner), 1873.

G. C. W.

DARIUS I (*Dariavaush*), Achaemenid king of Persia, 521-486 B.C. He came to the throne after overthrowing a usurper, Gaumata the Magian, who was impersonating Bardiya (Smerdis), the dead brother of Cambyses (King and Thompson, op. cit. inf. 13-61; Hdt. 3. 68 ff.). The first years of his reign were spent in quelling revolts in Persia, Babylonia, and the Eastern provinces. By 519 order was restored, and Darius could undertake the reconstruction necessitated by the recent anarchy. His division of the Empire into provinces governed by satraps (q.v.) was retained with little change throughout the Achaemenid period and even later. The true successor of Cyrus, his organization was framed to centralize authority while allowing to each province its own form of government and institutions. Like Cyrus, he was a devout Zoroastrian, but showed a wise tolerance towards the religions of his vassals. His financial reforms created a

new national economy based on a yearly fixed tax. His campaigns were designed to consolidate the frontiers of the Empire; he developed commerce, building a network of roads, exploring the Indus valley and the Mediterranean, and connecting the Nile with the Red Sea by canal.

In 512 Darius penetrated into Europe on a punitive expedition against the Scythians. A revolt of the Greek cities in Ionia was suppressed; he then prepared to punish the Greeks for their interference. Storms off Mt. Athos checked this expedition, and a third, undertaken after further preparation, ended in a Greek victory at Marathon (490 B.C.). Darius died soon after.

G. B. Grundy, *The Great Persian War* (1901); L. King and R. Campbell Thompson, *The Sculptures and Inscriptions of Darius the Great at Behistun* (1907); J. V. Prašek, 'Dareios I', *Alte Orient* xiv. 4 (1914). M. S. D.

DARIUS II, son of Artaxerxes I, ruled over Persia 424–405 B.C. On his father's death he emerged triumphant from a dynastic struggle. His subsequent misgovernment, due in part to the influence of his consort and half-sister Parysatis, who proved much the stronger character, gave rise to a succession of abortive revolts, in Syria, in Lydia (before 413), and in Media (410). More serious was the loss of Egypt in 410. These set-backs were partially balanced by the successful intervention of Persian diplomacy, directed by Tissaphernes, Pharnabazus, and Cyrus, in the Peloponnesian War.

D. E. W. W.

DARIUS III (c. 380–330 B.C.), a collateral of the Achaemenid house, was raised to the throne in 336 by the vizier Bagoas, who met the same death at Darius' hands as he had himself inflicted on Artaxerxes III and Arsaces. In Alexander's invasion Darius was outgeneralled and outfought at Issus and Gaugamela, his defeats being aggravated by his personal cowardice. He attempted to rally the Eastern provinces, but was hunted down in 330, and his own followers, who had previously deposed him in favour of Bessus, stabbed him to death on Alexander's approach.

H. Swoboda, *PIV*, s.v. 'Dareios'.

DEA DIA, a corn-goddess worshipped by the Fratres Arvales; chief festival in May.

Henzen, *Acta fratrum Arualium* (1874), pp. 3 ff.

DEA SYRIA, see **ATARGATIS**.

DEAD, DISPOSAL OF. Cremation and inhumation were the only native methods in the classical cultures, others being known (e.g. Hdt. 2. 86–8; Ap. Rhod. 3. 202–7 and Nymphodorus ap. scholiast, *ibid.*), but not normally practised. It does not appear that these two methods corresponded to different eschatological beliefs. In some cases they arose from racial difference (the Terremare people in Italy cremated, the Villanovans inhumed), but even this is not invariable (Homer's people always cremate, but seem to be descended from the inhuming Mycenaeans). In the Roman Empire considerations of economy or convenience had a good deal to do with the choice (see A. D. Nock in *Harv. Theol. Rev.* xxv (1932), 357), and this may well have been true elsewhere. The essential thing was apparently to cover the body, burned or not, with earth (three handfuls will do for a ceremonial burial, Hor. *Carm.* 1. 28. 35, which is wholly Greek in tone; Antigone scatters a thin coating of dust over Polyneices, Soph. *Ant.* 255–6); the Roman definition of a buried body was one of which no bone showed above ground (Q. Mucius Scaevola ap. Cic. *Leg.* 2. 57, see the whole passage), or in a vault of some kind, such as a natural or artificial cave. Such constructions often held a number of bodies, e.g. the *columbaria* used in Imperial Rome and many earlier erections; pits

in the earth, when used, varied considerably in size, pattern, and the number of corpses they contained.

2. This covering cut off the dead from the sight of the celestial gods, with whom they had no more to do (see Soph. *Aj.* 589, and its imitation in Verg. *Aen.* 11. 51), thus avoiding pollution or offence of them and their altars (cf. Soph. *Ant.* 1016 ff.). It was also a kindness to the departed, who were generally held to need burial in order to admit them to the lower world (e.g. *Il.* 23. 71 ff.; *Aen.* 6. 325—*Od.* 24. 1 ff. is abnormal and such passages as *Aen.* 2. 646, Lucan 7. 819 are philosophical, not popular). Hence it was a universal act of piety to hurry, or at least allow the burial of, any dead person, friend or foe; to be left unburied was the lot of certain criminals after execution (at Athens, Plat. *Resp.* 4. 439 c, with Adam's note; traitors were so used, e.g. Soph. *Ant.* 26 ff., imitated by Aesch. *Sept.* 1013 ff. (a spurious passage); Soph. *Aj.* 1047 ff.; Roman law regularly allowed the burial of executed criminals, *Dig.* 48. 24, with occasional exceptions, Tac. *Ann.* 6. 29. 2). Suicides were sometimes given abnormal burial, or even none (Athens, see Aeschines 3. 244, hand of corpse buried separately; Rome, 'cautum fuerat in pontificalibus libris ut qui laqueo uitam finisset, insepultus abieceretur', Servius on *Aen.* 12. 603; but this certainly was not regularly observed).

3. A regular funeral (*ταφή*, *funus*) was carried out as follows, omitting local, national, and chronological differences (see below). After the body had been bathed (e.g. *Il.* 7. 425; *Aen.* 6. 219), dressed (in clothes such as might have been worn in life, not in a shroud), and laid on a couch, it was lamented by the relatives and others present (excess in this respect was forbidden in classical times, e.g., by the XII Tables 10. 4 Bruns) and then carried to the place of burning or inhumation (*ἐκφορά*, *exsequiae*), attended by a more or less large crowd. The pyre, if the body was burned (*πύρα*, *rogi*), was often, in archaic Greece and under the Empire in Rome, an elaborate structure, and the amount of grave-gifts burned with the body or placed in the tomb might be very large, though customs varied enormously, the classical tendency being towards moderation in this respect also (see, e.g., Plutarch, *Solon* 21, XII Tables 10. 2 Bruns). The ashes, in a case of cremation, were placed in a vessel, the shape, material, and size of which varied in different times and places; for an unburned body a coffin (*σάρος* or *λάραξ*, *capulus*) would normally be used, while later the stone sarcophagus, often elaborately carved, became very popular with those who could afford it. In either case, body and container would be put in one of the receptacles already described. If the body could not be found, a funeral would still be held, a dummy of one kind or another being sometimes used (example in *JHS* lvi (1936), 140). The tomb, then and at intervals afterwards, became the centre of family ritual directed towards the dead.

4. Of the differences in funeral practice above referred to, the following are the most interesting and important. In the Heroic Age of Greece, as described by Homer (especially *Il.* 23, funeral of Patroclus), the whole ceremony was most elaborate. This may be due, as regards some details, to the fact that Achilles (q.v.) retains some of the manners of an earlier time. Achilles himself, as chief mourner, is fasting and unwashed (43 ff.) till the rites are completed. The body lies in state and is formally bewailed by the women (19. 282 ff.; cf. 24. 664 and 710 ff., the mourning for Hector). In a hot climate the ceremony probably did not last long; in the *Iliad* both Patroclus and Hector are miraculously kept from decay (19. 29 ff.; 23. 182 ff.), and the lying-in-state continues for several days. When the pyre is complete, the body is brought to it by a procession of warriors in full armour, and is covered with hair shorn from the mourners' heads; Achilles, as chief mourner, holds the head of the corpse during the procession, and he and

some others keep watch over the pyre till morning. Then beasts are slaughtered and their fat laid about the body, together with other food-offerings and sacrifices of horses, dogs, and human beings, presumably to attend the dead in the next world (127 ff.). After the pyre has burned, the ashes are quenched with wine and the bones collected and put in an urn (237 ff.). A barrow of earth is then heaped above them (245 ff.), which was often marked by a post or other such object (331). Both the barrow and the post were called *σῆμα*, the former also *τύμβος*.

5. Of the funerals of the Minoan and Mycenaean ages we know nothing, but the tombs varied very much in size, elaboration, and number and value of offerings buried with the dead (see e.g. M. P. Nilsson, *Minoan-Mycenaean Religion*, 257; H. Schliemann, *Mycenae and Tiryns*, 41 ff., 88 ff.). Nor is it known whether it was the custom then to have the elaborate games after the funeral proper which are described in Homer (*Il.* 23. 259 ff.). Every contestant receives a prize of some sort, and some of them were the property of the dead; this possibly represents a compromise between burying all his goods with him and allowing them to be inherited.

6. In the classical Greek period some remnant of the ancient magnificence was still to be seen in public funerals, especially those given at Athens to citizens killed in war (Thuc. 2. 34), on which occasion a speech in their honour was made by one of the leading men (*ἐπιτάφιος λόγος*).

7. In Rome the funeral of a prominent man of good family, whose ancestors had held public office, was a remarkable ceremony. After the wailing (*conclamatio*) the corpse was laid out, fully dressed (in official robes, if he himself was or had been a magistrate), on a bed in the *atrium*, feet to the door. The household was *funesta*, i.e. in a state of taboo, not to be approached by, e.g., a pontiff, and to mark it as such, cypress or pitch-pine was hung outside the door. This condition lasted till a certain time after the funeral, when the heir formally swept out the pollution of death from the house with a special sort of broom (Festus, p. 68. 8 ff. Lindsay). The corpse was escorted to the place of inhumation or cremation, not only by living relatives and the general public, who were formally invited to attend, but by his dead kin, represented by actors or other suitable persons wearing their *imagines* (q.v.) and official robes. There were also professional mourning women, *praeficae*, who sang a dirge, *nenia* (q.v.), and musicians, often so noisy as to make the din almost proverbial (Hor. *Sat.* 1. 6. 43). The origin of all this was probably Etruscan; for details and references, see S. Marquardt, *Privatleben*, pp. 2, 346 ff. In the case of a son, the funeral might be conducted at night with very little ritual, in which case the household did not become *funesta* (Rose in *CQ* 17 (1923), 191 ff.). For Roman funerals, see further LAUDATIO FUNEBRIS, GLADIATORS.

8. Both Jews and Christians objected to cremation, which thus became ultimately extinct, and the latter in early times to elaborate sepulchres, hence the simple *loculi* or niches characteristic of the catacombs. Later they, when able to afford it, fell in with the common use of sarcophagi. See above, para. 3.

LITERATURE. No modern book deals exclusively and professedly with the subject as a whole; all the handbooks and encyclopaedias of classical antiquities contain sections and articles devoted to it.

H. J. R.

DEAE MATRES, a group of divinities whose worship is found chiefly in the Celtic and German provinces of the Roman Empire. There is no clear reference to them in the ancient writers, but more than seven hundred monuments of their cult (mostly inscribed) have been found. They are numerous in Cisalpine Gaul, Gallia Narbonensis, Gaul proper, lower Germany, and Britain, and rare in Rome and Spain. Those in Britain and Rome,

perhaps also in Spain, seem due to the army. The divinities are called *Matres*, *Matrae* (? inferred doubtfully from *Matris* and *Matrabus*), or *Matronae*, the last being perhaps their real Celtic name, though it is also common in Germanic territory. *Μαρπεβο* (at Nîmes) is also generally recognized as a Celtic form.

The monuments range in date from the time of Caligula to that of Gordianus. The earliest are on Celtic territory, and the flourishing period of the cult among the Germans appears to have been between A.D. 100 and 250. From these facts it has been usually inferred that the worship was taken over by the Germans from the Celts; but a number of scholars have recently argued that the Germans had such female divinities long before their contact with Celtic influence. In the lack of positive evidence it must be left undecided whether the Germans borrowed the cult from the Celts, or both peoples inherited it independently from Indo-European or took it over from some previous population in Europe.

The *Matres* are usually represented in triads, three draped figures sitting under a canopy and often holding baskets of fruit. There are variations in dress and posture, and on a very few monuments all three figures are standing. In the case of other groups of five or two, or even of single figures, the identification with *Matres* is doubtful. The single figure of the so-called 'equestrian Matrona' is now held to be Epona (q.v.).

The functions of the goddesses are hard to determine precisely, and they doubtless belong to a stage of religion in which 'departmental gods' were not clearly distinguished. The baskets of fruits and similar symbols suggest divinities of wealth and fertility. Most of the epithets on the inscriptions are local or tribal, but others (*Gabiae*, *Ollogabiae*, *Alagabiae*) indicate again the giving of bounty. The association, on various monuments, with *Parcae*, *Iunones*, *Campestres*, and *Suleviae* points to a number of other functions. Perhaps the *Matres* were primarily protecting divinities of persons or family groups, whose powers were freely extended till they covered on the one hand the interests of women (*Iunones*) and on the other military affairs (*Campestres*). The cult apparently always belonged chiefly to the humbler classes in the provinces, though the dedicants in many cases must have possessed considerable means.

In addition to the general treatises cited under RELIGION, CELTIC, note M. Ihm, in *Bonner Jahrbücher* 1887; the same author in Roscher ii. 2464 ff., s.v. 'Matres'; Heichelheim in *PIV* xiv. 2213 ff., s.v. 'Matres'; J. De Vries, 'De Nederrijnsche Matronen-vereeniging', in *Tijdschr. v. Nederl. Taal- en Letterkunde* 1. 87 ff. Monuments discovered later have been reported in successive volumes of the *Revue Archéologique* and the *Bonner Jahrbücher*. Some of the most interesting discoveries of recent years have been shrines or temples of the *Matres*. See especially *Bonner Jahrb.* cxix. 307 ff., cxxiii. 213 ff.

DEATH, see THANATOS.

DECAPROTI (δεκάπρωτοι) first appear in A.D. 66 and become common throughout the Eastern provinces of the Roman Empire in the second and early third centuries; the office was abolished in Egypt and probably elsewhere in A.D. 307-8. *Decaproti* were probably in origin a finance committee of the city council, concerned with civic revenues and endowments. By the second century they were collecting imperial taxes and levies, and in the third this was their chief function; in Egypt they were responsible for the imperial land revenue. They were liable to make good deficits from their own property. Normally ten in number, the board had a varying membership, sometimes increasing to twenty. They were elected, and probably held office for five years.

E. G. Turner, *JEGArch.* 1936, 7-19.

A. H. M. J.

DECARCHIES, (1) the committees, usually of ten oligarchic and pro-Spartan citizens, installed by Lysander after the Peloponnesian War in cities detached from the

Athenian Empire. Possessing full executive powers, and sometimes supported by a garrison under a Spartan commander, they collected their cities' share of the Spartan war-tax levied by Sparta (Arist. *Ath. Pol.* 39. 2). The Thirty Tyrants (q.v.) and the Ten at the Piraeus are the best-known examples. Many decarchies, especially in the Asiatic cities, were abolished in the reaction against Lysander (403-402 B.C.); the rest fell after the Spartan defeat at Cnidus (394) or by the King's Peace (386). (2) The same name was given to the governments instituted by Philip II of Macedon in the Thessalian cities in 344. A. M. W.

DECEBALUS, king of the Dacians, acquired prominence through his war against Domitian (A.D. 85-9) and organized his realm. Though defeated by Roman armies, he was able to secure a favourable peace from Domitian when the revolt of the German and Sarmatian allies beyond the Danube imperilled the whole frontier, namely recognition, a subsidy, and the loan of skilled artisans. The growth of his power seemed dangerous to Trajan, who made war upon him and, after two campaigns (101-2), imposed fairly stringent terms of peace. Decebalus, it is said, did not abide by them: war began again in 105 with a serious Dacian incursion into Moesia. Trajan now resolved to make an end and convert Dacia into a Roman province. The land was invaded, Sarmizegethusa, the capital, was taken. Decebalus, hunted down, evaded capture by suicide (106). R. S.

DECELEA (Δεκέλεια), on the foothills of Mt. Parnes overlooking the Attic plain as far as the Piraeus, was occupied by the Spartans from 413 to 404 B.C. as a permanent post on Attic soil. The slight remains of fortification belong probably to the early fourth century.

Thuc. 7. 19. 27-8. A. Milchhöfer, *Karten von Attika* vii-viii, 2 ff. T. J. D.

DECEMPRIMI, the ten senior members of the local council of a Latin or Roman municipality, formed with the yearly magistrates a group which in times of crisis represented the community in dealings with the central government. They are mentioned in the Republican period only, but in the fully developed Empire a similar group of *decaproiti* (q.v.) emerges as specially liable to Rome for the collection of the imperial taxes. The connexion between the two groups is obscure. See **DECURIONES**. A. N. S.-W.

DECEMVIRI was the name given to several Roman magistracies held by ten men:

(1) *Decemviri stlitibus iudicandis* judged suits to decide whether a man was free or a slave. It is doubtful whether they are to be identified with those *iudices* whose *sacrosanctitas* was declared together with that of the tribunes (Livy 3. 55). They are first definitely attested in a document c. 139 B.C. By Augustus they were probably made sectional presidents of the centumviral tribunal. See **CENTUMVIRI**, **VIGINTISEXVIRI**.

(2) *Decemviri sacris faciundis* kept the Sibylline books. Originally *duoviri*, they were increased to *decemviri* in 367 B.C. to include plebeians, and in Sulla's time to *quindecimviri*.

(3) *Decemviri legibus scribundis*. Tradition records that in 451 B.C. the Roman constitution was suspended and complete power was entrusted to ten patricians to prepare a code of laws. They prepared ten tables of law, and a new college of *decemviri* was appointed for 450 to complete the work. Although the new board included plebeians, it composed two additional tables which were unfavourable to the plebeians (e.g. codifying the prohibition of intermarriage between the Orders). It was dominated by Ap. Claudius (q.v. 3) and retained office until the murder of Verginia (q.v.) led to its resignation.

The ancient constitution was restored and the consuls of 449 published the Twelve Tables. The substantial authenticity of the tradition (apart from the single episodes) depends on the reliability of the *Fasti*, which is now acknowledged. Further, since tradition pictures the second decemvirate as hostile to the plebeians, it would have hardly invented the plebeian *decemviri*. Thus both colleges may be accepted. The Twelve Tables (q.v. for the content) represent a compromise between patricians and plebeians. It is doubtful whether the decemvirate was contemplated as a provisional magistracy or as one designed to replace permanently the consulate and tribunate. The majority of patricians and plebeians, however, were probably unfavourable to the second *decemviri*, fearing their tyrannical tendencies.

Diod. 12. 24-6; Livy 3. 31; Dionysius 10. 54; Cic. *Rep.* 2. 36. E. Täubler, *Untersuchungen zur Geschichte des Decemvirats* (1921); cf. G. De Sanctis, *Riv. Fil.* 1924, 266; W. Seltau, *Sav. Zeitschr.* 1917, 1; J. Elmore, *CPhil.* 1922, 128. See also **TWELVE TABLES**. A. M.

DECIDIUS SAXA, **LUCIUS**, described by Cicero as 'ex ultima Celtiberia' but deriving from Italian and probably Samnite stock (compare the proscribed Cn. Decidius defended by Caesar), was admitted to the senatorial career by Caesar, becoming tribune of the plebs in 44 B.C. He had previously been a centurion or an equestrian officer. An Antonian partisan, Saxa commanded along with C. Norbanus the advance-guard of the Caesarians in the campaign of Philippi. Later governing Syria for Antony, he was defeated and killed in the Parthian invasion (40).

R. Syme, *JRS* 1937, 127 ff.

R. S.

DECIUS, the Emperor, see **DECIUS** (4).

DECIUS (1) **MUS**, **PUBLIUS**, performed heroic but probably legendary feats as military tribune in the perhaps apocryphal First Samnite War (343 B.C.; Livy 7. 34 f.). During his consulship (340) a battle with the Latins, somewhere in Campania (E. Pais, *Storia di Roma* iv. 196), made him famous. Actually Decius may not have been present (K. J. Beloch, *Röm. Gesch.* 374); he was popularly believed, however, to have ensured Rome's victory by solemnly 'devoting' himself and the enemy to the gods below and then charging into the enemy ranks to his death (Livy 8. 9)—an exploit more probably to be attributed to his son. For the possibility of his Capuan origin see J. Heurgon, *Capoue préromaine* (1942), 260 ff. E. T. S.

DECIUS (2) **MUS**, **PUBLIUS**, son of (1) above, consul in 312, 308, 297, 295 B.C.; censor in 304. Duris, a contemporary, mentions his death at the battle of Sentinum (295) (*FIIG* ii. 479, fr. 40). Later tradition (Livy 10. 28) insisted that this was another case of *devotio* (see preceding article); in fact, if any *devotio* is historical, it is probably his (but see K. J. Beloch, *Röm. Gesch.* 449). Even so, the real hero of Sentinum probably was his colleague, Fabius (q.v. 3) Rullianus. E. T. S.

DECIUS (3) **MUS**, **PUBLIUS**, son of (2) above, consul 279 B.C. Pyrrhus defeated him at Ausculum. The story that he, like his father and grandfather, 'devoted' himself in the battle is unknown to most ancient authorities and should probably be rejected (Plut. *Pyrrh.* 21; Dion. Hal. 20. 1). E. T. S.

DECIUS (4). **GAIUS MESSIUS QUINTUS**, emperor A.D. 249-51, a native of Pannonia, but connected on his mother's side with an old Italian family, was city prefect before being appointed by Philip to the Danubian command (see **PHILIPUS** 1). After Philip's death he was accepted by the Senate and assumed the surname of

Trajan. The first year of his reign was peaceful, and extensive road-making was undertaken. A special financial office, somewhat reminiscent of the censorship, was created and given to the future Emperor Valerian. In an attempt to revive the State religion the Church was vigorously persecuted as a disintegrating element in the Empire, and Christians were obliged to make a declaration of conformity before specially constituted commissions.

In 250-1 Moesia was invaded by two armies of Goths. Decius succeeded in relieving Nicopolis, but was too late to save Philippopolis. He next attempted to cut off the Goths' retreat, but after an initial success at Abrittus near Adamklissi was trapped through the treachery of his lieutenant, Trebonianus (q.v.) Gallus, and cut down by the enemy.

Zosimus 1. 22-3; Zonaras 12. 20; Wittig, *PW*, s.v. 'Messius'; Parker, *Roman World*, 157-61; *CAH* xii, ch. 6, §§ 1, 5.

H. M. D. P.

DECLAMATIO (perh. originally a translation of *κατήχησις*, 'dinning into the ears', F. H. Colson, *CR* 1922, 116-17) long retained a nuance of excessively loud and over-vehement oratory (Cic. *Planc.* 19. 47; Tac. *Dial.* 35. 6), though late in Cicero's lifetime it had come to mean an oratorical exercise on an invented theme. Such themes were not unknown to Greek *rhetores* about the time of Demetrius of Phaleron (Quint. *Inst.* 2. 4. 41). Philostratus (*VS* § 507, ed. Kayser) regards Aeschines as the founder of 'the second Sophistic', which brought in stock characters of the type found in declamations—the tyrant, the rich man, the poor man. The old abstract subjects were replaced by subjects which reproduced in a fictitious manner a public debate or a judiciary case, on the ground that this sort of practice would qualify for politics or the law court. The inclusion of such exercises in education at Rome may have been due to Molon of Rhodes about 84 B.C. In any case, declamation grew to be the culminating practical exercise which most effectively applied the principles taught by professors of rhetoric; and its manner, its inventiveness, its quest after striking *sententiae* are of vital importance for its influence on the Latin style of the Silver Age. From the elder Seneca's collection, commonly known as *Controversiae* and *Suasoriae*, and from the pseudo-Quintilianean *Declamationes* we can best understand the nature of the declamatory oration. The variety and ingenuity of the arguments therein adduced for or against a thesis show declaimers at work and are typical of the rhetoric of several centuries. The stock subjects are also represented by the brief excerpts from over fifty declamations of Calpurnius Flaccus (1st or 2nd c. A.D.; ed. G. Lehnert, 1903); and the similarities pervading declaimers' themes are indicated by T. S. Simonds, *Themes treated by the Elder Seneca* (U.S.A. 1896).

2. There were two main sorts: (1) *suasoria* (q.v.), in which some eminent character is imagined to deliberate with himself or to have advice tendered to him at a political or strategic crisis, e.g. 'Should Sulla abdicate?' (Juv. 1. 16) or 'Should Cato commit suicide?' (Pers. 3. 45). Here the basis is chiefly historical. Hannibal can be told that his daring push across the Alps leads but to the glory of furnishing a rhetorical theme ('ut pueris placas et declamatio fias', Juv. 10. 107). (2) *controversia* (q.v.), handling a fictitious case in imitation of actual pleadings in court. Here we meet condensed stories, sometimes of romantic flavour, and move in a realm of far-fetched laws affecting such figures as the daughter and captive of a pirate-chief, a condemned Vestal, a disinherited son.

3. The handling of imaginary problems as if before a court ('cum sit declamatio forensium actionum meditatio', Quint. 4. 2. 29) aimed at producing readiness and assur-

ance in a speaker. In this lay a danger. Quintilian (10. 7. 21) comments on the vanity of showy *declamatores* ready to speak glibly on any theme the moment it was propounded. This emphasizes the unreality of undisciplined rhetoric. Much earlier the orator Crassus had feared lest the passion for applause might turn rhetorical academies into 'ludos impudentiae', and his reasons for closing by censorial edict the establishments of the *rhetores Latini* are given in Cicero, *De Or.* 3. 24. 93-5 (cf. Quint. 2. 2. 12). The qualities of a good declaimer are recognized in Seneca, *Controv.* 3. *praef.* 7-8, but in the same preface (12-18) strictures are cited from Severus Cassius on the remoteness of declamations from the real arena of Senate or forum. Caustic remarks are made about 'toiling in dreamland' ('cum declamo . . . uideor mihi in somniis laborare'), about the absurdity of training a sea-pilot on a fishpond, and about the declamatory standard by which great public speakers like Asinius Pollio and Messalla Corvinus were foolishly ranked as inferior to professors of rhetoric such as Cestius or Latro. There are many passages which allude to the pernicious influence of the proud parent keen on hearing his son declaim show-pieces (Pers. 3. 45-7; Quint. 2. 7. 1; 10. 5. 21; Stat. *Silv.* 5. 3. 215-17; Juv. 7. 160-6). Similar views had justified Pollio in contrasting the genuine *orator forensis* with the *orator scholasticus*, and in remarking that success in the one capacity did not guarantee success in the other (Sen. *Controv.* 2. 3. 13; 3. *praef.*). Quintilian has salutary improvements to suggest in declamations (2. 10), and the bad effects of unreal themes are condemned by Tacitus, *Dial.* 35.

4. Yet, with all its faults, declamation laid a powerful hold on Romans under the Empire. In an age of restricted free speech, the hall for the declaimer and his often highly critical audience provided an artificial forum. Alongside of the fashionable literary readings (*recitationes*), increasingly rife from Pollio's day, declamations formed an occupation or intellectual sport for the leisured and cultivated Roman. He did not necessarily forswear the exercise when he left the rhetorical school. Cicero claims that no one kept declamation up longer than he, *Tusc.* 1. 4. 7. Juvenal, a medieval *Vita* says, 'ad mediam fere aetatem declamavit animi magis causa quam quod scholae se aut foro praeferaret', and the effect on his style is obvious. The habit spread from Rome to Gaul, Spain, Africa, and other parts of the Empire, so that the traditional declamatory spirit is bequeathed to Christian Latin apologetics. Pagan themes continued to be set in schools, which explains why the works of Ennodius, bishop of Pavia late in the fifth century A.D., contain declamations similar to those in Seneca. Effective declamations kept their vogue as patterns long after their authors' times; e.g. those of Junius Gallio, Seneca's friend, were still studied in Jerome's day along with Cicero and Quintilian.

See **CONTROVERSIA**, **DECLAMATIONES PS.-QUINT.**, **QUINTILIANUS**, **RHETORIC (LATIN)**, and **SUASORIA**.

J. W. D.

DECLAMATIONES PSEUDO-QUINTILIANEAE, a title given to two sets of rhetorical pieces ascribed, very questionably, by manuscripts to Quintilian. The one set consists of 19 longer and more elaborate declamations, the other of 145 shorter pieces (the latter part of a collection once numbering 388). Ritter edited the shorter ones, and, unlike most modern critics, accepted them as by Q., but believed that the longer declamations fall into four groups, differing in date and authorship, though one

group might, he thought, come from the school of Q. In the fourth century Jerome and Servius quote from the longer ones as by Q. They may have been collected in the period of Gellius and Apuleius. It seems impossible to identify, as Ritter does, the shorter declamations with one of the two works mentioned by Q. (1 *proem.* 7) as having been published from notes by enthusiastic pupils; and a survey of the more fantastic, far-fetched, sensational themes of both sets indicates a difference in spirit from Q., who reminds us (2. 10. 5) that we shall look in vain among cases of contract and interdict for 'wizards', 'pestilence', 'oracles', 'step-mothers crueller than those in tragedy', and other features still more romantic (*fabulosa*). The shorter declamations contain a *sermo* (sometimes more than one *sermo*) sketching useful lines of argument for pupils' guidance, and the rhetorical handling is exemplified in *declamatio*.

Texts: in P. Burman's ed. of Quintilian (Leiden, 1720, still very serviceable); C. Ritter, *M. Fab. Q. declamationes quae supersunt cxiu* (1884); G. Lehnert, *Declamationes alic maiores* (1905, not satisfying). Special Studies: C. Ritter, *Die Declamationen* (1881); R. Reitzenstein, *Studien zu* (1881), suspects even more varied authorship than Ritter does; G. Goiz, *Der rhythmische Satzschluss in d. grösseren pseudo-Quint. Decl.* (1913, infers considerable variety of authorship from examination of *clausulae*); Y. Englund, *Ad Q. qui feruntur declamationes maiores adnotationes* (1934). On authenticity and nature of the themata see literary histories of Teuffel-Kroll-Skutsch, Sehanz-Hosius, and J. W. Duff.

DECRETUM, see CONSTITUTIONES.

DECUMA. Tithes on agricultural produce were paid by tenants on the *ager publicus* (q.v.) of Italy (Appian, *BCiv.* 1. 7), and by the landowners in the provinces of Sicily and Asia under the Roman Republic, which maintained the taxes previously levied by the native kings. Owing to the variability of the yield it suited the government to let out to *publicani* (q.v.) the right of collection. In Sicily this was done in Syracuse, so that local companies could compete. The *decumae* of Asia, which lasted from the time of C. Gracchus till the dictatorship of Caesar, were let in Rome to Italian companies. The *decumani* were regarded as the leading members of the *societates publicanorum* (Cic. *Verr.* 2. 175). The government had a right of pre-emption (at a fair price) on another tenth of the harvest (*alterae decumae*). G. H. S.

DECUMATES, see AGRI DECUMATES.

DECURIONES, the local councillors of the fully developed Roman municipal system, both in colonies and municipalities, whether Latin or Roman. They were recruited from the ex-magistrates and by censorial appointment at the quinquennial census, holding office for life. The qualifications were those required for the magistracies and included criteria of wealth, age, status, and reputation. The minimum age-limit of twenty-five was frequently neglected, minors of influential families being elected *honoris causa*. The *decuriones*, whose number varied with the size of the municipality, formed the *consilium* of the magistrates, and in practice controlled the public life of the community. Local administration and finance, the sending of deputations and *petitiones* to Rome or to the provincial governors, the voting of the honorary decrees and statutes, fell to them, since the popular assemblies played little part except at the magistristerial elections. The *decuriones* were also responsible for collecting the imperial taxes due by their municipality, and personally liable in case of default, a liability which became an intolerable burden in the later Empire and led to the breakdown of the municipal system. The *decurionate* became an hereditary inescapable *munus* of the wealthy, who degenerated from a ruling class to a tax-collecting caste, known as *curiales* (q.v.). For bibliography see MUNICIPIUM. A. N. S.-W.

DEDICATIO, the other side of *consecratio* (q.v.). Strictly speaking, only one who is himself in touch with *res sacrae*, in other words a priest expert in the ways of the gods, can consecrate anything; hence we do not hear, for instance, that M. Horatius Pulvillus consecrated the Capitoline temple, but that he dedicated it. But the owner (State or individual) of a *res profana* can if he chooses give it to a god, as he might to another human being or another State. This giving to a god, or removing from the secular (*noa, profanus*) sphere into the sacred (*tabu, sacer*) being accomplished in due form, the object, which a moment before anyone might handle, because it was a common thing, now becomes charged with *numen*, and to have anything to do with it requires more or less precaution and observance of proper ritual. Thus, a block of carved stone is in itself unremarkable, but if it has been dedicated to a god for use as an altar, it is impiety to touch it save in the performance of an act of worship, usually sacrifice (Hor. *Carm.* 3. 23. 17).

Though only objects dedicated and consecrated by permission or direction of the State could in Roman law be really *res sacrae* (see CONSECRATIO), in practice anyone might privately dedicate, e.g., a chapel on his own property to such gods as he chose to worship, though occasionally a non-Roman cult was prohibited by decree of the Senate or other competent authority. H. J. R.

DEDICATIONS. I. GREEK. In the early period of Greek literature dedication, in the modern sense, of literary works did not exist. When Hesiod, Theognis, and Empedocles addressed poems to Perses, Cyrenus, and Pausanias, their intention was not that of a modern dedicatory, to gratify the dedicatee or obtain a *cachet* from his name. The person addressed was no more than a target for the arrows of instruction or exhortation. Nor, obviously, do the *Epinicians* of Pindar come into account here. The first Greek to dedicate a book seems to have been Dionysius Chalceus, who in the middle of the fifth century B.C. dedicated his poems to a friend (Ath. 15. 669 d-e). In the fourth century Isocrates (*To Nicoteles*) and perhaps Theophrastus (Ath. 4. 144 c) adopted the practice, which became extremely common in the Hellenistic age. Thus Archimedes addressed his *Psammites* to Gelon, Apollonius of Perga the first three books of his *Conica* to Eudemus, the last five to Attalus I. Diogenes Laertius actually finds it 'arrogant' in Chrysippus to 'write so many books and dedicate none of them to a king' (7. 185), and mentions (4. 38) the only king to whom Arcesilaus did not dedicate anything. In the Roman period of Greek literature the practice remains frequent. Notable examples are the literary treatises of Dionysius of Halicarnassus (some in the form of letters) and the anthologies of Meleager and Philippos (*Anth. Pal.* 4. 1-2).

II. LATIN. The dedication of a literary work is not a difficult technical problem in the case of a collection of small poems. Thus Horace simply prefaces the first book of his *Odes* with a poem addressed to Maecenas (cf. *Epod.* 1. 4; *Sat.* 1. 1). Many of the *Epistulae* in bk. 1 address friends (e.g. Tibullus 1. 4. 1, 'Maecenas docte' 1. 19. 1), and such addressing verges on dedication; but Horace intentionally places *Epist.* 2. 1 before 2. 2 (written earlier) as an introduction addressed to Augustus. Propertius scatters mentions of his friends throughout his work, linking them to his predominant love-theme. Lucretius happily combines the dedication to Memmius with the invocation of Venus. Virgil is less successful. In *Ecl.* 3 a herdsman mentions the name of Pollio; the sixth begins with lines addressed to Varus having nothing to do with the poem; while the unity of the eighth is broken by the lines on Pollio's Illyrian expeditions. The *Georgics* (1. 2) are appropriately addressed to Maecenas (cf. 4. 2).

Formal dedications, like Spenser's letter to Raleigh explanatory of *The Faerie Queene* with his dedication to

Qucen Elizabeth, or like the elaborate addresses introducing eighteenth-century writings, were not the usage in Latin classics—many were subconsciously directed to posterity rather than to contemporaries. Apart from the technique of a dedication, formal or informal, there is its value for light thrown on an author's circle or the date of a work. Thus Persius addresses friends like Maecius or Caesius Bassus in different satires; Valerius Flaccus invokes Vespasian early in his *Argonautica* and by allusions to Titus and Domitian shows that he began his poem after A.D. 70; Martial, like Statius, prefixes to some of his books a prose letter: e.g. he dedicates bk. 8 to Domitian and bk. 12 to a friend Priscus excusing himself for three years' indolence in Spain.

Regarding prose writings, one may instance the *De Natura Deorum* as one of five philosophical treatises dedicated by Cicero to Brutus, and the second edition of the *Academica*, dedicated to Varro, of whose learning Cicero stood in some trepidation. Velleius Paterculus dedicated his work to M. Vinicius, and Valerius Maximus his to Tiberius. Seneca's *Consolationes* may be taken as dedicated to their addressees: his three books *De Ira* were dedicated to his brother Novatus; his seven *De Beneficiis* to Aebutius Liberalis. Quintilian addressed his *Institutes* to V(ictor) Marcellus as the real begetter of his undertaking.

DEDITICII were individuals, communities, or nations which made a formal, unconditional surrender of themselves, their property, territory, and towns to the Roman State. *Deditio* was usually performed by defeated enemies who preferred to throw themselves on Rome's mercy—*deditio in fidem*—rather than suffer total sack and destruction—*expugnatio*. But any community which wished to place itself under the total protection of Rome could surrender by *deditio*. *Dediticii* were regarded as suppliants and usually treated with generosity. They had no political rights and were *cives nullius certae civitatis*, until Rome settled their future status, either by restoring to them the right of self-government, *leges et iura*, and recognizing them as ordinary *peregrini* (q.v.), or even by granting them the status of a *civitas libera* (see **SOCII**) or, on occasion, full treaty rights (see **FOEDUS**). *Deditio* is not itself a form of treaty-alliance, nor is it normally a permanent status, although the *Lex Aelia Sentia* (A.D. 4) placed slaves of ill repute who were given their liberty in the category of *dediticii* instead of granting them Roman citizenship.

Ancient sources: Livy, *passim*, esp. bks. 1-10; Caesar, *B.Gall.*, *passim*. Modern views: A. Heuss, *Klio*, Beiheft xxxi; E. Täubler, *Imperium Romanum*. Cf. A. H. M. Jones, *JRS* 1936, 223 ff.

DEFIXIO, see **MAGIC**, para. 8.

DEIANIRA (Διάνειρα), in mythology, daughter of Oeneus (q.v.) and wife of Heracles. He first heard of her from Meleager's ghost in Hades, according to Bacchylides 5. 170. He won her in combat from Achelous (cf. **AMALTHEA**), and on the way home he entrusted her to the centaur Nessus to carry across a river; Nessus tried to assault her and Heracles killed him with one of his poisoned arrows. Dying, he gave Deianira some of his blood, assuring her it was a potent love-charm. Years later, when she had borne Heracles several children, he brought Iole home from Oechalia; Deianira, to regain his affection, smeared the blood on a garment and sent it him. The poison caused his death, whereat she killed herself. See Sophocles, *Trachiniae*.

H. J. R.

DEIDAMEIA (Διδάμεια), see **ACHILLES**, para. 5.

DEIOTARUS, tetrarch of the Tolistobogii (in W. Galatia), and subsequently king of all Galatia. In the third Mithridatic War he consistently supported the Romans. He was rewarded by Pompey with part of east Pontus (64 B.C.), and in 52 or 51 he received from the Senate Lesser Armenia and most of Galatia, together with the title of king. For his adherence to Pompey in the Civil War he was temporarily deprived of his new acquisitions by Caesar. Accused before Caesar at Rome (45 B.C.) of various acts of insubordination, he was defended by Cicero, whose son he had befriended during Cicero's governorship of Cilicia. After Caesar's death Deiotarus resumed his lost territories and bought recognition from Antony. He supported Brutus and Cassius at Philippi, but by his timely desertion to Antony he retained his kingdom, and by the murder of a rival tetrarch (c. 42) he acquired all Galatia. He died in 40. Deiotarus trained his infantry in Roman fashion; one of his corps subsequently became the Legio XXII Deiotariana.

B. Niese, *PIW* s.v.; F. E. Adeock, *JRS* 1937, 12-17. M. C.

DEIPHOBUS (Δηϊφόβος), in mythology, son of Priam; he plays a fairly prominent part in the fighting in the *Iliad*, and in the *Odyssey* is associated with Helen (5. 276), and the hardest fighting at the capture of Troy is about his house (8. 517-20). All later authors say he was married to Helen after Paris' death.

H. J. R.

DEIPHONTES (Δηϊφόντης), in mythology, a descendant in the fifth generation of Heracles. He married Hymetho, daughter of Temenus king of Argos, and was favoured by him above his own sons, who therefore murdered their father and strove with Deiphontes, with results variously described by different authors (collected by Stoll in Roscher's *Lexikon* s.v.).

H. J. R.

DEIPYLE, see **ADRASTUS**.

DELIA, the name under which Plania was celebrated in the love-poetry of Tibullus (q.v.).

DELIAN LEAGUE, THE, is the modern name applied to the confederacy organized in 478-477 B.C. to continue the naval war against Persia. As a *symmachia* (q.v.) it resembled the Peloponnesian League in leaving the determination of its policy to an assembly, and in entrusting the leadership in war to one State, Athens. Yet it was organized without a break between Athens and Sparta, and was meant to be neither a counterblast against the Peloponnesian League nor an instrument of Athenian power. Its membership eventually rose to c. 200 States. The Assembly met at Delos, and Athens theoretically had no predominant influence in it, but, like other States, cast one vote only. An advance over the older league was the existence of a treasury, which was kept at Delos till 454, when it was transferred to Athens. Members supplied either ships or money, and the money was used by Athens for the maintenance of the fleet. The original assessment of Aristides is said to have called for 460 talents a year, but details concerning collections are available only for the period beginning 454. Actually the position of Athens was stronger than indicated by the constitution. The smaller States followed her lead in the Assembly and the larger States that opposed her were outvoted. Furthermore, the League had been organized as a permanent offensive and defensive alliance, so that secession could be treated as rebellion. Revolting States, when subdued, were by treaties made into subject allies. Gradually most members lost their independence, meetings of the Assembly were discontinued, the treasury was transferred to Athens, and the League was transformed into an empire.

ANCIENT SOURCES: G. F. Hill, *Sources for Greek History*¹ (1907), ch. 1; add Thucydides 3. 10-11 (representation in assembly).

MODERN LITERATURE: Accounts in histories of Greece and handbooks of constitutional antiquities; especially J. B. Bury, *History of Greece*² (1913), 328 ff. The constitution and purpose of the League are discussed by Larsen in *Harv. Stud.* 1930. On the finances of the League see B. D. Meritt, H. T. Wade-Gery, and M. F. McGregor, *The Attic Tribute Lists*, vol. i (U.S.A. 1939). J. A. O. L.

DELICTUM, see LAW AND PROCEDURE, III. 4.

DELOS, a small island regarded as the centre of the Cyclades. According to legend the birthplace of Apollo and Artemis, it was from earliest historical times sacred to Apollo, who was honoured by song, dance, and games in a festival (*panegyris*), to which came men and women from the islands and coasts of the Aegean as early as the eighth century (cf. *Homeric Hymn to Apollo*). The island had once been occupied, according to Thucydides, by Carian sea-rovers, who were driven out by Minos of Crete. The pre-Hellenic inhabitants, of whose occupation stone huts on Mt. Cynthus afford evidence, were displaced by colonists from continental Greece before 1000 B.C., and the island was already famous in the *Odyssey*. Its history proper begins in the sixth century, when Pisistratus, to further his control of the Cyclades, purified Delos, and the Samian tyrant Polycrates extended his patronage.

2. When the invading Persian fleet arrived in 490 Datis respected the sanctuary. In 478-477, when a maritime league was formed to ensure Greek independence, Delos was naturally chosen as seat of the common treasury (see DELIAN LEAGUE). On the removal of the treasury to Athens Delos came under more direct Athenian control, but did not pay tribute. In 426 Athens again purified the island, and Nicias inaugurated a quinquennial festival in a *theoria* of great pomp. After the Peloponnesian War Athenian control of Delos was interrupted until the formation of Athens' second maritime confederacy (378/7), when the administration of the Delian temples was reorganized under Athenian officials called *Anphictiones* (cf. 'Sandwich Marble', *IG* ii. 1635). When Athens lost her sea power, her administration of Delos ended (314).

3. Henceforth for a century and a half the sanctuary was administered by local officials known as *hieropoioi*, while Egypt and Macedon contended for hegemony of the Aegean. During this period Delos enjoyed the usual institutions of a city-state. For the supervision of the temple of Apollo, and all edifices within his *temenos*, the *Ecclesia* entrusted its powers to the *hieropoioi*, who ranked next to the *Archon*, the head of the State. The first political relationship of the free Delians was with the League of Islanders (i.e. Cyclades), the formation and protection of which are attributed by some to the Ptolemaic kings. The federal treasury—perhaps the seat of the League—was at Delos, where federal festivals were from time to time instituted in honour of the Hellenistic princes who happened to be paramount in the mid-Aegean. Delian monuments of this period reveal the pretensions not only of the Egyptian and Macedonian but also of the Pergamene and Syrian kings. Early in the third century Delos was a centre of the corn-trade of the Aegean; buyers came from Macedonia and other northern places. A colony of foreigners was growing up, foreign banking-firms flourished; the occurrence of Italian names indicates commercial bonds with south Italy. Delos enjoyed a kind of neutrality; but at last she presumed to support Perseus of Macedon against Rome, and after his defeat at Pydna Rome handed over the island to her ally Athens, who removed the old inhabitants and sent her cleruchs to replace them (166). To damage Rhodian trade, Delos was made a free port.

4. In the third great period of Delian history the chief annual magistrate of the Athenian colony bore the title *Epimeltes*. After a servile outbreak (c. 130) there was a wider organization of the Athenians and foreign traders.

Already there existed guilds (*κοινά*) of Italian residents (*Hermaistai*, or *magistrei Mirquiri*, and others), also powerful Oriental guilds (e.g. *Poseidonistai* of Berytus). Traders' vessels filled the Sacred Harbour and the Merchant Harbour, and slaves constituted one of the chief commodities of exchange. Decline, however, set in after Archelaus, general of Mithridates of Pontus, sacked the island in 88; and in 69 the pirates, allies of Mithridates, attacked Delos, now a Roman naval centre, and enslaved the inhabitants. After Pompey suppressed the pirates some measure of prosperity returned; but before the end of the century the trade-routes had changed, and Delos was soon abandoned.

5. The archaeological exploration of Delos, carried on by the French School (Athens) from 1873, has revealed the remains of public buildings—temples, porticoes, theatre, gymnasium, etc., also of warehouses and private houses; these, with a wealth of inscriptions, make a notable addition to the knowledge of Greek civilization.

Rostovtzeff, *CAH* viii, ch. 20, § 3 (with full bibliography); id. *Social and Economic History of the Hellenistic World* (1941). W. A. L.

DELPHI is situated on the lower southern slopes of Parnassus, some 2,000 feet above the Gulf of Corinth. It was the most ancient and sacred sanctuary in Greece. It attained importance as early as 1600 B.C., for a Minoan fountain spout of that date was found near the temple, and it was also occupied in the Mycenaean period.

For the history of the oracle, see the following article. The sanctuary consisted of a *temenos* enclosed by a wall. Inside it were the monuments dedicated by the States of Greece to commemorate victories and public events, together with some twenty 'treasuries' (q.v.), a small theatre, and the main temple of Apollo (q.v., para. 4) to which the Sacred Way wound up from the road below. The original temple, a primitive and small building, was destroyed by fire in 548. Objects of value saved from it at this time have recently (1939) been found buried under a stone of the Sacred Way. The second temple was completed in 510, largely with the help of donations from the Athenian family of Alcmaeonidae (q.v.), then living at Delphi in exile. This new temple (partly described in the *Ion* of Euripides) was destroyed by an earthquake in 373. A new temple was built by subscription, its pedimental sculptures being made by two Athenians, Praxias and Androsthenes. This building survived until Roman times and was repaired by Domitian. The *adyton* or Holy of Holies, where the priestess gave the oracles, was below the south-west corner of the temple. A stone known as the *omphalos* (q.v.), the reputed centre of the earth, was found here; it bore the inscription ΓΑΖ (the 'Stone of Earth', the original deity of the oracle), and is dated c. 600 B.C. A marble *omphalos* of Roman period has also been found.

The sanctuary was attacked by the Persians in 480 and by the Gauls in 279, but suffered little damage. Nero despoiled it of 500 statues. Julian attempted a revival of the sanctuary, but the oracle announced to him its own decline, and in A.D. 390 it was finally closed by Theodosius in the name of Christianity. Excavations were begun by French archaeologists in 1880, when the village of Kastri was removed from the site to its present position.

F. Paulsen, *Delphi* (1920); E. Bourguet, *Les Ruines de Delphes* (1914); P. de la Coste-Messelière, *Au Musée de Delphes* (1936). S. C.

DELPHIC ORACLE, in classical times the supreme oracle of Greece, presided over by Apollo. Its site was supposed to be the centre of the earth, marked by the sacred navel-stone (*omphalos*, q.v.). It had been a holy place from remote antiquity (remains of pre-Greek

sacrifices have been found), and the presiding genius was originally an earth-spirit. Apollo was recognized by the Greeks themselves as a late-comer (Aesch. *Eum.* 1 ff., etc.). Aeschylus' account emphasizes the peaceful nature of the transfer to Apollo, but the legend of his killing a chthonian monster (*Hymn. Hom. Ap.*, Eur. *IT* 1244 ff.) suggests a different and more plausible tradition; the ecstasies and sex of the Pythia may be due to the original chthonian nature of the cult (but cf. K. Latte, *Harv. Theol. Rev.* xxxiii (1940), 9 ff.).

2. Responses were given by the Pythia, a young woman (in later times elderly, Parke, op. cit. infra, 257), in a state of frenzy induced by means not now ascertainable with certainty. Faith in the power of the god to take possession was complete, and the consequent emotional suggestion would doubtless add powerfully to the effect of such practices as chewing bay-leaves (Apollo's plant) or drinking holy water. Excavation has rendered improbable the post-classical theory of a chasm with mephitic vapours. The riddle of the prophecies is not entirely soluble. Efficient accumulation and use of information can account for much, but there remain exceptions, such as the response about the wisdom of Socrates, whose explanation will always be a mystery. After purification and sacrifice, inquirers approached the oracle in an order determined partly by lot. Right of precedence might be granted as a privilege (*προπαιρεία*, Farnell, *Cults* iv. 214 n.). A male prophet put their question and interpreted the Pythia's answer, commonly in verse. Advice was sought both by private individuals (e.g. concerning marriage, childlessness, commercial enterprises) and States. Slaves were manumitted by dedication to the Delphic god.

3. In religion Delphi gave answers on all questions of cult, fostering the worship of Olympian and local deities impartially and adopting a generally conservative attitude on religious questions. The best way to worship was 'according to ancestral custom' or 'the City's custom' (Parke, 326, n. 2). It seems, however, to have welcomed Dionysus—with whose ecstatic worship Delphic prophecy has been thought to have much in common—and assisted in the propagation of his cult. At Delphi itself Dionysus was received into partnership, his grave was shown in the inner sanctuary, and for three winter months Apollo was believed to hand over the shrine to Dionysus and retire to the far north. The trieteric festivals of Dionysus at Delphi were orgiastic, and women were officially sent from the Greek States (including Athens) to take part in them. An authority on all cult-practices, Apollo was above all the god of *katharsis*, especially purification after homicide, from which the primitive conception of automatic *miasma* never entirely disappeared.

4. Politically, Delphi came to the fore in the great period of colonization, its advice being regularly sought on the choice of site and patron deity. Tradition assigned many laws of Greek cities also to the god, e.g. the constitution of Lycurgus at Sparta. Other political prophecies, with a few striking exceptions difficult to explain, suggest extensive knowledge of the situation and a leaning to conservatism which did not exclude attempts (not always successful) at a politic adaptation to changing conditions. Thus in spite of aristocratic sympathies, Delphi is said to have foretold the power of most of the tyrants (Pisistratus is an exception), it favoured Croesus until his fall, discouraged Greek resistance to Persia, was pro-Spartan in the Peloponnesian War, supported Philip of Macedon.

5. Questions of individual morality, which were left untouched by the city-states, deeply interested the oracle, and it seems to have shown great firmness on moral issues. It sponsored the notion that purity was a matter, not only of ritual, but also, and primarily, of the spirit, and that the intention might be more important than the

deed. (Cf. esp. the story of Glaucus, Hdt. 6. 86, and other examples in Parke, 386 ff.) In this it reached the high-water mark of religious ethic in pagan antiquity. The famous exhortations carved on the temple, though not especially exalted in tone, were also moral precepts—'Know thyself' and 'Nothing too much'.

6. The importance of Delphi is above all that it provided a meeting-place for the otherwise isolated city-states of Greece. The unique position and universal prestige which it enjoyed, and which were necessary if it was to discharge this function, cannot now be completely accounted for, but besides the impressiveness of its prophetic method (as contrasted with 'sane' procedures like the inspection of victims or the flight of birds), one may mention the attraction of its famous Panhellenic Pythian games (founded after the First Sacred War about 590 B.C.) and its connexion with a powerful religious league of Northern States, the Delphic Amphictiony (see AMPHICTIONIES). The early history of the Amphictiony is obscure, but it seems certain that its original centre was farther north, and Delphi was probably not included until the middle of the seventh century. In the fifth century, with the recognition of Delphi as a common centre of worship, the Amphictionic Council became representative of the Greek States as a whole (Parke, 193). Macedon was admitted to membership after the assistance given by Philip against the Phocians in the Third Sacred War (355–346 B.C.).

7. In Hellenistic times the influence of Delphi and of the League rapidly declined, though the new kings thought it due to their royalty to flatter the oracle, which was still a centre of information for the Greek world. Delphi was seized by the Aetolian League about 300 B.C. and suffered later from barbarian invasions. Its treasure was unscrupulously used by Sulla. Under the Roman Empire it enjoyed a somewhat artificial revival in Hadrian's time, but astrology provided an alternative source of prophecy and there were rival oracles. The decline of Delphi was already almost complete when Christianity became the official religion under Constantine.

On the general subject of oracular prophecy, see ORACLES, DIVINATION.

For a full account of the Delphic oracle and bibliography, see H. W. Parke, *A History of the Delphic Oracle* (1939); also K. Latte, *PW* xviii. 839 ff. W. K. C. G.

DEMADES (fl. 350–319 B.C.), Athenian politician. A brilliant orator and diplomat, who recognized that Athens must come to terms with Macedon and did not scruple to stand in Macedonian pay, he rendered good service after the battle of Chaeronea, when he checked the intransigence of the Athenian people, rebuked Philip's insolence, and secured honourable terms of submission for Athens. After Philip's death he survived an impeachment by Hypcrides, and when Alexander marched into Greece he again mediated between Athens and Macedon (335). During Alexander's absence in the East he remained in power, together with Phocion; he prevented Athens from supporting King Agis III (q.v.) against Macedon, and he procured the deification of Alexander. Accused of receiving a bribe from Harpalus (q.v.), he offered no defence and was fined; and after Alexander's death he was disfranchised. Reinstated in 322 to avert Antipater's attack on Athens, he used his influence to procure the death of Demosthenes and Hyperides. In 319 he was detected by Cassander in an intrigue with Antigonos, and was summarily executed by him while on an embassy to Macedonia. Nothing survives of his speeches (which were not committed to writing) except some picturesque phrases, e.g. 'Macedon without Alexander would be like the Cyclops without his eye'. A fragment *ὅτι τῆς δωδεκερίας*, included in the oratorical Corpus, is certainly not by Demades.

DEMARATUS, a Spartan king, c. 510-491 B.C. He obstructed his colleague Cleomenes I (q.v.) on the invasion of Attica (506), and again when he prevented the arrest of the medizing party at Aegina (491). Dethroned on a false charge of illegitimacy by Cleomenes, he fled to King Darius. He accompanied Xerxes in 480, possibly in hopes of recovering his throne from the victorious Persians, and repeatedly warned him (according to Herodotus) that Sparta would infallibly resist him. Rewarded for his (unspecified) services with four cities in Asia Minor, he resided there until his death, many years later. A. M. W.

DEMETER (Δημήτηρ), the Greek corn-goddess, identified in Italy with Ceres (q.v.). It seems certain that the last two syllables of her name mean 'mother', but the first is more difficult. The ancient explanation, that δη- is a by-form of γη- and she is the 'earth-mother', breaks down owing to the absence of evidence of any such by-form of that or any other word beginning with γ. More likely, especially in view of Nilsson's demonstration (see below) that her most famous cult turns wholly on the processes connected with corn, is the suggestion of Mannhardt (see Farnell, *op. cit. infra*, 29 f.) that it is to be connected with ζέα, spelt, although this also is dubious, seeing that the form δηαί is attested (by Hesychius, s.v.) only as the Cretan for 'barley', and Demeter is not particularly connected with Crete, and the Dorian and other dialects call her Δαμάτηρ, indicating an *a*, not an *e* in the original form of her name.

2. Of her functions, however, there is no doubt. She is the goddess who governs the fruits of the earth, especially, though not quite exclusively, bread-corn. She would appear to have thrown off very early a younger double of herself, the 'Virgin' (Κόρη), who is regularly (not quite invariably) worshipped with her, and seems to be essentially the power which is in the corn itself and appears and disappears with it. Being thus connected with very important happenings at the surface of the earth, it is in accordance with a common tendency of Greek and other religions that she should become associated also with the depths of the earth; so Demeter becomes in mythology the mother-in-law, Kore (Persephone) the wife, of the death-god. It may reasonably be conjectured that originally the latter was the consort, not of Hades, but of Pluton, god of the wealth (especially the wealth of corn) which the earth produces. The story, first found in the Homeric Hymn to Demeter, is that Hades carried off Kore; Demeter, after vainly searching for her daughter, wandered to Eleusis and there was received, in disguise as an old woman, into the house of Celeus the king, to nurse his son. She put the child in the fire every night to burn his mortal nature away, but was interrupted by Metanira, Celeus' wife, and so hindered from making him immortal as she had planned. She then revealed herself to the Eleusinians, who built her a temple. Meanwhile Zeus, to persuade her to come back to Olympus and to let the earth bring forth, had Kore returned to her; but Kore, as she had eaten some pomegranate-seeds in the other world, could not return entirely, but spends some part of every year underground. As Nilsson (*ARW* xxxii. 79 ff.) points out, the myth agrees well with the historical celebration of the Eleusinian Mysteries (see MYSTERIES) and with Greek climatic conditions. The Great Mysteries are in Boeotia, 16-17 and 19-22, and connected with the return of Kore; the time is early autumn, when the fields are growing green again after the drought of summer. The Lesser Mysteries of Agrae are in Anthesterion; it is spring, and they lead up to the summer harvest and the following period of dryness, during which Kore, the young corn or seed-corn, is indeed under the earth, stored away in the great grain-jars. That the ritual of the Mysteries (which at Eleusis, are even older than Demeter, being

pre-Hellenic) had to do with the death and rebirth of the corn and that in time hopes of human immortality came to be read into this ritual is fairly clear, but the details remain extremely obscure (see bibliography below). Eleusis claimed to be the centre from which knowledge of agriculture sprung, Demeter having sent Triptolemus the Eleusinian to teach the rest of mankind (Callimachus, *Cer.* 20-2; *Ov. Met.* 5. 645; and many authors and representations in art).

3. Of other festivals of Demeter, one of the most famous and widely spread was the Thesmophoria (q.v., to Demeter Thesmophoros, 'bringer of treasures'). In Athens it was held on Pyanopsion 11-13, and consisted of a series of rites, largely magical, performed by women for the fertility of the soil; connected with it was the ritual of the Scirophoria (q.v.), on Scirophorion 12.

4. In Arcadia Demeter appears as the consort of Poseidon (probably in his capacity of 'earth-holder' or husband of Earth, γαιήχος, see POSEIDON). The Black Demeter of Phigalia and the Demeter Erinyes of Thelpusa were both said to have been mated with by Poseidon in horse-shape, and the former was shown horse-headed (Paus. 8. 25. 4 ff., 42. 1 ff.), while it was doubtful if the child she bore was a foal or the local goddess Despoina. That a darker side of her nature was stressed here is clear from her titles. However, even the normal Demeter could be very formidable, since being a giver of plenty she could also bring famine. When Erysichthon (q.v.) offended her it was insatiable hunger that was his punishment. Another trace of her tendency to become a goddess of the depths of the earth and not simply of the corn is shown in the Athenian use of Δημήτριοι, 'Demeter's people', as a euphemism for the dead (Plut. *De fac.* 943b).

5. Since she is a mother-goddess, the question who her husband is was never consistently answered. In Arcadia (see above) he was Poseidon; according to Hesiod (*Theog.* 912-13) Zeus was Persephone's father; a story, probably a very old ritual myth, in the *Odyssey* (5. 125 ff.) says that she lay with Iasion (cf. DARDANUS) in a ploughed field, and that when Zeus heard of it he killed Iasion with the thunderbolt. To be the consort of a mother-goddess is very dangerous, cf. ANCHISES. Hesiod adds (ibid. 969 ff.) that their child was Plutus (q.v.). This is characteristic for all such goddesses; the important thing is that they should be fertile, not that they should be wives.

Of literature on the subject, only a small selection can be given. Farnell, *Cults* iii. 29 ff. is the best collection of facts concerning her cult; add Deubner, *Altische Feste*, 40 ff., for her Attic, Nilsson, *Griechische Feste*, 311 ff., for her non-Attic festivals. H. J. R.

DEMETRIAS, a city of Magnesia on the Gulf of Pagasae. Formerly located below Mt. Pelion, it is now proved to have adjoined Pagasae on the western shore of the inner bay. Demetrius Polioretetes founded it c. 293 B.C. by a 'synoecism' of many small Magnesian towns; he built massive fortifications and made the best use of an admirable site, so that it became important as a military and commercial centre. Though occupied by a Macedonian garrison as one of the 'fettlers of Greece', it enjoyed some measure of self-government. Liberated from Philip V by Rome, Demetrias supported the Aetolians and Antiochus in 192-191 and was accordingly restored to Macedonia, under whose control it remained until the overthrow of Perseus. After a second liberation it gradually declined.

The adjacent sites of Demetrias and Pagasae have been more thoroughly investigated by archaeologists than any in the interior of Thessaly.

F. Stählin and E. Meyer, *Excavation Demetrias* (1934). H. D. W.

DEMETRIUS (1), writer of Old Comedy (Diog. Laert. 5. 85). His *Σκεψία* may be assigned to c. 420 B.C.

CGF i. 214-6; CAF i. 755-6.

DEMETRIUS (2) of Phalerum (b. c. 350 B.C.), son of Phanocrates, Athenian writer and statesman, escaped death as a pro-Macedonian in 318, and was made absolute governor at Athens by Cassander. During his ten years' *strategia* he limited military and other service, passed sumptuary laws, and established νομοφύλακες. When Poliorcetes took Athens (307), D. fled to Boeotia, and was later librarian at Alexandria (297). He died in disgrace under Philadelphus.

WORKS: moral treatises, popular tales, declamations, histories, literary criticism, rhetoric, and collections of letters, fables, and proverbs. Though an outstanding orator, D. produced mainly a superficial amalgam of philosophy and rhetoric. He assisted his fellow Peripatetics, and under him Athens enjoyed peace.

FGH ii B 228. W. S. Ferguson, *Hellenistic Athens* (1911).

F. W. W.

DEMETRIUS (3) I of Macedonia, *Poliorcetes* (336–283 B.C.), son of Antigonos I, married (321) Antipater's daughter Phila. His first important campaign was against Eumenes (317–316); his first independent command, against Ptolemy, ended in disaster at Gaza (312). Nevertheless he became henceforth the brilliant instrument of his father's policy of reuniting Alexander's empire. His best performances were in Cyprus (306), which he won from Ptolemy by the naval victory of Salamis, and in Greece (307 and 304–302), where his enthusiasm (perhaps genuine) for Greek autonomy and his revived 'League of Corinth' achieved more than many victories. His famous siege of Rhodes (305) was a failure, and would have been unimportant politically had it succeeded; it repays study as a military *tour de force* and an apt expression of 'the Besieger's' personality.

The defeat of Ipsus and the death of Antigonos (301), for which Demetrius, by his impetuosity, was partly to blame, destroyed Antigonos' empire in Asia, and reduced Demetrius' power to a precarious thalassocracy. But he kept a foothold in Greece, and after Cassander's death (297) and the murder of two kings and the queen-mother, he had (through Phila) the best claim to the throne of Macedonia, and he was accepted as king by the army (294).

He was always a conqueror rather than a ruler, and age taught him no wisdom. While he established his control over Greece (293–289), he planned to regain his father's empire in Asia. He possessed the finest man-power and the greatest fleet; but the Macedonians, who wanted peace not war, deserted to Lysimachus and Pyrrhus when they simultaneously invaded Macedon; and Demetrius had lost his kingdom (288). He led into Asia no 'Grand Army', but a small force of mercenaries (287). He was trapped in Cilicia and surrendered to Seleucus (285), who hospitably encouraged him to drink himself to death (283). 'Bonis initiis malos euentus habuit.'

Diodorus, bks. 19, 20; Plutarch, *Demetrius*. W. W. Tarn *CAH* vi, ch. 18; vii, ch. 3.

G. T. G.

DEMETRIUS (4) 'the Fair' (ὁ καλός), son of Demetrius (3) Poliorcetes, and half-brother of Antigonos Gonatas. He was sent by Antigonos to take Cyrene from Ptolemy II (c. 255 B.C.). He gained Cyrene without opposition, but was murdered soon after at the instance of Berenice II (q.v.).

M. C.

DEMETRIUS (5) II of Macedonia (c. 276–229 B.C.), son of Antigonos II and Phila, defeated Alexander of Epirus and dethroned him in 264 (Justin. 26. 2. 11). On succeeding Gonatas (see ANTIGONOS 2) in 239 he divorced Stratonice, Antiochus I's daughter, who had no male issue, and married an Epirote princess, Phthia, also called Chryseis. (His marriage to Nicaca, Alexander of Corinth's widow, was probably unconsummated: Plut. *Arat.* 17.) The Aetolian League, which sought to annex Epirote Acarnania, now united with Achaea against Macedon

('Demetrian War'). Active at first in the west, Demetrius saved Acarnania, but lost Atintania; he assisted Argos against Achaea, and detached Boeotia, part of Phocis, and Opuntian Locris from Aetolia; in 233 his general Bithys defeated Aratus. About this time, however, the Epirote monarchy was overthrown and the new republic joined the Leagues; Demetrius allied himself with Agron of Illyria to protect Acarnania, but was called north by a Dardanian inroad. Defeated, he died in 229, leaving one son, Philip, by his wife Phthia.

A shadowy figure, Demetrius by his lack of vigour brought the Macedonian monarchy to a low ebb.

Plut. *Aratus*; Justin. bk. 28. V. Costanzi in *Saggi di Storia antica offerti a G. Beloch* (1910); K. J. Beloch, *Griech. Gesch.* iv (1928); P. Treves, *Rendiconti Accademia Lincei* 1932.

F. W. W.

DEMETRIUS (6) of Pharos (d. 214 B.C.) betrayed Corcyra to Rome (229) and became a dynast in north-west Illyria. He helped Antigonos at Sellasia (222). In 220, breaking the treaty with Rome, he sailed past Lissus, to ravage the Aegean islands. Pursued by the Rhodians, he sold his assistance against Aetolia to Macedon. When expelled by the Romans (219), he fled to Philip V, whose anti-Roman policy he mainly inspired. In 215 he urged Philip to seize Ithome, and later perished in a rash expedition against Messene. Polybius (3.19. 9) characterizes him as foolhardy, and wholly without judgement.

Polybius (the only reliable account). M. Holleaux, *Rome et la Grèce* (1921).

F. W. W.

DEMETRIUS (7) of Bactria (d. 167 B.C.), eldest son of Euthydemus (q.v. 2) and his half-Seleucid queen (see DIODOTUS 1), succeeded to the Bactrian throne about 190 B.C. He annexed the Seleucid provinces east of the Persian desert, and soon after 184 invaded northern India to restore the native Mauryan Empire under his own rule. Making skilful use of the political position, which threw the Buddhist world on to his side, he almost succeeded; his general Menander captured the capital Pataliputra (*Patna*), while Apollodotus occupied Kathiawar, Barygaza (*Broach*), and probably Ujjain; and he began to rebuild Taxila as his Indian capital. He was consciously imitating Alexander, and intended, following his ideas, to make of his empire a kind of partnership of Greek and Indian, typified by his bilingual coinage. Many names of the Greek satrapies in India have been recovered; he founded three name-cities, Demetrias in Arachosia, in Sind (*Patala*), and on the Oxus (*Termedh*). But many Bactrian Greeks disliked his Indianizing policy; in 168 Eucratides, cousin of Antiochus IV, invaded Bactria and raised a revolt; next year Demetrius was killed, and Bactria with its Iranian provinces fell to Eucratides.

Cambridge History of India i, chs. 17, 22; W. W. Tarn, *The Greeks in Bactria and India* (1938), passim.

W. W. T.

DEMETRIUS (8) I SOTER of Syria (187–150 B.C.), second son of Seleucus IV. As a hostage in Rome he saw the kingdom pass first to his uncle (Antiochus IV) and then to his cousin (Antiochus V). In 162 he escaped and won the throne for himself. He crushed the rebel general Timarchus in the East and reconquered the insurgent Jews in Palestine (161). His ability made him feared by neighbouring Powers and suspect to Rome (though the Senate had recognized his title in 160). He died in battle against a pretender, Alexander Balas, whom the kings of Pergamum and Egypt had suborned against him.

G. T. G.

DEMETRIUS (9) II NICATOR of Syria (c. 161–126 B.C.), eldest son of Demetrius I, reigned 145–141 and 129–126. In 141 he made war upon Parthia, but was captured, and did not obtain his release until 129. His reign well illustrates the difficulties of the later Seleucids. He won his kingdom from one pretender, lost part of it almost immediately to a second, and was finally murdered after losing the remainder to a third.

G. T. G.

DEMETRIUS (10) of Seepsis in the Troad (b. c. 214 B.C.), grammarian, archaeologist, and polymath, wrote 60 books on the 60-line Trojan catalogue (*Il.* 2).

DEMETRIUS (11) **IXION** (2nd c. B.C.), a grammarian, contemporary with Aristarchus, who succeeded from Alexandria to Pergamum and disputed Aristarchan textual principles. He also compiled an Atticist Lexicon.

DEMETRIUS (12) **LACON** (2nd c. B.C.), Epicurean, pupil of Protarchus of Bargylia and younger contemporary of Zeno of Sidon. He criticized Carneades' attack on the possibility of proof, and expounded Epicurus' doctrine of time. Ed. W. Crönert, in *Kolotes u. Menedemos* (1906), p. 100, and V. De Falco (1923).

PIV iv. 2842.

W. D. R.

DEMETRIUS (13) (probably 2nd or 1st c. B.C.) compiled in Greek a short guide to letter-writing which enumerates twenty-one types of letter, with one or two examples of each type (ed. V. Weichert, 1910).

DEMETRIUS (14) of Magnesia (fl. 50 B.C.), friend of Atticus, wrote in Greek on concord (*Περὶ ὁμόνοιας*), and on homonymous towns and writers; much of his biographical detail was transmitted to Diog. Laert.

FHG iv. 382.

DEMETRIUS (15), the unknown author of a Greek treatise *On Style* (*Il. ἐμπνεύσις: De Elocutione*), of uncertain date. That he was not Demetrius Phalereus (2 above), the traditional author, would seem certain: and as its date is probably best assigned to the first century A.D. (Roberts, ed. 49 ff.: see, however, Kroll, *Rhet.*, § 20), the attempt to identify him with Demetrius (q.v. 16) of Tarsus (Roberts, ed. Loeb, 272-9) is worthy of note. The work, which is of considerable value, embodies Peripatetic teaching, discusses diction and its arrangement, four types of style and the epistolary art, and probably forms part of the first-century movement for establishing classical standards in literary art.

Editions: L. Radermacher, 1901; W. Rhys Roberts, 1902; W. Rhys Roberts (Loeb), 1927. E. Orib, *Demetrios vom Stil*, 1923 (German translation, with bibliography). J. W. H. A.

DEMETRIUS (16) of Tarsus (late 1st c. B.C.), a grammarian, one of the characters in Plutarch's *De defect. orac.*, where he is said (c. 2) to be on his way home from Britain to Tarsus. Perhaps identical with a D. who dedicated two tablets with Greek inscriptions, now in the York Museum; and possibly also Demetrius (15). See W. Rhys Roberts, in Loeb *Demetrius*, pp. 272-9.

DEMETRIUS (17) the Cynic lived in Rome under Gaius, Nero, and Vespasian, and belonged to the strongly anti-monarchical branch of the Cynic school. He was exiled to Greece under Nero (A.D. 66) but returned in the time of Vespasian.

PIV iv. 2843.

DEMETRIUS (18) of Troezen (probably 1st c. A.D.), wrote works on literary history (*Ath.* i. 293). The only known title is that of his work on philosophers, *Κατὰ σοφιστῶν* (Diog. Laert. 8. 74).

DEMETRIUS (19), Jewish historian, see **JEWISH GREEK LITERATURE**.

DEMETRIUS, see also **TRICLINIUS**.

DEMINUTIO CAPITIS. The civil capacity in Roman law depends on three elements: freedom (*libertas*), Roman citizenship (*civitas*), and membership in a

Roman family (*familia*). The loss of one of these three *status* effects the loss of the *caput*, the civil capacity (*capitis deminutio*). *Caput* signified originally the individual person by which a group of persons, *populus* or *familia*, has been diminished and not directly the civil capacity (cf. *Inst. Inst.* i. 16. 9) as in the classical meaning of the term. Classical Roman law distinguished three degrees of *deminutio capitis*. (a) *Maxima*, when the individual lost his freedom (by enslavement). This involved the further loss of his *civitas* and family, for only a free man could be *civis* and member of a family. (b) *Media* (or *minor*), when a person has lost the citizenship with the consequent dissolution of family ties (this happened in the case of *aquae et ignis interdictio*, and later with *deportatio*, or when a Roman citizen became *peregrinus* or Latin); the *libertas*, however, remained untouched. (c) *Minima*, when somebody has lost the membership of his family (*mutatio familiae*). In this case it is indifferent whether he enters at the same time another family or becomes a head of a family himself. The *deminutio capitis minima* occurs with *adoptio* (q.v.), *adrogatio*, *emancipatio*, in *manum conventio*, *datio in mancipium*. The origin of *deminutio capitis* is obscure. The rigid organization of the ancient Roman family explains the fact that in ancient times *deminutio capitis minima* was treated on a par with the two other forms, in spite of essential differences which distinguished the legal institutions from which the various degrees of *deminutio capitis* originated. In later development the effects of *deminutio capitis maxima* and *media* remained unaltered, except in so far as the principles of the *ius gentium* moderated the effects of *deminutio capitis media*. But the consequences of *deminutio capitis minima* (dissolution of agnatic ties and therewith the suppression of the rights of inheritance and guardianship, extinction of debts, of personal servitudes and partnership, failure of will, and so on) were considerably diminished already in the Classical period, together with the weakening of the institution of the Roman family. These reforms were due to the praetorian law, in which the emphasis on cognatic relationship was one of the chief features. In Justinian's law *deminutio capitis minima* lost its actuality for the most part.

DEMIURGOI (δημιουργοί), 'public workers', are in Homer such independent craftsmen as metal-workers, potters, and masons, and also seers, doctors, bards, and heralds (though not beggars! *Od.* 13. 383). Plato and Xenophon use the word thus. But in pre-Solonian Athens they comprised all who gained their livelihood other than from the soil, perhaps including wage-earners. They enjoyed a short-lived right of supplying two of the archons (580 B.C.) (*Arist. Ath. Pol.* 13. 2); they do not subsequently appear as a separately organized class. As the highest, often eponymous officers, *demurgoi* appear in several States; though perhaps of greatest antiquity in Elis and Achaia, they are most often mentioned in Dorian records. Their exact function varied from State to State. In the Achaean League they formed a council of ten, who assisted the general; the Arcadian League imitated this organization, based originally on local representation, as also in Elis, where the *demurgoi* formed a special caste. *Demurgoi* appear in the Argolid, Megarid, Messenia, Thessaly, Delphi, Locris, Phocis, Crete, and several Aegean islands; examples from Cilicia, Pamphylia, and Phidia date from Roman times.

Evidence mainly epigraphical. V. v. Schoffer, *PIV* s.v. 'Demiurgoi'; M. Guarducci, *Journ. Phil.* 1932.

DEMOCEDDES of Croton (6th c. B.C.), one of the most famous physicians of his time, practised first in Aegina and Athens, then at the court of Polycrates of Samos. After the murder of Polycrates in 522 B.C. he won much favour at the court of Darius, but later returned to Croton; on the defeat of the aristocrats by the democrats under Theages he fled to Plataea. He married a daughter of the wrestler Milon.

Testimonia in Diels, *Vorsokr.* 5 i. 110-12. *PIV* v. 132. W. D. R.

DEMOCHEARES (c. 360-275 B.C.), Athenian orator and democratic statesman, who rose to power after the expulsion of Cassander's agents in 307. During the 'Four Years' War' against Cassander (307-304) he fortified Athens and made an alliance with Boeotia. Exiled c. 291 (not earlier, as Plut. *Demetr.* 24 suggests), he returned in Diocles' archonship (288-287), and recovered Eleusis from Macedon. He secured financial aid from Lysimachus, Antipater, and Ptolemy; and in 280-279 (archon: Gorgias) had a decree passed honouring Demosthenes, his uncle. Sincere and patriotic, he was handicapped by doctrinaire political views.

His written works consisted of Speeches, and a History, mainly of Athens, in over twenty-one books, rhetorical and lacking in objectivity.

F. Jacoby, *FGH* ii. 79; *Lives of X Orators*, p. 851 (decree passed by Demochares' son Laches, 271-270); W. S. Ferguson, *Hellenistic Athens* (1911); K. J. Beloch, *Griech. Gesch.* iv. 2 (1928), 445. F. W. W.

DEMOCRACY (*δημοκρατία*, the 'rule of the people'). This term becomes common with Thucydides and Aristophanes, but is known to Herodotus (6. 43), and is presumed by Aeschylus (*Supp.* 604). The germs of Greek democracy grew from the fact that the *polis* (q.v.) derived from the old assembly of the armed people, and always preserved some traces of that origin. Beginning with Thersites (*Il.* 2. 212), there were always movements against the rule of the noble and the rich, as the lower ranks of free people tried to win full citizenship. The development to democracy may be first perceived in Hesiod and Solon. The suppressed and exhausted demos found leaders in tyrants or lawgivers, and during the sixth and fifth centuries B.C. most of the city-states achieved a more or less democratic constitution. The ideas of law, freedom, and equality began to predominate. (The expression for equality, *isonomia*, is sometimes used for democracy itself.) Athens became the most perfect and by its power the most influential democracy. Its ideal form is proclaimed by the Periclean Funeral Speech (Thuc. 2. 35 ff.).

The sovereign authority in democracy was the Assembly, which decided by majority. The principal task of the council (*see* BOULE) and the magistracies (q.v.) was to prepare measures and to carry them into effect. In the Assembly and popular courts almost the whole people participated, and as council and magistracies were continuously changing their personnel, the people became the actual ruler. Every citizen had full liberty of speech (*παρρησία*), but even the most extreme democracy could not dispense with leadership. In the fifth century one or more of the *strategi* (q.v.) ruled in fact, in the fourth century government was controlled by unofficial and irresponsible leaders ('demagogues'). That was one of the reasons for the decline of democracy. Other reasons were: the ease with which the Assembly could make and unmake laws, the strong individualism arising from the very ideals of freedom and equality, and the general mistrust of any person who grew powerful. Political philosophers always regarded democracy, and especially its 'deviation', ochlocracy, as a bad constitution.

Schoeffer, *PIV*, Suppl. i. 346 ff.; T. R. Glover, *Democracy in the Ancient World* (1927); G. Glotz, *The Greek City* (1929). V. E.

DEMOCRITUS, c. 460 (Apollodorus, ap. Diog. Laert. 9. 41; Thrasyllus, *ibid.*, gives 470) to c. 370 B.C., 'a young man in the old age of Anaxagoras, 40 years his junior' (D.L. l.c.), son of Hegesistratus (al. Athenocritus or Damasippus), a wealthy citizen of Abdera in Thrace, adopted the Atomic theory of his master Leucippus (q.v.), with whom his name is constantly conjoined. Accounts of his life, spent mainly in study, teaching, and writing as head of the school at Abdera, are legendary. In childhood magi left behind by Xerxes with his father taught him Oriental lore, and, as a young man he is said to have spent his patrimony in extensive travel in Egypt and the East. Contemporary tradition (Glaucan of Rhegium, ap. D.L. 9. 38) mentions a Pythagorean teacher, and association with Philolaus (Apollod. ap. D.L. *ibid.*) and Anaxagoras, as well as Leucippus (D.L. l.c. 34), is asserted on weak evidence. Demetrius of Phalerum (ap. D.L. l.c. 37) denies the story of his visit to Athens, where he saw Socrates but was unrecognized (fr. 116). Nicknamed 'Wisdom' (*Σοφία*) in his lifetime for his encyclopaedic learning, and, in later antiquity, 'the laughing philosopher' (*Γελασίνος*: cf. Hor. *Epist.* 2. 1. 194; Juv. 10. 33), he lived to a great age (90, Diog. 12. 11; 100-9, ap. D.L. l.c. 39, 43). Plato never mentions him, but Aristotle pays great attention to his views. Cicero praises his style for its ornateness, rapidity of motion, and clarity.

2. **WORKS**: Of an edition by Thrasyllus (1st c. A.D.) in tetralogies only the list of 70 titles (ap. Diels, A 33) and 200-300 fragments, mostly ethical, some spurious, survived from antiquity. D.'s writings covered almost every field: Ethics (Tetr. 1, 2); Physics, with Psychology and Logic (3-6); Mathematics and Astronomy (7-9); Music and Poetics (10, 11); Technical (12, 13); 'causes' (9 bks.); miscellaneous (9 bks.). The following are noteworthy philosophically: *On Cheerfulness* (*Περὶ εὐθυμίας* 2. 3), defining the moral ideal; the *Greater* and the *Lesser World Systems* (*Μέγας* and *Μικρὸς δικοσμος*, 3. 1, 2), the former ascribed to Leucippus; *On Mind* (*Περὶ νοῦ*, 4. 3) by Leucippus, and *On the Senses* (*Περὶ αἰσθησίων* 4. 4), both psychological; *Guarantees* (*Κρατερήρια*, 6. 1) and *On Logic or The Canon* (*Περὶ λογικῶν ἢ κανόνων*, 6. 3) which contained his theory of knowledge.

3. Ancient writers after Theophrastus failed to distinguish the respective contributions of Leucippus and D. to Atomist doctrine: D. probably supplied its refinements and elaborate theory of knowledge. The ultimate principles are atoms and void: the former—real or body—innumerable tiny particles, homogeneous in substance, infinitely various in shape and (D. adds) size, indivisible (*ἀδιαίρετα, ἄτομα*), solid, compact, and unmodifiable; the latter, infinite empty space (*τὸ κενόν*)—unreal, but existent. D. contrasts the Nothing (*οὐδέν*) with the Something (*δέν*)—where these invisible reals move in all directions, colliding and interweaving and forming things by aggregation. That D. held Epicurus' theory of an original perpendicular fall of the atoms due to their weight is, despite conflicting testimony (see Bailey, *op. cit.* inf., 130-2), unlikely. Burnet argues (*EGP* 341 f.) that Leucippus and D. considered weight a derivative property, a function of size within the 'Whirl'. Aristotle's complaint (*Metaph.* 985^b19) that they omitted to assign any cause for atomic motion is unfair. They took it as ultimate and eternal, referring it to 'necessity' (*ἀνάγκη*: Arist. *Gen. An.* 789^b2; D.L. 9. 45), or 'natural law'.

4. Differences in the shape, arrangement, and position of the atoms in compound bodies, by variously affecting the senses, generate the 'secondary qualities' of colour, sound, etc., which exist only by convention (*νόμῳ*, fr. 125). Soul (identified with mind) is material, composed of fine, round, fiery atoms distributed over the body. 'True-born' knowledge (*γνώμη γνησθή*) of atoms (and void) comes from direct contact with soul atoms, 'bastard' (*σκορτή*), via the senses. Both depend on

'idols' (εἰδωλα, δαίκελα) which objects shed. In vision an idol stamps an impression on the intervening air, which then appears, distorted, as an image in the pupil (ἐμφασις).

5. Aristotle's three-repeated remark (*De An.* 404^a27; *Metaph.* 1009^b12 f.; *Gen. Corr.* 315^b9) that D. 'found truth in sense-appearance' because he identified mind with soul (*De An.*), or thought with sense (*Metaph.*), must be understood from his own standpoint of belief in intelligibles (νοητά), not as implying a narrow sensationalism and ignoring D.'s account of true cognition of (physical) realities. D.'s own fragments (ap. Diels B 6-11; cf. 117), quoted by Sextus, show that he refused to take sense at its face value, and looked deeper for truth. His attack on the relativism of his fellow-townsmen Protagoras (Sextus ap. Diels A 114; Plut. *ibid.* B 156) proves him to be no sceptic.

6. Democritus shared Leucippus' theory of the generation of innumerable 'Worlds' by action of a 'whirl' which originates spontaneously (ἀπὸ ταυτομάτου) or by chance (ἀπὸ τύχης); this does not imply contingency, as Aristotle's criticism (*Ph.* 196^a24-28) might suggest, but rather the operation of undesigned and inscrutable mechanical causes (cf. Bailey, *op. cit.* inf. 139-43). His astronomy is reactionary, with its Milesian notion of a flat, disk-shaped earth.

7. Democritus' ethical fragments hardly afford evidence for a systematic theory of conduct. His ideal of inner contentment is lofty but self-centred, and his acute reflections on human life lack the moral depth of Socrates and Plato.

8. Aristotle thought highly of D., who approaches Aristotle himself in the volume of his writings and the breadth of his learning. The loss of his works is serious. Epicurean physics and modern materialism derive largely from him.

1. Ancient sources: Diels, *Vorsokr.*⁸ (Kranz, 1934-7); Ritter and Preller¹⁰ (1934). 2. Modern literature. (i) General: Zeller-Nesle, *Philosophie der Griechen* i. 2⁷ (1922) (Engl. transl. 1881); Th. Goedeckemeyer, *Epikurs Verhältnis zu Demokrit* (1897); H. Weiss CQ xxxii (1938; D.'s theory of cognition); PW v. 135. A. J. D. P.

DEMODOCUS, the minstrel of Alcinous (q.v.), blind but very gifted (*Od.* 8. 44-5; 62-4). He sings of the loves of Ares and Aphrodite (*ibid.* 266 ff., if genuine), is sent an honourable portion of meat by Odysseus at Alcinous' feast (474 ff.), and makes him weep with his songs of the Trojan War (521 ff.). H. J. R.

DEMOI (δῆμοι), in general, villages, like κῶμαι; of political importance at Athens since the legislation of Cleisthenes. He took the natural groups which formed townships in Attica, and gave them a part in both local and State administration. As local corporations they were responsible for certain police duties (such as were performed by the *astynomoi*, q.v., in the city); they could hold land and had their own cults and officials (a treasurer, priests, etc.); measures were passed at meetings of all the members (*demotai*), presided over by the *demarches*. Each deme registered its own members, youths being entered at a deme-meeting on the completion of their eighteenth year, and on these registers every citizen depended for recognition of his citizen-rights, though a rejected applicant might appeal to a dicastery. From each deme were chosen the *bouleutai*, in numbers proportionate to the membership of the deme; and the demes carried out financial duties on behalf of the State,

such as keeping a register of property held within the deme for the purposes of *eisphora* and *liturgies* (qq.v.). Metics (q.v.) also were registered in their demes of residence. In this way a census of the adult male citizen and metic population, of wealth, and of the production of cereals was kept.

As the demes were originally natural townships, they varied greatly in size. There were at least 150 in the fifth century (over 170 later); they averaged about 3 members each in the Boule, but Acharnae had 22 members (in the 4th c. at least), some from 10 to 15, many only one or two. Athens contained seven or eight demes within the walls and many others in the environs. After their first institution the demes ceased to be purely territorial, for a man belonged to his father's deme wherever he resided; with the drift of the country population to Athens and Piraeus they tended to develop from territorial units to kinship groups.

Demos are also found in other States, as Cos and Rhodes (after 408-407), and in many under the influence of Athens.

A. W. Gomme, *The Population of Athens in the Fifth and Fourth Centuries B.C.* (1933), ch. ii. A. W. G.

DEMON (c. 300 B.C.), wrote an *Atthis* and a large collection of proverbs (*Περὶ παροιμιῶν*). The latter was widely quoted by writers of *Paradoxa*, but its explanations are generally false and popular.

FGH i. 378.

DEMON, antiquarian, see PAROEMIOPHILERS.

DEMONAX of Cyprus (2nd c. A.D.), Cynic philosopher, known only by the life of him ascribed to Lucian. He was of good family but elected to live in poverty; his teachers were Epictetus, Timocrates of Heraclea, Agathobulus, Demetrius. He avoided the grossest excesses of the Cynic school; he admired Socrates and Aristippus as well as Diogenes. He cannot be credited with any independent philosophical views. He starved himself to death when nearly 100 years old.

PW v. 143.

W. D. R.

DEMOPHANES and **ECDELUS** (not Megalophanes and Ecdemus, as Plut. *Phil.* 1; cf. Ziegler, *Rh. Mus.* 1934, 228 f.) (3rd c. B.C.), two Megalopolitans, followers in exile of Arcesilaus of the Athenian Academy, and renowned for their services to the republican cause, in 251 B.C. helped Aratus to liberate Sicyon, and about the same time had the tyrant Aristodemus murdered, thus freeing their own city. After the assassination of Demetrius the Fair (q.v. 4) they were called in to establish a federal constitution in Cyrene (c. 250). They were later famous as Philopoemen's teachers. F. W. W.

DEMOPHON (Δημόφων), in mythology, son of Theseus and brother of Acamas (q.v.). He and his brother, being shadowy figures, are often confused, both being lovers of Laodice and Phyllis. His part in the Trojan War is the doublet of his brother's. While returning he stayed in Thraee and there met Phyllis, a princess who fell in love with him. He left her, promising to return when he had settled affairs at Athens, but she, weary with waiting, hanged herself and was turned into an almond-tree, which put forth leaves when Demophon came at last and embraced it (Servius on Verg. *Ecl.* 5. 10; Hyg. *Fab.* 59; Ov. *Hrr.* 2). The Athenians claimed to possess the Palladium (q.v.), which came somehow into Demophon's hands (Suidas s.v. ἐν Ἑλλάδι; Clem. Al. *Protr.* p. 36. 15 ff. Stählin). H. J. R.

DEMOSTHENES (i) (d. 313 B.C.), son of Alcisthenes, Athenian general. After an unsuccessful invasion of Aetolia in 426 he won two brilliant victories against a Peloponnesian and Ambraciot army invading Acarnania.

In 425 his occupation of Pylos led to a most valuable success, the capture of a body of Spartan hoplites on the adjacent island of Sphacteria. He surprised Nisaea in 424, but failed to take Megara, and in a triple attack on Boeotia, for which he was perhaps responsible, he was unable to land troops at Siphæ, since the enemy was forewarned. In 413 he commanded the armament sent to reinforce Nicias at Syracuse. After failing to regain Epipolæ by a night attack, he urged the abandonment of the siege, but evacuation was delayed until the Athenians lost control of the sea and were driven to attempt escape by land. The rearguard, led by Demosthenes, surrendered on the sixth day, and he was subsequently executed.

Though never a politician, Demosthenes favoured the war-party and collaborated with Cleon. His strategy tended to be over-elaborate, but he was a skilful tactician, and his gallant leadership in difficult situations merited a better fate.

Thucydides, bks. 3, 4, 7. B. W. Henderson, *The Great War between Athens and Sparta* (1927), chs. 4-6 and 9. H. D. W.

DEMOSTHENES (2) (384-322 B.C.), the orator, son of Demosthenes of the deme Paiania in Attica. When D. was seven years old his father died, leaving the management of his estate to his brothers, Aphobus and Demophon, and a friend, Therippides. The trustees mismanaged the business, and D. at the age of eighteen found himself almost without resources. He claimed his patrimony from his guardians, who spent three years in attempts to compromise. In the meantime, D. was studying rhetoric and legal procedure under Isæus; at twenty-one he brought a successful action against his guardians, but two more years elapsed before he received the remnants of the property. He was now engaged in the profession of *logographos*, and was also giving lessons in rhetoric. The latter profession he followed certainly till 345, when public affairs began to engross his attention.

2. He is said to have tried as a young man to speak in the Ecclesia, but to have failed, because his voice was weak and his delivery imperfect. We may set aside the legends of his declaiming with pebbles in his mouth and reciting on the sea-shore amid the thunder of the waves, but doubtless he submitted himself to a rigorous training which partially overcame his disabilities, though, if we may believe Aeschines, he was not successful at extempore speaking. Internal evidence justifies the tradition that he carefully studied the works of Thucydides, Plato, and Isocrates. As a *logographos* he did not specialize in any one class of cases; his extant speeches show a very wide range of subject and a remarkable grasp of legal technicalities.

3. The reputation gained in private causes led to his being employed as an assistant to official prosecutors in public trials, and the speeches against Androtion, Timocrates, and Aristocrates (355-352 B.C.) bear witness to his ability on this higher level. His first appearance in the courts was at the trial of Leptines (354); in the same year he spoke in the Ecclesia (*On the Symmories*) and again in 353 (*For the people of Megalopolis*). In 351 he started on his political career with the first of the famous series of *Philippics*. All the great political speeches fall within the period 351-340, when D. was in opposition. During this time a great change was coming over Greek politics. Philip, who had come to the throne of Macedon in 359, had in eight years united the seemingly incompatible elements in his kingdom, created a national spirit out of tribal feuds, and established a national army, gradually throwing over the mercenaries on whom he at first relied. The Athenians had not hitherto realized the significance of the rise of this new power; D., with keener insight, foresaw the danger not only to Athens but to Greek liberty in general, and henceforward

devoted his life to the task of averting it. The splendid series of *Philippic*, *Olynthiac*, and other speeches ends with the *Third Philippic*, the finest of them all.

4. By the end of this period the anti-peace party, led by Hyperides and Lycurgus, had gained strength. A vigorous policy was pursued, and one of D.'s greatest triumphs was that he persuaded Athens to offer alliance to Thebes, her ancient enemy. After the battle of Chaeronea, 338 B.C., D. was engaged for a time in internal affairs, e.g. the repair of fortifications. In 336 the death of Philip revived the hopes of the city-states, but the prompt action of Alexander shattered them. Alexander demanded that D., with other orators, should be surrendered to him, but they were saved by the intervention of Demades.

5. In 344 D. had impeached Aeschines (*De Falsa Legatione*) for his conduct in connexion with an embassy to Philip. Aeschines is accused of having, from corrupt motives, led the people into concluding a dishonourable peace; there was a strong presumption of Aeschines' guilt, but little proof, and he was acquitted. The enmity between the two orators smouldered on for many years, and finally burst out in the famous trial *De Corona* (330). Aeschines had accused Ctesiphon of illegality on three counts in proposing that a gold crown should be awarded to D. (see *Aeschines*). This was a mere pretext, and the real issue was a review of the political life of the two opponents. Aeschines in his speech *Against Ctesiphon* had discussed in detail the public actions of D. from 357 to 330; D. defended himself and made a vigorous counter-attack. The verdict was against Aeschines, and modern opinion is inclined to accept it as just.

6. The last phase of D.'s life begins with the mysterious case of Harpalus; this man, who was governor of Babylon, accepting (in 324) a false rumour of Alexander's death, made off with the king's treasure and sailed to Athens with 6,000 followers. On the motion of D., he was refused admittance, but on dismissing his army he was allowed to enter. Alexander demanded his surrender, but D. temporized by proposing that he should be kept as a prisoner and the treasure stored in the Parthenon. Harpalus subsequently escaped, and the treasure remaining was found to be short by 370 talents of the sum which he had declared. On the motion of D. himself the Areopagus made an investigation, and declared that D. had received 20 talents for helping Harpalus to escape. He was brought to trial and condemned to pay a fine of 50 talents; being unable to do so, he went into exile at Troezen. The extant speeches for the prosecution by Hyperides and Dinarchus are not explicit, and the question to what extent D. was guilty or innocent must remain undecided.

7. On the death of Alexander (323) D. made a tour of the Peloponnese to organize a joint effort against Macedon. He was recalled from exile, and his fine paid from the public funds. After the victory of Antipater at Crannon, Athens received a Macedonian garrison, and Demades carried a decree for the execution of D. and Hyperides. D. took sanctuary in the temple of Poseidon at Calauria, but being pursued there he sucked poison concealed in the end of his pen, and so died (322).

8. WORKS

(a) *Private law-court speeches* (δίκαι). The series of private speeches begins with those against Aphobus and Onetor (363-362), in which D. claimed recovery of his property from his guardians, and continues throughout his life (*Against Dionysodorus*, 323-322). Several private speeches attributed (perhaps wrongly) to D. were delivered on behalf of the Apollodorus who was D.'s opponent in the *For Phormio*. The speech *For Phormio* (350) and the first *Against Stephanus* (349); the second *Stephanus* is undoubtedly spurious) raise a question of professional morality. Pasion, the banker, appointed his

chief clerk Phormio trustee for his sons; the elder son, Apollodorus, subsequently claimed a sum of money allegedly due to him, but Phormio proved that the claim had been settled some years previously. Apollodorus then prosecuted Stephanus, one of Phormio's witnesses, for perjury. If, as Plutarch states, D. wrote *Stephanus A* as well as *For Phormio*, he was guilty of a serious breach of faith, for while the earlier speech extols Phormio's character, the later one contains insinuations against him. The evidence for the authenticity of *Stephanus A* is, however, inconclusive (Paley and Sandys II, xxxix-1; Pickard-Cambridge, *Demosthenes*, 220-4). Aeschines asserts that D. showed to Apollodorus a speech composed for Phormio, but this may be a misrepresentation of some attempt by D. to act as mediator.

The subjects of the private speeches include guardianship, inheritance, claims for payment, bottomry-loans, mining rights, forgery, trespass, assault, etc. In the *Callicles* (which has flashes of humour, seldom found in D.) the plaintiff alleges that the defendant has flooded his land by blocking a watercourse; in the *Conon*, a brilliant piece of writing, combining Lysianic grace and Demosthenic force, some dissolute young rowdies and their father are summoned for assault. The *Polycles* gives a vivid picture of the trierarchic system.

(b) *Political law-court speeches* (ὑποαῖμα). *Against Androtion* (355), written for Diodorus, who prosecuted Androtion for an illegal proposal. *Against Leptines* (354), delivered by D. in person. Leptines proposed the abolition of the hereditary immunity from taxation granted to public benefactors. *Against Timocrates* (353), written for Diodorus. Timocrates proposed that Androtion and others, guilty of embezzlement, should be given an extension of time for repayment. *Against Aristocrates* (352), written for Euthycles, is important as an authority for the law of homicide. *Against Midias*, 347 B.C. Midias, a personal and political enemy of D., had slapped the latter's face at the Greater Dionysia when D. was providing a chorus. D. maintains that Midias has committed sacrilege in assaulting a public official engaged on sacred duties. This powerful speech was greatly admired by Lord Brougham. It has flashes of effective irony (cf. § 174), and supplied [Longinus] (*Subl.* 20) with a fine example of the effect produced by repetition combined with asyndeton. *On the Embassy*, 344 B.C. D. accuses Aeschines of having been bribed by Philip to conclude a dishonourable peace. *On the Crown* (330; see above), the most famous of D.'s speeches, is long and lacking in systematic arrangement. It purports to be a defence of Ctesiphon, but the main theme is the contrast between the speaker's public life and that of Aeschines, the prosecutor. The private life of Aeschines also comes in for severe treatment. *Against Aristogiton*, i and ii (325-324), an attempt to crush a sycophant. Weil considers the second spurious. *Against Neaira* and *Against Theocritus* (both c. 340) are probably not by D. but by unknown contemporary writers.

(c) *Political speeches* (λόγοι συμβουλευτικοί). The earliest of these is the *Symmetries* (354), in which, while discrediting a rumour that Persia is planning to invade Greece, D. urges the necessity of preparation and introduces a scheme of naval reform. In the *Megalopolitans* (355) D. supports the people's request for help against Sparta; in the *Liberty of the Rhodians* (351) he supports the Rhodians' request for help against Artemisia, widow of Mausolus of Caria. In the *First Philippic* (351) and the three *Olynthiacs* (349) D. emphasizes the rapid growth of Philip's power, and the need to meet it with equal resolution. He hints in the *First Olynthiac*, and says openly in the *Third*, that the Theoric Fund must be used for military purposes, to aid Olynthus. In the *Peace* (346), while disapproving of the peace of Philocrates, D. urges that, once made, it should be kept. In the *Second Philippic* (344) he exposes Philip's duplicity, and

contrasts his singleness of purpose with Athenian vacillation. In the *Chersonese* (341) he defends Diopceithes, an Athenian admiral, charged by Philip with plundering some of his subjects, and argues that Athenian admirals are compelled to shift for themselves if the State votes them no supplies. The *Third Philippic* (341), the finest of D.'s deliberative speeches, is characterized by its broader view of the political situation. It is no longer a question merely of Athenian interests; the liberty of Greece as a whole is threatened. The speech is extant in two forms, and it is generally believed that Demosthenes was responsible for both; but it is uncertain which is the final form. The *Fourth Philippic* suggests that Persia might be asked to help against Philip. The speech is a compilation, about one-third being taken from the *Chersonese*, while other passages may have been borrowed from speeches now lost. *On the Halonnesse* (342), see HEGESIPPUS (1). *On the Treaty with Alexander* is generally assigned to an unknown contemporary of D. The six *Letters* are doubtful, the *Epitaphios* and *Eroticus* almost certainly spurious. The collection of 56 *prooemia* may be genuine (see PROOEMIUM).

9. D. had many rivals in his lifetime; but later critics considered him the greatest of the orators. His claim to greatness rests on his singleness of purpose, his obvious sincerity, and his lucid and convincing exposition of his argument. In many instances he produces a great effect by the use of a few ordinary words. In his most solemn moments his style is at its plainest and his language most moderate. A master of metaphor, he uses it sparingly, and hardly at all in his most impressive passages. His style varies infinitely according to circumstances; sometimes as simple as Lysias, now polished like Isocrates, again almost as involved as Thucydides, he follows no scholastic rule; long and short periods follow each other, or are mingled with passages in the running style not according to any regular system. Thus his carefully prepared utterances give an impression of spontaneity. Such was his control of language that he was generally able to avoid hiatus (q.v.) without any dislocation of the order of words. He had an instinctive aversion to a succession of short syllables, and even tribrachs are of comparatively rare occurrence.

10. In his public orations no personal enmity is allowed to interfere with his judgement; his political opponents are not abused or even mentioned by name; it is the policy, not its supporters, that he attacks. In the forensic speeches the case is different: not content with argument, the speaker calls up all his forces of irony, sarcasm, and invective. Ridiculous stories, probably false or at least much exaggerated, about the ancestry and private life of Aeschines served to raise a laugh at the time, but do not increase the orator's reputation.

J. F. D.

DEMOSTHENES (3) of Bithynia (? 2nd c. B.C.), epic poet, author of *Bithyniaca*.

FHG iv. 384-6.

DENTATUS (1), **LUCIUS SICIPIUS** (or **SICCUS**), called by ancient writers 'the Roman Achilles', was a legendary embodiment of the civic and military virtues of the plebeians in their struggles against both patricians and external enemies. Since the chronology of his largely fictitious career was unknown, Siccus was later connected with the Decemvirs, by whose leader, Appius Claudius, he is said to have been treacherously murdered.

P. T.

DENTATUS (2), **MANIUS CURIUS**, Roman plebeian hero, consul in 290, 284 (*suffectus*), 275, 274 B.C.; censor in 272. After ending the Samnite War (290), he conquered Sabines (q.v.) (290), Senones (284), Pyrrhus (275), Lucani (274). He triumphed in 290 (the sources incredibly say twice) and 275. About 289 Curius partly drained Lake Velinus and in 272 commenced Rome's second aqueduct (*Anio Vetus*). He died in 270. The rhetorical accounts of his humble birth, incorruptibility, and frugality resemble the tales told of C. Fabricius (q.v.) Luscinus, and derive largely from Cato who idealized him.

DENTISTRY in antiquity was part of general medicine; diseases of the teeth were explained and treated in accordance with the theories on other diseases. The operative technique was excellent (the Hippocratic treatment of the fracture of the mandible is famous); extractions were performed at an early date. The methods of preserving the teeth, however, consisted mainly of medicinal and dietetic means; fillings for that purpose were unknown. Loose teeth were fastened with gold wire (Hippocrates, *II. ἀρρωστων* 32; *The XII Tables* 10. 8). Toothache being considered a chronic disease and one of the greatest torments (Celsus 6. 9), hygienic prescriptions were extensively advocated. Cleansing of the teeth with tooth-powder, the tooth-pick (*dentiscalpium*), chewing (σχιζέω τοὺς ὀδόντας) were recommended in addition to innumerable remedies against bad breath, a favourite topic of Latin epigrammatists. False teeth were set, but only by technicians, the artificial teeth being carved from ivory or other animal teeth. Such prostheses, used by the Etruscans and Romans, served primarily to hide physical defects and to correct deficiencies of speech, but had probably to be removed before meals. Physicians and dentists refrained from making prostheses, either on account of their technical insufficiency, or because their importance for the process of digestion was not appreciated.

DEPORTATIO, see **EXSILIUM**, **RELEGATIO**.

DERCETO, see **ATARGATIS**.

DETERMINISM, see **FATE**.

DETESTATIO SACRORUM. A patrician, if *sui iuris*, had certain rites belonging to his *gens* (*sacra gentilitia*) to perform. If, therefore, he wished to become legally the son of a member of another *gens* (*arrogatio*) or cease to be a patrician (*transitio ad plebem*), he must, after investigation by the pontifices to make sure that the rites of his own *gens* did not become extinct, attest before

them and the *comitia calata* that he renounced them. This was called *detestatio sacrorum*. See Gellius 5. 19. 5-10; 15. 27. 3, cf. 7. 12. 1; Cicero, *Dom.* 34 ff., *Orat.* 144; Servius on *Aen.* 2. 156; Mommsen, *Röm. Staatsr.* ii³. 37; iii. 38 f., 136 ff. H. J. R.

DEUCALION (Δευκαλίων), name of several mythological persons, the only important one being Prometheus' son, the Greek Noah. When Zeus flooded the earth in wrath at the sins of the Bronze Age, or of Lycaon (q.v. 2), he and his wife Pyrrha, daughter of Epimetheus, by Prometheus' advice built an ark (ἀρκαξ, Apollod. 1. 47) and floated in it till the waters subsided. When their ark grounded, they were advised by Themis, or Hermes, to throw their mother's bones over their shoulders. Realizing that this meant the stones of the earth, they did so, and those thrown by Deucalion became men, those thrown by Pyrrha, women (Ov. *Met.* 1. 318 ff.; Apollod. 1. 46 ff.). They became the parents of Hellen (q.v.; *ibid.* 49). H. J. R.

DEVA, the river *Dee*, whence the name was applied to the legionary fortress at its mouth, modern Chester. The earliest discovered occupation is c. A.D. 70, and the permanent fortress with stone buildings was probably constructed by Agricola in 79 (*ILS* 3704a), perhaps for Legio II Adiutrix and XX Valeria victrix. A reconstruction soon after may denote reorganization when II Adiutrix left (c. 86). Another rebuilding after 150, following extensive destruction, may be connected with the evacuation of the garrison for Albinus' campaigns (196). Portions of the fortress wall of block-work with internal towers (enclosing c. 56 acres), the *praetorium*, two other colonnaded buildings (*scholae*?), and typical 'legionary' barrack blocks are known; there was an extra-mural amphitheatre, and extensive civil settlements and cemeteries.

Stevens, *ib.* xxxv. 49-52. For recent work, R. Newstead *ib.* xxix. 1-40 (amphitheatre); xxxiii. 5-17; xxxiv. 3-46; *Liverpool Annals* xxii. 19-30; xxiii. 3-50. C. E. S.

DEVERRA, see **PILUMINUS**.

DEVOTIO. It was open to a Roman general, if the battle was going against him, to vow (*deuovere*) himself and the enemy's army with him to Tellus and the Manes (Livy 8. 9. 4 ff.). He wore his ceremonial costume (*toga praetexta*), with his head covered (*velato capite*) and his feet on a weapon (*telum*, probably a spear or javelin; perhaps to bring himself into direct contact with Mars, cf. Mars Hasta). One hand touched his chin (? cf. the dedicator holding the door-post of the temple he dedicates, see **CONSECRATIO**). He then recited after a pontifex a formula of prayer asking for victory and the destruction of the enemy. At the end of this, he said: *legiones auxiliaque hostium mecum deis manibus Tellurique deuoveo*. Then, girt with the *cinctus Gabinus* (see **GABII**), he sought death among the enemy. He might, however, substitute for himself any soldier from a legion (*ibid.* 10. 11), presumably with a corresponding change of formula. If he or his substitute was killed, the gods had clearly accepted the vow and must therefore accept the rest of it. If the substitute was not killed, but the victory won, an image at least 7 feet high must be buried in his place; if the general was not killed, he could never again offer sacrifice acceptably. The enemy must not get the weapon on which he had stood.

H. J. R.

DEXIPPUS, **PUBLIUS HERENNIUS** (fl. c. A.D. 253-76), Athenian Sophist and statesman, published a *Ἱστορικὴ ἱστορία* to A.D. 269-270 in twelve books, a history of the *Diadochi* in four books, and *Σκυθικά*, a work on the

Gothic Wars from A.D. 238 to Aurelian, preserved largely in Zosimus. In rhetorical composition and in style he follows Thucydides.

DI CONSENTES, *see* CONSENTES DI.

DI PATRII, *see* THEOI PATROOI.

DI PENATES, *see* PENATES.

DIADEM (διάδημα), a blue band with white spots which was fastened round the Persian king's upright head-dress, the tiara. When Alexander conquered Darius he adopted this band as an emblem of royal power, and his example was followed by his successors. Refused by Julius Caesar in 44 B.C., the symbol of Oriental monarchy was adopted by Constantine in A.D. 325 and became part of the insignia of the Roman emperors.

F. A. W.

DIADOCHI (Διάδοχοι, 'Successors'). This term was applied in a special sense to the more important of Alexander the Great's officers who ultimately partitioned his empire, viz. Antigonus I, Antipater, Cassander, Lysimachus, Ptolemy I, Seleucus I (qq.v.). The 'age of the *Diadochi*' represents a period extending from Alexander's death (323 B.C.) at least to the battle of Ipsus (301), which ended the efforts of Antigonus I (q.v.) to reassemble the whole empire under his own rule, and perhaps to the battle of Corupedium (281), which fixed the main political boundaries of the Hellenistic world for the next century.

G. T. G.

DIAERESIS, *see* METRE, GREEK, II (1).

DIAGORAS, lyric poet, of Melos. Though Eusebius-Jerome gives his *floruit* as 466 B.C., he seems to have been active in the last quarter of the fifth century (Ar. *Av.* 1071 ff., *Nub.* 828 ff.). Renowned for his atheism (Cic. *Nat. D.* i. 2, 63), he disparaged the Mysteries (schol. Ar. *Av.* 1071; Lys. 6. 17), was condemned to death, and fled (Diod. Sic. 13. 6). Fragments, perhaps from *Encomia*, show no trace of atheism, and the story was that he lost his faith because the gods did not punish a man who broke his oath (Sext. *Emp. Pyr.* 9. 53).

C. M. B.

DIALECTIC. If Aristotle really said that Zeno discovered dialectic (Diog. Laert. 9. 25), he was inaccurate. Zeno set the example of exploring the consequences of an hypothesis, and Socrates set the example of seeking truth by question and answer alone; but the creator of the notion of dialectic was Plato (*Resp.* 531-9, and Adam's commentary, esp. ii. 168-79). He regards it as the highest of human arts, by which men attain the greatest insight into the best things. It deals solely with the unseen, not even using the visible as an aid. Its only medium is speech, the responsible use of question and answer in the pursuit of truth. He represents it sometimes as the synopsis of the one in the many and the many in the one, by which we define realities and discern which fall under which; sometimes as the exploration of the consequences of an hypothesis, by which we render our opinions more systematic. Once he suggests that dialectic can ultimately overcome its hypothetical character and reach the 'unhypothesized beginning' (*Resp.* 511 b). For Aristotle (*see* *Top.* i. 1-2 and *Soph. El.* 34), its hypothetical character makes it inferior to deduction from premises known to be true. Nevertheless, it has its uses: (1) ultimate premises, which cannot themselves be deduced, can sometimes be made evident by exploring the consequences of their denial, and that is hypothetical

thinking; (2) dialectic provides good training; (3) even winning the argument is worth something, and Aristotle's handbook of dialectic, the *Topics*, gives disproportionate attention thereto. *See* R. Robinson, *Plato's Earlier Dialectic* (1941), 65-96.

R. R.

DIALECTS, GREEK. From the inscripational evidence it appears that each of the Greek city-states possessed and used in its public documents its own individual dialect. This multitude of dialects falls into three distinct groups: (1) Attic-Ionic, spoken in Attica, the Ionic colonies on the southern seaboard of Asia Minor, and certain islands; (2) Achaean, comprising (a) Aeolic in Lesbos and the neighbouring mainland and, with an admixture of West Greek elements, in Thessaly and Boeotia; (b) Arcado-Cyprian, which is not employed in extant literature; (3) West Greek comprising (a) North-West Greek in Phocis, Locris, Elis, and Aetolia, and (b) Doric in the Peloponnese and the Doric colonies in various islands and Magna Graecia.

2. The dialects of the literary texts are not identical with those that appear in the inscriptions. This is not due merely to manuscript corruption but to the strict literary formalism that forced a Greek writer to use the traditional language of the genre he was practising in preference to his native dialect. The dialect was, in fact, regarded as an integral part of the particular art form. Thus the epic dialect, arising from a fusion of Aeolic and Ionic elements, was utilized by all writers of Greek epic down to Byzantine times. The elegy was a creation of the Ionians. Yet because the hexameter was traditionally wedded to the epic dialect, it is this dialect (in an ionicized form) that appears in elegy whether by Ionians like Archilochus and Callinus, the Laconian Tyrtaeus, the Athenian Solon, or the Megarian Theognis. Similarly the choric ode was developed among the Dorians; consequently Pindar, a Boeotian, Bacchylides, an Ionian, and the Attic dramatists must give their language at least a Doric flavour. It was because of this traditionalism in language that only few of the Greek local dialects achieved literary rank, and even these few discard much that would have seemed narrow and provincial. In this respect, too, Greek art idealized: the language itself represents a compromise between individual and local peculiarities.

3. The EPIC DIALECT is basically Ionic, the most characteristic features of which are the change of \tilde{a} to η , the ν *ephelestikon*, the pronouns $\eta\mu\epsilon\iota\varsigma$, $\eta\mu\acute{\alpha}\varsigma$, $\psi\mu\epsilon\iota\varsigma$, $\psi\mu\acute{\alpha}\varsigma$, the particle $\alpha\upsilon$ and the infinitive in $-ραι$, and verbal forms in $-σαν$ ($\epsilon\delta\omicron\sigmaαν$, $\epsilon\delta\epsilonσαν$, etc.). It contains, further, numerous Aeolic elements such as $\alpha\mu\mu\epsilon$, $\psi\mu\mu\epsilon$, etc., datives in $-σσσι$, genitives in $-οιο$, infinitives in $-με(αι)$, and the particle $\kappa\epsilon$. The dialect exhibits, further, features from different chronological stages of the language, and there can be little doubt that so composite and artificial a language is a product of a long poetical tradition which passed from an Aeolic to an Ionic sphere.

4. The language of Hesiod is practically identical with that of Homer. He has a few Aeolisms absent from Homer which may come from his native Boeotian— $\alpha\upsilon\eta\eta\mu\epsilon$, $\tau\rho\eta\kappa\acute{o}\tau\omega\nu$, etc. We find, further, Dorisms derived possibly from Locris, where he settled: $\tau\acute{\epsilon}\tau\omicron\rho\alpha$, $\eta\upsilon$ 'they were', acc. plur. $-ās$, and participles like $\delta\iota\sigma\acute{o}\alpha\varsigma$. The epic dialect exercised a strong influence on all subsequent poetry, which constantly exhibits such features as $-οιο$, $-σσσι$, the omitted augment, and the inconsistent treatment of ϵ .

5. MELIC POETRY. The intensely personal character of this genre precluded any rigid formalism of language. The poems of Sappho and Alcaeus are written in their native Lesbian dialect. Characteristic are the σ in $\sigma\phi\acute{o}\tau\omicron\varsigma$, $\sigma\rho\alpha\chi\acute{o}\varsigma$, etc., the diphthongs in $\epsilon\delta\omicron\varsigma$, $\nu\epsilon\lambda\omicron\iota\varsigma$, $\chi\epsilon\iota\rho\omicron$, etc., the diphthong which appears after the loss of ν before ς ($\mu\alpha\iota\sigma\alpha$, $\mu\omicron\iota\sigma\alpha$, $\lambda\iota\mu\iota\sigma\alpha$, and the acc. plur.

ἀπάλεις, στεφάνους, etc.), the double consonants in ἐμμι, ὕμμε, σελάννα, φαεννός, etc., datives in -εσσι, infinitives in -μεναι, and the -μι conjugation of contracted verbs (κάλημι, etc.). It would be absurd to attribute hyper-Aeolisms to native speakers. It follows that φαῖμι, Κρονίδαις, and the like are later corruptions.

6. Alcraeon of Teos used his native Ionic with but few Aeolisms or epicisms (πεπερύγεσσι, δχάνοιο, δακρυδέσσα, etc.).

7. Corinna of Tanagra wrote in Boeotian. Characteristic are εο>ιο (ἐκόσμιον), preservation of ϕ (ῥάδομη), verbal forms in -νθι and -νθη, ἰων for ἐγώ, τῷ, τίν, τεοῦς, τεῖν for σύ etc., and βανά = γυνή. The text in our version appears with the later orthography (αι>η, η>ει, ει>ι, οι>υ). The usual epic features are present.

8. For the CHORIC ODE the traditional dialect was Doric, the chief characteristics of which are the retention of ā and ʃ, the preservation of the group τι (διδῶτι, φίκατι, etc.), aorists in -ξα (ἐδίδαξα), the article τοί, ταί, 1st pers. plur. in -μες (φέρομες), futures in -σεω, and the particle κα. Alcman, though he writes in the language of Sparta, nevertheless avoids certain local peculiarities such as the change of intervocalic -σ- to -h- (Ποιοιδάν). In view of the influence of Lesbian Melic poetry on the choric ode it is not surprising that Apollonius (Pron. 107. 13) describes Alcman as συνεχῶς Διολέζων. Aeolic features are ἔμματα, κλεννά, ἔχοισα, etc. Epic influence is apparent in ἔδμεναι, παιδεσσι, the free augment, etc. As with Corinna, the orthography of our text has been modernized: σιός (θεός) embodies a change of θ>ς first attested in the fourth century B.C.

9. The language of the other poets of this genre (Stesichorus, Ibycus, Simonides, Bacchylides, Pindar) has no such close connexion with a local dialect. It is an artificial creation, a mixture, varying with the individual author, of Aeolic, Ionic, and epic elements with the basic Doric, which is progressively reduced to a few representative elements such as ā, genitives like Κρονιδᾶ, Μουσᾶν, and verbal forms like πτάσσοντι.

10. IAMBIC AND TROCHAIC poetry were written in Ionic. Hipponax, in particular, and his imitator Herodas, used an especially popular variety containing many non-Hellenic words. Solon, however, apart from quotations and reminiscences of epic and Ionic poetry, used his native Attic dialect. This dialect appears, further, in the trimeters and tetrameters of Attic drama. It has been suggested that the few Doric elements present indicate a possible Doric origin of this particular art form.

11. COMEDY. Both Epicharmus and Sophron employed the popular dialect of Syracuse, where the common Doric was infused with local peculiarities such as ψίν (σφίν), κίκραμι (κέραννυμι), κάρρων (κρέσσων). Even so popular a genre, however, did not wholly escape the influence of epic and tragedy.

12. PASTORAL POETRY. The dialects affected by Theocritus (epic in *Id.* 12, 22, and 25, Lesbian in 28-30, and 'choral' Doric in 16-18 and 24) have that combination of the learned and the artificial that we expect from an Alexandrian poet. Even the fuller Doric, in which the majority of the idylls are written, has been designated a 'salon-Doric'. For while it contains the common Doric features enumerated above, its artificiality is revealed by hyper-Doric forms like φιλάσω. The dialect contains a few more locally restricted Dorisms such as the acc. plur. in -ος, ἐντί = εἰσί, infinitives in -εν, and the 2nd pers. sing. in -ες (συρίδες), which may derive from the Doric of Sicily or Cos. The usual epic elements are present (see above). Aeolic colouring is given by the predominance of participial forms in -οισα, but γελαόισα is hyper-Aeolic for γέλασα.

13. EPIGRAM. The earliest inscriptional epigrams were written in the local dialects, so that even the Ionian Simonides composed the epigrams he wrote for Doric cities in a conventional Doric. The local peculiarities of

the epigrams have often been obscured in the tradition: thus the manuscript version of the epitaph on the Corinthians who fell at Salamis contains the words ποτ' ἐναίομεν, whereas the stone itself presents the Doric ποκ' ἐναίομεν. The poets of this genre drew largely on Homeric material in composing their hexameters, but the oldest epigrams exhibit fewest traces of this influence. It is noteworthy that even such borrowings assume a native guise: thus Ποσειδάωνι ἀνακτι appears in a Corinthian epigram as Ποτειδάωνι φάνακτι.

14. PROSE. A prose literature was first developed in Ionia, and Ionic became the language of historical and scientific prose: representative names are Hecataeus of Miletus, Antiochus of Syracuse, Hellanicus of Lesbos, and Hippocrates from Cos; even the Athenian Thucydides gave his history an Ionic flavour by avoiding local Attic peculiarities such as ττ and ρρ. The early λογογράφοι wrote in a simple unadorned Ionic. Herodotus, however, was a more self-conscious artist and dignified his native Ionic with archaic speech forms—uncontracted verbs, iterative imperfects (ποιέσκε), and the numerous epic expressions which earned him the epithet Ὀμηρικώτατος.

15. Our estimate of the Homeric elements in the dialect of Herodotus must be linked with an examination of the textual tradition, for our manuscripts present a picture of his dialect which can hardly be authentic. We find hyper-Ionic forms like Κροίσω, and suspicion is cast on the genuineness of the uncontracted verb forms by impossibilities such as κέεται, which is a false resolution of κείται. Moreover, the fact that another hyper-form νοῦσος is identical with the Homeric form, where it is metrically conditioned, whereas the derived verb, which does not occur in Homer, has the normal form νοσέω suggests that the text of Herodotus was corrupted at an early date by editors ignorant of the Ionic dialect who 'ionized' his language while regarding the Homeric epics as a source of early Ionic. Thus they took the omission of the augment to be an Ionic trait. This led to curious misunderstandings. The augmented imperfect of ὀρώω, for instance, was *ἡφοραον, which in Ionic would appear as ἐώρων. The editors ionized this by omitting the first vowel, so that the manuscripts present the impossible ὦρων, the true unaugmented form being ὀρων. Ionic, further, was distinguished from Attic by the crasis of ο+α>ω: thus ἐωντῶ contrasts with Attic ἐαντῶ. It is perhaps a false generalization of this equivalence of ων and αν in the respective dialects that we owe the Herodotean θάμμα. At any rate this form never appears in the inscriptions, which present, on the contrary, examples of θαύμων, θαύμασις. Similarly the extension of the form αὐτέων to the masculine and neuter rests on a misunderstanding of the relationship of the true Ionic feminine form αὐτέων to the contracted Attic αὐτῶν. Both rest on an early αὐτάω, which in primitive Ionic would appear as αὐτήων.

16. THE Κοινή. The liquidation of the independent city-states and the political unification of Greece encompassed the destruction of the ancient dialects and their absorption into a new common language. Xenophon, who passed his life among Greeks of different origin and dialect, epitomizes this process and may be regarded as the first writer of the κοινή. It was in this common language that the Septuagint and the Greek New Testament were written. In the first century the archaist revival we know as Atticism strove to approximate the language of prose literature to that of classical Attic. In spite of numerous revolts this archaistic literary language has maintained itself against the increasingly divergent popular language, so that the modern Greek must learn the καθαρεύουσα which he writes in addition to the δημοτική which he speaks.

L. R. F.

DIALECTS, ITALIC. Latin together with Oscan and Umbrian as well as the dialects of various mountain tribes of central Italy, Marsi, Marrucini, Hernici, Vestini, etc., forms the Italic branch of the Indo-European family of languages. This excludes, in the north, Celtic, Ligurian (now generally considered Indo-European, cf. Kretschmer, Kuhn's *Zeitschr. f. vgl. Sprachforschung*, 38. 108), and Venetic (of Illyrian origin); in central Italy, Etruscan (q.v.); and, in the south, Messapian (probably Illyrian in descent). But the term Italic Dialects is more commonly confined to Oscan and Umbrian, the two chief non-Latin dialects of the group. Oscan inscriptions have been found in Samnium, Campania, Apulia, Lucania, Bruttium, but Pompeii, and more recently Capua, have furnished most. The earliest are coin-legends of c. 450-350 B.C., while the latest are graffiti from the walls of Pompeii after the first earthquake in A.D. 63. Most are written in the Oscan alphabet, which is derived through Etruscan from Chalcidic Greek. But a few, including the longest, the Tabula (q.v.) Bantina, are in the Latin alphabet, while others from south Italy are in Greek. Oscan was more than a mere *patois*. While Latin was still confined to Rome and Latium, Oscan was the chief language of central Italy. Our knowledge of Umbrian is derived almost entirely from the Tabulae (q.v.) Iguvinae, a more extensive document than any representing any other dialect save Latin. Some of the tablets are written in the Umbrian alphabet, also derived through Etruscan from Greek, the rest in the Latin alphabet. The following are some of the main features which distinguish Osco-Umbrian from Latin.

(a) PHONOLOGY

- (i) *q^u g^u* appear as *p, b* (Latin *qu, u*): O. *pis*, U. *pisi* (= quis). O. *bivus* (= vivi).
- (ii) Syncope of short medial vowels: O. *actud* (= agito).
- (iii) *nd > nm*: O. *upsannam* (= operandam).
- (iv) *s* retained before nasals: O. *fisum* (= fanum), U. *sesua* (= cenna).
- (v) *bh, dh > f*: O. *tfei*, U. *tefe* (= tibi).
- (vi) *kt > ht, pt > ft*: O. *Uhtavis* (= Octavius), O. *scritas*, U. *scrito* (= scriptae).
- (vii) *ks > ss, s*: O. *destrst* (= dextra est).

(b) MORPHOLOGY

- (i) First decl. genit. sing. ends in *-ās* (cf. *paterfamilias*), also nomin. plur.
- (ii) Second decl. genit. sing. ends in *-eis*; dat. sing. in *oi*; nomin. plur. both nouns and pronouns in *-ās*; genit. plur. only in *-ām*.
- (iii) Third decl. genit. sing. in *-eis* (from *i* stems); accus. sing. of consonantal stems in *-om* (from *o* stems); in the nomin. plur. consonantal and vocalic stems are kept distinct, the former ending in *-ēs* with syncope of the *e*, the latter in *-ēs* as in Latin: O. *humuns* (= homines) but *tris* (= tres).
- (iv) In the verb, moods, tenses, voices are like Latin, but
 - (a) Present infin. active ends in *-om*: O. *ezum*, U. *etom* (= esse).
 - (b) Future indie. has *-s-* (it is a short vowel *s-* aorist subjunctive): O. *deiuast* (= iurabit) U. *ferest* (= feret).
 - (c) Future perfect has *-us-*: O. *dicust* (= dixerit), U. *benust* (= venerit).
 - (d) Characteristic of the perfect is an *-f-* type: O. *ahdafed* (= decrevit). Oscan has also a *-tt-* perfect, and Umbrian an *-l-* and *-nti-* perfect, but the *-ri-* and *-s-* types of Latin are lacking.
 - (e) A peculiar third sing. passive is e.g. O. *sakrafir*, U. *ferar* (= feratur).

(c) SYNTAX

The syntax is very similar to the Latin with some differences in case-usage. Thus

- (i) the locative is quite common: O. *eisei terci* (= in eo territorio).
- (ii) Genitive of time: O. *zicolom XXX nessimum* (= in diebus XXX proximis).
- (iii) The genitive of respect is much less restricted than in Latin.

(d) VOCABULARY

There is a considerable number of words in Osco-Umbrian which do not appear at all or in the same form in Latin, though they can be paralleled in other Indo-European languages:

- e.g. *her-* (= velle): O. *herest*, U. *heri*. Cf. *χαίρω*.
touta- (= civitas): O. *toutad praesentid* (= populo praesente).
medes- (= ius): O. *meddiss*, U. *mersto* (= iustum). Cf. *modus*.
hontro- (= inferus): O. *huntruiss* (= inferis), U. *hondra* (= infra).
ner- (= vir): O. *nerum* (genit. plur.), U. *nerf* (accus. plur.). Cf. *Nero*.
pur- (= ignis): U. *pure-to* (= ab igne). Cf. *πῦρ*.
ais- (= sacer): O. *aisusis* (= sacrificiis). Cf. Etrus. *aisar* (= dei), L. *acstinio*.
 Peculiar to Oscan are, e.g.:
deiuu- (= iurare) connected with **deiuo* (= d us).
egmo- (= res). O. *egmazum* (genit. plur.).
cituum (= pecuniae). Also in Marrucinian.
felhuss (= muros). Cf. *τεῖχος*: same root as L. *fungo*, *figura*.
puklum (= filium). Also Paelignian *puclois* (= pueris).
tauginom (= sententiam). Cf. L. *tougere* and Engl. 'think'.

Peculiar to Umbrian are, e.g.

- anouihimu* (= induitor). Same root as L. *induo*, *exuo*.
gonia (= gravidas). Cf. L. *gemo* and *γέμω*.
nertru (= sinistro). Cf. *νέπτερος*.
ueudu (= vertere): U. *ahauendu* (= avertito). Cf. Engl. 'wind'.

Many words are used in a sense either unknown in Latin or passing out of use. Thus

- O. *kasit* (= caret) means *deest*, *oportet*.
 O. *castrous* (= castrum), U. *castruo* means *fundus*.
 O. *carneis* (= caro), U. *karu* means 'portion', cf. *κέρω*.
 But Umbrian also has the meaning 'piece of flesh'.
 U. *emantur* (= accipiantur) shows the original meaning of Latin *emo*, 'take', found in compounds *adimo*, *demo*.
 O. *urust* (oro) is used in the technical sense 'plead, argue': cf. Festus antiquos dixisse pro agere'.

DIALEXEIS, see DISSOI LOGOI.

DIALOGUE, GREEK. Diogenes Laertius (3. 48) defines a dialogue as 'a discourse consisting of question and answer on some philosophical or political subject, with due regard to the characters of the persons introduced and the choice of diction'. It is essentially a *μῦθος*, an artistic reproduction of 'good talk' or informal discussion in which, while a single theme is pursued, some digression and inconsequence is permissible and proper; the theme must be of more than topical interest, though it usually arises out of the experiences of particular persons at a particular time.

2. The most important source of dialogue was the actual conversation of Socrates with all and sundry; yet the *Σωκρατικός λόγος* is foreshadowed in the incorporation of quasi-philosophical conversations in the narrative of Herodotus and Thucydides, notably that between Solon and Croesus (Hdt. 1. 30-2) and the Melian Dialogue (Thuc. 5. 85-113). The influence of Attic Drama is also plain, and the affinity to dialogue of the Mimes of Sophron is recognized by Aristotle.

3. The earliest Socratic dialogues may have been simply notes taken by those who talked with or listened to Socrates (cf. Pl. *Thi.* 142-3); later these developed into freer *μυήσεις* in the hands of Plato, Xenophon, Aeschines (of whom considerable fragments survive), and other disciples. Plato's dialogues differ widely in literary merit: some show supreme dramatic power and artistry; in others the dialogue form becomes almost a convention, the chief speaker (sometimes an unnamed 'stranger') a mouthpiece for Plato's own teaching, and the interlocutors otiose. Of the earlier works Jaeger's saying is true, that 'his desire was to show the philosopher in the dramatic instant of seeking and finding, and to make the doubt and conflict visible'; for such an aim dialogue was wholly suitable.

4. Aristotle's dialogues, extant only in fragments, won him high literary fame in antiquity. Most were written before the death of Plato. Although some fragments show Aristotle still retaining the Socratic technique of question and answer, his usual method was probably that of long expository speeches, like those in Cicero's dialogues, with the leader (sometimes Aristotle himself) summing up.

5. After a long and almost total eclipse, dialogue reappears with Plutarch and Lucian. Some fourteen genuine dialogues of Plutarch survive, philosophical or semi-philosophical in character. His best work lacks Plato's depth and dramatic power, yet has a quiet charm and illuminates for us the interests of contemporary cultured society. In Lucian the influences of Socratic dialogue, the New Comedy, and Menippus combined to stimulate a genius unique amongst ancient writers. Though he employed many other forms, his fame rests principally on his satiric dialogues, brilliant exposures of every sort of dogma, prejudice, and humbug. In the twilight of classical antiquity dialogue is still represented in the work of Julian and Synesius.

DIALOGUE, LATIN. The art of dramatic dialogue early attained a high proficiency in Rome, especially in the comedies of Plautus and Terence, the Roman public being quite keen to appraise the quick give and take of conversation, as is shown by the popularity of the *altercationes* in forensic rhetoric (Cic. *Brut.* 164). Dialogue played a considerable part in the *Satura* from the time of Ennius, one of whose *saturae* seems to have been a dialogue between *Mors* and *Vita*; and many satires of Lucilius, Horace, and Persius are largely dialogue, though it plays a smaller part in Juvenal. Prose dialogue at Rome began with M. Junius Brutus, who composed his three books *De Iure Civili* in the form of dialogues with his son (Cic. *De Or.* 2. 224). These, like Cicero's, and the Roman dialogue generally, followed the Aristotelian rather than the Platonic model: the principal part in each dialogue was played by one interlocutor (sometimes the author himself) who expounded his view dogmatically in long speeches, the part of the other characters being reduced to a minimum. Each dialogue was preceded by a *mise en scène* giving the place and the occasion of, with

the names of the participants in, the conversation. Cicero's long series begins with the political dialogues, *De Republica* and *De Legibus*, proceeds to the rhetorical dialogues (*De Oratore*, *Orator*, and *Brutus*), and ends with the philosophical and theological *Academica*, *De Finibus*, *Tusculanae Disputationes*, *De Divinatione*, *De Natura Deorum*, etc. While Cicero's dialogues reproduced the conversation and manners of high society, a less polished, though not more Roman, stratum was represented in Varro's dialogue *De Re Rustica*. Seneca's *dialogi* are dialogues only in name. The prose dialogue is taken up into the novel in Petronius' *Satyricon* and to a less extent in Apuleius' *Metamorphoses*. Tacitus' *Dialogus* resumes the Ciceronian tradition in its discussion of the decline of oratory; but the art is almost lost by the time of Boethius' *De Consolatione*. Minucius Felix used the dialogue form in his *Octavius* in the interest of Christian polemic, a use which persisted till the time of St. Augustine.

DIANA (root DI, cf. Zeus, Iup-iter; probably 'bright one', which says nothing for or against ancient and modern theories of her identity with the moon), an Italian goddess anciently identified with Artemis (q.v.). Altheim (*Griechische Götter*, 93 ff.) supposes her cult actually derived from that of Artemis Orthia, through Etruria, but see A. E. Gordon in *Trans. Am. Phil. Ass.* lxiii (1932), 177 ff.; *California Pubs. in Class. Arch.* ii (1934), 11. Her cult was widespread; see Birt in Roscher's *Lexikon* i. 1003-4 for details. One of her most famous shrines was on Mt. Tifata near Capua (Vell. 2. 25. 4 and elsewhere in literature, supported by much inscriptional evidence); the name Tifata means 'holm-oak-grove' (Festus, 503. 14 Lindsay), which suits Diana's character as a wood-goddess (see below) excellently. Most famous of all was her ancient cult near Aricia (on the shore of the volcanic lake known as *Speculum Dianae*, below the modern Nemi, i.e. *nemus*). Her temple stood in a grove, and the cult is said to have been founded by Egerius Baebius (?) of Tusculum, *dictator Latinus* (Cato, *Orig.* 2, fr. 21 Jordan). It was therefore an old religious centre of the Latin League and it is probable, though direct proof is lacking, that the foundation of her temple on the Aventine, traditionally by Servius Tullius (Livy 1. 45. 2 ff.), was an attempt to transfer the headquarters of this cult to Rome, along with, what Livy mentions (ibid. 3), the headship of the League. See further REX NEMORENSIS, and for the Massiliote and Ephesian connexions of the Aventine temple, see ARTEMIS.

That she was largely a goddess of women is shown by the processions of women in her honour at Aricia (Prop. 2. 32. 9-10; Ov. *Fasti* 3. 268-9), also by the character of many of the votive offerings there, which have clear reference to children and childbirth; see further Frazer on Ovid, *ibid.* 267, Wissowa *RK* 248. That she is a moon-goddess (see Preller-Jordan, *Römische Mythologie*³ i. 312) is an idea resting on no real evidence (cf. JANUS). Warde Fowler (*Religious Experience*, 235) plausibly calls her a 'wood-spirit', for certainly she is commonly worshipped in wooded places. The central idea of her functions would seem to have been fertility, especially human, though probably not confined to that; for the development of such a deity into one of political importance, cf. Juno and Hera.

At Aricia she was associated with Egria (q.v.), and Virbius, an obscure male deity (Ov. *Met.* 15. 544; Servius on *Aen.* 7. 84 and 761; see HIPPOLYTUS). Identifications with foreign deities are common all over the West. H. J. R.

DIATRIBE. For examples of the *διατριβή* in Greek, characteristic of the Cynic and Stoic schools, see EPICTETUS, TELES. A large number of Roman writers, even

when not professed philosophers, imitated the Greek *διατριβή*. Cato in his speeches resorts to the polemic methods of the popular moralists of Greece. In Lucilius the employment of diatribist writings is above all literary. On the other hand, Varro's satires are so much akin to Menippus' works that they can be in their general features reconstituted thanks to comparison with the dialogues of Lucian, another successor of Bion's disciple. Even Cicero in the *Tusculans* and *Cato Maior* presents long passages inspired by the opponents of systematic philosophy—by Ariston of Chios in particular. From this epoch of soul-stirring moral crisis, the popular preachers in their harangues to Roman crowds had recourse to the arsenal of themes belonging to the diatribe. Horace mocks them, but he willingly admits that his own satires are *Bionei sermones*; and his independence of thought does not debar him from using the same weapons. Among his contemporaries one must segregate the disciples of Q. Sextius (q.v. 2), founder of a sect which was rather original in spite of the eclectic character of its doctrine. Its ascetic vegetarianism is based, not on Pythagorean metaphysical conceptions, but on reasons of empirical ethics and hygiene which rest diatribic themes on the exercise of the will. Fabianus, an important 'Sextian', had an enormous influence upon the schools of rhetoric.

The elegiac poets and the prose-writers (especially Livy) who urge a return to the simplicity of ancient times found, like the fabulist Phaedrus, in this tradition, rejuvenated in accordance with the Roman spirit, those moralizing *loci communes* which appeared suitable to the needs of their period.

Seneca's works mark the point of departure for a fresh evolution, a neo-Stoicism in which, thanks to him, the diatribe makes its formal re-entry into philosophy. Notwithstanding manifold inconsistencies, Seneca towards the end of his life becomes more and more faithful to the moral principles which he had borrowed from Bion and Ariston. If Lucan and Persius return to orthodox Stoicism, Juvenal, the last of the great Roman satirists, is especially influenced by *rhetores* whose diatribist themes he develops at length.

Among Christian writers Tertullian shows what profit the advocates of the new religion could draw from this pagan tradition.

One sees that the rôle played by this movement of ideas was considerable in Roman literature. Its predominantly pragmatic and empiric character suited the practical spirit of the Latin people and agreed with their moralizing purposes.

DICAERCHUS, a Greek from Messana, who lived most of his life in the Peloponnese, especially at Sparta; pupil of Aristotle and contemporary of Theophrastus. Fragments only survive of his works:

I. POLITICAL. (i) *Bíos 'Ελλάδος*, the first attempt at a universal history of culture, from the Golden Age to D.'s time. (ii) *Πολιτεῖαι* (*Constitutions*) of Pelene, Corinth, Athens, and Sparta. (iii) *Τριπολιτικός*, perhaps a delineation of a 'mixed' constitution, containing elements of monarchy, aristocracy, and democracy. Probably this and others of D.'s works were in dialogue form. (iv) *Ὀλυμπιακός* and *Παναθηναϊκός*, both probably in form political orations. (v) *Περὶ τῆς ἐν 'Ιλίῳ θυσίας*, on Alexander's sacrifice before the battle at the Granicus.

II. BIOGRAPHY AND LITERARY HISTORY. (i) *Bíos*, on the lives and writings of Plato and other philosophers. (ii) *Π. Δικαίου*, probably a biography and an exegetical commentary. (iii) Works on Homer, titles unknown.

(iv) *'Υποθέσεις τῶν Σοφοκλέους καὶ Εὐριπίδου μύθων* (*see* *HYPOTHESIS*). (v) *Π. μουσικῶν ἀγώνων*, on competitions in music and poetry. The last three works were important sources for later scholars, containing much information about Homer and the Dramatists.

III. PHILOSOPHICAL. (i) *Π. ψυχῆς*, a dialogue on the corporeal nature and mortality of the soul, apparently consisting of two parts, *Λεσβιακός* and *Κορινθιακός*. (ii) *Π. φθορᾶς ἀνθρώπων*, maintaining that man is destroyed more by man than by natural disasters. (iii) A work on future things, title unknown, but apparently not identical with (iv) *Π. μαντικῆς*. (v) *'Η εἰς Τροφώνιου κατάβασις*, 'Descent into the Trophonian Cave', including immoralities of priests therein. (vi) Letter (? philosophical) to Aristoxenus.

IV. GEOGRAPHICAL. *Περίοδος γῆς*, cartography (and description?) of the known world, establishing for geographers a main parallel from the Straits of Gibraltar to the Himalayas; it included perhaps 'Measurements of Mountains in Greece', whose heights D. over-estimated.

Dicaearchus was a learned, fertile, and remarkably versatile author, of an original and genuinely scientific turn of mind. He influenced many subsequent writers, including Eratosthenes, Cicero, Josephus, and Plutarch. Cicero, who admired him greatly (*Att.* 2. 2. 6; 13. 31; *Tusc.* 1. 77), took him as the exemplar of the *βίος πρακτικός*, Theophrastus as that of the *βίος θεωρητικός*.

DICAEÖGENES, a tragic poet, probably of the latter half of the fifth century B.C., wrote a *Medea* and a *Cyprians* (Aristotle, *Poet.* 16, mentions the recognition scene).

TGF 775-6.

DICASTERIES. At the institution of Athenian democracy in the time of Cleisthenes, the *Heliaea* (q.v.) ceased to be a court of appeal and became a court of first resort. The date was probably c. 487-486 B.C., when the importance of the archons was diminished by the substitution of sortition for election in their appointment. But whatever the occasion of the change, it was only natural that the growing democracy should seek more judicial power, for as Aristotle (*Ath. Pol.* 9) observes, *κύριος ὢν ὁ δῆμος τῆς ψήφου* (judicial ballot), *κύριος γίγνεται τῆς πολιτείας*.

2. It was obviously impossible for the entire *Heliaea* to sit on every case. Accordingly 6,000 were annually selected to serve in panels called dicasteries. The number was chosen because in the case of *νόμοι ἐπ' ἀνδρῶν* and ostracism a quorum of 6,000 was required. Thus the 6,000 dicasts represented the Athenian people. The whole group was sworn annually. The designation of the oath as *ἡλιαστικός* indicates that it belongs to the time of Solon. The oath was as follows:

I shall vote according to the laws and the decrees of the Athenian people and the Council of the Five Hundred, but concerning things about which there are no laws, I shall decide to the best of my judgement, neither with favour nor enmity. I shall judge concerning these things which are at issue and shall listen impartially to both the accusation and the defence.

Though the oath was annual, the dicasts were constantly reminded of it by litigants.

3. At first the dicasts served without pay. Remuneration was first suggested by Aristides, but was carried out by Pericles as a political manoeuvre (c. 450 B.C.). By a convenient legal fiction the representative character of the total number of dicasts was extended to each section. Thus each court was independent, and no one could call it to account. But the dicasts represented current public opinion, because they were apportioned among the demes in each tribe according to their number and population. At first each section, numbering 500 (Donner and Smith, *Administration of Justice* I (1932), 275 ff.), not 600 as is commonly believed, was assigned to a court

for a whole year. For important cases several dicasteries could be combined. An even vote was an acquittal, like the Scottish verdict 'not proven'.

4. At the end of the fifth century there was a change in the method of manning the courts. The number of jurors was still nominally 6,000. All eligible citizens who offered for service were accepted and divided into ten sections. The first ten letters designated the sections, the next ten marked the courts. On days when court sessions were to be held all jurors were summoned. By a system of lot each court could be filled. Odd numbers—201 or 401 or 501—were used with the assurance that the trial would start with the full number.

5. A third system of recruiting dicasteries is described by Aristotle (*Ath. Pol.* 60 ff.; cf. H. Hommel, op. cit. inf.). The date of its introduction is uncertain, but in all likelihood it coincides with the introduction of written evidence in 378–377. Under this system it seems certain that the same men remained in the same section year after year. The annual allotments were confined to new applicants. It is difficult to interpret the intricate details of the assignments of dicasts to the court in which they would sit; its effect was to render impossible the bribery of dicasts, which was not unknown in the fifth century.

6. Each litigant appeared before the dicastery and was expected to speak in his own behalf, but he could always recite a speech written for him by a professional *logographos*. A litigant who was obviously incapable of speaking in his own behalf could obtain a substitute by permission of the court. Advocates (*συνήγοροι*) were always permitted to speak for a defendant. Until 378 evidence was presented orally as in modern courts; afterwards all evidence was reduced to writing and read by the clerk of the court when called for by the speaker. The verdict of a court was final, though on rare occasions the Ecclesia annulled or quashed a verdict or granted a pardon to a condemned defendant. In certain classes of cases a successful suit for perjury against a witness enabled a litigant to reopen the case.

7. The dicasts were judges of both law and fact. The presiding magistrate's task was to see that the case came to court in proper fashion; he did not issue an instruction to the jury after the hearing of the case. The dicasts reached a verdict without the charge of an expert jurist or an opportunity of discussing a case in private such as modern juries enjoy. Their verdict, reached by a majority or equal vote, was a mere affirmation or negation. As each court was independent, there were no legal precedents. But when a speaker cited parallel cases, they unquestionably had some effect on the dicasts. It is difficult to believe that 500 or more amateurs could try a case fairly. But the Athenians had some advantages: they could neither be browbeaten nor bribed, their numbers gave them confidence, and the system of selecting them made bribery impossible.

DICING. Gambling with dice, the American crap game, was a popular amusement in Greece; in Rome, although nominally illegal except during the Saturnalia, it became a national vice. There were two kinds of dice, the four-sided astragalus (Lat. *talus*) and the six-sided cubus (Lat. *tessera*); and two, three, or four dice could be used. Sometimes the best throw was when all the dice showed different numbers, but usually the highest score was four sixes, *Venus*, the lowest four aces, *Canis*. The dice were thrown from a box; loaded dice were not unknown.

F. A. W.

DICTA CATONIS ('Dionysius', sometimes added to Cato's name, remains a puzzle), the title given to a versified handbook of morality, partly pagan, partly Christian, which, dating in its original form probably from the third century A.D., was widely studied in the Middle Ages and translated into many European languages. The title 'Cato' was perhaps an unknown author's recognition of Cato the Elder as the first moralist of Rome.

The collection consists of (a) its most important part, four books of hexameter *Disticha* (288 lines); (b) preceding them, 57 *breves sententiae* in prose; (c) four short *prae-fationes*, that to bk. i being in prose, the rest in hexameters; (d) 16 additional lines from the Zürich and Verona MSS. of 'Cato'; (e) 78 single lines (*Monosticha*), besides a considerable number of lines of Catonian origin (Baehrens thought 52) in a *carmen monostichon* constituting rules for life, *Praecepta Vivendi*. Baehrens accepted the ascription of the *Praecepta* to Columbanus, but its affiliation is rather with a poem ascribed by Dümmler to Aleuin (205 lines published by Dümmler, *MGH, Poet. lat. aevi Carolini* i. 275, 1880). This ascription Boas supports with proofs in *Alcuin und Cato* (1937), reprinting Dümmler's text with marginal notes to indicate borrowings from *Disticha* and *Monosticha*. Alcuin, he believes, used, not the medieval vulgate of 'Cato', but a manuscript of the same family as the Veronese fragment.

The collection has bequeathed many debatable questions, e.g. which are the oldest parts, the prose or the verse? whether or not there once existed a larger *Corpus Catonianum*? how much is pre-Christian? what alterations were made by a Carolingian recension?

The maxims, not without worldly cunning and selfishness, inculcate on the whole a homely morality: they represent, as proverbs do, the experience of the past, traceable sometimes to Greece, though occasionally the influence of Horace or Ovid appears. The final couplet of the *Disticha* (4. 49) emphasizes the terseness aimed at.

Text: Baehrens, *PLM* iii. 214–42 (1881); G. Némethy (1895); with translation, J. W. and A. M. Duff, *Min. Latin Poets* (Loeb, 1934). For language, metre, and survival among European peoples, F. Skutsch, *PIV* v (1905), 358 ff. A series of articles by M. Boas deal with the MSS. and relevant questions; e.g. *Rh. Mus.* lxxvii (1912); *Mnemos.* xliii (1915), xlv (1916); *Rh. Mus.* lxxii (1917); *Philol.* lxxiv N.F. xxviii (1917), lxxv N.F. xxix (1918), lxxdiii N.F. xxxvii (1926); *Die Epistola Catonis* (Akad. Amsterd., 1934); *Alcuin und Cato* (1937).

DICTATOR. The dictatorship, which is found as a permanent office in other Latin States, was added to the Roman constitution soon after the expulsion of the kings to provide a temporary, extraordinary magistracy in military—and later domestic—crises, *rei gerundae causa*. Any connexion with Etruscan or Oscan magistracies is obscure (see MEDDIX). Originally a major colleague of the consuls, known as *praetor maximus*, the dictator soon became completely independent, holding undivided authority of military character, not subject to veto or appeal, both abroad and at Rome. Twenty-four lictors indicated his quasi-regal power, which, however, was rather a concentration of the consular authority than a limited revival of the kingship. The dictator was not elected by the people, but nominated by a consul on the Senate's proposal. A *lex curiata* confirmed the nomination. After 361 B.C. *consulares* were normally selected, earlier the 'best man' was chosen. The dictator (who was also known as *magister populi*, master of the infantry) immediately appointed a *magister equitum* (q.v.) as his subordinate. Other magistrates remained in office but were subject to the dictator, who held his post for six months at most, but usually retired earlier, as soon as his particular task was done. This time limit rendered the dictatorship comparatively useless outside Italy, and its importance declined in the third century. Dictators were increasingly employed for minor purposes—hold-

ing elections or celebrating festivals or fixing the 'sacred nail', etc.—and popular success, was able by 300 B.C. to *provocatio* (q.v.). Despite a revival during the invasion of Hannibal it was never again employed for its original purpose after 216 B.C., perhaps because of senatorial jealousy of independent authorities. After 202 B.C. even the dictators with limited competence were no more appointed. Later dictatorships (see SULLA, CAESAR) differed widely from the original in scope and purpose.

Ancient sources: Livy bks. 1–25 and Dion. Hal. passim; Polybius etc. Modern views: Liebenow, 'Dictator' in *PIV* v, with Westermeyer, 'Magister Equitum', *ibid.* suppl. (lists); Mommsen, *Röm. Staatsr.* ii. 141 ff.; K. J. Beloch, *Röm. Gesch.* 75 ff.; A. Rosenberg, *Staat der alten Italiier* (1913), 89 ff.; E. Meyer, *Kleine Schriften* (1924), ii. 272. A. N. S.-W.

DICTIO DOTIS, see MARRIAGE, LAW OF, para. 8.

DICTYNNA, see BRITOMARTIS.

DICTYS CRETENSIS, a Cretan of Cnossos, companion of Idomeneus at Troy, and reputed author of a Trojan War diary, actually composed perhaps in the second or third century A.D. (*PTeb.* ii. 268). This work, supposedly discovered during Nero's reign, was translated into Latin prose by L. Septimius (fourth c.?) and with Dares (q.v.) formed the chief source drawn upon by medieval writers on the Troy-saga.

G. C. W.

DIDACTIC POETRY, GREEK, includes under one name many works which have little in common, except that their subject-matter is not love or war but science, philosophy, or some art or craft. The Greeks themselves hardly regarded it as a separate genre, but classed it under the general head of *ἐπὶ*. In the earliest times we can perhaps discern two main roots from which it sprang. On the one hand, there is an interest in myth and genealogy, and here we see its relation to hymn and epic; on the other, a natural desire to accumulate and hand on a store of recorded experience, whether in the practical or moral sphere, enriched with proverb and fable, and in this way akin to the utterance of oracles and seers. That such subjects should be expressed in hexameter verse is natural to an age in which literature is to be handed down in the memory and published by recitation. Both these strains can be traced in our earliest surviving poems, which come not from Ionia but from mainland Greece, and are grouped round the name of Hesiod. We can distinguish somewhat sharply between the guide to right conduct both with heart and hand, called *Works and Days*, and the *Theogony* with other works now lost (such as the *Ehoiai*, a catalogue of the heroines from whom noble families claimed their descent)—the former a moving personal appeal aiming at right action, which has been compared not unprofitably with Horace's *Epistles* and the prophecies of the Old Testament; the latter mere versified cosmogony and mythology, aiming at right information, and much more obviously influenced by Homer. Later work of the same school, now lost, included the proverbial philosophy of the *Sententiae Chironis*, and poems on astronomy—an easy extension from the agriculture of the *Works*—and perhaps geography. In the seventh and sixth centuries the purely moral element in Hesiod is continued in the work of Phocylides of Miletus; but henceforward it was to be expressed rather in the elegiac and iambic poets, whom we do not regard as didactic in the strict sense of the word, and later in the prose diatribe. The religious movements of the time found utterance in the oracles and *Theogony* of Epimenides, and in the early verse-literature of Orphism. But the most remarkable flowering of didactic poetry is to be seen in the work of the great philosophers of the Ionian school. It might be thought

that the growth of speculation would have led merely to the development of a simple prose style adequate to express its results with lucidity, for science is concerned with thoughts, poetry with feelings; but the passionate personal conviction of the early thinkers raised their subject to a level apt for poetical expression, and both in their interest in cosmogony and in their desire to make converts to right thinking they are the direct heirs of Hesiod. Add to this that the first philosophical poet, Xenophanes of Colophon, was already a poet in other metres, and we see why no effort was made before about 500 B.C. (Heraclitus) to exploit the latent resources of prose. But for his example, it is hard to think that his younger contemporary, Parmenides of Elea, would have chosen to write in verse, for his style is crabbed and his ear faulty. In Empedocles of Acragas, on the other hand, great intellectual force is allied with burning conviction, command of language, and an imagination both powerful and lively; and though Aristotle denies him the name of poet, the fragments of his works *On Nature* (*Περὶ φύσεως*) and *Purifications* (*Katharmoi*) incline us to regard him as one of the outstanding figures in Greek literature. Didactic poetry was never to achieve such heights again.

In fifth-century Athens the writing of didactic, as of epic, poetry was not in fashion; but in Alexandrian times, when systematization of knowledge was in vogue and increased attention was paid to the works of Hesiod, there arose a most flourishing school. The Greeks had always regarded edification as a poet's legitimate aim; and they attached great importance to literary form, even in subjects so unpromising as veterinary science. In this period they derived a pleasure which we cannot always share from the perusal of works in which mere technical details were expounded in flowing Homeric verse—pleasure seemingly enhanced if the author, a mere 'metaphrast', had no personal knowledge of his theme, but was known to be simply versifying an accepted prose treatise on the subject. We may leave on one side poems on local history and antiquities, for they partake to a certain extent of the nature of epic or hymn and are not always written in hexameters, and may concentrate on didactic poets in the narrow sense. Of these the first, at the end of the fourth century, is Menecrates of Ephesus, who wrote a poem now lost on husbandry (*Ἔργα*), inspired no doubt by the *Works and Days*. It was his pupil, Aratus of Soli in Cilicia, whose *Phaenomena*, a transposition into hexameters of the prose treatise of Eudoxus on the constellations, achieved a popularity truly phenomenal, and with its free adaptation of epic language set the fashion for all succeeding work of the same kind. His follower, Nicander of Colophon, shows the style at its most unreadable to our taste, for in his poems on snakes (*Θηρίακᾶ*) and antidotes for snake-bite (*Ἀλεξίφάρμακα*)—others on agriculture and bee-keeping are lost—outlandish subjects are allied with a love of rare and uncouth words. But the fashion had come to stay. The favourite themes were medicine (including the magical properties of precious stones), astronomy, and geography. Thus we hear of the *Phaenomena* and *Chorography* of Alexander of Ephesus in the Ciceronian age; of the *Sights of Italy* (*Ἰταλικὰ θεῖα*) and the *Μολυσμικά* (possibly on methods of painless suicide) of Heliodorus of Athens in the first century B.C. or A.D.; the antidote described by Andromachus of Crete, Nero's physician, in 174 elegiac verses; the *Ἱατρικά* in 42 books of Marcellus of Sidé under Marcus Aurelius; and very many more, which are mere names to us. Only four surviving works are of any importance. The *Μολυσμικά* ascribed to Manetho, which were given their present form perhaps in the fourth century A.D. but incorporate earlier material, are of some value to the student of ancient zoology. The long geographical poem (*Ὀδοιπορίας περιήγησις*) of Dionysius Periegetes

in the reign of Hadrian (he also wrote a *Λιθικά*, on precious stones) is enlivened with descriptions, though its aim is the purely practical one of imparting instruction; and it enjoyed very great popularity down to Byzantine times. The five books on fishing (*Ἀλευτικά*) and four on hunting (*Κυνήγητικά*) under Oppian's name, written by two different poets living under Marcus Aurelius and Caracalla, are the most readable productions of this later school, for in them the technical theme is diversified with epic colouring, with similes, moral reflections, and picturesque detail, and the intent is purely to give pleasure. These are the last real fruit of the didactic tradition in Greek poetry, for henceforward the practical intention already noticed in Dionysius holds the field, and if information is expressed in verse, it is to make it more easily got by heart at school.

R. A. B. M.

DIDACTIC POETRY, LATIN, as was to be expected, is strongly influenced by Greek, and most of the Roman writers are translating or adapting Greek models. But at Rome the tradition produces poetry which is often of higher quality, and sometimes in the very first rank, partly because the authors usually convey more of a personal interest in their subject, partly because they are better poets. In the early period of Latin literature it is doubtful how far one can speak of didactic poetry. The *Hedyphagetica* of Ennius, a rendering of Archestratus' Greek work on gastronomy, seems from the surviving fragment more akin to satire; and of a remarkable series of poems in various metres on criticism and literary history—Accius' *Didascalica*, and the work of Porcius Licinus and Volcacius Sedigitus—we know too little to speak with certainty. The same is true of Q. Valerius Soranus, the friend of Cicero; and even the latest of these poems on literary themes, Horace's *Ars Poetica*, has more the character of an epistle or *sermo* than of didactic poetry properly so called. It is in the Ciceronian age that the Greek tradition begins to bear full fruit at Rome. There is first the example of Empedocles. The translation of his work by a certain Sallustius is known only from an unfavourable judgement in one of Cicero's letters and the contemporary *De Rerum Natura* of Egnatius from two brief fragments. But it was Empedocles who inspired Lucretius to express his passionate conviction of the truth of Epicurean philosophy in a long hexameter poem, as he acknowledges in one of the noblest tributes ever paid by one great poet to another; and the genius, the power, and originality of the result enabled Latin didactic poetry in the next generation to achieve a masterpiece which the Alexandrian school by itself would have been powerless to beget. For the other great influence in the last century of the Republic is that of Aratus and his followers. Aratus' *Phaenomena* enjoyed in Roman literary circles the same inexplicable popularity as among the Greeks, and Cicero's *Prognostica*, an adaptation of it made by him in early youth, is the first of a series of similar enterprises spread over four and a half centuries; also the most important, for it had considerable influence on both Lucretius and Virgil. The *Chorography* of P. Varro (q.v. 3) Atacinus, perhaps based on Alexander of Ephesus, and the *Theriaca* and *Ornithogonia* of Aemilius Macer (q.v. 2), who no doubt followed Nicander, seem to have been little more than attempts to naturalize the Alexandrian didactic poem in Roman dress. It is far otherwise with Virgil's *Georgics*. It is fashionable to regard these as a didactic poem on husbandry, and indeed the title—already used by Nicander—and the author's claim to be the Roman Hesiod, lend colour to this view. But their didactic element is in a sense accidental; they are something absolutely new in the beauty and splendour of their language and the masterly variety of their construction, and their real subject is not farming, but Rome and Italy and nature and the life of man.

The subsequent popularity of didactic poetry on many trifling subjects we know from Ovid's reference in *Tristia* 2. 471–92. His own position is peculiar. The *Haliutica* (if it be his) is on traditional lines, and so was perhaps his lost *Phaenomena*; but the *Medicamina faciei femineae* and the *Ars Amatoria*, with its palinode the *Remedia Amoris*, are rather parodies of the genre, brilliantly adapted as befits the theme to elegiac verse. His contemporary Grattius (q.v.) in the *Cynegetica*, presumably adapted from a Greek source but enlivened by a genuine feeling for the subject, shows that under the inspiration of the *Georgics* even a writer not of the first rank could produce work that can be read with pleasure; and we should feel the same of the remarkable *Astronomica* of Manilius, were it not for the obscurity of his distasteful theme. The undying popularity of Aratus appears from the new rendering of the *Phaenomena* by Germanicus Caesar, under Tiberius; its success, from the body of scholia that was later to gather round it. But didactic poetry was never again to be written by men of real poetic talent; and though under the Julio-Claudian Principate an unknown author was provoked by the example of Lucretius to write a crabbed poem on Mt. Aetna, later ascribed to Virgil, though Columella, the writer on agriculture, accepting the challenge thrown out in the *Georgics*, clothed his tenth book (on gardening) in competent hexameters, the old tradition was played out. Nemesian's (q.v.) fragmentary poem on hunting, written late in the third century, is its last manifestation. Already, towards the end of the second, a new type shows itself, in which the desire to impart information is everything, the poetry nothing: the voluminous works on grammar and metres of the skilful versifier Terentianus Maurus and the jejune collection of medical prescriptions by Q. Serenus seem—like the anonymous *Carmen de figuris* and *Carmen de ponderibus et mensuris* (qq.v.) of two centuries later—almost to announce the onset of the Middle Ages. The same love of instruction causes one more lengthy adaptation of Aratus in the second half of the fourth century by Avienus (q.v.), whose *Ora maritima* (written in iambics) is not without its value; and Dionysius Periegetes is translated by the same Avienus, and in the sixth century by Priscian, no doubt for use in schools. The Latin didactic poem serves henceforth for schoolbooks, or for Christian polemic and edification.

R. A. B. M.

DIDASCALIA. The word means primarily the 'teaching' of a play or dithyramb to the chorus which was to perform it by a poet or the professional trainer employed, and then, more generally, the production of the play or dithyramb. (In Plutarch and other late writers the term may also be applied to the group of plays performed.) In the plural *Διδασκαλῖαι* refers to the records of performances, including the names of victorious tribes, *choregi*, poets, actors, and flute-players for each year, and of the plays performed at the Dionysiac festivals; Aristotle's lost works included one book entitled *Διδασκαλῖαι* and one book of *Νίκαι Διονυσιακά δοτικά καὶ Ἀθηναῖα*. These must have been completed from the official records; it is not known whether these were engraved on stone from the first or not; but it is generally agreed that the inscriptions, of which large fragments remain (*IG* ii². 2318–25, with some other scraps), and which were probably engraved in the third century or late fourth century B.C., were based on the work of Aristotle so far as this went, and brought up to date afterwards; and that Aristotle was also the source from which Alexandrian and other scholars (including the authors of the *Arguments* to the plays in our manuscripts) must have drawn; it is not known how far his researches went beyond the official records, nor in what year his record began. The inscription numbered *IG* ii². 2318 probably carried the record back to 502 B.C. or a few years earlier,

and is generally thought to correspond to Aristotle's *Nikai*; the other inscriptions are likely to have drawn upon his *Διδασκαλία*.

See E. Reisch in *PW* v. 1 (1903), s.v. 'Didaskaliai'; A. Wilhelm, *Urkunden dramatischen Aufführungen in Athen* (1906); E. Capps, *Introduction of Comedy into the City Dionysia* (1903), and arts. in *AJPhil.* xx and xxi, *AJArch.* for 1900, and *Hisperia* xii. 1 (1943); A. E. Haigh, *Athic Theatre*, ch. 2 and Appendix B (1907); G. Jachmann, *De Aristotelis didascalii* (1909). A. W. P.-C.

DIDASCALIAE at Rome. Plautus' *Stichus* and *Pseudolus* (in A), Terence's plays and Donatus' commentary thereon are prefaced by brief remarks concerning first performance, games at which performed, presiding magistrates, producer, composer and type of music, Greek original, order of play in author's works, consuls of the year, etc. They were often incomplete; varying in different manuscripts; source unknown; nevertheless of fundamental importance.

See Schanz-Hosius, *Gesch. röm. Lit.* i⁴ (1927), 105. W. B.

DIDIUS (1), TITUS, an Optimate and the first member of his family to reach the consulship (98 B.C.). As *tribunus plebis* (103) he was driven from the tribunal by his colleague Norbanus, during the trial of Q. Caepio (q.v. 1). He was praetor (101) and defeated the Scordisci in 100 in Macedonia. Later, as proconsul in Spain, he cut to pieces nearly 20,000 of the Vaccaci, was saluted Imperator, and triumphed (in 93). As consul, with Q. Metellus Nepos, he passed the famous *Lex Caecilia Didia*, forbidding 'tacking' and imposing an interval of three *mundinae* between the promulgation of a law and voting on it. He fell in the Social War (89).

For his tribunate, see J. Lengle, *Hermes* 1931. M. II.

DIDIUS (2) **JULIANUS**, MARCUS, a rich senator, was chosen by the praetorians after a mock auction of the Empire to succeed Pertinax, in preference to the latter's father-in-law Flavius Sulpicianus. His election was no less unpopular with the populace (see *PESCENNIUS NIGER*) than with the army, and at Carnuntum the legions proclaimed Septimius Severus emperor. Julianus attempted negotiations, but his fate was sealed when Severus bought the support of the praetorians. Upon their direction the Senate deposed Julianus, who was murdered in his deserted palace on 1 June A.D. 193.

Herodian 2. 6-13; Dio Cassius bk. 73; S.I.A.; Parker, *Roman World*, 56-60. H. M. D. P.

DIDIUS, see also **GALLUS** (6).

DIDO, legendary daughter of a king of Tyre, known by Virgil as *Belus*; she is said to have had the name of *Elissa* at Tyre, and to have been called *Dido* (? 'The Wanderer') at Carthage. Her husband, called *Syhaeus* by Virgil, was murdered by her brother *Pygmalion*, now king of Tyre, and *Dido*, escaping with some followers to Libya, there founded Carthage. At this point legends diverge. The older story, narrated by *Timaeus*, was that in order to escape marriage with the king of Libya (*Iarbas* in Virgil) *Dido* built a pyre as though for an offering and leapt into the flames. The Roman form of the story, which gained currency at the time of the Punic Wars and was probably followed by *Naevius* and *Ennius*, brought *Aeneas* to Carthage, but *Varro*, who adopts it, makes *Dido's* sister *Anna*, not *Dido* herself, perish for love of *Aeneas*. The story contained in the first and fourth books of the *Aeneid* may have been invented by Virgil himself. *Aeneas*, shipwrecked on the coast of Libya, is brought by *Venus* to the palace and entertained by *Dido*, who falls in love with him. After a while *Aeneas* departs, warned by *Mercurius* to leave Carthage and pursue his destiny, and *Dido* throws herself on the pyre. Ovid in *Heroides* 7 presents *Dido's* lamentation

in a rhetorical form. Modern sentiment has reviled *Aeneas's* treatment of *Dido*, but his desertion of her in obedience to divine command is an essential element in his 'piety' (see *AENEAS* 1).

For the sources see A. S. Pease, *Vergil, Aen.* 4. 14 ff. C. B.

DIDYMA, also called *Branchidae*, seat of an oracle of *Apollo*, eleven miles from *Miletus*. Before the Persian wars *Didyma* was governed by the hieratic family of the *Branchidae*, who traced their descent from the hero *Branchus*. The Persians burned the temple in 494. After *Alexander's* conquest of *Miletus* in 334 the cult was reorganized. The Milesians built for it the largest temple of the Greek world. The cult was thenceforth administered directly by the city; the prophet was elected annually and assisted by two treasurers (*ταμίαι*) and an executive board (*κόσμοι*). A prophetess, as at *Delphi*, was the mouthpiece of the god. An annual agonistic festival, the *Didymeia*, was made pan-Hellenic early in the second century B.C.

Ancient sources: (a) Milesian inscriptions relating to *Didyma* are scattered through many publications; see especially B. Haussoullier, *Rev. Phil.* from 1895 to 1926; Th. Wiegand, *Milet: Ergebnisse der Ausgrabungen* (1899-); a number of the more important are included in *Dittenberger, SIG* and *OGI*. (b) Valuable literary sources are *Hdt.* 1. 157 f.; 5. 19; *Conon, Narr.* 33, 44; *Iambli. De Myst.* 3. 11; *Pausanias* and *Strabo*, passim. Modern literature: H. Gelzer, *De Branchidiis* (1869); B. Haussoullier, *Milet et le Didymeion* (1902); H. Knackfuss, *Didyma: Die Baubeschreibung* (1939). J. E. F.

DIDYMUS (1) (c. 80-10 B.C.) belonged to the school founded at *Alexandria* by *Aristarchus* (q.v. 2) and himself taught there. A scholar of immense learning and industry (cf. his nicknames *Χαλκέντερος* and *Βιβλιοδόξας*, the latter because of occasional self-contradictions due to his having forgotten what he had said in earlier books), he is said to have written 3,500 or 4,000 works. His importance for literary history consists primarily in his careful compilations of the critical and exegetical work of earlier scholars. He was not an original researcher, but rather a discriminating variorum editor and a scrupulous transmitter of learning that might otherwise have been lost.

WORKS: 1. He sought to reconstitute lost recensions by *Aristarchus* of the Homeric text by the comparison of copies and by the examination of A.'s commentaries and special treatises. His results were much used by the scholiasts. 2. Commentaries, with abundant mythological, geographical, historical, and biographical information, on *Homer*, *Hesiod*, *Pindar*, *Bacchylides*, *Choerilus*, *Aeschylus*, *Sophocles*, *Ion*, *Euripides*, *Achaeus*, *Cratinus*, *Aristophanes*, *Phrynichus*, *Eupolis*, *Menander*, *Thucydides*, *Antiphon*, *Isaeus*, *Isocrates*, *Aeschines*, *Demosthenes*, *Hyperides*, *Dinarchus*. Much of the oldest scholia to *Pindar*, *Sophocles*, *Euripides*, and *Aristophanes* is ultimately derived from D. A papyrus fragment of his commentary on *Demosthenes' Philippics* illustrates well his compilatory method. 3. Lexicography: *Λέξεις πραγματικαί* and *Λέξεις κωμικαί*. These collections formed a valuable source for scholiasts and lexicographers, e.g. *Hesychius*. On *Corrupt Expressions*, On *Expressions of Doubtful Meaning*, *Metaphorical Expressions*, On *Proverbs*, a chief source of the extant works of the *Paroemiographi* (q.v.). 4. Grammar: On *Orthography*, On *Analogy among the Romans*, On *Inflections*. 5. Literature and antiquities: On *Lyric Poets*, *Σύμψλοιστος* (on myths and legends), *Miscellany* (*Σύμμικτα συμποσιακά*), On the *Axones* of *Solon*, works on the death of *Aeneas*, the birthplace of *Homer*, etc., and a polemic against *Cic. Rep.*, which was answered by *Suetonius*.

M. Schmidt, *Didymi Chalcenteri grammatici Alexandrini fragmenta* (1854); A. Leisach, *Aristarchi homericus Textus* (1854-55); H. Diehl u. W. Schubart, *Die Kommentare zu Demosthenes* (1924); A. Körte, *Rh. Mus.* 1905; P. Foucart, *Mémoires de l'Institut National de France* 1909. J. E. F.

DIDYMUS (2), **CLAUDIUS**, the Younger (1st c. A.D.), an Atticist lexicographer, wrote on the incorrect diction of Thucydides (*Περὶ τῶν ἡμαρτημένων παρὰ τὴν ἀναλογίαν Θουκυδίδη*), abridged the *Attic lexicon* of Heraclion of Ephesus, and wrote a monograph comparing Latin with Greek.

P. B. R. F.

DIEKPLUS (διέκπλους), a naval manœuvre which the Greeks apparently borrowed from the Phoenicians in the Persian Wars. The ships of one line, feinting to ram the galleys of the opposing line, swept between them (διεκπλεύσαντες), damaging their oars or rudder-oar, and circled about to strike the helpless craft in the rear. To prevent this, a fleet was drawn up in two lines, either in file, as at Artemisium (U. Wilcken, *Hermes* 1906, pp. 103 ff.), or in staggered formation, as at Arginusae (Xen. *Hell.* 1. 6. 29). With the heavier ships of Hellenistic times, the insertion of *lembi* in the lines (Polyb. 16. 4. 8 ff.), and the Roman reliance on boarding (ibid. 1. 22-3, 51), the *diekplus* lost importance. C. G. S.

DIES FASTI, NEFASTI. On the Roman calendar (see **CALENDARS**) certain days were marked *F*, meaning *fas* or *fastus*, literally 'days of speaking', when the formal words necessary to transact legal business might be spoken, i.e. the courts were open and the day was not a festival. Others were *N*(*efasti*), when for one reason or another legal business might not be done (properly speaking, it was not impossible, but to do it was a *vitium* and must be expiated by a sacrifice). See Varro, *Ling.* 6. 29 ff. for other classes of days: *C*(*omitialis*), when public assemblies might be held; *EN*(*dotercisus*) or *intercisus*, lawful during the pause in the middle of the sacrificial ritual; *Q*(*uando*) *ST*(*ercus*) *D*(*elatum*) *F*(*as*), 15 June, when the shrine of Vesta (q.v.) was cleansed; *Q*(*uando*) *R*(*ex*) *C*(*omitiauit*) *F*(*as*), 24 March, 24 May, when the *rex* (q.v.) *sacrorum* had certain formal duties. On existing calendars, the sign NP, probably *nefas, feriae publicae*, is used somewhat erratically for many of the *dies nefasti*. *Dies religiosi* are any days, whether *nefasti* or not, supposed to be unlucky, e.g. the anniversary of Cannae.

H. J. R.

DIESPITER, by-form of *Iuppiter* (see **JUPITER**), e.g. Horace, *Carm.* 3. 2. 29.

DIETETICS was originally the regulation of life for those who were training for the games, and this type of dietetics was practised as long as games were held. In the fifth century Herodicus of Selymbria, Plato says (*Resp.* 406 a), tried to heal the sick by prescribing a certain regimen; from then on dietetics became an established means of treating patients, like surgery or pharmacology.

Still more important than dietetics for athletes and the sick was that for the healthy as advocated by Greek physicians. If diseases due to a disturbance of the bodily balance can be healed by diet, it must be likewise possible to prevent diseases by a diet which preserves this balance undisturbed. Such prevention is the more necessary since the bodily balance is constantly changed by whatever a person does, eats, or drinks, by exercises and the seasons; it must be constantly restored so as to avoid the danger of falling into disease at almost any moment. The healthy no less than the sick, it was therefore claimed, should fall under the permanent supervision of the physician.

For their dietetic rules the physicians determined with minute accuracy the quality of all factors influencing the body from without or within. They regulated with great care every detail of life according to the necessities of health alone, and without paying any attention to the demands of business activities, politics, or normal life. They admitted that the poor had to content themselves

with what was possible for them, but wanted the rich, who alone had the means of living a healthy life, to do so, even if it meant giving up everything else. Strange as it seems, people accepted this medical philosophy, believing as they did that health is the greatest blessing in this life of uncertainty and change. Such ideas became the more plausible, at least for the upper classes who were not restrained by any considerations of occupation, especially since political independence was gradually destroyed in the city-states. Yet even among the poor dietetic measures in as far as they could be applied were very common.

There can be no doubt that the demand of physicians on the healthy was responsible for much nervousness. People became too conscious of their bodies; besides, they were unable to endure sudden and unforeseen changes, and in addition tended to remain aloof from all useful activity, a consequence deplored by philosophers and statesmen. Yet it was not until Greek medicine was transmitted to the Romans that a certain change took place. The Romans insisted that the healthy man could do whatever he pleased, for otherwise he could not fulfil his duties as a citizen; dietetics they thought only good for weaklings and scholars. In the Roman Empire, however, even this opposition was overcome. With the rise of autocratic government and the beginning of the archaistic movement the Greek conception won the day and its reign was uncontested until the heathen ideal of bodily health vanished before the new God.

ANCIENT SOURCES: Hippocrates, *Περὶ διαίτης ὑγιεινῆς*; *Περὶ διαίτης* bks. 1-4; Galen, *Υγιεινόν*, bks. 1-6; Philostratus, *Περὶ γυμναστικῆς*.

DIEUCHIDAS of Megara (4th c. B.C.) wrote annals of Megara (*Μεγαρικά*), and ascribed the recension of Homer to Solon.

FHG iv. 388.

DIFFARREATIO, see **MARRIAGE, LAW OF**, para. 9.

DIFFERENTIAE, distinctions between words of similar form (*ora, hora*) or meaning (*metus, timor, pavor*) formulated by rhetoricians and grammarians as an aid to correct diction. The earliest Latin examples are in the *Ad Herennium* and Varro's *De Ling. Lat.* Many *differentiae* were discussed by miscellanists (Suetonius in his *Prata*, Aulus Gellius), by lexicographers (Verrius Flaccus, Nonius especially in bk. 5), and by grammarians. Anonymous lists compiled from various sources were sometimes attributed to great names (*Diff. Catonis*, etc.) and many items were incorporated in glossaries. Many *differentiae*, however, do not correspond with the actual usage of Latin authors.

G. Goetz, art. 'Differentiae' in *PW*; Schanz-Hosius, § 1121.

J. F. M.

DIGAMMA, see **ALPHABET**.

DIGESTA, a title applied by the classical jurisprudence to systematic, comprehensive treatises on the law as a whole, and by Justinian to the main part of his codification, published after the first *Codex* and *Institutiones*. An alternative name for this part of Justinian's work was *Pandectae*, a counterpart of Greek origin to the Latin name formed from *digerere*. By the constitution of 15 December 529, beginning with the words 'Deo auctore', the Emperor initiated the work by giving instructions to his minister of justice Tribonianus (q.v.) for its composition by the collection of passages from the works of classical jurists. Precisely three years later the collection was published by the Constitution 'Tanta', which contains precious indications on the origin and formation of the work, but nothing on the method by which the

editorial commission (five professors and eleven advocates under the presidency of Tribonian) accomplished their task. The *Digesta* came into force on 30 December 529. They contain excerpts from works of jurists of more than three centuries; the earliest are C. Mucius Scaevola and Labeo, the latest Modestinus, Hermogenianus, and Charisius. Justinian records that two thousand books with three millions of lines were read by the compilers for this purpose, but only a twentieth, 150,000 lines, were selected. A not quite accurate list of authors and works excerpted (*Index Florentinus*) is annexed to the best manuscript of the *Digest*, preserved at Florence. The collection is divided into fifty books, the books into titles with headings taken chiefly from the praetorian edict. Each fragment has an *inscriptio* indicating its author and the work from which it is taken. The order of books and titles follows generally that of the commentaries on the edict.

It was certainly a strange idea of the Emperor or his counsellors to construct a code of existing law by compiling passages written three to five centuries before, and presenting them as his own opinion (const. 'Omnem' 6: 'omnia nostra facimus'). The compilers, moreover, did not restrict themselves to collecting legal rules and formulations of a general character: they copied passages with historical reminiscences, etymological observations, quotations taken from Homer, polemics and divergent opinions, precious of course from a historical point of view, but superfluous and embarrassing in a work which according to a strict order of Justinian should have been a codification, since the jurists' opinions were to be considered as substantive and valid law. The task of the compilers was very difficult; the mosaic compilation of more than 9,000 fragments could not produce a perfect result; repetitions and contradictions were unavoidable (though strictly forbidden by Justinian) in such an enormous work, completed in less than three years. Another reason for the insufficiency of the work was the order of the Emperor that the compilers might alter and reform everything that seemed to them 'superuacuum, imperfectum uel minus idoneum' (const. 'Tanta' 10). Such alterations, accomplished in the classical texts by omissions, additions, or substitutions in a very large measure, are called 'interpolations' ('*emblemata Tribonianiana*'). They concern partly institutions of civil law or procedure obsolete in Justinian's times, as abolished by law or custom (e.g. *manipatio*, *in iure cessio*, *res mancipi*, *dotis dictio*, *fiducia*, *cogitor*, *vindex*, *vadimonium*, and some more). Mention of all these antiquated matters was suppressed and replaced by modern expressions. The tendency to restrict the classical texts had the effect that several passages were often fused into one fragment, longer argumentations were omitted or shortened so as to produce not infrequently an unintelligible or chaotic text. On the other hand, superfluous additions were made in explanation of a word or a rule. But a great number of interpolations were far from being merely formal alterations, as when the classical decision was restricted to special matters of fact or changed into an opposite one in conformity with the new law of imperial constitutions of post-classical times, and with reforms of Justinian himself, or under the influence of new legal doctrines and ideas. It is clear that such a method of adapting old classical texts to new tendencies, rules, or necessities sometimes brought a confusion into the precise constructions and opinions of the classical jurists, the more so as the Byzantine compilers wrote different Latin from the jurisprudence of the first three centuries of the Empire. In the modern science of Roman law the discovery of interpolations (already known as such in the 16th c.) has engaged most attention, and justly so, for the distinction of the classical law from that of Justinian depends on the recognition of the original classical text. The real value of the detection of an interpolation (which

must mostly remain hypothetical) does not, however, lie in the mere purification of a text from alterations or additions, but in the right appreciation of the alteration itself, of its reforming character and its position in the development of a legal institution or idea. It remains to be observed that the manuscripts excerpted by Justinian's compilers contained corruptions, mistakes of copyists, additions (glosses) and marginal notes of the earlier users of them. Many of these alterations subsequently passed into the official manuscript of the *Digest*, partly by inadvertence of the Byzantine copyists, partly by intention, on the order of the compilers, to whom such notes seemed a useful extension of the classical original. Therefore not everything which seems to come from another hand than that of classical jurists is an intentional, substantial interpolation, i.e. a legal reform. The modern literature of Roman law has made enormous progress in distinguishing the classical law from Justinian's and his collaborators' innovations, but very often an exaggerated tendency to find new interpolations has produced erroneous opinions. Interpolations are assumed without sufficient justification (especially on the basis of the fallacious linguistic criterion), and errors are committed in the historical evaluation of suspected texts.

Modern editions: Mommsen, *Digesta Justiniani* (2 vols. 1866, 1870); Mommsen, P. Krueger, *Corpus iuris civilis* i (14th stereotyped ed. 1922, with indication of interpolations). A pocket edition by Bonfante, Fadda, Ferrini, Riccobono, Scialoja contains some useful suggestions (vol. i, 1908; vol. ii, 1931). Important works of reference: A. Guarneri-Citati, *Indice delle parole e frasi ritenute interpolate* (1927); Suppl. in *Sindi Riccobono* i and *Festschrift für P. Koschaker* i (1939). *Index Interpolationum quae in Justiniani Digestis inesse dicuntur* (initiated by L. Mitteis and edited under the direction of E. Levy and E. Rabel; 3 vols. and 1 Suppl., 1929-35). *Vocabularium iurisprudentiae Romanae*, in 5 volumes (not yet finished, edited by B. Kübler). See also the bibliographies under LAW AND PROCEDURE, ROMAN, § 1, and JURISPRUDENCE (text-books on the sources of Roman Law). A. B.

DIKE (*Δίκη*), personification, mostly literary, of Justice. One of the Horae (Hesiod, *Theog.* 902), she reports to Zeus the wrong-doings of men (*Op.* 256 ff.), and similar ideas occur in later authors. In Aratus (*Phaen.* 96 ff.), she is the constellation Virgo, who finally left the earth when the Bronze Age began; some (as Ov. *Met.* 1. 149-50) call her Astraea in this connexion. In art she is sometimes shown punishing Injustice (see PAUS. 5. 18. 2; cf. von Sybel in *Roscher's Lexikon* i. 1019). She catches an evil-doer (Eur. *Herakl.* 941); will not suffer a murderer to live (*Acts* xxviii. 4), perhaps from popular (pagan) belief. Cf. Schrenk in G. Kittel, *Theologisches Wörterbuch zum Neuen Testament* ii. 180 ff. H. J. R.

DIKE (*δίκη*) in Athenian practice might mean any lawsuit, but technically it was a private suit in which the plaintiff appeared in his own behalf, as distinguished from *γραφαι* or other processes, in which any one might be plaintiff. Normally *δίκαι* correspond to modern civil actions. Marked exceptions are prosecutions for homicide and perjury: the former could be instituted only by a relative of the deceased, the latter by the person injured by the illegal evidence.

Δίκαι were either *πρός τινα* (*ex contractu*) to settle a claim, or *κατά τινος* (*ex delicto*) to determine damages. Where the court assessed the damages, a second trial was held to decide between the damages asked by the plaintiff and those suggested by the defeated defendant. Such *δίκαι* were called *τιμῆται*, others *ἀντιμῆτοι* because damages were fixed by law. R. J. B.

DINARCHUS (*Διναρχος*) (b. c. 360 B.C.), the 1st of the 'ten orators'. A Corinthian by birth, he lived at Athens, and studied under Theophrastus. Being a *ristothor*, and therefore debarred from public speaking, he composed a large number of speeches for others. The first of these was written c. 336, but he did not come into prominence till c. 324, when he wrote a speech

against Demosthenes in the Harpalus affair (see DEMOSTHENES). He prospered particularly after the death of Alexander, when, as his biographer Dionysius of Halicarnassus remarks, the other orators having been executed or banished, there was nobody left worth mentioning. Under the oligarchy established by Cassander, 322–307 B.C., he was active and prosperous, but on the restoration of democracy in 307 he retired to Chalcis in Euboea, where he lived till 292. Returning to Athens, through the intercession of Theophrastus, he was robbed of a large sum of money by his host Proxenos, and brought the latter to justice. Nothing is known of his life after this, nor the date of his death.

WORKS. Of sixty speeches which Dionysius considered genuine we possess only three—*Against Demosthenes*, *Against Aristogiton*, and *Against Philocles*, which are all connected with the affair of Harpalus. The authenticity of the first of these was doubted by Demetrius, but it is very similar to the others in style and matter. Three other speeches, *Against Boeotus II*, *Against Theocrines*, and *Against Mantiitheus*, which appear in the Demosthenic Corpus, have sometimes been ascribed to D.

Dinarchus marks the beginning of the decline in Attic oratory. He had little originality, except some skill in the use of new metaphors; he imitated his predecessors, especially Demosthenes (Hermogenes, *Id.* 2. 11 calls him κριβνός Δημοσθένους, 'a small-beer Demosthenes'), but developed no characteristic style of his own. He knew the technique of prose composition and had command of all the tricks of the orator's trade. He was competent up to a point, but his work is careless and lacking in taste. Thus, the arrangement of his speeches is incoherent; his sentences are long and formless, certain figures of speech, e.g. epanalepsis and asyndeton, are ridden to death, and his invective is so exaggerated as to become meaningless. Numerous examples of minor plagiarisms are collected by Blass (*Att. Ber.*² iii. 2. 318–21); in particular, a passage about Thebes in *Demos.* 24 is based on Aeschines 1. 133, and *Aristog.* 24 is suggested by Demosthenes 9. 41.

For general bibliography, see ATTIC ORATORS. Text, Blass (Teubner, 1888). Index, see ANDOCIDES. J. F. D.

DINON (Δίνων rather than Δείνων) of Colophon, father of Cleitarchus (q.v.), wrote a history of Persia in at least three *syntaxis* (perhaps Assyria, Media, Persia), certainly down to Artaxerxes Ochus. Following Ctesias' *Περικὰ*, it represents the trend towards the romantic Alexander-histories. Widely read, it is used in Plutarch's *Artaxerxes*.

FGH ii. 88.

A. H. McD.

DIO (1) COCCEIANUS, later called **Chrysostomus** ('the golden-mouthed') (c. A.D. 40–after 112), Greek orator and philosopher. He was born in Prusa (now *Brussa*) in Bithynia of a family of high social standing in their city (*Or.* 44. 3; 46. 2). He gained renown as an orator and sophist, and was able to play a political role. In 82 he became involved in a political intrigue in Rome (*Or.* 13. 1) and was banished from Italy and his native province by decree of Domitian. He then wandered about for years in the Balkans and Asia, earning his livelihood by occasional humble work (Philostr. *VS* 7. 29). This sudden and complete change of life created an entire change of mind. He turned to philosophy, and based his life on the Cynic doctrine. Convinced of his divine mission (e.g. *Or.* 32. 12) as a doctor of the soul, he went about healing mankind by his example and his orations. Under Nerva he was allowed to end his exile. Henceforth he combined a new political career at home and a rhetorical one throughout the Empire with his work as a preacher and philosopher. His influence was at its height under Trajan, to whom he delivered the speeches 'On the duty of a prince'. He was a champion of Greek

patriotism within the Roman Empire, and, like Plutarch, a representative figure of Greek culture in the late first century of Imperial Rome. See LITERARY CRITICISM IN ANTIQUITY, 1. 6.

As a philosopher D. with his eclecticism of Stoic and Cynic ideas is not in the least original. What makes his orations worth reading is the fact that he understands philosophy deeply enough to take it as a basis of active life, and propounds it with a considerable power of style. A corpus of eighty speeches (with a few *falsa*) is preserved.

Texts: H. v. Arnim (1893–6); G. de Budé (Teubner, 1915–19); Loeb (with transl., in progress). Studies: H. v. Arnim, *Leben u. Werke des Dio von Prusa* (1898, important); C. Martha, *Les Moralistes sous l'empire Romain* (1900); PW v. 848; Ueberweg-Præchter, *Grundriss*¹ 566. Style: W. Schmid, *Der Atticismus in Norden, Kunstprosa*² ii. K. O. B.

DIO (2) CASSIUS (*Cassius Dio Cocceianus*) of Nicaea (Bithynia), son of Cassius Apronianus, governor of Cilicia and of Dalmatia, entering the Senate under Commodus, became praetor (A.D. 193), *consul suffectus* (before 211), and consul for the second time with Alexander Severus in 229. Besides a biography of Arrian and a work on the dreams and portents of Septimius Severus, he wrote a Roman history from the beginnings to A.D. 229, of which bks. 36–54 (68–10 B.C.) are fully preserved, 55–60 (9 B.C.–A.D. 46) in abbreviation, 17, 79–80 in part. Xiphilinus (11th c.) epitomized from bk. 36 (missing Antoninus Pius and M. Aurelius' first years); Zonaras (12th c.) gives the tradition of bks. 1–21, 44–80 in bks. 7–11 of his *Ἐπιτομή Ἱστοριῶν*, following Xiphilinus from Trajan.

The narrative, which took ten years to prepare and twelve years to write, appears to be based on an early annalistic tradition, Polybius with annalistic 'contamination', Livy (from 68 to 30 B.C.), Imperial annalistic tradition (common to Tacitus, if Tacitus himself is not used), memoirs, and possibly Arrian's *Παρθικά*, and for contemporary events his own high authority. Ignorant of Republican institutions and conditions, from Caesar he used his Imperial constitutional experience, at first colouring events with his ideas of Imperial absolutism (cf. Maecenas' speech in 52. 14–40), but later handling his material with full knowledge. Annalistic in arrangement, although modified to meet requirements of subject-matter, his narration concentrated on political aspects, avoiding details and technicality, and giving a rhetorical narrative in Thucydidean style.

Texts: J. Melber (1890–1928 Teubner); U. P. Boissvain (1895–1931); E. W. Cary (1914–27, Loeb); cf. E. Schwartz, *PW* iii. 1684. A. H. McD.

DIOCLES (1) (d. after 412 B.C.), democratic lawgiver in Syracuse, and opponent of Hermocrates (q.v.). Some scholars distinguish two Diocles, an elder one, a lawgiver who received worship as a hero, and the politician of 412. But this remains a mere hypothesis.

Diodorus, bk. 13. W. Hüttl, *Verfassungsgeschichte von Syrakus* (1929), 85 ff. V. E.

DIOCLES (2) (fl. c. 410 B.C., Suidas), comic poet, born at (?) Athens. Several of the titles (*Βάκχαι*, *Θυέστης*, *Κύκλωπες*) suggest mythological burlesque. *Μέλινται* presumably portrayed a republic of industrious bees: He may be the Diocles who is said to have invented a sort of harmonica, consisting of saucers struck with a wooden hammer (fr. 15).

FGC i. 251 ff.; CAF i. 766 ff.

M. P.

DIOCLES (3) of Carystus, according to Pliny the second physician after Hippocrates in time and fame, a contemporary of Aristotle (384–322 B.C.), lived at Athens. He was the first physician to write in Attic, avoiding hiatus. His books dealt with animal anatomy, physiology, actiology, symptomatology, prognostics, dietetics, botany. The fragments show the influence of the Sicilian school

of which his father, Arehidamus, was also an adherent, and of Empedocles (four humours, importance of the heart, the pneuma), of Hippocrates (the body considered as organism), of Aristotle (methodological concepts and terminology). Diocles' originality, it seems, consists in uniting these different trends. That in the details of scientific research he was independent is certain.

Text: fragments, M. Wellmann, *Die Fragmente d. sikelischen Ärzte* (1901); M. Fränkel, *D. Carystii fr. quae supersunt*, Diss. Berl. (1840). Literature: general discussion, Wellmann, l.c., and *PIV* v. 802. W. Jaeger, *D. v. Karystos* (1938), points to Aristotelian influence and argues for a later date of Diocles than had formerly been assigned; the date 340-260 B.C. (Jaeger, *Sitz. Berl.* 1938) seems too late; cf. review of Jaeger's book by L. Edelstein, *AJP* 1940.

L. E.

DIOCLES (4) (probably 1st c. B.C.), mathematician. He wrote a work *Περὶ πυρρίων* (on burning-glasses). He invented the 'cissoid' curve as a means of doubling the cube, and may have been the inventor of the parabolic burning-glass.

PIV v. 813.

DIOCLES (5) of Magnesia (it is not known which Magnesia), a younger friend of the Cynic Meleager of Gadara, therefore probably born c. 75 B.C. He must have lived part of his life in Cos. He is mentioned only by Diogenes Laertius, who describes him as the author of an *Ἐπιδρομή* (compendium) *τῶν φιλοσόφων*. Diogenes makes large use of this work, but Nietzsche went much too far in describing Diogenes' work as simply an epitome of that of Diocles.

PIV v. 798.

W. D. R.

DIOCLES (6), Greek rhetor of the Augustan age, whose declamations betrayed moderate Asianist tendencies.

Sen. Controv. 7. 1. 26.

DIOCLETIAN (GAIVS AURELIVS VALERIVS DIOCLETIANVS), originally named Dioeles, a Dalmatian of low birth, who rose to be commander of the Emperor Numerian's bodyguard. Chosen by the army near Nicomedia in November A.D. 284 to avenge his master's death, he at once struck down the praetorian prefect, Aper. Marching westward to meet Carinus, he ended an arduous campaign at the battle of Margus (early 285) and, by showing mercy to the hostile faction, assured a lasting peace. He at once chose Maximian, an old comrade, to be his Caesar and sent him to Gaul to suppress the revolt of the Bagaudae. Quickly victorious, Maximian was raised to the rank of Augustus early in 286.

2. The two emperors had wars to fight on Danube and Rhine, against Sarmatians, Franks, and Alamanni. In 289 they joined forces in Raetia against the Chabones, and in the winter of 289-90 met in state at Milan. In the East Diocletian set up a Roman nominee, Tiridates III, as king of Armenia and asserted Roman supremacy in Mesopotamia. In 291 (?) he suppressed the revolt of Coptos and Busiris in Egypt. But, in the West, Carausius, admiral of the Channel fleet, revolted in 286 to escape condemnation for neglect of duty, seized Britain and a part of northern Gaul, and frustrated all attempts to reduce him. The emperors found it politic to grant him peace and recognition in 289.

3. To increase the stability of his government Diocletian in 293 established his famous 'tetrarchy'. Himself Augustus of the East he took Galerius to be his Caesar, while to Maximian, Augustus of the West, was assigned Constantius Chlorus. The two Caesars put away their wives to marry the daughters of their Augusti. The main military problems of the reign now came up for settlement. Constantius blockaded Bononia (Boulogne) by a dam and wrested it from Carausius, who was soon afterwards murdered by his assistant, Allectus. A great expedition in 296 under Constantius and his praetorian prefect, Asclepiodotus, destroyed Allectus and recovered

Britain, which now entered on a new age of prosperity. In 298 Constantius gained a spectacular victory over the Alamanni at Langres. Maximian in 297 crossed to Africa and defeated the troublesome confederacy of the Quinguentanei. In Egypt a fresh revolt broke out under Domitius Domitianus and Achilleus in 296, but was suppressed by Diocletian in person at Alexandria in 297.

4. Galerius had at first been engaged in defending the frontiers and reclaiming waste land in Illyricum. In 297 he settled the Carpi in Pannonia. But a determined attack on the Empire by Narses of Persia now called him to the assistance of his Augustus. Defeated in the first campaign near Carrhae, Galerius was permitted to bring up reinforcements and correct his error. Invading Armenia, he gained a complete victory over the king and destroyed his will to fight by capturing among the booty the royal concubines. Diocletian moderated the zeal of Galerius and granted peace on reasonable terms, annexing only some minor provinces and establishing Nisibis as trade-depot between the two empires.

5. In 303 Diocletian visited Rome for the first time, to celebrate his *Vicennalia*. A collapse in health the following year almost cost him his life, and on 1 May 305 he abdicated with Maximian, leaving Constantius and Galerius Augusti in West and East respectively, with Severus and Maximinus Daia as their Caesars. His years of honoured retirement were spent at Salonae, broken only by a return to public life, in 308, to help Galerius to re-establish order in the government at the Conference of Carnuntum. Diocletian died in 313, saddened by the civil wars, the collapse of his system, and the persecution of his kindred by Maximinus Daia and Licinius.

6. Diocletian deservedly ranks as the refounder of the Empire, completing and systematizing the changes demanded by the anarchy of the third century. The Imperial office, as we have seen, was divided. Two Augusti, with two Caesars as adjutants and destined successors, administered different sections of the Empire. Diocletian, as chief, ensured unity of purpose. The provinces were greatly increased in numbers by subdivision, and were grouped in twelve dioceses (see *DIOECESIS*), each under a *vicarius* of the *praefecti praetorio*. Each Augustus and Caesar had his own prefect, and these prefects began to rank as financial and administrative, rather than as military, officers. The civil and military commands were permanently separated. Asia and Africa were still governed by proconsuls, all other provinces by senators or equestrian *praesides*. Each of the four rulers had his staff (*comitatus*), and new capitals, Nicomedia, Treviri, and Sirmium, rose by the side of Rome.

7. In finance, too, Diocletian introduced extensive reforms. The new system of taxation was based on the *iugum*, the unit of land, and the *caput*, the human unit, and was liable to revision every fifteen years (*indictio*). Besides money payments the *annona*, payment in kind, was regularly levied. In the coinage Diocletian at first contented himself with stabilizing the gold piece at 70, and later at 60, to the pound. But in A.D. 296 he carried through a complete reform. Beside the gold piece of 60 to the pound was struck a piece of good silver, at 95 to the pound, with subordinate issues of silvered bronze and plain bronze. Alexandria, the last surviving Greek mint, was closed, and all coinage was now Imperial, issued from a number of centres. The masses of silvered bronze already in circulation were probably reduced in value. This led to distrust of the coinage, desperate spending, and an abrupt rise in prices, which Diocletian strove, without much success, to combat by his *Edictum de maximis pretiis* of A.D. 301. Italy lost her ancient privilege and paid taxes with the provinces. Despite the general excellence of the financial administration, the expenses of four courts and the lavish expenditure on new buildings put a heavy strain on the taxpayer.

8. In the army discipline was restored and efficiency enhanced. The legions were reduced in size, but greatly increased in numbers. The *élite* of the army was now concentrated in the standing army, the *palatini*, and *comitatenses*; the frontier troops were militia of inferior quality. The chief command was assigned to *magistri peditum et equitum*.

9. To raise the dignity of the Imperial office Diocletian assumed the forms and trappings of royalty, and required obeisance (*adoratio*) from his subjects. His own dynasty, the Jovian, stood under the protection of Jupiter, the Hereulian of Maximian under that of Hercules. A stern love of old Roman discipline and tradition gradually led Diocletian to attack the Christian Church. Beginning with a purge of the army and civil service, Diocletian was led on by Galerius to direct persecution in 303. The burning of the palace of Nicomedia embittered feeling, and the persecution became increasingly severe, passing from attack on buildings and sacred books to actual bloodshed. Carried on with varying intensity over the whole Empire, it had apparently triumphed by the time that Diocletian abdicated. The persecution was the one grave mistake in a career of enlightened public service.

Stade, *Der Politiker Diokletian und die letzte große Christenverfolgung* (1926); W. Ensslin, *Zur Ökonomie des Kaisers Diokletian* (1942); W. Seston, *Diocletien et la tétrarchie* i (1946).

H. M.

DIODORUS (1) of Sinope (fl. c. 350 B.C.), Middle (or New?) Comedy poet, brother of Diphilus (q.v.): a family monument included both brothers as Athenian citizens (Wilhelm, *Urkunden*, p. 60). Two of his plays (*Μαυρόμενος*, *Νεκρός*) are dated 353 B.C. Fr. 2, the ways of the parasite.

FCG iii. 543 ff.; CAF ii. 420 ff.

W. G. W.

DIODORUS (2) **CRONUS** of Iasos (fl. c. 300 B.C.), one of the masters of Megarian dialectic. Among his pupils were Zeno of Citium and Arcesilaus, both of whom owed much to him. He repeated the arguments of Zeno of Elea against the possibility of motion; his most famous argument, the *κυριεύων*, was directed against the possibility of that which is not actual, and played a considerable part in controversies over freewill.

PW v. 705.

W. D. R.

DIODORUS (3) **SICULUS** of Agyrium, flourished under Caesar and Augustus (to at least 21 B.C.), wrote (c. 60–30 B.C.) a World History, his *Βιβλιοθήκη*, in forty books from the earliest times to Caesar's Gallic War (54 B.C.). He began with an *ἀρχαιολογία*: bk. 1 Egypt, bk. 2 Mesopotamia, India, Scythia, Arabia, bk. 3 North Africa, bks. 4–6 Greece and Europe (1–5 fully preserved, 6 fragmentary); bks. 7–17 covered from the Trojan War to Alexander the Great, bks. 18–40 from the *Diadochi* to Caesar (11–20 fully preserved, 21–40 fragmentary). The narrative reproduces in its successive parts the tradition of Hecataeus, Ctesias, Megasthenes, Dionysius Scytobrachion, Ephorus, Theopompus, an historian of Alexander who is perhaps Cleitarchus, Hieronymus (perhaps through Agatharchides), Duris, Diyllus, Philinus, Timaeus, an early Roman annalist not necessarily Fabius Pictor, Polybius, Artemidorus, Posidonius. This material was added to the framework of a chronological work, dependent on Apollodorus, like that of Castor of Rhodes. Despite his universal conception of history and his aim of writing for the Graeco-Roman world, his work is undistinguished, with confusion arising from the different traditions and chronologies, a compilation only as valuable as its authorities.

Texts: I. Bekker (1853–4); L. Dindorf (1866–8); F. Vogel–C. T. Fischer (1888–1906); C. H. Oldfather (1933–, Loeb). Cf. E. Schwartz, *PW* v. 663; A. Momigliano, *Enciclop. ital.* xii. 924; N. G. L. Hammond, *CQ* 1937, 79; *ibid.* 1938, 137; A. Klotz, *Rh. Mus.* 1937, 206.

A. H. McD.

DIODOTUS (1), satrap of Bactria-Sogdiana under Antiochus I and II. Under the latter he began to act independently, and struck coins with Antiochus' name and types but with the monogram DIO, which may represent Diodotus. In 246 Seleucus II, in his struggle with Ptolemy III, gave a sister to Diodotus to ensure his support; their daughter married Euthydemus (q.v. 2). Probably Diodotus took the royal title, for in the state-cult of the Euthydemid kings he bore the cult-name Soter; the earlier coins with the legend 'Of king Diodotus' have recently been ascribed to him instead of his son Diodotus II.

W. W. T.

DIODOTUS (2), Stoic, teacher of Cicero c. 85 B.C., lived later in Cicero's house. He died c. 60 and made Cicero his heir.

PW v. 715.

DIOECESIS. To facilitate the control of the provincial governors by the central bureaucracy Diocletian divided the Empire (including Italy) into twelve dioceses, each administered by a *vicarius*. These *vicarii* were representatives of the praetorian prefects, and being equestrians were of lower rank than the senatorial governors, all of whom, except the proconsuls of Asia, Africa, and Achaëa, were subject to vicarial authority. The dioceses corresponded to the spheres of the *vicarii*, except the diocese of Italy, which extended to the Upper Danube. The provinces north of the Apennines were under the *vicarius Italiae* at Milan; the rest of the mainland, with Sicily, Corsica, and Sardinia, was controlled by a special *vicarius in urbe Roma*. The jurisdiction of the *vicarii* was concurrent with that of the praetorian prefects, and appeals from their decisions went directly to the emperor.

Parker, *Roman World*, 263–5.

H. M. D. P.

DIOGENES (1) of Apollonia (prob. Phrygian, not Cretan Apollonia), son of Apollonhemis and younger (?) contemporary of Anaxagoras (cf. Diog. Laert. 9. 57; fl. c. 440 or 430 B.C.), was an eclectic philosopher, carrying on the Ionian tradition with additions from Anaxagoras and Leucippus. Little is known of his life. He almost certainly visited Athens, where his views aroused prejudice and were parodied by Aristophanes in the *Clouds* (423 B.C.).

WORKS: *On Nature* (*Περὶ φύσεως*), from which Simplicius quotes extensive fragments. Others cited, *Against the Sophists* (i.e. Cosmologists), a *Meteorology*, and *The Nature of Man*, are mere titles.

Diogenes revives the teaching of Anaximenes, whom he could scarcely have 'heard' (D. L. *ibid.*), that the primary substance is Air, endowing it with mind or intelligence, divinity and all-disposing power. Its infinite transformations are effected by rarefaction and condensation. D. argues that if things in the world, including Empedocles' elements, are to be affected by one another, they must be differentiations of the same underlying substance (fr. 2). Air is also the principle of soul and intelligence in living creatures, and essentially alike in all; it differs, however, in degrees of warmth for different species and individuals. D.'s physiological theories of generation, respiration, and the blood are important in the history of medicine, and Aristotle has preserved his account of the veins (*Hist. An.* 511b30 f.). His cosmology follows traditional lines, with its flat round earth, but bears some resemblance to that of Anaxagoras. The heavenly bodies are pumice stones filled with fire. But he is no mere reactionary: like the Hippocratic writers he displays the scientific interest in details typical of his age. See also ANATOMY AND PHYSIOLOGY, para. 2.

Ancient sources and text of fragments: Diels, *Vorsokrat.* (Kranz, 1934–7); Ritter and Preller¹⁰ (1934). Modern literature: Zeller–Nestle, *Philosophie der Griechen* i. 2¹ (1922) (Engl. Transl. 1881); Zeller–Mondolfo ii (1938); J. Burnet, *Early Greek Philosophy* (1930, translates fr.); *PW* v. 764.

A. J. D. P.

DIOGENES (2) (c. 400–c. 325 B.C.), son of Hicesias of Sinope, ὁ κύων, founder of the Cynic sect. According to some authors (Diog. Laert. 6. 20–1) he came to Athens as an exile after he and his father, who had been in charge of the mint in Sinope after 362 (*Recueil général des monnaies grecques de l'Asie Mineure*, 193), had been accused of παραχαράττειν τὸ νόμισμα. At Athens he lived in extreme poverty and continued παραχαράττειν τὸ νόμισμα in a metaphorical sense, by rejecting all conventions. Whether he was a personal disciple of Antisthenes (D.L. 6. 21 and passim) is doubtful on chronological grounds. But he seems to have been influenced by his philosophy, since there are many similarities in outlook, and since the originality of Diogenes apparently consisted more in the way in which he applied his philosophy in everyday life than in his theories as such.

2. His main principles were the following: Happiness is attained by satisfying only one's natural needs and by satisfying them in the cheapest and easiest way. What is natural cannot be dishonourable or indecent and therefore can and should be done in public. Conventions which are contrary to these principles are unnatural and should not be observed.

3. From this there results in practical life self-sufficiency (αὐτάρκεια), supported by ἀσκήσις (training of the body so as to have as few needs as possible), and shamelessness (ἀναιδέεια). Mainly on account of the latter quality Diogenes was called κύων (dog), from which appellation the name of the Cynics is derived.

4. He illustrated his simple principles by pointed utterances and drastic actions. He probably wrote dialogues and tragedies, the latter in order to show that the tragic heroes could have avoided misfortune by following his principles. But many of the works attributed to him by later authors were spurious.

5. Although Theophrastus described his way of living and his disciple Metrocles collected anecdotes about him, the tradition about his life is obscured by the fact that soon after his death he became a legendary figure and the hero of pedagogic novels (Eubulus, Cleomenes) and satirical dialogues (Menippus, Bion). The tradition on his philosophy was obscured by the tendency of the Stoics to attribute their own theories to him because they wanted to derive their philosophy from Socrates through the succession Antisthenes, Diogenes, Crates, Zeno.

6. It is uncertain whether Diogenes lived in Corinth for many years (so D.L. 6. 71; Dio Chrys. 8. 4; Julian, *Or.* 7. 212), and how, when, and where he died, since the tradition is conflicting.

7. His disciple Crates spread his philosophy. D. had great influence on later literature through his caustic wit. He is stated (D.L. 6. 73, 80) to have written tragedies in which his doctrines were expounded, but the plays named as his were also ascribed to others. They were probably never acted.

Diogenes Laertius 6. 20–81; tragic fr. in Nauck, *TGF* 807–9. E. Schwartz, *Charakterköpfe* ii. 1–26; K. von Fritz, *Philol. Suppl.* Bd. xviii. 2; *Studi di Filologia Class.* N.S. v. 133–49; D. R. Dudley, *A History of Cynicism* (1937), 17 ff.; F. Sayre, *Diogenes of Sinope* (1938); *PW* v. 765.

DIOGENES (3) of Seleucia on the Tigris, commonly called Diogenes of Babylon (c. 240–152 B.C.), pupil of Chrysippus, succeeded Zeno of Tarsus as head of the Stoic school. He visited Rome in 156–155 and greatly stimulated interest there in the Stoic creed. His most famous pupil was Panætius, and his main influence was on the grammatical doctrine developed by the school. Works: *Περὶ φυσικῆς τέχνης*; *Διαλεκτικῆς τέχνης*; *Περὶ τῆς ἀρετῆς*; *Περὶ μαιευτικῆς*; *Περὶ τοῦ τῆς φύσεως ἡμερισμῶν*; *Περὶ εὐγενείας* (all lost).

Testimonia and frs. in von Arnim, *STF* iii. 210–43. *PW* v. 773. W. D. R.

DIOGENES (4) of Tarsus, Epicurean of uncertain date, but probably identical with the author of a book on ποιητικὰ ζήτηματα (who fl. c. 150–100 B.C.).

PW v. 776.

DIOGENES (5) of Oenoanda in Lycia, Epicurean of about the second century A.D. Faced with the approach of death he decided to proclaim to the widest possible audience the main principles of the Epicurean gospel; so he ordered the erection of a big Epicurean inscription in an open place. The work is a collection of single treatises, mainly about problems of Ethics and Physics. We find also the correspondence of a mother and a son, probably Epicurus himself.

The inscription is interesting more as a human document of a faithful Epicurean mind than as a philosophical work. But the account D. gives of the doctrines of his master is clear and shows some understanding of the questions involved. The main part of the inscription was discovered in 1884.

Text: J. Williams, Leipzig 1907 (with comm.). Studies: Ueberweg–Præchter, *Grundriss* 578 f.; *PW* Suppl. v. 153. K. O. B.

DIOGENES (6) LAERTIUS, author of a preserved compendium of ancient philosophy, of about the first half of the third century A.D. His name is probably modelled on the Homeric Διογένης Λαερτιάδης.

His work is a mixture of biography and doxography, as its title proves: 'History of philosophy, or on the lives, opinions, and apophthegms of famous philosophers'. It was never brought up to the standard of a literary or scientific book, but remained a collection of more or less classified quotations and excerpts. Nevertheless, to us the work is of the greatest importance, as most of our biographical knowledge of ancient philosophers is derived from it.

The book is arranged in so-called 'successions' (see PHILOSOPHY, HISTORY OF). In the early stages of its use it was mutilated, as a sketch of the original plan shows (ed. Rose, *Hermes* 1866).

Texts: H. G. Hübner (1828); C. G. Cohet (1850, with Lat. transl.); Loeb (with Engl. transl.); in critical editions: book 3, edd. Breitenbach, Buddenhagen, etc. (1907); book 5, life of Aristotle, see ARISTOTLE; book 8, ed. A. Delatte (1922); book 10, see EPICURUS.

Studies: U. von Wilamowitz, *Phil. Unters.* iii. 1880, *Epistula ad Maasium*; E. Schwartz in *PW* v. 738 (standard work); E. Howald, *Philol.* 1917; *Hermes* 1920; A. Delatte, *La Vie de Pythagore de Diogène Laërte* (1922); R. Hope, *The Book of D. L.* (1930, an account of modern research). K. O. B.

DIOGENIANUS (1), Epicurean. Eusebius quotes many passages from his polemic against Chrysippus' doctrine of fate. His date is unknown, but he probably belongs to the second century A.D., when the polemic of the New Academy against Chrysippus was at its height.

Ed. A. Gercke, *Jahrbücher für Klassische Philologie*, Suppl. 14. 748. *PW* v. 777. W. D. R.

DIOGENIANUS (2), of Heraclea, of the age of Hadrian. Besides geographical indexes, a collection of proverbs, and other works, he compiled in five books an alphabetically arranged epitome of the Lexicon of Parniphius as abridged by Vestinus. This epitome was used by Hesychius, who refers to it under the title of *Περὶ ἐπὶ ὁμωνύμων*.

Edition, F. L. von Leutsch and F. G. Schneidewin, *Paroemiographia* i. 177, ii. 1. Norden, *Hermes* xxviii (1892), 625. P. B. R. F.

DIOMEDES (Διομήδης), in mythology (1) a Thracian, son of Ares and Cyrene, king of the Bistoniæ (Apollod. 2. 65). To capture his man-eating horses was the eighth labour of Heracles (q.v.).

(2) Son of Tydeus (q.v.), and Deipyle, daughter of Adrastus (q.v.); *Ilyg. Pab.* 69. 5 and often. He took a

prominent part in the Trojan War, wounding Aphrodite and Ares by help of Athena, and overcoming a number of the foremost Trojans (*Il.* 5. 1 ff.), but behaving chivalrously to his hereditary guest-friend Glaucus the Lydian (q.v.; *ib.* 6. 119 ff.). He and Odysseus raid the Trojan camp, killing Rhesus (q.v.; 10. 219 ff.). Throughout the poem, and especially in the second half, he is the author of wise and bold counsels. His part in the expedition of the Epigoni against Thebes (cf. *ADRASTUS*) is mentioned in the *Il.*; (4. 406, cf. *Apollod.* 3. 82 ff.). In the post-Homeric Trojan cycle he is conspicuous. He shared with Odysseus in the murder of Palamedes (q.v.; *Paus.* 10. 31. 2, quoting the *Cypria*). He and Odysseus brought Philoctetes from Lemnos (*Hyg. Fab.* 102. 3; cf. *PHILOCTETES*). The same pair stole the Palladium from Troy (Hesychius and *Suidas* s.v. *Διομήδεις ἀνάγκη*, from the *Little Iliad*). Two other cycles of his adventures are: (a) In Calydon; his grandfather Oeneus having been robbed in old age of his kingship by the sons of Agrius, Diomedes killed them all but two, gave the throne to Oeneus' son-in-law Andraemon, and brought Oeneus to the Peloponnesus (*Apollod.* 1. 78). (b) After the return from Troy he found his wife Aegialeia unfaithful, came to Italy, where his companions were turned into birds (*Stith Thompson, Index*² 88), and finally received heroic or divine honours after his death or disappearance (*Farnell, Hero-Cults*, 289 ff.).

H. J. R.

DIOMEDES (3) (late 4th c. A.D.), grammarian, who wrote an *Ars grammatica* in three books (ed. Keil, *Gramm. Lat.* i. 299-529). His work is of value because, though he rarely mentions his sources, he clearly relied upon earlier grammarians who discussed and illustrated the usages of Republican authors. Parallels between his work and that of Charisius (q.v.) seem to indicate that he borrowed from his contemporary.

Cf. Teuffel, § 419. 3; Schanz-Hosius, § 834.

J. F. M.

DION (c. 408-354 B.C.) was a relative and minister of Dionysius I; but falling under the spell of Plato, he became opposed to tyranny. He tried to exert a liberalizing influence upon the young Dionysius II, but like Plato himself he failed, and had to leave Syracuse (366). For many years he stayed in Greece, closely attached to the Academy. But the hostility of Dionysius grew, and Dion decided to attack him. With only a small force he succeeded in winning Syracuse, and other cities joined him. But he had internal enemies, being a haughty aristocrat and not a popular leader like his former friend Heraclides, who outstripped him by gaining a great naval victory over Dionysius' admiral Philistus. The intrigues against Dion increased, and he and his soldiers were expelled, only to be recalled soon after, when Syracuse was again attacked by Dionysius. Once more the city was liberated, but Heraclides' intrigues continued, and finally Dion had to allow his assassination. After his rather ideological attempt at a constitution according to Platonic ideas, he became 'a tyrant in spite of himself'. In 354 he was murdered by order of Callippus, a supposed friend and Platonist.

Plato's letters (esp. 7 and 8); *Plutarch, Dion*; *Diodorus*, bk. 16. R. Hackforth, *CAH* vi. 272 ff.; R. v. Scheliha, *Dion* (1934) (idealizing).

V. E.

DIONE (*Διώνη*), consort of Zeus at Dodona, *Farnell, Cults* i. 39, who conjectures that she is the local form of the Earth-Mother; but her name is simply a feminine of Zeus (cf. *Cook, Zeus*, ii. 350 and note 6), which suggests rather a sky-goddess. Nothing definite is known of her cult; if the original consort of Zeus, she was ousted by Hera (q.v.), and from Homer (*Il.* 5. 370) on she is one of his mistresses or secondary wives, mother of Aphrodite, or even Aphrodite herself.

H. J. R.

DIONYSIA. Many festivals of Dionysus had special names, e.g. the Anthesteria (q.v.), the Lenaea (q.v.), etc.; the latter are, however, in inscriptions styled *Διονύσια τὰ ἐπὶ Ἀθναίῳ* or *ἐπιλήνια Δ.* (*Aristotle, Ath. Pol.* 57; *IG* ii². 1496 A, b 105, 1672, 182) and the term *Dionysia* was given to such festivals at which dramatic performances took place. With the great and ever increasing popularity of the drama, *Dionysia* were instituted almost everywhere; their origin is found in Athens. Athens had (a) τὰ κατ' ἀγροῦς, (b) τὰ ἐν ἄστει or τὰ μεγάλα Δ. The old opinion that the Lenaea were part of the Anthesteria and the urban equivalent of the rustic *Dionysia* (revived by W. Dörpfeld-E. Reisch, *Das griechische Theater*, 1896, pp. 9 ff.; contra, M. P. Nilsson, *Studia de Dionysiis atticis* (1900)) is clearly wrong, for the festivals cannot be separated from the months named from them; the month of Gamelion in which the Lenaea were celebrated was in other Ionian towns called Lenaion. The rustic *Dionysia* were celebrated in Poseideon and the city *Dionysia* in Elaphebolion.

(a) Rustic *Dionysia* are known from many Attic demes through inscriptions, but only because of the dramatic performances which took place at them, and these are obviously borrowed from the city *Dionysia*. Fortunately *Aristophanes* gives a vivid description of the procession at the merry rustic festival (*Ach.* 247 ff.). First comes the daughter of Dicaeopolis as *kanephoros*, then two slaves carrying the phallos, and last Dicaeopolis himself singing an obscene lay in honour of Phales. *Plutarch, Non posse suavi vivi sec. Epic.* 1098b, mentions the cries and the riot at the rustic *Dionysia*. A special feature was the ἀσκολιασμός, youths balancing on a full goat-skin; see *ASKOLIASMOS*.

(b) The City *Dionysia* were celebrated in honour of Dionysus Eleuthereus. This god was introduced into Athens by Pisistratus from the village of Eleutherae in the borderland between Attica and Boeotia. A temple was built to him on the southern slope of the Acropolis, and a second temple was erected close at hand, probably in the last years of the fifth century B.C. The orchestra where the dramatic performances took place was adjacent; the stone theatre was built by Lycurgus about 330 B.C. The fact that tragedy has its origin in this cult militates against the commonly accepted opinion of *Aristotle* that tragedy and satyric drama alike arose from the dithyramb. At Eleutherae Dionysus was called *μελαναυγής*, 'he who is clad in a black goat-skin', and a myth tells of a duel between Xanthus and Melanthus in which Dionysus appeared. It has been supposed that the origin of tragedy is to be found in the mourning for the slain god (M. P. Nilsson, *Neue Jahrb.* xxvii (1911), 673 ff.).

The City *Dionysia* was a great festival to which people flocked from all parts. The statue of Dionysus was brought to a temple in the Academy and, coming hence, the god made his epiphany with much pomp; phalli were carried in the procession, which went to the temple on the southern slope of the Acropolis where sacrifices were performed. Inscriptions give the information that, after the sacrifice, the ephebes carried Dionysus into the theatre by torchlight in order that he might be present at the dramatic performances (M. P. Nilsson, *JDAI* xxxi (1916), 336 ff.; P. Stengel, *ib.* 340 ff.). When the theatre was filled with people the surplus of the State revenues was carried through the orchestra and the sons of men who had fallen in war were given panoplies.

The performances at the City *Dionysia* comprised lyric choruses sung by men and boys as well as tragedies and comedies. The *Marmor Parium*, cp. 43, gives the information that Thespis performed the first drama ἐν ἄστει at a date which is mutilated, but must fall between 542 and 520 B.C.; *Suidas* says 535. Comedy was introduced later, a few years before the Persian Wars (see *COMEDY, OLD*). For the very important but badly mutilated

lated inscriptions which enumerate the victories see A. Wilhelm, *Urkunden dramatischer Aufführungen (Sonderschriften des österreichischen archäologischen Instituts vi)* (1906).

L. Deubner, *Attische Feste* (1932), 134 ff.; A. E. Haigh, *The Attic Theatre*, revised by Pickard-Cambridge (1907); A. W. Pickard-Cambridge, *The Theatre of Dionysus in Athens* (1946). M. P. N.

DIONYSIUS (1) I (c. 430–367 B.C.), tyrant of Syracuse, was a former adherent of Hermocrates (q.v.). After the failure of the Syracusans to relieve Agrigentum in 406, Dionysius, supported by Philistus, the historian, caused the assembly to elect new generals, among whom he was one. Later he supplanted his colleagues, obtained a body-guard, and was regularly re-elected *strategos autokrator*—a constitutional tyrant. Defeated by the Carthaginians, he lost the support of the wealthy class, who attempted an unsuccessful revolution. To consolidate his power he signed a very unfavourable treaty with Carthage, and converted Ortygia into a fortified residence. His adversaries' property was distributed among aliens and freed slaves. Aided by mercenaries, he began a process of military expansion. He destroyed Naxos, settled mercenaries in Catania, and transplanted the citizens of Leontini to Syracuse. At Syracuse he fortified Epipolae and built a castle at Euryalus. He constructed a great fleet and remarkable war-machines. His aim was clearly to expel the Carthaginians from Sicily (398). He took Motya, but the tables were turned by the arrival of Himilco (397), who drove him out, defeated his fleet, and besieged Syracuse until driven off by plague and Spartan intervention. A secret agreement between Himilco and Dionysius is improbable. Dionysius' authority was now established over Greek and Sicel towns. A new Carthaginian attack was repelled in 392, and he styled himself 'archon of Sicily'. An extensive movement of population assured his domination.

His ambitions extended to southern Italy, where in alliance with Loeri (he married a Loerian, Doris) and Lucanian tribes he established his authority after a victory near the Elleporus (388) and the destruction of Rhegium (386). He concluded an alliance with the Molossian Aleetas and probably with Taras. He may have established colonies at Issa, Ancona, and Hadria to control the Adriatic (but the evidence is doubtful). He helped Sparta against Athenian naval predominance and against Thebes, checked Etruscan piracy, and probably entered into relations with Rome. His State was the first great political construction of the Greeks in the West. But Dionysius had checked the Carthaginians only at the expense of the Greek cities against which he launched barbarian populations. His mercenaries exhausted his financial resources. His oppression had to be concealed by external splendour. He sought popularity in Greece: in Athens for political convenience his tragedy *The Ransom of Hector* was awarded the first prize in 367. Plato, who visited him, was sent away in disgrace.

A new outbreak of hostilities with Carthage c. 383 involved the cities of south Italy. Heavily defeated at Cronium (382?; 375?), Dionysius had to abandon Selinus and Thermae. His fresh attack in 368 was stopped before the impregnable Lilybaeum. He died in 367.

Dionysius composed tragedies, which he exhibited at Athens and Olympia, as well as in Sicily; but though, as noted above, he won the first prize at the Lenaea with the *Ἐκτορος Λύτρα* in 367, his plays are generally represented as very poor work (Cramer, *Anced. Par.* i. 303; *Died. Sic.* 15. 6, 74, etc.) and are ridiculed by poets of the Middle Comedy (e.g. in Ephippus fr. 16 and in Eubulus' *Dionysius*). His use of the desk of Aeschylus and his purchase of the pen, writing-tablets, and harp of Euripides (Lucian, *Ind.* 15) failed to kindle any inspiration which could justify his vanity in regard to his work. Gram-

marians give instances of his misuse of words in accordance with fanciful etymologies.

Principal source: Diodorus, bks. 13–15 (partly from Timaeus, partly perhaps from Theopompus). K. J. Beloch, *Griechische Geschichte*, iii. 1–2 (1922–3); J. B. Bury, *CAH* vi (1927), 108; M. L. W. Laistner, *A History of the Greek World from 479 to 323 B.C.* (1936), 268; G. Glotz-R. Cohen, *Histoire grecque* iii (1936); R. L. Beaumont, *JHS* 1936, 202–3. See also SICILY, SYRACUSE. For Dionysius' tragedies see TGF 793–6. A. M. and A. W. P.-C.

DIONYSIUS (2) II, eldest son of Dionysius I, succeeded his father in 367–366 B.C., when about thirty. He stopped the war with the Carthaginians, but he continued the Spartan alliance and retained some hold in south Italy, founding two colonies in Iapygia. Weak, inexperienced, and probably dissolute, he was also cultured, the author of poems and philosophic dissertations, and the host of philosophers (Plato, Aeschines, Aristippus, Xenocrates, Speusippus). An historian, Philistus, was his minister. Dion (q.v.), backed by Plato, tried to transform him into a model monarch of a philosophic State, but both were eventually dismissed by him (366). His power rested on mercenaries and his court was disunited. Dionysius, wishing to preserve the friendship of Plato, induced him to return (361), but the result was a complete breach. In Dionysius' absence (357) Dion seized Syracuse, although Ortygia resisted till 355. Dionysius held Rhegium till c. 351 and Loeri till 347–346, when he again seized Syracuse by treachery. In 345 he was blockaded in Ortygia by some Syracusans and Carthaginians and also by Timoleon (q.v.) whom a rival party had summoned to help. He surrendered to Timoleon and obtained a safe conduct to Corinth, where he lived many years.

Sources: Plato, *Epist.* 3, 7, 8 (see G. Pasquali, *Le lettere di Platone*, 1938); Diodorus, bks. 15–16; Plutarch and Nepos, *Lives of Dion and Timoleon*. B. Niese, *PIV* v. 904; R. Hackforth, *CAH* vi; R. v. Schellin, *Dion, die platonische Staatsgründung in Sizilien* (1934). Also see PLATO, SICILY, SYRACUSE. A. M.

DIONYSIUS (3), AELIUS, an important Atticist lexicographer, of the age of Hadrian. He compiled ten books of *Ἀττικά καὶ λέξεις*. See PAUSANIAS (4).

DIONYSIUS (4) THE AREOPAGITE, an Athenian mentioned in Acts xvii. 34 as converted at Rome by St. Paul's preaching. Of the works ascribed to him, (1) *Περὶ τῆς οὐρανίας ἱεραρχίας*, (2) *Περὶ τῆς ἐκκλησιαστικῆς ἱεραρχίας*, (3) *Περὶ θεῶν ὀνομάτων*, (4) *Περὶ μυστικῆς θεολογίας*, (5) 11 letters, (6) a Liturgy, the four first-named are a daring fusion of Christianity with Neoplatonism, and had an enormous influence throughout the Middle Ages. They are certainly not by St. Paul's Dionysius; they may be as early as A.D. 350 or as late as 500. It has been conjectured that the ascription of them to the Areopagite is due to confusion between him and another Dionysius (? Dionysius of Rhinocolura, c. 370), but it is more likely that the author deliberately tried to pass them off as the work of a contemporary of St. Paul.

PIV v. 996. Ed. Migne, *PG*, vols. 3, 4.

W. D. R.

DIONYSIUS (5) of Byzantium (fl. c. A.D. 175), a Greek. Of his *Ἀνάπλους τοῦ Βοσπόρου*, 'Voyage up the (Thracian) Bosphorus', part of a Latin translation survives (Pierre Gilles, *de Bospor. Thrac., Libri III*).

GGM II. i ff.; GL. C. Weicker, 1874.

DIONYSIUS (6) CHALCUS (5th c. B.C.), poet, so called after his introduction of bronze currency into Athens; he took part in the colonization of Thurii (Plut. *Nic.* 5), wrote sympotic elegies, some of which began with a pentameter (Ath. 602c), of a somewhat riddling character, with notable metaphors.

Text: E. Diehl, *Anth. Lat. Graec.* I. 1, pp. 82–92. Criticism: R. Reussmann, *Epigramm und Satira* (1893), 51; U. von Wilamowitz-Moellendorf, *Hellenistische Dichtung* (1914) i. 97. C. M. B.

DIONYSIUS (7) of Halicarnassus, rhetor and historian, taught at Rome (30–8 B.C.), where he was the leading spirit of an influential literary circle. Of his critical writings (30–8 B.C.), the most original was *On the Arrangement of Words* (*Π. συνθέσεως ὀνομάτων*: *De comp. verb.*), an illuminating inquiry into an artistic word-order. Important, too, was the work *On the Ancient Orators*, which traced the development of Attic oratory on biographical and aesthetic lines. Its first section (Lysias, Isocrates, Isaeus) remains; and part of the second section possibly survives in the fine appreciation of Demosthenes in *Π. τῆς Δημ. λέξεως*. Representative also was *Π. μιμήσεως* (fragments only), which dealt with imitation, authors to be imitated, and methods of imitating. The rest of his writings, occasional in kind, included *Π. τοῦ Θουκυδίδου χαρακτήρος*, in which the matter and style of Thucydides were discussed, *On Dinarchus*, investigating the authenticity of Dinarchus' speeches, the *First Letter to Ammaeus*, confuting Demosthenes' alleged indebtedness to Aristotle, a *Second Letter to Ammaeus*, supplementing his previous remarks on Thucydides, and a *Letter to C. Pompeius*, in which Plato's inferiority as a stylist was reaffirmed. The *τέχνη* (Ps.-Dion.), falsely ascribed to him and consisting of precepts on epideictic oratory, was probably a later compilation. As a critic D. stands high, though in places his work is conventional and uninspired. At his best he is a masterly exponent of the subtleties of style, a keen aesthetic critic, and a pioneer in critical methods (biographical, historical, and comparative) who recalled to his age the literary standards of classical Greece (see LITERARY CRITICISM IN ANTIQUITY, I. 5).

His historical work, *Antiquitates Romanae* ('*Ρωμαϊκὴ ἀρχαιολογία*'), which in twenty books covered from the *κτίσις* of Rome to the First Punic War, represents the application of his historical theories to the annalistic tradition. Careful study of the sources loses in effect through critical inability and ignorance of early Roman conditions; much of value is obscured, much of a misleading character is added, in his elaborate rhetorical composition.

Texts, etc.: *Dionysii Hal. Opuscula* ed. Usener and Rademacher (1899–1929); *On Lit. Comp.* ed. Roberts (1910); *Three Lit. Letters*, ed. Roberts (1901); *Ant. Rom.* C. Jacoby (1885–1925); Cary (Loeb, in progress, 1937–); *Vett. Cens.* (Hudson ii. 122–7) = *Περὶ μιμήσεως* B (Usener–Rademacher ii. 202. 18–214. 2). Criticism: E. Schwartz, *PIV* v. 934. J. W. H. A.

DIONYSIUS (8) of Heraclea on the Pontus (c. 328–248 B.C.) studied under Heraclides Ponticus, Menedemus, and Zeno, and became one of the most voluminous writers of the Stoic school. He also wrote poetry (including a tragedy, *Παρθενόπαιδος*) and was an admirer and imitator of Aratus. An attack of illness in old age led him to abandon the Stoic creed that pain is not an evil and to adopt the view that pleasure is the end of life (hence his nickname *ὁ μεταθέμενος*). He starved himself to death.

Testimonia in von Arnim, *SVF* i. 93–6. *PIV* v. 973. W. D. R.

DIONYSIUS (9) of Miletus, see LOGOGRAPHERS.

DIONYSIUS (10) 'PERIEGETES', Greek author, c. A.D. 300, of *Περιήγησις τῆς οἰκουμένης* in 1,185 hexameters (for schoolboys?), describing pleasantly the known world chiefly after Eratosthenes, taking little account of subsequent discoveries: land, elliptic (east-west), three continents; ocean, with inlets; Mediterranean; Libya; Europe; islands; Asia. Lost works attributed to D.: *Βασσαρικά* = *Διονυσιακά*; *Λιθικά* (on gems); *Ὀρνιθικά*; *Γιγαντιάς*.

GGM II. xv ff., 103 ff. E. H. Bunbury, *Hist. Anc. Geog.* (1879) ii. 480 ff.; *PIV* v. 915–25. E. H. W.

DIONYSIUS (11) of Philadelphia, reputed author of an extant poem, *Ὀρνιθικά*, which may, however, be by Dionysius Periegetes.

Ed. F. S. Lehrs, *Poetae Bucolici et Didactici* (1851). *PIV* v. 925.

DIONYSIUS (12) of Samos, Hellenistic 'cyclographer', published a *κύκλος ἱστορικός* in seven books, a mythographical romance or, perhaps more probably, a mythological handbook.

FGH i. 178, 491. E. Schwartz, *PIV* v. 932.

DIONYSIUS (13) SCYTOBRACHION, an Alexandrian grammarian of the second or first century B.C., who appears to be cited also as Dionysius of Mytilene (or Milctus), wrote a mythological romance, Euhemeristic in tone and claiming authority by false reference to old writers. He treated of the Argonauts, followed here by Diodorus (bks. 3–4), the Trojan War, Dionysus and Athena, and the Amazons, and wrote *Μυθικά πρὸς Παρμένωντα*.

FGH i. 228, 509. E. Schwartz, *De Dionysio Scytobrachione* (1880) and in *PIV* v. 929. A. H. McD.

DIONYSIUS (14) of Sinope, Middle (?) Comedy poet. The learned cook provides humour in one piece (fr. 2).

FCG iii. 547 ff.; CAF ii. 423 ff.

DIONYSIUS (15) of Thebes, poet, teacher of Epaminondas (Ncp. *Epam.* 2), regarded by Aristoxenus (ap. Plut. *De mus.* 31) as a practiser of the old style of music.

DIONYSIUS (16) surnamed THRAX, son of Teres, of Alexandria, was a pupil of Aristarchus and later a teacher of grammar and literature at Rhodes, where his pupils provided him with the silver for a model to illustrate his lectures on Nestor's cup (Athenaeus 489, 492, 501). His most enduring work was the extant *Τέχνη γραμματική*, an epitome of pure grammar as developed by the Stoics and Alexandrians (see GRAMMAR). The work is essentially Alexandrian, but there are traces of Stoic influence. It defines grammar as an *ἐμπειρία*, but includes *ἀναλογία* (see CRATES (3) OF MALLOS) among its parts; classifies accents, stops, letters, and syllables; defines the parts of speech, with lists of their qualifications (cases, moods, etc.), and subdivisions, if any, giving examples; and concludes with some paradigms of inflection. To the four Stoic cases the vocative (*κλητική*) is subjoined; the adjective (*ἐπίθετον*) is still one of many classes of noun; the *ἄρθρον* includes both *ὁ ἡ τό* (with vocative *ὦ*) and *ὅς*, our relative pronoun. There is no treatment of syntax in the work. It had, however, an immediate vogue which lasted until the Renaissance, and its authority was continued in the catechisms derived from it which then took its place. Latin grammar early fell under its influence (see, e.g., Remmius Palaemon), and through Latin most of the modern grammars of Europe are indebted to it.

Edition: Uhlig, in Teubner's *Grammat. Gr.* Scholia: Hilgard, same series. P. B. R. F.

DIONYSIUS (17) (? 2nd c. A.D.), a Greek, son of Calliphron, author of *Ἀναγραφὴ τῆς Ἑλλάδος* (for schoolboys?); 150 feeble iambs survive: preface (acrostics); Ambracia–Peloponnesus; [gap]; Cretan cities; Cyclades and Sporades Islands.

GGM I. lxxx, 238–43.

DIONYSUS, the god much more of an emotional religion than of wine (q.v.). He is rarely mentioned in Homer, for, like Demeter, he was a popular god who did not appeal to the Homeric knights, but the myth that Lycurgus persecuted him and his nurses is told (*Il.* 6. 130 ff.). From Hesiod (*Theog.* 940 ff.) on, his parents are Zeus and Semele (q.v.).

2. The general opinion, shared both by ancient and modern authors, that he came from Thrace is well founded. His cult was widely spread in Thrace (see RELIGION, THRACIAN), and the Thracian and Macedonian women were especially devoted to his orgia. The myths of invasions of Boeotia and Attica by Thracians are not to be wholly disregarded. They may be ascribed to the

very beginning of the last millennium B.C., and the Thracians may have brought the cult to Greece. Boeotia and Attica were its chief seats; in the Peloponnese it is less common. Myths, e.g. of Pentheus and the daughters of Minyas, prove that it swept over Greece like wildfire and that the cause was its ecstatic character which seized chiefly on the women. They abandoned their houses and work, roamed about in the mountains, whirling in the dance, swinging thyrsi and torches; at the pitch of their ecstasy (see ECSTASY) they seized upon an animal or even a child, according to the myths, tore it apart and devoured the bleeding pieces (Farnell, *op. cit. infra*, 302 ff.). This so-called omophagy is a sacramental meal; in devouring the parts of the animal the maenads incorporated the god and his power within themselves. Dionysus was sometimes believed to appear in animal form; he is called 'bull', 'bull-horned', etc. He himself and his maenads are clad in fawn-skins. Sometimes it is told that the maenads wore masks. The mask was characteristic of his cult; his image sometimes consisted of a mask and a garment hung on a pole, but these masks are human. This feature reminds us of primitive customs and is important with regard to the fact that the drama has its origin in the cult of Dionysus. The descriptions of his orgia referred to, in which the votaries are depicted as capable of all kinds of miracles, possessed by the god, enjoying communion with wild life, vegetable and animal, and able to overcome any human resistance (e.g. Eur. *Bacch.* 680 ff.), are mythical and literary, but votaries did in fact bear the god's name, *bakchoi* (Pl. *Phaed.* 69c). Orgia of a milder kind were celebrated in historical times on Mt. Parnassus by official cult associations of women, and there is a trace of the omophagy in a State cult. The frenzy of the orgia was tamed by Apollo, who admitted Dionysus at his side at Delphi and brought his cult into the gentler forms of State religion.

3. Ancient authors say, however, that Dionysus also came from Phrygia. The Phrygians, who were a Thracian tribe, believed that Dionysus (cf. Phrygian *Diounsīs*: W. M. Calder, *CR* xli (1927), 160 ff.) was bound or slept in the winter and was free or awake in the summer. They knew also of a child-god. This Dionysus is apparently a god of vegetation. His other name, Bacchus, is a Lydian word. It is remarkable that the Dionysiac festivals of the Lenaea (q.v.) and the Anthesteria (q.v.), the spring festival in which Dionysus made his epiphany coming from the sea, are common to all Ionians, whilst other festivals of Dionysus are isolated. At Delphi Dionysus was venerated as a child in a winnowing fan and awakened by certain rites. It seems that Dionysus in a somewhat changed form came from Asia Minor across the sea. This Dionysus was a god of the vegetation, not of the crops but of the fruit of the trees including the vine. Moreover, he seems to have a certain connexion with Minoan religion. The phallus which was carried in the Dionysiac processions belongs to him as a god of fertility; he is never represented as phallic himself, but the Sileni and Satyrs who surround him are; they are daemons of fertility. This Dionysus was the god of wine, but wine has no great place in his cult in the early age, especially not in the orgia. The festivals of viticulture are few and rarely attributed to him, and we find him connected with a variety of plants—corn (Diod. Sic. 4. 4. 2), trees (Farnell, pp. 96, 118 ff.), figs (Ath. 3. 78c; Hesychius s.v. *σκατῆς*), ivy (Eur. *Bacch.* 106 etc.). On Attic vases he is, however, constantly represented with a drinking-horn, or a cantharus, and vine branches. As time went on, he was more and more thought of as the god of wine, and we hear of wine-miracles in certain festivals.

4. A point of view particularly emphasized by some scholars is that he was the Lord of souls. The opinion of Rohde that the belief in immortality was introduced into Greece by Dionysus is now abandoned. While others, e.g. Miss Harrison, refer to the fact that the

Anthesteria was devoted to the dead, these rites have nothing to do with Dionysus; the connexion had no intrinsic reason. Other similar festivals are too little known. But among the mystics Dionysus was associated with the Nether World, an idea which perhaps originated among the Orphics, in whose doctrines Dionysus had a great place. Thus Dionysus was introduced into mysteries other than the old orgia, but no one of them can be proved to be of old origin. Such mysteries became very popular in the Hellenistic and even more in the Roman age. In spite of the opinion of Cumont, these late mysteries of Dionysus seem to owe more to Greek than to Oriental tradition. That the idea of a happier life in the other world prevailed in them is proved by the fact that sarcophagi are often decorated with Dionysiac myths. Until the early part of the fifth century B.C. Dionysus is represented as a full-grown, bearded man, later as a delicate, playful youth. His myths are numerous. Not to speak of his early adventures in escaping from Hera's jealousy (see ATHAMAS), his campaigns in the East are known to Euripides: their extension to India is modelled after those of Alexander the Great; they were celebrated in a voluminous epic by Nonnus at the end of antiquity.

E. Rohde, *Psyche*; Farnell, *Cults of the Greek States* v. 85 ff.; J. E. Harrison, *Proleg. to the Study of Greek Religion*, 364 ff.; M. P. Nilsson, *Gesch. d. griech. Religion* i. 532 and, for the Minoan connexions, *Minoan-Mycenaean Religion*, 492 ff.; W. F. Otto, *Dionysos* (1933), is highly speculative. The festivals: Nilsson, *Studia de Dionysii cultis* (Lund 1900); *Griech. Feste*, 258 ff.; L. Deubner, *Attische Feste*, 117 ff.; *Theophrastus*, *Enquiry into Plants*, 1. 1. 1. 232 ff.; N. H. J. Rose, *Handbook of Greek Mythology*, 147 ff.

M. P. N. and H. J. R.

DIOPHANTUS of Alexandria (fl. c. A.D. 250) was the first Greek to make any approach to an algebraical notation. He wrote *Αριθμητικά* in thirteen books, six of which survive, and a tract on Polygonal Numbers. A third work, *Προλογιατα*, is lost, but some propositions in the theory of numbers are quoted from it in the *Arithmetica*. Diophantus works with numbers purely arithmetically and not geometrically as did the Pythagoreans. In the preface to the *Arithmetica* he defines 'species' of numbers, which are, besides units (denoted by M^0 for *μονάδες*), the various powers up to the sixth of the unknown quantity, for which he appropriates the word *ἀριθμός* denoted by the symbol ζ . Its powers he denotes by Δ^1 (for *δύναμις*, square), Λ^2 (for *κύβος*, cube), etc. He has a symbol Δ for *minus*, denoting *λείψις*, a 'wanting', contrasted with *ὑπαρξίς*, 'forthcoming' or *plus*. Minus, he explains, multiplied by a plus gives minus, minus by minus, a plus. Expressions containing more than one 'species' he arranges according to powers, first the positive terms, then the negative terms all together. He shows how to solve simple and quadratic equations; he does not recognize negative roots of equations or negative numbers standing by themselves. His problems are mostly indeterminate or semi-determinate equations (single or simultaneous) of the second degree, and his methods are extraordinarily varied and ingenious; his object is always to find a solution in positive numbers (not necessarily integral as generally required in modern indeterminate analysis). The typical sort of problem solved is this: to find three numbers such that the product of any two of them *plus* their sum, or *plus* any given number, is a square. It was Diophantus' work which led Fermat to take up the theory of numbers, in which he made his world-famous discoveries. The *editio princeps* of the Greek text is that of C. G. Bachet, 1621; second edition, with Fermat's notes, 1670. The standard text is now that of Paul Tannery (Teubner). Other editions are: German, by Wertheim (1890); English (in modern notation) by T. L. Heath (1910); French translation by Paul ver Eecke (Bruges and Paris).

T. H.

DIOS wrote a history of Phoenicia cited by Josephus (*AJ* 8. 147-9; *Ap.* 1. 113-15).

DIOSCORIDES (1) (fl. 230 B.C.), last of the great Alexandrian poets, has some forty epigrams in the Greek Anthology. The majority are erudite and skilful conceits on remote subjects—artificial epitaphs on historical figures (e.g. 'inventors' like Atys and Thespis) or paradoxical anecdotes. The rest—save one hate-poem, *Anth. Pal.* 11. 363—are lively, ironical, realistic love-poems in the sharpest epigrammatic style. G. H.

DIOSCORIDES (2) **PEDANIUS** (1st c. A.D.) of Anazarbus, army physician, was well versed in pharmacological literature and had studied the subject of his interest from early youth in extensive travels before composing his book; he was ambitious as expert rather than as writer. All this he tells us himself. He lived under Claudius and Nero (41-68); Erotianus mentions him.

WORKS: 1. *Π. ὕλης ἰατρικῆς*, bks. 1-5, almost 600 plants, nearly 1,000 drugs. 2. *Π. ἀπλῶν φαρμάκων*, or *Εὑπόριστα*, bks. 1-2.

The *Materia medica* is a conscious attempt to give a system, not an alphabetical list of drugs. Remedies from the vegetable, animal, and mineral kingdoms are described in careful subdivisions. The observation is minute, the judgement sober and free from superstition. Dioscorides' book superseded all earlier literature and became the standard work of later centuries, in the East no less than in the West. See BOTANY, para. 6; MEDICINE, 1 j.

BIBLIOGRAPHY

TEXT. *Materia medica*, M. Wellmann, i-iii (1907-14), contains both works; Wellmann's proof of genuineness of the second work (*Die Schrift d. D. Π. ἀπλῶν φαρμάκων*, 1914) not wholly convincing. Certainly spurious, *Π. δηλητηρίων φαρμάκων*; *Π. ἰοδόλων*, K. Sprengel, in C. G. Kühn, *Medici Graeci* xxvi (1830); *De herbis femininis*, H. F. Kästner, *Hermes* 1896; list of plant synonyms, Wellmann, *Hermes* 1898.

DIOSCORIDES, see also DIOSCURIDES.

DIOSCURI (Διόσκουροι, Attic -κοροι), the Sons of Zeus, a title (*Hymn. Hom.* 33. 1, of uncertain date; *Hdt.* 2. 43. 2; and often in Attic authors; not in any early passage) of the Tyndaridae (cf. TYNDAREUS), Castor and Polydeuces (Latinized Pollux). They are the brothers of Helen, *Il.* 3. 237 ff., where it is apparently stated that they are dead, but cf. *Od.* 11. 300 ff., where they are 'alive' although 'the corn-bearing earth holds them', and the author explains that they are honoured by Zeus and live on alternate days, 'having honour equal to gods'. Here and in Hesiod they are sons of Tyndareus and Leda; later, as in Pindar (*Nem.* 10. 80), Polydeuces is son of Zeus, his twin Castor of Tyndareus, and at Polydeuces' request they share his immortality between them, living half their time below the earth, the other half in Olympus. The Homeric hymn (supra) makes them both sons of Zeus, and an account of which there is no certain mention earlier than Horace (*Sat.* 2. 1. 26) makes them both born from an egg, like their sister (see HELEN). They had a cult in Lacedaemon, where they were symbolized by the *dokana*, two upright pieces of wood connected by two cross-beams (Plut. *De frat. amor.* 478 a-b), and in many other States, chiefly but not exclusively Dorian (Argos, Athens, Dorian colonies in Sicily, etc.). See ANAKES.

2. The chief events in their mythology are three. When Theseus kidnapped Helen they made an expedi-

tion to Attica, recovered her and carried off Aethra (q.v. for references). They took part in the Argonautic expedition, and on it Polydeuces distinguished himself in the fight against Amycus (q.v.). Their final exploit on earth was the carrying off of the two daughters of Leucippus, the Leucippides, Phoebe and Hilaeira. Thereupon the nephews of Leucippus, Idas and Lynceus, pursued them (Pind. op. cit. 60 ff., who makes it a cattle-raid; Theoc. 22. 137 ff.). In the resulting fight Castor and both the pursuers were killed; the sequel of the shared immortality has already been mentioned, but some ingenuity seems to have been spent in determining whether they have since been always together or always separate, one being in Hades while the other is in Olympus (Rose, *Handbook of Greek Myth.* 249, note 4). They are often identified with the constellation Gemini (as Ps.-Eratosthenes 10), and are connected with stars as early as Euripides (*Hel.* 140). Of the miracles attending their cult, the most famous is that connected with the battle of the Sagra, which gave rise to the Roman story of their appearance at Lake Regillus (Cic. *Nat. D.* 2. 6). The Locrians, being at war with the Crotonians, appealed for help to Sparta and were told that they might have the Dioscuri, whom they accepted. In the battle, which resulted in a complete victory for them, two gigantic youths in strange dress were seen fighting on their side (Justin 20. 3. 8; Suidas s.v. ἀλγρότερα τῶν ἐν Σάγγρη).

3. It is a still unsettled controversy whether they are in origin heroes of more than usual celebrity and popularity (they received divine honours here and there) or heroized ('faded') gods. In favour of the former view it may be urged that the earliest evidence (Homer, Hesiod fr. 94. 13, 27, and 31 Rzach) knows nothing of their being anything more than important human beings, honoured after death as several others of their kind were; that they do not become more than heroes till relatively late and even in late traditions and theologizings retain much of their human origin, becoming stock examples of the possibility of transcendent human virtue attaining superhuman rank (as Horace, *Carm.* 3. 3. 9). For such a career a close parallel can be found in that of Heracles (q.v.). On the other side, however, can be cited a not inconsiderable list of divine twins, the most celebrated being the Sanskrit Āśvins. These are often connected with horses; the Dioscuri are on occasion λευκόπωλοι, 'riders on white steeds', and Castor especially is a notable horseman. They not uncommonly have astral connexions, such as we have seen the Dioscuri have, though not very early and possibly only through one of their most picturesque functions, that of saviours of those in peril from storms at sea. In this capacity they appear as twin lights of St. Elmo's fire, which it would not be a hard thing to confuse mythologically with stars; see, for instance, Pliny, *HN* 2. 101. Certainly they are not infrequently seen in art with stars over the curious round caps which they wear. Moreover, possible traces of other twin gods have been discovered elsewhere in Greece, as for instance the Theban pair, Amphion and Zethus (see AMPHION), who are also sons of Zeus. But it cannot be said that these arguments are cogent as against the earlier date of the Homeric and Hesiodic passages; the original divine nature of the twins is no more than a possibility.

4. There is but one important identification of the Dioscuri with other figures; they tend to be confused with the Cabiri (q.v.). See, for some very interesting monuments connected with this and similar cults, F. Chapouthier, *Les Dioscures au service d'une déesse* (1935); in these, they (or deities identified with them) are grouped on either side of Helen. The connecting link is the common function of rescuing mariners.

Farnell, *Hero-Cults*, 175 ff., for their cult and the controversy as to their origin. Fuller references to their legends and art-monuments in the appropriate articles of the larger classical dictionaries, as Roscher's *Lexikon*. H. J. R.

DIOSCURIDES or **DIOSCORIDES** (1st c. B.C. or A.D.) is reputed to have written *On Customs in Homer*, in which he is said to have interpolated the Homeric text, *On the Life of Homer's Heroes*, *Recollections* of sayings of famous men, *The Spartan Constitution*, *On Institutions*. But these may not all be the work of one D.

FHG ii. 192 ff.

J. F. L.

DIOTIMA, legendary priestess at Mantinea and teacher of Socrates; Plato in *Symp.* 201d puts in her mouth his metaphysic of love. It is impossible to say whether Plato's fiction had any basis in fact, since we have no independent testimony.

PW v. 1147.

DIOTIMUS of Thrace (fl. 250 B.C.), who was a poor schoolmaster in Gargara, is the author of ten epigrams in the Greek Anthology: several of them (e.g. 7. 173, 261) are full of the deep, pure pathos which is characteristic of the 'Peloponnesian school' of epigrammatists.

Wilamowitz-Moellendorf, *Hellenistische Dichtung* (1924), i. 143.
G. H.

DIPHILUS of Sinope, brother of Diodorus (q.v. 1) of Sinope, New Comedy poet, born probably before 340 B.C.; he outlived Menander (Philemon in his *Φάσμα*, later than 289 B.C., mentioned Diphilus as living—Plaut. *Mostell.* 1145). Wrote about 100 plays, winning three Dionysiac victories (1st Lenaeon victory, c. 316 B.C.). About sixty titles are known—many of them common to other poets, and nine being mythological (e.g. *Heracles*, *Theseus*). His admiration for 'golden' Euripides, fr. 60 (a parasite's behaviour), was shared by other poets of New Comedy. Many interesting fragments of this 'live' poet—e.g. fr. 38, unfilial conduct of Ctesippus, son of Chabrias; fr. 43, a master-cook selects his employers with care; frs. 69, 70, Archilochus and Hipponax as Sappho's lovers; fr. 91, a vigorous description of an ugly woman.

A play of Diphilus was the original of Plautus' *Rudens*; the *Ἀληπούμενοι*, of Plautus' *Casina*; the *Συναποβήσκειντες*, of the lost play of Plautus, *Commorientes* (Terence, *Ad. prol.* 6, used a scene omitted by Plautus); and possibly *Σχέδια*, of Plautus' *Vidularia*. The influence of Diphilus upon the Roman stage attests his popularity and power as a comic poet.

FCG iv. 375 ff.; CAF ii. 541 ff. See Coppola, *Atene e Roma* (1924), 185-204.
W. G. W.

DIPLOMA, a small bronze tablet recording the privileges granted to a soldier on the completion of his service or, as regularly after the first century A.D., on his discharge. These *diplomata*, of which some 160 are extant, were given to auxiliaries, *classarii*, and members of the praetorian and urban cohorts. Down to the principate of Antoninus Pius the auxiliary and marine received personal citizenship, the legalization of his past or future marriage, and civic rights for his descendants. After A.D. 140, by which time Roman citizens also were enlisted in the *auxilia*, the form was brought into line with the *diplomata* granted to the praetorians. Citizenship was given to those requiring it, but *conubium* was now only prospective.

The legionary did not normally receive a *diploma*. The only exceptions to this rule are the two Adiutrices legions recruited from *classarii* in A.D. 68-9, and some soldiers of X Fretensis who were non-citizens enlisted in the same crisis.

CHL xvi (texts of *diplomata*; ed. H. Nesselhauf). G. L. Christman, *The Auxilia of the Roman Army* (1914); J. Lesquier, *L'armée romaine d'Égypte* (1918).
H. M. D. P.

DIPYLON, the gate by which the Sacred Road to Eleusis left Athens, and much of the traffic from Piraeus passed. Outside lay the outer Ceramicius (the inner Ceramicius being by the Agora). This was a burying-

place from the early Bronze Age, and from late Mycenaean times was Athens' chief cemetery. Magnificent monuments lined the roads, among those identified being those of Alcibiades' family and of the Spartans killed at Piraeus in 403. The Athenians who fell in battle were buried here, and here Pericles' Funeral Speech was spoken.

W. Judeich, *Topographie von Athen* (1931), 135 ff., 400 ff (modified by the results of recent excavations); progress reports in *Ath. Mitt. and Arch. Anz.*
T. J. D.

DIRCE, see AMPHION.

DIRGE in Greek literature. The ancient critics seem to have distinguished between two kinds of dirge, the *ἐπικήδειον* sung actually over the dead body (Procl. ap. Phot. *Bibl.* 321^a30), and the *θρήνος*, a song sung in memory of the dead (Ammon. *Diff.* p. 54). The difference does not seem to have been observed by the Alexandrian editors of the lyric poets, and the Dirges of Simonides (frs. 7-12) and of Pindar (frs. 114-23) may well have included both kinds. The earliest evidence for such dirges is in *Il.* 18. 50-1, 314-16, 24. 472-4. In these a company laments, but the leader has a special part as *ἐξάρχος*. Cf. E. Reiner, *Die rituelle Totenklage der Griechen* (1938).

For the dirge in Latin literature see EPICEDIIUM, NENIA.
C. M. B.

DISCORDIA, see PERSONIFICATIONS.

DISCUS (δίσκος), a flat circular piece of stone or metal, somewhat thicker in the centre. The old stone discus was heavier than the metal, sometimes weighing rather more than the 15 pounds which is the normal weight of the shot in our putting. The metal discus, usually of bronze, which became general during the fifth century B.C., was lighter and smaller, extant specimens varying in diameter from 6 to 9 inches, in weight from 3 to 9 pounds. It was thrown from a space defined by lines in front and either side. For the method of throwing, see ATHLETICS.
F. A. W.

DISSOI LOGOI (labelled by H. Stephanus *Διαλέξεις*), a short surviving sophistic work written in Doric about 400 B.C., perhaps in Cyprus, perhaps at Cyrene. The contents have no originality; they are reminiscent now of Protagoras, now of Hippias, now of Gorgias, and confirm Plato's account of the ethical relativism characteristic of the Sophists.

Ed. Diels, *Vorsokr.* ii. 405-16.

W. D. R.

DITHYRAMB. The origin of the word *διδύραμβος* is not known, though it is almost certainly not of Hellenic origin. It first appears in Archilochus (fr. 77), who calls it the song of Dionysus and says that he, under the influence of wine, leads others in singing it. It was, then, from the beginning a choral song to Dionysus, though it need not yet have had any very definite form. It was reduced to order by Arion at Corinth c. 600 B.C., when it was sung by a regular choir and made to treat of a definite subject. From Corinth it was brought to Athens by Lasos of Hermione (Suidas s.v. *Ἀἰῶες*), and it soon became a subject for competition at the *tes va's* of Dionysus. The first victor is said to have been Hypodocus of Chalcis in 509-508 B.C. (*Marm. Par.* 46). Hence till about 470 B.C. it attracted poets of great eminence such as Simonides, who won fifty-six prizes (fr. 79), Lasos, Pindar (frs. 60-77, not all for Athens), and Bacchylides (Odes 15-21). At this period it was composed like other choral odes, with regular strophe and antistrophe. The surviving fragments do not suggest any close connexion of their subjects with Dionysus or any special Dionysiac spirit, though the large element

of narrative in them may be due to Arion's example. But about 470 B.C. its character began to change. The change, associated with the names of Melanippides, Cinesias, Philoxenus, and Timotheus, was largely musical, and since no note of their music survives, it is hard to estimate what happened. In the main the music seems to have become more important than the words and to have led to a degeneration of the text. A protest against this movement is to be seen in some lines of Pratinas (fr. 1). Other elements in the change were the abolition of the correspondence of strophe and antistrophe, the introduction of solo-songs, and the development of a pompous, affected language. The movement continued into the fourth century in the hands of Polyidus and Telestes. After the fourth century the dithyramb seems to have lost its importance, even at Athens, though before 300 B.C. the State took charge of the expenses of production. Inscriptions from Delos, from 286 to 172 B.C., show that at the Delian Dionysia and Apollonia competitions were still held, as they were at Miletus in the third century and at Teos and Samos in the second. Polybius (4. 20) notes that the Arcadians commonly sang dithyrambs in his time. The habit lasted in Athens into the Imperial age, though no fragments of importance survive.

A. W. Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy* (1927), 5-82. C. M. B.

DIVERBIUM, dialogue in a comedy as distinct from *cantica* (q.v.).

DIVINATIO. Divination (q.v.), when professionally exercised, was regarded at Rome from the time of Tiberius as a crime and punished with confiscation of property and *relegatio* (q.v.). In spite of this and similar later prohibitions of all forms of *divinatio* (*vaticinatio*) and especially of the art of *astrologi* (called *mathematici*), all these 'improbandae artes contra quietem publicam' did not pass out of fashion, especially as some emperors tolerated this profession, which was practised mostly by foreigners from the Orient (*Chaldaei*). Under the late Empire the prohibition was repeatedly renewed. Diocletian strictly forbade the *ars mathematica*; Constantius (A.D. 357) made divination into a capital offence: 'sileat omnibus perpetuo diuinandi curiositas'; his constitution was included in Justinian's Code (9. 18. 5). It was equally a punishable offence to consult soothsayers.

Divinatio had another meaning in criminal procedure. When several persons came forward as prosecutors of the same criminal act, the magistrate determined in a special intermediate *iudicium*, attended by a *consilium* of jurors, who should be the accuser. See **QUAESTIO**. A. B.

DIVINATION. Prediction by supernatural means of future events and interpretation of past occurrences is found throughout Greek and Roman civilization, showing contacts at various points, such as neeromancy, prophecy, extispicy, or astrology, with Oriental cultures. The present account sketches Greek and Roman uses together, and for the sake of brevity neglects much of their chronological development.

2. Our most important ancient source, Cicero's *De Divinatione*, in 1. 11 and 2. 26 (possibly after Posidonius), divides the art into natural (or intuitive) and artificial (or inductive) types, though the two may at times overlap in practice, as with dreams. The former of these is immediate in its application, the latter supplements observation by *coniectura*.

3. Of Natural Divination no form seems more primitive than dreams, often mentioned from Homer onward. These might either be understood by the dreamer or require professional interpreters, whose lore, based partly on empiricism but chiefly on supposed resemblances (Arist. *Div. Somn.* 2. 464^{b7}), was preserved in practical dream-books, such as the *Onirocritica* of Arte-

midorus and Astrampsychus, or discussed in theoretical works, like Aristotle (op. cit.), Synesius, *De Insomniis*, and Macrobius, *Comm. in Somnium Scipionis*. A specialized form is incubation (q.v.; *ἐγκοιμήσις*), practised at health-shrines, like those of Aesclepius, by persons desirous of cures, and hence called *iatromancy*. Neeromancy, or evocation of spirits of the dead, is already well developed in *Od.* 11, but though long employed, especially at certain localities (*psychomantia*), it was less respectable than most other methods. Related to it are lecanomancy, elaeomancy, hydromancy, and catoptromancy, in which forms of the dead or of gods or demons appear on the surface of liquids or on mirrors.

4. Very important is prophecy (*vaticinatio*), in which the *vates* acts as the medium or mouthpiece (*προφήτης*) of a divine or demonic power possessing him, the process being related to poetic inspiration, and known as *ἐνθουσιασμός*; cf. [Arist.] *Probl.* 30. 1. 954^a34-8. Lists of such seers are given by Hopfner in *PW* xiv (1928), 1267-8. Like telepathy and clairvoyance and like the ventriloquists (*ἐγγαστριμύθοι*), the freer forms of prophecy, such as those of the shadowy Baeis (q.v.) and Musaeus (q.v. 1), seem hardly to have become institutionalized, but with the Sibyls (q.v.) and the oracles (q.v.), e.g. Delphi (q.v.), Dodona (q.v.), Lebadea, Oropus, and Ammon (q.v.), prophetic power became resident at fixed sites, where a succession of media regularly answered consultants. See, however, **PROPHECIES**.

5. Artificial Divination may be roughly divided into prognostications from animate beings or from plants, and those from lifeless objects. Its oldest type is perhaps augury (see **AUGURES**) or the observation and interpretation of the number, species, flight, cries, eating, and other symbolic acts of birds. Cicero (*Div.* 1. 92) mentions Phrygians, Pisidians, Cilicians, Arabs, and Umbrians as specialists in this art, but it was common in Greece from the time of Tiresias, Melampus (Porphyry, *Abst.* 3. 3), and Calchas (*Il.* 2. 308-32), and at Rome was entrusted to the college of augurs (see **AUSPICUM**). Auguries might be deliberately sought (*impetratiua*) or offered to men unsought (*oblatiua*; cf. Serv. *Aen.* 6. 190), a variety of the former type more convenient for military use being the Roman observation of the sacred chickens (aleutryonomancy). Similar features might be noted in the case of other animals, especially from their chance appearances during a journey (*ἐνόδια*; cf. A. S. Pease on Cic. *Div.* 1. 26). Still more important were indications derived from human beings, e.g. from their involuntary motions or twitchings (*παμῶς, salisatio*), from sneezing, and from the large class of omens (or *eledonomancy*), i.e. utterances prophetically significant, like tragic irony, in a way not realized by the speaker, who is here, as in motions and sneezings, merely the tool of a temporarily possessing, superhuman, power (e.g. *Od.* 18. 112-17). Other types depend upon the morphology rather than the actions of animate beings, and include teratological births, palmistry or chiromancy (Poll. 2. 152), and the interpretations of physiognomists. But most important, during a long period and over a wide geographic range, is extispicy (or haruspicy), based on observation of the entrails—especially the liver (hepatoscopy) of sacrificial animals, for which see **HARUSPICES**. Predictions were also derived from miraculous growths and actions of plants, e.g. of 'birth-trees' (see Donat. *Vit. Verg.* p. 2 Brummer), the residence of an 'external soul'.

6. Divination from lifeless objects has varied forms. The classification by Varro (ap. schol. Dan. *Aen.* 3. 359; Isid. *Etym.* 8. 9. 13) into four elemental groups (*geomantis, aëromantis, pyromantis, hydromantis*) is suggestive but unduly formal. There may here be mentioned, however, empyromancy, or the behaviour, when placed on a sacrificial fire, of such objects as incense (libanomancy), flour (aleuromancy), or eggs (oöscopy). In omoplatoscopy (or scapulomancy) the shoulder-blade of

the victim was observed when heated over the coals. Other objects, such as axes (axinomancy), spindles (sphondulomancy; Poll. 7. 188, where numerous other detailed types of divination are named), and sieves (eoscinomancy) also appear, but rhabdomancy, or the use of the rod for prognostication, seems to belong primarily to neighbouring cultures. Numerous are the uses of lots (cleromancy), in which a divine power guides the fall of dice or knuckle-bones (astragalomancy) or the drawing (often by the hand of an innocent child) of inscribed *sortes* from some receptacle. This practice was often localized at particular sites, such as Claros, Praeneste, Antium, the fountain of Clitumnus, and Patavium. The inscribed lot is naturally later in origin than the introduction of writing, and from it was perhaps derived bibliomancy, or the random consultation of books to discover prophetic advice. The great poets were often so used (rhapsodomancy), perhaps as being themselves divinely inspired. Thus we find the *sortes Homericae*, the *sortes Vergilianae*—eight cases in the *Augustan History* alone—and, with the Christians, the *sortes Biblicae*.

7. The interpretation of weather-signs (as in Aratus 733) approaches more nearly to empirical science, yet many unusual meteorological phenomena (storms, meteorites, aurora borealis, etc.) and many arising from the earth (earthquakes, faulting, etc.), as well as teratological births of men and beasts (see above), were called *ostenta*, *portenta*, *monstra*, *prodigia* (q.v.) (Cic. *Div.* 1. 93), and considered precursors of social, political, or dynastic changes. Such were recorded in priestly records (especially at Rome) and used as sources by various historians (e.g. Livy, from whom Julius Obsequens, by a reverse process, compiled his *Prodigiorum liber*). For the vast field of astrology in its various forms, increasing with the Oriental influences following the conquests of Alexander, see ASTROLOGY.

8. Popular belief at most periods commonly accepted older, socially or politically established, forms of divination, though many looked askance upon others as charlatany. Some philosophers also accepted the art with little question, but Xenophanes, the Epicureans, Carneades, and others rejected it, and Panaetius expressed doubts of its reality. Some Peripatetics admitted intuitive but disallowed inductive divination (Cic. *Div.* 1. 5, 113; 2. 100), but most Stoics (notably Posidonius) vigorously defended both types, basing their justification upon the powers of gods, fate, and nature (Cic. *Div.* 1. 125), or upon the doctrine of *συμπάθεια*. Mystics in the second century of our era, and later, attempted to revive interest in the Delphic oracle, which was in Cicero's time (*Div.* 1. 37-8; cf. Plut. *De Pyth. or.*; *De Def. or.*) already in neglect, and various collections of oracles, with infiltration of Christian elements, date from this period. Yet after a fitful respite, during which apologists like Origen attacked pagan divination as the work of malign demons, Theodosius, in the fourth century, by a series of edicts forbade various mantic rites, and though these sometimes survived under Christianized guise the prestige of the pagan divination was at an end.

Reinhardt, *Kosmos u. Sympathie* (1926), 214-75. A. S. P.

DIVISIO, used in Cicero and Quintilian of logical and rhetorical division, occurs in the title of Seneca's collection of specimen debates. Part of each *controversia* is devoted to a dissection of the strict legal questions involved (e.g. *Controv.* 9. 5. 6; 10. 2. 8-9): it is a skeleton line of argument showing the structure of a speech (*Controv.* 1. 4. 6). The *divisio* had to avoid over-elaboration; for Seneca (*Controv.* 7 *praef.* 1), criticizing Albucius' handling of *controversiae*, says it was too sketchy for a declamation but too full for a *divisio*.

See H. Bornecque, ed. of Sen. *Controv. et Suas.*,² Introd. p. ix. J. W. D.

DIVISORES, see CANDIDATUS.

DIVITIACUS (1) (1st c. B.C.), an Aeduan Druid, leader of the philo-Roman party. After the defeat of his tribe by Ariovistus (c. 61 B.C.) he appealed unsuccessfully for help at Rome. He regained influence against his brother Dumnorix by supporting Caesar (58), whom he urged in the name of the Gallic tribes to expel Ariovistus. In 57 he assisted Caesar by attacking the Bellovaci and secured favourable terms for them.

Caesar, *B Gall.* 1. 16-20; 31-2; 2. 5-15; Cicero, *Dir.* 1. 41. 90.

DIVITIACUS (2), king of the Suessiones c. 100 B.C. and overlord of other tribes both in Gaul and Britain.

Caesar, *B Gall.* 2. 4. 7

DOCHMIUS, see **METRE** (Greek) III (7).

DODONA (Δωδώνη), seat of a very ancient oracle of Zeus in the mountains of Epirus. Zeus, with the epithet Naïos, had Dione as his consort. According to the cult-myth a pigeon (πελειάς) flying from Egyptian Thebes had lighted on an oak tree at Dodona, and with human voice had directed the founding of an oracle. This oak was the centre of Zeus' cult; in the rustling of its leaves the god's will was divined. Perhaps other signs were interpreted too: the flight and cooing of the sacred pigeons, the murmurs of the sacred spring, the resounding echoes of a bronze gong. The consultants wrote their questions upon lead tablets; the tablets preserved reveal that the questions were frequently of a trivial nature. Both men and women served Zeus and Dione and interpreted their will. The priests were called Selli (Σελλοί) 'of unwashed feet, who couch upon the ground' (Il. 16. 235). Our sources call the women not only prophetesses (προφῆτιδες, προμάντις) and priestesses (ἱέρειαι), but also 'old women' (γραιαί) and 'pigeons', whence the pigeon of the cult-myth.

ANCIENT SOURCES. (a) Inscriptions: a number of the lead-tablet inscriptions of consultants' questions are published in Collitz, *Dialekt-Inschriften*, 1557-98, and in SIG³, 1160-6. (b) Literature: Hom. *Il.* 16. 233-5, *Od.* 14. 327 f. = 19. 296 f.; Hdt. 2. 55-7; Strabo 327-9 and bk. 7, frs. 1-3 (Jones).

Nilsson, *Gesch. griech. Rel.* i (1941), 396-400; A. H. Krappe, *Rev. Arch.* 5 sér. xxxvi (1932), 77-93; J. Friederich, *Dodonaica* (1935). The nineteenth-century excavations are reported in C. Carapanos, *Dodone et ses ruines* (1878); more recent excavations are reported by D. Evangelides in *Ἱπάρχικὰ τῆς ἐν Ἀθῆναις Ἀρχαιολογικῆς Ἐταιρείας* (1930-2). J. E. F.

DOGS. From early times in Greece and Italy the dog was the companion and the friend of man, although he had not then lost some of the qualities which in his wild state he shared with the wolf and jackal. In Greek towns, even in the fifth century B.C., dogs often roamed in bands feeding upon the garbage of the streets, and Thucydides (2. 50) in his account of the plague at Athens notes that the dogs refused to eat the corpses left unburied. In Homer, however, we see the dog in his gentler aspect, when on the return of Odysseus the old hound Argus wags his tail and pricks up his ears in recognition of his master (*Od.* 17. 290 ff.).

The ancients knew of many varieties of dogs. The best-known was the huge Molossian, whose open jaws, strong teeth, and loud bark are described by Lucretius (5. 1063). From Greece also came the Laconian and the Arcadian hounds, the latter fierce animals supposed to have a strain of the lion in them. In Italy the chief breeds were the Umbrian and Salentine, equally useful as sheep-dogs or hunters; and from our island in the third century A.D. the Romans imported the bulldog and the terrier. A white Laconian was considered best as a sheep-dog, a black Molossian as a guardian of the house; and all alike were used in hunting. For pet dogs see **PETS**.

DOKANA, see **DIOSCURI**, para 1.

DOKIMASIA, the examination of candidates for office at Athens, before the *thesmothetai* (except candidates for the Boule, who were examined by the outgoing Boule). Men already chosen, whether by lot or by vote, but primarily the former, were formally interrogated to ascertain whether they were eligible: e.g. whether they were thirty years old; whether (in the case of certain offices at certain periods, e.g. the archonship: see **ARCHONTES**) they belonged to a particular census-class; and whether they were not precluded from one office, because they had held it before, or were holding another, or through being under some form of *atimia* (q.v.). A. W. G.

DOLABELLA (1), GNAEUS CORNELIUS, consul 81 B.C. and afterwards governor of Macedonia, was rewarded with a triumph for his victory against the Thracians. Accused in 77 *de repetundis* by Caesar in a famous speech now lost, he was acquitted.

Münzer, *PW* iv. 1297-8.

A. M.

DOLABELLA (2), GNAEUS CORNELIUS, praetor 81 B.C., plundered Cilicia (80-79) aided by his legate Verres; impeached by M. Aemilius Scaurus and betrayed by Verres, he was banished.

DOLABELLA (3), PUBLIUS CORNELIUS, commanded a Caesarian fleet in the Adriatic (49 B.C.) and fought in the campaigns of Pharsalus, Thapsus, and Munda. As tribune in 47, he provoked serious riots in attempting to carry a law for the cancellation of debts. After the murder of Caesar he at first associated himself with the conspirators, but Antony won his support by allowing him to assume the consulship which Caesar had intended for him. At the same time his drastic intervention against worshippers of Caesar (April 44) was enthusiastically approved by the Republicans. Towards the end of the year he left for Syria, which had been assigned to him by the Assembly for five years, captured Smyrna by surprise, and put to death Trebonius, governor of Asia. The Senate declared him a public enemy (February 43), he was besieged by Cassius in Laodicea, and committed suicide to avoid capture (probably July 43). Dolabella was notorious for his dissipation, and was invariably in debt. His second wife was Cicero's daughter Tullia.

Cicero, *Letters and Philippics*; Plutarch, *Antony* 9-11; Appian, *BCiv.* bks. 2-4; Dio Cassius, bks. 41-7. Drumann-Groebe, *Gesch. Roms* ii. 486-97. G. W. R.

DOLABELLA (4), PUBLIUS CORNELIUS (*cos.* A.D. 10), was legate in Dalmatia (14-c. 20), where he kept the legions quiet and used them in a big programme of road construction. In 23-4, as proconsul of Africa, he ended the war against Tacfarinas (q.v.).

A. M.

DOMAINS. (a) **CIVIC**. Most cities owned land corporately. Some was acquired by conquest, some by escheat, some by confiscation. When cities came under Roman rule, conquest was ruled out, and escheated and confiscated estates normally went to the Roman People. The cities, however, continued to acquire territory, chiefly by gifts and bequests; though they could not inherit under Roman law, they probably could do so under peregrine law (till A.D. 212), and legacies were legalized by Nerva; moreover, *fideicommissa* were doubtless always valid. The domains owned by a city did not necessarily lie within its territory; Arpinum owned land in Cisalpine Gaul and Cos estates in Cyprus. The rent from domains was often an important part of the civic revenues.

(b) **IMPERIAL**. The nucleus of the imperial domains was formed by the estates of successive emperors, which normally passed to their successors. They were enlarged by a vast flow of bequests not only from friends, dependents, and freedmen, but from strangers: some emperors refused to accept bequests from persons unknown to them, but others were so grasping as to quash wills under which they did not benefit. Furthermore, the estates of persons condemned for *maiestas* were sometimes bestowed on the emperor; by the second century this was probably the regular practice. In Egypt the imperial domains were, from the Flavian period, managed by a special department (λόγος οὐσιακός) separately from the public lands. In other imperial provinces, where there were only scattered public domains, they and the imperial estates were probably administered by the same staff. In the public provinces the emperor's procurators, who at first managed only his estates, later,

perhaps under the Flavians, assumed control of public lands; at this date the domains in Africa were grouped in *regiones* and *tractus*. Public and imperial domains were thus assimilated (except in Egypt) and were both included in the *patrimonium*.

(c) ROYAL. Alexander and the Successors claimed to own the land of their kingdoms, excluding the Greek cities. This theory was most vigorously exploited by the Ptolemies in Egypt. They granted lands, it is true, to the gods in perpetuity, to their friends for life, and to their soldiers at first on a life and later on a hereditary tenure, and they even granted private possession in perpetuity of some land. But they seem to have maintained their title to the land which was granted (γῆ ἐν ἀφέσει), and the rest, the royal land (γῆ βασιλική), they exploited directly by rack-renting it to the peasants. In Cyrenaica also the Ptolemies seem to have claimed ownership of all the land save the territories of the Greek cities. The Seleucids also made grants of land to their friends and soldiers, but they did not generally disturb tenures, but merely levied the customary dues from the natives. They gradually alienated the χώρα βασιλική by gifts and sales to cities, or to individuals with permission to incorporate the land in cities; by founding new cities; and by recognizing native communities as cities. When the Attalids succeeded to Seleucid Asia Minor, they probably found little royal land. The Bithynian and Cappadocian kings owned extensive royal lands. The Macedonian and other European kings, on the other hand, possessed little—probably only family estates and the territories of communities which had been conquered and destroyed.

(d) SACRED. Many gods owned land; especially in Egypt and Asia Minor. These were probably acquired in the main by gifts and bequests; partly perhaps by the foreclosure of mortgages, for the gods, controlling large reserves of cash, engaged extensively in money-lending. In Egypt the sacred lands were administered by the Crown under the Ptolemies, and the Roman government maintained the system. In Asia Minor the sacred lands were often managed by the high priests of the god, some of whom were independent dynasts or subject only to the suzerainty of the Crown. In cities the sacred lands were generally administered by public magistrates, and with the spread of cities the independent temples of Asia Minor mostly passed under municipal control.

DOMINIUM. In ancient Roman law ownership of things was closely connected with the power over persons: the rights of a *pater familias* over wife and children were similar to those over slaves and cattle; they all derived from his sovereign position as head of the *familia* (a term which included both persons and objects in the household, see *PATRIA POTESTAS*). The more developed law differentiated between rights over persons and rights over things, as also between the transactions for their transfer, for all of which *mancipatio* had previously been sufficient. The classical jurisprudence conceived ownership (*dominium, proprietas*), without precise definition, as an unrestricted right of control over physical objects. It was absolute, exclusive, and complete. Consequently, when several persons owned a thing in common, neither did each of them hold *dominium* of the whole, nor did each of them hold *dominium* of a determined part (e.g. a single floor of a building). They owned ideal, abstract parts, expressed in fractions (see *COMMUNIO*). Restrictions of *dominium* were at first imposed for religious reasons only, or for avoiding a nuisance to neighbours; they were gradually extended in later times in order to protect public interests.

The ancient law knew only *dominium ex iure Quiritium*, which, being an institution of the old *ius civile*, was open to Roman citizens only. The quiritary owner (the only one who could assert '*res mea est*') could transfer the ownership of *res Mancipi* by transactions of the *ius civile*, viz. *mancipatio* (q.v.) and *in iure cessio* (a kind of collusive process in which the transferor, as defendant in the trial, did not contradict the plaintiff's claim to own the transferred object). By a later development, however, the praetors introduced means of protecting ownership not acquired by these methods, or ownership of *res nec Mancipi*. In this way a praetorian type of ownership (*in bonis habere*) arose, which was defended by special praetorian remedies, even against the quiritary owner. A 'praetorian' owner became a 'civil' one by uninterrupted possession of an object for one year (if movable) or two years (if immovable). This method of acquiring quiritary property was called *usucapio*. The contrast between quiritary and praetorian ownership disappeared in Justinian's law (see *POSSESSIO*).

DOMITIAN (TITUS FLAVIUS DOMITIANUS), son of the Emperor Vespasian, was born on 25 October A.D. 51. His youth was spent in obscurity until 69, when his father's rebellion against Vitellius suddenly brought him into prominence. After a narrow escape from death Domitian found himself, on the murder of Vitellius, temporarily at the head of affairs in Rome. This brief taste of power, which abruptly ended with Vespasian's arrival in 70, coloured Domitian's whole outlook. He had dreamed of heading a Germanic invasion and of rivalling his brother's exploits; instead, he found himself condemned to a position of inferiority. Vespasian intended him to succeed the childless Titus, and he held two ordinary consulships (73 and 80) and five suffect consulships; yet neither under Vespasian nor under Titus did he exercise any real power.

2. The effect which this long suppression had on Domitian's naturally proud and ambitious character was unfortunate. When he finally succeeded Titus in 81 he was an embittered and jealous man, determined to exert his powers to the full. His reign falls into two halves. Down to the rebellion of L. Antonius Saturninus (q.v. 3) in 88 Domitian avoided bloodshed and ruled firmly but equitably; afterwards he became more and more ruthless, until his reign culminated in a Terror (93 to 96).

3. Domitian accentuated the absolutist tendencies of Vespasian. He was consul ten times during his principate, using the office merely for the purpose of giving his name to the year. He wore the dress of a *triumphator* even in the Senate and was accompanied by twenty-four lictors. He habitually exercised the right of *adlectio*, using it to draft distinguished *equites* and provincials into the Senate, while in 84 or 85 he became *ensor perpetuus*. This was a serious blow to the Senate, whose composition he now completely controlled. He only consulted it perfunctorily, relying for advice on the *consilium principis*, in which senators and *equites* served equally. In fact Domitian broke the spirit of the Senate, compelling it to vote as he willed, and, after 88, bringing back all the horrors of *maiestas* and *delatio*. This was partly caused by financial embarrassment, though, as his major expenses occurred before 93, it may be argued that revenge was at least as important a motive. The increase of legionary pay from 300 to 400 *denarii* annually, military campaigns, extensive public works and buildings, such as the temple to Jupiter on the Capitol, the temple to Jupiter Custos on the Quirinal, and his magnificent Alban villa, in addition to *congrua* amounting in all to 225 *denarii* a head, all helped to swell expenditure.

4. In foreign policy Domitian aimed at strengthening existing frontiers, and his much-maligned campaign against the Chatti in 83 was really a successful attempt to annex Mt. Taunus and complete the line of defence from Main to Neckar. In 85 the Dacian king Decebalus inflicted a heavy defeat on Oppius Sabinus, legate of Moesia. Another defeat followed in 86, and the Roman general Sabinus was slain and an eagle captured. In 87 the Roman forces won a great victory at Tapae; but under pressure from a defeat of the Pannonic army, which he was leading in person, at the hands of the Marcomanni and Quadi, Domitian made an honourable peace with Decebalus and returned to Rome to triumph in 89. The Sarmatians inflicted some further defeats on the Romans, and in 92 Domitian, taking the field in person, won some success. The only other serious fighting was that of Agricola (q.v.) in Britain; Agricola was recalled in 84, possibly because Domitian was jealous of his success.

5. In general administration of the Empire Domitian showed himself careful and efficient, choosing good governors and punishing bad ones. Procurators and freedmen were strictly controlled, and exaction of taxes was severe but fair. Domitian also made serious attempts to raise the general standard of morality, and, as censor, strictly enforced the laws against immorality, suppressed castration, and checked theatrical licence. In 83 he executed three Vestal Virgins for immorality. In 90 the Chief Vestal, Cornelia, was condemned to be buried alive.

6. Domitian's strictness on the question of public morality accorded ill with the sensuality of his private life, and this was one of the many causes of the opposition with which he met from the aristocracy and philosophers. Other causes were his attempt to impose Greek refinement on the Romans, his virtual suppression of the Senate, and the Oriental flattery of himself which amounted, at least unofficially, to an assumption of semi-divine honours. Earlier Domitian had treated this opposition with comparative indifference, but in his later years, feeling that he could trust nobody, he turned to persecution. The philosophers, whom he twice banished from Italy (89 and 95), were not so serious a menace: their chief danger was that they supplied theoretical arguments to justify the aristocratic opposition. Many plots were made, though our authorities give the most flimsy reasons for Domitian's executions. The fact that the Emperor was childless increased both his own suspicion and the hopes of the plotters; until he executed him in 95, Domitian had destined the two sons of Flavius Clemens as his heirs; what he intended to do afterwards we do not know.

7. A vicious circle was thus set up; every unsuccessful plot caused more executions, which in their turn led to another plot. In 96 the Emperor's own wife, Domitia, feeling herself insecure, joined with the two praetorian prefects and some of the court officials in a plot which succeeded, and Domitian was murdered. The real significance of his reign lies in the fact that a rapid and permanent advance was made towards absolute monarchy.

Gsell, *Essai sur le règne de l'empereur Domitien* (1894); R. Syme, *JRS* 1930, and C. H. V. Sutherland, *JRS* 1935 (on Domitian's finances). See also under *VESPASIAN*.

R. L. J.

DOMITIANUS, TITUS FLAVIUS, son of Flavius Clemens and Flavia Domitilla; he and his brother were adopted by Domitian and received respectively the names of Domitian and Vespasian. Their tutor was Quintilian.

Stein, *PIW* vi. 2596.

DOMITILLA, FLAVIA, Domitian's niece, was accused with her husband, the consul Flavius Clemens, in A.D. 95 of atheism, probably because she favoured Christian (rather than Jewish) rites. She was exiled. The early-Christian Coemeterium Domitillae on the Via Ardeatina is somehow connected with her. Eusebius 3. 18, which refers to Domitilla as a niece of Clemens, is probably a simple mistake, not evidence for another person.

Stein, *PIW* vi. 2732; H. Leclercq, *Dict. d'arch. chrétienne* iv. 1401; P. Styger, *Die röm. Katakomben* (1933), 63. A. M.

DOMITIUS (1) AHENOBARBUS, GNAEUS, plebeian aedile (196 B.C.), praetor (194), and consul in 192, in Gaul. In the absence of Scipio Africanus he was in effective command at Magnesia. He may have been in Greece in 169–168 and 167, but this Domitius may be his son, consul in 162.

Livy 35. 22 and 40; 37. 39; 44. 18; 45. 17; Appian, *Syr.* 30. De Sanctis, *Stor. Rom.* iv. 198. A. H. McD.

DOMITIUS (2) AHENOBARBUS, GNAEUS (*cos.* 122 B.C.), won great glory as proconsul in 121 by his conquest of the Allobroges in south Gaul, whither the king of the Salluvii had fled after Calvinus' victories. He used elephants with great effect at the battle of Vindalium near Avignon. The annexation of Narbonese Gaul followed, after Domitius had treacherously seized Bituitus, king of the Arverni, at a conference. The Via Domitia, from Provence to the Pyrenees, was founded by him; and he started the practice of erecting monuments (like that at St. Rémy) in the form of towers on the site of a victory. He was censor with Metellus Delmaticus (115). M. H.

DOMITIUS (3) AHENOBARBUS, LUCIUS (*cos.* 54 B.C.), husband of Cato's sister Porcia, supported Verres (Cicero then calls him 'princeps iuuentutis'—*Verr.* 2. 1. 139) and resisted Manilius (q.v. 2) in 66 B.C. Relentlessly hostile to the 'Triumvirate', in 58 (as praetor) and in 56 he specifically threatened Caesar's position in Gaul, the scene of his own grandfather's victories; he thus precipitated the conference of Luca, which postponed his consulate to 54. In 49 the Senate granted him Gaul, but his march northwards, unsupported by Pompey, ended in capitulation at Corfinium, though by Caesar's clemency he survived to defend Massilia and to fall at Pharsalus. Domitius could mobilize clients from the Marsi and Paeligni and tenants from the great estates which Sullan bounty had given him. But his pretensions sometimes made him ridiculous (cf. Caelius in Cic. *Fam.* 8. 14), his stupidity was proverbial, and he shared the brutality of his gens (Suet. *Nero* 2). G. E. F. C.

DOMITIUS (4) AHENOBARBUS, GNAEUS (*cos.* 32 B.C. and son of (3) above), fought on the Pompeian side in the Civil War and accompanied Brutus to Macedonia in 44. In 43 he was condemned (perhaps unjustly) for participation in the murder of Caesar, and proscribed. From 42 to 40 he commanded a fleet in the Adriatic against the Triumvirs, but he joined Antony before the treaty of Brundisium, was appointed governor of Bithynia, and took part in the Parthian expedition (36) and the operations against Sextus Pompeius in Asia Minor (35). Domitius was consul in 32, but left Rome for Ephesus when civil war threatened. He opposed the personal participation of Cleopatra in the war and went over to Octavian before Actium, already suffering from a fever which proved fatal.

Appian, *BCiv.* bks. 4 and 5; Dio Cassius, bks. 47–50. Drumann-Groebe, *Gesch. Roms.* iii. 24–8. G. W. R.

DOMITIUS (5) AHENOBARBUS, LUCIUS (*cos.* 16 B.C.), the husband of Antonia, the elder daughter of M. Antonius and Octavia, the Princeps' sister. Alleged to have been proud, blood-thirsty, and addicted to chariot-racing, he was aedile in 22, when he behaved arrogantly

to the censor Planeus; proconsul of Africa (12); legate of Illyricum between 7 and 2, when he marched from the Danube to the Elbe, setting up an altar to Augustus on the farther bank of the latter river. The direction of his march is uncertain. Next, in command of the army of Germany, he constructed the causeway across the marshes between the Rhine and the Ems known as the *pontes longi*, after which nothing more is heard of him.

R. Syme, *Roman Revolution* (1939), see Index.

R. S.

DOMITIUS (6) MARSUS, Augustan poet, acknowledged by Martial as one of his models (1 *praef.*; 2. 77; 5. 6; 8. 56. 24). To light poetry he added an epic *Amazonis* (4. 29. 8). An epigram by him is attached to the *Vita* of Tibullus, but his remains are too slight for a literary estimate.

Baehr. *FPR*; Morel, *FPL*.

J. W. D.

DOMITIUS, see also **AFER**, **AURELIANUS**, **CALVINUS**, **CORBULO**, **NERO**, **ULPIAN**.

DOMUS AUREA (Golden House) was the palace of Nero, built after the great fire of Rome in A.D. 64, covering the south slope of the Oppian Hill and surveying the ornamental lake later covered by the Colosseum (q.v.) and the temple of Claudius on the Caelian. As befitted its situation in a royal park, the main wing of the palace (now covered by the courtyard and reservoirs of the baths of Trajan) followed Hellenistic landscape architecture, with frontal colonnade and angular planning, permitting different vistas to be enjoyed. The treatment, however, is domestic when compared with the Flavian palace on the Palatine. Only the vestibule to the palace, on the site of Hadrian's temple of Venus and Roma, attained monumental proportions and was approached by the great colonnades of the new *Sacra Via* (q.v.).

I. A. R.

DONATIVUM, a supplement to the annual pay of a soldier in the legions and the praetorian and urban cohorts. Originally a share in booty, donatives were paid in money by emperors to commemorate a joyful event (e.g. the fall of Sejanus), or left in their wills. After Claudius each new accession was the occasion for a donative. The amount granted to each praetorian was at first, like his pay, three times that of the legionary, but gradually, because of the political importance of the Guard, the difference became disproportionately greater. When Hadrian adopted L. Aelius Caesar the legionary got 225, the praetorian 5,000 *denarii*.

H. M. D. Parker, *The Roman Legions* (1928); M. Dury, *Les Cohortes prétorienne* (1938).

H. M. D. P.

DONATUS (1), AELIUS, the most famous grammarian of the fourth century A.D., who numbered amongst his pupils the future St. Jerome. He wrote two *artes* and commentaries on Terence and Virgil. (i) The *Ars minor* (ed. Keil, *Gramm. Lat.* iv. 355-66), intended for beginners, deals, in the form of question and answer, with the eight parts of speech. (ii) The *Ars maior*, or *secunda* (ed. Keil, *ibid.* 367-402), is more comprehensive and includes the *vitia et virtutes orationis*. These works became favourite school-books in the Middle Ages. (iii) The extant Terence commentary (which omits the *Haec autem timorumenos*) is not in its original form but is apparently a (6th c.) compilation made from two copies found in the margins of Terence MSS. P. Wessner (ed. 2 vols., 1902-5) prints the commentary as found in our manuscripts; H. T. Karsten (ed. 2 vols., 1911-12) attempts to restore the original form. In this work Donatus owed much to Aemilius Asper (q.v.). (iv) Of the Virgil commentary only the preface (ed. Wölfflin,

Philol. xxiv. 154) and the life of Virgil with an introduction to the *Eclogues* (ed. J. Brummer, *Vit. Verg.* 1912) are extant. But the commentary of Servius (q.v.) contains much material derived from it, and the so-called Servius Danielis is claimed to be virtually Donatus (cf. E. K. Rand, *CQ* 1916, 158-64). Some of the more learned notes in glossaries (e.g. the *Liber Glossarum*) may also come ultimately from Donatus' commentary. See also **SCHOLARSHIP**, **LATIN**, IN **ANTIQUITY**, and cf. Teuffel, § 409; Schanz-Hosius, § 832.

J. F. M.

DONATUS (2), TIBERIUS CLAUDIUS (Inte 4th c. A.D.), wrote a continuous (but tedious) commentary (*Interpretationes Vergilianae*) in twelve books on the *Aeneid* (ed. H. Georgii, 2 vols., 1905-6), in which he deals with the poet's thought, style, rhetoric, and learning. It has no clear affiliation with earlier or contemporary commentators and is mentioned by no later writer.

Cf. Teuffel, § 431. 5; Schanz-Hosius, § 248. 3.

J. F. M.

DORIANS, the last of the northern invaders into Greece (c. 1100-1000 B.C.), who settled especially in Elis, Laconia, Argos, Corinth, Sicyon, Epidaurus, Megara, and Aegina, and crossed the seas to occupy Crete, Melos, and Thera, and the south coast of Asia Minor. Greek tradition associated the invasion with the return of the Heraclidae and traced the route of invasion from Doris (q.v.) via Delphi (where the priesthood came of Dorian families) to Naupactus, whence the invaders crossed by sea into Peloponnesus. As they spoke a dialect of Greek, it is probable that they were of related stock to the earlier invaders and had previously inhabited the fringes of the Mycenaean world. Of the tribes commonly found in Dorian communities, the Hylleis, Dymaneis, and Pamphyli, the first probably represented the eastern stream of invasion via Delphi, the second the western stream via Elis (the ethnic *-anes* being north-west Greek), and the third the general ruck of less important tribes. The area whence the invaders came was probably Epirus and south-west Macedonia.

Culturally the Dorian invaders were inferior to the Mycenaeans; bringing little with them except the iron slashing sword and the spectacle fibula, they ended Mycenaean civilization and plunged Greece into the Dark Ages, in which Geometric pottery—regarded by some as Dorian, by others as degenerate Mycenaean art—developed and reached its acme at Athens. In the Orientalizing and Archaic periods the Dorian element contributed largely to the development of Greek art in architecture, pottery, sculpture, and choral lyric. They possessed a restraint and architectonic power which blended with Ionic Greece in Athens to produce the acme of Greek art. Politically the Dorians split into two main channels; at Sicyon, Corinth, Argos, and Aegina the Dorian conquerors gradually lost their monopoly of franchise and became merged in the subject people; but Sparta and Crete retained a peculiar political form, in which the subject-peoples were serfs and dependents, while the franchised Dorians constituted a ruling military class, with a special organization of men's clubs.

DORIC, see **DIALECTS**, **GREEK**.

DORIEUS, a younger half-brother of the Spartan king Cleomenes I (q.v.). Jealousy and discontent drove him, probably with Cleomenes' approval, to lead a colonizing expedition to Cynops on the north African coast (near mod. Tripoli), whence the Carthaginians expelled him after three years. Returning to Sparta he next founded a settlement in west Sicily near Heraclea Minoa, where, before long, he and most of his followers were killed.

by the joint forces of Segesta and the Phoenicians. According to a doubtful tradition Dorieus had previously taken part with Croton in the destruction of Sybaris (510 B.C.).
A. M. W.

DORIS, a small area in central Greece enclosing the headwaters of the Cephissus. Its small plain, containing the Tetrapolis of Pindus, Erineus, Boeum, and Cytinium, is traversed by the route from Malis to Phocis which turns the defences of Thermopylae and was used by the Persians and Galatians. The Dorians of Peloponnesus, and the Spartans particularly, claimed Doris as their metropolis (Tyrtaeus, fr. 2); possibly during the invasion period a section of Dorian invaders halted there. Represented on the Amphictonic Council, Doris was championed by Sparta (Thuc. 1. 107). In the fourth century it fell into the power of Onomarchus and later of Philip. Fourth-century walls are extant at Cytinium.

N. G. L. H.

DOROTHEUS of Sidon (1st or beginning of 2nd c. A.D.), an astrological poet who had great vogue with the Arabian astrologers.

Ed. (along with Manetho) H. Koechly (1858). *PW* v. 1572.

DOS, see MARRIAGE, LAW OF, paras. 7-8.

DOSIADAS, author of a poem called *Βωμός* because of its shape, preserved in *Anth. Pal.* 15. 26 and manuscripts of Theocritus, written in mixed metres and purporting to be a dedication by Jason, in extremely obscure, allusive language. The poem is a *παίγνιον* like the *Syrinx* of Theocritus and seems to come from the same circle and age.

Text: J. U. Powell, *Collectanea Alexandrina*, 175-6 with notes; U. von Wilamowitz-Moellendorf, *Bucolici Graeci*, 152-3.
Criticism: Wilamowitz, *De Lycophronis Alexandra* (1884), 12 ff.
C. M. B.

DOSITHEUS (1) of Pelusium (fl. c. 230 B.C.), pupil of the astronomer Conon. He continued a connexion between the Alexandrian astronomers and Archimedes which had begun with the latter's studies in Alexandria; Archimedes dedicated several of his books to D. Observations by him on the times of appearance of the fixed stars (some of them made at places farther north than Alexandria) and on weather-signs are recorded in the *Parapegma* of Geminus and elsewhere. He wrote a work *Πρὸς Διόδωρον* in which he discussed Aratus' *Phaenomena* and Eudoxus' researches, and a work on the calendar, *Περὶ τῆς Εὐδόξου ὁκταετηρίδος*.

PW v. 1607.

W. D. R.

DOSITHEUS (2), surnamed *Magister* (possibly late 4th c. A.D.), grammarian, whose bilingual *Ars grammatica* (ed. Keil, *Gramm. Lat.* vii. 376-436; J. Tolkiehn, 1913) was intended for Greeks who wished to learn Latin. The Latin part was probably based on the *Ars* of Cominianus, and the Greek (now interspersed with the Latin) was originally interlinear. Under D.'s name there are also preserved in various forms the remains of a bilingual school-book now known as the *Pseudo-Dositheana Hermeneumata* (ed. G. Goetz, *Corp. Gloss. Lat.* iii). Originally it contained twelve sections: vocabularies, *Hadriani sententiae*, *fabulae Aesopiae*, *de munitionibus*, *narratio de bello Troiano*, etc. The contents are of various dates (some possibly 3rd c. A.D.) and have value for the light they throw on social life.

Cf. Teuffel, § 431. 7-8; Schanz-Hosius, § 836.

J. F. M.

DOSON, surname of Antigonus III (q.v.).

DOSSÈN(N)US (Hor. *Epist.* 2. 1. 173) probably identical with Manducus, the guzzler in *Atellana* (q.v.).

DOUGGA, see THUGGA.

DOXOGRAPHERS, designation of those ancient authors who wrote on the doctrines of philosophers.

This type of literature was inaugurated by Aristotle, who used to discuss the views of his predecessors in the introductory chapters of his systematic works. His disciple Theophrastus was the first to write a special work on the subject. He collected the doctrines of the Pre-Socratics in sixteen books (*φυσικῶν δόξαι*) and arranged them according to topics, the first book dealing with the first principles (*περὶ ἀρχῶν*), the last (most of which is preserved) with the theory of sense-perception. The works of the Hellenistic authors who wrote on the lives (*περὶ βίων*) and of those who wrote on the succession of the philosophers (*περὶ διαδοχῶν*) contained doxographic elements. This is especially true of the history of philosophy (*Ἐπιδρομή τῶν φιλοσόφων*) of Dioecles of Magnesia. Some of this material has found its way into the work of Diogenes Laertius.

Arius Didymus, the teacher of Augustus, wrote a summary (*ἐπιτομή*) of the doctrines of the Stoics. A complete doxography of the philosophy of the pre-Christian era was composed by Aëtius (1st or 2nd c. after Christ). A great part of his work is preserved in the Pseudo-Plutarchean *Placita* and in the *Eclogae* of Stobaeus. It was also used by Galen in his history of philosophy and by Theodoret.

Doxographi Graeci ed. H. Diels (1879); J. Burnet, *Early Greek Philosophy*, 33-7.
K. von F.

DRACO (*Δράκων*), an Athenian lawgiver, who drew up a code of laws with prescribed rules of procedure and fixed penalties (621 B.C.). He made no changes in the constitution (Arist. *Pol.* 1274^b15; the constitution attributed to him by Arist. *Ath. Pol.* 4 is no longer regarded as genuine). The purpose of the code was to allay the discontent of the masses. In a measure this object was achieved. No longer could the aristocratic magistrates apply and modify the law in the interests of the nobility.

The governing class was doubtless further influenced in appointing a lawgiver by the fact that a murderer had come to be regarded as polluted. Owing to the danger of pollution and the possibility of serious blood-feuds, homicide could no longer be dealt with by the families concerned. The State provided courts to try all homicides who did not take refuge in exile (*CAH* iv. 28).

The view that Draco used the judicial decisions of the magistrates as recorded by the *thesmothetai* has been challenged. But there is evidence in the extant part of his code dealing with unpremeditated homicide that he reduced to writing the customary law of his day, particularly in practice and procedure (Tod, *Greek Historical Inscriptions*, 87). For example, there is no formula for the interdict against an alleged or unknown slayer. Some loose form of the interdict must long have been in use.

Solon (q.v.) revised or repealed all of Draco's laws except those dealing with homicide, because the penalties were too severe. When Draco was asked why he made penalties so severe, he replied that small offences deserve death and for greater crimes he knew of no more severe penalty. The orator Demades said that Draco's laws were written in blood, and Aristotle (*Pol.* 1274^b13) says there was nothing noteworthy about them except the severity of the punishments.

R. J. B.

DRACON of Stratonicea, in Caria, predecessor or contemporary of Dionysius Thrax; author of a number of works on grammar, metric, and particular lyric poets (Sappho, Alcaeus, and Pindar), cited by Suidas. The extant *Ἰ. μέτρων ποιητικῶν* ascribed to him (text, G. Hermann, 1812) has been shown to be a sixteenth-century forgery.

PW v. 1662-3.

J. D. D.

DRACONTIUS, **BLOSSIUS AEMILIUS**, a Christian Latin poet who flourished as an advocate at Carthage towards the end of the fifth century A.D. For eulogizing in verse a foreign prince he was imprisoned by Gunthamund, the Vandal king, but subsequently released. His secular works, of small poetic value, marked by free treatment of legend and unrestrained rhetoric, consist of a collection of short hexameter poems entitled *Romulea*, including rhetorical exercises, epithalamia, and mythological epyllia (*Hylas*, *De Raptu Helenae*, *Medea*); the anonymous *Orestis Tragodia*, now proved Dracontian, probably belongs to this collection. The Christian poems, written in prison, comprise (a) a short elegiac poem of repentance addressed to the king (*Satisfactio*), (b) *De Laudibus Dei* in three books of hexameters; this, his chief work, shows considerable poetic imagination, appeals by its warm personal interest, but is marred by digressions, repetitions, and lack of unity. D. displays an impressive knowledge both of Scripture and of classical Roman literature. Though he is well versed in the poetic diction, exhibiting numerous echoes of the classical poets, his language is often harsh and obscure, the syntax audacious, and the prosody faulty. That the anonymous *Aegritudo Perdieae* is Dracontian cannot be proved.

Editions: F. Vollmer, *MGH* (1905), *PLM* v³ (1914). Cf. *PW* v. 1635 ff.; Teuffel-Kroll iii². 466 ff.; Schanz iv. 2. 58 ff.; F. J. E. Raby, *Christian Latin Poetry*, 1927. A. H.-W.

DRAMA, GREEK, see **COMEDY**, **TRAGEDY**.

DRAMA, ROMAN. The Romans enjoyed rhetoric and spectacle; they had also a keen appreciation of satire and repartee. The germ of their drama is perhaps to be found in the rude exchange of banter at harvest-home festivals (see *FESCENNINI*). In 364-363 B.C. Etruscan dancers took part in an expiatory ceremony at Rome; the foreign, professional dance was then grafted on to the native mime, and the result was the *satura* (q.v.), a medley of dialogue, song, and dance, performed to music by professionals (*ludii, histriones*). The decisive advance to a continuous plot was made by the Tarentine Greek, Livius Andronicus, who in 240 B.C. produced at the *Ludi Romani* a Greek tragedy and comedy (?) in translation. Eight titles and forty lines of his tragedies are preserved; his *Aiæx Nestigophorus* seems to have been a clumsy version of the *Ajax* of Sophocles. The three comic titles—*The Blade*, i.e. the Swashbuckler (?), the *Maid* (?), the *Dancer* (?)—with the fragments, point to New Comedy as their source. The metres include the iambic senarius, the trochaic septenarius, and the cretic; the three forms of dramatic delivery (speech, recitative, and song) therefore go back to Livius. He acted in his own plays; we are told that after his voice had become overstrained he employed a boy to sing the *cantica* while he himself accompanied the words in dumb-show (Mirmont, *Ét. sur l'ancienne poés. Lat.* 75 ff.). Little as subsequent generations thought of Livius, he seems to have given Roman tragedy and comedy their abiding form.

2. With Naevius (7 titles of tragedies, 2 *praetextae*, together nearly 70 lines; 34 comedies, some of uncertain title, over 100 lines), apparently a Campanian, we are conscious of a more national spirit: 'libera lingua loquimur ludis Liberalibus'. His achievements were (1) to develop the *palliata* (adaptation of New Comedy); (2) to create the *praetexta* (Roman historical drama); (3) to make drama topical; (4) to give it style. Though tragedy was not his chief interest, he gave it a Roman note:

laetus tum laudari me abs te, pater, a laudato viro.

The very titles of the comedies are full of life—the Night-hawks (*Agrypnites*), Derby Day (*Agitatoria*), Solomon Levi (?) (*Alpella*), the Girl of Tarentum (a notable first: *Alia edocuit, Alia edocuit, Alium amat, Alium tenet* . . .).

When we read in the *Soothsayer* of how to entertain guests from Praeneste or Lanuvium, we feel that we are not far from native comedy (*togata*). His interest in Roman history manifested itself in two original plays, the *Romulus* and the *Clastidium* (the latter of which dealt with the victory of Marcellus in 222). Irrepressible boldness of utterance, a gift of epigram, and a taste for scandal brought Naevius into ill-favour with the Scipios and the Metelli; the lesson of his downfall was not lost on his contemporary Plautus (q.v.), whose *palliatae* are free from all but the most innocuous political allusions.

3. Ennius (239-169), a failure in comedy, has left us 20 titles of tragedies, with some 400 lines. A new power over language is manifest in the oath of Achilles:

per ego deum sublimas subices
umidas, unde oritur imber sonitu saevo et spiritu.

The lyrical dialogue in his *Iphigenia* conveys a sense of night's grandeur and mystery not unworthy of the original by Euripides (*IA* 1 ff.):

quid noctis uidetur in altisono
caeli elupco?
superat temo
stellas cogens etiam atque etiam
noctis sublime iter.

With Ennius' interest in Euripides (from whom he also translated the *Hecuba*, the *Medea*, and many other plays) went a rationalizing and humanitarian spirit:

ego deum genus esse semper dixi et dicam caelium;
sed eos non curare opinor quid agat humanum genus;
nam si curent, bene bonis sit, male malis, quod nunc abest.

The famous words of *Medea* must have sounded strangely in Roman ears:

nam ter sub armis malim uitam eernere
quam semel modo parere.

Effective Roman rhetoric is found in Agamemnon's reply to Menelaus in the *Iphigenia*:

egone plectar, tu delinquas: tu pecces, ego arguar?

where a comparison with Eur. *IA* 385 supports Cicero's remark that the great Roman tragedians translated 'non uerba sed uim'. Effective use of metre is found in the change from recitative to song in Cassandra's ravings:

adesi, adesi fax obuoluit sanguine atque incendio!
multos annos laui: ciues, ferte opem et testiguite!
iamque mari magno classis cita
textur: exitium examen rapit . . .

The melodramatic tendency of Roman tragedy is illustrated by the repeated choice of the banquet of Thyestes as a dramatic subject; madness, too, is a frequent theme. Another passage in Ennius' *Iphigenia*, quoted by Gellius as part of a chorus:

otio qui nescit uti, plus negoti habet . . .

illustrates (1) the retention of the chorus in Roman tragedy (?), (2) the independence of Ennius, who appears to have substituted soldiers for the maidens of Euripides, (3) the recurrent note of pedantry in Roman drama. One or two lines are left of the *Sabinae* and the *Ambracia*, which may have been *praetextae*. Later generations, while recognizing Ennius' greatness as a poet, never seem to have ranked him as a dramatist with Pacuvius or Accius (qq.v.).

4. Meanwhile comedy was represented by Caecilius and Terence (qq.v.). The other writers of *palliatae* are hard to date; Trabea (q.v.) has left us a vigorous picture of a lover's eagerness, Atilius (q.v. 3) the title *Misogynus* ('Woman-hater'), Aquilius (q.v. 1) a parasite's diatribe against sun-dials, which Varro assigned to Plautus on grounds of style (in fact there was much confusion as to authorship, and much misuse of Plautus' name); Lurcius (q.v.) Lanuvinus, Terence's arch-enemy, achieved some success by his faithful versions of Menander; Licinius (q.v. 2) Imbrex has left us two lines which seem to have been borrowed from Plautus. Turpilius (q.v.; died

103 B.C.) has left 13 titles and over 200 lines; the titles are Greek (like all our other titles of post-Caecilian *palliatae*), but the variety of metres and the somewhat rough style remind us of the earlier period. Turpilius had enough independence to change the opening monologue of Menander's *Ἐπικληρος* into a dialogue; his *Demiurgus* was still performed in Cicero's time, and his *Leucadia* (from Menander), the story of the hideous boatman endowed by Venus with the magical power to win the love of all women, suggests that New Comedy was not yet exhausted as a source of promising themes. But the *palliata* seems for some time to have been fighting a losing battle against cruder forms of entertainment, and with the death of Turpilius it came to an end.

5. *Fabula Togata*. As the *palliata* grew more Greek in tone a natural reaction led to the creation of the 'comedy in native dress', also, apparently, called the *fabula tabernaria* or 'private-house comedy'. Three writers are mentioned: perhaps the earliest and most typical is Titinius (q.v. 1; date unknown), of whom we have 15 titles and about 180 lines. The *Fullonia* shows us the fullers, those stock butts, engaged in a dispute with the weavers. In the *Barbatus* an embroiderer remarks that he has given up his employment. In the *Setina* or 'Girl of Setia' (a town in the Pontine marshes) a timid suitor for the heiress is encouraged by a friend. There is a contemptuous reference in the *Quintus* to speakers of Oscan and Volscian, who know no Latin. We are in a respectable, workaday Italian world, where betrothal, marriage, and family relationships play a larger part than mercenary gallantries, and where the 'cunning slave' of the *palliata* is conspicuous by his absence. T. Quinctius Atta (q.v.; died 77 B.C.) has left 11 titles and 20 lines; such titles as 'The Aedile's Games', 'The Megalensian Games' indicate that he found material in the public festivals. The *Aquae Caldae* depicted life at a 'fast' watering-place, where the 'ladies of the town' infuriated respectable women by dressing like them. Titles such as 'The Aunt', 'The Mother-in-law', remind us that the author was renowned for his portrayal of female character. The title *Satura* recalls the pre-Livian drama—perhaps not unlike the *tabernaria*. Atta still held the stage in Horace's day. L. Afranius (q.v. 1; 44 titles, 300 lines) was a greater figure; he admired and imitated Terence, Menander, and others, as he confesses without shame. He employed the prologue, both explanatory (like Menander) and polemical (like Terence); his plots may have resembled those of New Comedy. His *Simulans*, in which a father-in-law by skilful strategy outwits and brings to repentance an errant son-in-law, was still very much alive in the time of Cicero; his *Incendium*, in which a fire was shown on the stage, was revived, characteristically, by Nero. But for a writer of 'native comedy' to have to draw on Greek sources (including peculiarly Greek immorality) was a confession that the days of the *togata* were numbered. The title *Bucco Adoptatus*, if genuine, suggests that Afranius even borrowed from the Campanian farce; if so, he pointed the way which popular drama was to take after his death (see ATELLANA and MIMUS).

6. In tragedy Pacuvius was succeeded by Rome's favourite tragedian, L. Accius (q.v. 170–c. 86), whose activity, self-confidence, and fiery temperament are partly revealed in the surviving fragments (40–50 titles of tragedies, 2 of *praetextae*—the *Brutus* and *Decius*—and about 700 lines). The main qualities of his work—violent emotion, flamboyant character-drawing, powerful rhetoric, especially in repartee—are all exemplified in the famous reply of the tyrant Atreus—'oderint dum metuant'. The titles cover the whole tragic field—Trojan, Theban, Aetolian, the legends concerning Bacchus, Hercules, the Argonauts, the Pelopidae, etc. Modern statements as to Accius' treatment of his Greek originals are mostly derived from Ribbeck's guesswork; it seems

clear, however, that a fragment of the *Phoenissae* is a translation of Euripides' opening lines:

sol qui micantem candido curru atque equis
flammam citatis feruido ardore explicas . . .

Another fragment of the same play,
egredere, exi, efer te, elimina urbel

when compared with Euripides (593, 614, 636) shows equally clearly the heightening of rhetorical effect which we may believe to have been characteristic of Accius. That his work, in spite of its acknowledged harshness, was appreciated by the Romans is shown by Cicero's expressed admiration and frequent quotations, by Virgil's imitations, and above all by the popularity of his plays and splendid leading roles down to the end of the Republic. Some may find a more poetic quality in such occasional passages as:

excita saxis suauisona echo
crepitu clangente caccinnat,

but it is difficult, when reading the last great dramatist of the Republic, to forget that drama itself is soon to give place to rhetoric.

7. *Theatre, production, etc.* There are frequent references in Plautus' plays to a seated audience; in 194 special places were assigned to the senators. The 'best' seats were placed close to the stage, which was of wood, low, long, and deep; on it appeared all the performers. Behind rose the green-room, the front wall of which, with its conventional three doors, served as a permanent back-cloth; at each end of the stage were the side-entrances: that to the right of the spectators was supposed to lead to the Forum or 'near distance', that to the left to more remote parts. There was at first no curtain; scenic decoration was of the simplest; changes of scene within the course of a play were unknown. The use of masks as early as the time of Naevius seems indicated by two of his titles—*Personata* (? 'The Masked Lady'), *Quadrigenini* ('The Twins twinned'); with doubling of parts a troupe of five actors could perform practically any play of Plautus. Choral singing was at first unknown; crowds were represented by one actor and some mutes. The flute-player was present throughout the course of a play to accompany the recitative and song and occasionally to while away an empty-stage interval.

8. *Decline of drama*. After Accius the writing of tragedy seems to have become an amusement for noble dilettanti like C. Julius Caesar Strabo (curule aedile in 90 B.C.). We do not know that his works were produced; the supply of new plays for the stage seems to have almost ceased. Yet the Ciceronian period was in a sense the Golden Age of the theatre; the tragedies and comedies of earlier writers were frequently produced and highly popular. It was an age of great actors: Aesopus 'starred' in such parts as the title-role of Accius' *Atreus*; Roscius was famed for his playing of Ballio in Plautus' *Pseudolus*. The crowd seems to have known its 'classics' well; public interest was heightened by the search for topical allusions, as when in 57 the mention of the banished Telamon (in Accius' *Eurysaces*) caused a demonstration in favour of the banished Cicero. We can understand why the authorities in 44 B.C. banned the performance of Accius' *praetexta*, the *Brutus*. The theatres had now become vast and splendid, the performances gorgeous; the use of such devices as the drop-curtain (mentioned by Cicero) made possible elaborate scenic effects. In 55 B.C. Pompey gave Rome its first stone theatre, seating 9,000 persons (Huelsen's estimate—Pliny says 40,000); the spectators were treated to a performance of Accius' *Glutemestra* in which 600 mules were led across the stage as part of Agamemnon's booty. Such barbaric display was itself a mark of decadence; soon the crowd were to find all that they wanted in spectacle, music, and farce, while the writing of plays became a mere literary exercise; thus Quintus Cicero wrote four in sixteen days.

9. *The Empire*. We possess scarcely a line of the two outstanding tragedies, the *Thyestes* of Varius (said to have been produced at the games in celebration of Actium) and the *Medea* of Ovid (who denies that he had written for the theatre, *Tr.* 5. 7. 27); for Asinius Pollio see *Hor. Carm.* 2. 1. 9-10. After the coming of pantomime in 22 B.C. tragedy seems to have survived chiefly in the form of excerpts sung on the stage (cf. *Suet. Ner.* 21), e.g. perhaps the *carmina* of the tragedian Pomponius Secundus which exasperated the spectators in A.D. 47 (*Tac. Ann.* 11. 13). The nine tragedies attributed to Seneca, with our solitary *practexta*, the *Octavia*, do not read as though meant for production, but their influence on Renaissance drama was destined to be great. Of comedy, threatened by mimes and Atellanæ, we hear even less. Melissus invented the *trabeata* (see *FABULA*); *togatæ* were written for recitation (*Juv.* 1. 3); Fundanius composed *palliatae*. *Togatæ* were sometimes performed (cf. *togatarium*, *Suet. Aug.* 45), but perhaps these were old classics (see para. 5 *supra* on Afranius). In the fourth century we find Arnobius (*Adv. Gent.* 7. 33) apparently referring to a production of Plautus' *Amphitruo*.

DREAMS, see *DIVINATION*, para. 3.

DRESS. There are three striking points of difference between ancient and modern dress. Firstly, both in Greece and Rome women's dress in outward appearance was very similar to men's, and a Greek wife could, and often did, wear her husband's cloak out of doors. Secondly, there was very little fashionable alteration in the garments worn by both sexes, and none of our present-day bewildering changes in the body contour. Thirdly, wearing apparel was usually home-made and the same piece of home-spun cloth could serve as a garment, a blanket, or a shroud.

2. The two garments worn in Greece by men and women alike were the tunic (χιτών) and the cloak (ἱμάτιον). These were rectangular pieces of stuff, woollen or linen, and were draped according to individual taste. The tunic had two main varieties, the Ionian made of linen, the Dorian made of wool, this latter being the earlier kind of women's dress. In length it was rather more than the wearer's height, in breadth about twice the span of her arms. Before wearing it was first folded along the upper edge so that the overlap reached to the waist, and then doubled lengthways. The open ends were usually sewn up, but the Spartan women pinned them together. The tunic hung from the shoulders, arm-holes being provided on each side. It was secured at the waist with a girdle. The Ionian tunic was of much lighter stuff, and was bunched up round the waist with one or two girdles, the lower part hanging straight; while for outdoor wear a heavier garment was usually thrown over it. In early times when women at Athens were wearing the Dorian tunic, the men wore the Ionian; but c. 450 B.C. the women changed to the Ionian dress and the men adopted for active exercise a much shorter woollen garment reaching to the knee and drawn by fastenings to the left shoulder so as to leave the right arm bare. Their ordinary dress, however, was the cloak (ἱμάτιον), which was sometimes arranged in elaborate folds covering the whole body, but usually was drawn away from the right shoulder. For riding a short flowing cape (χλαμύς) was worn (see also *EREMIS*).

3. A Roman lady had three sorts of garments, a *tunica*, a *stola*, and a *palla*. The *tunica interior* was sleeveless, a brassiere—*strophium*—often being worn with it; over this for ordinary occasions was drawn a much longer

tunic with sleeves, the *stola*, which had a broad flounce sewn on at the bottom, half covering the feet when the *stola* was girded up into folds under the breast. Third came the *palla*, a rectangular piece of stuff like the Greek ἱμάτιον, worn only out of doors and draped according to the wearer's taste. The men of Rome wore a *tunica* resembling the Greek χιτών and an outer garment, the *toga* (q.v.), which they probably adopted from the Etruscans.

4. At first the toga was worn alone next to the skin, but later one or more tunics underneath became usual—Augustus in cold weather wore four—and at all times the tunic was the usual indoor dress. Senators had a broad purple stripe in front, *latus clavus* (q.v.), knights two narrow stripes, *angustus clavus* (q.v.). There were, however, other garments worn on special occasions. The *synthesis* was a light brightly coloured robe especially suited for banquets; the *lacerna* an open mantle, fastened by a brooch on the shoulder, used in cold weather; the *paenula*, a sleeveless cloak, with a hole for the neck and a hood attached, used especially by travellers.

5. The Greeks had a broad-brimmed hat (*petasos*) for men and a round one for women, but seldom wore them: when their heads needed covering they drew up their cloaks. They had a simple form of sandal with a heavy sole for outdoor wear; at home they went barefoot. The Romans followed the Greeks as regards headwear, but besides sandals they had two special kinds of boot, the *caliga*, a heavy marching boot for soldiers, laced on the instep and secured by thongs, and the *calceus*, made in the case of senators of red leather with an ivory crescent and with thongs wound round the legs and tied twice in front.

DROMEDARII, see *CAMELS*.

DRUIDS, see *RELIGION*, *CELTIC*.

DRUSILLA, JULIA (probably A.D. 16-38), the second daughter of Germanicus and Agrippina. She was married to L. Cassius Longinus (*cos.* A.D. 30) and afterwards to her cousin M. Aemilius Lepidus. Her name, like her sisters', was compulsorily included in vows and oaths after the accession of her brother Gaius. She was his favourite sister, and it was rumoured that their relations were incestuous. She was named as Gaius' heir during his illness (late 37), but died in 38. Public mourning was enforced throughout the Empire and, though there was no precedent in Roman history for the consecration of a woman, she was consecrated as Panthea, probably on the anniversary of Augustus' birthday.

J. P. B.

DRUSUS (1), MARCUS LIVIUS (*cos.* 112 B.C.), as tribune in 122 B.C. vetoed the proposals of C. Gracchus in his second tribunate, which he outbid by a scheme for twelve Roman colonies—never established—coupled with the exemption of Latins from corporal punishment. His continued popularity is hard to explain, if his proposals were merely dishonest. As consul in 112 he retrieved the recent failure of C. Cato in the Balkans, pursuing the Scordisci beyond the Danube. He died, probably in 109, while censor with Scæurus.

M. H.

DRUSUS (2), MARCUS LIVIUS, son of (1) above, husband of Servilia (daughter of Q. Cæpio, q.v. 1), brother of Livia (wife of the younger Cæpio, praetor 91), and probably adoptive father of Livius Drusus Claudianus, whose daughter Livia married Augustus. Drusus was a senatorial leader who tried to combine Senate and Equites, while championing the Italians' claim to Roman

citizenship. Proud and severe, he lavished his wealth in gaining political influence. The supporters of his proposals for reform from the side of the Senate included many leaders, such as Scarrus, Bestia, and L. Crassus; but while gaining adherents from all ranks, Drusus antagonized the selfish majority in each party. As tribune in 91 B.C. he revived his father's colonial schemes; proposed to give back the jury courts to the Senate, which, however, was to be doubled by the inclusion of 300 *Equites*; and offered the franchise to all Italians. This legislation was carried *en bloc*, contrary to the *Lex Caecilia Didia* (see DIDIUS 1) of 98; and force was used. Caepio, who had quarrelled with him and divorced Livia some years before, started an active opposition which was headed by the consul Marcus Philippus; and after a period of violent agitation, and various threats of large-scale Italian movements to support Drusus, the Senate declared all Drusus' legislation invalid. Drusus himself died by violence; his supporters were attacked in the law courts; and the Italians openly rebelled (Social War). Cicero's chief aims, the *Concordia Ordinum* and *Consensus Italiae*, were largely based on Drusus' ideas.

E. G. Hardy, *CR* 1913, 261 ff.; P. A. Seymour, *Engl. Hist. Rev.* 1914, 417 ff.; C. Lanzani, *Riv. Fil.* 1912, 272 ff. M. H.

DRUSUS (3), NERO CLAUDIUS (38-9, B.C.), son of Ti. Claudius Nero and Livia Drusilla, was born in 38 B.C., about the time when his mother was divorced by Nero and married Octavian. After his father's death he was educated by Octavian. He married Antonia minor, daughter of M. Antonius, and had three children: Germanicus, Livilla, and Claudius. Already in 18 B.C. he was quaestor by privilege; in 15 with his brother Tiberius he subdued the Ractians and Vindelicians. In 13 he was appointed legate of the Three Gauls and organized the census of 12, when he dedicated an altar to Rome and Augustus at Lugdunum. Augustus considered him his best general, as he entrusted him with the invasion of Germany (12). The main difficulty being the transport of supplies, Drusus built a canal to connect the Rhine with the Ocean (*fossa Drusiana*), which apparently proved of little value. He used as his chief base Vetera (q.v.) and later Mogontiacum. In 12 B.C. he subdued the Frisii and routed the Sugambri, Bructeri, and Chauci, but his fleet was damaged on its return. In 11 he subdued the Usipetes and reached the Weser. He built fortifications of uncertain position. Augustus refused him a triumph; he had to be satisfied with an *ovatio*. In 10 he fought the Chatti. In 9 as consul he fought the Suebi, Marcomanni, and Cherusci and reached the Elbe; the Roman fortifications in Germany were improved. He died unexpectedly in summer camp. His work as an explorer had been extremely audacious; his military successes were more apparent than real. He was popular and was considered to hold Republican sentiments. He was buried in the mausoleum of Augustus. The Senate attributed to him and his descendants the surname of Germanicus. A cenotaph was built at Mogontiacum. An unknown poet wrote for his mother the *Consolatio ad Liviam* (q.v.).

DRUSUS (4) JULIUS CAESAR (c. 13 B.C.-A.D. 23), the son of Tiberius (later Emperor) and Vipsania. He married Claudia Livia (Livilla), sister of Germanicus. He was successful in suppressing the mutiny of the Pannonian legions after Augustus' death, was consul in A.D. 15, and commanded in Illyricum A.D. 17-20, celebrating a triumph on his return to Rome. He was consul again in 21, was given the *tribunicia potestas*—and therefore indicated as Tiberius' prospective successor—in 22,

but died in the next year, poisoned—it was later suspected—by his wife, who had been seduced by Sejanus. He was popular, though dissolute and cruel, and his relations with Germanicus (q.v.) were friendly, in spite of mischief makers. His son Tiberius Gemellus was put to death by the Emperor Gaius; his last-known male descendant (through his daughter Julia) was Rubellius Plautus, who was murdered by Nero's orders in 62.

R. S. Rogers, *Studies in the reign of Tiberius* (1943). J. P. B.

DRUSUS (5) JULIUS CAESAR (A.D. 7-33), as second of the surviving sons of Germanicus and Agrippina, was regarded, after the deaths of his father in 19 and of Drusus, son of Tiberius, in 23, as a likely successor to Tiberius after his elder brother Nero. Sejanus secured his arrest in 30 (a year after Agrippina and Nero were arrested), and he died, imprisoned in the palace, in 33.

J. P. B.

DRYOPE, in mythology, daughter of Dryops (q.v.). Apollo possessed her by a trick and she had by him a son, Amphissus, who became king of the city so called. Her mortal husband was Andraemon, son of Oxylus. The nymphs, who had long been her playfellows, finally carried her off and made a spring and a poplar appear where she had been; she became the nymph of the spring, and her son built a sanctuary for the nymphs. So far Nicander in *Ant. Lib.* 32. Ovid, *Met.* 9. 330 ff., says that while suckling Amphissus she wanted flowers for him to play with and by mishap plucked lotus-flowers, which were the nymph Lotis transformed. The plant trembled and bled, and when Dryope tried to run away she turned into a lotus-tree.

H. J. R.

DRYOPS, eponym of the Dryopes; his parentage is variously given, and the history of his people, allegedly Pelagian, i.e. pre-Hellenic, obscure, but they are stated to have emigrated widely (from the Spercheus valley to Parnassus, the Argolid, Arcadia, etc.); hence perhaps the differing stories which make him the son of gods or men belonging to several of these regions.

Weizsäcker in Roscher's *Lexikon*, s.v. Cf. DRYOPÆ. H. J. R.

DUCETIUS, native Sicel leader who after the fall of the Syracusan tyrants (460 B.C.), inspired by his knowledge of Greek political life, sought to accomplish a federation of the Sicels and to subdue the Sicilian Greeks. He seems to have formed a great power with its centre in the new town of Palici. First allied to Syracuse, he then became hostile to the Greeks, and was beaten by Syracusans and Acragantines (450). Deserted by his own friends, he appeared in Syracuse as a suppliant, was pardoned and sent to Corinth. Some years later, however, during a war between Syracuse and Acragas he returned and founded a colony of Sicels and Greeks at Cale Acte. While preparing to re-establish his leadership he suddenly died (c. 440), and the Sicels soon after abandoned all resistance.

Diod. 11. 78, 88 ff.; 12. 8. 29; Hackforth, *CAH* v. 155 ff. V. E.

DUILIUS, GAIUS, consul (260 B.C.), censor (258), and *dictator com. hab. caus.* (231). As commander of Rome's newly created fleet Duilius liberated Scgesta and defeated the Carthaginian fleet off Mylac in Sicily, thanks largely to the adoption of the *corvus* (260). He celebrated the first naval triumph. In the Forum a column (*columna rostrata*) was erected, ornamented with the bronze beaks (*rostra*) of the captured vessels with a laudatory inscription, of which a copy (or restoration) of Imperial times exists (Dessau, *ILS* i. 65. Cf. a briefer elogium, *ibid.* 55). Duilius was escorted through Rome by night with torches and music, a Greek rather than Roman honour. From the booty of Mylac he built a temple to Janus in the Forum Holitorium.

H. H. S.

DUMNORIX, brother of Divitiacus (q.v. 1) and leader of the anti-Roman party among the Aedui. He conspired in 61 B.C. with Orgetorix, the Helvetian. He acted against Caesar, who only spared him at Divitiacus' request. Ordered in 54 to accompany Caesar to Britain, he refused but was cut down in attempting to escape.

Caesar, *BGal.* 1. 3. 9; 18-20; 5. 6-7.

C. E. S.

DUOVIRI NAVALES. First chosen by the Roman people in 311 B.C., after the annexation of Campania (Livy 9. 30. 4), the *duoviri navales* 'for repairing and equipping the fleet' were thereafter elected or appointed, apparently at irregular intervals as need arose, until c. 150 B.C. This post was created for the defence of the Italian coasts; it played no part in Rome's great wars, for the ordinary squadron of a *duovir navalis* comprised only ten warships (Livy 40. 18. 7-8).

C. G. S.

DUOVIRI PRAETORES, IURE DICUNDO, QUINQUENNALES, see COLONIZATION, ROMAN, paras. 1 and 3.

DURA, see EUROPUS.

DURIS (1), potter and vase painter in Athens, working 510-465 B.C. Known from one potter's and thirty-two painter's signatures. Painted red-figure cups, etc., including *ὄπλων κρίσις* (Vienne), Eos and Memnon (Paris). A fine but slightly mannered artist, who continues into the early classical period.

Beazley, *A.V.* 199; id. *Attic White Lekythoi* (1938), 12. T. B. L. W.

DURIS (2) (c. 340-c. 260 B.C.), son of Scaeus (Paus. 6. 13. 5), tyrant of Samos, historian and critic, a pupil of Theophrastus.

WORKS: (1) Various writings on literature, music, and painting, anecdotal in character. (2) *Samian Chronicle*, 2 books mentioned. (3) *Histories* (*ἱστορίαι* or *Μακεδονικά* (Ath.); *Ἑλληνικά* (Diog. Laert.)): at least 23 books, becoming increasingly fuller, and covering from 370 to c. 280. (4) *History of Agathocles*: four books cited (excerpts, Diod. Sic. bks. 19-21). D.'s historical influence was small: he aimed at sensationalism in style and matter.

FGH II A 76.

F. W. W.

DUX, a title sometimes given during the third century A.D. to an officer performing duties above his rank (e.g. *primpili* as *duces legionum*). After the separation of civil and military authority by Diocletian, the command of the provincial armies was given to equestrian *duces*. In the Constantinian army they continued to serve as generals of the frontier armies with the titles of *dux provinciae* or *dux limitis*. Sometimes they received the honorary rank of *Comes* (Not. Dign. Or. xxxi-xlii).

R. Grosse, *Römische Militärgeschichte*, 8-11; 152-80. H. M. D. P.

DYEING. Of the fabric arts dyeing was the most commercialized and Tyre remained through the whole period of classical history the chief centre of the dyeing industry. The dyestuffs were derived either from vegetable substances such as orchilla, saffron, reseda, madder-root, and gall nuts, or from small living creatures. Scarlet, for example, came from the *coecus*, a grub found on the bark of the ilex tree; purple from the shell-fish *purpura*, *murex* (see PURPLE). In Greece and early Rome dyeing was comparatively simple, but under the Roman Empire it became one of the great luxury trades, and enormous sums were squandered on red, purple, and violet dyes.

H. Blümner, *Technologie der Griechen und Römer* 1. 225 ff.

F. A. W.

DYMANES, see DORIANS.

DYRRHACHIUM (modern *Durazzo*), originally the name of the headland under which the city of Epidamnus was situated, became the name of the town itself c. 300 B.C. (it first appears on coins of the 5th c.). The city passed successively through the hands of Cassander and Pyrrhus. In 229 it was besieged by the Illyrians, but was delivered and occupied by a Roman force. It served, together with Apollonia (q.v.), as a base for the Roman armies in Greece and the Balkan lands, and in 148 became the terminal point of the northern fork of the Via Egnatia (q.v.). In 48 Pompey made Dyrrhachium into his main base on the Adriatic, and he beat off an attack by Caesar on his entrenched camp nearby. After the battle of Actium Octavian drafted evicted partisans of Antony from Italy to Dyrrhachium.

Caesar, *B Civ.* 3. 41-72.

E

EBURACUM (*Ἐβόρακον*, Ptol. *Geogr.* 2. 3. 10; 8. 3. 7; Eborac, *Cod. Justinian.* 3. 32. 1; S.H.A. *Severus* 19, etc.; *JRS* xi. 102; *CIL* vii. 248; Eburacum, *It. Ant.* 466. 1, etc.; *Eboracen(sis)*, *JRS* xi. 102; *Ebur(acenses)*, *Eph. Epigr.* iii, p. 123), modern York on the Ouse. Here, on the east river-bank, lay the fortress of Legio IX Hispana, founded during the campaigns of Cerialis in A.D. 71-4, and rebuilt by Agricola c. 79 and under Trajan in 108 (*CIL* vii. 241). In 122 Legio VI Victrix replaced the Ninth. The fortress was rebuilt after destruction by the Macatae (a tribe from Scotland) in 197 and again after Pictish invasions a century later. It was the seat of the northern command and capital of Lower Britain (*CIL* xiii. 3162); Severus and Constantius I died there. The *canabae*, west of the Ouse, became a *colonia* by the third century, with trade connexions extending to Bordeaux (*CIL* vii. 248; *Eph. Epigr.* iii, p. 123; *JRS* xi. 102), and a bishopric before A.D. 314.

S. N. Miller, *JRS* xv. 176; xviii. 61; S. Wellbeloved, *Eboracum* (1842).

I. A. R.

ECBATANA (*Āghbatana*, mod. *Hamadan*) in northern Media, on the Iranian plateau. Traditionally founded by Deioces (Hdt. 1. 95) as the capital city of the Median

Empire, it became the summer capital of the Achaemenid Empire, and like Susa and Babylon a royal residence (Strabo 11. 522-4; Xen. *Cyr.* 8. 6. 22). Alexander captured Ecbatana in 330 B.C. and plundered a vast sum from the treasury (Strabo 15. 731). It remained a royal residence in Parthian times. The site has not yet been systematically excavated; the palace and fortifications are described by Herodotus (1. 95), by Polybius (10. 27. 6 ff.), and others.

M. S. D.

ECCLESIA (*ἐκκλησία*, in some States *ἀλιεία*, *ἀγορά*, *ἀπὸ ἄλλοι*), the meeting of citizens summoned as of right (*ἐκκληστοί*); the ultimate sovereign power in constitutional States, whether monarchy, oligarchy, or democracy. In a democracy all adult males who were citizens by birth were members; in an oligarchy membership might be restricted to those possessed of a certain standard of wealth or of a particular birth qualification. In a democracy the Ecclesia not only elected and dismissed the magistrates (such as were not chosen by lot) but controlled their activities, and those of the council; it dealt with all political matters, administrative (as the conduct of wars), legislative (see NOMOTETAI), financial, and, in certain State cases, judicial (see ΠΡΑΞΙΣ). In

an oligarchy or a monarchy the Ecclesia was more restricted: it decided alliances, war and peace, and (generally) questions affecting the life or status of a fellow-citizen, and elected magistrates; but the magistrates or the council had a greater sphere of activity unimpeded by the Ecclesia, and in practice they were better able to control its proceedings.

2. At Athens the summoning of the Ecclesia and the preparation of its agenda was the duty of the Boule (q.v.); but the Boule was by law compelled to summon it four times in each prytany (see PRYTANIS), and could summon it at other times if it thought fit or if the *strategi* demanded it. The Ecclesia could discuss nothing without previous consideration by the Boule; but it could order the Boule to bring a matter before it at its next meeting, and any amendment to a proposal by the Boule could be discussed. The agenda were fixed beforehand; and in times of war proposals by the *strategi* had a certain precedence. The president of the Ecclesia was a particular *bouleutes* for the day (see PRYTANIS, PROEDROX)—no one ever presided more than once in his life; the *prytaneis* or *proedroi* were responsible for the orderly conduct of the meeting. Any citizen might speak in debate and initiate amendments or administrative motions—magistrates had no privilege. Ambassadors and heralds of foreign States were given permission to address the Ecclesia directly. Voting was normally by show of hands, sometimes it was secret (e.g. in ostracism, q.v.); a simple majority decided the issue, but when the rights of an individual citizen were affected, a quorum of 6,000 votes was necessary (see ADEIA).

3. What proportion of the citizens on the average attended the Ecclesia we do not know: 6,000 was perhaps one-seventh of the total in 431, about one-quarter a hundred years later; but it was a traditional number, fixed when the population was lower. The oligarchs in 411 asserted that there were never as many as 5,000 at a meeting (Thuc. 8. 72. 1), but that was a party statement, and the circumstances were abnormal. After the war, when the masses were impoverished, payment to induce attendance was introduced, at first one obol, but by 327 it had risen to six obols, and nine for one meeting each prytany.

The Agora was the meeting-place in many cities, (hence *ἀγορεύειν* = to speak in the Ecclesia); at Athens it was changed to the larger area of the Pnyx hill; from the fourth century meetings were held in the theatre of Dionysus, and sometimes also in Piraeus.

Aristotle, *Ath. Pol.*, passim.

A. W. G.

ECDELUS, see DEMOPHANES.

ECHECRATES of Phlius (fl. c. 367 B.C.), pupil of Archytas and Eurytus, was one of the last members of the Pythagorean school, and survived to the time of Aristoxenus. In Plato's *Phaedo*, Phaedo recites to Echecrates, apparently in the Pythagorean *συμπόσιον* at Phlius, the account of Socrates' last discourses and death. Plato is said to have visited Echecrates at Locri.

Testimonia in Diels, *Vorsokr.* 1. 443. *PIV* v. 1910. W. D. R.

ECHECRATIDAE, see PHARSALUS.

ECHIDNA, i.e. 'Snake' in mythology, a monster, child either of Phorcys and Ceto or of Chrysaor and Callirhoe daughter of Oceanus (Hesiod, *Theog.* 295 ff., where it is not clear which parents are meant). She was half-woman, half-serpent, mated with Typhon (q.v.), and bore Orthus (Geryon's hound), Cerberus, and the Hydra (see HERACLES), the Chimaera (q.v.), and, by Orthus, the Sphinx and the Nemean lion.

H. J. R.

ECHION, ('Εχίων, 'snake-man'), (1) one of the surviving Sparti, see CADMUS; he married Agave and begat

Pentheus (q.v.). (2) Son of Hermes and Antianeira, daughter of Menetus. He and his twin brother Erytus joined the Argonauts (q.v.; Ap. Rhod. 1. 51 ff.). Their home was Pangaeon (Pind. *Pyth.* 4. 180) or Alope (Apollonius). They joined the Calydonian boar-hunt (Ov. *Met.* 8. 311).

H. J. R.

ECHO ('Ηχώ). There are two mythological explanations of echoes, neither very early. (a) Echo was a nymph vainly loved by Pan, who finally sent the shepherds mad and they tore her in pieces; but Earth hid the fragments, which still can sing and imitate other sounds (Longus 3. 23). (b) See NARCISSUS (1).

H. J. R.

ECLECTICISM denotes the attitude of selecting doctrines from different systems of philosophy. It began in the second century B.C., when the struggle between the great philosophical schools had lost its importance in favour of principles common to them all. Eclecticism was anticipated to some extent by the scepticism of Carneades, who criticized all systems on the same level. Two generations later the Academic Antiochus of Ascalon maintained that there was no real difference between the old doctrines of the Academy, the Peripatos, and the Stoa. Panaetius and Posidonius erected systems on the Stoic basis, which were meant to incorporate valuable parts of Platonic and Aristotelian teaching and to unite them in a new entity. The greatest example of systematized eclecticism in this sense is Neoplatonism, which contains and amalgamates in itself essential parts of the earlier systems.

In a different sense the term Eclectic might be applied to Roman philosophers like Cicero or Seneca who selected ideas from different Greek schools and tried to apply them to Roman needs.

The term has often been used in modern histories of ancient philosophy, especially by Zeller, *A History of Eclecticism in Greek Philosophy* (Engl. Transl. 1883).

K. O. B.

ECLOGA (ἐκλογή), originally a selection, and so sometimes a fine passage from a work (Varro ap. Charisium p. 120. 28 K.; cf. Cicero's *eclogarii*, *Att.* 16. 2. 6; equivalent to his *ἀνθή*, *ibid.* 11. 1). *Eclogae* is common in the wide sense of *brevia poemata* (schol. *Crug. Hor. Sat.* 2. 1). Suetonius (*Vit. Hor.*) calls *Hor. Epist.* 2. 1 an *ecloga*, and grammarians gave the name to the *Epodes*. Pliny, *Ep.* 4. 14. 9, thinks it suitable for his own sportive hendecasyllabics; Statius (*Silv.* prefaces to bks. 3 and 4) calls some of his *Silvae* by the term, and Ausonius his poem *Cupido cruci adfixus*. Its most famous application is to Virgil's *Bucolics*. It may not be Virgil's own title, though it has some MS. authority, and Suetonius seems to know it when recording certain *Antibucolica* (*Vit. Verg.*). Applied to the pastorals of Calpurnius and Nemesianus (see PASTORAL POETRY, LATIN), it was perpetuated in Carolingian and Renaissance usage.

See G. Knaack, *PIV* v (1905), s.v.

J. W. D.

ECONOMIC LIFE, see AGRICULTURE; ARBORICULTURE; BANKS; BEE-KEEPING; COINAGE; COLONUS; COMMERCE; DOMAINS; FINANCE; INDUSTRY; INTEREST, RATE OF; LATIFUNDIA; MONEY; MONOPOLIES; OLIVE CULTURE; PASTURAGE; VITICULTURE, etc.

ECPHANTIDES, the oldest of the comic poets (so Arist. *Eth. Nic.* 1122^b20). Yet he cannot have been much older than Cratinus, for both poets mention the demagogue Androcles (Schol. Ar. *Vesp.* 1187) murdered in 411 (Thuc. 8. 65. 2). His first victory fell about 457 B.C. (*IG* ii². 2325). Two titles (*Πεῖρα*, *IG* ii². 3091; *Σάρυροι*, *Ath.* 3. 96c) and five fragments survive. His obscurity or dullness won him the sobriquet *Καπνίδης* (schol. Ar. *Vesp.* 151).

M. P.

ECSTASY (ἐκστασις). In classical and good Hellenistic Greek this word and the corresponding parts of ἐξίστημι describe either a pathological condition, madness or unconsciousness, or, colloquially, the state of being 'beside one's self' with anger, etc. (Liddell-Scott², s.vv.); Aristotle, *Mem.* 451^a9, is a very dubious contrary instance. Later they signify a trance-state in which the soul, quitting the body, sees visions, as Acts x. 10; xxii. 17 (SS. Peter and Paul respectively have symbolic revelations). A state of this sort is clearly meant to be induced by the ritual of PGM iv. 475 ff.; cf. Dieterich, *Mithrasliturgie*², pp. 2 ff. (the magician mounts up to heaven). The loftiest application of the word is to the Neoplatonic union with deity, Plotinus, *Enn.* 6. 9. 11. Contrast ἐνθουσιασμός, in which the subject's body is possessed by a god. See further Hopfner, *Offenbarungszauber* ii, pars. 79 ff.; 102, and Fr. Pfister, *Pisciculi Franz Joseph Dölger dargebracht* (1939), 178 ff.; the word is characteristic of transcendental sects and philosophies.

II. J. R.

ECUS (EQUUS) OCTOBER, see MARS.

EDESSA (mod. *Urfa*), capital of Osroene, favourably situated in a fertile plain, though the river Skirtos (*Kara-Kuyur*) which flowed through the city occasionally caused disastrous floods. It was founded as a colony by Seleucus I, and named after the Macedonian Edessa (Aegae). When Osroene claimed independence, traditionally in 132 B.C., it became the royal residence, and played an important part in the Romano-Parthian wars. Its sympathies were often with the Arsacids when prudence dictated compliance with Rome. Captured and sacked by L. Verus, it finally became a Roman colony (Dio Cass. 77. 12), and thereafter issued a copious coinage. Christianity reached Edessa early, and the town became the most important bishopric in Syria. It was several times besieged and once captured by the Sassanid Persians; Heraclius recovered it, but in A.D. 639 it fell to the Arabs.

A. R. Bellinger and C. B. Welles, in *Yale Class. Stud.* v (1935), 95 ff.; R. Duval, *Histoire politique, religieuse et littéraire d'Edesse* (1892); L. Hallier, *Unterrichtungen über die Edessa Chronik* (1892); Jones, *Eastern Cities*, ch. 9.

M. S. D.

EDICTUM. The higher Roman magistrates (*praetores, aediles, quaestores, censores*; in the provinces the governors) had the right to proclaim by edicts legal provisions which they intended to observe in the discharge of their office (*ius edicendi*). These communications, originally oral (hence 'edicta'), were later published in the Forum; their validity was restricted to the period of the issuing magistrate's office. Legally they ceased to be binding when the magistrate left his post (normally after a year), but customarily they were reconfirmed by his successors, so that for the most part the rules laid down in the edict remained continuously valid. Among the magisterial edicts those of the *praetor urbanus* were of special importance for the development of the civil law. Apart from models of *formulae*, they granted new actions and jurisdictional and executive remedies, thus creating indirectly a mass of new rules (*ius praetorium*) to be observed by the people in order to obtain judicial protection. On the order of Hadrian the jurist Salvius (q.v.) Julianus composed a new and thoroughly revised edition of the praetorian edicts called *Edictum perpetuum* (c. A.D. 130). Confirmed by a *senatus consultum*, it acquired a permanent form. It was a codification of praetorian law only, and not of the whole civil law. The edict of the *aediles curules* concerning the trade in animals and slaves was perhaps annexed to it. From that time the right of the praetors to initiate new edicts was abolished. An ingenious reconstruction of Hadrian's Edict has been made by O. Lenel, *Edictum perpetuum*² (1927).

A. B.

EDICTUM DE MAXIMIS PRETIIS, see DISCRETIAN, para. 7.

EDUCATION. I. In a survey of Greek and Roman education the following types may be distinguished:

1. The 'Heroic' Age (13th c. B.C.), as pictured by Homer, trained a man to be a good speaker and an effective member of the State. 'Pelex sent me forth', says Phoenix to Achilles, 'to teach you all this' (military science and political institutions) 'to be a speaker of words and a doer of deeds' (*Il.* 9. 443).

2. The education of certain Dorian States, like Crete and Sparta, emphasized rigid discipline and war-training, with a strong tendency, as in Sparta after Lycurgus, to neglect art and science.

3. Ionian education, more elastic and humane, with a lively interest in art, science, and philosophy, aimed, in its best days, at the education of the whole man. This type of training is found first in Ionic Asia Minor and then, from the sixth century B.C., at Athens. Here the Sophists developed the rhetorical tradition, imported from Sicily in the fifth century, and introduced professional studies.

4. The Hellenistic schools (Alexandria, followed by Pergamum, Antioch, Rhodes, etc.), which emphasized the intellectual side of education, continued the tendency to specialization, particularly in rhetoric, and inaugurated an age of universal scientific learning (mainly 3rd-1st cc. B.C.).

5. Meantime Rome practised her own home-made system of education from the seventh century to the middle of the third, emphasizing personal and political behaviour in accordance with ancestral practice.

6. With the advent of Greek letters came intellectual interests. The Ciceronian ideal of *humanitas* envisaged the man who combines abstract learning with sound character and avoids undue specialization. The educated Roman was now bilingual. Visiting lecturers, like Crates of Mallos, repeated the work of the Sophists at Athens.

7. The Ciceronian ideal passed into the Imperial period and influenced Quintilian, though Rhetoric now showed signs of artificiality due to specialization on form and style as opposed to content. This tendency appeared, too, in the Greek world, where Rhetoric became fashionable. But Plutarch strongly emphasized the moral aspect of education.

8. From A.D. 300 two significant changes took place: the gradual disappearance of Greek from the West, which ended the bilingual tradition of Roman schools, and the rise of Christian education, which largely took over the framework and, to some extent, the substance of the pagan system. Quintilian reappeared in the precepts of Jerome.

9. Graeco-Roman education passed into the Middle Ages and beyond. The Seven Liberal Arts of Martianus Capella (5th or, according to some, 3rd c. A.D.), resting ultimately on Varro's lost *Disciplinae*, formed the two parts of the medieval curriculum: the *Tritium* (grammar, which, as the Art of Letters, might include literature, rhetoric, and dialectic, the last ranging from bare logic to the combination of pagan and Christian philosophy that led to Scholasticism), and the *Quadrivium* (geometry, including some geography, arithmetic, astronomy, and music). As late as the seventeenth century the exercises contained in the *Rhetores Graeci* were used in the schools of Europe.

II. THE STATE AND EDUCATION.

1. In early society the child was trained to conform to the pattern of the group: only so could there be safety against hostile strangers or jealous gods. In early Rome and in Sparta laws and conventions played a large part in education. Even in Cicero's time children learned the Twelve Tables by heart. In Sparta the boy was rigorously trained to be hard and military and, if need be, cunning;

in Rome more stress was laid on moral character. In Dorian Crete we hear of common meals and troops led by a group-leader (*paidonomos*), which seems to indicate State control such as we find in Sparta after 550 B.C. But in early Rome the control lay with the *paterfamilias*: the child was educated 'in gremio matris', and the first school was not opened until the third century B.C. (see CARVILIUS (2)). At Athens a doubtful tradition ascribes school regulations to Solon (594 B.C.), and in the next century Herodotus mentions a school in Chios, Thucydides a school at Mycalessus in Boeotia, and Anaxagoras a school at Clazomenae.

2. The first recorded State contribution was made in 480, when the Trezenians undertook to educate refugee Athenian children at the public cost. Athenian schools up to the fourth century B.C. seem to have depended on private enterprise alone. According to the inscriptions, the first school to receive regular endowment was one in Miletus in the third century B.C., salaries at first being equivalent to sailors' pay under Pericles. Endowments eventually became widespread, and although the status of ordinary teachers was low, distinguished lecturers received relatively large sums. Hippias received about £80 from an insignificant town; on the other hand, he frequently lectured to the Spartans without wringing a single obol from them. Liberal presents sometimes replaced regular pay: Dionysius gave Plato 80 talents. At Athens the State trained youths from 18 to 20 (see EPHEBI), and an inscription of c. 350 B.C. (SIG 956) commends a *strategus* for attending to the education of children. In Hellenistic times the inscriptions, especially in Asia Minor, show many instances of State schools.

3. At Rome the State took more interest in education as time went on. Julius Caesar enfranchised teachers of the liberal arts; Vespasian appointed Greek and Latin professors of rhetoric (at a salary of about £850) to State-supported chairs. Trajan provided for the education of 5,000 children, and the younger Pliny endowed a school at Novum Comum. Marcus Aurelius established the first Imperial chairs at Athens. By the third century A.D. the emperors had, for the most part, assumed control of the schools. Antoninus Pius made provincial towns responsible for the upkeep of schools and gave them the right to appoint teachers under Imperial supervision. Diocletian fixed by edict the fees of all teachers. The *Codex Theodosianus* shows how completely both students and teachers came to be controlled by the emperor. Justinian dealt the death-blow to the pagan schools by expelling non-Christian teachers and forbidding pagan philosophy (A.D. 529). But academic freedom had declined ever since the control of the universities by the Ptolemies in alliance with the capitalist *bourgeoisie* in the third century B.C., an alliance that was continued by the later Roman emperors.

III. CONTENT AND METHODS

1. At Athens, as at Rome, religious and ethical ideas had a large place in elementary education. The child was initiated into State ceremonies and taught how to behave to men and gods. Plato says that parents charged the master to pay far more attention to their children's good behaviour than to their letters and harp-playing (*Prt.* 325d). In this respect the poet was the great teacher in the ancient world. When the boys have learned their letters 'they are furnished with works of good poets to read . . . and are made to learn them by heart' (*ibid.*). Hence the marked predominance of poetry in the curricula of Greek and Roman schools. Even music is to be studied for moral profit, so that children may become 'more gentle and harmonious and rhythmical'. Modesty of demeanour and self-restraint (*σωφροσύνη, continentia*) are greatly emphasized. The person of the boy was guarded by a slave (*paedagogus*), who escorted him to school and supervised his conduct.

2. In intellectual matters Athenians received the torch from Ionia—the Dorian States had little to contribute—and fostered an enthusiasm for thought and knowledge. From 6 to 14 the boy attended the elementary school; from 14 to 18 the high school; and then for two years he trained as an *ephebus*. His elementary studies consisted of reading, simple arithmetic, and music—the whole being called *μουσική* (a word indicating connexion with the Muses or the arts inspired by them; cf. MUSEUM). For physical training, *γυμναστική*, he went to a *Paidotribes* with whom boys of 8 to 12 exercised in the *palaestra*, which was usually private, as distinct from the public *gymnasium* for adults. The Romans did not include these gymnastic exercises in the school curriculum; instead, they indulged in various sports on the Campus Martius. The secondary school at Athens, attended only by the richer class, concerned itself with mathematics, rhetoric, and literary studies. Grammar and metre are mentioned, and sometimes art. University or college education was supplied by the wandering Sophists and by the schools of philosophy like Plato's Academy. Plato favoured the *seminar type of instruction*; *Isocrates the formal lecture*; while Aristotle combined the two. The Sophists were objective, practical, fee-charging, versatile, vocational. Deeper search for fundamental principles was left to the philosophers, who regarded study as coextensive with life. Aristotle was Plato's student for twenty years. 'We must learn', says Seneca, who inherited this tradition of scholarship, 'as long as we lack knowledge: and that means, as long as we live.' For the State university of Alexandria see MUSEUM.

3. When Greek studies affected Rome (c. 240 B.C.) the school of the elementary teacher (*litterator*) appeared. The three R's were taught, and Horace comments on the prominence given to arithmetic by the practical Roman. After the Second Punic War came the secondary school of the *grammaticus*, whose pupils read texts aloud with careful attention to pronunciation and enunciation, and learned passages by heart. The master added a commentary (*enarratio*) on literary or philosophical points. The *Progymnasmata* of Aphthonius (4th c. A.D.) are specimens of studies preparatory to the school of the *rhetor*, which dates at Rome from the first century B.C. Here the students' tasks consisted of speeches on a given theme advocating a course of action (*suasoriae*) such as the retirement of Sulla from public life, or else debates (*controversiae*). These speeches were often marred by artificiality, a tendency that was increased by the cult of the epigram (*γνώμη, sententia*), which had always been part of rhetoric but became particularly prominent under the Empire. Works like Quintilian's *Institutio Oratoria* show how largely rhetoric bulked in education and how wide was its field.

4. The Romans were bilingual in their schools from Livius (q.v.) Andronicus until the fourth century A.D.; the Greeks were conscious monoglots. According to Petronius, Quintilian, and the younger Pliny, Greek took precedence in the Roman schools. Greek slaves were also used to escort the pupils and to talk Greek with them (hence the derivative meaning of *paedagogus*: teacher). Latin rhetors were forbidden to teach at Rome in 92 B.C. The reasons for this may have been political, but there was also the idea, based on the prestige of Greek letters, that the main object of education was to learn Greek. Greek tutors in Roman homes played an important part from the second century B.C. and many a Greek library found its way to Rome. Bilingualism undoubtedly helped to train the political imagination of the Roman and to give him an understanding of other races. This ultimately had a bearing on Roman imperialism.

5. At their best, the educators of Greece and Rome aimed at 'wholeness' and held that the educated man combined moral, intellectual, and physical excellence. At Athens an uneducated body was as much a disgrace

as an untrained mind. Plato opposed the narrowly vocational education of the lesser Sophists. Isocrates, Cicero, and Quintilian stressed the importance of a wide education, of an attitude of mind that sees things in their context and appreciates their relationships. They opposed the sterility into which rhetoric fell through undue specialization. In two respects education covered too narrow a field. (1) The education of girls was neglected at Athens, though it received a larger place in Sparta and in Rome. Yet women were admitted to Plato's Academy, and there were women professors like Hypatia at Alexandria. (2) Training in the technical arts was not included among the *artes liberales*, i.e. those fit for a *liber* or free man, as opposed to a slave. But the ideal of *humanitas* remains a priceless, if neglected, legacy from the ancient world.

Rauschen, *Das griechisch-römische Schulwesen* (1901); M. Roger, *L'Enseignement des lettres classiques d'Ausone à Alcuin* (1905); T. J. Haarhoff, *Schools of Gaul* (1920)—4th and 5th centuries A.D.; *The Stranger at the Gate* (1938)—bilingualism. F. H. Cramer, 'Why did the Roman Universities fail?' (*Harvard Educ. Rev.* ix. 2 (1939)). T. J. H.

EETION (*Ἠέτιων*), name of eight different mythological persons (see Schultz in Roscher's *Lexikon*, s.v.). The only well-known one is the father of Andromache (q.v.), king of the Cilician city of Thebe. Achilles captured and plundered the city, killing Eetion and his sons, but giving him honourable burial (*Il.* 6. 414 ff.). H. J. R.

EFFATUS (AGER, LOCUS). An augur (see AUGURES) who marked out a *templum* on the ground was said *liberare effarium* that space (see Servius on *Aen.* 1. 446), that is to free it (from profane use, cf. *Livy* 5. 54. 7) by the use of the proper words. But *effari* was used of marking off land for other purposes; the ground on which Rome (and presumably other cities regularly founded) stood was *ager effatus* (Gellius 13. 14. 1). H. J. R.

EGERIA (etymology uncertain, whether from *egero*, cf. *infero*: *inferius*; or connected with the gentile name Egerius, and if the latter, whether the goddess or the *gens* is prior), a goddess, probably of water, worshipped in association with Diana (q.v.), at Aricia (Verg. *Aen.* 7. 762–3), and apparently with the Camenae (q.v.) outside the Porta Capena (Juvenal 3. 17 and Mayor ad loc.). Women with child sacrificed to Egeria for easy delivery (Festus, p. 67. 25 Lindsay; Wissowa, *RR*, pp. 100, 219, 248 f.; cf. Altheim, *Griechische Götter*, 127; A. E. Gordon, *Univ. of California Publications in Classical Archaeology* ii (1934), 13 f.). She was said to have been Numa's consort and adviser (*Livy* 1. 21. 3 and often); cf. NUMA. H. J. R.

EGESTA, see SEGESTA.

EGG (*in ritual*). Eggs play no great part in ancient ritual. They occur in chthonian offerings, Nileson in *ARV* xi. 530 ff. (as life-givers?); an egg is one of the materials used for purifying the ship of Isis (Apuleius, *Afr.* 11. 16; not Greek ritual); but they were used for Greek purifications also (Lucian, *Dial. Merit.* 1. 1; *Catapl.* 7), including the so-called Hecate's suppers (schol. Lucian, p. 125. 24 Rabel); probably in the Greek instances simply as articles of food, either for the impurities to pass into so that they might be thrown away, as food otherwise tainted might be, or as bribes to the uncanny powers which they might eat instead of any-

thing more valuable. At meals, eggshells were smashed or pierced to prevent sorcerers using them (Pliny, *HN* 28. 19). There was also a form of divination, *ωοσκοπία*, by putting eggs on the fire and observing how they sweated or burst; Orpheus was supposed to have written on this (Kern, *Orphicorum fragmenta*, 333). H. J. R.

EGNATIUS, GELLIUS, Samnite general who organized the coalition of Samnites, Gauls, and Etruscans whose defeat at Sentinum made Rome mistress of central Italy, 295 B.C. (Polyb. 2. 19; *Livy* 10. 21. 29). Egnatius, like the Roman general Decius (q.v.) Mus, fell in the battle. The suggestion that Egnatius is only a fictitious composite of two other Samnite generals, *Gellius* Status (captured 305) and *Marius Egnatius* (Social War hero), is unconvincing. E. T. S.

EGNATIUS, see also RUFUS.

EGYPT UNDER THE GREEKS AND ROMANS.

Egypt had been little affected by Greece before Alexander's conquest. Trade with Greece had mainly consisted in bartering corn for silver at Naukratis, and foreign manufactured articles rarely went up country. Greek mercenaries were employed at times, but did not settle; and travellers like Herodotus and Plato collected information but imparted none. Whether Alexander formed any plans for hellenizing Egypt is unknown: his one foundation there, Alexandria, was primarily a seaport, and he does not seem even to have garrisoned Memphis, the strategic centre of the lower Nile valley, while the south was left to itself. He was formally recognized as king at Memphis, and then passed out of Egyptian history. If he had any scheme, it would doubtless be known to Ptolemy Soter, if to anyone; but how far Ptolemy's organization of Egypt was his own and how far inherited from Alexander can only be guessed.

2. The development of Alexandria as the home of a new Graeco-Egyptian culture was begun by Soter: a typical instance of the syncretism attempted is the conception of Sarapis built up by a committee of theologians. Ptolemais, founded to control Upper Egypt, was more purely Greek in its organization; also reclaimed lands in the Fayûm were given to veterans of the army, providing a reservoir of troops and a guard for the desert frontier. But Hellenism did not spread amongst the natives for many decades; stray references, e.g. to gymnasia in some provincial towns, are the only indications of Greek influence. Ptolemy Philadelphus, less occupied with external policy than his father, could pay more attention to the advancement of culture in Alexandria, and spent money freely in securing Greek writers and artists; but he had to make concessions to Egyptian ideas, e.g. by issuing a copper coinage on the local standard to circulate alongside of the Greek silver. Attempts to introduce Greek practices, e.g. that of Apollonius in farming, were short-lived; the recruiting of Egyptians to be trained in a phalanx in 218 was more significant of their recovery of position than of the growth of Hellenism. The difference in tone between the decree formulated by the synod of priests at Canopus in 237 and that similarly passed at Memphis in 196 shows the revival of nationalism in religion.

3. The second century B.C. witnessed a gradual supersession of Greeks by Graeco-Egyptians in the Alexandrian official circles. In the reign of Epiphanes the last Ptolemaic possessions outside Africa, except Cyprus, were lost, isolating Egypt from the Greek political world; and the Ethiopian rulers of Meroë had pushed their frontier down to Philae. The latter probably fostered rivalries in the Thebaid, and the constant dynastic quarrels of the royal house, which started with the sons of Epiphanes, disturbed the whole country. To these in part the numerous concessions granted to the natives

may be ascribed, as bribes for their support; but the Egyptian element at court must also have counted for something in securing them. Polybius seemingly found no pure Greeks even at Alexandria: he described the population as Egyptians, mercenaries, and Alexandrians of mixed stock; and, as there was little to tempt fresh Greek settlers, the Graeco-Egyptians would tend to become more and more Egyptian.

4. Greek influence, in short, was never more than a veneer in the interior of Egypt under the Ptolemies. In Alexandria the Museum maintained a contact with Greek culture, particularly in philosophy, which absorbed some Egyptian elements, but it did not touch the natives; the Greek language was used officially, but the evidence of the study of Greek literature diminishes after the third century, and the native language persisted, to revive as Coptic; the Greek gods were only known in the country as synonyms for local deities, and in the artificial triad of Sarapis, Isis, and Harpocrates the latter two, who were mainly Egyptian in their attributes, were more generally worshipped than Sarapis. The royal house itself became Egyptianized, in sympathies if not in blood: the monuments relating to it, especially in temples, are predominantly Egyptian; and the whole policy of government was changed accordingly in its orientation.

5. The Roman conquest of Egypt had disastrous results. Augustus did not add Egypt to the Empire of the Roman People, but treated it as a personal estate, which was exploited without any consideration for the welfare of the inhabitants. The wealth of the land had not been seriously depleted under the Ptolemies; there is little evidence of destitution, and, though the conditions of life outside the towns were primitive, they did not deteriorate. Roman rule was marked by decay for over three centuries: the revenues were spent abroad and capital was drained to Rome, land went out of cultivation, and many of the agriculturists were reduced to vagabondage. It was not till the Imperial authority grew weaker in the fourth century that there was any revival of prosperity in Egypt: then large estates of a feudal type were formed in some districts, in others monastic bodies acquired considerable properties—for both of which analogies can be found in Ptolemaic times—and contemporary documents suggest a distinct amelioration in the life of the natives. The changes in the administration of Egypt under the Roman emperors illustrate this point. Augustus probably intended to keep the existing scheme of organization in being when he conquered the country: certainly many of the Ptolemaic official titles were retained, and the functions of these officials were seemingly little altered; the chief novelty, the Prefect, might be described as a viceroy substituted for a king. But, as the machinery had to be gradually adapted to a new ideal of government, the Ptolemaic civil service lost such independence as it had possessed—for instance, the heads of the former finance department, the *dioecetes* and *idologos*, became of executive instead of administrative rank, and the presence of an army of occupation deprived the *epistrategus* of his military powers. In the lower grades of officials, whose main duties were in the collection of revenues for the emperor, there was a steady trend towards compulsory service: many of the Ptolemaic taxes had been farmed freely, but under the Romans the posts became liturgies. The local magistrates, under various titles—gymnasiarch, *exegetes*, *eutheniarch*, *cosmetes*, *agoranomus*—had one common responsibility, that of making up the sum assessed upon their town, if they could not extract it from the collectors, or these from the taxpayers. Septimius Severus attempted to remedy matters by converting the bodies of magistrates into senates, presumably with the idea of increasing the local control; but as the burden on the community as a whole was not lightened, the measure did nothing to check the impoverishment of the country.

6. In Alexandria Roman rule completed the fusion of the Greek and Egyptian elements, which thereafter formed a nationalist opposition to the imperial officials; the gymnasiarchs were usually in the forefront of any popular movement. There was apparently some revival of Greek culture, as shown by the study of Greek literature, and Sarapis worship became more influential. Hadrian may have realized the possibility of improving the condition of the country, by encouraging this tendency, when he founded Antinoöpolis on a Greek model; but though his foundation prospered, his experiment was not repeated, except by Septimius Severus in a summary and ill-considered fashion. Romanization was never attempted: veterans from the army settled sporadically in the country, but they were soon absorbed into the mass of the natives; Latin was hardly ever used, except in official or military documents, or studied; formal mention of the emperors was occasionally made in Egyptian style on temple walls, and Roman festivals were occasionally observed, but in neither case was there any real meaning. In Byzantine times a resident in Egypt might boast of Macedonian descent, or quote Homer; no one showed any knowledge of the existence of Rome. See also PTOLEMY.

BIBLIOGRAPHY

ANCIENT SOURCES. There is no connected account of any period in the history of Egypt under Greek or Roman rule, and very little first-hand evidence of value, except for passages in Polybius and the *De bello Alexandrino*. The scraps of information given by Roman writers are far from trustworthy. The important inscriptions can be found in *OGI* and *IGRom*. The papyri discovered and published during the last fifty years provide the chief material: their evidence is necessarily fragmentary, but they have revolutionized the old views on the social and economic conditions of the country.

MODERN LITERATURE. (a) General history: M. L. Strack, *Die Dynastie der Ptolemäer* (1897); A. Bouché-Leclercq, *Histoire des Lagides* (1903-7); E. R. The bibliography of Graeco-Roman Egypt published annually in the *Journal of Egyptian Archaeology* gives particulars of articles which have appeared since the preparation of these volumes. J. G. M.

EGYPTIAN DEITIES. The chief deities of Egyptian origin worshipped in the Graeco-Roman world were Sarapis, Isis (qq.v.), and Harpocrates (see HORUS). Anubis (q.v.) appears with the group in some places and Ammon, Bubastis, and Osiris (qq.v.) at others. Temples of these deities such as the one at Dclos, for instance, might contain among the 'associated gods', in addition to those mentioned, a dozen or more Egyptian, Greek, or syncretized deities. A minor deity of the group was sometimes Bes, an old, crude, comic god much beloved by the common people. The popularity of Bes, Harpo-

crates, and other minor members of the cult was enhanced by the influence of the pottery industry which sent out from Alexandria many statuettes, jars, jugs, and vases with representations of these deities. In the Hellenistic age most of the foundations of the cult of the Egyptian deities in the Aegean area seem to have become public cults very quickly, and most of their ceremonies and properties came under the regulation and direction of the magistrates of the city States. In connexion with many of these cults there were societies of *melanephoroi* and some system of periodic services was probably carried out. In the later period, especially in the West as, for instance, at Pompeii, the cult was probably served by a professional priesthood, and at many of the temples the old Egyptian mysteries of Osiris were celebrated. Something of the nature of these mysteries is disclosed to us by Apuleius in his *Metamorphoses* (bk. 11), and Plutarch (*Concerning Isis and Osiris*) shows how they could receive a philosophic interpretation. The cult of the Egyptian deities was one of the last great pagan worship to succumb to Christian pressure. The temple at Alexandria was destroyed about 391, but the cult lingered longer at Philae. The cult seems to have commanded strong interest among official classes in Rome during the fourth century.

EHOIAI or EOIAI, see EPIC POETRY, GREEK, para. 5, and HESIOD.

EIDYLLION, see PASTORAL POETRY, GREEK.

EILEITHYIA(E) (*Ἐλεῖθυια(ι)*), the goddess(es) of birth, identified by the Romans with (Juno) Lucina (q.v.). She has, or they have, no myth properly speaking, appearing simply as a subordinate figure in various stories of birth, see HERACLES, LERO. She is often identified with, or her name used as a title of, Hera, from whom she may have developed; she is identified also with Artemis (q.v.), owing to that goddess's functions in connexion with childbirth (see, for instance, Farnell, *Cults* i. 247, n. 28c; ii. 567-8, n. 41). She is also on occasion the daughter of Hera (as Pausanias 1. 18. 5 (Crete)), or the partner of Artemis (as Diod. Sic. 5. 72. 5, where she and Artemis are both daughters of Zeus). At Olympia, where she is associated in cult with Sosipolis (for whom see Farnell, *Cults* ii. 611; Nilsson, *Minoan-Mycenaean Religion*, 503, n. 2), she seems to be one of the nurse-goddesses not uncommon in Minoan cult. Her cult is widespread and she occasionally develops into a city-goddess. H. J. R.

EINSIEDELN ECLOGUES, two incomplete Latin pastorals (87 hexameters together) first published in 1869 by Hagen from a 10th-century MS., early products of Nero's reign. In the first a competing shepherd belauds the minstrelsy (Nero's) which eclipsed that of Mantua (Virgil's); in the second the shepherd Myses sings the return of the Golden Age. The authorship, sometimes credited to Calpurnius Siculus, remains unsolved. See PASTORAL POETRY, LATIN, para. 5.

Text: E. Bachrens, *FLM* iii; A. Riese, *Anthol. Lat.* nox. 725. 726; C. Guarratano (with Calp. and Nemes., 1924). Translation (with text): J. W. and A. M. Dal, *Minor Latin Poets* (Loeb, 1934). Special Study: S. Leesch, *Die Einsiedler Gedichte* (with text, facsimile, 1909) [supports Lucan's authorship, whose works present some parallels to Apollon's praise, *Ed. v. E. Georg, PW* iii. 1379, maintains Calpurnius' Pao's authorship.] J. W. D.

EIRENÆUS (*Latine*, Minucius Pacatus), a grammarian of the Augustan age, pupil of Heliodorus the metrist, and cited by Erotian. See also GLOSSA (GREEK).

EIRENE, peace personified. Apart from her appearance as one of the *Horae* (Hesiod, *Theog.* 902), and a number of mentions in poetry (serious, Bacchylides, fr. 3 Jebb; Euripides, fr. 453 Nauck; semi-serious, Aristophanes, *Pax* 221 ff.), she has no mythology and little cult. The famous statue of her by Cephisodorus (see Roscher's *Lexikon* i. 1222 and the various handbooks of Greek art) is an embodiment in visible form of the poetical passages; the goddess holds on one arm the infant Plutus. At Athens, however, we hear of actual worship of her at a public festival; at the Synoikia (schol. Ar. *Pax* 1019), on Hecatombaeon 16, a sacrifice was offered to her, which the scholiast says was bloodless (perhaps a mere conclusion from the text of Aristophanes there, see Deubner, *Attische Feste*, 37 f.). It dates from the peace with Sparta in 374 (Isocrates 15. 109-11). Two or three times the name is found applied to a heroine or Bacchant (see Roscher, *ibid.*), but not for women till much later.

H. J. R.

EISANGELIA (*εἰσαγγελία*), in Athenian practice signified an information, but since it was largely used in cases that came before a political body, it is most conveniently rendered 'impeachment', that is to say a trial before a political body.

An impeachment could be brought before the Areopagus (in earlier times), the Boule, and the Ecclesia. The Boule might try a case at once and impose a fine within its competence, or send the case to court where a suitable penalty could be demanded. Again, the Boule might put the case on the calendar of the Ecclesia. In very unusual cases the Ecclesia might itself try the case. Otherwise it was turned over to a court.

In the so-called *εἰσαγγελτικὸς νόμος* (Hyperides 4. 7) which grew out of Solonian legislation (Arist. *Ath. Pol.* 8. 4) certain crimes are specified that had to be tried by *εἰσαγγελία*, viz. attempts to overthrow democracy, betrayal of military forces or possessions of the State, acceptance of bribes as an orator. The procedure was mandatory also against an arbitrator who had failed in his duty. The case came before the board of arbitrators. *Εἰσαγγελία* was commonly used in cases of wrongdoing that were novel and not mentioned in any criminal law. In later times the process was abused and trivial infractions of the law were thus tried.

R. J. B.

EISPHORA, the name of an extraordinary property tax in ancient Greece which is known from Aegina, Athens, Mende, Messene, Miletus, Mytilene, the Koinon of the Nesiotas, Orchomenus, Potidaea, Siphnus, Sparta, Syracuse, and the Ptolemaic Empire. It was a quantitative land tax in Mende and in Ptolemaic Egypt, a quantitative property tax in Messene, a distributable property tax in Potidaea and fourth-century Athens, and a property tax of some kind in fifth-century Athens and other States mentioned.

Pollux 8. 130—a much disputed passage which might nevertheless be trustworthy, at least in its dating—recalls a progressive *eisphora* system introduced by Solon. Thuc. 3. 19 (for 428-427 B.C.) and the (perhaps) earlier inscription IG ii. 92 are the first certain sources for an *eisphora* in Athens.

The tax was remodelled at Athens in 378-377. The whole taxable capital in the State had to be valued (the amount of the first assessment being 5,750 talents). The taxpayers were divided into *symmoriae* which were financially nearly equal. A certain percentage of the whole assessment ($\frac{1}{10}$, $\frac{1}{5}$, $\frac{1}{2}$, etc.) had to be paid, as the necessity arose. Even fortunes exempt from liturgies (q.v.) had to be assessed for the *eisphora*. Some years

after 378-377 the so-called *proeisphora* was introduced, according to which the 300 richest citizens had to pay the whole levy in advance and reimbursed themselves later on from the other taxpayers.

For bibliography see FINANCE (GREEK AND HELLENISTIC), SYMMORIA. B. A. van Groningen, *Mnemos.* lvi (1928), 395 f.; W. Schwahn, *Rh. Mus.* lxxiii (1933), 247 f. F. M. H.

EKPHRASIS, the rhetorical description of a work of art, one of the types of *progymnasma* (rhetorical exercise, q.v.). Similar, but shorter, descriptions in verse are common in the *Anthology*. The efflorescence of the representational arts in the second century A.D. gave an impetus to this type of writing, of which Nicostatus of Macedonia (2nd c. A.D., author of an *Eikónes*) is perhaps the first exponent. Lucian's *De Domo* (*Περὶ τοῦ οἴκου*) is on the same lines. In his *Imagines* (*Εἰκόνες*) the beautiful Pantheia is compared to famous works of art. The earliest extant collection is that of Philostratus (q.v. III), perhaps not descriptions of actual pictures. See also CALLISTRATUS (5) and PAULUS (2).

On the description of works of art in Greek literature, in general, see P. Friedländer, *Johannes von Gaza und Paulus Silentarius* (1912), 1-103. J. D. D.

ELAGABALUS (1), the Baal of Emesa in Syria. His young priest, on becoming emperor in A.D. 218 (see the following art.), carried to Rome the sacred black stone, or baetyl, of E., enshrined it on the Palatine with the Carthaginian Caelestis as its bride, and for a brief period made the 'deus invictus Sol E.' the chief deity of Rome.

F. R. W.

ELAGABALUS (2) (Roman emperor A.D. 218-22), whose real name was Bassianus, was a son of Julia Soacmias and grandson of Julia Maesa (see JULIA 5 and 6), and at his native Emesa was priest of the local Sun-god (Elagabalus). In his fifteenth year he was saluted Augustus under the title of M. Aurelius Antoninus (218; see MACRINUS). After the defeat of Macrinus he spent the winter at Nicomedia indulging with his mother in the fanatical excesses of his religion, and only reached Rome in 219. For three years the city witnessed unparalleled scenes of debauchery. Two magnificent temples were built for the Sun-god, whose midsummer festival was celebrated by his priest with a ceremonial no less ludicrous than obscene. Nor was Elagabalus merely a religious pervert; he was treacherous and extravagant without honour or responsibility. The command of the Praetorians was given to an ex-actor and the care of the food-supply to a hairdresser. Moral depravity was the passport to administrative preferment.

In alarm for her own position and the continuance of the Severan dynasty Maesa induced the Emperor to adopt his cousin Alexianus, and to entrust the secular administration to him (221). Jealousy and intrigue ensued till an opportune bribe by Mamaea, Alexianus' mother, induced the Praetorians to murder Elagabalus and his mother (222).

Herodian 5. 5-8; Dio Cassius, bk. 79; S.H.A. Parker, *Roman World*, 102-5; M. Besnier, *Histoire romaine* iv. 79-87; K. Hönn, *Quellenuntersuchungen zu den Viten des Heliogabalus und des Severus Alexander*; CAH xii, ch. 1, § 6. H. M. D. P.

ELATEA (*Ἐλάτεια*), a Phocian town of strategic importance; commanding the routes from Phocis to Boeotia by the Cephissus valley, from Phocis to Opus on the Euboean Straits, and from Boeotia to Thermopylae over Mt. Callidromus. The most famous citizen of Elatea was Onomarchus (q.v.). Philip II of Macedonia occupied it in September 339 B.C., threatening Boeotia a few miles south and Athens which lay three days' march distant; by fortifying the town he blocked all routes from Boeotia northwards. In 305 Cassander, while occupying the same position, was defeated by the Athenians under Olympiodorus (q.v.). N. G. L. H.

ELATUS (*Ἐλατος*, 'Driver', the name of (1) a Trojan ally killed by Agamemnon (*Il.* 6. 33); (2) one of Penelope's wooers (*Od.* 22. 267); (3) the eponym of Elatea (Paus. 8. 4. 2-4); (4) a Centaur (Apollod. 2. 85); (5) a Lapith, father of Polyphemus the Argonaut (schol. Ap. Rhod. 1. 40); father of Taenarus eponym of Taenaron (ibid. 102). H. J. R.

ELEATIC SCHOOL (*Ἐλεατικὸν ἔθνος*, Pl. *Soph.* 242d), a philosophical school founded about 540 B.C. at Elea in Lucania, by Xenophanes. The chief later members were Parmenides, Zeno, and Melissus (who fl. c. 440). The school seems not to have survived as a school after Melissus. Its common tenet was monism. In Xenophanes this was essentially the protest of a monotheist against polytheism. In Parmenides it was a materialistic monism, thinking of the universe as an undifferentiated sphere, denying the existence of plurality or change, and resting on reason as against the testimony of the senses. Zeno's contribution was a brilliant criticism of the paradoxes involved in a belief in plurality and change; Melissus attempted, but with much less success, to defend the theory against the rising tide of pluralism, as represented by Empedocles and Leucippus. W. D. R.

ELECTRA (*Ἠλέκτρα*, Doric *Ἄλέκτρα*), in mythology, (1) daughter of Oceanus, wife of Thaumias, mother of Iris and the Harpyiae (q.v.; Hesiod, *Theog.* 265 ff.). (2) Daughter of Atlas, one of the Pleiads, born in Arcadia (Apollod. 3. 110), usually located on Samothrace (as Ap. Rhod. 1. 916 and schol. there); mother by Zeus of Dardanus (q.v.) and Iasion (Iasius) (schol., ibid.). (3) Daughter of Agamemnon and Clytemnestra (qq.v.). She does not appear in Epic, the first certain mention being in the *Oresteia* of Stesichorus (see Vürtheim, *Stesichorus' Fragmente und Biographie*, 46). Where Stesichorus, or his alleged predecessor Xanthus of Lydia (ibid.), found the name is quite unknown; one or the other made a bad pun on it in defiance of quantity, interpreting the Doric form as meaning 'unwedded', as from a privative + *λέκτρον*. In Tragedy she becomes one of the central figures of the story. Sophocles (*El.* 12) makes her rescue Orestes (q.v.), then a young child, from the murderers of his father. In the *Choephoroe* of Aeschylus she is unalterably hostile to her mother and Aegisthus (q.v.), welcoming her brother, joining with him in the invocation to Agamemnon's ghost, but not actively helping the killings. Her role in Sophocles is similar, but more developed. In Euripides (*El.*), she is almost a monomaniac from hate and brooding over her wrongs, helps to kill Clytemnestra, and at once goes half-mad with remorse. In his *Orestes* she appears as a desperately faithful nurse and helper to her mad brother, and shares his wild exploits throughout; ibid. 1658 and Hyg. *Fab.* 122. 4, she marries Pylades; in Hyginus (ibid. 1-3) she meets Orestes and Iphigenia at Delphi and nearly kills the latter, who she thinks has murdered him. The source of this story is unknown, see Rose ad loc. For her appearances in art, see Robert, *Bild und Lied*, 150 ff. It is fairly clear that the development of her story is due to the poets mentioned and their fellows, not to tradition. H. J. R.

ELECTRICITY, see PHYSICS, para. 8.

ELECTRYON, see AMPHITRYON, LICYMIUS (1).

ELEGIAC POETRY, GREEK. The Greek elegiac is a development of the epic hexameter in the direction of melic verse by adding to it a so-called 'pentameter', which consists of two 'hemiepes' verses combined into a single line in the form:

—x—x—|—uu—uu—

The pentameter is a single unity in so far as the final syllable of the first half must be long and hiatus is not

allowed between it and the following syllable, but it reveals its construction from two separate parts by the break which is required at the end of the first half and does not allow a word to be carried from one half to the other. The word *ἐλεγίον*, first used by Critias (fr. 2. 3), is connected with *ἐλεος*, and in antiquity there was a popular notion that the elegiac was in some sense a lament, the 'sebilis elegeia' of Ovid (*Am.* 3. 9. 3). This seems highly unlikely, since most early types of elegiac have no relation to laments. It is more likely that *ἐλεος* is connected with some foreign word for 'flute', such as survives in Armenian *elegn-*, and that the elegiac was originally a flute-song. This is supported by the references to the flute in early elegists such as Archilochus (fr. 123 Bergk), Mimnermus (Strabo 14. 643), and Theognis (241, 533, 825, 943), and by the use of the flute for purposes for which the elegiac was used, such as military life and convivial occasions. The inventor of the elegiac is not known, and the ancients who ascribed it variously to Archilochus, Callinus, and Mimnermus may have known no more than we do. It makes its first appearance at the end of the eighth century and may have found most of its characteristic uses at an early date. It seems to have started in Ionia, to have found its way quickly to the mainland of Greece. Its main uses may be classified. (1) Symptotic. Flute-songs were sung over the wine, and the elegiacs of Archilochus (frs. 1-13), though they belong mostly to camp-life, are of this kind. So, too, is Callinus fr. 1, as its opening words *μέχρις τεῦ κατὰ κλισίῃς*; show, though it is full of martial spirit. This type may be seen in all the known fragments of Mimnermus, in the collection ascribed to Theognis, in some short pieces of Anaëreon (frs. 96, 100, 102), and in poets of the fifth century like Ion of Chios and Critias. To this class belong certain short poems sung in memory of dead men, like the Attic couplet on Cedon (*Scol. Att.* 23), which are sometimes mistaken for epitaphs. (2) Military. Long elegiac poems of an exhortatory kind were addressed to soldiers by Tyrtæus, and it seems to have been his example which emboldened Solon to use the elegiac as a means for political discussion and propaganda. (3) Historical. Mimnermus told the history of Smyrna in his elegiac *Smyrneis*, Semonides that of Samos, Panyassis that of the Ionian colonization. This type may well have been a development of the first type, since Mimnermus certainly included historical pieces in his *Nanno*. (4) Different from these types was the use of the elegiac for inscribed dedications. The earliest known case comes from Perachora in the last quarter of the eighth century B.C., while examples are attributed, without certainty, to Archilochus (fr. 16) and Anaëreon (frs. 107-8). It is not known why the elegiac was used for this purpose. (5) Epitaphs. The elegiac was also used in inscriptions to commemorate the dead, who were either made to speak in the first person or had something simple said about their name, home, etc. This seems to have become a popular use in the middle of the sixth century B.C., especially in Attica, and may perhaps have been derived from the commemorative elegiac. Both epitaphs and dedications were inscribed without the author's name, and though many are attributed to well-known poets, such as Simonides, the attributions are extremely uncertain. The elegiac epitaph survived for centuries and was still popular in the fourth century A.D. (6) Lament. This use seems to have existed and even to have been popular at an early date in the Peloponnese, since Echiembrotus (c. 586 B.C.) was famous for his elegies sung to the flute and for their gloomy character (Paus. 10. 7. 4). No early examples of this kind survive, but perhaps traces of it may be seen in the epitaph on the Athenian dead of Coronea (*CG* xxxii. 80-8), in the elegiacs of Euripides (*Andr.* 103-16), and in Plato's lines on Dion of Syracuse (fr. 6). These main types survived until the end of the fifth century, and probably till the

end of the fourth. After this the differences between them tended to be obliterated and the elegiac was put to new uses, largely because instead of being composed for a practical end it was often composed as a literary exercise. About 300 B.C. the changes were already apparent, and may perhaps be connected with the names of Anyte and Addæus; in the next generation, that of Philetas and Aselepiades, there is no doubt about them. With these, and later, authors the elegiac is used in the following new ways: (1) Descriptive. Scenes are described, of country or town life, or even from mythology. This became more and more popular and lasted into the Byzantine age. (2) Love-poems. On the whole this type is very rare in the sixth and fifth centuries, though the second book of Theognis shows its existence. It was a department of the symptotic elegy. It was developed in intensity and intimacy by Plato, and became common at Alexandria. (3) Imitations of earlier forms, especially of dedications and epitaphs, which were often written just as literary pieces and betray themselves by their lack of exactness in giving names and their occasional confusion of real epitaphs with commemorative elegies. Along with these new forms the old forms survived and were still popular. After comparative inactivity in the fourth century the elegiac developed a new strength in the third, and was one of the forms of poetry most popular with the Alexandrians, who seem to have made its rules stricter and to have polished its technique. In the Roman period it continued its life and had a considerable flowering in the Augustan age, to which Antipater of Thessalonica, Bion, and Euenus belong. The tradition was carried on in the first century A.D. by Antiphras and Julius Polyænus, and in the second by the distinguished figure of Lucian. After a century of comparative barrenness there was a considerable revival in the fourth century, when the Emperor Julian used the form and Palladas was the last distinguished pagan to express his feelings in it. Even in the sixth century, when classical Greek was a dead language, it was still used for the composition of elegiacs by such notable poets as Agathias Scholasticus, Paul the Silentiary, and Maëdonius. After this outburst in the reign of Justinian it seems to have passed into disuse, though lines attributed to Cometas (*Anth. Pal.* 9. 586) may have been written as late as the reign of Constantine VII (A.D. 911-59).

C. M. B.

ELEGIAC POETRY, LATIN. While a few epigrams survive in the fragments of earlier writers (Ennius, Porcius Licinus, Q. Lutatius Catulus, Publilius), the first poet to use the metre with frequency is Catullus; he shows not only a great advance in poetic power and technique, but writes long elegies (66-8) as well as epigrams, while there is reason to believe that other poets of his circle (Calvus, Cinna, Cornificius) did the same. But the first Roman to write elegy on a large scale was Cornelius Gallus, in whose four books of *Amores*, of which but one line survives, the Latin love-elegy came to birth. Tibullus, Lygdamus, Propertius in his poems to Cynthia, and Ovid in his *Amores*, all follow in the footsteps of Gallus. The love-elegy finds no exact parallel in extant Greek poetry, nor is there any sure evidence for the existence of a prototype in any of the lost works of Greek elegists. It draws on many sources, Lyric, Epigram, Pastoral, and the New Comedy, is coloured throughout with illustrations drawn from Greek mythology, and (more especially in Propertius and Ovid) is strongly influenced by the schools of rhetoric. Love, however, is not the sole theme of elegy. Propertius hails Philotas and Callimachus as his masters in the learned mythological style. His ætiological poems in book 4 find their inspiration in the *Alia* of Callimachus. The

same is true of the *Fasti* of Ovid, whose *Ibis* also, the most Alexandrian of Roman elegies, has presumably some kinship with Callimachus' poem of the same name. But Ovid is also an innovator, giving a new rhetorical turn to elegy and inventing fresh types, such as the *Heroides*—brilliant rhetorical monologues, based on legendary themes, and cast in the form of letters—and as the *Ars Amatoria* and *Remedium Amoris*—cynical instructions to not too reputable lovers, shameless if witty travesties of didactic poetry, finding their germ in the New Comedy and the less respectable aspects of the love-elegy. Even his letters of exile (*Tristia* and *Epp. ex Ponto*) are in their way a novelty. Outside the ranks of the Augustan specialists in elegy stand other poets. Sulpicia's handful of elegies are genuine love-lyrics, akin rather to the epigrams of Catullus and the Greek Anthology. Virgil's elegies contained in the *Catalepton* are but slight and trivial, but his *Copa* (if it be his) is a gem, the most Greek of Latin elegies. To these must be added the *Nux*, the two *Elegiae in Maecenatem*, and the *Consolatio ad Liviam* (qq.v.). They have been attributed to Ovid, but their authorship is uncertain, and even their date is disputed. See, however, *Nux* in article on Ovid.

2. With Ovid's death the great age of Elegy comes to an end. The *Anthologia Latina* has preserved a number of elegies (mainly epigrams) attributed to Seneca and to Petronius. The former are of no great worth or interest, the latter are many of them charming. Martial a generation later makes free and skilful use of the epigram; he is often witty and entertaining, and occasionally has genuine charm. After him, though elegy survives, it is almost uniformly devoid of any real merit save for a very few fine poems by Claudian, occasional flashes of beauty in Ausonius, and the remarkable *Itinerarium* of Rutilius Namatianus, which, though uneven in quality and unduly rhetorical, has passages and couplets of real grandeur.

3. *The Metre.* The hexameter differs from the heroic hexameter in no respect save that it tends to be more dactylic than that of Virgil and his predecessors, and that the employment of long endings (4- or 5-syllable words) is rarer still. The pentameter in its earlier stages admits long endings (3-, 4-, or 5-syllable words) following Greek practice, though they are less common, and show a steady decrease, until in Ovid the dissyllabic ending becomes the rule. Elision is rarer (after Catullus) both in the hexameter and the pentameter than in the hexameter when employed alone—and rarest of all in the last dactyl of the pentameter. Further, the couplet (unlike the Greek) is generally self-contained; and in cases where a sentence is continued through two or more couplets there is normally at least a comma at the end of the pentameter. The elegiac couplet is first found in full maturity in Tibullus. Catullus had not fully mastered the technique; it is not improbable that Cornelius Gallus largely contributed to its perfection.

Wheeler, *Catullus and the Traditions of Ancient Poetry* (1934) (also CPhil. v. 28-40; 440-50; vi. 56-77); A. A. Day, *The Origins of Latin Love-Elegy* (1938).

H. E. B.

ELEGIAE IN MAECENATEM. Tradition ascribes to Virgil two such *Elegiae*, which in the MSS. have been wrongly made into one, but which Scaliger divided. As they were written after Maecenas' death (8 B.C.), Virgil (d. 19) cannot be the author. In the former elegy the unknown poet tells us that Lollius (either consul 21 B.C., cf. Horace, *Carm.* 4. 9. 33, or another Lollius) made him write this poem. This elegy defends Maecenas against the charge of weakness and love of ease.

The second elegy contains the farewell words of the dying Maecenas, who gives utterance to his gratitude towards his friend Augustus.

The question of their date is answered differently. By some they are dated shortly after Maecenas' death; on the strength of *El.* 1. 1-2 many ascribe to the same poet the anonymous *Consolatio ad Liviam*. Others rightly reject this on account of metre and diction, though it must be admitted that the Maecenas elegies follow the *Consolatio* in places. As both *Consolatio* and Maecenas elegies borrow from Ovid's *Metamorphoses*, *Tristia*, and *Ex Ponto* (I-III), it is probable that the Maecenas elegies were written not before A.D. 13.

ELEMENTS. Hesiod conceived the Universe as a family of divine powers descended partly from the Void and partly from the Earth. The early Ionian cosmologists (Thales, Anaximander, Anaximenes, Heraclitus) saw it as not only originating from, but as consisting of and returning to, a single substance, which 'envelops and governs' it as the Divine. Parmenides regarded Nature as the product of the mixture in different proportions of two self-identical 'forms' (μορφαί), Light and Night, existing (like all Nature) only 'in convention', and transferred to a Daemon the world-government exercised by the Ionian ἀρχή. These 'forms' Empedocles converted into four real 'roots' (ρίζματα), viz. Earth, Air (αἰθήρ), Fire, Water, which are the ultimate, exclusive, and eternal constituents of the Universe. He thus founded the conception of physical elements.

For this conception Plato introduced the name στοιχεῖα, the 'letters' or 'ABC' of the book of nature (*Th.* 201 e; *Soph.* 252b). He himself maintained that not the Empedoclean 'roots' but the geometric figures constituting them are alone genuine 'elements' (*Th.* 48b; 54d). Aristotle (*Metaph.* Δ 3) defined and classified the usage of στοιχεῖον, embracing now, among other things, the elementary demonstrations inherent in all mathematical and logical proof (whence Euclid's 'Elements'). The physical sense, however, prevailed, though the metaphor was forgotten; so that when St. Paul speaks of 'beggarly elements' (*Galatians* iv. 9) he refers to the natural phenomena worshipped by the superstitious. In Latin Lucretius, continuing the old image of letters for atoms, first translated στοιχεῖα by *elementa*; which term Cicero presently adopted to denote the Empedoclean 'roots'.

A. H. C.

ELEPHANTINE, on an island below the first cataract of the Nile, had been a military and business frontier station and a religious centre in Pharaonic times; but under the Ptolemies its religious importance was gradually transferred to the island of Philae above the cataract, and the Roman camp and customs station were at Syene, on the east bank of the river. The buildings seen by Jomard on Elephantine have nearly all been destroyed; the only interesting monument that remains is the Nilometer mentioned by Strabo. Many ostraca, chiefly customs receipts, have been found. The temples on Philae, mainly Ptolemaic and early Roman, are now submerged except at low Nile.

E. Jomard, *Description de l'Égypte, Antiquités*, ch. 3, pls. 30-7; H. G. Lyons, *Report on the Temples of Philae* (1908). J. G. M.

ELEPHANTS. War-elephants came to the Western world from India. Alexander's desperate battle with the 200 elephants of Porus proved their utility; and though

he never used them in battle himself, they played a considerable part in the wars of his Successors. They could be deadly the first time, against untried infantry; but they soon lost their terrors, and the Macedonians used them primarily as a screen against cavalry, though at Raphia (217 B.C.) they led Antiochus' attack. When Indian elephants became a Seleucid monopoly, Ptolemy II and Carthage imported Indian trainers and broke in African elephants, the Ptolemies getting theirs from Ethiopia and the Red Sea hinterland, Carthage from Numidia and Mauretania. The oft-repeated story that the African was smaller and weaker than the Indian is a thoughtless literary *cliché*; the heavy weights recorded for Ptolemaic tusks are conclusive. Indians and Africans met at Raphia, and the Africans, heavily outnumbered, were defeated; but the African elephants of Carthage contributed greatly to the defeat of Regulus, and pulled Carthage through in her war with her mercenaries, even storming the mercenaries' camp (the only recorded success of elephants against a fortified position). The last important elephant battle was Magnesia in 189; they lingered among the Seleucids and in Numidia, and Juba I had some at Thapsus. The Romans first encountered elephants ('Lucanian oxen') in Pyrrhus' army, but seldom used them in battle. They frequently exhibited them in beast hunts.

ELEPHENOR, in mythology, leader of the Abantes of Euboea (*Iliad* 2. 540), killed by Agenor (4. 463-70). He is son of Chalcodon in both passages; Hyginus (*Fab.* 97. 10) says his mother was Imenarete, a dubious name. Lycophron 1034 and the schol. there make him survive the Trojan war, previous to which he had gone into exile from Euboea for accidentally killing his grandfather Abas. H. J. R.

ELEUSINIA, a word signifying games celebrated at Eleusis, never the Eleusinian Mysteries. The games were celebrated every fourth year (the second of the Olympiad) and on a lesser scale every second year. The prize was a certain quantity of grain from the Rarian field. We know also of a procession and certain sacrifices.

A. R. van der Loeff, *De ludis Eleusiniis* (1903); L. Deubner, *Attische Feste*, 91 ff. M. P. N.

ELEUSIS, the next town of Attica after Athens and Piraeus, on a land-locked bay with a rich plain, was an important prehistoric settlement, and its rich eighth- and seventh-century graves prove wide foreign contacts (J. D. P. Pendlebury, *Aegyptiaca* (1920), 79 ff.). It remained independent of Athens, with its own kings, until the seventh century (*Hymn. Hom. Cer.* 96-7; 473 ff.). The mysteries celebrated in honour of Demeter and Persephone attracted visitors from all Greece. Work of all periods is visible in their sanctuary; the small early apsidal temple was replaced under Pisistratus by the magnificent *telesterion*, a square hall with rock-cut seats like a theatre, which was rebuilt and enlarged by Ictinus. There was much building in Roman times, including the splendid Propylaea. The acropolis, held by the Thirty Tyrants in 403, was naturally strong; the walls and many houses are preserved. See also DEMETER, MYSTERIES.

K. Kourouniotes, *Eleusis* (Encl. Transl. 1936); F. Noack, *Eleusis* (1927). T. J. D.

ELIS, the plain of north-west Peloponnesus, famed for horse-breeding. It was occupied by a people akin in race and language to the Aetolians, coming in from the north. Their small neighbours of Pisa, Lepreum, and Triphylia long kept an uneasy independence. Their boundaries with the Arcadians of Heraclea were established by treaty (Ptol 5; early 6th c. B.). The Eleians presided over the Olympic Games, traditionally set up in 776 B.C.; but they may not have had effective control until

two centuries later (see PISA). They lived a country life and had little concern with politics; a council of 90 life members formed a closed circle within the oligarchy (Arist. *Pol.* 1306^a 12 ff.). They were early and loyal allies of Sparta, until in 420 Sparta championed the independence of Lepreum, whereupon Elis joined Athens and Argos; she was punished in 399 with the loss of Triphylia, which after 369 was united with Arcadia. Elis was now for a brief period a moderate democracy. In the third century the Eleians were allies of Aetolia and fought frequent wars with the Arcadians.

The town of Elis on the Peneus was built c. 471, and replaced Olympia as a political centre. It was an open and extensive town.

Philippson and Swoboda, *PIW*, s.v. Excavations: *JÖAI* 1911, Beibl. 97 ff.; 1913, Beibl. 145 ff.; 1915, Beibl. 61 ff. T. J. D.

ELIS, SCHOOL OF, was founded by Phaedo (q.v.; Diog. Laert. 1. 19; 2. 105; 126). Little is known of the members of the school other than its founder.

ELISSA, see DIDO.

ELOCUTIO NOVELLA, a phrase used by Fronto (q.v.) in writing to his pupil M. Aurelius expressing the modern style of Latin which he advocated. This fresh mode was a reaction against the outworn conventions of the Silver Age and an attempt to combine the virile elements of Early Latin authors with the vigorous current of contemporary speech. Gellius and Apuleius also represent the movement.

See J. Wight Duff, *Lit. Hist. Rome (Silver Age)*, 651-2. J. W. D.

ELOGIUS, QUINTUS, Augustan writer of memoirs cited as a first-hand authority on the Vitellian family by Suetonius (*Vit.* 1).

ELYSIUM, see AFTER-LIFE.

EMANCIPATIO is the release of a *filius* or *filia familias* from family ties and the *patria potestas* by a voluntary renunciation of the *pater familias*. The *emancipatus* became hereby a person *sui iuris* and, if male, a *pater familias* even though he had not yet a family of his own. *Emancipatio* signified for him a *capitis deminutio minima* (see DEMINUTIO CAPITIS) with all its consequences. *Emancipatio* was accomplished in the classical period in the following manner: the father sold his child (subject to a *fiducia* or trust) three times by *mancipatio* to a reliable man, who then on his part released the *mancipatus* (being now with him in *mancipio*) by means of three manumissions (or, as a Latin document of *emancipatio* from the third century A.D. shows, by *remancipationes*). According to a rule of the Twelve Tables (see PATRIA POTESTAS) the father was deprived of his *potestas* over the son by the three sales. For the emancipation of a daughter and of a grandson one sale was sufficient. The post-classical period simplified the forms of *emancipatio*. The Emperor Anastasius introduced *emancipatio per rescriptum principis* when the son was absent; Justinian sanctioned this form as a general one and created moreover the form of *emancipatio* by simple declaration of the father before the magistrate.

Ancient sources: Gaius, *Inst.* 1. 132; *Inst. Inst.* 1. 12; *Dig.* 1. 7; *Col. S.* 48 (49). Modern literature: P. Morand, *La Simple famille paternelle* (1910). Cf. the republication of the Latin documents by P. M. Meyer, *Juristische Papyri* (1920) no. 9; P. Bonfante, *Corso di diritto romano* 1 (1925), 65 ff. A. B.

EMBATERION. The ἐμβάτηριον was properly a marching-tune (Polyb. 4. 20. 12). Hence it was also a marching-song, such as the Spartans sang when under arms (Ath. 630 f.; schol. Dion. Thrax 450. 27), like the anapaests attributed to Tyrtaeus (*Carm. Pop.* 18-19; cf. Dio Chrys. 2. 59).

EMBLEMA, see MORALE.

EMBOLIMON, *see* AGATHON, TRAGEDY.

EMMELEIA, *see* DANCING.

EMPEDOCLES (c. 493–c. 433 B.C.; 444–441, his *floruit* ap. Diog. Laert. 8. 74, is too late), son of Meton and grandson of the Empedocles who won the horse-race at Olympia in 496, belonged to the aristocracy of Acragas in Sicily. Combining the rôles of philosopher, scientist, poet, orator, and statesman with those of mystagogue, miracle-worker, healer, and claimant to divine honours, he acquired legendary fame. Tradition associates him with Pythagoreans, and Theophrastus (ap. D.L. 8. 55) calls him a follower and imitator of Parmenides. He championed democracy at Acragas after 472, declined an offer of the kingship, was later exiled and fled to the Peloponnese, where he recited his *Purifications* at Olympia. He visited Thuri shortly after its foundation (Apollod. ap. D.L. 8. 52). The place and manner of his death, about which there are conflicting stories, are unknown. He died aged 60 (Aristotle ap. D.L. 8. 52; 74).

2. **WORKS**: two hexameter poems of considerable poetic merit (totalling 5,000 verses), (1) *On Nature* (*Περὶ φύσεως*), (2) *Purifications* (*Καθαρμοί*). About 350 verses of (1) and 100 of (2) are extant. Other writings are probably wrongly ascribed.

3. Empedocles' philosophy is the first pluralistic answer to Parmenides. Accepting the Eleatic contention that real being is permanent, he denies its unity and immobility. The All is a spherical *plenum*: within it four ultimate kinds or 'roots' (*ρίζωματα*), fire, air, water, and earth—to which E. assigns divine names—mingle and separate under the contrary impulses of Love (*Φιλία*) and Strife (*Νέκος*), pictured as mobile fluids, to cause the arising and perishing of 'mortal things'. Generation and decay are nothing save the compounding (in fixed ratios) and dissolution of eternally unchanging 'elements'. E. imagines a World-cycle in which Love, the unifier of unlikes, and Strife, which divides and so joins like to like, alternately predominate. The four stages are: (i) Love controlling the Sphere, with the elements wholly mingled and Strife enveloping it on the outside; (ii) Strife passing in and Love going out; (iii) Strife victorious and the elements completely separated; (iv) Love returning and Strife withdrawing. Our world (cf. Aristotle, *Gen. Corr.* 334^a6; *Cael.* 301^a14) falls in period (ii): sexual generation has succeeded a phase of 'whole-natured forms' (fr. 62). A corresponding world occurs in (iv), where union in haphazard wise of limbs and organs, originating separately, produces monsters (frs. 57–61).

4. Empedocles' cosmology, described by the doxographers, begins with the separating off of the elements, first of all air and fire. His obscure astronomy mingles penetration with naivety. Two hemispheres, a bright and a dark, revolving round the spherical earth, produce day and night. The sun is the rays of the diurnal hemisphere focused back from the earth's surface. More significant are his biological theories of pores and 'effluences' and of vision, later adapted by Plato and Aristotle. He explains sense-perception on the principles of symmetry and 'like perceives like'. The blood round the heart is the organ of thought.

5. The *Purifications*, *prima facie* a complete contrast to the poem *On Nature*, shows E. in close relationship with the Orphic tradition in Acragas (cf. Pindar, *Ol.* 2) and raises the problem of reconciling its doctrine of transmigration with the physical teaching. But the theological and mystical flavour of the cosmological poem, and the remarkable parallels with the religious (exhibited by Cornford and Kranz), point to a possible vindication of the unity and consistency of his thought.

6. Empedocles' theory of matter is a step on the road to Atomism; and Aristotle, after criticism, incorporates

it in his own philosophy. E. was, through his disciple Gorgias, the parent of Sicilian rhetoric, and Galen calls him the founder of the Sicilian medical school. His importance in Greek thought is far-reaching.

EMPHYTEUSIS. States and municipalities used to lease deserted land for cultivation at a small annual rent, *vectigal* (hence the land was called *ager vectigalis*), for a long period (hundred years) or in perpetuity. The legal position of the tenant was not much inferior to ownership: his rights were transferable by alienation or succession and enjoyed in a certain measure the same protection as ownership. An analogous practice based on similar conditions, but for much shorter terms and stronger accentuation of the owner's rights, was applied under the late Empire to imperial domains in the provinces and, later, to great private estates. From the fusion of the two institutions (the second of which was called *ius emphyteuticarium* from Greek *ἐμφύτευσις*) arose the *emphyteusis* invented and precisely defined by Justinian (*Cod.* 4. 66. 2–4). It was a peculiar contract, being neither a mere lease nor a purchase, which was also applied to ecclesiastical and private estates. When the holder was in arrears with the rent for three years the owner could revoke the *ius emphyteuticarium*, though the contract was valid in perpetuity. The land also returned to the owner if the holder allowed it to deteriorate or failed to pay his dues to the State.

EMPORIAE (nowadays *Ampurias*), a colonial foundation of Massilia situated on the coast in north-eastern Catalonia (about 75 miles north-east of Barcelona). A tradition of unfriendly relations with the native Indigetes is related by Livy. Towards Rome Emporiae displayed an unwavering loyalty. It was the starting-point of Roman military operations in 218, in 210, in 197 B.C., and was Pompey's base against Sertorius. Caesar settled some veterans in Emporiae after the civil wars and apparently gave to the citizens Roman citizenship. Excavations (reported in *Anuari, Institut d'estudis Catalans*) have uncovered the remains of a Roman military camp, breakwater, wall, pagan temple, Christian chapel, and coins (pre-Roman to Augustus).

P. Bosch Gimpera, *Emporion* (1929).

J. J. Van N.

EMPOROS, *see* COMMERCE, paras. 2 and 11.

EMPUSA, a Greek boggy-woman, appearing in fantastic forms (see *Ar. Ran.* 288 ff., the scholiast there, and the lexicographers s.v.). Later demonology took her more seriously: Philostratus (*VA* 2. 4) recommends abusing her if met, whereupon she will flee squeaking; she is an amorous fiend, like a Lamia, who will sooner or later eat her human lover (4. 25); Apollonius rescues a young man from her. H. J. R.

EMPYROMANCY, *see* DIVINATION, para. 6.

ENA, SEXTILIUS, a Spaniard from Corduba, who wrote narrative verse on events of the Augustan period (*Sen. Suas.* 6. 27).

See Bachrens, *FPR*; Morel, *FPL*.

ENCAUSTIC, the technique of painting on stone or wood with heated wax as a medium for applying colours (Plin. *HN* 35. 149). Eneastic decoration of architecture and ships preceded its use for pictures. Statues were coloured encaustically, which explains the statement that the technique was perfected by Praxiteles (q.v.); Praxiteles particularly liked those of his statues which were painted by Nicias (q.v. 2). The chief encaustic painters in Pliny's list are Polygnotus, Pamphilus, Pausias (qq.v.), Aristides (q.v. 2), and Nicias. The majority of the preserved mummy portraits (first to fourth century A.D.) are painted in encaustic on wood and show the combined use of brush and spatula for applying colours.

ENCOMIOLOGICUS, see **METRE** (GREEK) III (15).

ENCOMIUM (ἐγκώμιον, from κῶμος, 'revel'), originally applied by Pindar (q.v.) to the songs with which a victor was escorted home from an athletic contest; hence, any *laudatory composition*, whether in verse or prose. The prose form may be a serious study of a real person, e.g. the *Euagoras* of Isocrates, a sincere appreciation of the life and character of the king of Salamis; but the term more usually connotes a type of sophistical exercise in prose, often dealing with the virtues of some legendary character. We possess an *Eneomium of Helen*, attributed to Gorgias, though its authenticity is very doubtful; and the lost works of Gorgias' pupil Alcidas, 'The Praise of Death' and 'The Praise of Nais', may be put in the same class. The best known *encomia* are those of Isocrates—the *Busiris* and the *Helen*; but these are frankly critical exercises, the former addressed to Polyerates, who had written on the same theme, the latter an answer to the *Helen* of Gorgias. Isocrates first points out the faults into which the author has fallen, and then shows how he himself would have treated the subjects. Polyerates had also written an *Eneomium on Mice*; Isocrates speaks scornfully of those who write *encomia* of bumblebees and salt. In a later age Lucian, in addition to a semi-serious essay, in dialogue form, on Demosthenes, let his fancy play with an *Eneomium of the House-fly*. J. F. D.

ENCTESIS. Ἐγκτήσις, ἐμπασις, and related words, commonly further defined by the addition of γῆς καὶ οἰκίας, are used to describe the right to own real property within a State. Since this right normally belonged only to citizens, it became the practice to make special grants of *enctesis* to foreigners, generally together with other rights and honours such as *proxenia* and even *isopoliteia*. Examples and formulas are given by W. Larfeld, *Handbuch der griechischen Epigraphik* (1902-7), i. 520 ff.; ii. 794 f.

J. A. O. L.

ENCYCLIA, see **FINANCE**, GREEK, para. 6.

ENCYCLOPAEDIC LEARNING. In Greece the Sophists were the first who claimed to impart to pupils all the knowledge they might want in daily life. We are especially told of Hippias of Elis (Pl. *Hp. Mi.* 368b; Cic. *De Or.* 3. 127) that he mastered all the subjects of instruction (τέχναι), later on called by Aristotle (*Pol.* 1337^b15) ἀλευθέραι ἐπιστήμαι, or the branches of knowledge requisite for a freeman. Among them were: astronomy, geometry, arithmetic, music, and grammar. When Quintilian (*Inst.* 1. 10. 1) speaks of 'orbis ille doctrinae quem Graeci ἐγκύκλιον παιδείαν vocant', he means the ordinary course of instruction for a pupil before taking up his special subject of study. Notwithstanding the value the Greeks attached to encyclopaedic knowledge, they never got so far as to compose an encyclopaedia.

2. It was reserved for the practical-minded Romans to lay down in a compilation the results attained by the

scientific researches of the Greeks. Shortly after 184 B.C. M. Porcius Cato wrote a work for the benefit of his son on medical science, agriculture, and rhetoric, perhaps also on military science and jurisprudence.

3. Much more important was Varro's encyclopaedia, the *Disciplinae* in nine books on (i) *grammatica*, (ii) *dialectica*, (iii) *rhetorica*, (iv) *geometria*, (v) *arithmetica*, (vi) *astrologia*, (vii) *musica*, (viii) *medicina*, (ix) *architectura*. The first seven books formed the foundations for the so-called seven liberal arts, which as *trivium* (grammar, dialectic, rhetoric) and as *quadrivium* (geometry, arithmetic, astronomy, and music) were still practised in the Middle Ages.

4. During the reign of Tiberius, A. Cornelius Celsus (q.v. 2) composed an encyclopaedia named *Artes* probably containing the subjects agriculture, medicine, military science, rhetoric. Of these only the *libri medicinae* have come down to us. Pliny's *Naturalis Historia* (A.D. 77) is an encyclopaedia of nature and art. C. Suetonius Tranquillus' *Prata* was rather a collection of 'uaria et miscella et quasi confusanea doctrina' (Gellius, *Prac.* 5) than a real encyclopaedia.

5. In the fifth century the *artes liberales* were once more treated, by Martianus (q.v.) Capella between 410 and 439) in his bizarre work, *De Nuptiis Philologiae et Mercurii*. This encyclopaedia comprises, however, only the first seven *artes* dealt with by Varro. Neither is the book a strictly scientific manual, as Martianus dishes up his only half-understood learning borrowed from various sources in the shape of a Menippean satire, i.e. in prose alternated with poetry. The wedding of Mercury with Philology is the background that serves as a setting to the whole.

6. Anicius Manlius Severinus Boethius (q.v., c. 480-524) was so far interested in encyclopaedic learning that he made arithmetic, music, geometry, and astronomy the foundation of his purely philosophical works laid down in four text-books.

7. In the sixth century it was Flavius Magnus Aurelius Cassiodorus (q.v.) Senator who wanted to give the monks of his monastery 'Vivarium' a summary of the worldly sciences in his *Institutiones*. Therefore he laid down in seven chapters the seven liberal arts.

8. Finally mention must be made of the *Etymologiae* or *Origines* by Isidorus (q.v.) of Seville (c. 570-636), an encyclopaedia which, starting from etymology, treated everything briefly that seemed to him worth knowing. When at the end of the seventh century civilization on the Continent began to decline more and more, the monasteries of England offered a refuge for the study of the *artes* (Beda and Alcuin).

M. Guggenheim, *Die Stellung der liberalen Künste oder encyclopaedischen Wissenschaften im Altertum* (1893); E. Norden, *Die antike Kunstprosa* ii (1909), 670; *Plü* Suppl. vi. 1256.

P. J. E.

ENDELECHTIUS, Christian rhetorician and friend of Paulinus Nolensis (c. A.D. 395), probably identical with 'Severus Sanetus id est Endeleichus', in Pithoeus' heading (1596) of a pleasant idyll *De moribus boum* in thirty-three lesser asclepiadean strophes (Riese's *Anthologia* no. 893). The poem, a dialogue between cowherds, recommends Christianity as an efficacious protection from cattle-plague.

O. S.

ENDOWMENTS can be divided into two groups, those given to State institutions and public corporations, and the private ones. The first group was called *epidoteis* in Greece, if the givers were citizens, and was the only one permitted in Roman law. The *epidoteis*, known since the Peloponnesian War, and an important factor in town finances, were given in money or in kind (especially in corn). There was a difference between 'gifts' and *epidoteis* in Athens; the purpose of the *epidoteis* (cancellation of debts, war expenses, public buildings and roads,

libraries, foundation of schools and offices, corn provision, public festivals, distribution of food, etc.) and the terms on which they were to be collected, had to be defined in a published decree.

The private endowments had very different purposes. We hear of donations to temples and synagogues, sacrifices, processions, the making of statues of gods, festivals for kings and Roman emperors, sacrifices for a dead person or care for his grave, donations and legacies to gymnasia, sports festivals, and clubs. The gifts were often in real estate (land, houses, and even villages). If the donation was intended to last for a long period or forever, an administrative body had to be appointed and rules laid down how a given capital should be invested and how its interest should be applied.

Many precautionary measures against betrayal of trust were provided (oaths, witnesses, State control, fines and punishment, legal actions, curses, blessings, disavowal of the endowment or its transfer to another body, etc.). Several hundreds of such endowments are known to us, a symbol of the public generosity of the ancients. The economic crisis of the third century A.D. marked the approximate end of these general endowments, which were superseded by donations to the Christian Church. See FINANCE, GREEK AND HELLENISTIC.

O. Broneer, *Hesperia* viii (1939), 181 f.; B. Laum, *Stiftungen in der griechischen und römischen Antike* i, ii (1914); A. Kuenzi, *Epidois* (1923). H. Volkmann, *Neue Jahrb. f. Antike* (1939), 3 f. F. M. H.

ENDYMION (*Ἐνδυμίων*), in mythology, a remarkably beautiful young man, either king of Elis (Apollod. i. 56 and others) or a Carian (Aristophanes ap. Hesych., s.v. *Ἐνδυμίων*); his grave was shown on Latmos (Hesych. *ibid.*, Paus. 5. i. 5), or at Elis (*ibid.*). Of several tales told of him (see v. Sybel in Roscher's *Lexikon*, s.v.) the most celebrated is that he was loved by the Moon. In the Elean version (Paus. *ibid.* 4) she bore him fifty daughters, evidently the fifty months of an Olympiad; usually (as Apollod., loc. cit.), he sleeps everlastingly, either because Zeus granted it to him as a boon or for some other reason.

H. J. R.

ENGYESIS, see MARRIAGE, LAW OF.

ENIPEUS (*Ἐνιπείος*), god of a river (in Thessaly, or Elis, schol. *Od.* 11. 238, cf. Strabo 8. 3. 32), loved by Tyro, daughter of Salmoneus (q.v.). As she wandered beside it, Poseidon took the form of the river-god and possessed her, making a wave curve over them to hide them. She bore Pelias and Neleus.

H. J. R.

ENJAMBEMENT, see METRE, GREEK, I.

ENNIANISTA, 'an enthusiast for Ennius', a title claimed by a reader (*ἀναγνώστης*) who gave public recitations clamorously applauded in the theatre at Puteoli from Ennius' *Annales*. The incident, recorded by Gellius (18. 5), illustrates archaizing taste in the second century A.D.

J. W. D.

ENNIUS, QUINTUS (239-169 B.C.), 'father of Roman poetry', was born at Rudiae in Calabria. Educated in Greek culture, he learned to speak Latin, Greek, and Oscan, became a centurion in the Roman army, served in Sardinia (204), and was brought by Cato (whom he taught Greek literature) to Rome, where he lived frugally on the Aventine, first by teaching Greek. Soon he was writing poetry, mostly dramatic, and became a friend of enlightened and influential Romans, especially Scipio Africanus and M. Fulvius Nobilior and his son Quintus. E. accompanied Marcus on his Aetolian campaign (189) and described it in the play *Ambracia*, being given Roman citizenship in 184 through Quintus. Acquaintance with the poets Livius, Naevius, and Plautus is not apparent, but he knew Caccilius Statius, while Pacuvius was his nephew. In 169, still poor, still producing plays, he

died of gout. E. was of a convivial nature, but his seventy years indicate no drunkard. Surviving fragments include: (i) about 550 lines from *Annales*—eighteen books of an epic which established the Greek hexameter in Latin, and described Roman history to 171 B.C. in often uncouth, often ruggedly magnificent, verse, following Homer in inspiration, verbal and descriptive details, and use of similes, but making full play with alliteration, assonance, and the resonance of Latin (see EPIC POETRY, LATIN). (ii) About 400 lines from at least twenty tragedies with Greek subjects and models (those asterisked being based on Euripides): *Achilles* from Aristarchus, *Ajax*, *Alcmeo*, *Alexander**, *Andromacha** (not from the extant *Ἀνδρομάχη*), *Athamas*, *Cresphontes*, *Erechtheus**, *Eumenides* based on Aeschylus' extant play, *Hectoris Lytra* (contaminated from an Aeschylean trilogy?), *Hecuba** (Euripides' extant play), *Iphigenia** (Euripides' extant *Ἴ. ἐν Αἰλίδι*), *Medea** (Euripides' extant play and his lost *Μ. ἐν Αἰγεί*), *Melanippe** (*ἡ σοφὴ*), *Nemea*, *Phoenix*, *Telamo*, *Telephus**, *Thyestes*. E. freely translated, compressed, augmented, and adapted. (iii) Two *fabulae praetextatae*—*Ambracia* (see above), *Sabinae* (on the Rape of the Sabines). (iv) Lines from comedies. (v) Thirty-one lines from four or six books of *Satires* in various metres, including Greek fables and criticism of morals and politics. (vi) Hexameters and *septenarii* from *Scipio*, on Africanus' victory over Hannibal (202 B.C.). (vii) Some *Epigrams* (epitaphs). (viii) Lines (sotades) from *Sotas*, translated apparently from the coarse poet Sotades (3rd c. B.C.). (ix) Three lines from *Protrepticum* (*Praecepta*?) : Greek model. (x) Eleven lines of *Hedypagetica* ('Delikatessen'), adapted from Archestratus, on edible sea-fish. (xi) Fourteen lines from a didactic poem *Epicharmus* on nature and the four elements. (xii) *Euhemerus* or *Sacra Historia* in *septenarii* (summarized by Lactantius in prose), rationalizing, after Euhemerus, old Greek mythology; chiefly about Jupiter. E. was revered by all literary Romans, as e.g. Cicero and Quintilian show. His epic influenced Lucilius and, still more, Virgil. See ARCHAISM; DIDACTIC POETRY, LATIN; DRAMA, para. 4.

Fragments: J. Vahlen, *Ennianae Poesis Reliquiae*² (1928); E. H. Warmington, *Remains of Old Latin* i (Loeb, with translation); Ethel M. Stuart, *The Annals of Q.E.* (1925); O. Ribbeck, *Scenicae Romanorum Poesis Fragmenta*² (3rd ed. Teubner). Cf. Ribbeck, *Die römische Tragödie* (1875); E. Norden, *Ennius u. Vergilius*. E. H. W.

ENNODIUS, MAGNUS FELIX (A.D. 473/4-521), of Gaul, Bishop of Pavia, author of a biography of his predecessor Epiphanius, a panegyric of Theodoric (both works of historical importance), letters, model speeches, miscellaneous poems (sacred and secular), and other writings. Preoccupation with form dominates his work.

Editions: Hartel, *CSEL* (1882); Vogel, *MGH* (1885). A. H.-W.

ENOPLION, see METRE, GREEK, III (6).

ENYO, Greek war goddess, see BELLONA. Also one of the *Graiae* (q.v.).

EOIAI or **EHOIAI**, see EPIC POETRY, GREEK, para. 4, and HESIOD.

EOS (*Ἥως*, *Ἔως*, *Aurora*), the dawn-goddess, a figure of mythology rather than cult. She is daughter of Hyperion and Thea (qq.v., Hesiod, *Theog.* 372); she drives over the sky in a chariot and pair (*Od.* 23. 246), the horses being Lampos and Phaethon, i.e. Shiner and Bright. In other words, she is an important luminary, but less so than the Sun with his four-horse car. Her stock epithets, especially in Homer, are *ροδοδάκτυλος* (rosy-fingered) and *κροκόπεπλος* (saffron-robed), with obvious reference to the colour of the sky at dawn.

For some unknown reason, she is imagined as very amorous; an aetiological myth (Apollod. i. 27) attributes

this to the jealousy of Aphrodite, because Eos had been Arcs' mistress. Hence most of the stories about her consist of kidnappings of handsome men to live with her (? a euphemism for sudden and mysterious death, see E. Rohde, *Psyche*, index under 'Entrückung'). The oldest of these lovers, so far as our documents go, is Tithonus; she leaves his bed to shine (*Od.* 5. 1). In *Hymn. Hom. Ven.* 218 ff. she asks Zeus to make him immortal, but forgets to ask immortal youth for him; so at last he becomes helpless with old age although he talks perpetually, and she shuts him up in a bedchamber. An old, perhaps original form of the story (see J. Th. Kakridis in *Wien. Stud.* xlviii. 25-38), is that in Hellanicus (fr. 140 Jacoby), that he became a cicada, which chirps ceaselessly. Memnon (q.v. 1), was their son. A quite obscure lover is Clitus, a cousin of Amphiarus (q.v., *Od.* 15. 250). Cephalus (q.v.) is much better known; in Ovid, *Met.* 7. 711 ff., Hyginus, *Fab.* 189. 2-3, it is Eos who suggests to him that he should try Procris' constancy. In Hyginus also (*ibid.* 5 ff.) Artemis gives Procris the means to be revenged on Cephalus. This opposition between the amorous and the virginal goddess might be suggested by *Od.* 5. 121 ff.; there Eos makes Orion (q.v.), her lover, and the jealousy of the gods finds expression in Artemis killing him with her arrows, an unusual detail, for she regularly kills women, not men.

In art, Eos is a common and picturesque figure, hence her occurrence in modern paintings also. H. J. R.

EPAMINONDAS (d. 362 B.C.; date of birth uncertain) was a pupil of Lysis the Pythagorean, but his early career is otherwise in doubt. Though he co-operated actively in the restoration of Theban power (379-371 B.C.), his individual part is not distinguishable till 371, when he was Boeotarch for the first time. While representing Thebes at the peace negotiations he refused to allow the Boeotian cities to be separately sworn, and consequently Agesilaus with the concurrence of Athens excluded Thebes from the treaty. Epaminondas was one of the commanders who met the invading Spartan army at Leuctra. Here he introduced the variant of a slanting attack by the left wing, which had been strengthened to the depth of fifty men (*δοξή φάλαγγ*). The crushing defeat of the Spartan army which followed made Epaminondas famous. More than a year later he invaded the Peloponnese (winter 370-369) to help the Arcadians to throw off Spartan control. When this was achieved without fighting, Epaminondas made the first recorded invasion of the Eurotas valley. He pressed home the moral advantage of this operation by establishing Messenian independence. His later invasions of the Peloponnese (369 and 367) had less effect. In 364 he decided to challenge the Athenian supremacy at sea, and led a fleet as far as Byzantium. But when war broke out again in Arcadia he commanded the Boeotians, and after a daring attempt to seize Sparta by surprise, he won an inconclusive victory at Mantinea, where he died of wounds.

The nobility of Epaminondas' character greatly impressed tradition. His political creations, independent Messenia and Arcadia, survived with somewhat different consequences than he had intended. His new strategy ended the military supremacy of Sparta and led to the innovations of Philip II and Alexander.

Plutarch's *Life* (as excerpted by Paus. 9. 13 ff.); H. Swoboda, *Plut.* s.v. 'Epaminondas'. H. W. F.

EPAPHRODITUS (1), Nero's freedman and secretary, helped him to unmask the Pisonian conspiracy and accompanied him in his final flight. He was again secretary (*a libellus*) of Domitian, by whom he was killed (A.D. 95), apparently because he had helped Nero to commit suicide. Epictetus (q.v.) was his slave. He is probably

not the man to whom Flavius Josephus dedicated his *contra Apionem* and *Jewish Antiquities*.

Stein, *PIV* v. 2710; R. Laqueur, *Der jüdische Historiker Flavius Josephus* (1920), 23; L. A. Constans, *Mélanges d'arch.* 1914, 383. A. M.

EPAPHRODITUS (2) of Chaeronea (1st c. A.D.) in his youth was a slave of the Alexandrian scholar Archias, who became his teacher. After obtaining his freedom from the governor of Egypt, M. Mettius, he taught at Rome and acquired a large library. He died in the reign of Nerva at the age of seventy-five.

WORKS: Commentaries on Homer's *Iliad* and *Odyssey* (Steph. Byz. s.v. *Ἀπαφρόδιτος*, etc.; *EM* 165. 3, etc.), which dealt with etymology, grammar, and interpretation. Commentaries on Hesiod's *Scutum* (*Etym. Gud.* 36. 13) and Callimachus' *Actia* (schol. Aesch. *Eum.* 2). *Ἀλέξεις*, probably an etymological work (schol. Ar. *Vesp.* 352). *Περὶ στοιχείων* (schol. Theoc. 1. 117). J. F. L.

EPEISODIA, see TRAGEDY, para. 14.

EPEIUS (*Ἐπειός*), in mythology, (1) son and successor (as king of Elis) of Endymion (q.v.; Paus. 5. 1. 4). (2) Maker, with the help of Athena, of the Wooden Horse (*Od.* 8. 493). He was son of Panopeus, a poor warrior but an excellent boxer (*Il.* 23. 664 ff.); casts the weight very badly (*ibid.* 839-40). In Stesichorus (*Iliu Persis*, fr. 1 Würthcim; Athenaeus, 457a) he is water-carrier to Agamemnon and Menelaus, and Athena pities his hard toil and (presumably) inspires him. This may be local tradition or Stesichorus' invention. H. J. R.

EPHEBI (*ἑφῆβοι*), meant in general youths who had reached the age of puberty. But in the legal and technical sense it had a different meaning. At Athens a youth who had reached the age of 18 was known as an *ephebeus*. He now spent one year in military training and a further year doing garrison duty under the supervision of the State. By the third century B.C., as the number of *ephebi* fell, the period of training was reduced to one year. Six trainers were appointed by the State to conduct his physical and military and naval exercises, and his morals were supervised by a publicly appointed board. At the end of his training he was formally presented with a spear and a shield, and swore on oath that he would not bring shame on his weapons (Pollux 8. 10. 5).

His duties included attendance at public functions like feasts, processions, and the meetings of the Ecclesia, and sometimes intellectual studies. During his training he enjoyed immunity from taxes and could not be prosecuted. He wore his hair short and assumed a broad-brimmed hat (*πέτρανος*) and short cloak (*χλαμύς*).

From the fourth century *ephebeia* spread through the Greek world, especially in Asia Minor; the inscriptions suggest that the length of service was generally one year, (e.g. *CIG* 3665—Cyzicus). During the Roman Empire *ephebeia* passed out of State control, though its functions continued to be of a public character. Its character became athletic, cultural, and religious rather than military, and admission depended on selection (*ἐγκρίσις*) by the existing members.

When *ephebeia* was instituted in Athens is a vexed question. A clear use of the term in its legal sense is not found before the fourth century. Xenophon's use (*Cyr.* 1. 2. 4, etc.) is probably general and does not refer to Athens. Nevertheless many scholars believe that *ephebeia* was instituted at Athens at the beginning of the fifth century, if not earlier. T. J. H.

EPHEMERIDES (*ἡμερησίαι*), diaries, a term applied particularly to the Royal Journal of Alexander the Great, kept by Eumenes (q.v. 3) of Cardia and his assistant Diodorus of Erythrae. Its character has been deduced mainly from the internal evidence of a few surviving

citations. It was candid, detailed, and catholic, recording, besides the personal affairs of Alexander, military and administrative memoranda. Though probably intended mainly for administrative purposes, it was almost certainly the ultimate basis of the so-called 'official tradition' concerning Alexander (q.v. 3, Bibliography, Ancient Sources), which survives in the work of Arrian (q.v.). The record began probably not later than 336 B.C.; it may even have been inherited from Philip. Its publication after Alexander's death is thought to have been in abridged form only; but this view is not supported by the citation (if genuine) of Philinus (Plut. *Mor.* 623e).

EPHESIA GRAMMATA, formulae used in learned magic, see Eust. *Od.* 1864, 15. Cf. *MAGIC*, 6.

EPHESUS, a city at the mouth of the Caÿster on the west coast of Asia Minor, which rivalled and finally displaced Miletus, and owing to the silting up of both harbours has itself been displaced by Smyrna as the sea-port and emporium of the trade of the Maeander valley and of the great trade route which traverses it. Ephesus was founded by Ionian colonists under the leadership of Androclus, son of the Athenian king Codrus, a couple of miles from the holy place of the Anatolian goddess called Artemis by the Greeks, close to which was the old Anatolian township which was merged in the Greek city and gave it the character of a Graeco-Oriental community. Ephesus maintained itself against the Cimmerians and also against the Lydian kingdom until its capture by Croesus, who contributed to the construction of the first temple of Artemis and dedicated the columns fragments of which are preserved in the British Museum. Under the Persians Ephesus shared the fortunes of the other seaboard cities; it was a member of the Delian Confederacy, but revolted c. 415 B.C. and presently sided with Sparta. The temple was burned down on the night of the birth of Alexander the Great, under whose control the city passed in 334. The city was replanned by Lysimachus c. 286 and passed with the kingdom of Attalus III to the Romans in 133. It had meantime grown to a size and importance rivalled in the East only by Alexandria in Egypt and Antioch in Syria, and under the Roman Empire it was the real (though not the titular) capital of the province Asia, and the residence of the proconsul. At this time, as earlier, the Temple treasury acted as a bank, in which deposits were made by cities, kings, and private persons. Acts xix gives a vivid picture of conditions in Ephesus in the middle of the first century A.D. In the provincial reorganization of Diocletian, Ephesus became the metropolis of the reduced province of Asia. The temple and part of the city have been excavated.

Jones, *Eastern Cities* (see Index).

EPHETAI (ἐφέται) were a commission of the Areopagus (q.v.), 51 in number, who were sent to sit in judgement on minor cases of homicide in the courts of the Palladium and the Delphinium, and at Phreatto. Before the State took cognizance of murder, a homicide either fled the country or took refuge in a sanctuary where he could in safety arrange to make compensation to the relatives of his victim. In later times homicides who felt that they had a reasonable excuse for their acts fled to the asylum of a temple, in whose precinct the trial was held. The common view is that regular dicasts were substituted for *ephetai* shortly after the revision of Draco's laws in 409-408 B.C. But a more attractive view is that the change was made by Pericles in the middle of the fifth century when he completed the reform of the Areopagus begun

by Ephialtes and himself. The name *ephetai* was retained long after they had become dicasts, even in such official documents as Draco's revised homicide code.

Gertrude Smith, 'Dicasts in Ephetic Courts', *CPhil.* 1924, 353 ff.; Bonner and Smith, *Administration of Justice* i (1930), 97 ff.

EP(H)IALTES (Ἐφιδάλτης, Ἐπ-), in mythology, (1) a giant; (2) one of the Aloadae (q.v.); also (3) a demon of nightmare. See Rose, *Handbook Gk. Myth.* 2 57; 60 f.

EPHIALTES (4) (d. 462-461 B.C.), Athenian statesman. He took part apparently in the campaign of Eurymedon under Cimon (q.v.), 468 or 467 B.C. He was a fierce enemy of the nobles, personally incorruptible, and attacked many of them for their administration. He opposed the sending of help to Sparta in 462 during the helot revolt. With the help of Pericles, now beginning his political career, he carried measures stripping the Areopagus of most of its privileges, 462-1; but so great was the hatred that he had aroused that he was murdered later in the same year.

A. W. G.

EPHIALTES (5), of Trachis, is said to have shown to Xerxes the pass by which the Persians outflanked Leonidas at Thermopylae. The Delphic Amphictions set a price on his head (479 or 478), and the Spartans honoured as a hero another Trachinian who assassinated Ephialtes from personal motives (some ten years later, on his return from Thessaly, where he had taken refuge).

P. T.

EPHIPPIUS (1), Middle Comedy poet, named in the Victors' List immediately before Antiphanes with one victory (*IG* ii². 2325. 145). The twelve known titles include *Βούσιπρις*: the character of the drunken Heracles attracted poets now, as in the days of Old Comedy. Ridicule is frequent (e.g. in *Ναυαγός*, of Plato and his school—a full-length portrait of an elegant Academician). Fr. 5 (how a fish bigger than Crete is prepared by whole States) has an obscure, but very early, reference to Celts or Gauls.

FCG iii. 322 ff.; *CAF* ii. 250 ff.

W. G. W.

EPHIPPIUS (2), an Olynthian hostile to Macedonia, contemporary with Alexander, wrote a pamphlet of malicious gossip which started the legend of Alexander's excessive drinking. See *ALEXANDER* (3), Bibliography, Ancient Sources.

EPHORS (Ἐφοροι, usually derived from ἐφορᾶν, but perhaps to be connected with οὔρος, 'a guardian'). Magistrates of this name existed in several Dorian States (Sparta, Thera, Heraclaea Lucaniae). At Sparta they were five in number, presumably representing the five villages of the Spartan community, elected annually by the citizens, and the senior ephor gave his name to the year. Combining executive, judicial, and disciplinary powers, they profited by the scarcity of written laws, and by the fifth century B.C. they dominated the State (subject only to their rendering account to their successors). Their powers over the monarchy rested on the tradition that when the kings were at variance the ephors should decide, and on a monthly exchange of oaths with the kings, by which in return for the king's swearing to observe the laws, the ephors promised them their support. They had a general control over each king's life and conduct, could prosecute them before the Gerousia, and enforce their appearance before their own board at the third summons. Two ephors accompanied the king on campaign to watch his conduct. They negotiated with representatives of other States, and convoked and presided over the Gerousia and Apella. In the event of war they gave orders for mobilization and dispatch of the army.

Besides possessing general powers of civil jurisdiction they could depose and prosecute other magistrates. In trials before the Gerousia they both presided and executed the sentences. In disciplinary matters they enforced the Lycurgan *kósmos* for the citizens, including supervision of the State education; they dealt more arbitrarily with the *periocci*, and even more so with helots, through the *Krypteia* (q.v.). Abolished by Cleomenes III (c. 227 B.C.), they were revived later and survived until at least A.D. 200.

The origin of the ephorate is much disputed. Ancient writers variously ascribed it to Lycurgus, to King Theopompus (c. 750 B.C.), or even to a later founder. It may have been a primitive Dorian institution which was reorganized by Lycurgus (i.e. at the *synoecismus* of Sparta) and further strengthened under Theopompus.

A. M. W.

EPHORUS of Cyme (c. 405–330 B.C.), contemporary of Theopompus and a pupil of Isocrates. His various works included a history of Cyme (*Ἐπιχώριος λόγος*), a treatise on style (*Περὶ λέξεως*), and two books (*Περὶ εὐρημάτων*) which aimed at satisfying the demand for popular information on diverse topics characteristic of the period. E.'s importance rests on his universal history (*Ἱστορίαι*) in thirty books. Beginning with the Return of the Heracleidae on the theory that this was the first period of verifiable fact, it reached the siege of Perinthus, 341. Book 30 was added by his son Demophilus to complete the work with an account of the Sacred War. The arrangement was on a subject system (Diod. Sic. 5. 1. 4) merging later into an annalistic framework.

Our knowledge of E. largely depends on the fact that he was the chief source of Diodorus bks. 11–16, whose abridgement follows him very closely (see fr. 191). He consulted numerous authorities, correcting Herodotus by Ctesias, using a strongly biased Athenian source for the Pentecontaetia, perhaps Hellanicus or Androtion, and colouring Thucydides' account of the Peloponnesian War under the influence of fourth-century pamphleteers. He wisely preferred the Oxyrhynchus historian (q.v.) to Xenophon, and consulted Callisthenes and political pamphlets like those of Lysander and Pausanias. Although he failed in criticism of sources and was no military expert, he was, except for Xenophon, the most important historian of the fourth century. His influence lasted well into the Roman Empire. See also HISTORIOGRAPHY, GREEK, para. 4.

EPHYMNION, see METRE.

EPHYRE, see CORINTH.

EPIC, see DIALECTS, GREEK.

EPIC CYCLE, *ἐπικός κύκλος*, a collective name for certain epic poems, neither Homeric nor Hesiodic (cf. schol. Heph. 126. 20), composed by poets who are described as very ancient (Clem. Al. *Strom.* 1. 21. 132. 1), after the Homeric poems between c. 800 and c. 550 B.C., and later collected into a series.

2. A cycle, *κύκλος*, was a collected series either of documents, as the Orphic *κύκλος*, or of information, as the *κύκλοι* of Dionysius *κυκλογράφος*, who collected Homeric and other legends, and of Asclepiades of Tragilus, who compiled legends from tragedies only. The *ἐπικός κύκλος* was a series of epic poems, selected and arranged to make the story of Troy complete, from the union of Ouranos and Ge to the final settlement of the family of Odysseus after his death. The name is not found before the Christian era, and the collection of poems may or may not have been known to the Alexan-

drians. Aristarchus used the adverb *κυκλικῶς*, and Callimachus (*Epigr.* 29. 1) wrote *ἐχθαίρω τὸ ποίημα τὸ κυκλικόν*; but neither need refer to early 'cyclic' epic.

3. The Epic Cycle was extant in the second century A.D., as quotations show, but it was lost probably not long afterwards. Information about it is derived from notices, including inscriptions of Roman date (*EGF*, pp. 3–4) and quotations, and from an epitome of it in the *Chrestomathia* of Proclus (probably a writer of the second century A.D., not the fifth-century Neoplatonist), which is preserved in the *Bibliotheca* of Photius (O.C.T. *Homeri opera*, v. 95–109); Proclus may have depended on an earlier prose epitome, or, more probably, on the actual texts of the poems.

4. According to Proclus, the Epic Cycle included, before the *Iliad* begins, a *Theogonia*, a *Titanomachia*, and the *Cypria*; between the *Iliad* and *Odyssey*, the *Aethiopis*, the *Ilias Parva*, the *Iliu Persis*, and the *Nostoi*; and after the *Odyssey* the *Telegonia*. Also called cyclic are an early *Thebaid* and the later *Thebaid* of Antimachus of Colophon. Apparently, either the Trojan Epic Cycle included poems on the Theban legends, regarded as preliminary to the Trojan story, or there were strictly two cycles, a Theban and a Trojan. Many other epic poems existed, on subjects other than Thebes and Troy, and though they are not known to have been collected into cycles, they could be loosely included under the general conception of cyclic poetry.

5. The text of the Epic Cycle was to some extent fluid. According to available evidence, the *Ilias Parva* and the *Iliu Persis* overlapped and disagreed in details. There was an *Amphiaraus Exelasis*, which may have been the same as the early *Thebais*, or a part of it, as the *Τειχομυχία* is part of the *Iliad* (bk. 12). The *Telegonia* was said to include a complete book by a different poet. Some of the earlier poems were at first attributed to Homer, but from the fifth century, as critical interest increased, they were attributed to other poets, with much difference of opinion, but sometimes on the evidence of local knowledge.

6. There was much in the cyclic epic which was alien from Homer's taste or from his time, especially superstitions and brutalities, probably survivals from a period before Homer, and also wider knowledge of the world, acquired subsequently to him. The poems were composed out of material such as Homer used, but without his freedom in the alteration and adaptation of it. They lacked the Homeric unity and dramatic movement (*Arist. Poet.* 23. 1459^a; cf. cund. *Rh.* 3. 14. 4, 6, 1415^a). But at first the earlier cyclic poems were highly valued and closely followed, as by Sophocles (*Ath.* 7. 277c) and Pindar (schol. *Pind. Ol.* 6. 15; *Nem.* 10. 114, etc.). In the fifth century epic was revived by Panyassis and others, partly in the cyclic tradition. Their work was admired, enthusiastically by some contemporaries, and also by later critics, but sometimes with more reserve (*Suid.* s.v. *Ἠλεοσάβδος*; *Quint. Inst.* 10. 1. 53–4; *Dion. Hal. Vett. Cens.* 2. 3; *Cic. Brut.* 51). From the fourth century, perhaps under the influence of Aristotle, the great superiority of Homer to other epic poets came to be better recognized, and eventually Cyclic Epic was read for ordered information rather than as poetry (*Procl. Epit.*). The word 'cyclic' acquired a disparaging connotation; but that is at least partly due to the banal qualities of prose compilations called *κύκλοι*, and of the learned poets who used them, and not wholly, if at all, to the cyclic epic. But there was certainly a tendency in these poems, shown especially in the *Telegonia*, to exploit exhausted material inartistically. Like the French poets after the great age of the *Chanson de Geste*, the Greek poets fell into a 'manie cyclopée'. But the evidence is not sufficient to justify contradiction of the early Greek opinion that there was merit in some cyclic poems; and at any rate Greek epic continued to be

composed, with little intermission and frequent infusion of new vitality, until the beginning of the Byzantine age.

7. The following is a list of the more important poems in hexameter verse, neither Homeric nor Hesiodic, down to the fifth century B.C.:

THE EPIC CYCLE, THE TROJAN WAR. *Theogonia*, beginning with the marriage of Ouranos and Ge with which the Epic Cycle is said to have started (Phot. *Bibl.* 319 a Bekker); there were probably several poems of this name. *Titanomachia*, by Arctinus or Eumelus (qq.v.), or anonymous (Ath. 7. 277d). *Cypria*, ? eighth century; wrongly attributed to Homer (Hdt. 2. 117); perhaps by Stasinus (q.v.); on the abduction of Helen. *Aethiopis*, eighth century; probably by Arctinus (q.v.); continuation of the *Iliad* to the quarrel for the arms of Achilles. *Ilias Parva*, ? seventh century; probably by Lesches (q.v.); continuing to the reception of the Wooden Horse into Troy. *Iliu Persis*, eighth century; probably by Arctinus (q.v.), continuing to the start of the Achaeans for home. *Nostoi*, ? seventh century; probably by Hegias or Agias of Troezen; on the homeward voyage, including the vengeance of Orestes. *Telegonia*, sixth century; by Eugammon (q.v.); continuation of the *Odyssey* to the death of Odysseus at the hands of Telegonus, and the union of Telegonus with Penelope and of Telemachus with Circe; said to have included the *Thesprotis* of Musaeus (Clem. Al. *Strom.* 6. 2. 25. 2), which may, however, have been an earlier version of the *Telegonia*.

POEMS ON THEBES WHICH MAY OR MAY NOT BELONG TO THE EPIC CYCLE. *Oedipodea*, ? eighth century; attributed to Cinaethon (q.v.); there may have been more than one poem so named. *Thebais*, eighth century; mentioned very early as by Homer (Callinus ap. Paus. 9. 9. 5); otherwise anonymous; much admired; called cyclic (Ath. 11. 465e); there were other poems so named, one by Antimachus (q.v.) of Colophon. *Amphiarai Exelasis*, attributed to Homer (Suid. s.v. "Ομηρος"); possibly identical with, or part of, the *Thebais*. *Epigoni*, ? seventh century; attributed to Homer (Hdt. 4. 32), and to Antimachus of Teos (schol. Ar. *Pax* 1270).

POEMS ON HERACLES. *Heraclea*, *Heracleis*; probably there were several poems so named, attributed to Cinaethon (q.v.) and others, especially Peisander (q.v.) of Cameirus. *Minyas*, on Heracles, Meleager, Thamyris, and others. *Oechaliae Halosis*, attributed to Homer and to Creophylus (Suid. s.v. "Ομηρος"; Strab. 14. 638).

POEMS ON THE ARGONAUTS. *Aegimius*, ? sixth century; attributed to Hesiod and to Cercops (Ath. 11. 503d). *Argonautica*, attributed to Epimenides (Diog. Laert. 1. 111). *Naupactia*, perhaps by Carcinus (q.v.). *Corinthiaca*, by Eumelus (q.v.).

OTHER EARLY EPIC POEMS. *Alcmaeonis*, *Atthis*, *Danais*, *Phocais*, *Phoronis*, *Theseis*.

POEMS OF THE EPIC REVIVAL. *Heraclea*, by Panyassis (q.v.). *Thebais*, by Antimachus of Colophon (q.v.). *Persica*, by Choerilus (q.v. 2) of Samos.

TEXTS: G. Kinkel, *Epicorum Graecorum Fragmenta*, 1877; O.C.T. *Homeri opera*, v. 93-151; F. Dübner, *Asii, Pisandri, Panyasidis, Choerili et Antimachi fragmenta* (1838).

W. F. J. K.

EPIC POETRY, GREEK. The Greek epic must originally have consisted of lays sung by bards in camp, at court, and in public gatherings. Homer depicts Achilles as singing *κλέα ἀνδρῶν* (*Il.* 9. 189), and his sketches of bards in the *Odyssey* show professional poets at work. These poets sing of the recent past and draw

their power from the Muse. This may mean that they improvise, and the probability is that the Greek epic, like other primitive epics, was originally improvised. The poet would learn the traditional formulae of his art and by means of these he would be able to provide the song for which he was asked and to suit its length to the conditions demanded by each occasion when he had to perform. Such lays would vary in length, though pre-Homeric poems must normally have been much shorter than the *Iliad*. For the *Iliad* shows the technique of short lays in the way in which its episodes can be detached from the whole and treated as complete unities in themselves. The bard would learn not merely formulae, but the traditional devices of his craft, such as similes, repeated lines and passages, conventional epithets, stock characters, and the like. Since he composed not to be read but to be heard, he had to concentrate on the essentials of narrative and omit irrelevant and unimportant details. In consequence epic narrative is more loosely knit than the modern novel and can more readily admit inconsistencies real and apparent.

2. Of pre-Homeric epic nothing survives. All that we have is the *Iliad* and the *Odyssey*. These presuppose a long line of predecessors in the stories which they assume their hearers to know, in the characters who are labelled with traditional epithets, in their occasionally inexact use of stock phrases. But Homer's originality may be guessed from the architectural unity which he gives to both his poems, from the life which he breathes into his characters, who are far more than tradition can ever have made them, in his moral sensibility, which is often at war with the more brutal standards of the heroic age which he describes, in the personal tastes and touches which he inserts into his similes. He seems to come at the end of a period of epic art and to sum up in himself all its characteristics. For this reason, no doubt, his works were preserved when his forerunners were forgotten, and for this reason he exerted an incalculable influence on later Greek poetry. Whether his poems were written down early or not does not affect the degree of his influence, which may be seen in all later Greek epic.

3. This influence must have appeared most obviously in the so-called Cyclic poets (see EPIC CYCLE). In the centuries after Homer other poets took up his stories and filled the gaps between the *Iliad* and *Odyssey* or before and after them. The *Cypria* provided a prelude to the *Iliad*, the *Aethiopis* told of the death of Achilles, the *Little Iliad* and the *Sack of Troy* of the events which ended the Trojan War, the *Returns* of the adventures of heroes other than Odysseus on their way home, and the *Telegonia* of the death of Odysseus. The scanty fragments suggest that their style belonged to the same tradition as Homer's, even if it was not directly influenced by him. Where they differed was in composition. Their authors lacked his capacity for building a single poem and fell into detached episodes. For this, and no doubt for their inferior poetic talent, they were forgotten when he was remembered.

4. Outside this Homeric cycle there were other epic cycles of which vague hints have survived. Boeotian legends were told in the *Oedipodea*, *Thebais*, and *Successors*; the *Titanomachia* told of Zeus' war against the Titans; the *Capture of Oechalia* of an episode in the life of Heracles. These poems were shorter than Homer's—the *Oedipodea* had 6,000 lines and the *Thebais* 7,000, and their chief interest is that they preserved ancient stories for later poets, lyric and tragic, to use. Of the same age but not quite of the same kind was the *Corinthiaca* of Eumelus of Corinth. Though this too dealt with the heroic age, it seems to have taken great liberties with tradition and to have falsified it in the interests of Corinthian national pride.

5. The *Theogony* and *Works and Days* of Hesiod are written in the epic metre and language and may possibly

have been influenced by Homer. The first is an attempt to clarify the confused traditions of Greek mythology, the second is a personal document about farming addressed to the poet's unsuccessful brother. Their differences from the Homeric epic are enormous, but they were written not for princes and soldiers but for farmers. They are the product of the mainland, where life was harder than in Ionia, and Hesiod has less belief in the heroic virtues than Homer had. Yet they are epic in their interest in the past, their language, their technique. Moreover, Boeotia seems to have had its own epic tradition, which was more concerned with old stories than these two poems were. For among the other poems attributed to Hesiod the collection known as the *Ehoiai* or *Catalogue of Women* seems to have told a large number of ancient tales. The only complete specimen is the *Shield of Heracles*, which is certainly later than Hesiod. It, and the other fragments, show that Hesiodic epic was more primitive than Homeric; its scope was smaller, its characterization less complete, its language less rich.

6. The Homeric text was preserved by the so-called Homeridae (q.v.) or sons of Homer, whose special task it was to recite it at festivals and public gatherings. Sometimes before beginning his recitation a bard would recite a composition of his own. Such poems, written in the epic manner, were called *προοίμια* or Preludes. They are known to have been composed by Terpander, who brought Homer's works to Sparta, and a collection of them survives in the book of *Homeric Hymns* (T. W. Allen, W. R. Halliday, and E. E. Sikes, 2nd ed., 1936). These poems differ considerably in date: the *Hymn to Demeter* is certainly early, the *Hymn to Pan* may be later than 500 B.C., but the collection shows how well the tradition of Homeric language was preserved and how carefully the poets modelled their own style on Homer's. These Ionian poets seem to have had a better gift for narrative than the Hesiodic school and to have concentrated less on the mere telling of a tale. They show an abundant fancy and a fine appreciation of the imaginative possibilities of their themes.

7. When the recitation of Homer became a fixed part of Athenian life in the sixth century, the composition of epic had almost ceased to be a reality in Greece. The society which produced it had ceased to exist, and its heroic standards had disappeared with the development of the city-state. But poets still attempted it. Some, like Epimenides and Onomacritus, used it as a vehicle for their new ideas about religion; others like Panyassis, and Antimachus continued to tell the old stories. But their failure was known even to them; for Choerilus of Samos complained that the land of the Muses was now divided up and no new chariot was available to those who wished to enter the race (fr. 1). He indeed tried to find subjects for epic in more recent history and wrote about the Persian Wars, but it seems that he met with no great success. These poets realized that they could hardly use the language of Homer, and Antimachus seems to have tried to vary his style with archaic words and neologisms. But if we may judge by what the Alexandrians said of him, he succeeded merely in making himself absurd.

8. At Alexandria the epic revived, but in new conditions. It was now meant to be read, not heard; its poets aimed at precision and delicacy of language and avoided the traditional formulae; its construction was much affected by the contemporary taste for mythology, geography, picturesque scenes, and tender feelings. For their themes they went to the past, though not necessarily always to the heroic past. For while Rhianus wrote about local legends in Thessaly and Elis, his influential *Mezentia* dealt with early Spartan history, or rather invented a whole new set of legends for it which were gravely accepted as fact by Pausanias. The only complete work of this time is the *Argonautica* of Apollonius Rhodius. Though he seems to have made use of Eumelus

and was accused of an attachment to outworn forms, he shows little of the true epic temper in his work, which is full of tender sentiment and elaborate descriptions, while his method of construction really owes more to Alexandrian Idylls than to Homer. In the third century Euphronion also wrote epic. Though he was much admired, he seems to have been a dry and dull writer, interesting more for his learning than for his powers of narrative. Epic was much disparaged by Callimachus, and popular taste seems to have turned against it. For in the later Alexandrian age and the first three centuries A.D. there is no Greek epic of interest known to us.

9. In the fourth and fifth centuries A.D. taste changed, and the epic revived. This movement, which may be regarded as a last manifestation of the pagan spirit in literature, is well known through the works of Quintus Smyrnaeus, Colluthus, and Tryphiodorus. These poets look beyond Alexandria to the early epic, especially to the Homeric cycle, on which they drew generously for their subjects. Quintus picked up the story of the *Iliad* where Homer left it and practically bridged the gap between it and the *Odyssey*. Colluthus wrote a short *Rape of Helen* in a simple style, and Tryphiodorus told again an old story in his *Capture of Troy*. Rather later than these poets are two others who pursue more original paths. Musaeus' *Hero and Leander* owes nothing to Homer either in theme or manner. It is a story of love, told with great force and feeling. The *Dionysiaea* of Nonnus is even more remarkable. In its enormous scope it tells every known adventure of Dionysus, and spares nothing to achieve an emphatic, rhetorical effect. Its language, copious and repetitive, seems to be its author's invention and to forecast a new age in literature.

Text: G. Kinkel, *Epicaeorum Graecorum Fragmenta* (1877), and see under the various authors mentioned. C. M. B.

EPIC POETRY, LATIN. Of the earliest history of the Latin epic little is known. That the native Saturnian metre was adapted for narrative poetry is proved by its employment by Livius Andronicus and Cn. Naevius, but Cato's statement (fr. 118 Peter, *HRRel.*) that heroic lays were sung at Roman banquets 'apud maiores' does not prove the existence of epic poetry before the third century. L. Livius Andronicus (284-204) translated the *Odyssey* into Saturnian verse, and Cn. Naevius (c. 269-199) wrote his *Bellum Punicum* in the same metre. The scanty fragments of both display a rough vigour hampered by an unsuitable medium, and it was not until Q. Ennius (239-169), a Calabrian who obtained Roman citizenship in 184, adopted in his *Annales* the Greek hexameter as his metrical model that the history of the Latin epic really begins. The *Annales*, as the title implies, is a chronicle of the history of Rome in verse from the time of Romulus until the year 181, the first twelve books (down to 196) being published first and the remainder in probably two sections, bks. 13-15 (to 189), and bks. 16-18 just before the death of the author; the history of the First Punic War was treated cursorily as it had formed the main subject of Naevius' epic. Both poets, after the fashion of the Hellenistic epic, attempted to give to an historical record the form of an epic poem; but Ennius, adopting and naturalizing the Greek epic hexameter, with higher poetical gifts and a finer literary sense than his elder contemporary produced a work which, admired and imitated by Virgil, continued to be regarded as a virile and dignified monument of Roman literary achievement. The chronicle in verse retained until the Augustan age its position as the normal form of the Latin epic, though only scanty fragments survive: Hostius, who wrote a *Bellum Histricum*, A. Furius of Antium, M. Furius Bibaculus of Cremona who wrote a poem on Caesar's Gallic War, P. Terentius Varro of Atax (82-37), who, besides a free translation of the *Argonautica* of Apollonius Rhodius, composed a *Bellum Sequanicum*,

are little more than names. Even Cicero attempted the epic. But no attempt seems to have been made until the Augustan age to produce an imaginative poem upon an historical subject which could be described as an epic as distinct from a mere narrative in verse. P. Vergilius Maro (70-19), after writing the *Eclogues* and the *Georgics* turned his attention to the composition of an historical epic, the *Aeneid*, upon which he spent the last ten years of his life, and which he left unfinished. By the choice of Aeneas as the hero of his poem Virgil avoided at once the annalistic form inseparable from the historical narrative and the combination of the panegyric and the epic hardly to be avoided in the treatment of contemporary events; he left his imagination free and he was able to give a form to his subject which would have satisfied Aristotle's definition of the epic. By abandoning the chronology followed by Ennius, which made Romulus the grandson of Aeneas, he found room for the line of Alban kings and was able to treat the whole history and antecedents of Rome as the distant prophecy of a destiny as yet remote and unrealized. A narrative that moved in the heroic age might fitly borrow from Homeric precedent; but Virgil's extensive borrowing from Homer, particularly in the later books of the poems, did not prevent him from drawing as well upon other Greek authors (esp. Apollonius Rhodius) and his Latin predecessors. He enriched the narrative of his hero's wanderings in search of Italy and of his final triumph there by the episode (inspired by the Alexandrian school and the *Argonautica* of Apollonius) of Dido's passion for him in the fourth book, and his *descensus Averni* in the sixth. He puts into his lips the story of the last days of Troy; and the episode of Nisus and Euryalus, the story of Camilla, the tragic figures of Mezentius and Lausus, and of Evander and Pallas, the description of the mustering of the Italian clans, are all proofs of the creative imagination which used a wide poetic heritage for its own purposes. The dramatic quality of his theme is emphasized by the careful insistence upon the reaction to the same circumstances of the contrasted characters of Aeneas and Turnus, and in the episode of Dido. The speeches are carefully (but unobtrusively) composed according to the dictates of rhetorical theory. Virgil succeeds in avoiding the monotony in his predecessors' handling of the hexameter; and by varying the pauses and by careful attention to the contrast and succession of vowel sounds, imparts a musical quality to his verse which no other Latin poet attained. The influence of the scholarship to which Varro had given such an impetus is reflected in Virgil's archaeological interests and particularly in his references to religious ceremonies and ancient customs; and all is put at the service of a lofty patriotism and a deep human sympathy and insight.

2. The latter part of the Augustan age saw a great production of epic poetry on mythological subjects (Ov. *Pont.* 4. 16): Cornelius Severus wrote a *Bellum Siculum* of some merit (Quint. *Inst.* 10. 1. 89), and Albinovanus Pedo wrote a *Theseis* and (apparently) a Roman epic (Sen. *Suas.* 1. 15). In Nero's reign M. Annaeus Lucanus (39-65) wrote his *De bello civili*, an epic in ten books on the civil war between Caesar and Pompey. In the choice of a Roman historical subject Lucan reverts to the pre-Virgilian tradition, but his treatment opens a new chapter in the Latin epic. He not merely abandoned the tradition of the Homeric and Hellenistic epic (followed by Ennius and Virgil) by dispensing with direct supernatural action in his story, but he changed the method of treatment of the human elements. The story was no longer treated objectively and allowed to enforce its own moral but was made the vehicle for the poet's own subjective attitude to the historical events recorded. Upon whatever sources now lost Lucan may have relied (R. Pichon, *Les Sources de Lucain*, 1912) he cannot be acquitted of carelessness and inaccuracy in geographical

and historical matters. In place of a consecutive narrative of events he selects episodes upon which he dwells with a singular force and brilliancy, often spoiled by exaggeration and lack of taste, throwing over the whole the rhetorical *color* to be expected from his Stoic republican sympathies. The divine intervention of the epic tradition is inadequately replaced by the idea of destiny (*fatum, fortuna*) which pervades the poem and by his morbid interest in necromancy. The numerous speeches are embellished by every device of the *controversia* and the *suasoria*, and the same 'pointed', artificial style is used also for the narrative and descriptive passages. Of this style Lucan was a master and used it with such striking effect that Roman classical poetry never after succeeded in shaking off his influence.

3. Under the Flavian dynasty the epic flourished; the Emperor Domitian himself attempted it in youth, as did also, not without success, Silius Italicus (Quint. *Inst.* 10. 1. 90). The work of three epic poets has survived from this period, C. Valerius Flaccus Setinus Balbus (d. c. A.D. 90, Quint. loc. cit.), Silius Italicus (25-101), and P. Papinius Statius (c. 40-c. 96). Of the three Valerius Flaccus has the most genuine poetic gift. Reverting to the mythological epic of the Augustan age, he composed the *Argonautica*, of which eight books survive, following in the main the version of Apollonius Rhodius but with so many transpositions and variations as to make it virtually a different legend. The composition lacks the Virgilian firmness and precision: while Jason is the principal figure, it is not upon his person, but upon the quest of the Golden Fleece that the main interest is centred; and Valerius Flaccus never succeeds, as Virgil does in the case of Aeneas, in making him a genuine character of the heroic age. He is rather a figure of the Hellenistic period, just as his Medea lacks the simplicity and freedom from self-consciousness of the Greek legend. While Valerius keeps the traditional divine machinery, he is clearly influenced by the eschatological preoccupation of the mystery religions and imports it into his picture of the earlier time. He acknowledges by imitation on almost every page the influence of the *Aeneid*; but he cannot borrow either the Virgilian temper or the Virgilian style throughout, and his verse betrays too much the influence of the rhetoric of Lucan at a lower level. Statius, too, in his *Thebais* and his unfinished *Achilleis* chooses subjects from Greek mythology. He endeavours to import into his treatment of the heroic ages a new realism of detail. He is at times not unsuccessful in the attempt to combine descriptions of natural scenery and phenomena with his account of the actions and feelings of his characters and has a lively fancy for realistic details. But his style is so laborious and overloaded, under the combined influence of Alexandrian learning and Roman rhetoric, he is so fond of verbal and phraseological innovation, as to conceal his real poetical merits. While he tries to borrow felicitous phrases from Virgil, he lacks altogether the power to vary the cadence of his line and there are passages of unbearable metrical monotony. In contrast to Statius and Valerius Flaccus, Silius Italicus is in the annalistic tradition. His *Punica* is an attempt in seventeen books at a poetical narrative of the career of Hannibal up to the battle of Zama. His verse, while technically careful, is monotonous; and he tries to diversify his narrative of events, taken mainly from Livy, by imitating every epic device met with in his reading of previous poets. But he is capable of some competent descriptive passages and a few ingenious phrases. After the Flavian period the popularity of the epic seems to have declined until the time of Claudian. Most of the work of Claudius Claudianus (d. post 404) dealing with historical subjects is frankly panegyric or invective: his *De bello Gildonico* is a fragment; but in the *De raptu Proserpinae*, Claudian shows a perfect mastery of the epic style and metre. He has a vivid and colourful

fancy, and many of his descriptions are of a smooth and finished polish hardly surpassed in Latin; but he falls short of the sober balance and *gravitas* of the best period. C. Sollius Modestus Apollinaris Sidonius (c. 430-79) continued the practice of the panegyric disguised as an epic poem; but Flavius Cresconius Corippus, who followed the same practice, added to it the composition of an epic, *Iohannis*, in eight books on the Byzantine campaign against the Mauretanians under Johannes the *magister militum* in Africa in not unpleasing verse.

EPICASTE (= *Iocasta*), see **OEDIPUS**.

EPICEDION DE MORTE DRUSI, a less authentic title for the *Consolatio ad Liviam* (q.v.).

EPICEDIDIUM (ἐπικήδειον sc. μέλος, see **DIRGE**), in Latin literature a poem in honour of a dead person. The term is not found in Latin before Statius; the thing itself is older, for the *nenia* and *laudatio funebris* (qq.v.) contained its essentials. But Greek influence was needed to weld these into a literary genre. Originally a song of mourning chanted over a corpse (*cadavre nondum sepulto*, in contrast with ἐπιτάφιος, Serv. ad Verg. *Ecl.* 5. 14), it came to mean simply a poem honouring a deceased person, scarcely distinguishable from a *θρήνος* (see **DIRGE**). It was cultivated at Alexandria; it is not therefore surprising that the first Roman poets to attempt it were Calvus and Catullus. The *epicedium* sometimes fell also under the influence of the *Consolatio* (q.v.), without, however, losing its identity; its chief aim was to lament the dead, not to console survivors. Further, it is closely related to metrical epitaphs, several of which (Buecheler, *Carm. Epigr.* 1109; 1111; 1189; 1237) are really *epicedia*.

The constituent elements in the *epicedium* are lamentation and eulogy. Accompanying these (notably in the *Consolatio ad Liviam* or *Epicedion Drusi*, and in Statius) are consolatory reflections—irrevocability of fate, necessity of submission, faith in survival. Other customary features consist in frequent employment of mythology, apostrophes or invocations, indignation against destiny or the gods, thoughts on the vanity of birth or youth or merit, justification of lament, hope or assurance that the dead will be received in the other world by the *Manes*, finally (in Statius) description of last hours and of obsequies.

The metres are principally the hexameter and the elegiac distich. Length varies considerably: the shortest pieces are about 10 lines long; the longest (*Consol. ad Liv.*) is 474. Their literary worth is also very variable: contrast a masterpiece by Propertius with the poverties of the *Elegiae in Maecenatem*.

The chief *Epicedia* are: Catullus 101; Verg. *Edl.* 5. 20-44; *Am.* 6. 860-86; *Hor. Carm.* 1. 24; Propert. 3. 7; 18; 4. 11; *Ov. Am.* 3. 9; *Pont.* 1. 9; *Consol. ad Liviam* and *Elegiae in Maecenatem* (authors unknown); Mart. 5. 37; 6. 85; Stat. *Silv.* 2. 1; 6; 3. 5; 1. 3; and 5; Auson. *Epiced. in patrem; Parentalis*.

Some *Epicedia* semi-parodically concern animals: Catull. 3; *Ov. Am.* 2. 6; Stat. *Silv.* 2. 4 and 5. Martial represents the pointed form where the dead animal is less the central theme than an occasion for a rhetorical subtlety.

EPICHARMUS (5th c. B.C.), Sicilian writer of comedy, born at Syracuse (Theoc. *Epigr.* 18), according to Arist. *Poet.* 1448^a33 at Hyblaeon Megara, or in Cos (Diog. Laert. 8. 3). Contemporary of Hieron, king of Syracuse (478-467 B.C.; *Marm. Par.* v. 71; Clem. Al. *Strom.* 1. 353 P.), whom Epicharmus mentions (fr. 98) as having stopped Anaxilaus of Rhegium from destroying Locri in 476 B.C. He lived to the age of 90 (Diog. Laert. 8. 78) or 97 (Lucian *Macr.* 25) and may be dated roughly 530-440 B.C. Said by Suidas to have started, with Phormis, Syracusan comedy, and by Aristotle (*Poet.* 1449^b5) to have introduced 'plot' (μῦθος) into his plays. Wrote some 35 to 52 comedies. 35 titles survive. Of these 18 are mythological; some about Heracles, and many from the Homeric saga, e.g. 'Ὀδυσσεὺς αὐτόμολος' (Odysseus, sent as a spy to Troy, hesitates to go, and wonders what excuse he can make to the Greeks (fr. 99)), Κύκλωψ, Τρώες, Σειρήνες. Many plays seem to burlesque the gods: e.g. the Τριακάδες (? referring to the month-end feast of Hecate), 'Ἡβης γάμος' (fr. 54, Poseidon as fishmonger), Βούσσειρις (fr. 21, the greed of Heracles). Some are controversial in type: e.g. Λόγος καὶ Λογίνα (? 'Male and Female Reason', whatever that may mean), Γᾶ καὶ Θάλασσα ('does Earth or Sea give greater blessings to men?'), Ἐλπίς ἢ Πλοῦτος. Some suggest Middle Comedy subjects: e.g. Ἀγροαστίνος (= Ἀγροίκος, The Countryman); and even New Comedy is foreshadowed by such 'stock' characters as, e.g., the parasite. The *Θεαποῖ* depicts an embassy sightseeing at Delphi (fr. 79). The *Πέρσαι* may be a parody of Aeschylus. The *Χύτραι* perhaps depicts a potter's dream of wealth.

Epicharmus' plays seem to have been farces rather than comedies proper. There was apparently no chorus, for the plural titles (*Θεαποῖ*, *Χορευταί*, etc.) refer to actors. No lyric fragments are found, though some are in anapaestic metre and stage music is mentioned (frs. 127 and 210). Though farcical, the plays are written in literary (not vulgar) Doric and must have made their appeal to a cultured audience. They contain much philosophizing (e.g. frs. 170-3) and some parodies of Homeric style (fr. 99). Introduced into Athens probably for reading rather than performance, they doubtless influenced Attic comedy; cf. Archippus' 'Ἡρακλῆς γαμῶν, from Epicharmus' 'Ἡβης γάμος, and Aristophanes, according to the Scholiast, imitates Epicharmus at *Pax* 185 (E. fr. 125) and again (probably) in his *Telamones* (Ar. fr. 530, cf. E. fr. 149). Among the well-known fragments may be cited fr. 246 οὐτα φύσις ἀνθρώπων ἀσχοί πεφουσαμένοι (cf. Petron. *Satyr.* 42 'heu, heu, utres inflati ambulamus'), and fr. 249 τοὺς ὄρη καὶ τοὺς ἀκούει τάλλα καὶ καὶ τὴν πλά. Tradition makes him a pupil of Pythagoras. The younger Dionysius of Syracuse wrote a book on him (Suidas, s.v. 'Dionysius') and the second-century B.C. poet Apollonius of Rhodes edited his works in ten volumes. Besides plays, Epicharmus is credited by Diog. Laert. (8. 78) with physical, medical, and ethical treatises.

EPICRATES, Middle Comedy poet, of Ambracia. In fr. 11 (before 347 B.C.) Epicrates cleverly describes scientific research in botany by Plato and his disciples.

FCG ii. 365 ff.; *CAF* ii. 292 ff.

EPICTETUS (1) (fl. 520-500 B.C.), potter and vase-painter in Athens, known from one potter's and thirty painter's signatures, chiefly on red-figure cups with dainty compositions. One vase signed by Epictetus is attributed to the Cleophrades painter, a successor of Euthymides (q.v.) and a forerunner of the strong style,

who painted from 510 to 480; he should perhaps be known as Epictetus II.

T. B. L. W.

EPICTETUS (2), (c. A.D. 55 to c. 135), of Hierapolis (Phrygia), Stoic philosopher. He grew up as a slave of Epaphroditus, a freedman, who held the important office of *libellis* under Nero and again under Domitian. His master allowed him to attend the lectures of Musonius Rufus and later set him free. He then began to teach philosophy in Rome. When in 89 Domitian banished the philosophers from Rome, he went to Nicopolis (Epirus), where he continued teaching to the end of his life. He acquired a large audience and many distinguished followers, among them Flavius Arrianus (see **ARRIAN**; cos. c. A.D. 130), who collected his lectures (*διαρπύβαλ*), probably in eight books, four of which have come down to us, and later published a summary of his philosophy in the famous Manual (*ἐγχειρίδιον*). Through these posthumous publications he had great influence on the Emperor M. Aurelius.

Though Epictetus considered logic useful because it prevents us from being deceived by faulty arguments (Arrian 1. 17), he was but little interested in the purely theoretical side of philosophy, except theology. He taught that the universe is the work of God, and that Divine Providence manifests itself in its unity and order.

Contrary to the early Stoics he did not teach for the few and for the self-reliant, but for the many and the humble. He used to say that only he who had become aware of his weakness and his misery could profit from the teaching of the philosophers. He taught the common brotherhood of man. Wrongdoers, he thought, should not be punished as criminals, but pitied, because they are more unhappy than their victims.

Like the early Stoics he wanted to make man free and independent of the vicissitudes of fortune. We must not, he said, let our happiness depend on things which are not in our power. The only thing which is always in one's power is one's own self and one's will. This we must keep unblemished. We must be indifferent to death, pain, and illness, and even the loss of our dearest relatives must not touch us. For all this not only belongs to the external world, but also happens through Divine Providence, which is always good.

K. von F.

EPICURUS (*Ἐπίκουρος*), 17th Gamelion 342/1-271/70 B.C. (Apollod. ap. Diog. Laert. 10. 14 f.), famous Athenian philosopher. He was the son of the Athenian Neeoles of the deme Gargettus and his wife Charaestrata. He belonged to a family of ancient nobility, the Philaadae (Metrod. ap. D.L. 10. 1). His own parents, however, are not likely to have been well-to-do, since they went out with many other colonists to Samos in 352/1 to make their fortune. There Neeoles taught as a schoolmaster (Sotion and others ap. D.L. 10. 1; 4). E. was probably born in Samos. He went back to Athens in his eighteenth year (D.L. 10. 1) to pass the examination required of an *ephebus* (*δοκιμασία*). He used to say himself that he began to show philosophical interest at the age of fourteen (D.L. 10. 2). His first philosophical lessons he had with the Platonic Pamphilus, while still at Samos (Ariston ap. D.L. 10. 14). On his departure from Athens he joined his family again in Colophon, where they had gone after quitting Samos owing to the political situation (D.L. 10. 1). In Teos, not far from Colophon, he probably studied under the Democritean philosopher Nausiphanes (Ariston and Apollod. ap. D.L. 10. 13-14), of whom he used to speak very contemptuously in later

years (D.L. 10. 8; Sext. Emp. *Math.* 1. 3). E. may have been introduced by him to Democritus' philosophy (cf. Ariston ap. D.L. 10. 14). In 311/10 he opened a school of his own at Mytilene, and later one at Lampsacus. He soon was joined by devoted pupils, and after five years, in 306, he went to Athens to compete with the great philosophical schools. There he bought a house and the famous garden (*κῆπος*) as the domicile of his school, to which it gave its name. He was the first philosopher to admit female members to an organized school. He lived in Athens, except for a few journeys, for more than thirty-six years, leading a simple, remote, and hidden life with his pupils. In his will he left the garden and the school to Hermarchus of Mytilene (ap. D.L. 10. 17).

2. In his community (*θίασος*) the founder himself enjoyed a kind of worship even during his life. His birthday was a celebrated feast. This and similar customs he ordered in his will to be observed after his death (Epic. ap. D.L. 10. 18). The life he lived with his friends in the community was simple, contrary to the gossip of enemies of the sect (cf. D.L. 10. 4 f.; 11 f.).

3. **WRITINGS.** As the number of E.'s works Diogenes Laertius (10. 26) mentions the immense figure of three hundred rolls. All the main works are lost. The greatest loss is his writing *On nature* (*Περὶ φύσεως*) in thirty-seven books (D.L. 10. 27), of which we have only a few fragments in ancient writers and on papyrus. A most valuable source is the tenth book of Diogenes Laertius, which gives a *Vita*, the preserved works 1-4, and good doxographic material.

4. The preserved works are:

(1) The letter to Herodotus (like the recipients of 2 and 3 a pupil of E.), the only comprehensive review of E.'s natural philosophy which has been preserved. Its style is crabbed and difficult.

(2) The letter to Pythoeles, probably only an abridgement of a work of E., giving an account of his meteorology.

(3) The letter to Menoeceus, the shortest and clearest of the three. Its subject is the ethical theory.

(4) *Kύρια δόξα* (*Principal Doctrines*), a kind of breviary which could be learnt by heart. It contains forty ethical aphorisms.

(5) *Sententiae Vaticanae*, a collection of eighty almost entirely ethical aphorisms, discovered in 1888 in a Vatican MS. by C. Wotke.

5. **DOCTRINES.** E. defines philosophy as the attempt to gain happiness by means of discussion and reasoning (Sext. Emp. *Math.* 11. 169). He divides it into three parts, Ethics, Physics, and the axiomatic part, called *Canonice* (*κανονικόν*), usually taken together with the Physics (D.L. 10. 30).

(1) *Canonice*. E. regards sense-perception (*αἰσθησις*) which is common to mankind as the one and only basis of knowledge (Sext. *Math.* 8. 9; cf. D.L. 10. 31). Fallacy may arise when we begin to reason, or to form opinions or judgements (*δόξα, ὑπόληψις*) out of the material with which the senses have been furnished. The only proof we can find lies again in perception. If there are sensations proving or, at least, not disproving them, opinions are right, otherwise wrong (D.L. 10. 31 f., etc.).

(2) *Physics*. For the needs of his new theory E. was brought back to the teaching of Democritus and the old atomism. Like Democritus he holds that sensation is due to 'effluences' leaving material things and entering our senses by means of the sense-organs. He assumes that things continuously throw off from their surfaces small 'images' or 'idols' (*εἰδῶλα, imagines*) of unpassable fineness of texture, shaped like the solid bodies and flying with so incredible a speed that they cannot be seen moving. In this way our senses come, so to speak, in direct touch with the objects (Epicur. *Ep.* 1. 46 f.; Luer. 4. 270 f.). This seemed to confirm the teaching of his *Canonice*.

The effluence of 'idols' is due, according to Democritus and E., to the motion of the atoms which constitute every concrete object. With Democritus E. believes that only the existence of two things can be finally proved: the atoms and the void. The atoms have to be accepted, because in all destruction there must be a last imperishable element. The void is necessary as the place through which bodies move (*Ep.* 1. 39 f.). E., however, differs considerably from his predecessor by granting a kind of arbitrary character to the movement of the atoms which causes them to swerve from their original straight movement (*παρεγκλίπειν, declinare*; *Lucr.* 2. 216 f.). This accounts for the first and all further collisions of atoms, and avoids the blind necessity of Democritus' mechanism.

Everything is due to the atoms and their movement: this perishable world as well as the infinite number of other worlds, including men and gods. At death the atoms of the soul are dispersed and sensation ceases immediately (*Ep.* 1. 63 f.; *Lucr.* 3. 328 f.; *Usener p.* 378 f.). The gods are anthropomorphic and made out of the finest atoms. In the distances between the worlds (*intermundia*) they live a blessed and perfect life, free from any concern with this or any other world (*Lucr.* 3. 18 ff.; 5. 146 f.; 1167 ff., etc.).

(3) *Ethics*. By his Physics E. wants to free mankind from the fear of death, of the gods, of the great metaphysical and physical powers which seem to surround him. He wants to remove every disturbance from within. So he advises man not to take part in public life (*D.L.* 10. 119), to avoid marriage and begetting of children (*Clem. Al. Strom.* 2. 23), to withdraw from the world and to live hidden (*ἀόφθιμος*; *Plut. De lat. viv.* 1128). As the natural human aim and the highest good E. recognizes 'pleasure' (*ἡδονή*; *Ep.* 3. 128 f.), led again by the evidence of our desires and feelings. But he firmly declines to identify this with the 'pleasure of the profligates' (*Ep.* 3. 131). Pleasure, as he understands it, is mainly negative, meaning freedom from pain and trouble, imperturbability (*ἀραξία*), and an independent and peaceful state of body and mind (*Ep.* 3).

6. In Epicurus' time man had lost the old bonds of State and religion. His philosophy is a gospel intended to free humanity from old traditions and fears, and to give it a new belief instead. This was the gospel of the independent and untroubled human soul which has withdrawn from public life and found a new and reliable basis in the joy of its simple and pure existence.

EPIDAMNUS, a joint colony of Corcyra and Corinth, founded c. 625 B.C. to exploit the Illyrian trade up the Genusus valley. This trade was at first constituted as a monopoly for the benefit of the ruling oligarchy, which further strengthened its ascendancy by restricting industrial pursuits to public slaves. By 435 the commons

had nevertheless gained control and expelled the oligarchs; when put under siege by the latter, they invoked the aid of Corcyra, and when this was refused they applied to Corinth. The Corinthians reinforced the democracy with new settlers, but shortly after the city was recaptured by the Corcyraeans. This scramble of Corinthians and Corcyraeans for Epidamnus was a contributory cause of the Peloponnesian War. For the later history of Epidamnus, see *DYRRACHIUM*.

Thuc. 1. 24-9.

M. C.

EPIDAUROS, one of the small States of the Argolic Acte, on a peninsula of the Saronic Gulf. It was originally Ionic, but dorized from Argos (*Paus.* 2. 26. 1); unlike Argos, it used a 'Western' alphabet. It owed religious dues to Argos (*Thuc.* 5. 53), but was politically independent, and at one time controlled Aegina (*Hdt.* 5. 82). Its fame lay in the sanctuary of Asclepius, situated in an inland valley. Entered by a propylaeum, the sanctuary contained a temple of Asclepius (early 4th c.), other small temples, porticoes, baths, a gymnasium and palaestra, inns and priests' houses. The chief extant buildings are the *tholos*, a round building of the mid-fourth century by Polyclitus the younger, with beautiful Corinthian columns, and one of the most perfect of Greek theatres, which well preserves its fourth-century plan. The building accounts of temple and *tholos* are preserved. Though there are earlier dedications, the buildings and the chief fame of Asclepius belong to the fourth and later centuries. The cult, originally perhaps Thessalian, was transferred from Epidaurus to other towns, notably to Athens and Rome (*Paus.* 2. 26. 8). The inscriptions recording cures, wrought by sleeping in a dormitory attached to the temple and following the prescriptions of the priests, are important for the history of ancient medicine.

EPIDOSIS, see *ENDOWMENTS*.

EPIGENES (1) of Sicyon is said (*Suidas s.vv. Θέσις* and *Οὐδὲν πρὸς τὸν Διόνυσον*) to have been the 'first tragic poet', and may have composed 'tragic choruses' of the type which Herodotus (5. 67) speaks of as produced at Sicyon in the sixth century B.C., having reference to the sufferings of heroes, but transferred by the tyrant Cleisthenes to the worship of Dionysus. A. W. P.-C.

EPIGENES (2), Middle Comedy poet, dated before 376 B.C. by his reference to Hecatomnus, king of Caria. *FCG* iii. 537 ff.; *CAF* ii. 416 ff.

EPIGONI (*Ἐπίγονοι*), sons of the Seven against Thebes (see *ADRASTUS*). They were: Alcmaeon and Amphilocheus, sons of Amphiaraus; Aegialeus, of Adrastus; Diomedes, of Tydeus; Promachus, of Parthenopaeus; Sthenelus, of Capaneus; Thersander, of Polynices; Euryalus, of Mecisteus. (*Apollodorus*, 3. 82; a different list, *Hyginus, Fab.* 71.)

EPIGRAM

I. THE EPIGRAM: GREEK, GRAECO-ROMAN, AND BYZANTINE.

Epigram, *ἐπίγραμμα*, means 'inscription' and in practice a metrical inscription. Throughout 1,000 years of development the poetic epigram never wholly lost its original meaning. There are four stages in its history.

(1) *Archaic*. The first verse-epigrams appear about the seventh century B.C. on votive offerings, tombstones, and occasionally signposts (*Plato, Hipparch.* 228d). They are usually in one or more hexameter lines or elegiac couplets, sometimes even in iambs. Their style, enriched with Homeric decorations, is as ornate as is

compatible with their function. Throughout this period an epigram is essentially a graceful mnemonic. Thus a tombstone-verse contains the name, city, family, and age of the dead, and usually the manner of his death. Phrases of regret are not often added, though impersonal reflections sometimes are. This restraint and purpose made the epigram into an artistic form. Along with the elegiac couplet, the epigram was developed by the Ionians: from about 550 B.C. the Attic inscriptions become more and more graceful, and more and more Ionic. The first great poet to write inscriptions was Simonides, whose few authentic epigrams show a grave intensity of emotion which is actually increased by their brevity and impersonality. Throughout the fifth and fourth centuries, Greek verse-inscriptions show an increasing delicacy and pathos which is largely due to his example; other poetic influences, such as that of tragedy, further purified their style.

(2) *Hellenistic*. The Hellenistic age loved trifles, and it loved to change and expand the scope of literary forms. Therefore it made several fundamental changes in the meaning of the epigram—(i) by cultivating purely artificial epitaphs and votive inscriptions, called epideictic, 'for display', because they could not be carved on a real tomb or tablet, e.g. poems on long-dead historical personages, famous works of art, small perishable offerings, dead animals; (ii) by infusing the subjective emotion of the elegy and drinking-song into the brief memorable form of the poetic inscription. In this period two different schools have been postulated. The 'Peloponnesian' school wrote chiefly in Doric, often about country life and scenery: it was quiet, objective, straightforward. To it belonged the pastoral painter Anyte, Nossis servant of Aphrodite, Perses of Thebes, and the great Leonidas of Tarentum. The 'Ionian' school, centred in Samos and Alexandria, was more social and sophisticated; it wrote of love and wine, literature and art, in a far more complex style and vocabulary. Its leader was Asclepiades, with his friends Hedylus and Posidippus; he was followed by Callimachus and Dioscorides. Invective epigrams began in the third century B.C. with Alcaeus of Messene. The definition of epigram, thus enlarged, was made to include short poems by great poets of the past: the works of Archilochus, Sappho, Anacreon, and others were combed for 'epigrams', and forged epigrams were attributed to Aeschylus, Plato, and other notabilities. The metre of the epigram in this period was almost exclusively the elegiac couplet.

(3) *Graeco-Roman*. In 196 B.C. Alcaeus of Messene had extolled T. Flamininus, the 'liberator' of Greece. The Greek world now began to address, influence, and even praise Rome. Here, without sketching the history of epigram at Rome (for which see *LATIN EPIGRAM* below), it is appropriate to remark on some examples of Greek influence or departures from it. Ennius' fine epitaph on himself (the first extant Latin elegiac poem) is essentially Hellenistic in spirit, for it could not be carved on any tomb; but it is charged with a new Roman pride and solidity. Q. Lutatius Catulus, who was consul in 102 and knew the Greek epigrammatist Antipater of Sidon, joined two friends in writing rudimentary love-epigrams in the Alexandrian manner. By the time of Catullus and Calvus all forms of the Greek epigram were being successfully imitated in Rome—notably the invective epigram, which always suited Roman taste. Varro's picture-book *Imagines* had a descriptive epigram under each portrait. The fashion grew, until we hear of epigrams by almost everyone who pretended to culture (Cicero, Caesar, Augustus, Maecenas, Tiberius), anonymous collections by groups of friends (the *Priapea*), and venomous pasquinades against unpopular emperors. For humorous and spiteful epigrams the Romans used hendecasyllables and scazons as well as elegiacs. Meanwhile, Melcager (c. 90 B.C.) had given the Greek epigram a great impetus

by publishing his *Garland* of the greatest Greek literary epigrams; and in A.D. 40 Philippus compiled another to supplement it. Greek writers at this time tended to concentrate on complimentary and epideictic epigrams (Crinagoras, Antipater of Thessalonica, Antiphrilos, and Erucius); but there was more real life in the convivial and amorous poetry of Philodemus and Argentarius. The genius of the Romans for satire appears in their preference for derisory epigrams: fools, knaves, and misfits are the targets of Roman epigrammatists in both languages. Nero patronized Martial's predecessor Lucilius (not the great satirist, Lucilius), whose Greek epigrams, all satirical and usually very funny, were closely imitated by the much less graceful Nicarchus. Martial's poems, more than half of them satirical in intention and pre-eminently perfecting the trick, comparatively rare in Greek, by which the epigram leads up to a surprise, were never improved upon by his Roman successors; and we find that the epigrams of Hadrian ('animula uagula blandula') and of Ausonius revert to a more Greek type. In Greek the strange gloomy figure of Palladas, a lonely disillusioned pagan (c. A.D. 400), closes this period, and marks the end of original poetry.

(4) *Byzantine*. The revival of Greek literature which began in the fifth century produced a number of Byzantine epigrammatists. Agathias made a large collection of epigrams called the *Circle*, including many contemporary poems, paraphrases of themes, and patterns invented by classical writers: their language and metre are correct, but to know their models is to despise them. He inserted numerous poems by himself and his friend Paulus Silentiarius. Agathias' collection, enlarged yet further by Constantine Cephalas in the tenth century, became our present *Anthology* (q.v.).

II. THE LATIN EPIGRAM

There is a difficulty in demarcating epigram from elegy (q.v.) most felt in their earlier stages. Their histories are intertwined and complementary, for elegy, though its origin lies in the sung lament, retains much in common with sculphral epigram. But the widening content of epigram also widened the gap between them. Latin poets could note among Greek epigrammatists the extension of the form from a commemorative inscription on tomb, shrine, or work of art to lines on life or death, on ethical themes, on love or any striking event capable of giving the impulse towards terse summary or incisive mockery. It is significant that the liberation of a slave in Petronius' *Satyricon*, 55, is said to demand an 'inscriptio' or epigrammatic record, whereupon Trimalchio composes a few halting lines. Such occasional poetry may be as varied as human experience, so that in Martial, for instance, we find epigrams which could not be called elegies. The occasional epigram becomes an exercise-ground for wit and satire, different from the emotional tone of elegy; and the severance is emphasized by the choice, for the short poem, of various metres—hendecasyllabic, scazon, even hexameter (as Martial claims, 6. 65), besides the elegiac couplet. Martial indeed (12. 94) contrasts epigram as a separate literary genre with *epos*, tragedy, lyric, *saturae*, and *elegi*; while Pliny (*Ep.* 4. 14. 9) says his own hendecasyllables may be equated indifferently with *epigrammata*, *idyllia*, *eclogae*, or *poemata*.

In studying Latin epigrams there are two further difficulties—the difficulty of dating many Greek epigrammatists preserved in the *Anthology*, so as to determine possible influence, and the difficulty caused by the disappearance of many collections of epigrams by Latin authors. What time has left offers only a meagre view of epigram-writing at Rome. Thus, we cannot estimate the literary worth of three authors, Marsus, Pedo, and Gaetulicus, acknowledged by Martial as his models besides Catullus, whose epigrammatic power we fortunately can judge.

The ancient tradition of the epitaph is exemplified in the three extant pieces by Ennius, and in one by Pomilius, while to Papinius belongs the satiric banter of two lovers ('Ridiculum est . . .'). From Varro's *Hebdomades* six pieces survive, mostly memorial verses of which the best known are on (? or by) Naevius, Plautus, and Pacuvius. Two love-poems by Valerius Aedituus have come down; unhappily, but for a line, the *Amores* of Cornelius Gallus are lost (for love-elegies see ELEGIAC POETRY, LATIN). We have remains, disappointingly insignificant, of compositions by Lutatius Catulus and his circle, and by the neoteric poets, Bibaculus, Calvus, Cinna, Tigidas, and others. Julius Caesar's lines on Terence represent literary compliment and contrast with the anonymous couplet reproaching Sallust for the theft of archaic words from Cato. Scraps have survived by Cicero, Ovid, and Manilius; more has been left of the *Catalepton* and *Priapea* (qq.v.).

Under the Empire, Asinius Gallus is one of those who continued the satiric epigram (the ex-boxer turned professor). Nero's reign yields the collections ascribed to Petronius and Seneca (see J. Wight Duff, *Lit. Hist. Rome, Silver Age*, 193-5, 246-7); Lucan has a distich of moral advice. From the Flavian age comes the memorial couplet written by Verginius Rufus for his tomb as his claim to have saved the imperial power 'non sibi sed patriae', and we know that Pliny was himself the author and the begetter in others of epigrams; but the pre-eminent figure of the day in this line, and the greatest name in the history of epigram, was his friend Martial (q.v.). Gellius (19. 9) heard a concert of 'charmingly sweet *ἐλεγεία* by recent poets'; and in the numerous *epigrammata* of Ausonius, mainly elegiac, we meet a wide variety of subjects where both Martial and Greek originals are models. Claudian's shorter poems include several in epigrammatic style—sepulchral, satiric, complimentary, descriptive. Roman sepulchral epigrams are usually miniature elegies, modelled on Augustan poets, but very seldom distinguished by originality. The luxurious Vandal State in Africa produced (c. 530) a brief crop of epigrammatists and anthologies like the *Codex Salmasianus*: metrically lax and aesthetically disgusting, they make us regret Martial. The persistence of epigram-writing during the Middle Ages and the Renaissance was largely due to the continued influence of Martial.

It is almost impossible to find a general definition which will sum up the history of the Greek and Latin epigram, and cover all known epigrams, literary and inscriptional; but certain fundamental characteristics are clear throughout. It is a short direct poem, usually in elegiacs, sometimes in hendecasyllables, rarely in hexameters; it expresses one single thought which is rather more intellectual and analytical than lyrical and passionate; the thought is usually voiced as a comment on a new and symbolic situation—the death of a friend, the breaking of a lover's vow, the dedication of an offering, the sudden realization of some incongruity or some beauty. The modern epigram bears the stamp of Martial and Catullus, and has become a brief, pointed, witty remark, instead of the vaguer but richer form which the Greeks filled with such manifold and delicate emotion.

G. H. and J. W. D.

EPIGRAPHY, GREEK,* is the study of inscriptions

written on durable material, such as stone or metal, in Greek letters and expressed in the Greek languages. Coin-legends are regarded as falling within the province of the numismatist, painted mummy-labels and ink-written texts on ostraca (fragments of coarse pottery), specially numerous in and characteristic of Egypt, are claimed by the papyrologist, and painted inscriptions forming part of the original decoration of vases (97) are assigned primarily to ceramics, though texts subsequently incised on pottery and the stamps on Rhodian and other amphorae are usually deemed epigraphical materials. The study covers an area coextensive with the lands inhabited or visited by Greeks who left behind written memorials, and a period of well over a millennium, from the appearance of the earliest extant examples of Greek writing down to the close of the fourth century or even later, when Greek merges into Byzantine history. The materials are to a large extent scattered in the various places where they were found, though much has been done to collect and protect them in museums in Greece (especially the Epigraphical and Acropolis Museums at Athens and the local collections at Eleusis, Corinth (23), Sparta, Olympia (24), Thebes, Delphi (25), etc.), Asia Minor, Egypt (notably at Alexandria (46) and Cairo (47)), and elsewhere; there are important collections, e.g. in Berlin, Paris (45), the British Museum (44), and the Ashmolean Museum at Oxford.

2. Epigraphical studies have a very long history (2, 9, 10). Herodotus discusses, in the light of archaic dedications copied by him at Thebes, the Phoenician origin of the Greek alphabet and its later modification under Ionian influence (*Hdt.* 5. 53-61), and he frequently appeals to inscriptions as historical sources, as do also Thucydides and most of the Greek historians and orators. Philochorus edited a collection of *Ἐπιγράμματα Ἀττικά* early in the third century B.C., and about the same time Craterus published a *Ἐπιγραμμάτων συναγωγή* with historical commentary, while a century later Polemo of Ilium received the nickname *σθηλοκόμος* for his tireless attention to the inscribed records. The study revived in the fifteenth century with the activity of Ciriaco de' Pizziccolli (Cyriac of Ancona) in copying ancient inscriptions in the course of his travels, and the seventeenth and eighteenth centuries witnessed a dozen attempts to collect the available material in *corpora*. The modern period opens with the travels of Pouqueville, Leake, Gill, Osann, Letronne, and others, August Boeckh's acceptance

* In this article figures in brackets refer to the corresponding items in the appended bibliography.

in 1815, under the auspices of the Berlin Academy, of the task of preparing a new and comprehensive *corpus* on a geographical basis (20), and the issue by J. Franz in 1840 of the first adequate general work on Greek epigraphy (6). Thus were laid the foundations on which scholars have built during the past century, aided by the enhanced opportunities of travel which followed the liberation of Greece, the systematic excavations carried out by Greek and foreign archaeologists on many Hellenic sites—the Acropolis, Corinth (23), Olympia (24), Delphi (25), Delos (21, 29), Gortyn, Priene (35), Miletus, Pergamum (36), Magnesia (34), Sardis (37), and others, of which the most recent and prolific is the Athenian Agora—and the improved technique of decipherment, restoration, and publication, in which the ‘squeeze’ and the photograph play a valuable part. The most ambitious and fruitful enterprise of this period is that of the Berlin Academy, which, shortly before the completion of Boeckh’s great work, embarked on the publication of a series of *corpora*, united in 1903 under the single title of *Inscriptiones Graecae* (21), which should contain all the Greek inscriptions of Europe; the Vienna Academy undertook the preparation of a *corpus*, of which only the first-fruits have appeared (22), of Asia Minor; and Syrian (40) and Egyptian *corpora* are planned or already begun.

3. Greek epigraphy comprises two main provinces, palaeographical and historical, though there is a certain overlap between them in so far as palaeographical criteria are used for the determination of the provenance and the date of an inscription, and so for its assignment to its historical context.

I. Inscriptions afford by far the earliest extant examples of Greek writing, and are thus invaluable for the study of the origin and development of the Greek alphabet and script (8-12, 16, 17). The persistent tradition which spoke of the Phoenicians and their semi-mythical King Cadmus as those who taught the Hellenes to write is confirmed by the use of the word *φονικῆς* (Hdt. 5. 58; SIG 38. 37) to denote letters, by the ‘retrograde’ direction of the earliest Greek inscriptions, by the Greek letter-names, by the identical order of the alphabets of Phoenicia (as inferred from the cognate Hebrew) and of Greece (as indicated by many early *abecedaria*, by the numerical values given to the letters, and by the unbroken tradition of the Greek language), and by the striking resemblances between the letter-forms used in the most archaic inscriptions of the Greeks and their Phoenician counterparts, as found, e.g., in the inscription of Ahiram from Byblus and on the ‘Moabite Stone’. The Phoenician alphabet of twenty-two consonants the Greeks rapidly and skilfully transformed into an instrument suited for the representation of their own language, either discarding or giving new phonetic values to letters they did not require, and making further additions, as utility or consistency demanded, at the close of the alphabet, which, as they first learned it, ended with T. In this process of development and adaptation each community or group of communities made its own experiments, and thus a large number of local variations arose (58), but the resultant alphabets fall into four main classes: (1) those of Crete, Thera, and early Melos, in which $\Xi\Phi\chi\psi$ are lacking, (2) those of Attica and certain islands, in which $\Phi\chi$ represent the sounds $\phi\chi$, but $\Xi\psi$ are wanting, (3) the ‘Eastern Group’, including also Corinth, Argos, and Sicyon, in which $\Xi\Phi\chi\psi$ represent $\xi\phi\chi\psi$ respectively, and (4) the ‘Western Group’ in which Ξ is not used and $\Phi\chi\psi$ represent $\phi\xi\chi$ respectively. The original ‘retrograde’ direction of the script gave place to the ‘boustrophedon’ style, in which the lines run alternately from right to left and from left to right, and this was succeeded by the exclusive use of the left-to-right direction. Greek aesthetic sense, notably that of the Athenians, demanded greater simplicity, symmetry, and uniformity in the letter-forms and insisted

on their arrangement in straight horizontal lines. Indeed, in the sixth century B.C. the ‘stoichedon’ style appears, and enjoys, especially at Athens, a long vogue; in this there is an exact alinement of letters not only horizontal but also vertical (59). Down to the close of the fifth century Athens used an alphabet of only twenty-one letters,

ΑΒΛΔΕΙΗΘΙΚΛΜΝΟΠΡΞΤΥΦΧ,

in which E denotes ε, ει, η, O denotes ο, ου, ω, and H retains its original value as an aspirate; but in 403 B.C. the Milesian alphabet of twenty-four letters was officially adopted in its place, and soon all Greece followed the Athenian lead and used the alphabet

ΑΒΓΔΕΙΗΘΙΚΑΜΝΞΟΠΡΞΤΥΦΧΨΩ.

Since that time the Greek alphabet has neither gained nor lost a letter, though various influences modified their forms. (1) The fourth century witnessed an excessive simplification, due perhaps in part to economic motives, leading to the frequent representation of A or Δ by Λ, of H or N by Π, etc.; but this hampered the reader and proved a passing phase, dying out in the third century. (2) Another temporary fashion was the substitution of rectilinear for curved forms, partly in the engraver’s interest and partly because of the archaic appearance of some of the resultant forms. (3) Far more lasting and potent was the tendency towards elaboration of the script, due to a recoil from the old simplicity and a desire to display the designer’s ingenuity; this led to the addition of serifs or of ‘apices’ to the letters, the substitution of A for Λ, and the invention of various ornamented forms, and flourished in the two centuries before and after Christ, but died down c. A.D. 200. (4) Ultimately the influence of the cursive style triumphed, and the epigraphical script became a mere copy on stone of the forms convenient to papyrus or parchment, with its tendency to make the letters taller and narrower, to substitute curved for straight lines, and to reduce or eliminate the necessity of removing pen from paper. We thus reach an alphabet of the type

ΑΒΓΔΕΖΗΘΙΚΛΛΑΝΞΟΠΡϚϛϜϝϞϟ.

Numbers were either written out in words or indicated by numeral signs. The Greek numeral systems are of two classes, in the first of which there are many striking local divergences. (1) In the acrophonic system (60), illustrated by inscriptions from about 460 to 100 B.C. and used sporadically even later, the initial letters of *πέντε*, *δέκα*, *έκατόν*, etc., stand for the values indicated by those words; I represents the unit; and there are usually compound signs for 50, 500, 5,000, etc. Thus in Attica ΜΧΧΗΠΔΔΔΠ = 12186 and ΤΤΠΠΗΠΠΗΠΠ = 2 talents, 5607 drachmas, 2½ obols. (2) In the alphabetic system, traceable back to the fifth century, widespread in the Hellenistic period and completely dominant by 100 B.C., the letters in their alphabetical order (with the retention of F and Q in their original places after ε and π and the addition of Ϛ after ω) indicate the nine units, nine tens and nine hundreds, so that ΤΨΗ = 398 and ΜΒΠΠ = 12186. Frequently these alphabetic numerals, which are used for ordinal as well as for cardinal numbers, are distinguished by a superposed horizontal line. Inscriptions also furnish abundant materials for the study of Greek punctuation, ligature, monogram, and abbreviation, which consists in the omission either of the end or of some part of the interior of a word; the latter method of contraction is especially frequent in, but by no means confined to, the *nomina sacra*, e.g. $\Theta(\epsilon\acute{o})\varsigma$, $\chi(\rho\iota\sigma\tau\acute{o})\varsigma$, $\kappa(\acute{\upsilon}\rho\iota)\varsigma$.

II. Even more important than the form of inscriptions is their content. They are historical documents as well as palaeographical specimens, and there is no aspect of Hellenic thought or speech, writing or action on which

they do not throw valuable light. Apart from such outstanding documents as the Attic tribute quota-lists and assessments (82-3), the law-code of Gortyn (48), the the chronological table known as the 'Parian Marble' (49), the poems of Isyllus and Maistas, the Delphic paeans, the cure-records from the Epidaurian Asclepium, the official autobiography of Augustus in the bilingual *Monumentum Ancyranum* (50-1), Diocletian's Edict (52), and the philosophical confession of Diogenes of Oenoanda, inscriptions with their authentic, first-hand, contemporary records, characterized by extraordinary detail and objectivity, immeasurably enrich our knowledge of the ancient world (4, 5). They offer materials, often the sole materials available, for the study of all the Greek dialects (61-3); they provide uniquely valuable evidence of grammatical and orthographical usage and of phonetic changes (64); they give to the student of Greek literature thousands of dedicatory poems, metrical epitaphs, and other verse compositions (69-71), as well as countless examples of prose and extensive records of dramatic contests and victories (87); they preserve several hymns accompanied by the musical notes to which they were chanted. To the archaeologist they supply hundreds of signatures of sculptors (90), potters, and painters. In the sphere of religion we owe to them a wealth of detailed knowledge of cult titles and ritual laws (91), temple organization and finance, priestly appointment and tenure, religious festivals and societies, oracles, confessions and thanksgivings, prayers and curses (92), not to speak of the light they throw upon Jewish and Christian beliefs and practices (13-15, 65-8). In the political realm they preserve the *ipsissima verba* of laws, decrees (very many of which record the bestowal of citizenship, *πολιτεία* (76), and other privileges) (73), edicts and rescripts (75), treaties (74), arbitral awards (5, 77-9), legal judgements (80), economic and fiscal regulations, financial records (81), specifications and accounts relating to public buildings (88-9), boundaries of States or public domains, lists of eponymous or other magistrates, census-surveys, and other documents, confirming, correcting, or supplementing the data derived from literary sources. Finally, in the field of private and social life, where literature is least helpful, inscriptions aid us with their countless records of legal and commercial transactions—contracts, sales, leases, mortgages and guarantees, loans and deposits, wills and endowments (85), dowries and manumissions of various types, civil or religious—of clubs and societies (5, 98-9), schools and scholars, examinations and prizes (86), their thousands of stamped amphora-handles and mercantile inscriptions (84), and their myriads of epitaphs with varying formulae, often revealing interesting local peculiarities (93-6). Even where such inscriptions are of little or no value individually, they frequently serve, taken in large numbers, as the bases of inductions which are of real importance, linguistic or historical.

BIBLIOGRAPHY

† Partially; ‡ Unpublished.

On almost every aspect of the study light is thrown by the works of M. Holleaux (esp. *Études d'épigraphie et d'histoire grecques*, 1938-), L. Robert, U. von Wilamowitz-Moellendorf (esp. *Kleine Schriften*, v. 1 (1937)), and A. Wilhelm (esp. *Beiträge zur griech. Inschriftenkunde* (1909)). Current discoveries and discussions are collected in J. J. E. Hondius, *Supplementum Epigraphicum Graecum* (1923-); biennial surveys of recent epigraphic books and articles are provided by M. N. Tod, in *JHS* and *JEGArch.*
M. N. T.

EPIGRAPHY, LATIN. Latin epigraphy is concerned with the remains of Latin inscribed on stone or metal (but not coins or gems), while palaeography deals with writings on parchment or papyrus. But epigraphy has regard not only to the form of the inscription (e.g. lettering, abbreviations) but also to the subject-matter, and so impinges in varying degree on philology, history, antiquities, law, and many other departments of classical study. Inscriptions range from casual scratchings on stone to important official documents incised on metal or stone. Most inscriptions belong to the early Empire, and throw a flood of light on numerous aspects of life about which the literature has little to say, e.g. the stations, promotions, movements, nationality of soldiers; the imperial civil service; the life of slaves and freedmen; trade; municipal government; religious cults; roads and boundaries; and indeed the general life of the provinces.

2. Inscriptions are usually classified somewhat as follows: (i) *tituli* (ἐπιγράμματα): inscriptions relating to individuals, usually connected with the object bearing the inscription, e.g. *tituli sepulchrales, sacri, honorarii*, or inscriptions on public works and portable objects as e.g. lamps, lead pipes; (ii) *acta* (ὑπάγματα): public or private documents, e.g. *foedera, leges, plebiscita, senatus consulta, leges collegiorum, decreta* of magistrates or emperors, public documents of a sacred character, private documents. To illustrate the variety of topics covered by inscriptions it will be convenient to follow (in the main) the classification adopted by H. Dessau in his *Inscriptiones Latinae Selectae*.

3. Under *monumenta historica liberae reipublicae* fall such inscriptions as the *S.C. de Bacchanalibus* of 186 B.C. embodied in an official letter (Dessau, *ILS* 18), *lex agraria* of 111 B.C. (*CIL* i². 2. 585), inscriptions on boundary stones (*cippi*) set up by C. Gracchus, the 'Tables of Heraclea', containing an assortment of laws by Caesar (*ILS* 6085), *elogia*, i.e. inscriptions (often laudatory) appended to statues of famous men set up, e.g., in the *forum Augusti*, a few of which are contemporary (*ILS* 1-17, 43-68. *Inscriptiones Italiae* XIII, fasc. iii: *Elogia* (1937)). With this group may be mentioned also the *fasti consulares* and the *acta triumphorum* (*CIL* i². 1; *Inscript. Ital.* XIII, fasc. i (1947)).

4. Under the heading *tituli imperatorum domusque imperatoriae* (*ILS* 70-839) are grouped most valuable inscriptions which give information about the powers (e.g. *ILS* 244), offices, and titles held by the emperors (and on them we are often dependent for dates), events of their principates, their campaigns and travels, their rescripts and letters (e.g. *ILS* 423) and edicts (e.g. *ILS* 214), petitions sent to them and their replies, their public works, and their speeches. For the great record put up by Augustus, see *MONUMENTUM Ancyranum*.

5. Numerous inscriptions refer to *virī et mulieres ordinis senatorii* (*ILS* 862-1312) and to *virī dignitatis equestris* (*ILS* 1313-472), and illustrate, e.g., the official careers of the noble families and the lines of promotion; the distinction between senatorial and imperial provinces, their relative importance and the changes in their status; the rise of new families and the disappearance of old; the careers of the *equites* in the civil service. The study of the relative importance assigned to offices or of the provincial origin of officials may contribute largely to the understanding of the policy of an emperor, as e.g. of Vespasian and his new equestrian nobility of office.

6. Inscriptions relating to *ministri domus Augustae condicionis libertinae et servilis* (*ILS* 1473-876) and to *apparitores et servi publici* (*ILS* 1877-975) reveal the amazing variety of duties, many very responsible, which fell to the lower grades of the civil service in every quarter of the Empire. The names and origins of these humble officials often show something of the nationalities making up the population of a given place, while their functions and positions reveal in great detail the administrative system and illustrate the nature and function of slavery.

7. *Tituli militares* are indispensable for an understanding of the Roman army. Not only do they show the ranks and duties, lines of promotion, and terms of service within the army, but they also give information about the stations and movements of troops, about recruitment and the policy of using troops in their own area of recruitment or sending them elsewhere. The relationship between military service and citizenship, and thus the function performed by the army in civilizing the Roman world, can be appreciated from the inscriptions. Indeed *tituli militares* together with *tituli municipales* will show the process by which the camp and its *canabae* grew into a Roman township, often the origin of towns still flourishing to-day.

8. A few inscriptions refer directly to men well known as writers (e.g. the younger Pliny's career is given in *ILS* 2927), but more often men and women who are not much more than names in Latin literature are made real by chance information about them preserved in inscriptions.

9. *Tituli sacri et sacerdotum* (*ILS* 2957-5050) show the organization of religious cults, the spread of Roman cults into the provinces and of Oriental cults into the West. They are invaluable for the study of the growth of emperor worship. For our knowledge of the syncretism of religions, of the persistence of ancient cults and names and obscure deities of Gaul and Britain, of the nature and diffusion of Mithraism and kindred matters we are almost entirely indebted to inscriptions.

10. Inscriptions relating to *ludi* (*ILS* 5051-316) are common and range from lists of victorious horses and gladiators to the briefest prayer that a favourite 'colour' may win. Public works and buildings, roads, tunnels and aqueducts, the contracts and undertakings of building firms or emperors, technical details about sites and leases may be studied in other inscriptions (*ILS* 5317-6043).

11. *Tituli municipales* (*ILS* 6044-7210) form a large group and give abundant information about municipal life and government; from them we learn of the charters of townships, of their government and officials, of the gratitude and bequests of public men and private citizens, of the relations of the townships with the central government, of their origin, growth, wealth, financial instability, and decay. The charter of Malaca (*ILS* 6088) is an excellent example.

12. But inscriptions reveal also many aspects of humble life. Hence we can learn much of the *collegia* of the lower grades of society (*ILS* 7211-365); the numerous *tituli* relating to every kind of trade, craft, and occupation (*ILS* 7366-817) reveal the complex nature of life under the Empire and enable important deductions to be drawn about economic conditions. Of great human interest are the numerous epitaphs (*ILS* 7818-8560) put up by humble people, which record valuable details of family life and reveal clearly the feelings and affections of people whom the literature passes by; many are remarkably intimate and moving records of genuine emotion.

13. There are many other types of inscription of which mention must be omitted, and, though the information given by each inscription may be trivial,

cumulatively it is of importance. For example, the stamps on wine-jars or lamps or medicine pots or tiles may yield, when gathered together, important conclusions of economic or military or geographical significance.

14. For the philologist inscriptions are of great value in furnishing evidence as to Italic dialects, the growth of the Latin language, changes in spelling and pronunciation. The kind of Latin spoken in the provinces can be studied and provincialisms of usage and pronunciation are easily accumulated.

15. The processes of cutting inscriptions need not be minutely described. The line along which the inscription was to run was marked with a stretched cord stained with colour and 'snapped' on to the stone; sometimes a faint line was cut. The letters were cut with a chisel (*scalprum*) and hammer; there is some evidence that they were painted first, and that the outline was sketched by means of a template. Sometimes the letters, when completed, were picked out with vermilion. Large bronze letters were occasionally fixed to the stone by pegs, and when the letters have been lost the inscription can be read by means of the holes. Inscriptions on bronze (prepared by an *aerarius*) were chased by a *caelator*, and the word *incidere* is used of cutting inscriptions on bronze as well as on stone; sometimes the letters were filled with white lead.

16. The kind of lettering used in inscriptions varies according to its date and purpose and the material on which it is made. The characters change very considerably from the time of the earliest known inscription (c. 600 B.C., the *fibula* of Praeneste *CIL* i², p. 320) till the *scriptura monumentalis* reached full development under Augustus and the early Empire: *litterae quadratae* (the *quadrator* squared the stones) became a recognized type familiar in the best inscriptions of, say, the time of Trajan; they are bold, rounded, and unornamented. The *scriptura actuariaria* was derived from the flowing letters shaped naturally by a brush. The term *scriptura cursiva* is used to denote the letters of graffiti (writings on walls) which are akin to running handwriting. Individual letters vary much in the different *scripturae*. To save space letters were often run together or joined by 'ligatures'. From c. 90 B.C. to A.D. 250 an apex, shaped usually like an acute accent, was used (by no means always) to denote a long vowel. Sometimes dots above the foot of the line indicate the end of a word and less commonly small ivy leaves (*hederae distinguentes*) mark breaks.

17. Inscriptions are generally composed with extreme brevity to save space and lend dignity. But brevity is obtained also by drastic and elaborate abbreviation of words; this constitutes one of the main difficulties in beginning a study of inscriptions (handbooks usually contain a glossary of the main abbreviations). Certain words are more usually abbreviated than written in full, and the method of abbreviation on the whole follows defined rules. It is a convention in printing inscriptions that the letters necessary to complete an abbreviation are printed in round brackets ().

18. Inscriptions are dated (i) by subject-matter; for the assigning of a date most exact and detailed knowledge may be necessary, (ii) by the form of the letters or some peculiarity in phrase or order or spelling; on the other hand, badly cut letters occur in the best period. Forgeries have frequently been manufactured, chiefly in the Renaissance, to support a particular scholar's view or to glorify a family; but many of them contain imperfections or slips by which modern knowledge can prove their spuriousness.

19. A great many, perhaps most, inscriptions are imperfectly preserved; for the stones have often been damaged and used again for later building. But restoration of the whole inscription from a few surviving frag-

ments can often be made with confidence by scholars who have knowledge of epigraphic usage and Roman history. Restorations are conventionally enclosed in square brackets [] in printing.

BIBLIOGRAPHY

About A.D. 800 a monk made a collection of Latin inscriptions, which was later found at Einsiedeln in Switzerland; thereafter many collections have been made, on which we rely for some inscriptions now lost, as also on manuscript notes made by Italian painters copying ancient buildings. The plan of a complete *Corpus Inscriptionum Latinarum* (*CIL*), conceived first in Copenhagen and encouraged in France, was carried out in Germany, chiefly on the initiative of Mommsen. The first volume appeared in 1863. The collection is arranged on a geographical basis: i *Inscr. Latinae antiquissimae* (down to 44 B.C.), Fasti and Calendars; ii Spain; iii Egypt, Asia, Greek provinces of Europe and Illyrium; iv *Inscr. Parietariae* of Pompeii, &c.; v Gallia Cisalpina; vi Rome; vii Britain; viii Africa; ix Calabria, Apulia, Samnium, Sabini, Picenum; x Brutii, Lucania, Campania, Sicilia, Sardinia; xi Aemilia, Etruria, Umbria; xii Gallia Narbonensis; xiii Tres Galliae et duae Germaniae; xiv Latium vetus; xv Urbis Romae Instrumentum domesticum; xvi Diplomata militaria. Many volumes contain 'parts' or 'supplements' made necessary by new discoveries. Before incorporation in a supplement new inscriptions are published in *Ephemeris Epigraphica*. See also *Inscriptiones Italiae* (1931-). The best known selection is that of H. Dessau, *Inscriptiones Latinae Selectae* (Berlin, 1892-1916) with 9,522 inscriptions and Latin commentary.

The chief general treatments are: J. E. Sandys, *Latin Epigraphy*³ (1927, revised by S. G. Campbell), with full bibliography, and R. Cagnat, *Cours d'épigraphie latine*⁴ (1914). See also Lietzmann, *Kleine Texte* (which include 'Res gestae divi Augusti', 'Altlateinische Inscr.', 'Vulgärlateinische Inscr.', 'Pompeianische Wandinschr.'): Bücheler, *Carmina Epigraphica* (Teubner, 1895-7); G. McN. Rushforth, *Latin Historical Inscriptions*, illustrating the history of the Early Empire⁵ (1930); C. G. Bruns, *Fontes Iuris Romani antiqui*⁶ (1909); R. H. Barrow, *A Selection of Latin Inscriptions* (1934). See also bibliographies under separate provinces (AFRICA, &c.), MONUMENTUM AENEANUM, MUNICIPAL. R. H. B.

EPILYCUS, cited by Athenaeus as a writer sometimes of Old (4. 140a) Comedy, sometimes of Middle (e.g. 1. 28c). The *Κωπυλίσκος* has a Doric title, and was written partially in Doric.

FCG ii. 887 f.; CAF i. 803 f.; Demianczuk, *Supp. Com.*, p. 40.

EPIMELETES. (a) In Greek cities this title was given either to regular magistrates who managed special departments, such as the water supply, the docks, or festivals, or to special commissioners elected for some temporary need, such as the erection of a public building. (b) In Ptolemaic Egypt the *epimeletes* was in the third century the chief financial official of the *nomos* (q.v. 1). In the second century he was subordinate to *ὁ ἐπὶ τῶν προσόδων*, and he was sometimes responsible for a part of a nome only. (c) In the Roman period *epimeletes* is often the translation of the Latin *curator*. A. H. M. J.

EPIMENIDES, religious teacher and wonder-worker of Crete. According to Plato (*Leg.* 1. 642d) he was at Athens, performing religious rites and prophesying, about 500 B.C. Others said that he purified the city after the slaughter of Cylon's associates about 600 B.C. (Arist. *Ath. Pol.* 1, etc.; Diels, *Vorsokr.*³ i. 29 f.). With the variations in date go the legends of his great age (157 or 299), and miraculous sleep of fifty-seven years (Diog. Laert.; Diels, ib. 28). The stories of wanderings out of the body (cf. Suidas; Diels, ib. 29) rank him with Aristeas, Hieronimus, etc., but his god was the Cretan Zeus, and Plutarch says that the men of the time called him *Κούρης νόος* (Diels, ib. 30). Tradition assigned to him a *Theogony* and a *Cretica*, also *Katharmoi* and other mystical writings.

Sources and fragments in Diels-Kranz, *Vorsokr.*⁴ i. 27-27.

EPINOMIA, see PASTURAGE.

EPIPHANY. In Homer the gods regularly appear visibly and have dealings with men—fighting, helping, loving (cf. RELIGION, MINOAN-MYCEANEA). Poetic or

mythical epiphanies, regarded as belonging to the distant past, persist throughout Greek literature, and sometimes serve the ends of religion by giving the *aition* for a living cult, e.g. the Homeric Hymn to Demeter. Even the *märchenhaft* story of Baucis and Philemon suggests this by its ending. Dionysus especially appeared with manifestations of power to compel unbelievers, as in Euripides' *Bacchae*. In historical epiphanies the cult-motive is always prominent. In the famous story of Philip-pides, Pan demands worship at Athens in return for his help (Hdt. 6. 105). Two common types are (i) epiphanies to help or terrify in battle, frequent in Herodotus (8. 64; 8. 36 ff., etc.), and cf. in Roman saga the Dioscuri at Lake Regillus (Dion. Hal. *Ant. Rom.* 6. 13); (ii) healing epiphanies. Asclepius in effecting cures always appeared to the sufferer, usually in a dream (incubation) but sometimes waking (Isyllus-inscr. and *SIG* 803). Frequent Hellenistic inscriptions record epiphanies connected with the foundation of cults (e.g. the *Soteria* at Delphi; Dionysus 'in the tree' at Magnesia, Kern, *Inscr. von M.* 215 b). The genuineness of the belief cannot be doubted (cf. *Acts* xiv. 10-12), though cases of fraud were recognized (Pisistratus, Hdt. 1. 60). The term *epiphaneia* was used also to denote miracles in which the deity was not thought to be seen (Dion. Hal. *Ant. Rom.* 2. 68). Deified living rulers were hailed as *θεοὶ ἐπιφανείς*, because their power was felt. In general see F. Pfister in *PW* Suppl. iv. 277 ff.; A. D. Nock, *JHS* xlviii (1928), 38 ff.; cf. also the remarks of Nock in 'A Vision of Mandulis Aion', *Harv. Theol. Rev.* xxvii (1934), 53-104, esp. 67 ff.

EPIROTA, see CAECILIUS (3).

EPIRUS (*Ἠπειρος*, 'Mainland'), north-west area of Greece, from Acrocraunian point to Nicopolis, with harbours at Buthrotum and Glycys Limen (at Acheron's mouth); bordered on south by Gulf of Ambracia, and on east by Pindus range with pass via Metsovo to Thessaly. Three limestone ranges parallel to the coast and the Pindus range enclose narrow valleys and plateaux with good pasture and extensive woods; alluvial plains were formed near Buthrotum, Glycys Limen, and Ambracia. Epirus had a humid climate and cold winters. In terrain and in history it resembled upper Macedonia. Known to Homer only for the oracle at Dodona, and to Herodotus as the home of Dorian invaders and for the oracle of the dead by Acheron, Epirus received Hellenic influence from Ambracia and Corcyra. Theopompus knew fourteen Epirote tribes, probably of Dorian and Illyrian stocks, of which the Chaones held the plain of Buthrotum, the Thesproti the plain of Acheron, and the Molossi the plain near Dodona, which forms the high-land centre of Epirus with an outlet southwards to Ambracia. The unification of Epirus in a symmarchy led by the Molossian king was finally achieved by Alexander (q.v. 6), brother-in-law of Philip II of Macedon. The invasions of Italy led by Alexander and Pyrrhus both ended in failure; a weakened Epirus was the victim of attack from Aetolia, Macedon, and Illyria, until in c. 232 B.C. the Molossian monarchy fell. The Epirote republic with a federal assembly at Phoenice (near Buthrotum) was involved in the wars between Rome and Macedonia, culminating in 167 B.C. with the sack of Epirus and deportation of 150,000 captives. Under the Roman Empire roads were built through Epirus, and Roman colonies founded at Buthrotum and Nicopolis. Ancient remains indicate that Epirus flourished in Hellenistic and declined in Roman times.

EPISTATES. (a) At Athens the *ἐπιστάτης τῶν πρυτανέων*, chosen daily by lot from the *prytaneis*, during his day of office held the State seal and keys, and in the fifth century B.C. presided in council and assembly. In the fourth century he selected the *proedri* by lot, and from them, also by lot, the *ἐπιστάτης τῶν προέδρων* who presided. Similar *ἐπίσταται* are found in other Greek cities; but sometimes the title is equivalent to the Athenian *prytaneis*. (b) In Ptolemaic Egypt the *epistates* was a royal official who administered justice in each *nomos* and sub-district. These officials were distinct from the *ἐπιστάται τῶν φυλακῶν* (see *POLICE*, GREEK). (c) In Ptolemaic Egypt the *ἐπιστάτης ἱεροῦ* was the superintendent, probably appointed by the Crown, of a native temple. (d) In all Hellenistic kingdoms the *ἐπιστάτης* was a high commissioner appointed by the king to control a subject city. He sometimes, perhaps generally, had a royal garrison to maintain public order. He frequently exercised an informal and in theory probably voluntary jurisdiction, settling suits out of court, preferably by arbitration. At Thessalonica and at Seleucia in Pieria he is known to have possessed a constitutional power of veto over legislation.

EPISTOLOGRAPHY, see LETTERS.

EPISTULA AD PISONES, commonly known as *Ars Poetica*, see *HORACE*.

EPITADEUS, a Spartan ephor, who (probably soon after 400 B.C.) introduced a law authorizing the transfer of Spartan land-lots by gift or bequest, a method perhaps already much practised in secret. To this measure, and to the wealth accruing to Sparta after the Peloponnesian War, the concentration of the territory of Laconia and Messenia in a few hands (Arist. *Pol.* 2. 1270^a) was mainly due. A. M. W.

EPITAPHIOS, a funeral speech, delivered, according to Athenian custom, by a citizen chosen on the grounds of his high moral and mental qualities (Thuc. 2. 34), at a public funeral of those who had fallen in battle.

The conventional form comprised a tribute to the virtues of the dead, a summary of their country's glorious achievements in the past, a consolation to their relatives, and an exhortation to the survivors to imitate their virtues. Thucydides professes to record in full the speech thus delivered by Pericles at the end of the first year of the Peloponnesian War. The speaker follows the usual form, except that, instead of enlarging on past history, he tells of the glories of Athens in her maturity.

As a contrast to the impersonal austerity of Pericles we have the speech of Hyperides on Leosthenes and others who died in the Lamian War (322 B.C.). Hyperides, who was an intimate friend of the dead general, shows deep personal feeling, and a unique feature of this speech is his reference to the hope of personal immortality. A passage in Lycurgus (*Leoc.* §§ 39-40) is in effect a condensed *Epitaphios* on the dead at Chaeronea.

In addition to these genuine speeches we possess a florid fragment by Gorgias and a speech, composed under Gorgian influence, attributed to Lysias, which, though it cannot be referred with certainty to any definite occasion, may well be genuine (see J. Walz, 'Der Lysianische Epitaphios' (*Philol.* Suppl. 29. 4)). A similar composition attributed to Demosthenes is almost certainly spurious. Finally Socrates in Plato's *Menexenus* recites a funeral speech which, he affirms, was composed by Aspasia to be delivered by Pericles. J. F. D.

EPITHALAMIUM, GREEK. The *ἐπιθαλάμιον* was strictly a song sung by young men and maidens before the bridal-chamber (Dion. Hal. *Rhet.* p. 247), like the contents

of Sappho's Book 7, Theocritus 18, etc. It was distinguished from the *γαμήλιος*, which could be sung at any festival connected with a wedding (Eust. 1541. 49), and from the *ὑμέναιος*, the processional song which accompanied the newly wed couple to their home, and is described by Homer (*Il.* 18. 491-6) and Hesiod (*Sc.* 273-80).

C. M. B.

EPITHALAMIUM, LATIN. If Virgil's fourth eclogue is excluded, there are extant some seventeen Latin verse epithalamia. Epithalamia by Calvus, Tigidas, and Ovid are among those that have perished. The earliest and finest extant examples are the sixty-first and sixty-second poems of Catullus, who also in his sixty-fourth poem recounts the love and marriage of Peleus and Thetis. The influence of Sappho is discernible in Catullus, and her influence, direct or indirect, is sometimes suggested in the later rhetorical epithalamia of epic character. There are single examples by Statius, Ausonius (a cento), Paulinus of Nola, Ennodius, Venantius Fortunatus, and Luxorius (a cento). *Anthologia Latina* (Riese) 742 is an anonymous epithalamium. Claudian, Sidorius, and Dracontius have each left two epithalamia. A few verses by Gallienus are described as an epithalamium (S.H.A. *Gallieni Duo* 11. 8, and *Anthologia Latina* 711). The *Medea* of Seneca contains an epithalamium (56-115) which may well have owed something to one in Ovid's lost play with that title. The *De nuptiis Philologiae et Mercurii* by Martianus Capella is in mixed prose and verse, and a thing apart.

R. Reitzenstein, 'Die Hochzeit des Peleus und der Thetis', *Hermes* xxxv (1900), 73-105; A. L. Wheeler, 'Tradition in the Epithalamium', *AJPhil.* II (1930), 205-23; E. A. Mangelsdorff, *Das lyrische Hochzeitsgedicht bei den Griechen und Römern* (1913); J. Fries, *Ein Beitrag zur Ästhetik der römischen Hochzeitspoesie* (1910); C. Morelli, 'L'epithalamio nella tarda poesia latina', *Studi Italiani di Filologia Classica*, xviii (1910), 319-432. G. B. A. F.

EPITHETS, DIVINE. In considering the very numerous surnames or epithets of gods it is necessary first to distinguish between those appearing only as literary (especially epic) ornaments and those known to have been used in cult. Thus we have no proof that Athena was ever addressed in ritual as *γλαυκῶπις*; it is her stock epithet in Homer, Zeus' pet-name for her (*Il.* 8. 373). It seems unlikely that Ares was prayed to as *βροτοδολῆς*; he is so addressed by Athena (*Il.* 5. 31), which is a very different thing, and it is his stock epithet (as *ibid.* 846). In Latin such ornaments are abundant; thus in Virgil, Mars is *durus* (*Ecl.* 10. 44); *impius* (*G.* 1. 511); *indomitus* (*Aen.* 2. 440); *saevus* (*Aen.* 11. 153). These are certainly not cult-epithets, and in some cases the name of the god hardly means more than 'war, strife'. The epithet is purely poetical in *Aen.* 9. 717, where he is called *armipotens*, and in 11. 8 where *bellipotens* is used instead of his name. But there are many border-line cases, hard to decide. We have no instance of Athena being called Pallas in cult, yet it is not easy to suppose that so familiar a name was never used for her by worshippers; Zeus' stock epithet, 'cloud-gatherer', appears in the voc., *νεφεληγερέτα*, in epic in many places where it is syntactically a nom., strongly suggesting that its form had become fixed by some ancient liturgical phrase, which, however, is quite lost to us. Now and then an epithet is used to avoid mentioning an ill-omened name; *Ilades* in Sophocles, *OC* 1606, is Zeus *χρόνιος*, and in Aesch. *Supp.* 231 he is even Zeus *ἄλλος*.

2. But coming to those epithets which are guaranteed by their occurrence in liturgical formulae, dedications, and the official names of temples, we may distinguish the following classes. (1) Purely local, meaning that the deity in question is worshipped, or has a temple or altar, at such-and-such a place. Thus Apollo *delios* is simply Apollo who is worshipped in Delos, and differs from the Pythian, or any other similarly named Apollo, no other-

wise than as Our Lady of Lourdes does from Our Lady of Loretto. Dionysus *Κυδαθηναῖος* (Dittenberger, *SIG* 109. 16 and elsewhere) is nothing but the Dionysus who has a cult in the Attic deme *Κυδαθηναίων*. The Bona Dea (q.v.) Subsaxana gives rather the address of her temple than any characteristic of her own; cf. St. Mary's le Strand, St. Martin's in the Fields. Such titles are of no more than topographical interest. At most they may tell us something of the history of the cult, if the title does not fit the immediate locality; a Demeter *Ἐλευσία* worshipped at Pheneos in Arcadia (Paus. 8. 15. 1) manifestly has something to do with the famous cult at Eleusis, and the local legend said as much. In like manner, the vow of a temple to Venus Erucina, i.e. the Aphrodite of Eryx, in Rome (Livy 22. 9. 10) was made by advice of a Sibylline and therefore Greek oracle. (2) Titles indicating association with another god. These are often of some historical importance, and at times puzzling. Apollo *Κάρνειος* (*SIG* 736. 34 and 69) has behind him a history of identification, cf. *CARNEIA*; Athena *Ἥφαιστια* (*ibid.* 227. 20) need surprise no one, in view of the resemblance of some functions of the two deities; but it is less easy to see why she had a temple at Megara under the title *Μαγνίς* (Paus. 1. 42. 4). In Latin these most characteristically take the form, not of an adjective applied to the god's name but of a genitive following it, as in the much-quoted *conprecaiones* (q.v.) in Gellius 13. 23 (22). 2, *Luam Saturni, Salaciam Neptuni, Horam Quirini*, etc. Here in all cases the first of the pair is the less important, and the phrases mean 'Lua (etc.) who is associated with or belongs to the sphere of activity of Saturnus (etc.)', as is now pretty generally agreed. Adjectives are, however, used in the *Tabulae Iguvinae*, as *1 A 3, Iuve Krapuui (Ioui Grabouio), 8, Trebe Iuue (Trebo Iouio)*, though the meaning of the first adjective is not certain. (3) Undoubtedly the largest and most important class of epithets, however, have reference to the functions of the god or goddess, either in general or with reference to some particular occasion on which his or her power was manifest. Thus, Zeus has a great number of titles denoting his control of the weather and all that depends on it; he is *Βροντῶν*, Thunderer, *Κεραύνιος*, God of the Thunderbolt, *Ὀμβριος*, Sender of Rainstorms, *Υέτιος*, Rainer, and as a natural consequence *Γεωργός*, Farmer; also *Ὀύριος*, God of Favourable Winds, and so forth. Examples may be had from Farnell, *Cults* (index under 'Zeus'), and references there; the corresponding entry in the index to A. B. Cook's treatise on Zeus would supply abundant instances of every kind of title mentioned in this article. Aphrodite has epithets denoting her power over the sexual life of mankind, as *Ἀρβόλογηρα*, 'delayer of old age'; her connexion with love whether licit or illicit, for example *Πάνδημος* 'Goddess of the whole people', in her Athenian worship as a deity of marriage (Farnell, ii. 658), and on the other hand *Ἐραῖρα* and even *Πόρνη* (*ibid.* 667). These last belong to an extremely curious sub-class in which the characteristics of the worshipper are transferred to the deity; both signify the goddess who is worshipped by harlots. Hera in like manner is called *Παῖς*, *Τελέια*, and *Χήρα* at her three shrines in Stymphalia, in other words Maid, Wife, and Widow (Paus. 8. 22. 2); she naturally received the worship of women of all ages and conditions. The local legend was somewhat at a loss to explain the third title, since Zeus cannot die, and invented a quarrel between the two leading to a separation; clearly the sense of such epithets was no longer remembered when Pausanias wrote.

3. Of epithets referring to a particular manifestation of a god's activity two Roman examples may be given. Mars Ultor (see Plummer-Ashby, pp. 220, 329) owed his title to his supposed intervention on Augustus' behalf at Philippi and apparently in the recovery of the standards taken by the Parthians. Jupiter's titles

Custos and Conservator (Tacitus, *Hist.* 3. 74) refer *inter alia* to the thank-offerings made him by Domitian after his escape from the Vitellians when they took the Capitol.

4. Epithets having reference to the higher (moral or civic) qualities of a deity are not uncommon, though less so than those which are due to his natural functions. It is to be noted that there is a tendency in later ages to read such qualities into an old title; thus Athena *Προναία* at Delphi, so named from the fact that her shrine was in front of the temple of Apollo, had so decided an inclination to become *Πρόνοια* that some manuscripts of Herodotus 8. 37. 2 have been infected by it. As genuine examples may be instanced Apollo *Ἀρχηγέτης* (see APOLLO), Athena *Βουλαία* (of the Senate), Venus Verticordia.

5. Late hymns, for instance those of the Orphic collection, have a strong tendency to heap up epithets, including the most unheard-of and fanciful, e.g. no. 28 (Abel), to Hermes.

C. F. H. Bruchmann, *Epitheta deorum quae apud poetas Graecos leguntur* (Teubner, 1893); J. B. Carter, *De deorum Romanorum cognominibus* (Teubner, 1898) and *Epith. deor. q. a. p. Latinos leguntur* (Teubner, 1902) are useful, but there is room for a large and exhaustive work. H. J. R.

EPITOME (ἐπιτομή). I. GREEK. The production of summaries or abbreviated versions of longer works, especially scientific works, was much practised in the post-classical era. Thus Pamphilus' Glossary was reduced from 95 books to 30, and then to 5. Strabo was often epitomized (*GGM* 2. 529 ff.). Aristophanes of Byzantium epitomized Aristotle's *Historia animalium*, and the epitome was later epitomized by Sopatros. The first two books of Athenaeus and part of the third survive only in an epitome. But the most important of all Greek epitomes is Proclus' prose summary of the *Epic Cycle*, which has come down to us through Photius, and is a most important source for Greek mythology. J. D. D.

II. LATIN. In Rome the mental lethargy of late Imperial times betrayed itself in a demand for potted-history books. Works of the dimensions of Livy's history dismayed the reading public and the demand was met in two ways: (1) by the *breviarium*, which aimed at giving a short and concise survey of history (see FLORUS, AURELIUS VICTOR, EUTROPIUS, RUFIIUS FESTUS); (2) by the epitome, which offered condensed versions of, or extracts from, the works of others—an obvious danger to the survival of the originals. Among the latter is the so-called *Epitome Caesarum*, a hotch-potch account of Imperial history from Augustus to Theodosius which in the first eleven chapters betrays relationship with Aurelius Victor's *Caesares*. Another epitome is the work *De viris illustribus urbis Romae* which is preserved along with the *Caesares*. This gives a history of regal and republican times in the form of biographies. From the style, omissions, and obscurities it is evidently an epitome whose source is probably independent of, and antecedent to, Livy.

Apart from these we may regard as epitomizers L. Septimius, who contracted the last four books of his *Dictys* into one, and the so-called 'Hegcippus', who in his adaptation of Josephus' *Jewish War* compressed books 5, 6, and 7 of the original into one. We have, further, an epitomized version of Julius (q.v. 13) Valerius' translation of the Alexander Romance.

The *Epitome Juliani* is a sixth-century translation and an epitome of some 122 *Novellae* (*Νεαπαὶ διατάξεις*) of Justinian.

Epitomes did not always prevent the preservation of originals. Vitruvius and his abbreviator Faventinus have both survived. Two abridgements did not destroy Valerius Maximus. Pliny's *Natural History* weathered epitomizing and excerpting. Half of Seneca's *Con-*

troversiae and about three and a half decades of Livy are extant despite summaries. But in some cases the abridgement triumphed: e.g. Justinus supplanted his foundation Trogus.

Cf. M. Galdi, *L'Epitome nella letteratura latina* (1922). See PERIOCHAE. L. R. P. and J. W. D.

EPŌNA, a goddess associated with horses and mules, worshipped by the Romans, and sometimes held to be an old Italic divinity. But the name is purely Celtic. (Cf. Gaulish *epo-redias*, 'equorum domitores'; Breton *ebeul*, colt; Ir. *ech*, horse.) Epona is mentioned by Juvenal (8. 157) and several other authors. Numerous monuments are preserved, chiefly in eastern Gaul, northern Italy, and the regions of the Rhine and the Danube, and the dedications are mostly by soldiers. In fact the cult was transported so far by the army that it has been called 'the most widespread of Gaulish myths'. The goddess is represented as riding a horse or mare, or sitting among horses and mules and feeding them. She sometimes has the same symbols as the *Deae Matres* (q.v.), and the plural form *Eponabus* (like *Matribus*, *Campestribus*) appears on one inscription. It is conjectured that a cult of the horse itself may have preceded the worship of the horse-goddess and been superseded by it.

For references in texts and inscriptions see A. Holder, *Altceltischer Sprachschatz*, s.v. 'Epona'. The principal study of the cult is by S. Reinach, in the *Rev. Arch.* 3rd ser. xxvi, xxxiii, xxxv, xl. For an attempt to explain the myth by Irish and Welsh stories see H. Hubert, in the *Mélanges Vendryes* (1925), 187 ff. F. N. R.

EPONIA, see FINANCE, GREEK, para. 6.

EPONYMOI (ἐπώνυμοι) are those who give their name to anybody or anything. They were of three kinds in antiquity. (1) Gods were the *eponymoi* of cities, as Apollo of Apollonia and Athena of Athens. (2) Heroes were the *eponymoi* of tribes, demes, and families. When Cleisthenes divided the Athenians into ten tribes, the Delphic oracle chose ten Attic heroes to be their *eponymoi*; forty-two other heroes became the *eponymoi* of the successive years of military service from 18 to 59. (3) In many cities the presiding magistrate was the eponym of the year, as the archon in Athens, the *stephanephoros* in Miletus, the consuls in Rome. J. E. F.

EPOPEUS (Ἐπώνεύς; corrupted to Epaphus by Hyginus, *Fab.* 7. 1; 8. 2-3), the king of Sicyon who protected Antiope (q.v.). He is post-Homeric, first in the *Cypria*, where a version of his story was told in an episode (Proclus ap. Phot.). Eumelus (in Paus. 2. 1. 1) said that he was son of Alcæus the son of Helios, and father of Marathon, the eponym of the Attic region of that name. H. J. R.

EPRIUS MARCELLUS, TITUS CLODIUS. Born at Capua of humble parentage, he is first heard of as *practor peregrinus* in A.D. 48. As *legatus Lyciae* he was guilty of extortion, but by bribery secured both his own acquittal and the exile of one of his accusers (57). In 66 he was *cos. suff.* I, and in the same year, with Cossutianus Capito, he accused the Stoic Thrasca (q.v.) Paetus. For this Nero rewarded him with five million sesterces (c. £50,000). He was subsequently on terms of bitter enmity with Helvidius (q.v.) Priscus, who attempted to prosecute him in 70. For attacks by Helvidius upon him see Tac. *Hist.* 4. 6-8; 43. From 70 to 73 he was *proconsul Asiae*, and on his return *cos. suff.* II (May 74). He continued to enjoy great influence with Vespasian until 79, when he conspired with Caccina Alicus and was forced to suicide. He was a biting and effective orator (Tac. *Dial.* 5. 7; 8. 1; *Ann.* 16. 22 and 29). He also held the offices of *augur*, *curio maximus*, and *sodalis Augustalis*. R. L. J.

PIR², C 915.

EPULONES, the latest in date of the *quattuor ansplicissima collegia* of Roman priests. They were first instituted in 196 B.C. (Livy 33. 42. 1), and were then three in number (*tresviri epulones*), the bill for their creation being brought in by C. Licinius Lucullus, then tribune of the plebs, who was himself one of the first members. Their business was to organize and supervise the *epulum Iovis* and the similar public banquet which had by that time become a prominent feature of several festivals, as the *Ludi Romani* (cf. Cicero, *De Or.* 3. 73). They were later increased to seven and continued to be called *septemviri epulones*, although under Caesar their number became ten (Dio Cassius 43. 51. 9).

Wissowa, *RE* 423; 518; Marquardt-Wissowa, *Staatsverw.* iii². 347 ff. and references there. H. J. R.

EPYLLION (ἐπύλλιον, diminutive of ἔπος), a literary type popular from Theocritus to Ovid, was a narrative poem of about 100 to 600 hexameters; the subject was usually taken from the life of a mythical hero or heroine, the love motif being prominent in later epyllia. Some dialogue and at least one speech generally appear. The distinctive feature is the digression; this occurs in all extant epyllia except Theocritus' *Hylas* and the majority of the legends in Ovid's *Metamorphoses*. Usually introduced as a speech, less commonly as a description of a work of art, the digression makes a contrast to the main plot in either subject or details. Owing something to catalogue poems and Homeric hymns, the epyllion was evolved in the Alexandrian age. Formal artistry, learned allusions, romantic and even morbid themes were in varying degree prominent. The epyllia of Theocritus (*Hylas*, *Heracliscus*, and—if his—*Heraclis Leontophonos*) and of his school (Moschus's *Europa* and Bion's fragmentary *Achilleis*) are mainly successions of exquisite pictures; plot and character-drawing are comparatively slight. Callimachus in the fragmentary *Hecale* (published about the time when Theocritus died) developed a more complex plot. Dialogue was increased; the character of *Hecale*—possibly also of *Theseus*—was carefully constructed; the picturesque element, though not abandoned, was subordinated to the psychological. Euphron (b. 276 B.C.), represented by some titles and fragments, wrote at least six epyllia. Allusive and obscure (Cic. *Div.* 2. 133), he probably dropped the picturesque element, popularized the criminal love-story, and concentrated interest on the heroine. None of the other Greek epyllia are known. Parthenius (1st c. B.C.) may have written epyllia; but his *Περὶ ἐρωτικῶν παθημάτων* (thirty-six prose love-stories, full of violence, treachery, and unfaithfulness, dedicated to Cornelius Gallus for use *eis τὴν καὶ ἀγωγίαν*) shows the morbid sensationalism preferred by Euphron's successors.

Latin epyllia followed either the idyllic or the psychological type, either Theocritus or Euphron. The idyllic group (to which may have belonged Cicero's *Aleyone*, Calvus' *Io*, and Cornificius' *Glaucus*) is represented by Catullus' *Peleus and Thetis*, the *Culex*, and Virgil's *Aristaeus* (in *G.* 4). Plot and character are indeed more developed in these than in the earliest epyllia; but their strength lies in graceful and vivid pictures. Catullus, however, while idyllic in main subject, develops Ariadne's character in the digression, thus introducing a novel point of contrast—an innovation followed by Virgil with the Orpheus and Eurydice digression in his *Aristaeus*. The *Aristaeus* shows the epyllion at its highest. Supremely natural, Virgil raises it out of the studied artificiality which hitherto encumbered it. He excels his predecessors in technique, pathos, vividness; single lines or words often form pictures. The psychological group is typified by the *Ciris*, which narrates the love-inspired treachery of Semele. Frequently learned and obscure, it is perhaps by Gallus. Epyllia by Gallus (probably indicated in Verg. *Ecl.* 6. 31 ff.; cf.

F. Skutsch, *Aus Vergils Frühzeit*, 1901, c. 2) and Cinna's *Zmyrna* were almost certainly similar. This type is brought to its climax by the epyllia in Ovid's *Metamorphoses*. He makes some use of the picturesque method; like Virgil he can construct scenes out of a few words. But he excels in the psychological development of the heroine, especially through a set speech. Occasionally rhetoric betrays him into unnaturalness; but his diction has an easy flow, and his skill as a new teller of old stories is extraordinary. After Ovid, the epyllion was abandoned. The success of the *Aeneid* popularized epic, while the stock of epyllion subjects was almost exhausted. No one seemed original enough to develop historical or fictitious epyllia.

EQUES, EQUESTER ORDO. *Equus* means firstly 'horseman', 'cavalryman', secondly 'knight', a member of that second rank of nobility in Rome from which horsemen were drawn. *Equester ordo* was the collective name for those knights. The *ordo* ranked as one of the permanent classes of the Roman population, but lacked a regular political organ.

2. The general lines of the history of the knights are as clear as the detail is obscure. The *equites* were originally the State cavalry, serving on horses provided by the State (*equo publico*). Their function in the army was certainly more important than later. They were only distinguished as a class in so far as a certain *census* was considered necessary to maintain the position. Later, the *equites equo publico* sometimes proved insufficient for the need, and during the siege of Veii (c. 400 B.C.) service for additional knights, *equo suo*, was added. Later still the Romans ceased to employ home cavalry to any extent and depended almost entirely on their allies. Small bodies of cavalry were still attached to the legions, but the *equites* came to serve mainly in posts as officers. Until the age of the Gracchi there was nothing to prevent a senator from serving as a knight. Service was from the age of 17 to 46, and the pay was three times that of the infantryman; 10,000 *sestertii* were allotted for the purchase, 2,000 for the keep of the horses. The knights were reviewed at each *lustrum* by the censors, who could, as a mark of censure, order the horse to be sold. A public parade, *transvectio*, instituted in 312 B.C., took place every four years.

3. Gaius Gracchus created a new order in the State, by excluding senators from service as knights, and by giving definite political functions to the class from which knights were drawn—certainly only completing a process that must have begun in the Second Punic War. He gave to the knights the seats on the juries, hitherto held by the Senate, and set them to collect the taxes of Asia; a regular equestrian census, usually assumed to have been 400,000 *sestertii*, was probably established. Henceforward, the knights were always rivals, often enemies of the Senate. Sulla was their enemy, Cinna their friend, Cicero the advocate of 'concordia ordinum'—friendly collaboration of knights and Senate. The jury-seats, restored to the Senate by Sulla, were divided between senators, knights, and *tribuni aerarii* in 70 B.C. In 67 B.C. special seats in the theatre were re-assigned to the knights by L. Roscius Otho. As tax-collectors, the knights fought to secure easy contracts and a free hand in the provinces. The knights suffered heavily under the proscriptions. On several occasions proposals were made to recruit new members of the Senate from their ranks.

4. In the *comitia centuriata*, under the 'Servian Constitution', there were eighteen centuries of knights, and from them the *centuria praerogativa* was chosen by lot. Twelve of these centuries certainly contained *equites equo publico*; the remaining six, known specially as the *sex suffragia*, may have included senators also. Later

antiquarians traced the whole system back to the kings. Romulus appointed 300 *celeres* (*trossuli*); Tullus Hostilius, after incorporating Alba Longa, raised the number to 600; Tarquinius Priscus, hindered by an augur from increasing the centuries, doubled the numbers in each ($6 \times 200 = 1,200$). Servius Tullius treated these as twelve centuries and added six more, or, according to another account, found six and added twelve. But there is a very wide historical gap between the kingly period and the eighteen centuries that certainly existed in the late Republic (for a possible reference to twelve, and not eighteen, see Livy 43. 16. 14).

5. Augustus revived the *recognitio*, and combined it with the *transvectio*, which now became annual. The corps of knights (*τέλος*) was organized in *turmae* under *seviri*. Princes often held the title of *princeps iuventutis* (q.v.). The number was no longer restricted to 1800. The emperor could assign the *equus publicus* at will to any man of free birth, blameless character, and the necessary census of 400,000 *sestertii*. Men over thirty-five were allowed to return the horse, if they chose. The *equester ordo*, in its looser sense, included as well as *equites equo publico*, ex-knights and the sons of senators before they assumed senatorial rank. The distinctive marks of the *ordo* were the *tunica* with narrow border (*angusticlavus*) and the golden ring.

6. From the knights the emperors drew officers for the army (tribunes and *praefecti*), jurymen, procurators, and other civil servants. The crowns of the equestrian career were the prefectures of the Praetorian guard and of Egypt. Hadrian extended their employment at the expense of freedmen and gave them such posts as *a rationibus* and *ab epistulis*. The knights steadily gained at the expense of the Senate, and, in the third century, displaced senators from many provincial posts and from the military commands. In the fourth century the knights survived as a social order, but with diminished political importance.

EQUIRRIA, see MARS.

EQUITES SINGULARES IMPERATORIS, probably created by the Flavians, were a mounted bodyguard of the emperor. Chiefly Germans and Pannonians, they numbered at first 500 and later 1,000. Legally their status was that of *Auxilia*, but in practice they formed part of the Praetorian guard. They had their own camp near the Lateran under the command of two Praetorian tribunes.

ERANOS. In Homer and later authors this word meant a meal to which each partner contributed his share; but from the fifth century B.C. it was mostly a loan, free of interest, given to an individual by a number of friends. Creditors could form a club under an *ἀρχέφανος*, *ἐρανάρχης*, or *προστάτης ἐράνων*, who paid out the loan and received it in repayment. Each partner's claim was transferable, and repayment of sums greater than the original loan could be agreed upon, so that an *eranos* could be profitable business. Papyri from Alexandria suggest that this type of loan was often used by Hellenistic Jews to evade the biblical prohibition of interest.

ERASISTRATUS of Ceos, physician, lived in Alexandria together with and after Herophilus (first half of the 3rd c. B.C.). His school still flourished in Galen's time; his books were read as late as the fourth century A.D. A scholar and philosopher rather than a practitioner, Erasistratus became more and more interested in scientific

research, which included even quantitative experiment; working incessantly, he tried to complete his knowledge and did not shrink from admitting earlier mistakes. On the basis of the Democritean atomism and in connexion with Straton's system he apparently developed original ideas (e.g. that of a discontinuous vacuum); although relying on mechanistic principles of explanation, such as the *horror vacui*, he also believed that nature does nothing in vain. His anatomical studies led to the clear distinction of sensory and motor nerves; in post-mortem dissections he recognized the changes of the body due to disease; he was interested in comparative anatomy. In physiology he studied the growth of the body and the process of digestion; he theorized on the flow of the blood through the veins and that of the *pneuma* through the arteries. All diseases he explained by one cause, viz. plethora, repletion of the body through undigested nutrition; yet he did not neglect the local differences of illness nor the constitution of the patient. In therapy he emphasized the dietetic method and violently opposed phlebotomy and purgation.

ERATOSTHENES of Cyrene (c. 275–194 B.C.), pupil of Callimachus and Lysanias, after spending several years at Athens, where he came under the influence of Arcesilaus and Ariston, accepted the invitation of Ptolemy Euergetes to succeed Apollonius Rhodius as head of the Alexandrian Library. The most versatile scholar of his time, he was the first to call himself *φιλόλογος*. By the Alexandrian specialists he was styled *βῆτρα*, 'second-rate', and *πένταθλος*, 'all-rounder'.

WORKS. 1. Literary criticism. Opposing the allegorical interpretation of Homer, he maintained that a poet wishes to charm, not to instruct. His most important work of scholarship was the treatise *On Ancient Comedy*, in at least twelve books; this was not a chronological study, but consisted of discussions of literary, lexical, historical, and antiquarian matters, and dealt with problems of the authorship and production of plays. He corrected Lycophron and Callimachus, and his work was much used by Aristophanes Byz. for his editions of the comic poets and by Didymus for his lexicon of comedy. His *Καταστερισμοί* treated the constellations and their mythology; the extant work of this name is probably not genuine. 2. Chronology. *Χρονογραφίαι* represented the first scientific attempt to fix the dates of political and literary history. He also compiled a list of Olympian victors. 3. Mathematics, astronomy, geography. Besides investigating arithmetical and geometrical problems (cf. his 'sieve' method of finding prime numbers), he dealt in *Platonicius* with mathematical definitions and with the principles of music, and he wrote geometrical works *On Means* and *Duplication of the Cube*. In his treatise *On the Measurement of the Earth* he treated mathematical geography, calculating with a high degree of accuracy the circumference of the earth and the magnitude and distance of the sun and moon. He was the first systematic geographer, and his *Geographica* (*Γεωγραφικά*), in which he sketched the history of the subject and dealt with physical, mathematical, and ethnographical geography, is often mentioned, sometimes disapprovingly, by later geographers, e.g. Strabo. 4. Philosophy. His essays had perhaps a mainly ethical interest. He wrote also a history of philosophy. 5. Poetry. His short epic *Hermes* described the

birth of the god, his youthful exploits, and his ascent to the planets. The short epic *Anterinyas* or *Hesiod* dealt with the death of Hesiod and the punishment of his murderers. [Longinus] (*Subl.* 33. 5) praises the elegy *Erigone*, which told the myth of Erigone and his daughter.

ERECHTHEUM, the third outstanding building on the Athenian Acropolis, begun in 421 B.C. and finished, after a lapse, in 407 B.C.; built of Pentelic marble, with friezes of black Eleusis stone to take applied white marble relief sculpture. Exact details of its construction are known from a contemporary inscription. It is tempting to accept W. Dörpfeld's restoration of the original design as a long rectangular building with projecting porches placed centrally on the sides, but there are no certain evidences of this. The main structure is divided into four compartments: the largest (east cella) has a prostyle-hexastyle Ionic portico; the west end is closed by a wall with engaged columns and corner piers. At this end is a unique and boldly projecting (though small) south feature—the 'porch of the maidens', with draped female figures (caryatids) serving as supports—and, nearly opposite on the north side, a still more boldly projecting porch with Ionic columns (partly reassembled in early twentieth century) standing on a lower level and having the tallest Order of the whole composition. Though the general form of the Erechtheum hardly conveys a homogeneous impression, the perfection of the design of its porches, and its beauty of detail—the capitals on north and east, the carved wall bands and the north door being unrivalled—make it the most notable Greek Ionic building in existence. See **ALCAMES**. For the origin of the Erechtheum see **ERECHTHEUS**.

G. P. Stevens and J. M. Paton, *The Erechtheum* (U.S.A. 1927). T. F.

ERECHTHEUS (*Ἐρεχθεύς*), a fabulous king of Athens, often confused with Erichthonius (see **ATHENA**) and perhaps identical with him originally. Like him, Erechtheus was son of Earth and reared by Athena, *Iliad* 2. 547 ff., where his worship is mentioned (for which see Farnell, *Hero-Cults*, 11; *Cults* i. 393; iv. 47-52). Cf. *Od.* 7. 80 f., from a comparison of which with the other Homeric passage it would seem that Athena and Erechtheus were honoured together in a predecessor of the historical Erechtheum (the old royal palace?). The chief legend of Erechtheus concerns his daughters, of whom there were three (Eur. fr. 357 Nauck; *Ion* 10 adds a fourth, Creusa q.v.). They included Chthonia (Erechtheus' children vary greatly from one account to another, for obvious genealogical reasons); when Eumolpus (q.v.) the Thracian, son of Poseidon and Chione, invaded Attica, Erechtheus inquired of Delphi how he might win the victory. He was told that he should do so if he sacrificed one of his daughters. Chthonia, therefore, was sacrificed by consent of her mother Praxithea, probably by her own also, the story forming the plot of Euripides' *Erechtheus*, known by its frequent citations in later authors (to those quoted in Nauck, 464 ff. add Hyginus, *Fab.* 46 and 235. 2, and Rose ad locc.). The other daughters killed themselves; Erechtheus' own fate is variously told.

H. J. R.

ERETRIA, a city of Euboea, mentioned in the Homeric Catalogue. Eretria planted colonies on the north Aegean coasts, especially at Pallene. A great trading centre and

rival of Chalcis, it was defeated in the struggle for control of the Lelantine plain, and declined in importance, though Aristagoras of Miletus sought its aid for the Ionic revolt against Persia. In the avenging expedition sent by Darius the city was besieged and burnt. Circa 445 B.C. Athens planted a colony, but in 411 Eretria revolted with the rest of Euboea. A member of the second Athenian Confederacy (378-377), it again revolted (349), and subsequently was the victim of Athenian and Macedonian intrigues. In the second Macedonian war Quinctius Flaminius sacked the city, which after the Roman victory was nominally free. Eretria took little part in the struggle of the Greek leagues against Rome, and in the time of Augustus still ranked as the second city of Euboea (q.v.). W. A. L.

ERETRIA, SCHOOL OF, founded by Menedemus (q.v.) as a continuation of the school of Elis, is mentioned by Diog. Laert. 1. 17-19; 2. 105; 126; Strabo 9. 393; Cic. *Acad.* 2. 129. Menedemus had a large following, but only one follower, Ctesibius, is known by name. The last trace of the school is in the title of a work of the Stoic Sphaerus against it. W. D. R.

ERICHTHONIUS, an Attic hero, usually son of Hephaestus; for the circumstances of his birth, see **ATHENA**. But Apollodorus (3. 187), says 'some' name Atthis daughter of Cranaus as his mother. Being born, he was taken care of by Athena, who put him into a chest and gave him into the charge of the daughters, or a daughter, of Cecrops (q.v.; Eur. *Ion* 21 ff.; 270 ff., and later authors, as Apollod. *ibid.* 189; Hyg. *Fab.* 166. 4-5); all agree that they opened the chest, which Athena had forbidden them to do, and then out of fright (because the child had wholly or partly serpent form or had a serpent with him) or driven mad by the anger of the goddess, leapt off the Acropolis and so were killed. Or the serpent killed them (Apollod. *ibid.*). This scene is not very common in art, but the birth is a fairly popular subject, see Furtwängler-Reichhold, *Gr. Vasenmalerei* iii. 95 and plate 137. Erichthonius became king of Athens, fostered the cult of Athena (Apollod. *ibid.*), received from Athena two drops of the blood of the Gorgon (q.v.), of which one poisoned and the other healed (Eur. *Ion* 999 ff.), and was the inventor or introducer of sundry things, as chariot-driving ([Eratosth.] *Catast.* 13; Hyg. *Poet. Astr.* 2. 13; hence he is sometimes identified with the constellation Auriga), silver (Hyg. *Fab.* 274. 4). He is often confused with Erechtheus (q.v.). H. J. R.

ERIDANUS (*Ἠριδάρης*), mythical river, having Eleetrides (Amber-) Islands at its mouth. Named by Hesiod (*Theog.* 338) as a real river, the Eridanus was placed first in unknown northernmost Europe, or in western Europe, flowing into the Northern Ocean. Herodotus (3. 115) and Strabo (5. 215) doubted its existence. Aeschylus called it 'Spanish', meaning the Rhône (see *Plin. HN* 37. 32).

Greek authors from the time of Pherecydes agreed to identify the Eridanus with the Po, and Roman writers followed suit (since there are no islands at the mouth of the Po, some authors sought these in the east Adriatic). The description of the Eridanus as an amber-river may embody the memory of an early amber-route from Jutland up the Elbe and Rhine (Rhenus) and down the Rhône (Rhodanus) or across the Alps to north Italy (see **AMBER**). E. H. W.

ERIGONE (*Ἠριγόνη*), in mythology, (1) daughter of Icarus (q.v.), loved by Dionysus, who approached her disguised as a grape-cluster (Ov. *Met.* 6. 125). When she found her father's body she hanged herself, and the Athenian virgins began to do the same till her ghost was appeased by the *aiōpa* and other honours (Hyginus, *Fab.*

130 and *Poet. Astr.* 2. 4; cf. Rose, *Greek Myth.*³ 154 f.). (2) Daughter of Aegisthus (q.v.) by Clytaemnestra (q.v.). She was rescued by Artemis from Orestes (q.v.), who had killed her brother Aletes and wanted to kill her, and made a priestess in Attica (*Hyg. Fab.* 122. 3). According, however, to Cinaethon ap. Paus. 2. 18. 6, Orestes had by her an illegitimate son Penthilus. H. J. R.

ERINNA, poetess, of the Dorian island of Tēlos (Suid. s.v. "Ἑριννα"), who probably lived at the end of the fourth century B.C., not, as Suidas says, in the time of Sappho, since her art shows affinities to that of Theocritus, and Asclepiades seems to have edited her work (*Anth. Pal.* 7. 11). Writing in local Doric with a few Aeolisms, she was famous for her *Distaff* ('Ἡλακάρη), a poem in 300 hexameters in memory of her friend Baucis. Remains of this on a papyrus have recently been added to the few lines known from quotations, and show that in it Erinna described experiences of girlhood shared with Baucis and lamented her death. The title may refer to the time of spinsterhood which it describes. She herself died at the age of nineteen (*Anth. Pal.* 7. 11. 2). There also survive three epigrams, one dedicatory (*Anth. Pal.* 6. 352) and two inscriptions for Baucis' tomb (*Anth. Pal.* 7. 710 and 712). A line from what seems to have been a Propempticon (fr. 2) is of doubtful authenticity (Ath. 283d).

Text: E. Diehl, *Anth. Lyr. Graec.* i. 4, pp. 207-13; P. Maas, in *Hermes* 69 (1934), 206-9. Criticism: C. M. Bowra, in *Greek Poetry and Life* (1936), 325-42. C. M. B.

ERINYES, spirits of punishment, avenging wrongs done to kindred, especially murder within the family or clan (cf. ORESTES, ALCMAEON), but also lesser offences (see *Il.* 9. 454, 571; 15. 204), even against those who are no kin but have a claim on our pity (beggars, *Od.* 17. 475, though there it is rather hoped than stated that there are such avengers for them if wronged). They once stop a violation of the course of nature (*Il.* 19. 418), where they silence the horse Xanthus, given human utterance temporarily by Hera (407). Hence the dictum of Heraclitus (fr. 29 Bywater = 94 Diels-Kranz), that if the sun left his course the Erinyes would find him. But these passages go much beyond popular ideas, more in keeping with which are their associations with oaths (*Il.* 19. 259; Hesiod, *Op.* 803-4).

This early connexion of the Erinyes with offences other than manslaughter makes against Rohde's theory (*Psyche*⁴ i. 270) that originally an Erinyes is the ghost of the person slain, though this will fit the other facts (close connexion with blood guilt, greater importance of the Erinyes of an elder brother or a parent, doubtful potency of those of a beggar; see the Homeric passages above) very well. It is on the whole more reasonable to suppose that they were from the first curses, actual or conditional, personalized, as Farnell argues (*Cults* v. 438-9), since a curse (cf. CURSES) is not a mere form of words but the stirring up of mysterious powers which work automatically when once set going. They are early associated with Earth (Hesiod, *Theog.* 185; cf. *Il.* 19. 259), which helps to explain Demeter Erinyes (cf. DEMETER), an earth-goddess, as repository of powers of vengeance. As they regularly work by disturbing the mind (*Od.* 15. 233-4), it is understandable that very similar deities are called *Maniai* (Paus. 8. 34. 1). Being of the earth, they are often confused with kinder powers who send fertility, Eumenides, *Σεμναί*, etc.; their cult under their own name is extremely rare (see Farnell, *ibid.* 437 ff.). H. J. R.

ERIPHUS, Middle Comedy poet, as the two mythological titles, *Ἄϊολος* and *Μελίβοια*, suggest.

FCG iii. 556 ff.; CAF ii. 428 ff.

ERIS, personification of strife (discord, rivalry, competition; there are two kinds, one bad and one good, the latter being emulation between fellow-workers, Hesiod,

Op. 11 ff.). Generally, however, she is definitely Strife. Thus she accompanies Ares in Homeric battle-scenes, as *Il.* 4. 440-1, where she is his sister and companion; *Theog.* 225 ff., she is daughter of Night and mother of Battles, Slaughters, Disputes, Lawlessness, etc.

She emerges into fuller mythical personality in the *Cypria*. Zeus, having decided on the Trojan War, to relieve Earth of the burden of so many human beings (fr. 1 Allen), lets Eris be present at the marriage of Pelcus and Thetis (qq.v.). There she stirs up a quarrel between the goddesses as to which is the most beautiful, this leading to the Judgement of Paris (see PARIS) and so to the war. But the details are uncertain; we have no written pre-Alexandrian authority for the 'apple of Discord'. In Hyginus, *Fab.* 92. 1, from a Greek source perhaps about contemporary with the Emperor Claudius (see Rose, *Hygini Fabulae*, p. viii), Eris (Discordia) comes to the door, throws in an apple, and says the most beautiful may pick it up; other authorities (listed by v. Sybel in Roscher's *Lexikon* i. 1338. 50 ff.) make her inscribe the apple 'for the fairest'. This is obvious *Märchen* (see FOLKTALES), but when it was added to this myth is unknown. H. J. R.

ERŌS, god of love in Greek mythology. Eros personified does not occur in Homer, but the Homeric passages in which the word *eros* is used give a clear idea of the original significance. It is the violent physical desire that drives Paris to Helen, Zeus to Hera, and shakes the limbs of the suitors of Penelope (*Il.* 3. 442; 14. 295; *Od.* 18. 212). A more refined conception of this E. who affects mind and body appears in the lyric poets of the sixth and seventh centuries B.C. Because his power brings peril he is pictured as cunning, unmanageable, cruel (Alcman 36 Diehl; Ibycus 6 Diehl; Sappho 137 Diehl; *Theog.* 1231); in Anacreon and in vase-paintings he smites the lovestruck one with an axe or a whip (*Deltion* (1927-8), 106). He comes suddenly like a wind and shakes his victims (Sappho, Ibycus); Furtwängler recognized a pictorial equivalent of this image in the E. who carries off a girl on vases and gems. E. is playful, but he plays with frenzies and confusion. On the other hand, E. symbolizes all attractions which provoke love. He is young and beautiful, he walks over flowers, and the roses are 'a plant of E.' of which he makes his crown (*Anacreontea* 53. 42). He is sweet and warms the heart (Alcman 101 Diehl). Sappho sums up his essence, calling him 'bitter-sweet'.

2. Already Hesiod connects E. with Aphrodite (q.v. para. 3 and see *Theog.* 201), but many authorities hold this connexion not to be original. With Himeros and Pothos he is a constant companion of Aphrodite, although he can appear with any god, whenever a love story is involved, e.g. as ἀμφιθαλής at the marriage of Zeus and Hera (A. D. Nock, *CR* 1924, 152).

3. Hesiod seems to have transformed the Homeric conception of E. Although he describes E. in terms almost identical with Homer as the god who 'loosens the limbs and damages the mind', he also makes him together with Earth and Tartarus the oldest of gods, all-powerful over gods and men. Building on this idea of E. as a cosmic principle Parmenides found a place for E. (Diels, *Vorsokr.*⁵ i. 243, fr. 13), perhaps as the power which leads contrasts together? This philosophic conception contributed to the Euripidean picture of omnipotent Eros (Ath. 13. 561), took abstruse mythological shape in Orphic cosmogonies (Ar. *Av.* 693), and formed the background for the famous Platonic discussions of E. in *Symposium* and *Phaedrus*.

4. Hellenistic poets continue the more playful conception of Anacreon and sing the tricks which E. plays on mortals, the tribulations of those who try to resist him, and the punishments which he receives for his misdeeds. His bow and arrows, first mentioned by

Euripides (*IA* 548 f.), play a great part in these accounts. He becomes a humanized genre figure in Rocco style. Frequently a plurality of Eros is introduced (Athen. 13. 562; *Anacreontea*; *Anth. Pal.*; Ap. Rh. 3. 114). The usage originated because the Greeks drew no sharp distinction between love passion and the god who symbolized it; both could multiply. For the relation of E. to Psyche see *PSYCHE*. E. had some old cults and enjoyed much individual worship. He was always the god of love directed towards female as well as male beauty. Hence his images in the gymnasias, his cult by the Sacred Band in Thebes (Ath. 13. 561; 602), and the altar in Athens erected by the lover of Hippias (Ath. 13. 602 d). As a god of fertility E. is celebrated in the very old cult in Thespieae, and in the joint cult with Aphrodite on the north slope of the Athenian Acropolis. In Thespieae E. was represented by an aniconic image; in Athens phallic symbols have been found in the sanctuary. In both cults festivals were celebrated; that in Thespieae was called *Erotidia*. The festival in Athens was celebrated in the spring month of Munichion (O. Broneer, *Hesperia* 1932, p. 31; 1935, p. 125). In Philadelphia the worshippers called themselves *Erotes* after the god. In Athens a procession of Eros is represented on a relief performing the functions of worshippers. Another cult centre was Parion in Mysia.

5. In art Eros grows young. He begins as a fairly grown up boy in the archaic period, is a young boy in classical art, and becomes a playful putto in the Hellenistic age.

O. Waser in *PIW*, s.v.; A. B. Cook, *Zeus* ii. 2 (1925), 1039; C. T. Seltman, *BSA* 1923-4, 87; P. Friedländer, *Studi e testi* (1939), 53. G. M. A. H.

EROS, STADERIUS, see *STADERIUS*.

EROTIAN, grammarian and doctor of the Neronian age, compiled an extant glossary to Hippocrates.

EROTOPAEGNIA, see *LAEVIVS*.

ERUCIUS (*Ἐρύκιος*), author of fourteen epigrams in the Anthology, came from Cyzicus, but bore a Roman name. His career and character are little known; but he attacks Parthenius (*Anth. Pal.* 7. 377) and he seems to imitate Virgil's *Arcades ambo* (*Ecl.* 7. 3 = *Anth. Pal.* 6. 96. 1), although it is very rare for a Greek to copy Roman poetry. Thus he was writing about the beginning of the Principate, 30 n.c. His poems are chiefly suave little dedications and anecdotes.

C. Cichorius, *Röm. Stud.* viii. 3 (1922).

G. H.

ERYCIAS, ERYCIUS, see *ERUCIUS*.

ERYSICHTHON, in mythology, son of Triopas, of Dotion in Thessaly. Wanting timber, he was so misguided as to start cutting down a sacred grove of Demeter, though warned not to do so by the goddess herself in human form. He was thereupon plagued with insatiable hunger, to satisfy which he ruined himself and all his household. Thus far Callimachus (*Cer.* 23 ff.); the tale can be traced back no earlier than Hellanicus (Crusius in Roscher's *Lexikon* i. 1373. 56). Lycophron (1393, where see schol.; cf. *Op. Met.* 8. 847 ff.) says he had a daughter Mestra, granted by her lover Poseidon power to change shape. She was sold in various beast-forms, escaped and came back to be resold, and he lived on the proceeds. See Zielinski in *Philol.* l. 138 ff. = *Ireliane* ii. 1 ff.

H. J. R.

ERYTHEIA, 'the red, or blushing, one', i.e. sunset-coloured. Name of (1) one of the Hesperides (Apollod. 2. 114). (2) The daughter of Geryon, and also his island (Steph. Byzant., s.v.; Paus. 10. 17. 5); for both (1) and (2) see *HERACLEA*.

ERYTUS, see *ECHION* (2).

ERYX, an Elymian settlement and a mountain (*Monte San Giuliano*) above Drepana in west Sicily. Dependent on Segesta in the fifth century B.C., Eryx was occupied later by the Carthaginians, though temporarily seized by Pyrrhus (278 or 277). Phoenician masons' marks are found on the walls, and Punic legends appear on the coinage from the fourth century. The Elymian settlement, perhaps on a lower height than the famous temple of Astarte-Aphrodite-Venus (where is the modern town of S. Giuliano), was evacuated in 259, when the inhabitants were transferred to Drepana. L. Junius seized both heights and established a fort on the lower slopes to isolate Drepana (248). Hasdrubal Barea captured the old town, but not the Temple and lower fort (244); thus he failed to relieve Drepana, although maintaining his position until 241. On recent somewhat disappointing excavations in the Temple area see *JHS* 1936, 218-20.

H. H. S.

ESQUILINE. The name, in the form **Esquiliae* (from *ex-colo*, cf. *inquilinus*), denoted the eastern plateau formed in Rome by *montes Oppius* and *Cispinus*, the *regio Esquilina* being the second of the Republican Four Regions (Varro, *Ling.* 5. 49-50). Under the Kings and much later it was used as a cemetery (von Duhn, *Italische Gräberkunde* i. 468), ultimately for paupers (Hor. *Sat.* 1. 8. 8-13). It was included by the Republican Wall and provided later sites for Nero's Golden House and Trajan's *Thermae*. Under Augustus the name was applied to Regio V, outside the Republican Wall, containing various gardens and the Sessorium, an imperial residence. The Arch of Gallienus (*CIL* vi. 1106) recalls the *porta Esquilina* of the Republican Wall.

I. A. R.

ETEObUTADES, see *BUTES* (2).

ETEOCLES, (1) an ancient king of Orchomenus, founder of the local cult of the Charites (Paus. 9. 34. 9 ff.). (2) In mythology, the elder son of Oedipus (q.v.). After the blinding and retirement of their father, he and his brother Polynices twice insulted him, once by setting before him certain vessels which had belonged to Laius and once by giving him a portion of meat less honourable than a king should have (*Cyclop. Thebais*, frs. 2 and 3, Allen). He therefore cursed them (for conjectural details, see Rose, *Handbook of Greek Myth.* 221, n. 28), and the curse was fulfilled thus. He and Polynices agreed to reign in alternate years, Eteocles taking the first year. Polynices left Thebes and married Argia (see *ADRASTUS*). At the end of the year Eteocles would not give up his throne; Polynices returned with the Seven, and the two brothers met and killed each other. See references in Rose, loc. cit.

H. J. R.

ETEOCLUS, son of Iphis, a somewhat obscure Argive hero. At a fairly early stage of the tradition he seems to have replaced Parthenopaeus (q.v.) as one of the Seven against Thebes, cf. *ADRASTUS* (see Paus. 10. 10. 3). Then Aeschylus (*Sept.* 458) or his authority included both him and Parthenopaeus, apparently so as to be able to leave Adrastus out of the actual assault; hence later writers (as Soph. *OC* 1316 and Eur. *Supp.* 872) use the same list.

See Wilamowitz-Moellendorf, *Aeschylus Interpretationen* (1914), 100.

H. J. R.

ETHIOPIA, the land of the Ethiopians or 'Burnt-Faced Men', was a name usually applied by the Greeks to any region in the far south (but north of the Equator). Under the influence perhaps of Homer (*Od.* 1. 22, etc.), who distinguished between Western and Eastern Ethiopians, Aeschylus (*Supp.* 284-6) made the Ethiopians extend to India, and Herodotus (esp. 3. 17-23; 7. 67-70)

distinguished between the woolly-haired Ethiopians (negroes) and the straight-haired ones (primitive Indians). The tendency to confuse Ethiopians with Indians continued throughout ancient times (e.g. in Aesch. *Supp.* 284 ff.). But from Herodotus onward Ethiopia designated especially the lands south of Egypt—Nubia, Sennaar, Kordofan, and north Abyssinia. This country was visited since 665 B.C. by the Greeks, some of whom penetrated in the wake of Cambyses as far as Korosko, and various Ethiopian peoples became known in Greece by their tribal names. Under the Ptolemies the African coast was explored by sea as far as Somaliland and Cape Guardafui; the Blue and the White Nile and the Atbara were clearly distinguished (see NILE); and the Ethiopian city of Meroë (q.v.) received a veneer of Hellenic culture (Diod. 3. 38 ff.; Strabo 16. 773-4; 785-7). An Ethiopian raid into Egypt (25 B.C.) was repelled by the Romans, who established a frontier area from Assuan and Maharrakah. In the first century A.D. a powerful Ethiopian State arose in Abyssinia (see AXUMIS).

E. A. W. Budge, *The Egyptian Sudan* (1907); P. Paulitschke, *Geogr. Erforschung des afrikanischen Kontinents* (1884). E. H. W.

ETRUSCANS, the most important of the numerous peoples which compose the mosaic of early Italy. 'The renown of their name filled the whole length of Italy from the Alps to the Sicilian Strait' (Livy 1. 2. 5). Servius, however, is mistaken when he infers (*ad Aen.* 10. 145) that they subjugated the whole peninsula. At the time of their widest power, 500 B.C., they had not penetrated south of Salerno, beyond which the way was barred by their commercial rivals and bitter enemies the Greeks. On the Adriatic side no trace of an Etruscan has been found from at least Aseoli to Otranto. Therefore they never politically dominated more than a third of Italy.

2. To their original territory (modern Tuscany) they soon added by conquest and settlement Umbria and Latium. A further extension into Campania was complete by c. 550. The trans-Appennine colonies from Milan to Bologna were founded just before 500 B.C. But at this moment the incipient empire began to crumble. Greeks and Romans struck the first blows. The war which followed the expulsion of the Tarquins from Latium was quickly followed by the campaign in which Aristodemus (q.v. 3) drove the Etruscans out of Campania. Hieron of Syracuse helped to destroy the common enemy in the naval battle of Cumae, 474 B.C. Twenty years later the Syracusans captured Corsica and Elba. Already in 480 B.C. had begun the bitter duel between Veii and Rome which ended only in 396 B.C. The Gauls destroyed the young colonies in the region of the Po about 390 B.C. Thus, early in the fourth century only the core of their original settlements remained in Etruscan hands, and these were lost piecemeal to Rome in the next two hundred years. This decline was due in part to the Etruscans' incapacity for united military or political action: their confederation of twelve cities was formed for religious purposes alone. So Rome was able to subdue all their great cities, Caere, Tarquinii, Vulci, one by one.

3. To a great extent this individualism may be traced to the circumstances of the original settlement. Modern opinion has rallied to the view almost universally held in antiquity that the Tyrseni or Tyrrheni were colonists from Asia Minor, if not perhaps actually from Lydia, as Herodotus (1. 94) so circumstantially narrates. The tradition was never questioned by any writer till Dionysius of Halicarnassus in the time of Augustus. It was explicitly endorsed by historians as early as Timaeus, and was accepted by the Etruscans themselves, who had their own chronology and must certainly have preserved their own family traditions. It seems, therefore, mere perversity on the part of Dionysius to question it. His garbled and doubtfully authentic copy of the Lydian

Xanthus was no trustworthy authority, and in any case did not contradict the story of Herodotus except by omission. There are, however, a few scholars who maintain by more modern reasoning that the Etruscans were autochthonous. Their views seem irreconcilable with the linguistic evidence. There can be no doubt that the migration was made by sea, and it had probably begun before 800 B.C. Archaeology has disproved Niebuhr's never well-grounded theory of an invasion by land over the Alps. The oldest cities, Tarquinii, Caere, Vulci, Vetulonia, Populonia, were all on the sea-coast, whereas inland towns such as Orvieto, Perugia, Arczzo were later offshoots. It is improbable that the first colonists came all at once. The analogy of the Northmen in Great Britain suggests rather that they arrived at intervals and in no great numbers. Each city was probably founded by an independent chief who owed no loyalty to his fellow-chiefs. These ruled as princes over an earlier population which eventually survived them.

4. The language was unique. If autochthonous, it could only be a survival from a general pre-Aryan stratum in the western Mediterranean, with which, however, it has no recognizable affinities. The philologists deny that it has anything in common with Indo-European languages and give a valuable independent support to the Herodotean tradition by tracing affinities with Eastern languages (see ETRUSCAN LANGUAGE). Only nine of the 8,500 known inscriptions, of which the majority are obviously funeral, contain more than 30 words. The material, therefore, though sufficient for morphological study, is too slight to allow any hope of decipherment. Except for a score of glosses given by classical writers the meaning of no single Etruscan word is known. It need not be assumed that there was no literature, but certainly none has survived. The wall-paintings in many tombs afford vivid glimpses of Etruscan life. These show them as a luxurious and light-hearted people, much given to horse-racing, dancing, and every kind of music. Some gloomy pictures of the underworld may be partly influenced by Greek Pythagoreanism. Of their own religion little is known, except that divining and augury formed an important accessory to it. The Roman augurs and haruspices learned their arts originally from the Etruscans, who, even in the late Roman Empire, were still famous for proficiency in these arts.

5. The Etruscan domination of Latium, culminating in the Tarquin dynasty, had deep and lasting effects on Roman life, as witness the schematization and equipment of the army, and many details of pomp and ceremonial. The rude peasantry from the Alban and Sabine hills was organized, disciplined, educated by Etruscan standards. Further, all Italy owed a great debt to these rivals and precursors of the Greeks. Etruscan excellence in the arts is still too little appreciated. The statues lately discovered or identified are of first-rate quality, and singularly original in character. They include the Apollo of Veii, the Chimaera of Arezzo, the Lateran wolf, the three warriors in New York, the woman's figure in Ny Carlsberg Glyptothek, and, at a later period, the Orator of Trasimene. In the minor arts the Etruscans were unsurpassed. Etruscan *situlae* and other bronzes were exported to the remotest parts of Europe. Art connoisseurs collected 'Etrusca sigilla'. The goldsmiths' work at Vetulonia equalled the finest in Ionia. Even an Athenian exquisite in the fifth century (see Athenaeus 1. 28) boasts of the gilded Etruscan vase that decorates the house.

ETRUSCAN LANGUAGE. Of all the languages of ancient Italy the most difficult is Etruscan, about the origin of which little more can be stated with certainty than that it is not Indo-European. In spite of determined efforts to connect it with other better-known languages it is now generally agreed that we must rely for a solution of its problems upon the internal evidence of the records themselves. Besides a considerable number of Etruscan words preserved in Greek and Latin authors we possess some eight thousand inscriptions dating from the seventh century B.C. to the time of Augustus. They mostly contain little but proper names and are not very helpful, but two are longer, the Cippus Perusianus and the tablet of S. Maria di Capua. There is also a long liturgical text written on the wrappings of an Egyptian mummy now in the museum of Zagreb. The alphabet is a variety of the Greek with the omission of several characters which Etruscan did not need. The only added sign is 8, meaning *f*, which was common in Etruscan but unknown in Greek. Etruscan used only voiceless stops (*p*, *t*, *k*), which tended to become spirants; hence variations in pure Etruscan words, e.g. *sec* or *sey*, and in borrowings from Greek, e.g. *spōla* (σπουδα), *triumpus* (θρίαμβος). It also had a strong initial stress-accent which caused weakening or loss of medial vowels, e.g. *Menle* (Menelaos), *Ayle* (Achilleus).

In Greek names masculine gender is shown by *-e* (*Heracle*), feminine by *-ai*, *-ei* (*Phersipnai*, *Elenei*), but in true Etruscan words the feminine is in *-i*, *larθ* : *larθi*. In vocalic stems the genitive is in *-s*, *sebre* : *sebres*, and in consonantal in *-us*, *velθur* : *velθurus*. Characteristic is the genitive in *-l* denoting filiation, e.g. *Pumpunial* (= son of Pumpuni, i.e. Pomponia). All that is certain about the verb is that the 3rd sing. perfect ends in *-ee*, e.g. *tece* (= has raised), *turee* (= has given). On dice we have the numerals from 1 to 6, *max*, *zal*, *θu*, *huθ*, *ci*, *sa*, but which is which has not been decided. Tens were formed by adding *-alx*, thus *ci* : *cealx*. The meaning of a considerable number of words is known, e.g. *ais* (= god; plur. *aisar*), *puia* (= wife), *clan* (= son), *usil* (= sun), *tiv* (= moon). Herodotean tradition connects Etruscan with Lydian, with which it has affinities; the ending *-nos* (*Tupynnos*) is Asianic. The language of the Stele of Lemnos is also akin, and Caucasian affinity is possible.

ETRUSCAN RELIGION, see RELIGION (ETRUSCAN).

ETRUSCUS, see CLAUDIUS (14).

ETYMOLOGICA (Greek). The earliest etymological studies are known only from (usually nameless) reproduction in the philosophers. The first known title is the *Περὶ ἔτυμολογίας* of Heraclides Ponticus, now lost, as also the *Ἐτυμολογικὸν* of Chrysippus. Under Atticist influence etymology flourished among the later Alexandrians and under the early Empire, e.g. in the lexica of Eireneus, Demetrius Ixion, and Caecilius of Calacte. These works were absorbed by Dionysius, Vestinus, Phrynichus, and others of the second century A.D. From them, and from later redactions and conflation, e.g. by Orus, Orion, and Helladius, the Byzantine *Etymologica* are mainly derived. See ETYMOLOGICUM MAGNUM.

R. Reitzenstein, *Grundriss d. gr. Etymologie*, 1897. P. B. R. F.

ETYMOLOGICUM MAGNUM, an extant lexicon of uncertain date, but used by Eustathius, who became Archbishop of Thessalonica in A.D. 1175, and based mainly on the E. Gudianum (of c. A.D. 1100) and the E. Magnum Genuinum, the E. Gud. itself being a conflation of the E.M.G. and the E. Parvum, both of which were completed (the E.P. in A.D. 822) under the direction of Photius.

E. Magnum: T. Gaisford, 1841.

P. B. R. F.

ETYMOLOGY (in Greek and Roman times). Men have always seemed prone to toy with derivations and to see lessons in mere words. Thus in *Od.* 19. 562-7 the gates of ivory and horn by their very names—in Greek—proclaim the *frustration* and *fulfilment*, respectively, of the dreams that pass through them. Proper names have always been especial objects of such interest. L. Lersch (*Sprachphilosophie d. Alten*, pt. 3. 3-17) quotes some 70 examples—a selection only—mainly from Homer, Hesiod, Pindar, and Tragedy. Thus Aias is related by Sophocles to αἰάειν, by Pindar to αἰετός; Euripides connects Zethus with ζήτειν. (See ALLEGORY, GREEK.)

2. Unfortunately, Greek etymology did not remain the sport of amateurs, but was involved in sophistic and philosophical speculations on the origin of everything, including, inevitably, language. Was 'horse', or, it might be, some other—perhaps unrevealed—name, as much a natural property of the animal as its shape and constitution, or was a name only an artificial label by convention attached to this or that? Many of the Greek thinkers adopted the former view, with its consequences. Cratylus, pupil of Heraclitus, said that knowledge of Nature's names was required for real speech; without that utterance was mere noise. Indeed, in his old age, despairing of ascertaining Nature's names, he gave up utterance and used only gestures. Such a theory is paralleled in primitive (and later) practices, when, for example, healing virtues in things are deduced from their names, and the prescription swallowed with as much faith as the medicine: cf. E. S. McCartney, *APPhil.* xlviii (1927), 326; Hue, *Travels in Tartary*, etc. i. 75.

3. If, then, words are not mere tokens of sensation and belief, to trace them to their ultimate origins would elucidate not the history of human opinion but Nature's own *ἔνυμος λόγος*. From this theory, constantly active though repeatedly challenged, arose a systematic practice of etymology, not only among its adherents. Early examples, with parodies of his own, figure largely in Plato's *Cratylus*, sometimes hitting the truth, if only by accident. Aristotle, who rejected the theory, has derivations: δίκαιον, δικαστής, from δίχα (*Eth. Nic.* 1132^a 31), μακάριον from χαίρω (*ibid.* 1152^b 7), σωφροσύνη (after Pl. *Cra.* 411 c) from σῶζειν τὴν φρόνησιν, and (cf. Athenaeus 40b) μεθύειν from drinking μετὰ τὸ θύειν.

4. The Stoics, accepting the naturalistic theory, sought to relate the apparent chaos of current language to the rule of law hypothetically pervading Nature's works, by four principles stated in the Augustinian *Principia Dialecticae*. Nature forms words (i) κατὰ μίμησιν, by imitating things, e.g. *stridor*, *clangor*, or their impressions on the senses, as *crux* and *voluptas* are, respectively, unpleasant and pleasant in name (sound) as in fact; (ii) κατ' ὁμοιότητα, e.g. *crura*, which are 'longitudine atque durtia inter membra cetera ligno crucis similiora'; (iii) not from the thing but from something associated with it in one of various relations, viz. (a) *per efficientiam*, as '*fordus* a foeditate porci'; (b) *per effecta*, as '*puteus* quod eius effectum potatio est'; (c) *per id quod continetur*, as *urbs* from *orbis*; (d) *per id quod continet*, as *horreum* from *hordeum*; (e) by metonymy, as *rustro* for *gladius*; (iv) κατ' ἀντιθέσιν, as '*lucus*, quod minime luceat', '*bellum*, quod res bella non sit'. The operation of natural law was obscured, so they said, by human irregularity, ἀνωμαλία (see CRATYL (3) or HALLÓ).

5. The Atticist movement (see GLOSSA, GREEK) furnished a new impulse for etymologists, and a new aim, viz. to test the admissibility of a word to 'correct use' by relating it to its *στοιχείον*, which in the derivative had probably suffered loss, accretion, metathesis, crasis, or other mutation. In this connexion a terminology for many such *πράθη* was evolved; cf. Pseudo-Trypho, *Περὶ παθῶν*. Atticism regarded not the usage of good writers but what was right for them to use (see Phrynichus; *contra*, Sext. Emp. *Math.* i. 98). Etymology appears with analogy as a touchstone of diction in the Atticist Eirenaeus (of the Augustan age), and remained one of the criteria of fully developed purism, Greek and Latin. 'Latinitas est incorrupte loquendi observatio secundum Romanam linguam; constat autem, ut adscrit Varro, his quattuor: natura (meaning *etymologia*), analogia, consuetudine, auctoritate' (Diom. 439). This new etymology appears in Philoxenus (1st c. B.C.) and is fully developed in Seleucus (under Tiberius), whose results resemble those of the *Cratylus*, from which he borrows.

6. At Rome (as elsewhere) aetiological etymologies were early popular: 'nomina haec numinum in indigamentis inveniuntur, i.e. in libris pontificalibus, qui et nomina deorum et rationes nominum continent' (Serv. on Verg. *G.* i. 21). There are also examples in the early poets. Under Greek influences the etymological fashion took firm hold of Latin literature and scholarship, with like results as in Greek: Paullus s.v. 'miles': 'militem Aelius (i.e. Stilo) a mollitia κατ' ἀντίφρασιν dictum putat: sic ludum (school) dicimus, in quo minime luditur' (cf. Quint. *Inst.* i. 6); cf. Diom. and paragraph 4, *supra*.

7. It would be idle to analyse minutely a practice, popular and highly esteemed, often surprisingly correct and even acute (cf. Pl. *Cra.* 405c-d), which constantly produced such results as, *ἑσπερος, ἀπὸ τοῦ ἔσω περὶ πάντα τὰ ζῶα*, and, *γραμματική, διὰ τὸ τῆκεν καὶ καθαίρειν τὰ γράμματα*, and, *ἐντερον, παρὰ τὸ ἐντὸς πέειν*: so we are told that the (Greek) vowels number seven because there are seven planets. Neither Greeks nor Romans, early or late, came within reach of a scientific, historical method in etymology. Their rules are but statements of their arbitrary practices, with a multiplication of terminology that did nothing for the advancement of knowledge.

E. Schwyzler, *Griechische Grammatik* (1939), 29-45; F. Müller, *De veterum imprimis Romanorum studiis etymologicis* (1910); K. Woldt, *De analogiae disciplina apud grammaticos Latinos* (1911).—See also under GRAMMAR, GLOSSA (GREEK). P. B. R. F.

EUADNE, see EVADNE.

EUAGORAS, see EVAGORAS.

EUANGELUS appears to be a New Comedy poet. One fragment (10 trochaic tetrameters) is preserved of *Ἀνακαλυπτομένη*—a master discusses with a cook the preparations for a wedding-banquet.

FGG iv. 572; CAF iii. 376.

EUANTHIUS (4th c. A.D.), author of a commentary on Terence. The only parts remaining are certain sections of the treatise *De comoedia* which is now prefixed to the commentary of Aelius Donatus (q.v.).

Cf. Teuffel, § 405. 4; Schanz-Hosius, § 836. 1.

EUBOEA, also called Long Island (*Makris*), since it stretched from the Gulf of Pagasae to Andros. The chief cities from ancient times were Chalcis and Eretria (qq.v.). Other cities were Histiaea, Geracstus, and Carystus, famous for its marble. In the eighth century Chalcis and Eretria were powerful mercantile cities, rivals of Corinth, and, as pioneers, established colonies on the north-west shores of the Aegean and in Italy and Sicily. A rival with Chalcis for control of the Lelantine plain, Eretria was defeated, and her control of Andros, Tenos, and

Ceos passed to Athens, who later compelled Chalcis to cede part of the plain (506). In 490 the Persian general Datis attacked Euboea and captured Eretria and Carystus. Euboean contingents fought the Persians at Salamis and Plataea. Owing to Boeotian intrigues, the whole island revolted from Athens in 446, but it was reconquered by Pericles, who planted cleruchies in it. The cities remained tributary allies of the first Athenian Confederacy, but revolted in the Peloponnesian War (411). They were enrolled in the second Athenian Confederacy (378-377) and incorporated in a Euboean League (341). After much turmoil, while the Thebans and Philip II of Macedon intrigued against Athens, the whole island came under the control of the Macedonian monarchy, by whose fortunes it was affected for the rest of the third century. In 196 Flamininus, the liberator of Greece, revived the Euboean League. Euboea was temporarily occupied by Antiochus of Syria (192-191); for aid given to the Achaean League against Rome its League was dissolved (146). The island was attached to the province of Macedonia, and fell into decay in the Roman Imperial period.

Bursian ii. 395-438; CAH iii. 754 (bibliography); IG xii. 9. 143 ff. W. A. L.

EUBULEUS (*Εὐβουλεύς*), properly a euphemistic title of Hades, 'the good counsellor' (schol. Nic. *Alex.* 14 and elsewhere); one of a group of Orphic chthonian deities (Kern, *Orph. frag.* 32 c-e). He is humanized into a swineherd (fr. 51), son of Dysaulcs and brother of Triptolemus, who gave Demeter news of the rape of Persephone; or his swine were swallowed up with Persephone, which is why swine are thrown into chasms at the Thesmophoria (fr. 50). H. J. R.

EUBULIDES of Miletus, dialectician of the Megarian school, taught at Athens. He wrote a lampoon against Aristotle. He is said to have taught Demosthenes dialectic and rhetoric. He is best known for his eristic arguments, of which the most famous are the *ψευδόμενος* and the *σπρίτης*; but some of those ascribed to him by Diogenes Laertius are of older date.

PIV vi. 870.

W. D. R.

EUBULUS (1), (c. 405-330 B.C.), Athenian politician and rhetor. Some of his notable measures were the recall of Xenophon (q.v.), the peace after the Social War, and the peace of Philocrates. He was a realistic and pacifist politician, as we know from Demosthenes. Most remarkable was his financial policy, which directed Athenian administration from c. 354. He was able to increase (perhaps to treble) the public revenues, to expend more on the *theorika* (q.v.), and to introduce a public building policy without adding to regular taxation. He was an honest and thrifty statesman, but more cannot be said with certainty of his financial methods. It has been suggested, but never proved, that Xenophon's *De Vectigalibus* was influenced by or described his policy.

A. M. Andreades, *A History of Greek Public Finance* i (U.S.A. 1933), Index s.v. J. Kirchner, *PIV* s.v. 'Eubulos'. F. M. H.

EUBULUS (2), Middle Comedy poet (described by Suidas as standing on the border-line between Old and Middle). He composed 104 plays (with which he won six Lenaean victories)—most of them (judging by over 50 extant titles) mythological burlesques or parodies of tragedy (e.g. *Ἀγχίσης*, *Ἀγνή*), but some are character-types (*Σκυρεὺς*), others, women's names (*Νεορτίς*, *Παγγών*). E. is outstanding for variety of metre: frs. 104 (dactylic tetrameters, with iambic clausula), 35, 78, 105, 139.

Many interesting passages: fr. 10, parody of Euripidean cplilogue; fr. 12, in Boeotian dialect; fr. 25, the ways of a tyrant, Dionysius of Syracuse; fr. 90, the spoilt lap-dog;

frs. 116-17, the catalogues of good and bad women. In *Σφιγγοκαρίων* (named from a slave who talked like the Sphinx), fr. 107, the riddles beloved of Middle Comedy writers have a prominent place.

FCG iii. 203 ff.; CAF ii. 164 ff.; Demiańczuk, *Supp. Com.* 40 f. W. G. W.

EUCLEIDES (1) of Megara (c. 450-380 B.C.), pupil of Socrates and founder of the Megarian school. He was a strict adherent of Eleatic monism, and tried unsuccessfully to combine it with Socrates' ethical teaching, treating the Good, God, reason, and the several virtues as merely names for the Eleatic One. It has been thought (by Schleiermacher and others) that he developed a theory of Ideas before Plato, but the evidence is rather that the Megarian school criticized the theory of Ideas, and that Plato retorts on them in the *Republic*, *Theaetetus*, *Parmenides*, and *Sophistes*.

PW vi. 1000.

W. D. R.

EUCLEIDES (2), Athenian archon in 403-402 B.C., which, being the year of the re-establishment of democracy, is very often quoted. From that time Athenian inscriptions used the Ionian instead of the Attic alphabet, an important fact for epigraphical research.

V. E.

EUCLEIDES (3), the mathematician, see EUCLID.

EUCLID (Εὐκλείδης) of Alexandria (fl. c. 300 B.C.) lived under Ptolemy I (306-283) and founded a school at Alexandria; his fame rests on his great text-book the *Elements*, στοιχεῖα, in thirteen books (Books 1-6 on plane geometry, 7-9 on the theory of numbers, 10 on irrationals, 11-13 on solid geometry). This work at once superseded those of earlier writers of Elements (Hippocrates of Chios, Leon, Eudoxus, Theudius). Euclid made full use of his predecessors' work but added much of his own, while altering the whole arrangement. Most of the MSS. contain the recension by Theon of Alexandria, but the Vatican MS. 190 containing an earlier edition was discovered and edited by F. Peyrard (1814-18), and forms the basis of the authoritative text by J. L. Heiberg (Teubner). Commentaries were written by Heron of Alexandria, Pappus, Simplicius. Fragments of these have come down to us, mostly through the Arabic (an-Nairizi); but most valuable of all is the extant commentary of Proclus on Book I edited by Friedlein in 1877. The so-called 'Book 14' is by Hypsicles; 'Book 15' is an inferior compilation by a pupil of Isidorus (7th c. A.D.).

Of other works by Euclid some belong to elementary geometry: (1) the extant *Data*; (2) the lost *Pseudaria*, *Fallacies* (see Proclus, p. 70); (3) *On Divisions* (of figures), (*Διαίρεσεων βιβλίον*), discovered in the Arabic and edited by F. Wölpeke (1851; new edition by R. C. Archibald, Camb. 1913).

To higher geometry belong the following: (1) three books of *Perisms* (Πορισματα), (2) *Surface-loci* (Τόποι πρὸς ἐπιφανείᾳ), (3) four books of *Conics* (Κωνικά). These works are lost, and all we know of them is contained in Pappus (7, on the 'Treasury of Analysis'). Important attempts to restore the *Perisms* were made by Robert Simson and Michel Chasles. Other extant works are: the *Phaenomena*, an astronomical text-book containing 16 or 18 propositions in sphaeric geometry, partly based on Autolycus' *On the Moving Sphere*; *Optics*; these are included, with *Catoptrica* (not genuine in its present form), in the Teubner edition by Heiberg and Menge. Euclid wrote also on 'The Elements of Music': two works are attributed to him, the *Sectiones arithmeticae* (Ἀριθμητικὴ καὶ μέτρος) and an *Introduction to Harmony*, the former only containing excerpts from the original work, the latter being by Cleonides, a pupil of Aristoxenus; both are included in the Heiberg-Menge edition. See also MATHEMATICS.

BIBLIOGRAPHY

The *Elements* were first translated (from the Arabic) by Athelhard of Bath (about A.D. 1120) and Johannes Campanus (13th c.); the first printed edition contained Campanus' translation (Erhart Raddolt, Venice, 1482). 1505 saw the first translation from the Greek text, by Bartolomeo Zamberti. The *editio princeps* of the Greek text is that of Simon Grynaeus (Basel, 1533); the Latin translation by Commandinus is dated 1572; the first English translation was by Henry Billingsley, 1570. The Oxford edition of the Greek text by David Gregory (1703) contained the complete works of Euclid. The standard edition is *Euclidis opera omnia* by Heiberg and Menge (Teubner). Modern translations of the *Elements* are: T. L. Heath, *The Thirteen Books of Euclid's Elements* (1910); F. Enriques, *Gli Elementi d'Euclide e la critica antica e moderna* (1925-36). T. H.

EUEMUS of Rhodes (second half of the 4th c. B.C.), pupil of Aristotle. We do not possess any record of his life, although there was a biography by a certain Damas (Simpl. in Arist. *Phys.* p. 924. 13 Diels). In later years he appears to have opened his own school, probably in Rhodes (if one may combine E. ap. Simpl. *Phys.* p. 732. 32, taken from a lecture on Physics, with I. c. p. 923. 11 where he writes from outside Athens to Theophrastus about the same subject). That he stood closer to Theophrastus than to other Peripatetics is proved by the fact of their correspondence as well as the conservative character of their studies.

Eudemus' most important works concerned the history of science and civilization. He wrote a History of arithmetic and geometry, a History of astronomy, and a History of theology (*Τῶν περὶ τὸ θεῖον ἱστορίαι*). These books, with Theophrastus' historical works, are the basis of all later knowledge in these fields. He also compiled a paraphrase of Aristotle's *Physics* for which he inquired from Theophrastus about the reading of a sentence. He followed closely his master's text but noted and explained difficulties and gave the books a new grouping. Important features of the later Peripatetic commentaries can be traced back to E. and his generation. He also wrote on logic and rhetoric. On the *Eudemian Ethics* see ARISTOTLE.

L. Spengel, *Eudemi Rhodii Perip. fragm.* (1866 and 1870; not sufficient); Simpl. in Arist. *Phys.* ed. H. Diels, Index s.v.; U. Schoebe, *Quaestiones Eudemae* (Thesis, Halle 1931; frs. of and comm. on the first book of the *Physics*). Studies: Brandis, *Handbuch d. griech.-röm. Philol.* iii. 1. 215 f.; 256 f.; Zeller, *Aristotle*, etc., Engl. Transl. ii. 417 f.; PW vi. 895. K. O. H.

EUDORUS (1), in mythology, a Myrmidon captain, son of Hermes and Polymele (*Il.* 16. 179 ff.).

EUDORUS (2) of Alexandria (fl. c. 25 B.C.), eclectic philosopher. Chief works (lost): *Διαίρεσις τοῦ κατὰ φιλοσοφίαν λόγου*; commentaries on *Timaeus*, *Categories*, *Metaphysics*, *Aratus' Phaenomena*; *Περὶ τοῦ Νείλου*. He is reckoned as a Platonist but owed much to Stoicism.

PW vi. 915.

EUDOXUS (1) of Cnidos (c. 408-355 B.C.), a brilliant mathematician and astronomer, was a pupil of Archytas in geometry and of Philistion in medicine. At 23 he went to Athens, attended lectures by Plato, and returned to Cnidos. From about 381-380 B.C. he stayed in Egypt studying astronomy and making observations. Thereafter he founded a school at Cyzicus; later, about 368 B.C., he transferred it to Athens. Finally, returning to Cnidos, he was elected to legislative office. In astronomy he wrote books entitled *The Mirror* (Ἐναγών) and *Phaenomena* (see Hipparchus, in *Eudoxi et Arati phaenomena* 1. 2. 2); but his greatest achievement was his hypothesis of concentric spheres by which he thought to explain geometrically the movements of the sun, moon, and planets; this made each planet describe, on the surface of a sphere, a curve like a figure-of-eight, which he described as a *horko-feta* (ἡρόκωβη). In geometry he is famous as the creator (1) of the general theory of proportion, applicable alike to commensurable and incommensurable magnitudes, which is expounded in Euclid's

Books 5-6; (2) of the 'method of exhaustion', fundamental in Greek geometry, for measuring and comparing the areas and volumes of curvilinear plane and solid figures: this he applied to finding the volumes of a pyramid and a right circular cone, and to proving that circles are to one another as the squares, and spheres are to one another as the cubes, on their diameters respectively (see Euclid 12. 5-10, 1-2, 16-18). He also solved, by means of a special curve, the problem of doubling the cube. Other works were on *Geography* and on the *Octaëteris*, eight-year cycle (Diog. Laert. 8. 87; 90).

On the hypothesis of concentric spheres see Aristotle, *Metaph.* A 8. 1073^b17-1074^a14; Simpl. on *De Caelo* 488. 18-24; 493. 4-506. 18 Heib.; Schiaparelli, *Le sfere omocentriche di Eudosso, di Callippo e di Aristotele* (1875; German translation by W. Horn, *Abh. zur Gesch. d. Math.* (1877), 101-98); T. L. Heath, *Aristarchus of Samos*, 193-211. T. H.

EUDOXUS (2) of Rhodes (fl. 225-200 B.C.?), historian, perhaps identical with the author of *Περὶ πλοῖ* (GGM i. 565), which may have formed a part of E.'s histories.

FGH iv. 407-8; PW vi. 1. 930.

EUDOXUS (3) of Cyzicus (2nd c. B.C.), Greek navigator. After 146 B.C. he was sent by Ptolemy Euergetes II of Egypt with a stranded Indian guide to find the sea-route to India; sent again later, he was on his return blown some way down east Africa, consorted with natives, returned to Alexandria with some wreckage there said to be part of a ship of Gades (*Cádiz*), decided that Africa could be circumnavigated, and determined to go round it to India, avoiding Ptolemaic exactions. Having collected cargoes at various ports, he set out from Gades, with music-girls, doctors, and carpenters on board, but was driven aground south of Morocco. Returning, he saw perhaps Madeira, failed to persuade Bocchus of Morocco to help him, cut across land to the Mediterranean, and, with much greater equipment, sailed again down west Africa, and disappeared.

Strabo 2. 98-102. J. Thiel, *Eudoxus van Cyzicus* (1939, in Dutch); Cary-Warmington, *Explorers*, 70-1, 98-103, with modern authorities. E. H. W.

EUENUS of Paros (5th c. B.C.), poet and Sophist, of whom some twenty elegiac verses and two hexameters have come down. He gave metrical form to the rules of rhetoric and added to current terminology (Pl. *Phdr.* 267a).

EUETES, said by Suidas to have been an Athenian writer of comedy contemporaneous with Epicharmus, but it is likely that Suidas is really referring to the similarly named tragedian of about that date.

EUGAMMON of Cyrene (6th c. B.C.), epic poet, author of the cyclic *Telegonia* (see EPIC CYCLE).

EGF 57-9.

EUGEON of Samos, see LOGOGRAPHERS.

EUGRAPHIUS (early 6th c. A.D.), author of a commentary on Terence (ed. P. Wessner in *Donati Commentum*, iii. 1). His interest is chiefly in the rhetorical qualities and characterization of the plays and often he does little more than paraphrase the text of Terence. He probably knew the commentary of Donatus on Terence and that of Servius on Virgil. The work is found in two versions, one of which contains interpolations.

Cf. Teuffel, § 482. 3; Schanz-Hosius, § 1117.

J. F. M.

EUGUBINE TABLES, see TABULAE IGUVINAE.

EUHEMERISM, see EUHEMERUS.

EUHEMERUS (*Euemeris*, *Εὐήμερος*) of Messene (cf. the best sources in FGrH 63 Jacoby), in the service of Cassander (q.v.) 311-298 B.C. E.'s fame is based on the

anthropological theory of the gods which he put forward in a novel of travel, the *Sacred Scripture* (*Ἱερὰ ἀναγραφή*, Diod. 6. 1. 3; Athen. 14. 658e). In this book he gave an account of a fabulous journey which he claimed to have made to the island Panchaia in the Indian Sea. There he had seen in the temple of Zeus a large golden column on which were written the deeds (*πράξεις*) of Uranus, Kronos, and Zeus. From this he found that the gods of popular worship had originally been great kings and conquerors to whom mankind had shown their gratitude for astounding and helpful deeds by worshipping them as gods (Diod. 6. 1 f.; 5. 41 f.). E. systematized, perhaps not without the influence of Oriental, especially Egyptian, anthropomorphic theology, a deep-rooted Greek feeling which denied fixed boundaries between gods and great men. The rationalist tendency of his time as well as the tremendous deeds of Alexander had certainly prepared the way for his conception.

The theory seems to have made little impression on the Greeks, but Diodorus (q.v.) Siculus, apparently taking the romance for fact, embodied it (frs. of his sixth book). In Latin it had more success after the publication of the *Euhemeris* of Ennius (q.v.), and euhemerizing accounts of such mythological figures as Faunus exist. The Christian writers, especially Lactantius, liked to use it as an evidence of the real nature of the Greek gods. E.'s name survives in the modern term 'euhemeristic', applied to mythological interpretation which supposes certain gods (e.g. Asclepius) to be originally heroes.

G. Némethy, *Euhemeris reliquiae* (1889); Jacoby, FGrH 63; J. Vahlen, *Ennianae poës. reliquiae*, cxx f.; 223 f. Studies: R. von Pöhlmann, *Gesch. der sozialen Frage* (ed. 3, 1925), 293-305; P. van Gils, *Quaestiones Eumereae*, Thesis, Kerkade-Hecrlen 1902; PW vi. 952. K. O. B. and H. J. R.

EUMELUS of Corinth (? 8th c. B.C. or later), epic poet; author of a *Corinthiaca* (of which a prose epitome was subsequently made), a *Βορυσωνία* (perhaps dealing with the story of Aristaeus), a proconsorial ode (*Prosodion*), and other poems. See EPIC CYCLE.

EGF 185-95.

W. F. J. K.

EUMENES (1) I of Pergamum (d. 241 B.C.) was the son of a Eumenes of Tios and succeeded his uncle Philetaerus as ruler (never king) of Pergamum in 263, when he threw off Seleucid suzerainty with Egyptian assistance. After defeating Antiochus I near Sardes (262), he greatly extended his frontiers, and though he probably lost most of his gains to Antiochus II (c. 258), he maintained his independence till his death. He regularly bought immunity from the plundering bands of the Galatians.

G. T. G.

EUMENES (2) II (d. 160 or 159 B.C.) was the eldest son of Attalus I of Pergamum, whom he succeeded (197). He continued Attalus' policy of co-operation with Rome, and was perhaps mainly responsible for embroiling Rome with Antiochus (196-192), as Attalus had done with Philip V. In the war against Antiochus Eumenes assisted Rome with his fleet, and later stood a short siege in Pergamum; at Magnesia (189) he commanded the right wing with distinction. The peace of Apamea (188) gave him the Thracian Chersonese and most of Seleucid Asia Minor; and he secured these gains by cultivating the goodwill of Rome, which was further shown by the Senate's intervention in his favour, so as to end his wars with Bithynia (186-185) and Pontus (183-180). He was naturally the champion of the *status quo* in the East, and hence unpopular with all dissatisfied parties. The 'Third Macedonian War' (171-168), long regarded as 'inevitable', was hastened by his visit to Rome to accuse Perseus (172). Rome's failure to win the war quickly is said to have induced him to negotiate secretly with Perseus; but he cannot have seriously considered reversing a successful policy of thirty years.

Nevertheless, he certainly forfeited the Senate's confidence, though it was only transferred to his brother Attalus.

Eumenes was a worthy successor to Attalus I, and carried his policy to its logical conclusion, greatly to the advantage of Pergamum (taking the short view). His ability is unquestioned, and the unfavourable tradition is due partly to this very success, which made him many enemies. His best memorial was perhaps the city of Pergamum itself, which he adorned with a splendid sequence of buildings.

For bibliography, see under PERGAMUM.

G. T. G.

EUMENES (3) of Cardia (c. 362-316 B.C.), secretary to Philip of Macedon and to Alexander. He became (330?) principal secretary (*ἀρχιγραμματεὺς*), and kept the Royal Journal (see EPIHEMERIDES), which he perhaps published after Alexander's death. Some military experience, too, came his way, but it was in the wars of the 'Successors' (see DIADOCHI) that he proved himself a born general. He remained steadfastly loyal to the legitimate heirs and to the idea of a united Empire, and co-operated with the regents against the separatist generals. Driven from Asia Minor by Antigonos, he escaped to the Eastern satrapies, where he organized a fresh 'loyalist' front. After the indecisive battle of Paraetacene (317), Eumenes' fate was decided at Gabiene by the desertion of his picked Macedonian corps. He was executed by vote of the Macedonians of both armies. He was the Themistocles of the period, an able Greek among able Macedonians, their equal in warfare, their superior in diplomacy, which included skilful management of his Macedonian colleagues by tact, and of his Macedonian soldiers with the aid of an Alexander-cult instituted by him.

Diodorus, bk. 18 passim; Plutarch, *Eumenes*. Berve, *Alexander-reich*, no. 317; A. Vezin, *Eumenes von Kardias* (1907). G. T. G.

EUMENIUS (fl. 3rd-4th c. A.D.), of Greek origin, was, like his grandfather, a teacher of rhetoric. By oratorical skill he became *magister memoriae* at court. Constantius subsequently made him head of the school at Autun, a position less dignified, but much more highly paid. After the destruction of the school in war, Eumenius rebuilt it at his own expense, and delivered a carefully composed oration on the occasion of the reopening (A.D. 297) in which there is much flattery of the ruling powers. Perhaps some other speeches in the collection *Panegyrici* are also his work. See PANEGYRIC, LATIN. A. S.

EUMOLPUS, mythical ancestor of the Eleusinian clan of the Eumolpidae, as his son Ceryx was of the *Κήρυκες*. According to Apollod. 3. 201 ff. he was son of Poseidon and Chione daughter of Boreas (q.v.). To conceal her shame, she threw him into the sea; Poseidon saved him, brought him to Ethiopia, and entrusted him to his daughter Benthesisyme. When adult, he married Benthesisyme's daughter, but also tried to rape her other daughter, for which he was banished. During his exile he visited Eleusis, where he founded the Mysteries (Lucian, *Demon*. 34), or at least became somehow connected with them (Plut. *De Exil.* 607b). Finally he succeeded Tegyrius, a Thracian king, but was sent for again by the Eleusinians to help them against Erechtheus (q.v.), in which campaign he was killed. Further details of his story are obscure and contradictory, see Engelmann in Roscher's *Lexikon* s.v. H. J. R.

EUNEOS (Ἐϋνεός), and **THOAS** (Θόας), sons of Jason and Hypsipyle (q.v.). They came to Nemea while their mother was in captivity there, and were admitted to the house by her; later, they recognized her and took her away (Eur. *Hyps.* frs. 3 and 41 Hunt).

EUNUCHS, RELIGIOUS, generally self-castrated, were frequently associated with the cult of the Anatolian mother-goddess. The custom probably originated here,

rather than with the Semites, among whom it is found as a religious institution chiefly at Hierapolis-Bambyce, where many of the cultural ties were with Anatolia. Best known are the Galli of Cybele and Atargatis, who were temple attendants or wandering mendicants (cf. METRAGYRTES) rather than priests (Lucian, *Syr. D.* 43); they are seldom mentioned in inscriptions. Though the Archigalli in the West seem not to have been eunuchs, the heads of the cult at Pessinus, the Attis and Battakes, probably were, at least in earlier times. There were eunuchs in the service of Hecate at Lagina (*BGH* 1920, 79; 84), and Strabo (641) says that the Megabyzi, the chief priests of Artemis at Ephesus, were formerly eunuchs.

Many explanations of the practice have been offered, as that the act was intended to increase the fertility of the goddess or to assimilate the worshipper to her. These may have been contributory or secondary ideas, but the basic motive was probably the desire to make oneself permanently pure. Certain rites only the chaste could perform; the eunuch, at least in a negative sense, possesses the purity of a virgin or child (at Ephesus virgins were the colleagues of the Megabyzus). In other words, the importance lay not in the act but in its consequences.

The chief ancient sources are Lucian, *Syr. D.*, Catullus 63, *Anth. Pal.* 6. 217-20, and the texts collected in H. Hepding, *Attis* (1903) and F. Cumont, *L'Égypte des astrologues* (1937), 132-3. A lex sacra of Eresus forbidding Galli entrance to a sanctuary, *CR* 1922, 190; the Galli at Rome, J. Carcopino, *Mémoires de l'Académie des Inscriptions*, 1923. Origins of rite and comparative material: A. D. Nock, *ARV* 1925; L. H. Gray in *ERE*, s.v. 'Eunuch'. F. R. W.

EUPATRIDAE, (1) a general term for nobles by birth; (2) a particular term in Athens for a well-defined class, a 'peerage', like the *patricii* (q.v.) in Rome. Presumably they were the descendants of the original royal counsellors, who claimed also an exclusive right to the archonship, or to the three major archonships (see ARCHONTES). In that case the Areopagus (q.v.) was exclusively Eupatrid. This right was abolished by Solon (q.v.), who established an aristocracy of wealth and deprived the magistracy and Areopagus of their sole right to interpret and administer the laws. The right to interpret certain religious 'laws' was retained under the democracy by a few Eupatrid families.

H. T. Wade-Gery, *CQ* 1931, 1 ff.

A. W. G.

EUPHANTUS of Olynthus, tutor of Antigonos Gonatas, to whom he dedicated a treatise *Περὶ βασιλείας*. He also wrote contemporary history (*Ἱστορίαι*) and several tragedies.

FGH ii. 74; *FHG* iii. 19.

EUPHEMUS. A hero, son of Poseidon, connected with the foundation-legend of Cyrene. Sailing with the Argonauts, he was given a clod (symbol of sovereignty) by Triton as they returned from Libya, and told (in Pindar's account) that if he dropped it into the sea near Taenarum his descendants in the fourth generation would rule in Libya. It fell, however, by Tharos, whence, in the seventeenth generation after E., Battus colonized Cyrene. (Pindar *Pyth.* 4. See EURYPYLUS (3), also Hdt. 4. 150 and Ap. Rhod. 4. 1730.)

In Homer (*Il.* 2. 846) a Euphemus is mentioned as leader of the Cicones, and in Plato (*Phdr.* 244a) one as father of the poet Stesichorus. According to Hesychius, E. was an epithet of Zeus in Lesbos.

EUPHORBUS, in mythology, a Dardanian, son of Panthoos, who wounded Patroclus (*Il.* 16. 806 ff.), and was afterwards killed by Menelaus (17. 45 ff.). Pythagoras claimed to have been Euphorbus in a former incarnation and to recognize his shield (Hor. *Carm.* 1. 28. 9 ff., and commentators there).

EUPHORION (1), son of Aeschylus, is said (Suidas, s.v.) to have exhibited plays written by his father but not produced in his lifetime, and to have won four victories with them. In 431 B.C. he defecated both Sophocles and Euripides (Arg. Eur. *Med.*). A. W. P.-C.

EUPHORION (2) (b. c. 276 B.C.), of Chalcis in Euboea, studied philosophy at Athens. In poetry he was a pupil of Archebulus of Thera. After enriching himself by a liaison with the elderly widow of Alexander, ruler of Euboea and Corinth, he was appointed librarian at Antioch in Syria by Antiochus the Great (223-187) and was buried there or at Apamea (Suidas).

WORKS. (1) *Verse*. Apart from epigrams (*Anth. Pal.* 6. 279; 7. 651) E. seems to have confined himself in the main to the composition of epyllia and composite epics, akin to catalogue-poems, on mythological subjects. Suidas mentions three works, *Hesiod*, *Mopsopia* or *Miscellanea* (*Ἀτακτα*), *Chiliades*. The second was a collection of Attic legends, Mopsopia being an old name for Attica. The third guaranteed the eventual punishment of persons who had defrauded E. of money by a recital of oracles fulfilled after the lapse of 1,000 years. Of the further titles cited in the fragments seven are proper names, perhaps those of the addressees. The content of these poems was apparently mythological, as was certainly that of seven others, among which the *Thrax* seems to have been a medley of myths. The *Curses* or *Goblet-thief* was directed against a man who had robbed E. of such an article and, if fr. 9 belongs to this poem, imprecated on the thief many unpleasant ends recorded in myth; cf. Ovid's *Ibis*. The *Replies* (*Ἀντιγραφαί*) to *Theodoridas* was also in verse, a poetic epistle. The attribution to E. of love-elegies in the Roman manner is based on a misunderstanding. (2) *Prose*. The following works are cited, *About the Isthmian Games*, *About the Aleuadae*, a lexicon to Hippocrates.

The scantiness of E.'s surviving fragments makes an estimate of his work difficult. In subject-matter he seems to have preferred the Trojan Cycle, local legends of a gruesome character, and topics of aetiology and geography. His narrative technique consisted in undue amplification of detail and vain repetition, leading up to very summary treatment of the climax (frs. 44, 51; Lucian, *Hist. conscr.* 57). His sentiment was mawkish (fr. 92) and he indulged in childish etymologies (frs. 57, 136). His proverbial obscurity is due partly to the many and difficult mythological references, partly to his language, of which 'glosses' (cf. *Anth. Pal.* 11. 218, an attack on E. by Crates of Mallus) and neologisms, including truncated words, formed an important part. His basic vocabulary was drawn from Homer, whom he termed 'untouchable' (fr. 118), but he was also indebted for this and for many themes to Hesiod and others. The papyrus fragments reveal him as a barefaced plagiarist of his immediate predecessors, Callimachus and Apollonius Rhodius. But [Lycophron] in the *Alexandra* is probably E.'s debtor. See also EPHYLLION.

Euphorion exercised considerable influence on later poets. Among the Greeks, Nicander, Parthenius, Nonnus imitate his language or borrow his themes. At Rome his epyllia (see EPHYLLION) were well known to the generation of Catullus and Gallus (hence *cantores Euphorionis*, Cic. *Tusc.* 3. 45). Virgil's debt to him for subject-matter is illustrated by Servius. Of extant Latin poems the *Ciris* perhaps reproduces E.'s technique most closely.

Texts: J. U. Powell, *Collectanea Alexandrina* (1925), 28-58. For the latest papyri see K. Latte, *Philol.* xlv (1935), 129-55. General literature: F. Skutsch, 'Euphorion (4)', in *PW* vi. 1174-90; A. Meineke, *Analekta Alexandrina* (1843), 3-168; F. Scheidweiler, *Euphorionis fragmenta* (1908). E. A. B.

EUPHRANOR, sculptor and painter, of the Isthmus; later settled in Athens. Pliny dates him 364 B.C. (by battle of Mantinea). Pupil of the elder Aristides

(q.v., 2). His sculptures, some of them colossal, included Paris, Alexander and Philip in chariots, and a Priestess of great beauty. No probable attributions have been made. His paintings included Cavalry battle before Mantinea, Theseus with Democracy and Demos, the Twelve Gods. He wrote on symmetry and colours. Critics remarked on his large heads and slim bodies, but he seemed to portray the dignity of heroes and himself called his Theseus 'beef fed', in contrast to the 'rose fed' Theseus of Parrhasius (q.v.). T. B. L. W.

EUPHRATES, the longest river of western Asia, and the more westerly of the Two Rivers of Mesopotamia. Rising in the Armenian mountains, it flows south-west to the Taurus, then south-east, receiving its three main tributaries the Murat Su, the Balikh, and the Khabur on the left bank. In the alluvial plain of Babylonia, which it inundates yearly, it was in antiquity connected with the Tigris (q.v.) by numerous navigation and irrigation canals. In classical times it was crossed by a number of bridges, e.g. at Zeugma (q.v.) and Babylon. It served as a political boundary between Armenia and Cappadocia, Sophene and Commagene, etc. (Strabo 16. 746-9; Pliny 5. 83; Ptol. 5. 12). Between 53 B.C. and A.D. 63, and again after the withdrawal of Trajan, it separated Rome from Parthia; the forts along its west bank guarded the *limes* of the Empire against the Sassanids.

F. R. Chesney, *Expedition for the Survey of the Rivers Euphrates and Tigris* i, ii (1850); V. Chapot, *La Frontière de l'Euphrate* (1907). M. S. D.

EUPHRON, New Comedy poet, dated c. 270 B.C. by his allusion to Nicomachus of Bithynia (fr. 11. 2). Of nine titles three (*Θεῶν ἀγορά*, *Θεωποί*, *Μοῦσαι*) show E.'s personal liking for burlesques.

FGC iv. 486 ff.; CAF iii. 317 ff.

W. G. W.

EUPHRONIUS (late 6th-early 5th c. B.C.), potter and vase-painter in Athens, known from twelve signatures. He signed four red-figure vases as painter (510-500 B.C.), notably calyx crater with Heracles and Antaeus (Paris), and psykter with heataerae (Leningrad). Experimented with new positions, character contrast, etc., within ripe archaic conventions. As potter he employed: (1) Panaetius, painter (500-480), who painted six cups for Euphronius, including Theseus and Amphitrite (Paris), Heracles and Eurystheus (London), and many other lively scenes. (2) Onesimus, cup painter; continues style of (1) in direction of grace and charm. (3) Pistoxenus, painter. Painted white ground cup (Berlin, about 475), also Heracles and Linus (Schwerin), and Aphrodite cup (British Museum). Has been identified with painter of Penthesilea cup (Munich). An early classical artist with much Polygnotan ethos.

Beazley, *A.V.* 58; 165; 172; 260; *Vases in Poland* (1928), 21 (Panaetius, painter); W. Technau, *Röm. Mitt.* 1931, 189 (Onesimus); H. Diepolder, *Penthesileamaler* (1936). T. B. L. W.

EUPOLEMUS (fl. c. 150 B.C.), a hellenized Jew, wrote *Περὶ τῶν ἐν τῇ Ἰουδαίᾳ βασιλείων*, a popular history of the Jews in a rhetorical style (FHG iii. 207-30).

EUPOLIDEAN, see METRE, GREEK, II (7).

EUPOLIS (fl. c. 430-410 B.C.), regarded in antiquity as one of the three greatest of Old Comedy writers (Platon. *Diff. Com.* 1; Quint. 10. 1. 66; Hor. *Sat.* 1. 4. 1). Born at Athens, probably in 445, as Suidas says he first exhibited in his seventeenth year; son of Sosipolis (Suid.). The old tradition which told how Alcibiades drowned him on his way to Sicily (Platon. *Diff. Com.* 4; Ov. *Ibis* 593 f.) in punishment for E.'s attack on him in the *Βάρβαροι* was denied by Eratosthenes (Cic. *Att.* 6. 1. 18). Suidas attributed to E. seventeen plays and seven victories; anon. *Περὶ κωμ.* 2. 10 gives the number of plays as fourteen, the first 429 B.C. The *Alycs* (earlier than 423

B.C.) introduces a musical Sophist (fr. 11), and the plot may have resembled *Ar. Nub.* The *Βάπται* (? c. 416 B.C.) attacked Alcibiades (fr. 69) and his friends as worshippers of the Thracian goddess *Κορυτώ*, whose rites contained lascivious dances (Juv. 2. 91 and schol.). The *Ἀῆμοι* may now with confidence be assigned to 412 B.C. (Körte, *Hermes* xlvii. 276 ff.). Papyrus finds have added much to our knowledge of its contents (Powell, *New Chapters in Greek Literature*, 3rd ser. 161-3). Its chorus consisted probably of *Μαραθωνομάχαι*. In the episodic part of the comedy various former *προστάται τοῦ δήμου* (Solon, Myronides, Aristides) are recalled from Hades to help Athens in her hour of need. Another scene depicts the expulsion of a *συκοφάντης* by a *δίκαιος ἀνὴρ* (probably = Aristides). The *συκοφάντης* has tried to impeach a *ξένος* for violation of the Mysteries—a clear reference to the scandal of 415 in which Alcibiades was implicated. The *Κόλακες* (421 B.C.) contained an attack on Callias, son of Hipponicus (Ath. 5. 218b, c; schol. *Ar. Av.* 284), who is satirized as squandering his money on loose living and the parasites who presumably formed the chorus. The *Μαρικᾶς* (Hesych. *Μαρικᾶν κίναδον οἱ δὲ ὑποκόρισμα παιδίων ἄρρενος βαρβαρικόν* (MSS. -κοῦ)) was produced in 421 (schol. *Ar. Nub.* 553). It attacked the demagogue Hyperbolus under the name M., as *Ar. Eq.* attacked Cleon under the name of the Paphlagonian; indeed, the two plays seem to have been so much alike that, while Aristophanes accused E. of plagiarism, E. retorted by claiming to have collaborated with Aristophanes (*Ar. Nub.* 553; *E. fr.* 78). The *Πόλεως* is probably to be assigned to 422 (*Hermes* xxx. 443 ff.). Cities of the Athenian Empire (e.g. Tenos (fr. 231), Chios (fr. 232), etc.) formed the chorus. The play probably had a political motive: that of persuading Athens to deal gently with her dependants. The *Ταξιαρχοί* (perhaps 427 B.C., and, if so, E.'s earliest datable play; see Wilamowitz, *Phil. Unters.* i. 64 ff.) shows the effeminate Dionysus learning the arts and rigours of the military life from the Athenian general Phormio.

Of the remaining plays the title of the *Ἀσπράγευτοι ἢ Ἀνδρόγυνοι* (*The Shirkers*) explains itself. The *Αὐρόλυκος* attacked the favourite of Callias. The *Νουμηνίαι* may have been a mythological burlesque, like Epicharmus' *Τριακάδες*. The *Προσπάτριοι* was perhaps a satire on litigiousness. The *Φίλοι* introduced the famous beauty, Demus, and may have been an attack on paederasty. The *Χρυσὸν γένος* seems to have satirized Cleon. The fragments of E., though comparatively numerous, are too short to enable us to form any judgment on the poet's worth. Antiquity, as has been said, ranked him high, and we have, for what it is worth, the opinion of Platonius. He (*Diff. Com.* 2. 16) attributed to E. more *χάρης* than to Aristophanes and less *πικρότης* than to Cratinus. He further (ib. 2. 15) calls him *ειφαιστάτος* ('imaginative') *κατὰ τὰς ὑποθέσεις* and *εὐστοχος περὶ τὰ σκώμματα*.

FCG i. 104 ff.; ii. 426 ff.; CAF i. 258 ff.; Demiaśczuk, *Suppl. Com.* 41 ff.

EURIPIDES. (See also TRAGEDY.)

I. LIFE (485?-406? B.C.).

1. Euripides was probably born in 485 B.C. (*Marm. Par.*). He was son of Mnesarchus or Mnesarchides, of the deme of Phlya, and Clito, who according to the comic poets were respectively a shopkeeper and a greengrocer, but according to Philochorus, a respectable historian, were people of good position. Possibly his father had an agricultural estate in Salamis, the poet's home from early life. The authorities for his life (Satyrus, Gellius 15. 20, the 'Life' in certain MSS., Suidas, etc.) retail much unreliable gossip; but it may well be true that he was a disciple of Anaxagoras, whose doctrines sometimes appear in the plays, and that he associated with Prodicus, Archelaus, Protagoras, and Socrates, and was influenced

in his thought by them. (Socrates is said to have been an enthusiastic admirer of his tragedies.) He is described as devoted to books, and passing much time in study and writing in a cave by the sea in Salamis. He held a local priesthood of Zeus at Phlya; he once went to Syracuse as member of an embassy (*Arist. Rh.* 2. 6 and schol.), and he probably served as a soldier like other citizens. Otherwise he seems to have lived mainly in retirement, and possibly on this account was credited with a morose and unsocial temperament. He had three sons, one of whom brought out some of his plays after his death. The malicious stories about his domestic life need not be believed, but it may be true that Cephisophon, a member of his household, helped him in composing the music for his plays (*Ar. Ran.* 944, and fr. 580 K. etc.).

2. His first appearance in a tragic contest was in 455, when he was placed third; his first victory was in 441. He won only five victories (one of them posthumously), covering 20 plays out of the 92 which he composed. Of the 78 (or 74) known to Alexandrian scholars only 7 or 8 were satyric. He produced new plays at the Piræus and elsewhere, as well as at Athens. He composed also the elegy for the Athenian soldiers who fell in Sicily. He was constantly attacked by the comic poets, and his advanced views were probably ill received at first by Athenian audiences, though after his death he became, and remained for generations, the most popular of the three great tragedians. Not long before his death, i.e. in 408 or 407, he left Athens, some said on account of the ridicule of his fellow citizens, but no further explanation is given. After a stay in Magnesia (in Thessaly), where he was honourably received, he went to the court of Archelaus in Macedonia, where he composed a play in the king's honour, as well as the *Bacchæ* and other plays. He died there, probably at the beginning of 406, and was buried at Arethusa; a cenotaph was erected to him at Athens.

II. WORKS

3. Of the 19 extant plays those which can be certainly dated are the *Alcestis*, 438 B.C. (produced in place of a satyric play with the *Cressæ*, *Alcmaeon in Psophis*, and *Telephus*; the group won the 2nd prize); *Medea*, 431 (placed 3rd, with the *Philoctetes*, *Dictys*, and *Θεμιστοκλῆς*); *Hippolytus*, 428 (1st prize); *Troades*, 415 (placed second; the plays were *Alexander*, *Palamedes*, *Troades*, *Sisyphus*); *Electra*, 413; *Helena*, 412; *Orestes*, 408 (with the *Oenomaus* and *Chrysippus*). The *Bacchæ* was probably composed in 407 (produced in or after 406, with the *Iphigenia in Aulis* and *Alcmaeon in Corinth*). The *Heraclidae* is probably to be dated about 430 or 429, the *Hecuba* about 425, the *Suppliants* about 420, the *Andromache* (not performed at Athens) about 419, the *Hercules Furens* possibly about 416 (but the indications are very uncertain); the *Ion* and *Iphigenia in Tauris* seem to show the poet's later style (especially as regards versification) and may fall between 413 and 408, and the *Phoenissæ* and *Hyppolytus* appeared shortly before Aristophanes' *Ranæ* (produced in 405), i.e. probably 409 or 407. The satyric *Cyclops* cannot be dated. (For evidence, see editions, and Haigh, *Tragic Drama*, ch. iv.) Of the lost plays not mentioned above, the *Andromeda* appeared in 412 (*Ar. Therm.* 1060), the *Erechtheus* and *Crepheotes* probably in or soon after 421, the *Sthenoboea* before 422. The extant *Rheus* is probably not that written by Euripides, but its date is keenly disputed.

4. From the Trojan Cycle and legends closely connected with it Euripides drew the stories of about twenty plays, but his subjects are more or less evenly spread over a wide range of mythology, and he has recourse to some purely local legends attached to places outside Attica (as in the *Crepheotes*, a Messenian story). His only Dionysiac play was apparently the *Bacchæ*.

5. Much new light has been thrown on some of the lost plays by papyri published since Nauck's *Tragic Fragments*; see Powell and Barber, *New Chapters*, iii. 105-51 and D. L. Page, *Greek Literary Papyri* i. 54-135 (Loeb, 1942).

III. CHARACTER OF HIS WORK

6. Aeschylus and Sophocles were not out of harmony with the ordinary religious beliefs and conventions of their time. But to Euripides the traditional legends implied that the morality of the gods was lower than that of good men; and at the same time the advanced thought of the day, as expressed e.g. by Protagoras, declared itself baffled by all questions affecting the gods; scientific theories were accounting for natural phenomena by physical causes and dispensing with divine action, and, by the time when most of Euripides' extant plays were being written, the Peloponnesian War had generated, as Thucydides makes plain, widespread scepticism as to the existence of any divine government of the world. With these movements of thought Euripides was strongly in sympathy. At the same time he was intensely interested in the human mind and emotions as he saw them in living individuals, and he set himself to show what the effect on real minds and emotions must have been, if the events described in the legends had really taken place. In most of the earlier extant plays (and in some later) it is with the mind and feelings of women that he is occupied—first Alcestitis (accompanied by a masterly portrait of unconscious selfishness suddenly becoming conscious in Admetus); then the long series of distraught or dehumanized victims of cruelty, divine or human—Phaedra (in the *Hippolytus*), Medea, Hecuba, Andromache, the women of the *Troades*, Electra, Creusa (in the *Ion*), all portrayed with a vividness and an understanding which both in its insight and in its painfulness was a new thing. In some lost plays also the central person was one afflicted with some horrible or morbid passion—Pasiphae, Canace, Sthenoboea; or the victim of a god's lust, doomed to misery through no fault of her own—a Melanippe or an Antiope. Set against these were men either purely selfish (like Jason) or deadened to human feeling by supposed reasons of State, types of the political mind, masking cruelty with ingenuity of argument. (Aristotle, *Poet.* 15, feels that these characters may be sometimes needlessly bad—like Menelaus in the *Orestes*.) More rarely the victim of divine savagery is a man, Heracles, for instance, in the *Hercules Furens*. Besides such studies there are the incomparable pictures of maidens going willingly to death: Polyxena, Macaria, Iphigenia at Aulis, and doubtless the daughter of Praxithea in the lost *Erechtheus*; and there are good men—Theseus in the *Heracles*, Pylades, and others. The first interest of the poet in all these is in themselves, as human beings acted upon in different ways by experiences of a terrible or pitiful kind. But he also faces without evasion the moral to which their stories pointed as regards the government of the world. Sometimes his speakers may doubt or even roundly deny the existence of the gods, or speak very plainly as to their character; or they may declare their disbelief in the legends (*HF* 1346); or they may substitute the Laws of Nature or the Aether or Reason for what had been called God, or (especially in some later plays) may declare there is no power in the universe but Chance. Because the oracles were the official organs of the supposed will of the gods, they and the priests who administered them fall into the same condemnation, along with the purveyors of miracle-stories designed to bolster up the public worship by which priests and seers lived. But apart from such passages, the two main interests of the poet are reconciled by means of the normal structure of his plays. It is generally true that each play apart from the beginning

and end is a purely human drama, treated as if the agents were men and women who might have lived yesterday and who suffer as living men and women would suffer; only at the beginning and end, as a rule (the *Hercules Furens* is an exception), does it appear that all the misery is the work of the gods, and we are left to draw the moral. Not that Euripides is blind to the extraordinary beauty to be found in the religion of Greece; such a figure as Artemis in the *Hippolytus* and the amazing loveliness of the *Bacchae* are a sufficient refutation of this; but behind is always (and not least in the *Bacchae* itself) a sense of the falseness and cruelty of the gods, so that it is in human beings alone (and in the slave and the peasant no less than in those in high station) that the poet finds humanity.

7. In expressing these interests in drama Euripides often presents scenes such as have exposed him to criticism, not usually very intelligent, in ancient and modern times. Aristophanes and Plato thought that he lowered the dignity of Tragedy by his heroes in rags; others, disapproving of the minute analysis and display of abnormal passions and overwrought emotions, have been blinded to the poet's intense and truthful sympathy. But if there are some scenes so painful as to be almost intolerable, and if the poet seems at times to multiply distressing scenes almost wilfully, there is something much more profound than mere sensationalism in this; while in regard to some of the most pathetic and even agonizing scenes, it is well to remember that these presented the incidental consequences of war; and what these might be Euripides knew only too well. It was in the year before the production of the *Troades* that the Athenians had sacked Melos.

8. In his detestation of war Euripides never varies, and it appears in many plays; but his patriotism as a citizen of Athens is also strong. Perhaps it is for an idealized Athens, the upholder of the oppressed and of freedom, that he chiefly cares; the *Heraclidae* and the *Supplices* and the character of Theseus in more than one play illustrate this, and even the fine chorus of praise in the *Medea* is prompted by the part played by Aegeus as the friend in need. But he has also a hatred of Sparta which sometimes leads him—particularly in the *Andromache* and in the characters of Alcmena in the *Heraclidae* and of Menelaus generally—to say 'what the poet and not what the plot demands'. His attacks upon Apollo and the oracle of Delphi may be partly due to the pro-Spartan policy of the oracle in the war, though the fact that Delphi was the religious centre of Greece would be reason enough. Generally he is proud of his own free city, and even makes Theseus the author of its democracy (*Supp.* 353), but he has no mercy on demagogues, and in *Supp.* 244 ff. it is the μέσοι πολῖται, neither rich nor poor, that are spoken of as the saviours of the State, while in *Or.* 903-22 and in the portraiture of Electra's labourer husband he shows his respect for the honest working man. The debates on such subjects have been criticized as undramatic, but are perhaps less so in a drama in which the heroic story is treated as if it were a story of contemporary life.

9. The traditional stories had no special sacredness for Euripides, and he varies and invents freely. The plots of the *Helena* (with the virtuous Helen and the finely conceived Theonoe), the *Ion*, the *Iphigenia in Tauris*, and the *Orestes* are for the most part his own; so is Electra in her cottage with her peasant husband; and his treatment of the Theban story both in the *Phoenissae* and in the lost *Oedipus* and *Antigone* departed far from any existing versions (see C. Robert, *Oedipus*). Characters like the barbarian kings, Theoclymenus and Thoas, are a bold departure from convention. Now and then he presented plays in which there was almost as much of fairy-tale as of tragedy; the *Helena* and *Andromeda* (produced together in 412) and the *Phaethon* are examples,

and perhaps some of the plays which he offered in place of the conventional satyric plays may have been of a semi-tragic type. It happens that a large proportion of the extant plays have a relatively happy ending; but we know from Aristotle (*Poet.* 13) that most of his plays ended unhappily, and it is precisely for this reason that he describes him as the 'most tragic of poets', 'in spite of his faulty management in other respects'.

10. In some plays Euripides is probably open to the criticism which Aristotle brings against 'episodic' plots and scenes which have no causal connexion with the plot or with the preceding scenes. The *Troades* is a series of pathetic scenes, without much structural necessity to connect them, but justified as illustrating one common theme. The *Phoenissae* is almost what Aristotle would call an ἐποποιικὸν δράμα, the tragedy of Iocasta and that of Menoeceus being grafted on to that of the hostile brothers (which had been enough for one play of Aeschylus). The last part of the *Heracleidae* is very slightly connected with the rest and seems to be dictated by animosity against Sparta. In the *Suppliants* the self-immolation of Evadne and the mourning of her father are criticized as a sensational 'extra'; and there are other instances. It is seldom difficult for a careful reader to see the motive of these scenes, and the same is true of the scenes which are semi-comic—the arming of Iolaus in the *Heracleidae* (where there is some pathos in the comedy); some parts of the *Helena*; the lament of the absurd Phrygian slave in the *Orestes*. But where Euripides wanted to construct an almost perfect plot he did so, for instance in the *Hippolytus*, the *Ion*, and the *Iphigenia in Tauris*; and if some of the recognition scenes, for which he was famous, are somewhat artificial, others are convincing as well as astonishing, and combine pathos and joy with consummate mastery.

11. The formal prologue, spoken sometimes by a god, sometimes by a human character, giving genealogies, stating the circumstances in which the action originates, even (in some plays) forecasting the issue, and the epilogue, spoken usually by a god *ex machina*, who issues orders and pronounces prophecies, are often criticized. In fact, they preserve the supernatural atmosphere which was demanded of Greek Tragedy, while leaving the poet free to construct in the rest of the play his purely human drama; and the prologue, by giving the bare facts at once (and incidentally making the audience aware of any new version of the story which the poet has designed), enables the whole interest to be thrown into the study of the characters and their feelings in reaction to each turn of the plot. The epilogue very rarely (if ever, in extant plays) provides by divine intervention a solution of an otherwise insoluble tangle, in the way suggested by Horace (*Art. P.* 191), but in addition to preserving the religious setting (though not always to the credit of the gods) it often connects the events of the play with the life of Athens, introducing the institution by the god of some hallowed custom or solemnity familiar to the Athenians—a proceeding perhaps undramatic, but humanly very intelligible. Some of the prologues spoken by human beings are very finely in character, and in no way external to the action, and in both prologue and epilogue the poet frequently shows his own view of the morality of the story, and at the same time, by the vision they afford of past and future, sets it against a larger background. It should be added that when the play is read, much more when it is acted, the impressiveness of these prologues and epilogues is their abundant justification.

12. Of the other non-choral elements, the speeches of the messengers in many plays are masterpieces of glowing description, rising in style somewhat above the simple beauty of the language of the dialogue, without being rhetorical in any bad sense. Rhetoric does at times carry the poet away elsewhere: in the elaborate

debates on set themes and in the denunciations of classes of persons whom the poet dislikes he shows the less attractive side of the culture of his day in a way which is out of proportion to what the play requires, but it is fine vigorous work, both in thought and style. In a number of plays the chorus also appears to be less intimately connected with the plot than Aristotle (*Poet.* 18) would like, though it might be answered that the function of the chorus in Euripides is sometimes to afford relief from the plot by transferring the spectator to a larger and more spiritual atmosphere than the brutality of the story affords, that the choral odes which are really irrelevant to the general situation are few, and that a great number are actually prompted by the particular situation of the moment or have a special function at that point in the play. An ode which is really detached from the context (like the description of the shield of Achilles in *Electra* 432 ff.) is in fact exceptional, and careful study will usually discover what is in the poet's mind. The more frequent substitution of lyric dialogues between chorus and actor for set choral odes, while it may point to a certain disintegration of the choral form of tragedy, is certainly a testimony to the interest of the chorus in the action and the persons who act. It should be added that in many of the choral odes there are descriptive passages of indescribable beauty.

13. In so far as the chorus was really a difficulty, it was because Euripides, more than Aeschylus and Sophocles, developed intrigue as an element in drama, and it is difficult to conduct an intrigue smoothly in the presence of fifteen constant spectators of both parties; the binding over of the chorus by one party to keep the secret is sometimes unnatural and sometimes (as in the *Ion*) ends in its betrayal. In the *Alcestis* and the *Helena*, where there were good reasons for leaving the orchestra empty for a moment, this is effected quite naturally. The very great compression of the events supposed to have taken place during a choral ode in the *Suppliants* and the lost *Sthenoboea* was exceptional.

14. In the music which accompanied the choral odes, and in the lyric dialogues and monodies which Euripides introduced freely, he probably followed the new school of emotional music, which aimed at expressing by sound every change and degree of intensity in feeling without observance of any formal rule or symmetry. In the same way he frequently abandons the conventional antistrophic form, particularly in the lyric expression of individual passion or grief. We can no longer trace the full effect of the lyric metres which he uses in rapid succession, and the music is lost. Critics like Aristophanes and Plato found the new style over-emotional and unwholesome, and Aristophanes laughed at Euripides' repetition of words and trilling of syllables so as to fit the music (a very familiar thing in modern opera); but it was a natural consequence of the poet's intense interest in real minds and feelings that he should refuse to be fettered by the old conventions.

15. As the creator of the love-drama Euripides was the forefather of the New Comedy, which took over some of the most effective parts of his technique, above all the many forms of intrigue and of recognition scene, and learned much from his style as well as from his psychological insight. If at first respectable Athens was shocked at him, he was destined to be the mainspring of future Greek literature for centuries, and the interests which he first introduced into drama have been and still are the life blood of romance both in verse and prose.

EUROPA (Εὐρώπη), in mythology, daughter of Agenor king of Tyre (cf. CADMUS), or of Phoenix (Φοῖνιξ, 'the Phoenician', *Il.* 14. 321): i.e., her father, originally nameless, is later given an appropriate name 'the proud one', first in Herodotus (4. 147. 5). Zeus loved her, and so turned himself into, or sent, a beautiful bull, which swam to the sea-shore where she was playing and enticed her by its mildness to climb on its back. Once there, she was carried away to sea, and landed in Crete. There she bore Zeus two or three children, Minos, Rhadamanthys, and, in post-Homeric accounts, Sarpedon (in other words, the later forms of the legend reflect a belief, true or false, of a connexion between Crete and Lycia; Apollod. 3. 2 ff.). For their subsequent adventures, see under their names. She was then married to Asterius, king of Crete, who adopted her sons. Zeus gave her the bronze man Talōs (Ap. Rhod. 4. 1643; cf. ARGONAUTS, TALOS) to guard the island, a hound which never missed its quarry ([Eratosthenes] 33; cf. AMPHITRYON), and a javelin which never missed its mark (*ibid.*, cf. *Ov. Met.* 7. 681 ff.). These passed afterwards to Minos, thence to Procris (q.v.) for curing a disease which afflicted him, and so to her husband Cephalus. After her death Europa was worshipped as a goddess, her festival being the Hellotia (Nilsson, *Griechische Feste*, 95), i.e. she was popularly identified with some Cretan goddess. For a Cretan myth resembling hers, see Nilsson, *Minoan-Mycenaean Religion*, 480 f. The bull became the constellation Taurus ([Eratosth.] 14). H. J. R.

EUROPE. The name Εὐρώπη originally stood for central Greece (*Hymn. Hom. Ap.* 250; 290). It was soon extended to the whole Greek mainland and by 500 B.C. to the entire land-mass behind it. The boundary between the European continent and Asia was usually fixed at the river Don. Homer vaguely knew dark regions of the west and north, but his range of information hardly extended north of Greece or west of Sicily.

The Mediterranean seaboard of Europe was chiefly opened up by the Greeks between 800 and 500 B.C. (see COLONIZATION, GREEK). The Atlantic coasts and 'Tin Islands' were discovered by the Phoenicians (see CASSITERIDES); Pytheas (q.v.) circumnavigated Britain and followed the mainland coast at least to Heligoland. The Baltic Sea was probably not entered by Greek or Roman

ships; Scandinavia was almost wholly unknown, and Thule (q.v.) remained a land of mystery.

The prehistoric amber (q.v.) routes across Europe from Jutland and the Baltic were unknown to later explorers. The Greeks penetrated by way of the Russian rivers as far as Kieff or perhaps Smolensk; central and north Russia remained to them a land of mythical peoples and of the fabulous Rhipaeian Mts. (q.v.); north of the Balkans they located the equally mythical Hyperboreans (q.v.). Greek pioneers ascended the Danube to the Iron Gates, and the Rhône perhaps to Lake Leman. But Herodotus had only a hazy notion of central Europe, and the Hellenistic Greeks knew little more (see ALPS, HERCYNIAN FOREST).

The land exploration of Europe was chiefly accomplished by the Roman armies. These completed the Carthaginian discovery of Spain; under Caesar they made Gaul known; under Augustus' generals, M. Crassus, Tiberius, and Drusus, they opened up the Balkan lands, the Alpine massif, and the Danube basin (see DANUVIUS). Roman traders rediscovered the amber route from Vienna to the Baltic, and Trajan revealed the Carpathian lands by conquest (see DACIA). Tiberius and Drusus also overran west Germany to the Elbe, but central Germany remained outside known Europe.

Cary-Warmington, *Explorers*, 12 ff.; 108 ff.; 229 ff. E. H. W.

EUROPUS (*Dura*) on the middle Euphrates, founded as a Seleucid military colony c. 300 B.C. At first mainly Greek in character, it became gradually orientalized; the Arsacids refortified the city, and under Parthian rule it thrived by commerce and agriculture. Occupied by the Romans in A.D. 165, it became a strongly garrisoned fortress on the Euphrates *limes*, but its prosperity rapidly declined. It was besieged and destroyed by the Sassanids c. A.D. 257.

The importance of Europus is mainly archaeological. Excavation of the material remains has added considerably to our knowledge of life and culture in Mesopotamia under Hellenistic, Parthian, and Roman rule. The discoveries include well-preserved architectural remains, temples of Greek and Oriental gods, a Christian church and a synagogue, public and private secular buildings, and a Roman camp; frescoes and reliefs of great value for the history of art and religion; military equipment; inscriptions, parchments, and papyri including fragments of a Seleucid code, numerous Greek contracts, and important Roman military archives.

Rostovtzeff and collaborators, *Excavations at Dura-Europos, Preliminary Reports i-viii* (U.S.A. 1929-39); M. Rostovtzeff, *Caravan Cities* (1932) (on which D. Schlumberger in *Gnomon* xi (1935), 82 ff.); *id.*, *Dura-Europos and its Art* (1938). M. S. D.

EURYALE, see GORGO.

EURYBIADES, a Spartan nobleman, was the first recorded admiral of the Peloponnesian League (481-480 B.C.). Despite the smallness of Sparta's contingent (10 ships at Artemisium, 16 at Salamis), he held chief command over the allied Greek fleet against Xerxes. He gave general support to Themistocles (a ridiculous story alleges that he was bribed at Artemisium), but opposed his scheme to cut off Xerxes' retreat after Salamis by breaking the bridges over the Hellespont. A statue seems to have been erected in his honour at Sparta.

G. B. Grundy, *Great Persian War* (1901), 543 ff.; C. Guratzsch, *Klio* 1925, 62 ff. P. T.

EURYCLEIA, Odysseus' nurse, a woman of good family bought by Laertes (*Od.* 1. 429 ff.). She recognizes Odysseus (19. 392 ff.); keeps the maids in their quarters while the Wooers are killed (21. 380 ff.).

EURYCLES, GAIUS JULIUS, ruler of Sparta, was son of Lachares, who was executed by Antony. He fought at Actium on the side of Octavian, from whom he obtained

Roman citizenship. He exercised a sort of tyranny; his influence extended over the Eleutherolaconian towns and other parts of Greece. Cythera, which Augustus perhaps handed over to Sparta, was his personal possession. About 7 B.C. he was at the courts of Herod the Great and of Archelaus of Cappadocia, making mischief in the former. Repeatedly accused, he was exiled by Augustus (date uncertain), but he regained power, which he transmitted to his son Laeo. He was probably dead before Tiberius' accession. The games known as Euryeleia were long maintained at Sparta.

E. Kjellberg, *Klio* xvii (1921), 44; E. Kornemann, *Abh. Schles. Gesell.* 1929; *CMI* xi. 561. A. M.

EURYDICE (1) (*Εὐρυδίκη*, 'wide-judging', i.e. 'princess', a stopgap name like Creusa, q.v.), name of a dozen mythological characters, the best-known being Orpheus' wife (cf. ORPHEUS). Pursued by Aristaeus (q.v.), she was fatally bitten by a snake. Orpheus then descended to Hades and so charmed the infernal powers by his playing that he was permitted to bring her to the upper world again if he did not look back at her on the way. Breaking this taboo, he lost her. See especially Verg. *G.* 4. 454 ff., and for the distribution of the story, Stith Thompson, *F* 81. 1.

H. J. R.

EURYDICE (2), originally called *Adia* (337-317 B.C.), daughter of Amyntas (nephew of Philip II of Macedon) and Cynane (illegitimate daughter of Philip II), was betrothed to the feeble-minded Philip Arrhidaeus before 323 when he succeeded to Alexander's throne (jointly with Alexander's infant son). Her royal blood endeared her to the Macedonian soldiers, whose protection enabled her to marry Philip Arrhidaeus (322), make trouble for the regent Antipater (321), depose his successor Polyperchon from the regency, and try to rule Macedonia, using Cassander as her minister, and excluding Alexander's son from the succession (317). Her undoing was Olympias, against whom the Macedonians would not fight. Philip and Eurydice became her prisoners, and after Philip's murder Eurydice obeyed an order to commit suicide. In an age of violence her blood, brains, and courage were not enough.

G. H. Macurdy, *Hellenistic Queens* (1932), 40 ff. and 48 ff.

G. T. G.

EURYPONTIDS (*Εὐρυποντίδαι*) was the name of the junior royal house at Sparta. The most notable Eurypontid kings were Agesilaus, Agis II and IV, Archidamus II, and Leotychides (qq.v.). See also AGIADS.

EURYPYLUS, in mythology, (1) son of Euaemon; leads a contingent to Troy (*Il.* 2. 736); takes part in several battle-scenes and is wounded; tended by Patroclus (11. 809 ff.). According to the local legend of Patrae (*Paus.* 7. 19. 6 ff.), after the war he looked into a chest which contained an image of Dionysus made by Hephaestus, and went mad. He was promised at Delphi a cure when he found a 'foreign sacrifice'. Coming to Patrae, he found human sacrifice practised there, which, according also to Delphi, was to stop when a foreign king brought a foreign god. Both oracles were thus fulfilled and the cult of Dionysus established there. Some, however, made this Eurypylus son of Dexamenus. (2) Son of Telephus (q.v.) and Astyoche sister of Priam (q.v.). (3) Son of Poseidon, a Triton, who meets the Argonauts and gives one of them, Euphemus, a lump of earth as pledge of possession of part of Africa (Cyrene) (*Pind. Pyth.* 4. 20 ff., *Ap. Rhod.* 4. 1551 ff.).

H. J. R.

EURYTION, in mythology, (1) Geryon's herdsmen, see HERACLES. (2) A centaur (*Od.* 21. 295 ff.); getting drunk and misbehaving at Peirithous' wedding-feast, he began the quarrel between centaurs and men. (3) Brother of Pandarus (q.v.; Verg. *Aen.* 5. 495 ff.). (4) See FALLUS.

EURYTUS, see MOLIONES.

EUSEBIUS of Caesarea in Palestine, also surnamed *Pamphili*, after the Christian scholar who was his friend and patron in early life; his long life falls within the limits A.D. 260 and 340, covering the great crisis of the Christian Church. From early days Eusebius resided at Caesarea, where he worked in the school of biblical study established by Pamphilus and having as its kernel the library of Origen. In the great persecution, 303-10, Palestine suffered severely and Caesarea was the usual scene of the trials. The work of the school was interrupted, but the library seems to have escaped destruction. Pamphilus was beheaded in 310, but Eusebius himself got off with a short detention and was sometimes reproached later for his failure to 'witness'. In 311, after the edict of toleration, Eusebius succeeded Agapius as bishop of Caesarea. A little later he came into close personal contact with Constantine and remained in favour throughout his life. In the Arian controversy and at the Council of Nicaea Eusebius represented a moderate position, which, though unsatisfactory to Athanasius and the extremists, had the support of the Emperor. Eusebius cannot long have survived his patron.

Eusebius was the ablest and most fertile of the first generation of Christian men of letters in an Empire that was rapidly becoming Christian. Of his works, the *Chronica*, based largely on Julius Africanus, forms an important foundation of our knowledge of the chronology of Greek and Roman history. The *Church History* was written to satisfy the natural curiosity now felt in the rise of the Church to its new importance. The *Preparation of the Gospel*, similarly, was designed to show how pagan history had led up to the Christian revelation. In the *History* is included a special record of the martyrs of Palestine, invaluable as our one reliable witness to the detailed history of the persecution. A tract *Against Hierocles* confuted one of the bitterest of the enemies of the Church. Eusebius' *Life of Constantine* falls admittedly under the heading of panegyric, and sacrifices something of its historical value to the demands of its class. But Eusebius was writing of times he had lived in and of a man whom he had personally known and esteemed, and he is above suspicion of deliberate fraud. The historical importance of the *Life*, therefore, remains considerable and should not be too heavily discounted.

Most works in the Berlin Corpus, *Griech. Christl. Schriftsteller. Ecclesiastical History* translated by Kirchoff Lake and J. E. L. Oulton in Loeb Classics. *Præparatio Evangelica* ed. E. H. Gifford (1903). E. Schwartz, *PH*, s.v.

H. M.

EUSTATHIUS (12th c. A.D.), born and educated at Constantinople, was deacon at St. Sophia and taught oratory until in 1174 he received the bishopric of Thessalonica. In 1175 he obtained the title of archbishop, in which position he continued till his death (c. 1194). His works of classical scholarship were written before 1175. Henceforward he devoted himself to the practical duties of his spiritual office and to combating the prevailing corruption of monastic life.

WORKS. (1) Classical. *Commentary on Pindar*, of which only the introduction survives; this gives information about lyric poetry (especially Pindar's) and Pindar's life, and shorter notes on the Olympian games and the pentathlon. The *Paraphrase of Dionysius Periegetes* has discursive scholia, valuable for citations from earlier geographers, historians, the complete Stephanus Byz., and the lost works of Arrian. The *Commentaries on Homer's Iliad and Odyssey* (*Ἑρμηνείαι ἐπὶ τῇ Ὀδύσει καὶ τῇ Ἰλιάδι*) are a vast compilation, in which the *Iliad* commentary is twice as long as that on the *Odyssey*. Prefaces deal with the differences between the poems and with the cultural importance of Homer. The notes discuss chiefly questions of language, mythology

(interpreted allegorically), history, and geography. Their value consists particularly in the assemblage of material drawn from the old scholia and the lost writings of earlier scholars and lexicographers. His quotations from classical authors are taken mostly at second-hand.

(2) His other works include a history of the conquest of Thessalonica by the Normans; several polemics, e.g. the famous treatise *Inquiry into Monastic Life*; letters to the Emperor, church dignitaries, and others; speeches and addresses, homilies and tracts, some of which have historical value. E. was the outstanding scholar and orator of his time, enthusiastic for the traditional learning, for the preservation of books, for sound principles of education, and for the moral reawakening of monasticism.

Commentaria ad Iliadem et Odysseam, G. Stallbaum (1825-30); T. L. F. Tafel, *Eustathii Metropolitae Thessalonicensis opuscula* (1832); J. P. Migne, *Patrologia Graeca* cxxxv, cxxxvi (1864); A. B. Drachmann, *Scholia Vetera in Pindari Carmina* iii (1927).
J. F. L.

EUSTOCHIUS of Alexandria, physician, became a pupil of Plotinus in Plotinus' old age (Porph. *Plot.* 7) (prob. c. A.D. 265), and is said to have edited his master's works.

PW vi. 1489.

EUTERPE, see MUSES.

EUTHYCLES, writer of (?) Old Comedy (Ath. 3. 124 b). We possess but two titles, *Ἀστροὶ ἢ Ἐπιστολή* and *Ἀταλάντη*, the first of which looks more like Middle than Old Comedy.

FCG ii. 890; CAF i. 805.

EUTHYDEMUS (1) of Chios, Sophist, an older contemporary of Socrates. In the *Euthydemus* Plato presents him as a ridiculous figure. He has sometimes been thought to be unhistorical and merely a mask for Plato's criticism of Antisthenes. His historicity is proved by independent references by Aristotle; but Plato may have used him quite freely for the purpose of pillorying eristic views and arguments.

PW vi. 1504.

W. D. R.

EUTHYDEMUS (2) of Magnesia (3rd-2nd c. B.C.), probably a satrap of Diodotus II, removed him and became king of Bactria-Sogdiana. In 208 B.C. he was attacked by Antiochus III, who failed to subdue him and left him his crown. He made Bactria into a strong and quasi-national State, winning the support of the natives and shielding Iran from the northern nomads (see BACTRIA). After Antiochus' departure he took two satrapies from Parthia, conquered some part of Chinese Turkestan, and made an expedition northwards, probably to the Lake Issyk Kul country; Seleucid territory he never touched. He invented a new state-form, under which princes of the blood ruled groups of satrapies as sub-kings, with the right of coining. He died about 190. See DEMETRIUS (7).

W. W. T.

EUTHYMIDES (cnd of 6th c. B.C.), vase-painter in Athens, known from six signatures on large red-figure vases, including *Arming of Hector* (Munich). He breaks with archaic conventions; his heavy figures show new studies of movement.

Beazley, *A.V.* 63; *Greek Vases in Poland* (1928), 13; L. Talcott, *Hesperia* 1936, 59.

T. B. L. W.

EUTHYMUS. Temesa in south Italy was haunted by the ghost of Polites (q.v.), a companion of Odysseus, whom the inhabitants had killed for raping a girl. It could be kept quiet only by giving it the prettiest girl in Temesa every year. One year, when the sacrifice was to be made, Euthymus, a notable boxer, said to be son of the river Caecinus, arrived, pitied and then loved the girl, encountered the ghost, and drove it off for ever (Paus. 6. 6. 4-11).

H. J. R.

EUTHYNA, the examination of accounts which every officer of the State underwent on expiry of his office, at Athens and generally elsewhere. It was primarily an examination into the handling of public money, by ten *logistai* (q.v.) at Athens. If the *logistai* were not satisfied, or if some qualified citizen brought a charge against a magistrate, they must bring the matter before a dicastery and preside at the trial. Even after discharge the magistrate was not entirely free; for thirty days after, ten *euthynoi*, chosen by lot by the Boule from its own number, were prepared to examine any complaint, on a public or private matter, against an outgoing magistrate, and, if it was sound, brought it before a dicastery.

In democratic States the *euthyna*, though in the vast majority of cases a formality, was the most effective means for the control of the executive; and it put a powerful weapon into the hands of the sycophants (q.v.).

Aristotle, *Ath. Pol.* ch. 48.

A. W. G.

EUTROPIUS, the historian, who took part in Julian's Persian campaign (A.D. 363) and was *magister memoriae* of Valens, published a survey of Roman history (*Breviarium ab urbe condita*) in ten books. Beginning with Romulus, he reached the Sullan Civil War in bk. 5, Caesar's death in bk. 6, and covered the Empire to Julian's death (A.D. 364) in bks. 7-10. The subject-matter for the Republic is based upon the Epitome of Livy, for the Empire upon the end of the Epitome, an expanded adaptation of Suetonius, and an 'Imperial history', closing with personal knowledge of events. The work is short, but well balanced, showing good judgement and impartiality. It was translated into Greek by Paeanius about 380, adapted into Greek by Capito of Lycia, and used by Hieronymus (Jerome), Orosius, Isidore, and Paulus Diaconus.

Editions: H. Droysen (ed. minor 1878; ed. maior 1879); C. Wagener (1884); F. Rühl (1887). W. Pirogoff, *De Eutropii brevium A.U.G. indole ac fontibus* (1873); J. Sorn, *Sprachegebrauch des Eutropius* (1892); M. Galdi, *L'epitome nella lett. latina* (1922).

A. H. McD.

EUTYCHES (6th c. A.D.), author of an *Ars de verbo* in two books (ed. Keil, *Gramm. Lat.* v. 447-89) and of a treatise *De aspiratione* (now incorporated in the *De orthographia* of Cassiodorus; ed. Keil, *Gramm. Lat.* vii. 199-202).

Cf. Teuffel, § 482. 1; Schanz-Hosius, § 1116.

EUTYCHIDES (early 3rd c. B.C.), sculptor and painter of Sicyon, pupil of Lysippus. Works: (1) Statue of Timosthenes, a boy victor at Olympia. (2) Tyche of Antioch. Tyche seated, supported by the river god Orontes and crowned by Seleucus and Antiochus. Many copies of Tyche and Orontes have survived, the best probably the marble group in the Vatican (Winter, *KB* 340. 1). The bold composition is Lysippan; the drapery has a new realism. The original of a seated girl in the Conservatori (Winter, *KB* 371. 4) is ascribed to Euty-chides because of its likeness in composition. (3) Eurotas. A copy has been recognized in a river-god in the Vatican (Winter, *KB* 340. 2). (4) Dionysus, belonging to Asinius Pollio.

Overbeck, 1516; 1530-6.

T. B. L. W.

EUTYCHIUS PROCULUS (2nd c. A.D.), author of (lost) grammatical works.

Cf. Teuffel, § 357. 4; Schanz-Hosius, § 606. 7.

EUXENIDES, mentioned by Suidas as an Athenian writer of comedy contemporaneous with Epicharmus.

EUXINE SEA was the Greek name for the Black Sea. (The origin of this name is uncertain; perhaps it was invented by the early Greek colonists 'ad captandum', like medieval 'Greenland'.) This sea apparently remained closed to traffic from the Aegean in prehistoric

times, and the voyage of the Argonauts (c. 1250 B.C.) was probably an adventure in unknown waters. The Euxine was opened up in the eighth and seventh centuries by Milesians and other Ionian Greeks; by 600 it had become ringed with Greek settlements (see COLONIZATION, GREEK), and it remained a Greek lake until the Middle Ages. The earliest surviving description of the Euxine Sea is by Herodotus, who had personal knowledge of its northern coasts and gave a fairly accurate account of it, though he greatly over-estimated its length. A more detailed description of the south coast is contained in the geographical work attributed to Scylax (c. 340 B.C.). An excellent survey of the whole coast was written by Arrian in the days of Hadrian; a later 'Periplus of the Euxine Sea' is an extract from this work and from other Greek geographies.

Herodotus, bk. 4, esp. chs. 85-6; Scylax, chs. 67-92; Arrian, *Periplus Maris Euxini*; Ps.-Arrian, with same title. The last three works in GGM 1. M. C.

EVADNE (Ἐβάνη), in mythology, (1) a daughter of Poseidon, who became by Apollo mother of Iamus, ancestor of the prophetic clan of the Iamidae in Olympia (Pind. *Ol.* 6. 29 ff.). (2) Daughter of Iphis and wife of Capaneus, one of the Seven against Thebes. She burned herself on his funeral pyre (Eur. *Supp.* 980 ff.). H. J. R.

EVAGORAS (Ἐβγόρας, c. 435-374/3 B.C.), a member of the Teuerid house, the traditional rulers of Cyprian Salamis. Exiled during his youth, which fell in a period of Phoenician domination, he gathered some fifty followers at Soli in Cilicia, and with their aid established himself as ruler of Salamis in 411. His subsequent policy aimed at strengthening Hellenism in Cyprus by co-operation with Athens, and his court became a centre for Athenian émigrés, of whom Conon was the most distinguished. A clash with Persia was ultimately inevitable, but he postponed the issue by assisting in the revival of Persian sea-power culminating in the triumph of Cnidus. War finally came in 390 and dragged on for ten years. In alliance with Akoris of Egypt, Evagoras at first more than held his own. He not only extended his rule over the central cities of Cilicia, but also captured Tyre and dominated Phoenicia. In 382 Persia mobilized an overwhelming armament. Evagoras lost control of the sea at Citium in 381, and was forced to sue for peace, obtaining not unfavourable terms through dissensions among the Persian commanders. In 374 he was assassinated in a palace intrigue.

K. Spyridakis, *Evagoras I von Salamis* (1935). D. E. W. W.

EVANDER (Ἐβανδρος), in Greece a minor god or daemon, belonging to the circle of Pan and worshipped in Arcadia, especially at Palantium, where he had a temple; in Italy connected with the worship of Faunus (identified with Pan) and regarded as the first settler at Rome. According to tradition he was the son of Hermes and of a nymph, daughter of the river-god Ladon, known as Themis and identified in Italy with the prophetic goddess Carmenta (or Carmentis). Through Atlas, grandfather of Hermes, he was connected with the Trojan Dardanus (Verg. *Aen.* 8. 134-7). A more human genealogy made him the son of Echemos of Tegea, whose grandfather was Pallas (q.v. 2). As a boy he is said to have welcomed Priam and Anchises in Arcadia and conducted them to the city of Pheneos (*Aen.* 8. 165). He left Arcadia owing either to the hostility of Argos or to a famine, and reaching Italy landed on the left bank of the Tiber and made a settlement on the neighbouring hill, which he called after his native city (or his grandfather) Pallanteum (*Aen.* 8. 54), afterwards the Collis Palatina. He instituted there the worship of Faunus (Pan Lycaeus) and established the Lupercalia (q.v.; Ov. *Fasti* 2. 279 ff.). According to Virgil, Hercules visited him and slew the monster Cacus, who had stolen

his cattle; Evander in memory established the cult of Hercules at the Ara Maxima (*Aen.* 8. 185-275; Livy 1. 7). Aeneas, on the outbreak of war against the Latins, made his way up the Tiber and appealed to Evander for aid. Evander welcomed him as a kinsman, conducted him over the site of the future Rome and sent back with him his own son Pallas, who was subsequently slain in battle by Turnus (*Aen.* 10). Evander was thus used by the Romans to supply a legendary connexion between Greece and Rome and an aetiological explanation of place-names and cults. C. B.

EVOCATIO. Gods, being in a sense the highest class of citizens, are sometimes thought of as conquered when their city is taken (Verg. *Aen.* 1. 68=8. 11, 'uictos penatis', sc. of Troy), but more commonly (as Aesch. *Sept.* 218, on which see Groeneboom; Verg. *Aen.* 2. 351 f.) as leaving it. It was therefore not unnatural to hasten the fall of a city by inducing its gods to leave it, especially that god which particularly protected it. This the Romans did by promising the deity a cult in Rome at least as good as the one given by the city in question (Pliny, *HN* 28. 18); formula of evocation, Macrobius, *Sat.* 3. 9. 7-8. See Wissowa, *RK* 383 and note 7; W. Warde Fowler, *Rel. Expr.* 206. H. J. R.

EXECIAS (Ἐξικίας) (third quarter of 6th c. B.C.), potter and vase-painter in Athens, known from nine signatures (two vases are inscribed 'Execias painted and made'). Painted amphorae, calyx craters, cups, pinakes. Note particularly Achilles and Ajax dying (Vatican), death of Ajax (Boulogne), both excellent compositions showing a psychological insight unique in black-figure.

W. Technau, *Exekias* (1936); O. Broneer, *AJArch.* 1938, 161. T. B. L. W.

EXEGETES (ἐξηγητής), an interpreter or expounder, usually of sacred lore. Herodotus (1. 78. 2) gives this title to the college of diviners at the Telmessian oracle in Lycia. Best known are the *exegetai* of Athens, who, according to the most probable interpretation of the evidence, were of two kinds: those chosen by the Delphic oracle (*Πυθόχρηστοι*) and those elected by the people (*οἱ ὑπὸ τοῦ δήμου καθισταμένοι* or *χειροτονητοί*). Probably there were three of each kind, chosen for life from the Eupatridae. The *Pythochrestoi* were selected by the Pythia from a list nominated by the Athenian people. Also we find at Eleusis the *exegetai* of (or from) the Eumolpidae, probably three in number. Their functions were confined to the Eleusinian cult, and they probably antedated the Athenian domination of Eleusis. *Exegetai* are attested in other cities too: e.g. the *Pythioi* of Sparta, who resemble the *Pythochrestoi*.

In general the *exegetai* were keepers of religious tradition. They gave advice on sacrifices, festivals, foundations of new cults, and especially rites of purification. They interpreted oracles and omens. It is reasonable to suppose that the *Pythochrestoi* were consulted on the interpretation of Delphic oracles and on all matters affecting Athenian relations with Delphi. Non-Delphic subjects were in the hands of the elective body.

EXILIUM, see EXSILIUM.

EXODOS, see TRAGEDY, para. 14.

EXSILIUM. A Roman citizen or *peregrinus* being threatened by criminal proceedings on account of a capital crime could—even after their inception—leave Roman territory and escape to that of another State before a capital sentence was pronounced against him. This voluntary self-banishment, called *exilium* (later the

same term was used for indicating the banishment pronounced by a judgement in a criminal trial), was tolerated by the magistrates; in the last century of the Republic, however, it became a legal institution, when magistrates were strictly ordered to allow the condemned person time to escape before executing the capital sentence. Thus *exsilium* became a substitute for the death penalty. Its effect was to prohibit the return of the wrongdoer to Roman territory. After his escape a decree, more administrative than jurisdictional in character, pronounced by the *comitia* or a high magistrate, excluded him from all legal protection and threatened him with death in case of illicit return (*aquae et ignis interdictio*). In later times *exsilium* lost its strict technical meaning, being used not only by historians and orators, but even in some juridical texts (if they are not interpolated) indiscriminately for voluntary and involuntary emigration, for legally prescribed banishment, for escape before and

after judgement, and generally for all categories of expulsion, from the mildest form of *relegatio* (q.v.) to the severest one of *deportatio*. Because of these different uses of the word we must consider in each case whether it refers to temporary or perpetual expulsion, whether or not it is followed by loss of citizenship, by confiscation (total or partial) of property, and so on. In its old technical sense *exsilium* was perpetual and general, without any gradation; it resulted in loss of citizenship and of all property. See RELEGATIO. A. B.

F

FABIANUS PAPIRIUS, a philosopher of the older school (Sen. *Dial.* 10. 10), pupil of the elder Sextius and of Blandus, taught the younger Seneca. His declamations are copiously illustrated in Sen. *Controv.* bk. 2: cf. *praef.* 4-5.

FABIUS (1) AMBUSTUS, QUINTUS, was *tribunus militum consulari potestate* in 391 B.C. Another tradition assigned his office to 390 and made him responsible for the Gallic attack on Rome, since as ambassador at Clusium he had treacherously murdered a Gallic chief. Thanks to the authority of his father or to his popularity among the plebeians, he had escaped an attempted patrician prosecution. This story was no doubt invented as an honourable explanation of the Roman defeat at the Allia. It may, however, be inferred from Livy (6. 1. 6-7) that the Roman military chiefs were actually prosecuted after the Celts had retired, although sudden death or suicide seems to have saved Fabius.

O. Hirschfeld, *Kl. Schr.* (1913), 269 ff.; Ed. Meyer, *Kl. Schr.* ii (1924), 312 ff. P. T.

FABIUS (2) AMBUSTUS, MARCUS, princeps senatus and a patrician leader after the Gallic catastrophe, aimed at re-establishing patrician influence at home and at re-asserting the power of Rome over her neighbours. Successful against the Hernici in 356 B.C. and in 354 against the Tiburtini, over whom he triumphed, he was defeated in the same year, being consul for the third time, by Tarquinii. Appointed dictator in 351, he failed to prevent the readmission of the plebs to the consulate. The attempts in the traditional account to conceal or ignore his defeat in 354 demonstrate his authority and that of his family.

K. J. Beloch, *Röm. Gesch.* 352, 361 ff.

P. T.

FABIUS (3) MAXIMUS RULLIANUS, QUINTUS, a hero of the Samnite Wars; consul 322, 310, 308, 297, 295 B.C., censor 304 (after 310 his colleague was always P. Decius Mus), dictator 315 (Diod. 19. 101 records a second, probably apocryphal, dictatorship in 313). He celebrated triumphs over Samnites, Etruscans, Gauls. Of the exploits attributed to Rullianus the following deserve mention: his Samnite victory (325), when the dictator Papirius Cursor apparently impeached him for fighting against orders; his defeat by Samnites at Lautulae (315); his Etruscan expedition, reputedly through the Ciminius Forest (310); his annihilation of the Samnite, Gallic, Etruscan coalition at Sentinum (295) (see EGNATIUS). The

untrustworthy account of Rullianus in our principal source, Livy (bks. 8-11), whom details in Diodorus, Valerius Maximus, Frontinus, and others supplement, derives partly from Fabius Pictor but more from later annalists. It borrows incidents from the career of Rullianus' great-grandson, Fabius Cunctator; e.g. Rullianus-Papirius Cursor resemble Cunctator-Minucius; the censor Rullianus restricting the rabble to four city tribes suggests Cunctator confining freedmen to those tribes; Rullianus rescuing his son, the consul Fabius Gurgus (292) (see PONTIUS 1), anticipates Cunctator serving under his own son (213 B.C.).

F. E. Adcock, *CAH* vii, ch. 18 (with bibliography). E. T. S.

FABIUS (4) BUTEO, MARCUS (cos. 245 B.C.), censor 241 and *princeps senatus*. His naval victory off Aegimurus and subsequent shipwreck are improbable. Probably he, not Fabius Cunctator, delivered the Roman ultimatum at Carthage in 218. As dictator he filled up the Senate after Cannae (216). H. H. S.

FABIUS (5) MAXIMUS VERRUCOSUS, CUNCTATOR, QUINTUS, consul I (233 B.C.), triumphed over the Ligurians; censor (230), consul II (228), dictator I (between 221 and 219, probably 221). He probably did not deliver the Roman ultimatum to Carthage (see FABIUS 4). After the disaster at Trasimene he was elected dictator II, but quarrelled with his *magister equitum*, M. Minucius (q.v.) Rufus. By religious observances he restored the people's morale and stated his policy of dogging Hannibal's heels and avoiding further pitched battles. He allowed Hannibal to ravage Campania unchecked and later at Callicula to cross the Apennines to Apulia, being duped by the Carthaginian advance at night behind a herd of oxen with burning faggots tied to their horns. Fabius' strategy of exhaustion, which was opposed by many Romans, was only justified as a temporary expedient, since there was yet no real reason to distrust the Roman legions. But when these were defeated at Cannae (216) Fabius' policy had to be continued and the abusive title Cunctator, the Delayer, now became an honour: 'unus homo nobis cunctando restituit rem' (Ennius, Vahlen, 12. 370). As consul III (215) in Campania Fabius covered the road to Rome, while Marcellus and Gracchus parried Hannibal's attacks; as consul IV (214) he helped to recover Casilinum. In 213 he served as legate to his inexperienced son, now consul. In 209 he was consul V and *princeps senatus*; he recovered Tarentum through internal treachery. He

strenuously opposed Scipio's determination to invade Africa, and died in 203. He was pontifex for twelve years, augur for sixty-two. A typical example of the older Roman patrician, courageous, cautious, and unimaginative, Fabius inspired admiration rather than affection. Rightly called the Shield of Rome, he at length wore down Hannibal's strength: 'subsequendo coerevit' (*Elogium*). It was Scipio's bolder strategy which humbled Carthage—yet it was Fabius that had made its application possible. H. H. S.

FABIUS (6) PICTOR, QUINTUS, Roman senator and historian, who took part in the Second Punic War, consulting the Delphic oracle after Cannae, wrote a history of Rome in Greek, the first of the senatorial histories interpreting Roman institutions and policy to the Greek world. It treated the Greek association of Roman origins in Aeneas, set the foundation of the city in 747 B.C., and passed, probably in discursive fashion, to the Gallic and Punic Wars and his own times; his use of Dioecles of Peparethus (Plut. *Rom.* 3; 8) is now disputed. Polybius, though criticizing his Roman bias (Polyb. i. 14; 58; 3. 8-9), follows his authority. Dionysius and Livy cite him; Diodorus' use is uncertain. The Latin annals, if not a later adaptation, may belong to Ser. Fabius, the work *de iure pontificio* to Fabius Servilianus. Fabius' history, political in purpose, probably owed more to Hellenistic historiography than to the pontifical tradition, and it set the standard for senatorial history.

FABIUS (7) MAXIMUS AEMILIANUS, QUINTUS (c. 186-130 B.C.), born of L. Aemilius Paullus and Papiria and adopted by the Fabii Maximi, accompanied Paullus to Greece in 168. Praetor in Sicily (149); consul (145), he consolidated the position against Viriathus in Spain (145-144) and led an embassy to Crete (140). Legate at Numantia in 133, he died in 130. His career followed the rise of his brother, Scipio Aemilianus.

FABIUS (8) MAXIMUS ALLOBROGICUS, QUINTUS (cos. 121 B.C.), the son of Fabius (7). With Domitius (q.v. 2) he conquered the Allobroges and defeated the Arverni, then predominant in Gaul; the annexation of Gallia Narbonensis followed, as also the Roman alliance with the Aedui. 120,000 Gauls are said to have fallen in Fabius' victory at the confluence of the Rhône and Isère. From his spoils Fabius erected a triumphal arch at Rome. He was censor in 108. M. H.

FABIUS, see also FULCENTIUS, MAXIMUS, QUINTILIANUS, VALENS.

FABLE (αἶνος, μῦθος, λόγος, ἀπόλογος), a feature of the popular tradition of the Greek as of other races. It is typically an anecdote of animal life with a moralizing application; it may, however, be drawn from inanimate nature or directly from human experience. It is questionable whether Greek Fable is substantially indebted to that of any other race. Foreign and colonial sources are occasionally mentioned; e.g. Libya (Aesch. fr. 139), Egypt (Pl. *Phdr.* 275b), Lydia (Callim. *POxy.* 1011), Sybaris (Ar. *Vesp.* 1259). Instances of its employment occur throughout Greek literature; among the earliest are Hesiod *Op.* 202 and Archilochus frs. 86 and 89; it is not found in Homer. The earlier popular type upon which writers drew appears to have been in prose-form. By the end of the fifth century B.C. the body of native Fable was in general ascribed to Aesop, said to have been a slave in Samos in the sixth century (Hdt.

2. 134); his name is already familiar to Aristophanes and Plato. There is no extant Greek collection of fables as such before that of Babrius (q.v.). Demetrius of Phalerum composed *Λόγων Αἰσωνείων συγγραφαί* (Diog. Laert. 5. 80); these were presumably in prose. At a later period Fable was found useful in rhetorical training (Hermogenes *Προγυμνάσματα* ad init.), and further collections were made with this object, e.g. the *δεκαμυθία* of Nicostatus (Suid. *Νικ.*) in the second century A.D. The Fable so adapted reached its final form in the medieval collections, being regularly associated with the name of Aesop.

LATIN FABLE. As represented in Latin literature Fable is in general derivative from the Greek Aesopic form. It was well adapted for use in the *Satura*, especially in that of the Horatian type. Aulus Gellius (2. 29) cites part of an adaptation by Ennius of an Aesopic fable; Lucilius (988 Marx) uses another. Horace sometimes gives fables *in extenso* (*Sat.* 2. 6. 79 ff.; *Epist.* 1. 7. 29 ff.), sometimes merely alludes to them (*Sat.* 2. 3. 299; *Epist.* 1. 3. 19). The first extant Latin collection was in iambic verse, by Phaedrus (q.v.), a freedman of Augustus, who published his five books under Tiberius and Caligula. The MS. tradition is probably the result of selection; an Appendix of fables ascribed to Phaedrus is added. Phaedrus acknowledges his formal debt to Aesop, whilst seeking to improve upon him (4 *prol.* 11). The collection includes besides definitely Aesopic material much that is derived from the author's experience or imagination. He writes professedly (1 *prol.* 3) for entertainment and instruction; at the same time a desire for literary recognition is certainly a leading motive. He incurred the displeasure of Sejanus (3 *prol.* 41), no doubt on account of indiscreet allusions to contemporary events. He has been called a better story-teller than fabulist (Nisard); he is certainly at his best in anecdote, whilst his work lacks in general the peculiar genius of the best Greek Fable. His versification is adroit and finished; and in the terse and vigorous simplicity of his style he shows himself a not unworthy pupil of the preceding epoch. His diction is in general classical, but shows traces of contemporary tendencies. The Phaedrian collection was later paraphrased in prose under the title of *Romulus* (the 'Latin Aesop'). In the third century Titianus, of whose work nothing further is known, composed prose fables (Auson. *Ep.* 16 *praef.*); the extant collection of Avianus (4th or 5th c.), consisting of forty-two fables in elegiac verse, is of no particular literary merit. These later authors appear to have drawn principally on Babrius.

FABRI. In the early Roman Army there were two separately organized centuries of *fabri*. These men were less sappers and gunners, whose work was done by the ordinary legionary, than smiths skilled in the repair of arms. They were commanded by *praefecti*.

By the time of Caesar, and probably much earlier, the *fabri* were absorbed into the ranks of the cohort, and the *praefectus fabrum* became a sort of A.D.C. to the general, his work bearing no relation to his title.

H. M. D. P.

FABRICIUS LUSCINUS, GAIUS, hero of the war with Pyrrhus (q.v.), consul in 287, 275 B.C., censor in 275. He negotiated for Rome with Tarentum (284) and with Pyrrhus (280, 275). He received Thurii from Samellian besiegers (282) and was twice awarded triumphs for his

victories over Brutii, Lucani, Samnites, and Tarentines. His personality lies concealed under the rhetorical stories of his poverty, austerity, and incorruptibility: he rejected alike bribes from Pyrrhus and the proffered aid of would-be poisoners of Pyrrhus. Similar tales are told of the other plebeian hero M'. Curius Dentatus (q.v.), whom Cicero (cf. *Paradoxa* 50) constantly cites with Fabricius as a typical specimen of Roman virtue.

Livy, *Epit.* 13 f.; Dion. Hal. bk. 19 f.; Val. Max. 1. 8. 6; Plut. *Pyrrhus*; App. *Sam.* 9; Gell. 3. 8. E. T. S.

FABULA (besides meaning 'story', 'talk', 'fable') was the general Latin term for 'play'; special types were *F. Atellana* (see *ATELLANA*); *crepidata*, possibly = *palliata* (*crepida* was a type of Greek shoe, worn with the *pallium*); *palliata*, adaptation of Greek New Comedy (see *DRAMA*; *pallium* = Greek cloak); *praetexta(ta)*, serious drama on Roman historical subjects (see *DRAMA*; *praetexta* was the magistrate's toga); *riciniata*, a mime (see *MIMUS II*; *ricinium*, properly a woman's mantle, which could be used to veil the head; possibly this made it useful in the mime); *saltica*, libretto for pantomime (see *PANTOMIMUS*); *stataria*, 'quiet' play, opposed to *motoria*, 'bustling' play (cf. Ter. *Haut.* 36-40); *tabernaria*, 'private-house comedy' (?), apparently identical with *togata*; *togata*, Roman comedy, nearly always concerned with lower life (see *DRAMA*); *trabeata*, a form of *togata* dealing with upper middle-class life, invented by Maecenas' freedman Melissus (the *trabea* was worn by the *equites*). W. B.

FADIUS GALLUS, MARCUS, friend of Cicero, who addresses to him *Fam.* 7. 23-7. In 45 B.C. he was among those who wrote anti-Caesarian eulogies of Cato. See *ANTICATONES*.

FALERNUS AGER, a section of Campania between the Mons Massivus and the Volturnus taken by Rome from Capua (338 B.C. or later) and distributed among Roman citizens (Livy 8. 11. 22; 9. 41). Its exact extent and the origin of its name are alike uncertain. Its celebrated wine was already deteriorating in Pliny's day (Hor. *Carm.* 1. 20, etc.; Athenaeus 1. 26e; Pliny, *HN* 14. 62). E. T. S.

FALISCI. The Faliscans were the inhabitants of the Ager Faliscus, around Mt. Soracte in south-east Etruria. Their principal city was Falerii (*Civitas Castellana*). They form a link between Etruscans and Latins, sharing their characteristics but not completely identifiable with either. Their language was a dialect of Latin, but Etruscan inscriptions occur. The mixture of burial rites also suggests the presence of two races, even apart from Sabine infiltration. Their culture was predominantly Etruscan from the eighth century onwards, but with a strongly individual note, especially in the painted pottery. Politically the fortunes of Falerii and its neighbours were inseparably bound up with Veii. Indeed Cato believed Capena to have been the mother city of Veii. Capena, Fidenae, and the Faliscans were the only allies of Veii against Rome, so that the capture of Veii by Camillus entailed the surrender of Falerii and Capena (c. 395 B.C.). On a pretext of disaffection the Romans totally destroyed Falerium Vetus (241) and moved its inhabitants to a neighbouring plateau, where the Roman walls are still preserved (*Fallert*).

FAMA, see *PHEME*.

FAMILIA, see *PATRIA POTESTAS*.

FANNIUS, GAIUS (cos. 122 B.C.), the Gracchan annalist, son-in-law of Laelius and pupil of Panaetius, served at Carthage (146 B.C.) and in Spain (141), and became tribune (142), praetor (between 133 and 131?), and consul (122), opposing C. Gracchus' Italian legislation in a celebrated speech (Cic. *Brut.* 26. 99-100). He wrote a history, perhaps from the origins of Rome, but probably of his own times (this depends on the date of the *Drepana* reference of fr. 3). He included speeches verbatim in his narrative, like Cato, and portrayed contemporary personalities. His work was authoritative, recognized by Cicero, Sallust, who praised its *veritas*, and Brutus.

FANNIUS, see also *CAEPIO*.

FASCES, probably of Etruscan origin (iron *fascēs* have been found at Vetulonia), were rods (of elm wood, later of birch) tied by a red thong into a bundle from which an axe (*securis*) projected. They symbolized regal and later magisterial authority. They were carried on their left shoulders by the lictors, who never laid them aside, except as an act of mourning or homage (*fascēs submittere* or *demittere*), or when magistrates addressed popular audiences in order to symbolize the subordination of executive authority to that of the law. The privilege of carrying *fascēs* was granted also to religious officials (e.g. the *flamen Dialis* and the Vestal Virgins) and eventually to presidents of public games. When a magistrate was dismissed or punished his *fascēs* were destroyed.

Mommsen, *Röm. Staatsr.* i². 373 ff.; G. De Sanctis, *Riv. fil.* 1929; Samter, *PW*, s.v. P. T.

FASTI, the old calendar of *dies fasti* and *dies nefasti* for legal and public business, which received definite publication by Cn. Flavius in 304 B.C. (Livy 9. 46. 5), came to cover also lists of eponymous magistrates (*fasti consulares*), records of triumphs (*fasti triumphales*), and priestly lists (*fasti sacerdotales*). We know of the sacral calendars of Fulvius Nobilior (189 B.C.) and Verrius Flaccus (at Praeneste), and have fragments of the pre-Julian calendar of Antium (c. 70 B.C.) and twenty calendars from the close of the Republic to Claudius; also *fasti* of the Feriae Latinae and two rustic *menologia*, and in book form the calendar of A.D. 354, the *fasti Idaciani*, and the *Chronicon Paschale*. Of *fasti consulares* we have the exemplar of Antium (c. 70 B.C.) and the *fasti Capitolini*, which were set up on or near the new Regia (q.v.) of 36 B.C. and then continued to A.D. 13; the *ludi saeculares* were added, until A.D. 88. *Fasti triumphales* appear in the fragments of Tolentino and Urbisaglia, and also from the Regia, where a list from Romulus to 19 B.C. was added about 12 B.C., presumably by Augustus as Pontifex Maximus.

The authenticity of the *fasti* is now scarcely to be doubted, but they represent a systematic reconstruction, the opening of the *fasti triumphales* being based on the *annales maximi*, the *fasti Capitolini* owing something to a work like that of Verrius Flaccus or Atticus. The reconstruction was necessarily speculative, perhaps tendentious, for the fifth century B.C., based merely on a nucleus of records; but it was sound in its main lines for the fourth century, and from c. 300 B.C. appears consistently accurate, presumably using full regular records. This suggests that the inclusion of magistrates' names and cult notices (from which the triumph lists came) followed directly on the Flavian publication, and may be associated with the *tabulae pontificum* (q.v.).

FASTING (νηστεία), in the sense of abstinence from all food for a stated time, such as a day, is very rare in classical religions, both Greek and Roman. There is, for instance, no evidence whatever that anyone, priest or layman, was expected to come fasting to a sacred meal such as normally followed the killing of a victim. For Greece, however, we may cite two well-known instances. At the Thesmophoria the second day was called NESTEIA, at all events at Athens (cf. *ATTIC CULTS AND MYTHS*), because, as it would appear, the women conducting the rite took no food then; there was a day at Taras (Tarentum) having the same name (cf. Aelian, *VH* 5. 20, who gives an aetiological story not to be taken too seriously); it probably was part of some rite of Demeter or a similar deity. In like manner, the *ieiunium Cereris* at Rome (Livy 36. 37. 4-5) was instituted by advice of the Sibylline Books, and therefore belongs to the Greek, not the native cult of that goddess. The other outstanding example of a ritual fast in Greece is, like the former, connected with the cult of Demeter. The Eleusinian formula in Clem. Al. *Protr.* 2. 21. 2 (p. 16. 18 Stählin) specifies that the initiate had fasted before drinking the *kykeōn*. Details are, however, lacking. Various statements to the effect that some person would not eat (e.g. Achilles after the death of Patroclus, *Il.* 19. 303 ff.; the beasts after the death of Daphnis, when they show human grief, Verg. *Ecl.* 5. 25-6) should not, therefore, without further proof, be taken to imply ritual fasting. The general prescription of light diet, that the body might hinder the soul as little as possible, for those engaged in divination, especially by dreams, extended to actual fasting in some cases, to judge from Tert. *De Anim.* 48.

The later mystery-cults, on the other hand, seem to have used ritual fasting quite commonly, e.g. that of Attis (Sallustius, *De dis et mundo* iv, p. 8. 22 Nock). It is to be remembered that they are not Greek but Oriental in origin. The many prescriptions of fasting in the use of magic (q.v.) are not all evidence for any prolonged abstinence; for example, the application of the remedy in Pliny, *HN* 26. 93 (the touch of a naked girl's hand). She should do it *ieiuna ieiuno*, but this condition is satisfied if the ceremony is carried out before operator or patient has breakfasted. However, some examples of real fasting, extending on occasion over more than one day, are to be found (see Ziehen, loc. cit. infra, 94. 43 ff.).

What might be called partial fasting, i.e. abstinence during a certain period or for the whole of life from some specified food or class of foods, is common enough. The best-known examples are the vegetarian diets of the Orphics (see ORPHISM) and Pythagoreans (see PYTHAGORAS; also J. Haussleiter, *Der Vegetarismus in der Antike*, 1935), but many others exist, as the food-taboos of the *flamen Dialis* at Rome (he might not, e.g., eat beans, Gellius 10. 15. 12) and the very curious restriction on the priestess of Athena Polias at Athens, who might not eat green cheese unless it was imported (Strabo 9. 1. 11).

L. Ziehen in *PW* xvii. 58-107.

H. J. R.

FATE. In Homer we find many sombre reflections on various powers, such as *moira*, *aisa*, or the *daimon*, which seem sometimes to thwart the desires of man and again to leave him free to commit acts of folly. Unlike the poet himself, who usually prefers some more definite ascription, the Homeric hero, when quoted, regularly alludes to one of these rather vaguely conceived forces. Of special interest is *moira*, because in Homer and Hesiod alone there are references enough to suggest the probable evolution from a common noun to a personification, and thence to a divinity and finally a trio of goddesses. At first the word, like *aisa*, denotes the 'lot' or 'rightful portion' of the individual, but since man's inescapable lot is death, it becomes specialized in this sense, thus early acquiring a fatalistic connotation; and personifica-

tion begins as soon as *moira*, qualified as 'mighty', 'ill-omened', or 'baneful', is said to hurry a warrior to his appointed doom (e.g. *Il.* 5. 83; 12. 116). Since, however, *Moira* always remains distinct from *Thanatos* (cf. Hesiod, *Theog.* 211), she is never the actual agent of death, but often motivates it indirectly, as, for example, when she forces Hector to wait alone before the walls of Troy (*Il.* 22. 5; cf. 24. 132; another case, *Il.* 19. 87 ff.). An extended fatalism leads naturally to the belief that a man's death is determined at the time of his birth, a fact which explains the occasional association of *Moira*, in later times, with *Eileithyia* (e.g. Pindar, *Ol.* 6. 42; *Nem.* 7. 1). The notion of breaking the thread of life, beginning as a figure of speech, perhaps leads to that of spinning it. At first such spinning may be done by 'the gods' (*Od.* 20. 196; 1. 17; 8. 579; 11. 139) or 'the *daimon*' (*Od.* 16. 64) as well as by *aisa* (*Il.* 20. 128) or *moira* (24. 209), but since spinning is normally an occupation of women it is later restricted to the *Klōthes* (*Od.* 7. 197) or 'Spinners', regarded as goddesses, and to the *Moirai*, who appear as a plural, however, only once in Homer (*Il.* 24. 49). Finally, when the course of life intermediate between birth and death comes also to be determined by fate, fate's task is trebled, and so the *Moirai* become definitely a trio. Their names are not found in Homer, but are first given by Hesiod (*Theog.* 901 ff.): Lachesis, who assigns the lot, Clotho, who spins the thread of life, and Atropos, who 'cannot be stayed', i.e. from severing it. Euripides (fr. 623 Nauck) pictures them as seated at the throne of Zeus, and Hesiod makes them daughters of Zeus and Themis (*Theog.* loc. cit.), though in Pindar (fr. 30 Schroeder) it is they who serve Themis as bridal attendants. Their relation to Zeus is not without difficulty, for at times they might seem to be independent of his will or even above it. Yet such phrases as '*moira* of the gods' (*Od.* 3. 269), 'divine *moira*' (Plato, *Ap.* 33c), and '*aisa* of Zeus' (*Il.* 17. 322; *Od.* 9. 52) show rather that it is he who determines fate and is bound by it only in somewhat the sense that a man is bound by his given word. Thus, in *Il.* 16. 433 ff., Zeus could save Sarpedon, though his time has run out, and would like well to do so, but declines when reminded by Hera that he would be virtually setting the laws of the universe at naught (cf. Pindar, *Paean* 6. 92 ff.).

2. The three fates of Latin poetry are the *Parcae*. Originally a Roman goddess of birth (cf. *parere*; Varro ap. Gell. 3. 16. 10), *Parca* was identified with the *Moirai* owing to a false etymology (cf. *pars*), and so trichotomized. As we have seen, the *Moirai*, too, were sometimes present at a birth. Plato makes Ananke, 'Necessity', their mother (*Resp.* 10. 617c), and places in her lap an adamantine spindle on which the world itself turns (ibid. 616c, ff.); Macrobius (*Sat.* 1. 19. 17) says that Ananke and Tyche (i.e. Fortuna) preside at one's birth along with Daimon and Eros; and Horace (*Carm.* 1. 35. 17) completes the circuit by associating *Necessitas* with Fortuna. The Latin *Fata*, or *Tria Fata*, like the *Parcae*, were assimilated to the *Moirai* of the Greeks; *fatum* signifies 'that which has been spoken' (cf. *fari*), i.e. 'decreed', as by some prophetic agency (cf. Isidore, *Orig.* 8. 11. 90).

3. Destiny, variously designated, played an important role in certain legends of the epic cycle which supplied the tragedians with situations rich in dramatic conflict. Perhaps freedom and predestination are most nicely balanced in Sophocles' *Oedipus Rex*, whose hero appears to struggle without avail against forces which drive him to patricide and incest. Yet, according to the *Poetics* of Aristotle, his downfall is really the result of some 'flaw' or 'error' of his own, the much-debated *hamartia*.

4. The philosophical doctrine of necessity begins its development in the writings of the Pre-Socratics, whose references to it are often phrased in poetic language because they could not entirely escape the influence of religious teachings. Subject to many minor qualifications,

we may say that they believed in a sort of physical determinism. The defect which both Plato and Aristotle saw in their work was that they failed to recognize an external, final cause. Actually, a tentative approach to this can be discerned in some of the Pre-Socratics, notably Anaxagoras, who is said, however, to have disappointed the youthful Socrates because he did not definitely make his *nous* a final cause (Pl. *Phd.* 97c). This step was taken by Anaxagoras' disciple, Diogenes of Apollonia, the first teleologist.

5. Plato's dramatic methods of discussion left his ethical endorsement of responsibility imperfectly reconciled with the determinism of his theodicy. Aristotle enriched the speculation on the subject by criticizing in detail the work of his predecessors, distinguishing more carefully the various types of causation, and beginning a new attack from two different angles. First he showed that the notion of contingency or potentiality emerges from the fact that, of two mutually contradictory statements of particular, future content, either appears equally true. Then he constructed his ontological system, which culminated in his final cause, the prime mover; and this, once discovered, made it difficult in turn to retain contingency. His attempt to derive it from 'non-being' was a sort of compromise; the harsh alternative, chosen by such fatalists as the Megarians and Stoics, perhaps even Chrysippus (see below), was to reject it except as an illusion.

6. Of the atomists, Democritus had regarded necessity as strictly mechanical, identified with the endless motion of the atoms as an ultimate natural law; but he had neglected to extend this determinism to his ethics, where chance and free will reappear inexplicably. Epicurus, preferring to refashion physics in the interest of his moral teachings, devised the atomic 'swerve' as a somewhat naïve guarantor of freedom. The early Stoics clung to divination as revealing that all-powerful destiny which they saw in the pure reason of the supreme being. Confronted by the problem of evil, they asserted that it exists only at the human level, not the divine, and as the natural opposite of good. Chrysippus, who sought another, more adequate answer, strove to save at least the illusion of contingency, deliberation, and freedom of choice with his difficult theories of 'confatal acts' and 'assent'.

7. The pseudo-science of astrology acquired great importance in the early centuries of our era because it was thought to reveal the workings of a destiny so absolute as to render prayers and sacrifices entirely useless (cf., for example, Suet. *Tiberius* 69). The Ptolemaic system of astronomy appeared to give a rational basis for this belief. Those Oriental deities which promised, by virtue of their sovereignty over the stars, to release men from the rule of fate acquired thereby a special attraction for the superstitious. The Christian apologists also offered relief from the oppression of fate by insisting that man is free to create his own life of good or ill (e.g. Min. Fel. *Oct.* 36. 1).

FATUUS, see FAUNUS.

FAUNUS (from root of *favere*, 'kindly one', euphemistic), a *numen* anciently identified with Pan, whose festival (5 Dec., Horace, *Carm.* 3. 18. 10) was kept in the *pagi* with dancing and merry-making. He was primarily of the forests, and especially connected with the mysterious sounds heard in them, hence his titles (or identification with) Fatuus and Fatuclus (Servius on *Aen.* 6. 775), both meaning 'the speaker'. As a god of herdsmen he was further identified with Inuus, whose name the ancients connected with *inire* and interpreted as the fertilizer of cattle (*ibid.*). He had female counterparts, Fauna (cf. BONA DEA) and Fatua (Cornelius Labeo in Macrobius, *Sat.* 1. 12. 21). A more formidable side is shown by his identification (Servius, *ibid.*) with Incubo, a *numen* either of nightmare or (Petronius, *Sat.* 38. 8) of buried treasure. He was on occasion oracular (*Aen.* 7. 81 ff.; Dion. Hal. 5. 16. 2-3 and elsewhere). For his alleged connexion with the Lupercalia (q.v.), see Rose in *Mnemosyne* 60. 386 ff.

Cf. Wissowa, *RK* 208 ff.

H. J. R.

FAUSTINA (1) the Elder (*Annia Galeria Faustina*), daughter of M. Annii Verus (*cos.* III in 126), and aunt of M. Aurelius, married the future Emperor Antoninus (q.v.) Pius c. A.D. 110 or later, bearing him two sons and two daughters (including Faustina (2) the Younger). She became 'Augusta' on his accession (138). Late tradition questioned her character; but the pair lived in harmony until her death (140/1), when Antoninus consecrated her and named his new charity (*Puellae Faustinae*) after her.

PIR¹, A 715.

C. H. V. S.

FAUSTINA (2) the Younger (*Annia Galeria Faustina*), younger daughter of Antoninus (q.v.) Pius, born c. A.D. 125-30, was betrothed by Hadrian's wish to L. Verus (q.v.). But in 139 Antoninus betrothed her anew to her cousin M. Aurelius (q.v.), whom she married in 145, becoming 'Augusta' after her first child's birth in 146. Ancient authority groundlessly interpreted her lively temperament as a sign of faithless and disloyal character, not above collusion with Avidius (q.v.) Cassius. She accompanied Marcus during his northern campaigns (170-4) and—now 'Mater Castrorum'—to the East in 175. There she died, consecrated by Marcus, who apparently loved her genuinely. A second charity of *Puellae Faustinae* commemorated her.

See under AURELIUS (MARCUS); also PIR², A 716.

C. H. V. S.

FAUSTULUS, probably a by-form of Faunus (q.v.; if a deity *favet*, he is *faustus*), but humanized into a herdsman, husband of Acca (q.v.) Larentia, who found Romulus (q.v.) and Remus being suckled by the she-wolf. In a further rationalization his wife was the she-wolf herself (*lupa*, loose woman, prostitute). He reared the twins, and on Remus being brought before Numitor for an act of brigandage, told Romulus the whole story, whereupon the twins and their grandfather killed Amulius.

Livy 1. 4. 6 ff.

H. J. R.

FAVENTINUS, MARCUS CETIUS, made an abridgement of Vitruvius (q.v.) which Palladius and Isidorus used.

FAVONIUS EULOGIUS, a rhetor from Carthage in Augustine's time, wrote a *Disputatio de somnio Scipionis* (ed. Holder, 1901).

FAVORINUS (Φαβορπίος) (c. A.D. 80-c. 150), famous rhetor and polyhistor. He was born in Arlat in Gaul, a hermaphrodite. His defect was obvious from his body

and his voice (*ἀνδροδῶνλος καὶ εὐνοῦχος*, Philostr. *Vit. Soph.* i. 8; Suid. s.v.; etc.). He learned Greek very early; later he preferred to use it in everyday talk and in his writings. His teacher was Dio Chrysostom. In later years he lived in Rome as a favourite of the Emperor Hadrian. For some time he was in disgrace with the Emperor and was exiled to Chios (Papyr. in *Studi e Testi*, 53 col. 14). His keen competitor as an orator was Polemon (Kavvadias, *Δελτίον*, 1892). But F. was renowned also as a scholar and philosopher. Among his friends was Plutarch, among his numerous pupils Herodes Atticus, Fronto, and Gellius.

Little has been preserved of his many writings; of the lost works the most important were a 'Miscellaneous history' (*Παντοδμή ιστορία*) in twenty-four books (Phot. *Bibl.* 103b), an encyclopaedic work whose scheme was akin to Aelian's *Ποικίλη ιστορία*, and the 'Memoirs' (*Ἀπομνημονεύματα*). Notable among his philosophical works was 'Pyrrhonian modes' (*Πυρρώνειοι τρόποι*) in ten books (Philostr. *VS* i. 8; Gell. 11. 5. 5; Diog. Laert. 9. 87) in which he discussed the 'modes' (*τρόποι*) of Aenesidemus (q.v.).

Two speeches under the name of Dio Chrysostom have been ascribed to F. with great probability (nos. 37 and 64). Lately a declamation 'On exile' (*Περὶ φυγῆς*) has been found on papyrus (*PVat.* 11).

J. L. Matres, *De F. Arel. vita, studiis, scriptis*, 1853 (not sufficient); Th. Colardreau, *De F. Arel. studiis et scriptis*, Thèse Grenoble, 1903; E. Zeller, *Philosophie der Griechen* iii. 2^a, 76 f.; A. Goedeckemeyer, *Gesch. d. gr. Skeptizismus*, 1905, 248 f.; B. Häse, *Favorin Über die Verbannung*, Thesis Berlin, 1935; *PIV* vi. 2078. K. O. B.

FEBRIS, the *numen* of fever (it is rash to assume that it was malaria, the early history of which is imperfectly known, see P. Fraccaro in *Studi etruschi*, ii. 3 ff.). She had three temples in Rome alone (Valerius Maximus 2. 5. 6), in which *remedia* (amulets?) which had proved efficacious were placed. Dedications to her have been found in various parts of the Roman Empire (see Wissova, *RK* 246), some of which call her Tertiana and Quartana, clearly referring to malaria. H. J. R.

FEBRUUM, technical term of Roman ritual for anything used in a ceremony of purification.

See Ovid, *Fasti* 2. 19 ff.; Frazer, *Fasti of Ovid* ii. 277 f.

FEDERAL STATES first appear in Greece in the fifth century B.C., were most numerous and influential in the Hellenistic age, and continued under Rome as local governments in parts of Greece and Asia Minor. Though their influence on the course of events was considerable, they are particularly important as one of the two chief instruments used by the Greeks for creating unities larger than city-states, namely the *symmachia* (q.v.) and the federal State (*sympoliteia*, q.v.). Organizations of both types usually are called leagues. A distinguishing mark is that while the *symmachia* claimed to preserve the freedom of its members, the *sympoliteia* limited their freedom by the creation of a federal government. Hence the King's Peace led to the dissolution of the Boeotian and other federal leagues.

2. Federal States developed from tribal units (Boeotians, Arcadians, etc.), and so frequently, even in Roman Imperial times, a federal league was called an *ethnos* instead of a *keimon*, and c. 300 B.C. the States of Greece were classified as *ethne* (federal States and tribal States) and *poleis* (*IG* iv. 1. 68). In some tribes cities developed early, but did not cause the dissolution of the tribe, and such conditions in time led to the growth of federal States. In other tribes, e.g. the Aetolians, a looser ethnic organization was long retained and later transformed into a *sympoliteia*. In either case, if a large league was to be developed, it was necessary to overstep the ethnic boundary and incorporate States outside the tribe. This policy was not employed extensively before the third

century B.C., when it was used most successfully by the Achaicans.

3. From the very beginning oligarchic States seem to have been more ready than democratic States to adopt representative government, though it must be noted that information is so scanty as to make generalizations dangerous. There is extant a description of the oligarchic Boeotian League as it was in the early fourth century. Citizenship depended on a property qualification, apparently the hoplite census, and the local governments were uniform with one-fourth of the active citizens serving as the *boule* and the rest as the *ecclesia*. For federal purposes the country was divided into eleven parts. Thebes, with subject communities, controlled four; Orchomenus and Thespieae, together with smaller communities grouped with them, controlled two each; Tanagra, one; the other two districts each included three towns. Each of the eleven parts furnished one Bocotarch, sixty federal *bouleutai* and an unknown number of judges supplied equal contributions to the federal treasury, and furnished 1,000 hoplites and 100 horsemen to the army. The other numbers are precise, those for the soldiers (obviously) approximate; undoubtedly all active citizens of military age could be called. The federal *boule* was the final authority and thus the federal government was representative. The League, founded about 447 B.C., was dissolved at the King's Peace. The later league of the time of Epaminondas was democratic; it had Bocotarchs, and a primary assembly meeting at Thebes and dominated by the Thebans. The Arcadian League organized in 370 had a form of government that suggests democracy with a *boule*, a primary assembly called the Ten Thousand, and a single general as its chief executive. An inscription which mentions the *boule* also lists fifty *damiorgoi* by cities showing an inequality of representation, thus suggesting, whatever was their relation to the *boule*, a system of representation in proportion to population also for this body.

4. Whatever the constitutional form, the government of a federal State, through relatively greater activity of magistrates and council and less full attendance at meetings of the primary assembly, in practice functioned more nearly like a representative government than that of a normal city-state. The Boeotian League and many of the later leagues took the step outright and dispensed with the primary assembly, which, however, was retained by the Aetolians and Achaicans. The Thessalian League, organized in 194 B.C., had as its chief organ of government a *syndrion* of over 300 members; each of the four Macedonian republics organized in 167 B.C. had a *syndrion* consisting of elected representatives; and the Lycian League flourishing in the same period is said by Strabo to have had a *syndrion* in which the cities, depending on their size, each had one, two, or three votes. The Lycian inscriptions from Imperial times at first surprise the reader by quoting decrees passed by an *ecclesia*, but closer study shows that this was itself a representative body.

5. Only a few of the better-known States have been mentioned. Notice also that, when dates have been given to a league, these apply only to the government described and do not exclude the existence of a league with a different form of government at other times.

FELICITAS, a goddess of good luck, not heard of till the middle of the second century B.C., when L. Licinius Lucullus dedicated her temple on the Velabrum (see Platner-Ashby, 207); another was planned by Julius Caesar and erected after his death by M. Aemilius Lepidus where the Curia Hostilia had stood (*ibid.*). She is associated with Venus Vietrix, Honos, and Virtus at Pompey's theatre (*Fast. Amit.* on 12 Aug.); with the Genius Publicus and Venus Vietrix on the Capitol (*ibid.*, 9 Oct.); with the *numen Augusti* (*Fast. Praenest.* on 17 Jan.). Thereafter she is important in official cult under the emperors, appearing frequently on coins (*Felicitas saeculi* with figure of the goddess) and in addresses to the gods in dedications, etc., immediately after the Capitoline triad.

See Wissowa, *RK* 266-7.

H. J. R.

FELIX, MARCUS ANTONIUS, freedman of Antonia, Claudius' mother, was brother of Pallas. Perhaps sent in A.D. 52 to Samaria with the rank of procurator during the trial of Ventidius Cumanus, he was soon appointed procurator of Judaea, where unrest increased during his administration. He was St. Paul's judge. Accused by the Jews of Caesarea, he was acquitted. He married (1) Drusilla, grand-daughter of Antony and Cleopatra, and (2) Drusilla, daughter of Agrippa I. He was succeeded by Festus c. 60.

FENESTELLA (52 B.C.-A.D. 19 or, possibly, 35 B.C.-A.D. 36), the antiquarian annalist, wrote a Roman history in at least twenty-two books, perhaps from the origins, certainly to 57 B.C.; the citations of Asconius reflect his special authority for the Ciceronian period. The fragments, which, however, may come also from works on constitutional and social antiquities, show his wide antiquarian interests and critical ability, in the Varronian tradition. The Elder Pliny used him, and an epitome was made. See SCHOLARSHIP, LATIN, IN ANTIQUITY.

H. Peter, *HRRel.* ii (1906), pp. cix, 79; L. Mercklin, *De Fenestella* (1844); J. Poeth, *De Fenestella* (1849). A. H. McD.

FENUS NAUTICUM, see BOTTOMRY LOANS.

FERALIA, Roman All Souls' Day, 21 Feb., last of the *dies parentales* (beginning at noon on 13 Feb.), during which each household made offerings at the graves of its dead (Ovid, *Fasti* 2. 533 ff.). It is marked N^o in Imperial calendars (cf. *DIES FASTI*), but F in the *Fasti Antiaties*; what public ritual, if any, was performed and whether any change in this respect took place under Augustus is unknown.

H. J. R.

FERIAE CONCEPTIVAE, see FESTIVALS, AMBURBIUM.

FERONIA (Fē-, Verg. *Aen.* 7. 800; Horace *Sat.* 1. 5. 24; and elsewhere), an Italian goddess, officially received in Rome before 217 B.C. (Livy 22. 1. 18), and given a temple in the Campus Martius (*Fast. Arval.* on 13 Nov.). Her principal place of worship was the *lucus Capenatis*, later *Lucus Feroniae*, near Mt. Soracte (Cato, *Orig.* 1, fr. 26 Jordan; Verg. *Aen.* 7. 697; Strabo 5. 2. 9; Pliny, *HN* 3. 51). Her cult, however, is shown by inscriptional and other evidence to have been widely spread in central Italy (see Wissowa, *RK* 285 f.). Of her functions and the etymology of her name, which may be Etruscan, nothing is known, and the ancients seem to have been equally uncertain, to judge by the variety of guesses recorded (Wissowa, *ibid.* 286). Strabo (*loc. cit.*) says that a ceremony of fire-walking was performed in her precinct, but this seems to be a confusion with the so-called Apollo of Soracte (see Verg. *Aen.* 11. 785 ff. and commentators there). Near Tarracina slaves were set free in her shrine (Servius on *Aen.* 8. 564).

H. J. R.

FESCENNINI (VERSUS), ribald wedding-songs (Catull. 61. 126-55); cf. the licentious verses sung by soldiers at triumphs. Ancient etymologies were: *Fescennium*, a town in Etruria, and *fascinum* (= witchcraft, which the songs were supposed to avert). Similar verses were said to be exchanged at harvest-festivals between masked entertainers; such performances were thought, perhaps rightly, to have been the origin of drama (q.v.). For a possible parallel see Hor. *Sat.* 1. 5. 51-70; but see *PW*, s.v. 'Fescennini'.

W. B.

FESTIVALS. A festival is a sacred rite repeated yearly or with regular intervals of a certain number of years (every eight, four, two years; in this case there is often a lesser celebration in the intervening years, and except for the Dionysiac orgia, the enlargement consists of games); it is celebrated by an assembly at a certain time and after the introduction of the calendar on a certain day or certain days, often at full moon. The Roman custom of *feriae conceptivae*, the day of which was fixed by the magistrate within certain limits, is not known in Greece. A remarkable circumstance is that most of the old festivals took place at full moon, generally on the twelfth day of the lunar month, except for those of Apollo which fell on his holy day, the seventh, and those of his sister Artemis which fell on the day before. It is apparent that many rites are pre-deistic, i.e. magical rites efficient without the interference of any personal god, and only subsequently attached to the cult of a god. Sometimes a great god took possession of a festival which belonged to a lesser god—as happened with Apollo and the Hyacinthia, in which a preliminary sacrifice was offered to the hero Hyacinthus, in fact a pre-Greek god.

Aristotle remarks that in early times festivals chiefly took place after the harvesting of crops and fruits, and in fact a survey of the Greek festivals of early origin proves that most of them are agrarian. This corresponds to the old mode of life in which the people subsisted on the products of their own land, and to the fact that agrarian customs are bound up with the seasons and in consequence easily conform to a calendrical regulation. Even at an early date people flocked together to a sanctuary at a given time. Their original purpose was to perform worship, but to this were added games, merry-making, and markets. Such festivals were called *panegyreis* and take place even in modern Greece in a manner very reminiscent of the old. The most famous of the ancient *panegyreis* are the great games, the Olympia, Pythia, etc. (qq.v.).

The state of things described above was already in an early time changed by town life. The cult was the concern of the State and its magistrates had charge of it. They performed the rites and arranged the festivals. Almost every god who was not too unimportant had his festival day on which the people went to his temple. Although old rites were carefully preserved, the procession and the sacrifice including the meal that followed became the most prominent parts of the festival, in which great pomp was displayed. The sixth century B.C., in which great temples were built, marked a great advance in this direction, especially due to the tyrants. The Athenian democracy developed this during its heyday; the lavish sacrifices were a means to humour the people. In early times the colonies sent embassies (*θεωποί*: see THEOROI) to the festivals of the mother town, and the cities to the national games. The Athenians enjoined on their colonies and allies to send sacrificial animals, etc., to the Panathenaea and the Great Dionysia, and on these occasions displayed their glory to them. In the Hellenistic age it became very common for the cities to send embassies to each others' festivals, especially to the games. New festivals were instituted, many in commemoration of political events, but these are un-

interesting, comprising only processions, sacrifices, and games. The festivals were for a great part an expression of the political aspirations of the cities. The old rites are extremely important for the history of Greek religion and its gods.

M. P. Nilsson, *Griech. Feste mit Ausschluss der attischen* (1906); L. Deubner, *Attische Feste* (1932); P. Siengel, *Die griech. Kultusaltertümer*, 190 ff. (including the games); Nilsson, *Gesch. d. griech. Religion* i. 778 (the *panegyreis*). M. P. N.

FESTUS (1), PORCIUS, succeeded Felix as a procurator of Judaea c. A.D. 60 (date very uncertain). He fought against the Sicarii and a pseudo-prophet and was involved in the controversy between the Jews and Agrippa II. He carried on the trial against St. Paul, whom he sent to Rome (Acts xxv-xxvi). He died after a short period of office. A. M.

FESTUS (2), SEXTUS POMPEIUS (late 2nd c. A.D.), scholar, epitomizer of the *De significatu verborum* of Verrius Flaccus (q.v.). Of his work (alphabetically arranged in twenty books) the first half is lost. Festus himself was epitomized in the eighth century by Paulus Diaconus. The standard edition (including Paulus) is that of W. M. Lindsay (1913) whose later edition in *Glossaria Latina* iv (93-467) incorporates Festus material gleaned from glossaries. See SCHOLARSHIP, LATIN, and cf. Teuffel, § 261. 4-7; Schanz-Hosius, § 341. J. F. M.

FESTUS, see also RUFUS.

FETIALES, Roman priestly officials who conducted international relationships, as treaties and declarations of war. They were twenty (Varro ap. Non. 529), forming a *collegium* (Livy 36. 3. 7), variously said to have been founded by one or another of the kings; who its head was is not known, but it deliberated on questions affecting the state of war or peace (Varro, *ibid.*), though only in an advisory capacity, like all clerical *collegia*; the commonwealth decided what action should be taken.

Our chief informant as to their ritual is Livy. He states (i. 24. 4 ff.) that to make a treaty two *fetiales* were sent. One of these was the *uerbenarius* or *uerbenatus* (see Pliny, *HN* 22. 5; Varro ap. Non. 528), who carried herbs (*uerbenae*, *sagmina*) from the Arx; the other was the *pater patratus*, perhaps 'the father (full citizen, patrician) who accomplishes' (the ceremony; for this rare active use of *-tus*, see Krahe in *ARIW* xxxiv (1937), 112). He, after the terms of the treaty had been read aloud in the presence of the other State's *fetiales*, pronounced a conditional curse on Rome if she were the first to break it, confirming this by killing a pig with a *lapis silex*, probably a neolithic implement, cf. JUPITER; STONES, SACRED. On occasion several pairs of *fetiales* might be sent (Livy 30. 43. 9).

If an injury were received from another State, the *pater patratus* crossed the border, first announcing, with his head veiled in a woollen garment (*filum*), who he was and what he came for, calling on Jupiter, *fas*, and the boundaries themselves to hear him and swearing to Jupiter that his errand was just. This formula was several times repeated at various stages of the journey. If within thirty-three days satisfaction was not given, he formally denounced the offending nation to all the gods and returned to Rome. The Senate would then be consulted by the chief magistrate, and, if it voted for seeking satisfaction *iuxta piaculum bello*, the *fetialis* went once more to the boundary, and there, after formally declaring a state of war in the presence of at least three adults, cast across it either an ordinary spear or a cornel stake sharpened and hardened in the fire (*harum praecurium sanguinem*); to translate the last word by 'bloody' is a many times refuted blunder (Livy i. 32. 5 ff.). In case of war with a distant nation, the spear was cast upon a piece of land near the *calvaria bellia* (see *REL.*

LONA), which by a legal fiction was considered hostile territory. This was first done in the war with Pyrrhus (Servius on *Aen.* 9. 53 (52)), and was still in use under Marcus Aurelius (Dio Cassius 71. 33. 3; see Frazer on *Ov. Fast.* 6. 206). Other functions of the *fetiales*, however, as the formal claim (*clarigatio*) for satisfaction, described above, seem to have gone comparatively early out of use. By a kind of pun, the origin of the *ius fetiale* was credited to the Aequicoli ('Plain-dwellers', misunderstood as 'cultivators of equity').

See Wissowa, *RR* 550 ff.; T. Frank, *Roman Imperialism*, ch. 1; *CPhil.* 1912; Mommsen-Marquardt, *Manuel* i. 280 ff., vii. 377; Samter, 'Fetiales' in *PIW*. H. J. R.

FIBULA (περόνη, πόρπη). The primitive brooch or fibula, of violin-bow form resembling the modern safety-pin, is found in late Bronze Age times in Greece, northern Italy, and central Europe. A single centre of diffusion is highly probable, but it is uncertain whether that centre should be sought in the north or south. The case for the north has been weakened by recent lower dating of the central European examples, and it is now widely accepted that the fibula is an Aegean invention, developed c. 1300 B.C. out of a Minoan type of pin which had the end bent to prevent slipping. By further bending until the end, flattened into a catch, could engage the point, the fibula was produced, and the addition of a spiral coil at the angle to increase the tension is also of early date. Later improvements enlarge the bow so as to grip more cloth. Large fibulae from mainland Greece, of late Geometric times, extend the catchplate; the Cypriote type has a double-arched bow, the Asiatic a stilted one. The 'spectacle' type, in which the bow is replaced by spiral coils of wire, is considered of Danubian origin by some authorities. After 600 B.C. the fibula falls into comparative disuse in Greece, and no new types appear until Roman times. In Italy the development is unbroken and the types more varied: the bow looped, bent, threaded with disks, or thickened into the 'leech' or 'boat' form; the catchplate set transversely or fantastically prolonged. In the fifth century the simpler 'Certosa' type becomes universal and gives rise to the La Tène forms, in which the spiral spring is bilateral, and ultimately to the Roman in which, under the early Empire, a hinge replaces the spiral.

FIDEICOMMISSUM. A testator could leave individual objects to a person other than his heir by legacy (*legatum*) or *fideicommissum*. Several forms of *legata* were in use, the most commonly applied being: (1) *per vindicationem*, which transferred ownership to the legatee directly, so that he might claim the object by *vindicatio* (q.v.); (2) *per damnationem*, which imposed upon the heir the obligation to transfer the object to the beneficiary. Whereas a *legatum* had to be left in a prescribed form, and was chargeable only on a *heres* appointed by *testamentum*, a *fideicommissum* was a simple, informal request of the testator, addressed to any person who benefited from his inheritance (by will or on intestacy, by legacy or even by *fideicommissum*), to give one or more objects to a third person (*fideicommissarius*). The request was commonly made in the words 'fidei tuae committo' (hence the name *fideicommissum*). Originally not enforceable, *fideicommissum* from the time of Augustus became actionable in special courts, where the official, acting by *cognitio extra ordinem*, had a wide discretion in interpreting the testator's will. A *fideicommissum* was not necessarily a gift of single objects. It might be a gift of the inheritance, in whole or in part. In this case it meant a kind of universal succession, the *fideicommissarius* being *heres* *discretus*. To avoid refusal by the fiduciary successor, which would make void the *fideicommissum*,

later legislation gave him the right of keeping a quarter of the property in trust, in conformity with a Republican statute which preserved for the heir a quarter of the inheritance free from legacies and other burdens. In Justinian's law the provisions concerning *legata* and *fideicommissa* were amalgamated, and the distinction between the two fell into abeyance.

A. B.

FIDEPROMISSIO, *see* STIPULATIO.

FIDES, the Roman personification of good faith. Although her temple (on the Capitol, near that of Jupiter, with whom she is closely connected) is no older than 254 B.C. (see Platner-Ashby, p. 209), her cult is very old, said to have been founded by Numa (Livy i. 21. 4). Livy also gives details of her ritual; the *flamines* (q.v.), meaning probably the *flamines maiores*, drove to her shrine in a covered carriage drawn by two beasts, and the sacrificer must have his hand covered with a white cloth. A pair of covered hands is indeed her symbol, as often on coins commemorating the *fides* of the Augusti, the legions, etc., in Imperial times. Since giving the hand is a common gesture of solemn agreement, the symbolism is natural.

Wissowa, *RK* 133 f.

H. J. R.

FIMBRIA, GAIUS FLAVIUS (d. 85 B.C.), a violent supporter of the Marian party. At Marius' funeral in 86 Fimbria tried to assassinate Q. Scaevola 'Pontifex'. Sent as second-in-command of Flaccus' forces to the East, he fomented a mutiny, and murdered his chief (86); thereafter, he fought with success in Asia against Mithridates, whom he might have captured but for Lucullus' refusal to co-operate with him. On Sulla's arrival in Asia, he was deserted by his troops and committed suicide (85).

M. H.

FINANCE, GREEK AND HELLENISTIC. Conclusions on the revenue and expenditure of the Minoan and Mycenaean kings are at present only guesswork based on excavations and doubtful figures in Minoan inscriptions believed to be accounts. Homeric finance was simple. The kings had comparatively high expenses for household, wars, and hospitality; their revenues came from the royal estate (*temenos*), from gifts (*dotinai*), personal services and customary contributions (*themistes*) of the people, from piracy, presents of foreign merchants and other foreigners, tributes and war-booty.

2. Sparta kept many Homeric characteristics up to the Classical period. No regular taxes existed, except a small contribution in kind to the kings. The helots paid nothing to the State, but gave a share of their crops to their Spartan landlords. The *perioikoi* may have paid a small tribute in kind to the kings, who also had a privileged share of the spoils. Irregular war revenue was derived from the enemy, from contributions of allies, or primitive collections within the community.

3. Exceptional expenses for court and bodyguards, public works, colonization, and wars were characteristic of the finances of the Greek tyrants, and it was, as a rule, impossible for them to pay all these out of the ordinary taxes. Confiscations, irregular levies, monopolies, the undemocratic poll-tax on free citizens, and even extortions had to be introduced to fill the always empty treasuries of such governments.

4. The financial system of the Greek cities, democratic and oligarchic, was more developed. Athens took the lead and was very often the model for smaller communities. The usual expenditure was concerned with police, army, navy, fortifications, ambassadors, palaestrae, gymnasia, education (a Hellenistic innovation), sacrifices, religious festivals, public works (those of Pericles were famous), distribution of money (*see* THEORIKA), corn, and other foodstuffs, salaries of State officials and of citizens entrusted with official duties (e.g. the Councillors,

Dicasts, and Ecclesia of Athens), honorary distinctions (e.g., entertainment in the Prytaneum at Athens), and the maintenance of orphans, invalids, and crippled soldiers.

5. The State revenues of Greek cities were varied. Most towns had a considerable income from State property, especially mines (e.g. the famous silver mines of Laurium in Attica), quarries, houses, and State domains. Court fees and fines at Athens and other towns were another important source of revenue. Direct taxes were, as a rule, only paid by foreigners, non-citizens, and despised professions (e.g. by *metoikoi*, freedmen, *hetairai*, certain craftsmen and traders). The indirect taxes brought a greater return. The custom dues of Attica at the beginning of the fourth century B.C. amounted to 2 per cent. on both exports and imports (during the fifth century, perhaps, only to 1 per cent.). Of like importance were the customs of the Bosphorus and Black Sea ports during the Classical period, of Rhodes and the Egyptian ports during the Hellenistic. Treaties made by Athens and other towns, many of which are preserved, provided for delivery, under favourable conditions, of corn and materials for army and navy.

6. Excise duties existed, at least in the smaller cities of Greece. They may have been influenced, in some cases, by the practice of Hellenistic monarchies. The so-called *eponia* represented *ad valorem* gate tolls, auction taxes, and taxes on sales. They were in some places varied for real estate, slaves, cattle, bread, wheat, wine, etc. Another group of excise duties was called *enkykklia*, a Greek term which may be rendered as 'taxes on transport'. Belonging to this group of indirect taxes were harbour rights and dues, fishing rights in lakes and in the ocean, ferry taxes payable from shippers, pasturage taxes, duties for the use of public scales, and for the use of temple precincts for business purposes. In addition, there were a few land and cattle taxes during the Hellenistic period, and Classical as well as Hellenistic monopolies (q.v.). Certain liturgies (q.v.) had to be performed regularly too.

7. An important item of the Athenian Empire's budget in the fifth and fourth centuries, as well as of other hegemonic States, consisted in tribute and contributions from allies and subject States. The *phoros* of Aristides amounted to 460 talents, a sum which was subsequently increased. A certain amount of external revenue was derived from lands in the cleruchies (q.v.) of Athens and other powerful towns which belonged to the ruling State and were rented out as in the mother country. The regular revenues of Athens, the richest town of Classical Greece, were not always sufficient to meet expenditure. Irregular sources of income included *eisphora*, *epidoseis* and other endowments, sale of State property, public loans (often compulsory), selling of political rights and honours, tampering with the coinage, war booty, and financial expedients. The Athenian Empire and the temple States of Delphi and Olympia were able to collect large State treasures in times of peace.

8. Remarkable financial systems were developed in the Ptolemaic and Seleucid Empires, Syracuse, Hellenistic India, and other Hellenistic monarchies. The best-known of these, the Ptolemaic organization, may be described as an example. A planning economy regulated the Empire's budget. Attic and other city-state institutions were imitated. The expenditure was similar to that of the tyrants, but on a much larger scale. Monopolies (q.v.) were most important for the revenues. The whole country-side was farmed out as State land under rigorous State control of agriculture. The Greek poll-taxes, *eponia* and *enkykklia*, were used on a wider scale than in the *poleis*. The Ptolemaic control of agriculture, banking, commerce, and industry of Egypt's administrative units reminds us of the planning economies of the eighteenth and twentieth centuries A.D. As Greek *polis* economy

has influenced all later public financial organization in countries with free economy, so most later tendencies to planned economy from Byzantium and Hellenistic India to modern times seem to show a clear connexion with such Hellenistic systems. See EISPHORA; ENDOWMENTS; LITURGY; MONOPOLIES; SYMMORIA; THEORIKA.

FINANCE, ROMAN. At the basis of the finance of the Republic lay the authority of the Senate. In no department of State was its power more steadily exercised, in none were attacks on it more bitterly resented.

2. The general budgeting was in the hands of the censors, appointed every *lustrum* (four years) from 443 onwards. They revised the census classes, leased or sold public land, gave out public works on contract, and arranged for necessary buildings and repairs: the moneys allotted for the last purpose were termed *ultra tributa*. When the provincial taxes came to be sold to companies of knights it was the censors who held the auction. The decay of the censorship in the late Republic must have led to serious financial confusion. The details of administration fell to the quaestors—the urban, two in 467 B.C., later increased to four—and the Italian (*quaestores classici*), four instituted in 265. As provinces arose overseas, a quaestor was attached to the governor in each. The general abroad had a very free hand in the disposal of the booty (*see* MANUBIAE), and was seldom called to strict account, if his general policy was approved. The prosecution of the Scipios for their financial management in the war against Antiochus was exceptional. The aediles could levy fines and devote the money to works of public use.

3. Roman taxation was mainly indirect, consisting of customs-duties (*portoria*) and such special taxes as that on the manumission of slaves. The direct tax, *tributum*, was mainly levied for war, at a rate of 1 in 1,000 of the census: it could be treated as an advance, repayable at the State's convenience, as for example in 187 B.C. Provincial taxes were largely collected indirectly by *publicani*, who farmed them from the censors—an endless source of corruption and waste. Sicily paid a tithe (*decumana*). The State treasury was the *aerarium* (q.v.) *Saturni*, with a special reserve *aerarium sanctius*.

4. Augustus left the *aerarium* in the control of the Senate, but took an interest in its administration and the appointment of its chiefs. The censorship was not restored as a regular office. The emperors at once took over many of its functions, and occasionally held the office. Domitian became censor for life, and, though later emperors refused the title, they retained the powers. New treasuries arose—the imperial treasury (*fiscus*), the crown property (*patrimonium*), the *aerarium militare*. Septimius Severus added a new private chest, the *res privata* (qq.v.). Quaestors continued to function in Rome and the senatorial provinces: the quaestors of Italy were gradually abandoned. The emperor's own financial agents, in Rome and the provinces, were the procurators. The *a rationibus* was a chief Minister of Finance. Customs-duties were still levied for provinces or groups of provinces—the *III publica Africae* and the *XL Galliarum* are examples. The emperors gradually replaced the wasteful system of farming by direct collection. A *vicaria hereditaria* was levied on inheritances of Roman citizens, while other indirect taxes affected the sale of goods, the sale and emancipation of slaves, etc.

5. The third century brought a collapse of the coinage, disorganization of business, and catastrophic rises in

prices. The *amona*, the levy in kind, largely replaced cash levies. Diocletian, in his new census, revised every fifteen years (*indictio*, q.v.), relied on two new units—the *iugum*, unit of land, and the *caput*, unit of human labour. The chief financial officer, *comes sacrarium largitionum*, controlled a large staff of *rationales* and assistants. Taxation became technically efficient, but terribly oppressive. The final collapse of the West was largely due to the financial exhaustion of the tax-payer.

J. Marquardt, *Stoatsverw.* ii² (1884), 3 ff.

II. M.

FIRMICUS MATERNUS, JULIUS, of Syracuse, wrote (A.D. 334-7) an astrological treatise *Mathesis* in eight books (ed. Kroll-Skutsch-Ziegler, 1897-1913), the first containing an apologia for astrology. F. urges the highest moral integrity on the astrologer. The conflict between destiny and freedom of will he resolves on Stoic lines: the soul, being divine, can triumph over the stars. F. shows small technical knowledge; his merit, if any, is rhetorical and stylistic. Later, converted to Christianity, F. wrote a fanatical *De errore profanarum religionum* (ed. Ziegler, 1907) urging Constantius and Constans to eradicate paganism. Dom Morin's attribution of *Consultationes Zacchaei et Apollonii* (ed. 1935) to this author has not gained universal acceptance. L. R. P.

FIRST FRUITS. The rite of bringing first fruits to the gods is not strongly characterized in ancient Greece. It is comprised under the rite known as *panispermia*, the bringing of a mixture of fruits at various festivals, sometimes cooked in a pot (at the Thargelia and the Pyanopsia). *Θαύσια* are, according to the lexicographers, *aparchai* (q.v.) of the fruits and also the first loaf baked after the threshing. The opinion has been advanced that the offering of first fruits represents the breaking of the taboo imposed upon the unripe fruits; in the opinion of the Greeks themselves they were brought in order to ensure fertility; they were also called *εὐεργία*, i.e. a Good Year. They survive in ecclesiastical usage to-day under the ancient name *κόλυβα*.

M. P. Nilsson, *Gesch. d. griech. Rel.* i. 147.

M. P. N.

FISCUS, a basket or chest, hence a treasury—the distinctive name given, under the Roman Empire, to the main imperial treasury as against the *aerarium* (q.v.) *Saturni*.

The origin of the *fiscus* is obscure. It certainly existed under Claudius, whose powerful freedman Pallas, *a rationibus*, raised it to high importance. That some centre of imperial finance already existed under Augustus is proved by the accounts that he left at his death. Whether the *fiscus* yet existed as a chest, distinct from the provincial *fisci* and the *patrimonium*, is less certain.

The *fiscus* was under the *a rationibus*, usually a freedman down to Hadrian, afterwards a knight. His first assistant was perhaps the *procurator summarum rationum*. Disputes between the *fiscus* and the public were assigned by Claudius to the jurisdiction of his procurators. Nerva appointed a special praetor to try such cases in Rome. Hadrian instituted a new department of *advocati fisci*, to plead in the courts.

The *fiscus* dealt with the main revenues and charges of the emperor in his public capacity. For a survey of its business under Domitian, see Statius, *Silvae* 3. 3. 86 ff. The *fiscus* steadily grew at the expense of the *aerarium Saturni*, but as the emperor virtually controlled both, the distinction was largely illusory. It appears, however, that revenues from imperial provinces originally passed into the *aerarium*.

In strict theory, the *fiscus* was the property of the emperor, as the *manubiae* of the general. But he was under the strongest moral obligation to account for his use of it, and he could only leave it to his successor. There was much room for variation in practice, according to the greater or less degree of strictness with

which the emperor interpreted his obligations. The *fiscus Asiaticus* received the dues of Asia, the *fiscus Iudaicus* the special tribute paid, from Vespasian onward, by Jews.

FISH, SACRED. Fish were held sacred by various Oriental peoples. The Egyptian priests abstained from fish (Hdt. 2. 37) and there were local tabus on particular species. The Syrian reverence for fish early impressed the Greeks (Xen. *An.* 1. 4. 9); the temples of Atargatis (q.v.) regularly contained a pool for them, and a *lex sacra* from Smyrna (*SIG* 997) deals with their care. Atargatis punished with illness eaters of fish (Menand. fr. 544, Kock), and the tabu may have originated in the unwholesomeness of the local species. Her priests, however, ate them daily in a ritual meal (Mnaseas, *FHG* iii. 155), and they were a sacred food also in Thracian and Samothracian mystery cults, perhaps through Oriental influence; Julian (*Or.* 5. 176d) says they were sacrificed in certain mystic rites (and see **VOLCANUS**). The early Christian symbolism of *ἰχθύς* may be in part connected with their sanctity in Syria, but its popularity was enhanced by its equation with the formula *Ἰ(ησοῦς) Χ(ριστός) θ(εοῦ) υ(ἱός) σ(ωτήρ)*, which constituted a convenient confession of faith. See **BRUZO**.

F. Cumont, *PW*, s.v. 'Ichthys'; F. J. Dölger, *Ἰχθύς*, 1910-.

F. R. W.

FLACCUS, VERRIUS, a freedman, the most erudite of the Augustan scholars and teacher of the grandsons of Augustus. His works (now lost) included *Libri rerum memoria dignarum* (freely used by Pliny the Elder), *De obscuris Catonis*, *Libri rerum Etruscarum*, and *De orthographia*. The *Fasti Praenestini* (*CIL* 1²) were also drawn up by him. But he is best known for his lost *Libri de significatu verborum* in which he quoted freely from the earlier Republican authors. His material he arranged in alphabetical order and devoted several books to each letter. From the epitome made by Festus (q.v.) we can gain some idea of the richness of learning contained in this work of Verrius Flaccus, which was a quarry for the scholars of the immediately succeeding generations.

Cf. Teuffel, § 261. 1-3; Schanz-Hosius, §§ 340-1a. J. F. M.

FLACCUS, cognomen of Horace (q.v., Q. Horatius Flaccus).

FLACCUS, see also **AVILLIUS**, **CALPURNIUS**, **FULVIUS**, **SICULUS**, **VALERIUS** (6), (7), (8), (13), (19).

FLAMINES. The word *flamen* appears to mean 'priest' or 'sacrificer', cf. Old Icelandic *blót*, 'sacrificial feast', etc. (Walde, *Lat. etym. Wört.*, s.v.). In Rome the *flamines* were a group of fifteen priests, three *maiores* and twelve *minores*, forming part of the *collegium pontificum*. Each was assigned to the cult of one god (though he might on occasion take part in the worship of some other; e.g. the flamen Quirinalis conducted the ritual of the Robigalia, Ov. *Fasti* 4. 910; Varro, *Ling.* 5. 84, Cicero, *Leg.* 2. 20. The three *maiores* were the flamen Dialis, of Jupiter; Martialis, of Mars; Quirinalis, of Quirinus (Gaius 1. 112). The first of these was obliged to observe an amazingly elaborate system of taboos, all designed to keep his extremely holy person from any pollution or bad magic (list, with authorities, Marquardt-Wissowa, *Staatsverw.*² iii. 328 ff.); it is probable that the observances of the other two were, at least originally, hardly less complicated. It is further highly likely that the Dialis represented an ancient king, see Rose, *Roman Questions of Plutarch*, 111. Of the twelve *minores* we know the following ten: Voltumnalis, Palatualis, Furi-nalis, Floralis, Falacer, Pomonalis (these seem to have

been the last six, Festus, p. 144. 12 ff. Lindsay; all six in Ennius ap. Varr. op. cit. 7. 45); Volcanalis (Varr. op. cit. 5. 84), Cerialis (*CIL* xi. 5028), Carmentalis (Cicero, *Brut.* 56), Portunalis (Festus, p. 238. 9 Lindsay), but the order of precedence of these four is unknown. Their deities were respectively Voltumnus, Pales, Furrina, Flora, Falacer, Pomona, Volcanus, Ceres, Carmentis, and Portunus. H. J. R.

FLAMINIUS (1), TITUS QUINCTIUS (cos. 198 B.C.), the victor of Cynoscephalae, was military tribune under Marcellus (208 B.C.), propraetor *extra ordinem* at Tarentum (205-204), and for his philhellenism and diplomatic address became consul in 198, not yet thirty, to win the support of Greece against Philip V in the Second Macedonian War. After Cynoscephalae (197) he confined Philip in Macedonia, rejected Aetolian claims in Thessaly, and in 196 at the Isthmian Games proclaimed the freedom of Greece; in 195 he forced Nabis to surrender Argos. In 194 he evacuated Greece, and the Greek cities honoured him as deliverer. In 194-193 he upheld against Antiochus' envoys the Roman guardianship of Greek autonomy in Asia Minor, and in 193-192 suppressed Nabis, but failed to check the pro-Syrian policy of Aetolia. After Thermopylae (191) he procured a truce in Greece. Censor in 189 with M. Marcellus, his liberal policy appears in the restoration of the Campanians' census rights. In 183 he demanded the surrender of Hannibal from Prusias. He died in 174; a son was consul in 150 and a grandson consul in 123. Ambitious and idealistic, he was in his philhellenism and policy a rival rather than a protégé of Scipio Africanus, and this, with his diplomacy and generalship, made him the Senate's best instrument in establishing a protectorate over an autonomous Greece.

FLAMINIUS (2), LUCIUS QUINCTIUS (cos. 192 B.C.), curule aedile (201 B.C.), praetor (199), commanded the Roman fleet in Greece in 198 and 195 for his brother T. Flaminius. Consul in 192, he was guilty of oppression in Gaul, for which on moral grounds Cato expelled him from the Senate in 184.

Livy 33. 16 ff.; 34. 26 ff.; 35. 20-2; 39. 42-3. Plutarch, *Flaminius* 18-19. A. H. McD.

FLAMINIUS, GAIUS (cos. I, 223 B.C.), the greatest democratic leader before the Gracchi to challenge the senatorial government. *Tribunus plebis* in 232 B.C., despite bitter senatorial opposition he carried a timely measure to distribute to the poor the *ager Gallicus et Picenus*, recently confiscated from the Senones. A doubtful aristocratic tradition (preserved by Polybius) alleges that this caused the beginning of 'the demoralization of the people' and by annoying the Gauls hastened the Gallic invasion of 225; further, it was alleged that his own father opposed Flaminius. As praetor in 227 he was the first to hold that office in Sicily. Consul I (223), he led the first Roman army across the Padus and defeated the Insubres: accounts which assign the victory to the legions' efficiency in spite of their general's rashness are suspect. He 'triumphed' at the People's wish despite senatorial objection. He was *magister equitum* to his enemy Q. Fabius Maximus (221). As censor (220) he built the Via Flaminia (q.v.) and the circus Flaminius. The reform of the Comitia Centuriata, which Mommsen assigned to his censorship, is perhaps earlier. Alone of the senators, he supported the *Lex*

Claudia (see **CLAUDIUS** 7). His election to a second consulship in 217 was a popular criticism of the Senate's conduct of the Hannibalic war. He guarded the Western Apennines at Arretium; when Hannibal passed, he hastened south (probably to join his colleague Servilius with whom it was alleged he refused to co-operate) but fell into Hannibal's ambush at Lake Trasimene, where his army was destroyed and he himself met a hero's death, a fate which hostile tradition attributed to his disregard of the customary religious ceremonies.

K. Jacobs, *Gaius Flaminius* (1938; written in Dutch). H. H. S.

FLAVIUS (1), GNAEUS, son of a *libertus* of Appius Claudius (q.v. 4) Caceus, was a jurist and author of a dissertation *De usurpationibus*, on interruptions of the *usucapio*. He was Appius' secretary. Pomponius relates that he purloined a manuscript of Appius' containing the *Legis actiones* and published it. This publication, the first on this subject, gave the people knowledge of the Civil Law and of the forms of procedure which had been the monopoly of the pontiffs. For this service Flavius became *tribunus plebis*, senator, and *aedilis curulis* in spite of his humble origin. His formulary was known under the name *Ius civile Flavianum*. In his aedileship (304) he exhibited in the forum the list of court-days on which the *legis actio* was admissible. A. B.

FLAVIUS (2) **FELIX**; his verses, often unclassical in quantities, are preserved with Florentinus' verses in the *Anthologia Latina* (ed. Riese, 254).

FLAVIUS, see also **CLEMENS**, **DOMITIAN**, **FIMBRIA**, **SABINUS**, **TITUS**, **VERGINIUS**, **VESPASIAN**.

FLEVO LACUS, the Zuyder Zee. In Roman times it was a lake (whose name is preserved in Vlieland), with an island of the same name; most of the Frisian Islands were then part of the mainland. The Vecht flowed into Lake Flevo, and its outlet to the sea was a narrow stream, now the Vlie channel. These waterways were used by the Roman fleets in the wars of Drusus, Tiberius, and Germanicus; and Drusus canalized the Vecht for navigation from the Rhine to the sea. The Zuyder Zee retained this configuration substantially until the great inundations of the twelfth and thirteenth centuries. O. B.

FLORA (Ocean *Flusia*: Conway, *Ital. Dial.* nos. 46; 175a; L 24), an Italian goddess of flowering or blossoming plants. The antiquity of her cult in Rome is proved by the existence of a *flamen Floralis* (cf. **FLAMINES**), but her festival is not in the 'calendar of Numa' (see **CALENDARS**), and therefore was movable (*conceptivae*). In 238 B.C., by advice of the Sibylline books, she was given a temple (Pliny, *HN* 18. 286; cf. Platner-Ashby, 209 f.). Its dedication day was 28 April, and games (*ludi Florales*) began to be celebrated then annually in 173 B.C. (Ov. *Fast.* 5. 329 f.). These included farces (*mimi*) of a highly indecent character (Ov. *ibid.* 331 and Frazer ad loc.). Foreign, probably Greek influence accounts for this non-Italian feature (Aphrodite *Ἀφροδίτη*?).

See Wisłowa, *RK* 197.

H. J. R.

FLORENTIA, the modern *Florence*, probably was not an Etruscan foundation. It may have been in existence by the time of the Civil Wars (Florus 2. 8: text doubtful and certainly exaggerated), and possibly received a colony under the *Triumvirs* (*Lib. Colon.* 213). In Tiberius' reign a Florentine mission to Rome asked that the *Clanis* be not diverted into the *Arnus* (Tac. *Ann.* 1. 79). Otherwise Florentia played no recorded part in history until late Imperial times. In the fifth century it was a considerable fortress (Procop. *Goth.* 3. 5. 6); by Lombard times apparently the capital of a duchy.

L. A. Milani, *Museo dell'Archivio* (1874); E. Fucci, *Short History of Florence* (Florence, 1939); G. Mazzoni, *Florentia* (1941). E. T. S.

FLORENTINUS (*Anth. Lat.* (Riese) 376), see **FLAVIUS FELIX**.

FLORIANUS, **MARCUS ANNIUS**, praetorian prefect and half-brother of the Emperor Tacitus, accompanied him to the East in A.D. 276 and defeated the Goths in the north of Asia Minor. On the death of Tacitus at Tyana he seized the Empire 'quasi hereditarium' and was recognized everywhere except in Syria and Egypt, which set up Probus. Probus took the field against him at Tarsus and, by cleverly delaying the campaign, tired out and demoralized Florianus' troops. Florianus was put to death by his own men, after a short 'dream of Empire' lasting some ninety days (c. June 276). H. M.

FLORUS (*Lucius Annaeus F.* in Cod. Palat. 894 and most editions, *Julius F.* in Cod. Bamberg.) is generally held to be identical with F. the poet-friend of Hadrian and with P. Annii F., author of the imperfectly preserved dialogue *Vergilius orator an poeta* (see *infra*). The dialogue states that he was born in Africa and in boyhood took part unsuccessfully in the Capitoline competition under Domitian; he afterwards settled at Tarraco in Spain, but returned to Rome in Hadrian's time. His chief work is entitled *Epitome bellorum omnium annorum DCC.* He states (Introd. § 8) that he is writing 'not much less than 200 years after Caesar Augustus'; if these words mean the beginning of Augustus' career (27 B.C.), '200 years' is a slight exaggeration.

2. **WORKS.** The *Epitome* is an abridgement of Roman history with special reference to the wars waged up to the age of Augustus. Some manuscripts describe it as an epitome of Livy; but it is sometimes at variance with Livy. The author also made use of Sallust, Caesar, and the elder Seneca; and there are reminiscences of Virgil and Lucan. It is planned as a panegyric of the Roman people. Of the two books the first traces the rise of Rome's military power, the second its decline, the line of division being drawn in the Graecian age.

3. Of the dialogue only a fragment of the introduction survives. It was probably written about A.D. 122 (F. Schmidinger, 'Untersuchungen über Florus', *Neue Jahrb. f. Philol.* xx, Supplement 6, pp. 781-816. E. Woelflin (*Arch. für latein. Lexikogr.* vi (1889)) shows that its diction closely resembles that of the *Epitome*.

4. *Poems.* The lines on Hadrian beginning 'Ego nolo Caesar esse', had the honour of a retort from him (S.H.A. *Hadr.* 16. 3). Other fragments are preserved (Riese, *Anth. Lat.* i. 1, nos. 87-9 and 245-52). They are not sufficient to enable judgement to be passed on the author's poetry and hardly justify the theory that the famous *Pervigilium Veneris* is his work (H. O. Müller, *de P. Annio F. poeta et Pervig. Ven.* (1855)).

5. Florus in the *Epitome* shows a certain literary gift, marred, however, by a strong tendency to rhetoric. His brevity often entails obscurity, though he sometimes produces a felicitous epigram. He has irritating habits of inserting exclamatory remarks and repeating favourite words. As an historian he is often inaccurate in both chronology and geography, but the work as a whole achieves a limited success as a rapid sketch of Roman military history. It was a favourite school-book in the seventeenth century.

FOEDUS means a treaty, solemnly enacted, which established friendly association, *pia et aeterna pax*, and alliance between Rome and another State or States for perpetuity. *Foedus* is distinct from *indutiae*, which ended a state of war and were limited in duration up to a century. It might be *aequum* or *iniquum*. The former kind set both parties on equality, and provided for military assistance in defensive wars. The latter marked out Rome as *in foedere superior*, the second party being bound to assist Rome in offensive wars also, and to respect the dignity of Rome, *maiestatem populi Romani comiter conservare*. This attempt to express the spirit of the law in the letter indirectly limited the allies' sovereignty, placing them in the relationship of client to patron (see *socii*). Special conditions were not normally added to the treaty, being out of place in *foedus aequum* and unnecessary in *foedus iniquum*, until the later Republic. Treaties were usually limited to establishing the general alliance, with arrangements for agreed alterations and the usual sanctions. The earliest known *foedus aequum* is the treaty of Spurius Cassius (q.v. 1). *Foedera iniqua* were commonest in Italy and stressed the Roman hegemony (see *socii*). *Fetiales* (q.v.) or consuls usually officiated, but other military commanders also could make treaties, which then needed ratification at Rome. They were published on bronze and kept on the Capitol. Exceptional forms appear in the first two Carthaginian treaties, which are of non-Roman type, and the *foedus Gabinum* which mediated the incorporation of Gabii in Rome (6th c. B.C.).

For bibliography see *socii*.

FOLK-SONGS, GREEK. The Greeks, like other peoples, had their folk-songs, though it is impossible to give dates to them or to construct a history. They may be roughly classified as follows: (1) to gods (*Carm. Pop.* 46-53); (2) ritual songs (*ibid.* 31-2); (3) occupational (*ibid.* 29-31); (4) averting songs (*ibid.* 42); (5) love-songs (*ibid.* 43-4).

Cf. J. M. Edmonds, *Lyra Graeca* (Loeb) iii, pp. 488-549.

C. M. B.

FOLK-SONGS, LATIN. Folk-songs are to be distinguished from liting folk-saws and other folk-lore, as well as from so-called 'popular songs' which have not originated among the people and hence are not natural expressions of the people's spirit. Genuine folk-songs may be classed according to their favourite themes; (a) love-songs; (b) occupational songs; (c) carols; (d) ballads or songs on historical themes (see collections of English and American folk-songs by Cecil Sharp). No doubt there were Latin folk-songs also on these themes, but we can only repeat Cicero's words (*Brutus* 75) 'utinam exstarent illa carmina!' A connexion may be claimed between folk-songs or folk-ditties and the religious *carmina* such as those of the *Salii* and the *arvales* (see *CARMEN*), and also forms such as the *Fescennine* (q.v.) verses, *satura* (q.v.), triumph-songs, *epithalamia* (q.v.) or marriage-songs, *neniae* (q.v.), and those in 'Saturnian' metre (q.v.). The 'ancient lays' sung at banquets by 'modest boys' or by the banqueters themselves in honour of great men of the past, referred to by Varro and Cato, may be embellished versions of folk-songs. The *versus populares* upon prominent men in later days are probably to be classed rather as topical songs. The rhythms (e.g. trochaic tetrameter) of the folk-poetry appear to have survived throughout the period when art-poetry was using Greek metres exclusively, and reappeared at a later date. For occupational songs, see Varro ap. Non. 56; Victorin. *Gramm. Lat.* 6. 122.

A. L. P.

FOLK-TALES. Only one *märchen*, told as such, has come down to us from antiquity, and that in a literary form, Apuleius' story of Cupid and Psyche (*Metam.* 4.

28 ff.; this is Stith Thompson C 421). Tertullian names two more, *adv. Valent.* 3. But numerous folk-tale themes are to be found scattered up and down classical legends, though the chronological question whether the theme or the legend is the older often cannot be decided. Examples are the external soul (Meleager, q.v.); the husband who returns just in time to stop his wife, who supposes him dead, marrying another (Odysseus, q.v.); the unwitting killing by Aëdon (q.v.) and Thémisto (see *ATHAMAS*) of their own children (essentially the story of Tom Thumb and the ogre); Home-Comer's Vow, the tale of the man who, like Jephtha, vows to sacrifice the first thing which meets him on his return, or otherwise to destroy or dispose of it, and is met by his own child. This is told of Idomeneus (q.v. 1). At least one Greek tale, that of Odysseus and Polyphemus (see *CYCLOPES*), is found as far away as Lapland (see Qvigstad, *Lappiske Eventyr og Sagn* ii (1928), 448-9). The vast popularity of Homer makes it no wise incredible that we have here simply Homer's story (source unknown). That several of the longer cycles of story, as the legends of Perseus and of the Argonauts (qq.v.; for the latter, see S. Hartland, *Legend of Perseus*, and Halliday, op. cit. infra (2), pp. 21 ff.), are packed with details found in various folk-tales in and out of Europe is common knowledge.

For one common form of (Oriental?) folk-tale, the beast-fable, Greece has been a great distributing centre, owing to the collections popularly associated with the name of Aesop. From the earlier oral or written versions (see Halliday (1), pp. 101 ff.; (2), pp. 143 ff.) these apologues have spread, first into Latin (Phaedrus, 'Romulus', etc.), thence into modern languages, meanwhile never ceasing to be repeated among the later Greeks themselves. In all cases it is necessary to remember the reciprocal action between literary and popular compositions. Supposing, for example, what is likely in itself, that the beast-fable was originally popular and oral, we find it at very varying levels. It is used by serious authors to point grave morals (Hesiod, *Op.* 202 ff.; Pindar, *Pyth.* 2. 72 ff.; Aeschylus, fr. 139 Nauck). It was a popular form of after-dinner story (Ar. *Vesp.* 1259 f.). It was used as edifying reading for children (Babrius, *praef.*), and for first exercises in composition (Quint. *Inst.* 1. 9. 2). Finally, it became a popular chap-book, and so found its way back into oral or quasi-oral circulation. Thus the simple, popular tale may always be a worn-down form of the elaborate and literary one, not its predecessor. Caution is therefore necessary in tracing connexions such as those suggested above.

W. R. Halliday, *Greek and Roman Folklore*, U.S.A. 1927 ('Halliday (1)'); *Indo-European Folk-Tales and Greek Legend*, Cambridge, 1933 ('Halliday (2)'); Rose, *Handbook of Greek Mythology*, ch. 10, where some further references are given. See also *FABLE*. H. J. R.

FOLLIS, the bag in which coins were collected for large payments; then the coins themselves.

Follis seems to be applied only to coins of bronze or silvered bronze, but not to be restricted to any one denomination. Under Diocletian it may have denoted the common 'Genius Populi Romani' piece. Under Julian six *folles* are the price of a pound of pork. St. Augustine knows the *folles* as a tiny fraction of the *solidus*. In Byzantine times the *folles* was pre-eminently the piece of 40 *nummia*. The *Historia Augusta* is very doubtful authority for the use of the word in the third century A.D.

FOODSTUFFS. Of all the departments of ancient life revealed to us in literature we know more of food than of any subject, and that although the Athenians of the fifth and fourth centuries B.C. were conspicuously frugal in their tastes. The simplest classification of food we owe to the Athenians, for whom there were only two

kinds: (a) bread—*σῖτος*, (b) anything consumed with bread—*σῖλον*. We shall consider in turn cereal foods, fish, vegetables and fruit, game, poultry, and meat.

2. Of cereal foods there were many varieties. Both in Greece and at Rome porridge (*μάζα*, *alica*, *polenta*) was in use before bread. Wheat, barley, and (more rarely) rye and millet were all used for making loaves, but at Athens a wheaten loaf—*ἄρτος*—was a luxury, and normally barley and oats supplied material both for porridge and bread. The grain was ground into flour by hand-mills, and the product was far more nutritious than our machine white. Leaven was occasionally used; the loaves were square and flat; and they were sometimes flavoured with honey or cheese.

3. There were 150 species of fish, most of them edible, known to the Greeks and Romans; at Athens a piece of fish, fresh, dried, or pickled, was so frequently the accompaniment of bread that it is often synonymous with *σῖλον*. The Romans were equally fond of a fish diet, and under the Empire immense sums were paid for the choicer and larger kinds, such as sturgeon and turbot. Lampreys and mullet were often reared on meat in fish-ponds, and oysters fattened in the Luerine Lake were served with a special fish-sauce, *garum*.

4. For ordinary folk vegetables, fruit, and nuts were even more important than fish. Beans, peas, lettuce, carrot, radish, marrows, beet, onion, garlic, are only a few items in the long catalogue given by Theophrastus. In fruit, however, the Greeks had a more restricted choice. Apples, pears, mulberries, figs, and grapes and nuts grew in their own country, and dates were imported from Phoenicia. The Romans had in addition peaches, apricots, and cherries, which they transplanted from the Near East. But of what they had they made full use, and Galen tells us of people who for two months of the year lived well on bread, grapes, and figs.

5. Poultry, game, and eggs played a large part in Roman cookery. Geese, duck, and farmyard fowls were all reared for the table, where they appeared together with pheasants, partridges, quails, and every kind of small wild bird. Hares were a familiar delicacy, and the rich feasted on peacocks, flamingoes, and cranes. But of butchers' meat there was comparatively little, if we except pork in all its forms and an occasional joint of veal. In cooking, condiments and sauces were freely used; mustard, salt, pepper, vinegar, and innumerable herbs and spices, together with the famous silphium from Cyrene which served as many purposes as our ginger.

6. The Greeks and Romans used honey instead of sugar, and olive oil in place of butter; and the goat rather than the cow was their chief milking animal. They lacked potatoes, tomatoes, oranges, bananas; strawberries, raspberries, gooseberries were not cultivated. Of more substantial food beef, mutton, and lamb were seldom eaten. They had no distilled beverages, and no infusion drinks like our tea and coffee; and unlike other ancient peoples they did not brew beer. See also MEALS.

FORDICIDIA (this is the pure Latin form; Sabine *Hordicidia*, cf. Conway, *Ital. Dial.* i. 385): Roman festival of Tellus on 15 April, when a *forda* (cow in calf) was sacrificed to her (Ovid, *Fasti* 4. 630 ff.). See further Frazer, *Fasti of Ovid*, iii. 317; add Pausanias 2. 11. 4 (pregnant ewes sacrificed to the Eumenides). H. J. R.

FORGERIES, LITERARY. I. GREEK. Forgeries differ from other *pseudepigrapha* (works wrongly attributed to authors) in two respects. With a true forgery the attribution must be made by the real author himself, and there must be intention to deceive. On both points we are frequently left in doubt. If Lobon (q.v.) wrote

the *Hymn to Poseidon* attributed to Arion, Lobon is not necessarily responsible for the attribution; and the authors of the later *Theognidea* certainly took no pains to pass off their work as that of Theognis. Again, the *Anacreontea*, though they bear the superscription of Anacreon, and often refer to his darling Bathyllus as living, make no serious claim to be Anacreon's work (cf. 1, and 60 Β τὸν Ἀνακρέοντα μυθοῦ). The poems are only fathered on the old poet by a fanciful pretence, not even consistently maintained. Similarly, we cannot say that the composers of letters attributed to eminent Greek authors or personages (e.g. the famous Epistles of Phalaris) meant in every case to deceive the public (see LETTER). On the other hand, it is certain that from desire for gain, fame, or a *cachet* for philosophical doctrines some deliberate forgeries were perpetrated, e.g. the *Orphica* of the neo-Pythagoreans and much Jewish-Greek literature. Heraclides Ponticus, according to Aristoxenus, wrote tragedies which he attributed to Thespis; and *pseudo-Democritica* (see Diels's *Vorsokratiker*) are numerous. The music to part of Pindar's first *Pythian*, published by Kireher in 1648, is an almost certain example of forgery by a modern scholar. The invention of sources, e.g. by Ptolemaeus Chennus (and SEEDIONYSIUS (13) SCYTOBRACHION), may also be mentioned here.

J. D. D.

II. LATIN. Suetonius (p. 47 Reifferssch.) relates that there had come into his hands certain *elegi* and a prose letter addressed to Maecenas purporting to be by Horace. He rejected them, however, because the elegies were commonplace and the letter even obscure. False, too is the so-called *Sulpiciae satira* (ed. Unger, 1887), a poem of seventy hexameters in dialogue form lamenting the tyranny of Domitian and prophesying his fall. Earlier attributed to the poetess Sulpicia, it is unquestionably a late forgery. For Latin versions of fourth or fifth century A.D. based on Greek sources of some two centuries earlier professing to be by two participants in the Trojan War see DARES and DICTYS. Other late forgeries are the four poems and fragments of Gallus first edited by Manutius in 1590, while an epigram addressed to Augustus begging him not to allow the *Aeneid* to be destroyed is also falsely attributed to some manuscripts to Gallus. In 1510 a work by A. D. Ficcohi, *De magistratibus et sacerdotibus Romanorum*, was published under the name of the historian Fenestella, and the *De progenie Augusti Caesaris* attributed to Valerius Messala first saw the light of day in the fifteenth century. In still later times Guez de Balzac published thirty verses (*Indignatio in poetas Neronianorum temporum*) purporting to come from an ancient manuscript, and though they appeared among his own works as *ficta pro antiquis*, they were attributed by Wernsdorf to the poet Turnus. Active as a forger was C. Barth (1587-1658), who published various Latin poems, among which some were alleged to be by Vestricius Spurinna. Nodot's publication at Paris in 1693 of alleged portions of Petronius was fraudulent.

FORMULA, see LAW AND PROCEDURE, II. 3.

FORNACALIA, a movable festival, celebrated not later than 17 Feb. (Quirinalia), which day was hence called also *stultorum feriae*, because, as Ovid explains (*Fast.* 2. 531-2; from Verrius Flaccus, cf. Festus, pp. 304. 5 ff.; 418. 33 ff.; 419. 5 ff. Lindsay), those who were too stupid to know to what *curia* they belonged kept the festival then instead of on the proper day, proclaimed by the *curio maximus* (Ov. *ibid.* 527-8). It was, then, celebrated by the *curiae*, not the people as a whole; it consisted of ritual either to benefit the ovens, *fornaces*, which parched grain, or to propitiate the doubtful goddess Fornax who presided over them, *ibid.* 525.

See Frazer ad loc.; Willems *RM.* pp. 158, 159.

H. J. R.

FORTIFICATIONS in the Mediterranean area were from the first closely related to physical conditions. 'Praeruptis oppida saxis' are typical of the whole area, and it was the fortified acropolis, the oldest type, which was naturally productive of revetted slopes or terrace-walls, i.e. stone ramparts containing a filling of beaten earth or rubble. In Greece, Tiryns, Mycenae, and Gla (on Lake Copais) afford excellent pre-Hellenic examples in advanced development, exhibiting casements and bastions at Tiryns, gates with enfiling bastions at Mycenae (cf. TROY I), and vantage-courts at Gla. Hittite towns and citadels exhibit improved enfiling, and a combination of rectangular and semicircular towers, as at Zindjirli II (c. 900 B.C.). All these devices were translated bodily to Greek architecture in the fifth century B.C., when masonry town-walls on a large scale began to develop, and the tactical device of the Long Walls (Megara c. 460, Athens 457, Argos 417) converted the city-state into the city-fortress. Theory was formulated in the fourth century by Philo Byzantinus, and put into practice at such sites as Messene (371) and Ephesus. By this time improved methods of attack were demanding new defensive developments, also long anticipated in Asia Minor. The movable siege-tower (ἐλέπoλις) called for wide ditches or moats to prevent its approach and for the catapult, invented in 399 (Diod. Sic. 14. 42), to smash it. Syracuse and Selinus (397-383; cf. *Antiquity* vi. 261-75) provide remarkable instances of modifications in their fortifications designed for defence of this kind. Siege-artillery came later, but its development belied its promise, and Greek military architecture stood still. See ARTILLERY; SIEGE-CRAFT, GREEK.

The Italian tradition had an early development partly akin to that of Greece, but was less dependent upon the acropolis, being early modified by dissociation of the fortified bank, or *agger*, from hill-sides, as at Ardea or at Rome itself (*muris terreus*, Varro, *Ling.* 5. 48), and the revetment of such earth-banks in stone, creating earth-filled walls. The progressive development of such a wall has been traced at Pompeii (*Mon. Ant.* xxxiii (1930), pt. 2), beginning in 520-450 B.C.; it was enlarged in Italian style, as a revetted *agger* with rearward slope, in the fourth and third centuries B.C., and only hellenized, by the addition of towers, in 120-89 B.C. Meanwhile Rome had been experimenting with a masonry wall of partly Hellenistic type (see WALL OF SERVIUS), such as was adopted in her colonies of Ostia and Minturnae (qq.v.). But Hellenistic practice was not introduced wholesale until Sulla's day, as at Tarracina and Ostia II, though artillery casemates, as at Perugia and Rome, had been introduced somewhat before this. Vitruvius presents the intermediate stage (*De Arch.* 1. 5) between Sullan work and the eclecticism of the Augustan age. Another strain in Roman military architecture had already been introduced by military field-work, developed on a scale hitherto quite unknown, and predominant in all frontier provinces until the latter half of the first century A.D. There are notable works in earth and timber at Xanten, Haltern, Oberaden, and Altbirg in lower Germany, at Margidunum and Fendoch in Britain. This tradition of military building, combining simplicity and strength, was not ousted until the Flavian period in legionary fortresses, and under Trajan on the frontiers. Thenceforward masonry building takes first place, though never completely deserting the earthwork tradition. The fortified frontier, in which a wall, rampart, or palisade, patrolled from watch-towers, connected a chain of forts, is also a Roman invention (see LINES). The town-walls of the later Roman Empire and occasional forts, like Altrip, culminating in the double walls and artillery defences of Constantinople, combine the best Greek theory with Roman resource, and remained unsurpassed until the invention of gunpowder created entirely new defensive problems.

FORTUNA or **FORS** (Ennius ap. Cic. *Off.* 1. 38), in full Fors Fortuna (Terence, *Phorm.* 841), an Italian goddess identified in classical times with Tyche (q.v.). There is, however, good evidence that she was in the native cult not a deity of chance or luck, but rather the 'bringer', as her name signifies (*ferre*), of fertility or increase. She is praised by gardeners (Columella 10. 316), and her ancient temple in the Forum Boarium at Rome (see Platner-Ashby, p. 214; *ibid.* 212 ff., for her other Roman shrines) had the same dedication-day as that of Mater Matuta (see MATUTA), viz. 11 June (Ov. *Fasti* 6. 569). These facts suggest a deity potent for the fruits of the earth and the life of women, cf. her titles Muliebris (Festus, p. 282. 21 Lindsay; this shrine was 4 miles from Rome, and only women living in a first marriage might approach the goddess) and Virgo (Varro ap. Non. p. 189. 19). However, her titles are so numerous (see especially Plutarch, *Quaest. Rom.* 74, and Rose ad loc.) that too much should not be made of these.

It is regularly said that her cult was introduced into Rome by Servius Tullius (Plutarch, *ibid.*, and many other passages), and this is true in the sense that she has neither a *flamen* nor a feast-day belonging to the oldest list. How old her cult is in other parts of Italy is unknown, but certainly older than at Rome, whither it came from some place outside. Of the other Italian centres of her worship, one of the most interesting is Praeneste, where a number of archaic inscriptions throw light on the cult. One is a dedication 'nationu cratia', 'for offspring' (*CIL* xiv. 2863), which furthermore calls the goddess 'Diuou filea primocenia', i.e. 'Iouis filia primigenia', the one instance in Italian cult which makes one deity the child of another, unless, as suggested in Rose, *Roman Questions of Plutarch*, p. 83 f., a very old error underlies the title. Equally interesting is the fact that she had an oracular shrine there. The method of consultation was for a boy to draw at random one of a number of billets of oak-wood (*sortes*), inscribed with sentences (one was 'Mars shakes his dart', at a similar oracle at Falerii, Livy 22. 1. 11) which the consultant might apply to his own case (Cicero, *Div.* 2. 85-6, and Pease ad loc.). A temple was built to the Praenestine goddess on the Quirinal (Livy 29. 36. 8; 34. 53. 5). This was in 194 B.C. At Antium a plurality of Fortunae was worshipped (Macrob. *Sat.* 1. 23. 13), and these also gave oracles, apparently by movements of the statues (Macrob. *ibid.*). Cf. NORTIA.

Wisowa, *RK* 256 ff.; Drexler in Roscher's *Lexikon* i. 1503 ff. (exhaustive account of her titles, identifications, representations in art, etc.). H. J. R.

FORTUNATAE INSULAE ('Blessed Islands') were originally, like the 'Gardens of the Hesperides', the mythical winterless home of the happy dead, far west on Ocean shores or islands (Homer, *Od.* 4. 563 ff.; Hesiod, *Op.* 171; Pindar, *Ol.* 2. 68 ff.). They were later identified with Madeira (Diod. 5. 19-20; Plut. *Sert.* 8), or more commonly with the Canaries, after their discovery (probably by the Carthaginians). The Canaries were properly explored by King Juba II (c. 25 B.C.-c. A.D. 23), who described apparently six out of the seven. From the meridian line of this group Ptolemy (*Geog. passim*) established his longitudes eastwards.

FORTUNATIANUS, see ATILIUS (4).

FORTUNATUS, see VENANTIUS.

FORUM AUGUSTUM or **AUGUSTI**, dedicated in 2 B.C., is the vast precinct (125 metres by 90 metres) of Mars Ultor in Rome, vowed by Octavian at Philippi. Its long axis is based upon the equestrian statue of the avenged Dictator in the *Forum Caesaris*, whence it opened eastwards. The octostyle peripteral temple, in Corinthian style, stood upon a lofty bronze-plated podium, and its deep porch gave access to a sanctuary with aisles and apsidal nave which housed colossal statues of Mars and Venus. Caesar's sword was kept there. The apse was set against the high precinct wall of fire-resisting peperino, here irregular in plan owing to rising ground and the difficulties of buying out private property in the populous Subura. The temple lies between broad walks, leading from the Subura by flights of steps and spanned by triumphal arches, dedicated to Drusus and Germanicus in A.D. 19. Beyond the walks lay two-storied façades of lateral galleries, the northern one containing a colossal statue, probably of Divus Iulius. Out of either gallery opened an *exedra*. All these buildings were embellished with niches containing statues of eulogized *triumphatores*. In this *Forum* youths were admitted to manly estate, here provincial governors ceremonially departed or returned. Behind the northern *exedra* a group of apartments, centred upon an *atrium*, may have housed the *Salii*, priests of Mars. I. A. R.

FORUM BOARIUM, see *CAMPUS MARTIUS*; COMMERCE, para. 4; *HERCULES*.

FORUM CAESARIS or **IULIUM**, dedicated by Julius Caesar in 46 B.C., on land bought about eight years earlier for over 60 million sesterces (Cic. *Att.* 4. 16. 8). The area (115 metres long by 30 metres wide), was surrounded by a colonnade, behind which lay *tabernae* on east and west; an irregular plot of land to north was systematized by an *exedra*, while on the south and in the south-west corner lay Caesar's new *curia* (q.v.) and its appendages. In the centre of the *Forum* lay the peripteral octostyle temple of Venus Genetrix, mythical foundress of the Julian gens. In front of the temple stood an equestrian statue of the Dictator. While the *tabernae* are Caesar's work, the existing entablature of the temple is Domitianic. I. A. R.

FORUM HOLITORIUM, see *CAMPUS MARTIUS*.

FORUM IULII, modern *Fréjus*, presumably founded by Julius Caesar as a market town (*forum*). A colony was settled here probably by Augustus, who dispatched here the warships captured at Actium, so that *Forum Iulii* became a naval base as well (*Colonia Octavianorum Paensis Classica*). The fleet was still here in A.D. 69, but the harbour, now quite dry, was perhaps already silting up. Very extensive remains of the port and colony survive. *Forum Iulii* was the birthplace of C. Julius Agricola and probably of C. Cornelius Gallus.

A. Donnadieu, *Fréjus* (1927); Grenier, *Manuel* i. 298-314; *Carte arch. de la Gaule rom.* iii. 1-19. C. E. S.

FORUM NERVAE or **TRANSITORIUM**, 120 metres long by 40 metres wide, was built in Rome by Domitian and dedicated by Nerva in A.D. 97. It converted the Argiletum, which approached the *Forum Romanum* between *Forum Augustum* and *Forum Pacis*, into a monumental avenue: hence the name *Forum Transitorium*. At its east end, against the south *exedra* of *Forum Augustum*, stood a temple of Minerva, Domitian's patron goddess; relief's illustrating her cult and legends decorated the frieze and attic of the peperino precinct wall, which is divided into fifteen shallow bays by detached marble columns. Alexander Severus placed here colossal statues of the *Diæ*. At the east end traffic from the Subura

entered on the south side of the temple only; at the west end, towards the *Forum Romanum*, were twin monumental gates. I. A. R.

FORUM PACIS or **VESPASIANI** was the precinct of the Temple of Peace at Rome, dedicated by Vespasian in A.D. 75. The enclosure, bounded by a fire-wall of peperino lined with marble, was 145 metres long and about 100 metres broad. It contained, in addition to the temple, the *bibliotheca Pacis*, housing treasures from Jerusalem, and, at its south-east end, the famous Marble Plan of Rome. After the fire of Commodus it was restored by Severus, and the Marble Plan shows traces of a Diocletianic restoration. I. A. R.

FORUM ROMANUM, the chief public square of Rome, surrounded by monumental buildings, occupied a swampy trough between the Palatine, Oppian, Quirinal, and Capitol. The edges of the marsh, of which Laeus Curtius was a survival, were covered with cemeteries of prehistoric settlements, until the area was drained in the sixth century B.C. by the Cloaca Maxima (q.v.). Memorials of this early state are the Regia, Aedes Vestae, Lacus Iuturnae, the *tabernae*, and *comitium* (q.v.). The earliest dated monuments are the temples of Saturn (497 B.C.: Livy 2. 21), Castor (484 B.C.: Livy 2. 20, 42), and Concordia (336 B.C.: Plut. *Cam.* 42). The *rostra* (q.v.) were decorated by Maenius (338 B.C.), whose civic sense gave balconies (*maeniana*) to the *tabernae veteres* and *argentariae novae*, the latter associated with the shrine of Venus Cloacina, and decorated in 310 B.C. with Samnite *clipei*. Butchers and fishmongers were relegated to the *macellum* and *forum piscarium*. *Basilicae* were introduced in 184 B.C. by Cato (Livy 39. 44), and of this stage in the *Forum's* development Plautus (*Curc.* 468-81) gives a raucy sketch. Cato's work was soon imitated by the *basilica Aemilia* (179 B.C.) behind the *tabernae novae*, and *basilica Sempronia* (170 B.C.) screened by the *tabernae veteres*.

2. The growing official importance of the *Forum* is emphasized by the transfer thither of the *comitia tributa* in 145 B.C., with the consequent change in direction of the *rostra*. In 121 Opimius restored the temple of Concord, and built a new adjacent *basilica*, while the first triumphal arch, to Fabius Maximus Allobrogicus (*CIL* vi. 1303-4), spanned the Sacra Via. The temple of Castor was rebuilt in 117 (Cic. *Scaur.* 46). Much of the present setting, however, is due to Sulla (*JRS* xii. 1 ff.), who planned the erection of the *Tabularium* (q.v.), new *rostra*, and a new *basilica Aemilia*, paving much of the area and altering many minor monuments to suit his new plan.

3. Caesar, working through Aemilius Paulus (Cic. *Att.* 4. 16. 14), rebuilt the *basilica Aemilia* and planned a new *basilica Iulia*, to replace the old *basilica Sempronia*, which like the *curia* (q.v.) was finished by Augustus. His repaving of the *Forum* is marked by the series of galleries (*cuniculi*) below it. After Caesar's assassination a column was erected to mark the site of his pyre and later (29 B.C.) replaced by the *aedes divi Iuli*. Caesar's *rostra* (q.v.) were also rebuilt by Augustus, who received an arch (19 B.C.), while his *viri triumphales* restored the Regia (36 B.C.), the *basilica Aemilia* (14 B.C.), and the temples of Saturn (42 B.C.), Castor (A.D. 6), and Concord (A.D. 10). Minor Augustan monuments were the *porticus Iulia*, the *milliarium aureum*, the repair of *fori Iuturnae*. Under Tiberius came an *arcus Tiberii* (A.D. 16), the repair of *basilica Aemilia*, the *templum divi Augusti*, and the *schola Nautica* (*CIL* vi. 36692).

4. The Flavians made their impression on the *Forum*. The temple of Vespasian (*ibid.* 938; 1019) was built in 81, and Domitian also restored the *curia* (q.v.), the temple of Castor and of *divus Augustus*. His equestrian statue occupied the centre of the open space in 91.

5. Later monuments were the Trajanic sculptures from the *rostra*, commemorating *alimenta* for Italy and taxation-reliefs for the provinces, the *templum divae Faustinae* (A.D. 141: *ibid.* 1005), the *arcus Severi* (A.D. 203: *ibid.* 1003), the Diocletianic columns in front of *basilica Iulia* (*Röm. Mitt.* 1938), the columns for the *decennalia* and *vicennalia* (*CIL* vi. 1203; 1204), the *templum divi Romuli* (A.D. 307), the *basilica* of Maxentius, completed by Constantine, the *equus Constantini* (*ibid.* 1141), the *statio aquarum* at *fons Iuturnae* (*ibid.* 36951). Last of all come the monuments to Stilicho (*ibid.* 1187), the *rostra Vandalica* (see *ROSTRA*), and the column of Phocas (*ibid.* 1200).

C. Hülsen, *The Roman Forum* (tr. Carter, ed. 2, 1909); G. Lugli, *Roma antica: il centro monumentale* (1946), 55 ff.; P. Marconi, *Il foro romano* (1935); T. Ashby, *Topographical Dictionary of Ancient Rome* (1929). I. A. R.

FORUM TRAIANI or ULPIMUM. Of all *fora* in Rome this huge colonnaded square, of which the fourth side is occupied by the *Basilica Ulpia*, most resembles provincial *fora*, though on the vaster scale paid for by Dacian spoils. The *Forum*, apparently begun by Domitian, was completed for Trajan by the architect Apollodorus of Damascus in A.D. 114. It lies between the Capitol and Quirinal, impinging upon the slopes of both by immense *exedrae*. It has a single portico to the south, where its main entrance, adorned by a triumphal arch in A.D. 116, faced the *Forum Augustum*; the lateral porticoes were double. The *basilica*, with broad nave, double aisles, and two very large apsidal *tribunalia*, occupied the north side of the *Forum*. Behind it lay Greek and Latin libraries, flanking a colonnaded court, modified to contain Trajan's Column, 38 metres high. The column was decorated with spiral reliefs illustrating the Dacian Wars and was at first crowned by an eagle. Later Trajan's statue surmounted it, and it contained his and Plotina's ashes. The inscription on the column asserts that its purpose was to show the height of the cutting required for the *Forum*: this refers to the scarping of the Quirinal, where the elaborate *exedra*, separated from the *Forum* by fire-wall and street, screens a terraced rock-face ingeniously adapted to streets and staircases and crowned by an interesting market-hall. The libraries and column originally marked the end of the group of buildings, but Hadrian added the *templum Divi Traiani* beyond them.

I. A. R.

FORUM VESPASIANI, see *FORUM PACIS*.

FOSSAE MARIANAE, see *CANALS*.

FOUR HUNDRED, THE, were a council set up at Athens in 411 B.C., after the failure of the *probouloi* (q.v.) to retrieve the situation after the disaster in Sicily (see *PELOPONNESIAN WAR*). Many saw the need for a change in the constitution to secure greater efficiency, and the oligarchs realized their chance of a radical change. Alcibiades (q.v.) offered to win Persia over to alliance with Athens, on condition that an oligarchy be established and he himself return. Both moderates and oligarchs prepared the way, the latter by murder of prominent democrats, the former by urging the need for economy and for restricting the franchise to some 5,000 'able in their persons and their wealth to aid the State', a vague phrase that in practice meant the exclusion of all *thetes* and many *zeugitai* (qq.v.) from government. The negotiations with Alcibiades broke down, and the fleet, then at Samos, manned largely by *thetes*, stood firm for democracy; but the Ecclesia at Athens was finally persuaded or terrorized into electing five men who would (indirectly) select 400 to act as a Boule and into ceding their own powers to the 5,000 (May 411). Under the influence of its extremist members the 400 dispensed with the 5,000; but they failed to win over the

fleet at Samos, and when the Peloponnesians attacked Euboea, the squadron they hastily sent in its defence was defeated with disgrace. By this time, too, many of their leaders were intriguing with Sparta to surrender. Theramenes (q.v.), who had been a prominent revolutionary in the spring, now led the moderates, and the 400 were overthrown (Sept. 411). The 5,000 were now instituted; but after the victory at Cyzicus (410) the full democracy was restored. See also *ANTIPHON*, *PEISANDER* (2), *HETAIRIAI*.

Thuc. bk. 8 (a record of the actual course of events); Aristotle, *Ath. Pol.* chs. 29-33 (supported by documents, which, however, express the political ideas of the reformers rather than the realities of the revolution). A. W. G.

FRANKS, a name ('freemen') assumed in the third century by a coalition of German tribes on the middle and lower Rhine. They are prominent in attacks on Gaul and Spain between A.D. 253 and 276. A violent incursion in 355 was subsequently defeated by Julian, who granted the Salian Franks a large area for settlement (Toxandria). Frankish relations with the empire were fairly good after this, and Franks (e.g. Count Arbogastes) rose to high positions in the empire. C. 425, however, the Salians under Chlodio broke out from Toxandria, and the Franks of the middle Rhine crossed into Gaul. Both were checked by Aetius, but succeeded after his death in extending their power southward and westward. With the defeat of Syagrius in 486 or 487 by the Salian Clovis at Soissons, the last remains of Roman power in Gaul disappeared, and in the ensuing century the Merovingian house of the Salian Franks made itself supreme in the whole area of modern France (*Francia*).

FRATRES ARVALES, an ancient priestly college in Rome, mentioned under the Republic only by Varro, *Ling.* 5. 85, and restored by Augustus before 21 B.C. We owe our detailed knowledge of this brotherhood to the survival of substantial remains of their records (*Acta Fratrum Arvalium*) in inscriptions, some found in various places in Rome, but most on the site of the sacred grove of the brethren at the fifth milestone on the *Via Campana* outside the *Porta Portuensis* (now the settlement *La Magliana* on the Rome-Pisa railway, near the station). The first in a long series of discoveries was made there in 1570; systematic excavations carried out in the years 1867-71 almost doubled the number of fragments.

The college consisted of twelve members chosen from the most distinguished senatorial families by co-optation; the reigning emperor was always a member. The president of the college (*magister*) and his assistant (*flamen*) were elected annually. The most important ceremony of the brotherhood took place in May in honour of the goddess *Dea Dia* to whom the grove was dedicated. The rites of this agricultural cult belong to an early stage of Roman religion. The Acts of the year A.D. 218 have preserved the famous song of the Arval Brethren, the *Carmen Arvale* (q.v.), which originated in the fifth century B.C., and traces of Greek influence have been seen in its construction and form.

While the brotherhood's worship was directed to *Dea Dia* and other traditional deities, *divus Augustus* was added after his consecration, and one of the explicit intentions of that worship was the well-being of the imperial house. Numerous events in the history of that house received commemoration, and these commemorations, being dated, are a very important source for the chronology of the Empire. The preserved records begin in 21 B.C. and end in A.D. 241 (*ILS* 9522), but the cult still existed in 304 (*Not. Scav.* 1919, pp. 105 f.). See also *AMBARVALIA*.

For the history of Latin script in Rome the *Acta Fratrum Arvalium* are of unique significance.

Fundamental editions: W. Henzen, *Acta Fratrum Arvalium* (1874); *CIL* vi. 2023-119, 32338-98, 37164 f. New fragments: *Not. Scav.* 1914, 464-78; 1919, 100-6; 1921, 49-51; *Bull. Com. Arch.* lv (1927/8), 275-80. Selections: H. Dessau, *ILS* 229-30, 241, 451, 5026-49, 9522; G. McN. Rushforth, *Latin Hist. Inscript.* (1930), pp. xvi, 78, n. 66. For the *Carmen Arvale* see now Ed. Norden, *Aus altrömischen Priesterbüchern*, *Acta Reg. Soc. Hum. Litt. Lund.* xxix (1939), 109-280. Generally cf. A. D. Nock, *CAH* x (1932), 475. A new edition of the *Acta*, which will contain photographs and an English translation, is being prepared by H. Bloch. H. B.

FREE WILL AND DETERMINISM, see FATE.

FREEDMEN. In Greece freedmen (*ἀπελευθεροί* or *ἐξελυθεροί*) were less numerous and influential than at Rome. A slave could buy his freedom, though the master was not obliged to accept the ransom offered; sometimes masters gave gratuitous freedom. Manumission was done at a temple and before witnesses, and many manumission records survive (*IG* ii². 1553-78; 340-320 B.C.). Freedmen ranked among metics (q.v.). They might be bound by contract, embodied in their manumission deed, to give services for specified periods, without pay or for a percentage of the wages. Most freedmen remained in humble positions as shopkeepers, labourers, craftsmen, carriers; more rarely as land-workers. Some, however, attained to position and wealth (e.g. the banker Pasion (q.v.) or Myljas who managed the armoury of Demosthenes). Numerically freedmen were few compared with slaves: the State was not interested in manumission, for slave labour was needed and the Greeks believed that barbarians were by nature slaves. The Greeks did not develop any theory or practice of progress from slavery to citizenship and office, as the Romans did.

2. In Rome the freedman (*libertus*, implying citizenship, or *libertinus*, a general word including Latin freedmen) owed deference and service to his manumitter as patron. He could not bring an action unless with a magistrate's leave; if he died intestate or without heir, his property reverted to his patron. He was not eligible for certain positions (e.g. magistracy in Rome or the *municipia*, or the higher orders, or the army), but his son born after manumission was *ingenuus* and a full citizen.

3. In the Republic there was no limit to manumission, and large numbers of unsuitable slaves were turned into citizens. The enrolment of freedmen in the tribes became an important political issue, since on this depended their political influence (see the laws of Aemilius Scaurus (115 B.C.), Sulpicius (88), and Sulla). Following the liberal attitude of his day Caesar proposed to place freedmen on a level with *ingenui* in the *municipia*. Augustus, however, realized that unrestricted manumission was dangerous, and his social legislation was designed to allow only the best elements to attain full freedom (see LATIN IUSTIANI).

4. For many freedmen freedom must have differed little from the best form of slavery. They carried on their previous work or gained slightly more responsible positions; they were generally artisans, traders, shopkeepers, copyists, bailiffs, secretaries, teachers. Most lived humbly, a few won fortunes and influence, gaining often a reputation for ostentation and vulgarity (cf. Juvenal and Petronius *passim*). Tacitus (*Ann.* 13. 26, 27) records a proposal to give patrons a right to revoke freedom, to such lengths had the insolence of freedmen gone. While on the whole the literature presents the worst aspects of the freedmen, the inscriptions show that they were devoted benefactors of the townships, spending money on public works and holding office as *sevir Augustalis*. (In this connexion, see Pliny, *Ep.* 7. 32.)

5. When Augustus turned his household into a State

department, his freedmen became officials. Under his successors freedmen obtained secretaryships (named, e.g. *ab epistulis*, *a rationibus*, *a libellis*) which carried much political power and gave possibilities of great wealth (see PALLAS (3), NARCISUS (2), NYMPHIDIUS). There were also thousands more in the service of the central government or the *municipia*. Some emperors, notably Claudius, relied too much on freedmen. See also MANUMISSION, SLAVES, SLAVERY (LAW OF).

Barrow, *Slavery in the Roman Empire* (1928) (chs. 7 and 8 for social and legal aspects); S. Dill, *Roman Society from Nero to Marcus Aurelius* (1905), 100-37, 196-286. R. H. B.

FRIGIDARIUM, see BATHS.

FRISII, a German tribe on the Zuyder Zee and the coast from Vecht to Ems. They allied with Rome in 12 B.C., and their territory was used as a base in certain of the German campaigns. They paid taxes of ox-hides, but in A.D. 28 they revolted against oppressive tax-gatherers. Corbulo defeated them in 47; in 70 they joined Civilis. Their subsequent status is not clear, but *cunei Frisiorum* served in Britain in the third century (*ILS* 2635; 4761). Throughout the period they carried on a lively trade with the neighbouring Roman provinces, as numerous Roman objects in the Frisian 'terpen' show. In 294-5 Constantius repelled a Frisian incursion. Though driven from some of their lands by the Franks, they maintained themselves on their coasts and later on occupied land east of the Ems vacated by the Saxons.

L. Schmidt, *Geschichte der deutschen Stämme. Die Westgermanen* (1938), 71 ff. O. B.

FRONTINUS, SEXTUS JULIUS (c. A.D. 30-104), was *praetor urbanus* in 70 and *consul suffectus* in 73; after his consulate he was appointed governor of Britain (probably 74-8), where he subdued the Silures (q.v.). He was probably the founder of the legionary camp at Isca (q.v.).

Frontinus' writings are essentially practical, dealing with professional subjects in a straightforward style admirably suited to his purpose. Of his two-volume work on land-surveying, published under Domitian, only excerpts survive. A theoretical treatise on Greek and Roman military science (*De re militari*), used by Vegetius (1. 8; 2. 3), has perished; but the *Strategemata*, also of Domitian's reign, a more general manual of historical examples illustrating Greek and Roman strategy for the use of officers (bk. 1, *praef.*) survives in four books. The first three are closely related (stratagems before, during, and after battle; during sieges), but bk. 4, where critics detect differences of style and structure, collects instances more ethical in character (Discipline, Justice, etc.) and has been attributed to a later 'Pseudo-Frontinus'. Its authenticity remains doubtful.

Appointed *curator aquarum* by Nerva (A.D. 97), Frontinus began for his own and his successors' guidance a two-volume account of the water-supply of Rome (*De aquis urbis Romae*), completed under Trajan. This describes the aqueducts and their history, with complete technical details as to quantity and distribution of supply, and examines the regulations governing the system and its public and private use. The sources include personal inquiry, engineers' reports, State documents and plans, and senatorial decrees, as well as previous technical writers.

C. E. S. and G. C. W.

FRONTO, MARCUS CORNELIUS (c. A.D. 100–c. 166), born at Cirta, Numidia, became the foremost Roman orator of his day. After passing through the *cursus honorum* (CIL viii. 5350) he was *consul suffectus* in 143. Some years earlier he had been appointed tutor in Latin rhetoric to the future emperors M. Aurelius and L. Verus, and he continued in their service till his death in 166 or soon after.

In the pages of Aulus Gellius F. makes several appearances as the centre of a philological coterie. Later writers speak highly of his oratory, mentioning him in the same breath with Cato, Cicero, and Quintilian; the author (Eumenius?) of the *Panegyricus Constantio dictus* (14) even calls him 'Romanae eloquentiae non secundum sed alterum decus'. Except for a doubtfully ascribed treatise *De Differentiis Vocabulorum* there was no basis for testing these judgements till early in the nineteenth century, when palimpsests at Milan and Rome were found to contain the greater portion of his correspondence with M. Aurelius and others. Its publication so disappointed the expectations of historians that F. became the victim of much intemperate criticism. The correspondence has indeed little bearing on history, though it does something to rehabilitate the characters of Verus and of the elder and younger Faustina, and clearly pictures the *bourgeois* home life of the Antonines. It is, however, of considerable interest as a personal record, as a literary by-product, and as a document for the study of rhetoric and language. The mutual affection of Fronto and M. Aurelius is unquestionably sincere, and is the more remarkable since the author of the *Meditations* so obviously preferred philosophy to rhetoric and Greek to Latin. They write to each other as close friends, with just that touch of self-consciousness which is inevitable between master and pupil, but with no thought of having to run the gauntlet of posterity. Much of their correspondence is the merest small-talk, but it is also largely concerned with the study of rhetoric, and F.'s views on this subject are amply documented, though it remains impossible to estimate his achievement in oratory either from his precepts or from the few rhetorical exercises which survive with the correspondence. As a teacher F. employed the traditional rhetorician's technique, and reposed an excessive faith in similes. His favourite prose reading consisted of Cato, C. Gracchus, Sallust, and Cicero's letters; Seneca was his abomination. He deprecated the purism which would confine literary Latin to the vocabulary of Cicero's orations, and by drawing partly on early poets and partly on the *sermo cotidianus* he devised the *elocutio novella*. This euphuistic attempt to revitalize a decaying language is best illustrated in his own writings and those of his fellow-countryman Apuleius, but left its mark on most of the Latin prose written after his time.

Text: S. A. Naber (Leipzig, 1867). With translation: C. R. Haines (Loeb, 1919–20). Critical essays, text and translation of selected letters, and full bibliography to date: M. D. Brock, *Studies in Fronto and his Age* (1911). R. G. C. L.

FRONTONIANI (Sid. Apoll. *Ep.* i. 1. 2), followers of Fronto (q.v.) in his archaizing theories of a style, *elocutio novella* (q.v.), calculated to displace both Silver Age mannerisms and Quintilian's veneration for Cicero by a return to the old-fashioned and largely discarded language of Ennius, Cato, and the Gracchi as models. See ARCHAISM.

FRONTONIANUS, see PALMA.

FUCINUS LACUS, a large lake at the centre of Italy. It lacked a visible outlet, but legend stated that the river Pitonius from the Paeligni country traversed it without their waters mingling, the Pitonius reappearing near Sublaqueum to supply the Aqua Marcia (Pliny, *HN* 2. 224; 31. 41; Lycoph. *Alex.* 1275). The lake sometimes overflowed (Strabo 5. 240: exaggerated). Claudius, employing 30,000 men for 11 years, executed Caesar's plan to drain the lake: an *emissarium* was excavated 3½ miles through a mountain ridge to carry the lake waters to the Liris (Suet. *Iul.* 44; *Claud.* 20 f.; 32). But Claudius' efforts were not entirely successful. Even repairs to his *emissarium* by Trajan and Hadrian proved vain (Dio Cass. 60. 11. 33; Dessau *ILS* 302; S.H.A. *Hadr.* 22). Drainage attempts recommenced in A.D. 1240, but were unsuccessful until the nineteenth century, when practically the whole lake-bed was reclaimed.

E. Agostinoni, *Il Fucino* (1908).

E. T. S.

FUFIVS CALENUS, QUINTUS, who, as praetor, had supported Caesar in 59 B.C., was one of his lieutenants in the Civil War. On Caesar's return to Rome in July 47, he was elected consul, with Vatinius, for the remainder of the year. After Caesar's death he led the senatorial opposition to Cicero and early in 43 proposed that a conciliatory embassy be sent to Antony. On the formation of the Second Triumvirate, Calenus was given a military command in Italy; and when the triumvirs divided the Empire, he was left in Gaul, as Antony's representative, with eleven legions. He died not later than 40 (Dio Cassius 48. 20).

J. M. C.

FULGENTIUS, FABIUS PLACIADAE, a native of the province Africa, wrote probably about the end of the fifth century A.D. a number of works, of which four survive: *Mitologiarum libri tres*, *Expositio Vergilianae continentiae secundum philosophos morales*, *De Aetatibus mundi et hominis*, and *Expositio sermonum antiquorum*. The first is a dialogue between the Muse Calliope and the author, professing to discover the true sense of various old myths. The conclusions are sometimes based on fancy etymologies and seem to be derived mainly from scholia; the work is in general careless. In the second the Virgil of the *Aeneid* is alone regarded, the Muses and Virgil himself being introduced in dialogue. The work is a rather silly allegory. The third is based principally on Bible history, but that of the world in general is covered in fourteen books and twenty-three periods: the whole production is worthy of the others. The fourth is a study of a number of rare Latin words, illustrated by references to authors who used them, but here also carelessness rules. It is fairly widely held that this Fulgentius is to be identified with the bishop of Ruspe, from whom various theological works of considerable importance have come down to us. See also MYTHOGRAPHERS (ad fin.).

Ed. R. Helm (Teubner, 1898); Christian works: Migne *PL* lxx; O. Fribel, *Fulgentius der Mythograph u. Bischof* (1911), on the language. A. S.

FULLING. Both in Greece and Rome, the fuller—*κναφεύς*, *fullo*—played the part of our laundryman. His business was to collect the soiled woollen garments which were the common wear, clean them, raise the surface with a carding comb, and finally dress them with fuller's earth. The ancients had no soap, and the cleaning process was sometimes performed by using various alkalis—*πίτρον*, *kovia*—but more often by urine. The garments were trodden under foot in a bath of this liquid, and on removal were purified with sulphur. F. A. W.

FULVIA, the daughter of M. Fulvius Bambalio and wife of (1) Clodius, (2) Curio, and (3) Antony (45 or earlier). She played an active part in the political campaign

against Octavian which resulted in the Perusine War. After the fall of Perugia she escaped to Greece, where she died in the same year (40 B.C.). Fulvia was an ambitious woman of strong character, a precursor of the imperial women of the succeeding epoch. Among her five children were Antyllus and Iullus Antonius (q.v. 7 and 8).

Cicero, *Letters and Philippics*; Plutarch, *Antony*; Appian, *BCiv.* bks. 3-5; Dio Cassius, bks. 45-8. Drumann-Groche, *Grch. Roms.* II. 310-13. G. W. R.

FULVIUS (1) FLACCUS, QUINTUS, as consul I (237 B.C.) fought against the Gauls in north Italy; censor (231); consul II (224) he temporarily subdued the Boii; *praetor urbanus* in 215 and again *extra ordinem* in 214 to guard Rome; *magister equitum* (213). As consul III (212) he captured Hanno's camp near Beneventum, thus cutting off supplies from Capua, which he then besieged and captured as proconsul (211); proconsul in Campania (210); consul IV (209), he won over some Lucanian hill-towns. He served again as proconsul (208-207), opposed Scipio's African expedition (205), and died soon afterwards. H. H. S.

FULVIUS (2) NOBILIOR, MARCUS (cos. 189 B.C.), the victor over Aetolia, was curule aedile in 196, praetor in 193 in Spain, subduing Oretania and Carpetania (193-192), and as consul in 189 defeated the Aetolians, capturing Ambracia and sending its art treasures to Rome. In 188 he won Cephallenia, taking Same, and intervened between the Achaeans and Sparta. He triumphed, despite complaints about Ambracia, building the temple of Hercules Musarum. Censor in 179 with M. Aemilius Lepidus, he reformed the *Comitia Centuriata* and carried out a large building programme. A patron of Greek culture (Ennius accompanied him to Aetolia), he was attacked by Cato. One son was consul in 159, another consul in 153 at Numantia.

Livy 35. 7 and 22; 37. 50; 38; 39. 4-5; 40. 45-6 and 51-2; Polyb. 21. 25 ff.; De Sanctis, *Stor. Rom.* iv. 1, pp. 210, 456, 605.

A. H. McD.

FULVIUS (3) FLACCUS, QUINTUS (cos. 179 B.C.), son of (1) above, was curule aedile in 184. As praetor in Spain in 182 he opened the campaigns against the Celtiberians (182-180) which led to the settlement of Ti. Sempronius Gracchus. Consul in 179 in Liguria, he became censor in 174, repatriating Latins in Rome and controlling the *equites*. In 173 he dedicated a temple to Fortuna Equestris, after despoiling the temple of Hera Lacinia in Croton. He committed suicide in 172. It is doubtful whether he built the Via Fulvia. A fine general and conservative senator, his career marks the Fulvian predominance after Scipio Africanus.

Livy 40; 41. 27; 42. 2 and 10; Appian, *Hispan.* 42. De Sanctis, *Stor. Rom.* iv. 1, pp. 420, 460, 608; F. Münzer, *Röm. Adelsparteien und Adelsfamilien* (1920), 199.

A. H. McD.

FULVIUS (4) FLACCUS, MARCUS (cos. 125 B.C.), a nephew of (3) above, was a prominent member of the Gracchan reform-party. Little is known of his career till he became a member of the Gracchan Agrarian Commission (130). As consul in 125 he unsuccessfully brought forward the first proposal to admit the Italians generally to the Roman franchise, and was sent to help Massilia against the Ligurians, over whom he triumphed. He went in 122 to help C. Gracchus in colonizing Carthage. In the final struggle against Opimius, he was the most violent of the Gracchan leaders; he and his son were killed in the popular rising. M. H.

FULVIUS, see also MACRIANUS, PLAUTIANUS.

FUNDANIUS, GAIUS, unrivalled in witty comedy according to Horace, *Sat.* 1. 10. 40-3 (cf. Porphyry ad loc.). Belonging to Maecenas' circle, he is imagined to describe Nasidienus' dinner (*Sat.* 2. 8. 19).

FUNDITORES, see ARMS AND ARMOUR (ROMAN).

FUNERARY PRACTICE, see DEAD (DISPOSAL OF).

FURIAE, Latin equivalent of Erinyes (q.v.), perhaps a translation (*furere* = *ἐρινύειν*, to rage like an Erinyes). There is no proof of their existing in cult or unprompted popular belief; sometimes they are identified with the obscure goddess Fur(r)ina (q.v.), as Cicero, *Nat. D.* 3. 46.

H. J. R.

FURIUS (1) ANTIAS (i.e. of Antium), AULUS (fl. 100 B.C.), friend of Lutatius Catulus (Cic. *Brut.* 132), epic poet influenced by Ennius and in turn influencing Virgil and Statius, cf. his 'pressatur pede pes' with Verg. *Aen.* 10. 361 and Stat. *Theb.* 8. 399. From his *Annales*, a national poem, Gellius (18. 11) quotes some hexameters.

Baehr. *FPR*; Morel, *FPL*.

J. W. D.

FURIUS (2) PHILUS, LUCIUS, the friend of Scipio Aemilianus, was consul in 136 B.C., commanding in Spain in the Numantine War; he handed over Mancinus (q.v.) to the Numantines. A prominent member of the Scipionic Circle, he may be the author of a work, probably antiquarian, including sacral formulae; he appears in Cicero's *De Republica*. His excellent Latin and literary style in speaking were noted.

Appian, *Hispan.* 83; Cicero, *Brut.* 108; *De Or.* 2. 154; Macrob. *Sat.* 3. 9. 6.

FURIUS, see also BIBACULUS, CAMILLUS, SCRIBONIANUS, TIMESITHEUS.

FURNITURE. Little Greek furniture has survived, owing to the perishable nature of the material, but the forms can be recovered from representations in art. They are few in number, the principal being: the throne (*θρόνος*), a high-backed chair for occasions of state; the chair (*κλισιάς*) of lighter build, without arms, in general domestic use; the stool (*δίσκος*), four-legged, boxed, or folding (*δίσκος ὀκλαδίας*); the footstool (*ὀρθῆς*), which might be square or oblong; the table (*τράπεζα*), always small and portable, on three legs and oblong or circular (*τρίπους*); the couch (*κλίνη*), used for dining as well as for sleeping; and the chest (*κιβωτός*, *ἀρναξ*), in which clothes and bedding were stored. Rugs were used on the couches; in the fifth century their use as floor-coverings was considered effeminate, though the practice was known to Homer and became common in Hellenistic times. Utensils were piled on the floor or hung on the walls; lamps stood on shelves or in niches. The general effect to our eyes would be one of bareness and simplicity.

The Greek types are the basis of Etruscan and Roman furniture, and the greater luxury of these nations is evinced more in costliness of material than in novelty of form. Etruria introduced a new type of chair with rounded back resembling the modern arm-chair, and high candelabra of metal on which clusters of candles could be placed. Rome adapted these as lamp-stands. The Roman throne (*solium*), chair (*cathedra*), and stool (*sellā*), follow Greek models; the couch (*lectus*) was either of Greek shape or was provided with a back, like a sofa. Sideboards and cupboards with drawers, sometimes used as book-cases, appear in Imperial times, together with new forms of the table (*mensa*) which was the typical object of domestic ostentation: Cicero gave a million sesterces for a table of citron wood.

G. M. A. Richter, *Ancient Furniture* (U.S.A. 1926); W. Deonna, *Décor*, fasc. XVIII *Le Mobilier d'époque* (1938).

F. N. P.

FURRINA (this form is preferable to **FURINA**), a divinity belonging to the earliest stratum of Roman religion; she possessed a grove, an annual festival (*Furrinalia*, 25 July), and a *flamen*, but as early as the last decades of the Republic her very name was forgotten

save by a few individuals. The interpretation as *Furia* (in spite of Altheim, *History of Roman Religion*, 116 f.) rests upon a false analogy; the term *Nymphae Furrinae* appears to be late, although Furrina may have been a divinity of a spring or of springs. The location of her grove, on the slopes of the Janiculum near the Pons Sublicus, is indicated by the account of the death of C. Gracchus in 121 B.C. (Plut. *C. Gracch.* 17; Auctor, *De Vir. Ill.* 65; less precisely, Orosius 5. 12. 8), and fixed by epigraphical and other discoveries (P. Gauckler, *Le Sanctuaire syrien du Janicule*, 1912); these have established the existence of springs and the fact that under the Empire the traditional worship became almost totally ousted by Oriental cults. Cicero, *QFr.* 3. 1. 4, mentions another shrine near Arpinum. A. W. Van B.

FURTUM. In the developed Roman law this term embraced different actions qualified as theft according to the elastic definition in Paul. *Dig.* 47. 2. 1. 3. (= *Inst. Inst.* 4. 1. 1): 'contractatio (handling) rei fraudulosa lucri faciendi gratia', where *res* is understood also in the sense of possession or use of another's goods (as e.g. when a depositum uses the deposit). The penalties prescribed in the XII Tables, which combined the customary system of private justice with voluntary composition, were differentiated according to the gravity of the act and the age of the thief: they allowed a thief to be killed by night, but by day only when the wrong-doer made use of arms. The ancient distinction between

furtum manifestum (when the thief was caught in the act) and *nec manifestum* remained in the law of the Republic and the Principate, in spite of praetorian reforms which dealt with the *furtum* as a private delict (see LAW AND PROCEDURE, ROMAN, III), and exposed the thief to a twofold prosecution: (a) for a penalty (the double or the quadruple of the value of the stolen object), by means of an *actio furti*, which might be initiated by any interested person (e.g. the *bonae fidei* possessor); (b) for restitution of the stolen object, whether by the normal procedure for the protection of property or by a special action, *condictio furtiva*.

P. Huvelin, *Études sur le furtum* i (1915); H. F. Jolowicz, *Digest* xlvii. 2, *De Furtis* (1940). A. B.

FUSCUS, CORNELIUS, of a senatorial family, adopted the equestrian career, 'quietis cupidine', though of a dashing and adventurous character (Tac. *Hist.* 2. 86). He was a partisan of Galba in A.D. 68 and was rewarded by him with the procuratorship of Illyricum, in which function he actively helped the Flavian generals to invade Italy. Later, as Prefect of the Guard he was entrusted with the conduct of the war against the Dacians; he crossed the Danube and penetrated into Dacia (86 or 87), but met with a signal defeat and lost his life (Dio 67. 6; Jordanes, *Getica* 13. 76). The altar at Adam-Klissi (q.v.) has been connected with him, without much reason (cf. *GAH* xi. 670).

R. Syme, *AJPPhil.* 1937, 7.

R. S.

G

GABII, an ancient Latin city twelve miles east of Rome (Strabo 5. 239), nowadays *Castiglione*. Prehistoric finds do not contradict the story of its foundation by Alba Longa (Verg. *Aen.* 6. 773). Its resistance to Tarquin, separate treaty with Rome, and special role in augural practices prove its early importance (Livy 1. 53 f.; Dion. Hal. 4. 53; Varro *Ling.* 5. 33). After 493 B.C. Gabii appears as Rome's ally but was possibly sacked in the Latin War (Livy 3. 8; 6. 21; Macrobius *Sat.* 3. 9. 13). By 50 B.C. it had become a village (Cic. *Planc.* 23. Record of Sulla's colony is suspect: *Lib. Colon.* p. 234). Nevertheless the poets exaggerate its desolation. Under the Empire Gabii was a prosperous *municipium* with celebrated baths and ornate Hadrianic buildings (*ILS* 272). Although still a bishopric in the ninth century, to-day only a temple (third century B.C.) remains. The Romans reputedly derived from Gabii the *cinctus Gabinus*, a particular mode of wearing the *toga* which was used in certain ceremonial rites (Serv. on *Aen.* 7. 612; Livy 5. 46).

GABINIANUS, see JULIUS (6).

GABINIUS (1), AULUS, the grandson of a slave, served under Metellus in Macedonia in 149 B.C. Tribune in 139, he introduced the secret ballot in elections, against the influence of senatorial houses over their clients' votes.

Cicero, *Leg.* 3. 16. 35; Livy, *Epit. Oxyrh.* 193-4. A. H. McD.

GABINIUS (2) AULUS, tribune 67 B.C., legislated usefully on provincials' rights, and after transferring Bithynia and Lucullus' legions to Glabrio, sponsored the *Lex de piratis persequendis* (see POMPEY), threatening to depose Trebellius, a fellow tribune who attempted veto. He served Pompey as legate in the East and in 58 as consul, when he incurred Cicero's lasting hatred by scorning

his appeals for help. Clodius had bribed him with the province of Syria, which he administered competently, reorganizing Judaea and setting Antipater in power. But in 55 he restored Ptolemy Aulctes, for a large bribe; in return for this, and for his alienation of the *publicani* (perhaps through his leniency to the provincials—Cic. *Prov. Cons.* 10), he had to face three prosecutions on his return in 54. Cicero called his acquittal for *maiestas* a 'lex impunitatis', but next month was shamefacedly defending him for *repetundae*; this time, however, Gabinius was condemned and went into exile, a third charge, for *ambitus*, being dropped. Recalled by Caesar, he fought for him in Illyricum (winter 48-47), but was besieged by barbarian tribes in Salona, where he died. He was a typical *popularis* of the period, in character probably quite unlike the 'calamistratus saltator' persistently depicted by Cicero.

GADES, the oldest extant urban settlement in Spain, on a promontory south of the Bactis (*Guadalquivir*) estuary. The traditional foundation by Tyrian colonists c. 1100 B.C., and its early relations with Samian and Phoenician traders, are open to doubt. In the sixth century B.C. it appears as a Phoenician rival and eventual successor of the native town of Tartessus (q.v.). Gades served as the base of Hamilcar Barca's conquest of Spain, but later fell to the Romans (206 B.C.). As an ally of Rome it was permitted to continue its Phoenician coinage. Gades was associated with Metellus, who campaigned against Sertorius, and with Caesar, who started his Atlantic naval expedition from its harbour. Made an *oppidum civium Romanorum* by Caesar, Gades flourished for over three

hundred years. Its wealth, proved by the five hundred citizens of equestrian rank in the first century A.D., was derived from trade. Tin from the north, minerals from the upper Baetis, olive-oil, wine, wool, and fish were exported. Its most famous citizens were the Cornelii Balbi and Columella. J. J. Van N.

GAEA (Γαῖα) or **GE** (Γῆ), the Earth, conceived as a vaguely personal goddess. It may be that in the earliest times she, like Tellus (q.v.), was simply the power or *mana* resident in that parcel of earth which the particular group of worshippers tilled or otherwise used; but as far back as our records go she is the Earth in general, or a goddess resident in and governing it. Her cult can be traced in a number of places, though in most of them she has been superseded by a more definitely personal power, chthonian or other. At Delphi she was the original holder of the oracular shrine (Aesch. *Eum.* 2), a statement which there is no reason to doubt, as it is supported by sundry other traditions and by the fact that Apollo is said to have killed Python, a serpent and therefore a creature of earth (he actually gave the oracles, Hyg. *Fab.* 140. 1), before he could take over the holy place; cf. APOLLO. Her well-supported identity or close connexion with Themis (q.v.; Aesch. loc. cit. and *Prom.* 209-10) is to be explained by that goddess's original nature as simply 'the fixed or firm one' and not an abstraction (see Farnell, op. cit. inf. 12 ff.). For more or less probable identifications of her with other figures, see *ibid.* 19 ff. One of her most characteristic functions is as a witness to oaths (as *Il.* 3. 278), because she must know what is done on her surface.

In mythology she is the offspring of Chaos, or at least comes into being after it. Heaven (*Ouranos*) is her child and husband, and their offspring, besides such things as seas and mountains, are the Titans, Cyclopes, and Hecatoncheires (qq.v.). After her separation from Uranus (cf. *KRONOS*) she bore the Erinyes and Giants (qq.v.), being fertilized by the blood from his mutilation; later she produced Typhon (q.v.), whose father was Tartarus (Hesiod, *Theog.* 117 ff.; 820 ff.). This is a systematized account of the wedding of Sky and Earth; there are many legends ultimately to the same effect, e.g. the union of Zeus and Semele (see *DIONYSUS*) and many more children of Earth, as Erichthonius (see *ATHENA*), and Python in some accounts.

Apart from actual cult of Earth as a goddess, antiquity had its share of beliefs concerning her, as, e.g., the source (probably) of the life of new-born children, hence the Roman custom of placing them on the ground; the author of the potency ascribed to sundry herbs, and so forth. See, in general, A. Dieterich and E. Fehrle, *Mutter Erde* (1923); for herbs, A. Delatte, *Herbarius* (1938).

Farnell, *Cults* iii, pp. 1 ff. (cult); Drexler in Roscher's *Lexikon*, s.v. (mythology, etc.). H. J. R.

GAETULICUS, see *LENTULUS* (9).

GAISERIC, see *VANDALS*.

GAIUS (1), the Emperor, 'Caligula' (GAIUS JULIUS CAESAR GERMANICUS; A.D. 12-41), son of Germanicus and Agrippina, born at Antium on 31 Aug. A.D. 12. In 14-16 he was on the Rhine with his parents and, because of the military boots which he wore, was nicknamed Caligula ('Baby Boots') by the soldiers. In 18-19 he was with his parents in the East and, after Germanicus' death in 19, lived in Rome with his mother until her arrest in 29, then successively with Livia and Antonia minor, until 32, when he joined Tiberius on Capreae. After the death of his brother Drusus in 33 he was the only surviving son of Germanicus and, with Tiberius (q.v. 2) Gemellus—Claudius' claims not being considered seriously—next in succession to the Principate. He was elected *pontifex* in 31 and was *quaestor* two years later,

but received no other training in public life. Tiberius appointed Gaius and Tiberius Gemellus joint heirs to his property, having already indicated in language typically obscure that he expected Gaius to succeed to the Principate. Strongly supported by Macro, prefect of the Praetorian Guard, Gaius was acclaimed emperor (16 March 37), Tiberius' will being declared invalid by the Senate, so that Gaius might inherit the whole of his property. In the early months of his rule Gaius honoured the memory of his mother, father, and brothers and spoke abusively of Tiberius. Antonia, a restraining influence, died on 1 May 37. In October Gaius was seriously ill, and it is possible that Philo (*Leg.* 14; 22) is right in thinking that his mind was unhinged as a result (see, however, Balsdon, op. cit. inf., 212 ff.). On recovering he executed, some time before 24 May 38, both Macro and Tiberius Gemellus. In Jan. 39 Gaius quarrelled seriously with the Senate, revised his attitude to Tiberius' memory, and became more autocratic. The autumn and winter of 39-40 he spent in Gaul and on the Rhine; at Moguntiacum he forestalled a conspiracy against his life, whose leader, Cn. Cornelius Lentulus Gaetulicus, was executed. It is possible that at this time two new legions were raised (XV and XXII Primigeniae) and that Gaius had intended to invade Germany or Britain. The intention, if serious, was abandoned, either because of military indiscipline or because of Gaius' instability of character (Suetonius 24. 3; 39; 43-9; Dio Cass. 59. 21-3; 25. 1-5; cf. Balsdon, op. cit. 58-95 and *JRS* xxiv. 13-18). After his return to Rome (in ovation, on 31 Aug. 40) Gaius was in constant danger of assassination, governed with much cruelty, and was murdered in the Palace on 24 Jan. 41. His (fourth) wife, Milonia Caesonia, and daughter (his only child) were also murdered.

The government of Gaius was more autocratic than that of earlier emperors. He was consul four times, in 37 (suffect), 39, 40 (sole consul), 41; on the first occasion for two months, on the last two for a few days only. In many respects he appears to have deserted the Augustan form of principate in favour of monarchy of the Hellenistic type; this, at least, is the easiest explanation of his treatment of his sisters, especially Drusilla, with whom he was suspected of committing incest and whom he consecrated after her death. For himself he accepted extravagant honours, which came close to deification, and, though in face of opposition he desisted from his intention to set up a statue of himself in the temple at Jerusalem, he was responsible for serious unrest among the Jews both in Alexandria and in Judaea.

ANCIENT SOURCES. Books 7 and 8 of the *Annals*, in which Tacitus described the principate of Gaius, being lost, we depend on Suetonius, *Gaius Caligula*, Dio Cassius, bk. 59, and Josephus *Ant.* 18. 6. 8. 205-19. 2. 5. 111 (with a detailed account of the murder of Gaius and an estimate of his character and principate, probably derived from Cluvius Rufus; see M. P. Charlesworth, *Comb. Hist. Journ.* iv (1933), 105-10). For detailed knowledge of Gaius' relations with the Jews of Alexandria we have contemporary evidence in Philo, *Contra Flaccum* (edited by H. Box, 1939), and *Legatio ad Gaium* (Philo was himself a member of the embassy to Gaius which he describes). See also, on the sources, A. Momigliano, *Rend. Linc. serie sesta*, viii (1932), 293-336.

MODERN LITERATURE: J. P. V. D. Balsdon, *The Emperor Gaius (Caligula)* (1934), with full bibliography; M. P. Charlesworth, *Call* x. 653-66. J. P. B.

GAIUS (2) (2nd c. A.D.), one of the most renowned Roman jurists, though little is known of his personality. His gentle name and cognomen are unknown, likewise his origin (perhaps a Greek province) and studies. Born under Hadrian, he lived at Rome as a teacher and writer (about 100 books) without having the *ius respondendi* or any official charge. A determined follower of the Sabinian School (see *SABINUS* 2), he sometimes rejects their point of view and takes into consideration opinions of the opposite school. In his own times he was not much appreciated: it is a striking fact that he was never cited

by the later jurists, not even by Paulus and Ulpian who must have known and used his works. On the other hand, Justinian's compilers excerpted him freely, for his authority had been officially established by the Law of Citation (A.D. 426). Justinian seems to have had a special predilection for Gaius, for he frequently calls him 'Gaius noster', and by his order Gaius' standard work, the *Institutes*, was used as the basis for the composition of the imperial *Institutiones*.

WORKS: *Ad edictum provinciale*, a long commentary in thirty-two books, which has led some scholars to believe that he was a provincial jurist; *Ad edictum praetoris urbani*; *Ad legem XII tabularum*; *De verborum obligationibus*; *Res cottidianae sive Aurea*; *Liber singularis regularum*; and several monographs. His principal work, which procured him great renown, was his *Institutionum commentarii quattuor*, written about 161. Until they were discovered (1816) on a *codex rescriptus* at Verona (probably of the 5th c.), the *Institutes* were known only by a score of fragments in the *Digest* and the *Lex Romana Visigothorum*. The Veronese manuscript containing the fourth book of the *Institutes* (till then unknown) furnished quite new details on the Roman formulary procedure. The genuineness of the Veronese text has been severely attacked in recent years, but without sufficient reasons. The manuscript may be corrupt and completed here and there by additional notes (glosses) by later users of the work, but unquestionably the criticism applied to the text of Gaius by some modern authors, by which a gloss is discovered in nearly every paragraph, is carried much too far. The new fragments of the *Institutes* found in Egypt in 1933 on a few parchment sheets, and belonging apparently to the fourth century, confirm this opinion. It should not be forgotten that the text-book of Gaius, being destined for beginners, had not to be so perfect in its composition as his modern critics demand; on the other side Gaius' qualities as a writer suffice to explain the deficiencies and defects of the work. Being more of a compiler than an original author, now and then rather superficial and generally not of an independent mind, he was a faithful copyist and reporter of other jurists' opinions; but his language is clear and smooth (in spite of not infrequent grecisms), his formulations are elegant and clear, his exposition plain and perspicuous, and the few mistakes in historical discussions cannot diminish the high educational value of the work, which will always remain unique as a source of our knowledge of classical Roman law.

Zeitschr.* liv (1937), 258 ff.; Fr. de Zulueta, *JRS* xxiv (1934), 168 ff., xxv (1935), 19 ff., with copious citations of the newest literature; W. W. Buckland, 'Reflections suggested by the new fragments of Gaius', *Juridical Review* 1936, with admirable observations on the authenticity of the Veronese Gaius. A. B.

GALATEA (Γαλάτεια, perhaps 'milk-white'), name of a sea-nymph, first in Homer (*Il.* 18. 45); her legend was apparently first told by Philoxenus (see Bergk, *PLG*⁴ iii. 609 ff.). Polyphemus (see *CYCLOPS*) loved her, and wooed her uncouthly; the story is a favourite especially with pastoral writers (Theocr. 11; cf. 6. 6 ff.; Bion, fr. 12 Wilamowitz-Mocellendorff; *Ἐπιτάφιος Βίωνος*, 58 ff.; Verg. *Ecl.* 9. 39 ff.; cf. 2. 19 ff.; 7. 37 ff.; but particularly Ov. *Met.* 13. 738 ff.). In this, the earliest surviving passage which adds anything important to the story, Galatea loved a youth, Acis, son of Faunus (Pan?) and a river-nymph. Together they listened in hiding to Poly-

phemus' love-song, but when he had finished he rose to go and caught sight of them. Galatea dived into the sea, but Polyphemus pursued Acis and hurled a huge rock at him. As it fell on him and crushed him, Galatea turned him into a river, which bore his name ever after. The whole may well be a local Sicilian tale. The resemblance between Galatca's name and Γαλάττης, a Gaul, seems to underlie a less-known version in which she finally accepted Polyphemus' attentions and had by him a son, Galas or Galates, ancestor of the Gauls (see App. *Ill.* 2)—mere pseudo-historical or pseudo-mythical aetiology. H. J. R.

GALATIA is used, when applied to territory in the East, in two senses. (1) As the name of a territory in central Asia Minor, comprising parts of what was formerly Phrygia and Cappadocia, occupied and settled by a Celtic people which crossed the Hellespont in 278 B.C., and after much raiding and plundering were finally penned in an area stretching from the Sangarius to east of the Halys by Attalus I of Pergamum in 230. Here they continued to harass their neighbours; after the battle of Magnesia Rome sent Manlius Vulso to subdue them, and afterwards used them as a check on Pergamum. In the Mithridatic Wars they remained faithful to Rome. Their territory was organized on the Celtic tribal basis, the three tribes Tolistobogii, Tectosages, and Trocmi occupying separate areas around their respective capitals Pessinus, Ancyra, and Tavium, and each tribe being divided into four parts under tetrarchs. The council of the three tribes met at a place called Drynemetum, and tried cases of murder. The Galatians maintained their Celtic character throughout the Imperial period, and when visited by St. Jerome were still speaking a Celtic language.

(2) As the name of a Roman province, formed in 25 B.C., incorporating the kingdom of Amyntas, which comprised besides Galatia proper parts of Phrygia, Lycaonia, and Pisidia, and possibly Pamphylia. Other territories in Paphlagonia and Pontus were afterwards added to the province, which was normally governed by a praetorian *legatus* until about A.D. 72, when Cappadocia and Armenia Minor were united with Galatia, and the combined province was put under a *legatus* with consular rank. Galatia was reduced in size, and again put under a praetorian *legatus*, by Trajan, and still further diminished about A.D. 137. Under Diocletian the province shrank to the size of Galatia proper, with a strip of Lycaonia. The two principal cities of the province Galatia were Ancyra (the metropolis) and Pisidian Antioch.

It is disputed whether the 'Galatia' of St. Paul's Epistle to the Galatians refers to Galatia proper (the 'North-Galatian theory') or to the province Galatia, in whose Lycaonian and Phrygian regions St. Paul founded the churches mentioned in Acts (the 'South-Galatian theory').

Jones, *Eastern Cities*, ch. 4; F. Stähelin, *Geschichte der kleinasiatischen Galater*² (1907). W. M. C.

GALBA (1), the Emperor (SERVIUS SULPICIUS GALBA, c. 3 B.C.-A.D. 69), son of C. Sulpicius Galba and Mummia Achaica, was adopted by Livia Ocellina, second wife of his father. He was highly esteemed by Augustus and Tiberius, and was a favourite of Livia, as afterwards of Gaius and Claudius. Governor of Aquitania, consul (A.D. 33), legate of Upper Germany, proconsul of Africa (45), and from 60 governor of Hispania Tarraconensis, he had an exceptionally brilliant record to his credit, when in 68 Vindex invited him to replace Nero. He made his troops proclaim him only a legate of the Senate and of the Roman people. He had one legion and enrolled another of provincials (afterwards VII Gemina). The dangers inherent in the fall of Vindex were removed by Nero's death. Nymphidius (q.v.) Sabinus with the praetorians declared for Galba, who took the title of Caesar and went to Rome with Otho, governor of

Lusitania. Subsequent threats from Nymphidius Sabinus and Clodius (q.v. 2) Maecr were removed. Galba had the mind of an honest, but suspicious, administrator: 'omnium consensu capax imperii nisi imperasset'. His avarice was notorious. He did not pay the donative promised to the soldiers. A commission was appointed to recover Nero's presents. He was unwise in sending his Spanish troops to Pannonia. Early in Jan. 69 the troops of the Rhine declared against him. He adopted a certain L. Calpurnius Piso Frugi Licinianus as his successor, and offended Otho, who had hoped for that position. Otho organized a conspiracy among the praetorians, and Galba was killed on 15 Jan. 69.

SOURCES: Tacitus, *Historiae*; Suetonius, *Galba* (ed. G. W. Mooney, 1930); Plutarch, *Galba* (ed. E. G. Hardy, 1890); Dio Cassius, bks. 63-4; Josephus, *B.J.* 4. Tacitus, Suetonius, Plutarch mainly follow the same author (the usual identification with the Elder Pliny is very doubtful).

MODERN LITERATURE: Fluss, *PW* iv A. 772; B. W. Henderson, *Civil War and Rebellion in the Roman Empire* (1908); G. H. Stevenson, *CAH* x. 808; P. Zancan, *La crisi del principato nell' anno 69 d. C.* (1939). A. M.

GALBA (2) MAXIMUS, PUBLIUS SULPICIUS, was elected consul for 211 B.C. without having held any curule magistracy. He defended Rome against Hannibal's surprise attack. As proconsul (210-206) in Greece he conducted the First Macedonian War against Philip of Macedon, leading the first Roman fleet into the Aegean, where he captured Aegina (210); he achieved little else, and the main burden of war was gradually transferred to Rome's Greek allies. As consul II (200) he conducted the Second Macedonian War. Landing at Apollonia he planned to invade Macedonia from the west. He worsted Philip at Ottolobus and forced the pass of Banitza, but retired to Illyria for the winter (199); this campaign, though marked by no great military success, led the Aetolians to support Rome. Galba served as legate to Flaminius (197), as one of the ten senatorial commissions appointed to help Flaminius settle Greece (196), and later as ambassador to Antiochus (193). H. H. S.

GALBA (3), SERVIUS SULPICIUS, military tribune in 168 B.C., opposing Aemilius Paullus' triumph in 167, was praetor in 151 in Further Spain, where in subduing the Lusitanians he treacherously massacred a number who had sued for peace (151-150). A prosecution against him in 149, supported by Cato, failed. He was consul in 144. His oratory set new rhetorical standards in emotional effect.

Livy 45. 35 ff.; *Per.* 48-9; Appian, *Hispan.* 58-60; Cicero, *Brut.* 22. 86. De Sanctis, *Stor. Rom.* iv. 1. 480; H. Malcovati, *Or. Rom. Frag.* i. 76, 108, 203, 229. A. H. McD.

GALBA (4), GAIUS SULPICIUS (son of (3) above), an orator whose peroration 'Fati est a deo dicens se in hoc bello propter mismanagement . . . War was a choice specimen to be committed to memory in Cicero's boyhood (*Brut.* 127).

GALBA (5), SERVIUS SULPICIUS (grandson (?) of (3) above), was legate of Caesar in Gaul. He conducted a not entirely successful campaign (Caes. *B.Gall.* 3. 1) to open up the road leading from the Vais into Italy (57 B.C.). Candidate for the consulship of 49, he was not elected. Conspirator in 44 against Caesar, in 43 he fought in the battle of Forum Gallorum, which he described to Cicero (*Fam.* 10. 30).

F. Münzer, *PW* iv A. 762.

A. M.

GALBA (6), GAIUS SULPICIUS, grandfather of the Emperor Galba, wrote an historical work cited by Juba.

Peter, *HRKd.* ii. 41.

GALEN of Pergamum (A.D. 120-? 199) in a spectacular career rose from gladiator-physician in Asia Minor to court-physician in the Rome of Marcus Aurelius. Well educated in his native town, he travelled later, studied in

Greece and Alexandria, started practising in Pergamum in 157, and went to Rome in 162. He had become very famous when he left there in 166, only to return again from Pergamum in 169. He then stayed in Rome until his death. Writing all his life, he began with philosophical treatises and ended with medical books.

As philosopher and as physician Galen was an eclectic dogmatist. Plato and Hippocrates were his gods; Aristotle he held in sincere respect. But in spite of his belief in authorities he was anxious to form his own judgements, and his personality, therefore, takes the foreground in all his actions and writings. His knowledge was equally great in theory and practice; he excelled in diagnosis and prognosis and was a remarkably good teacher. His system is the ambitious effort to comprise the whole of medicine, the usual specialization of that time being rejected. Yet Galen realized that the physician has to deal with individuals, and that medicine can never be expressed adequately in general statements.

Galen was particularly productive as anatomist and physiologist. Performing dissections carefully in all their details, he collected and corrected the results of earlier generations and added many new facts. His physiological research based on experiment was masterly, particularly in the field of neurology; he proved that the arteries as well as the veins carry blood. His pathology was founded on the doctrine of the four humours; here he was most strongly influenced by speculative ideas. His pharmacological and dietetic doctrines were the codification of what had been accomplished in these fields.

Galen's monotheistic views, his ardent belief in teleology, his religious attitude—even anatomy to him was praise and veneration of God—foreshadow the coming Middle Ages. Yet his dominant influence on later generations, comparable only to that of Aristotle, is really due to his having made accessible through his work, as he had claimed, all parts of medicine, just as Trajan had made accessible through his roads all parts of Italy. See ANATOMY AND PHYSIOLOGY, paras. 12-21; MEDICINE, § 2.

GALERIUS (1), the Emperor (GAIVS GALERIUS VALERIUS MAXIMIANVS), was chosen as Caesar of the East by Diocletian in A.D. 293 and put away his wife to marry Diocletian's daughter, Valeria. Placed in charge of Illyricum and the north of Asia Minor Galerius spent a long and hard apprenticeship, beating back the barbarians and reclaiming land on the Danube. After settling the Carpi in Pannonia, he was called East to a greater task, the defence against Narses of Persia. Defeated at first near Carrhae, Galerius was treated with studied scorn by Diocletian, but given opportunity to repair his error. With strong reinforcements from the Balkans, he invaded Armenia, and gained a complete victory over Narses, capturing his concubines. A peace entirely favourable to Rome followed (298). Narses had lost the will to fight, and Diocletian discountenanced the large annexations that Galerius was disposed to make.

Galerius now began to insist on fuller recognition of his great labours and services. It was he above all others who drove Diocletian to persecute the Christians (303) and, during the illness of Diocletian in 304, intensified the persecution. Succeeding as Augustus of the East in 305, Galerius was nominally second to Constantius, actually superior, as both Caesars, Severus and Maximinus Daia were his men. When Constantius died (306) Galerius reluctantly accepted Constantine as Caesar of the West, but declined to recognize Maxentius and sent Severus, now Augustus of the West, against him. After the defeat and capture of Severus, he himself invaded Italy, but was forced to beat an ignominious retreat. Summoning Diocletian from his retirement, he made a new settlement of the Empire at Carnuntum (308), appointing Licinius Augustus and declaring Maxentius a public enemy. But Constantine and Daia refused the offered rank of 'filii Augustorum' and assumed the full imperial title. Falling ill in 309 Galerius relented so far as to issue an edict of partial toleration to the Christian Church. He died the year following, leaving the Church on the edge of triumph and the system of Diocletian on the brink of dissolution.

H. Mattingly, *CAH* xii, ch. 9. 329 ff.; Parker, *Roman World*, 229 ff., 272, 292 f., 308. H. M.

GALERIUS (2) **TRACHALUS** (cos. A.D. 68), a recent orator mentioned by Quintilian. His lofty and lucid style were enhanced by a voice and delivery 'that would have done credit to the stage' (*Inst.* 10. 1. 119; 12. 5. 5 and 10. 11). The Emperor Otho employed him to compose speeches (*Tac. Hist.* 1. 90). J. W. D.

GALERUS, see **APEX**.

GALINTHIAS (Γαλινθιάς, Anton. Liber. 29), or **GALANTHIS** (Γαλανθίς, Ov. *Met.* 9. 307), in mythology, a friend or servant of Alcmena (q.v.). When the latter was bearing Heracles, Eileithyia (and the Moirai) sat with hands clasped (and knees together), magically preventing delivery. Galinthias, perceiving this, ran out crying that Alcmena had borne a son; the goddess(es) leaped up in surprise and the charm was broken. In anger, they turned Galinthias into a lizard (Ovid) or weasel (Ant. Lib.). H. J. R.

GALLI, see **EUNUCHS**, **RELIGIOUS**.

GALLIA, see **GAUL**.

GALLIC WARS is the name usually given to the campaigns by which Caesar completed the Roman conquest of Gaul (58–51 B.C.). It is uncertain whether this conquest had been premeditated by Caesar; but appeals for his intervention on behalf of one Gallic tribe against another, or against German intruders, involved him in campaigns beyond the existing Roman province in south Gaul, and drew him as far as the Rhine (see

AEDUI, **ARIOVISTUS**, **HELVETII**). At the end of 58 Caesar took up winter-quarters in north-east Gaul, an act foreshadowing a permanent Roman occupation of all Gaul. In 57 accordingly he had to meet preventive attacks by the tribes of northern Gaul (see **BELGAE**, **NERVII**); by his victories over these he brought northern France and Belgium under Roman control. In 56 Caesar had evidently resolved on the complete subjugation of Gaul, for in this year he forced the submission of the peoples on the Atlantic seaboard (see **VENETI** 2). It is uncertain whether the tribes of central Gaul at this time came to terms with him; but these were now ringed off within the Roman area of occupation, and Caesar at this stage considered the pacification of Gaul as complete.

In this belief Caesar spent the campaigning seasons of 55 and 54 in Germany and Britain. But sporadic revolts in northern Gaul kept him occupied throughout the winter of 54–53 and the following summer, and in 52 he was confronted by a formidable coalition of tribes in central Gaul under the leadership of Vercingetorix (q.v.). The duel between Caesar and Vercingetorix was the most critical event in the Roman conquest of Gaul. After repeated marches and counter-marches across central Gaul the issue still remained undecided, when Vercingetorix allowed Caesar to invest him in the fortress of Alesia (q.v.). The reduction of Alesia by famine and the capture of Vercingetorix finally broke Gallic resistance, and the local rebellions which flared up here and there in 51 strained Caesar's patience more than his resources.

The conquest of Gaul was accomplished by Caesar at a surprisingly low cost of men. The Gauls lost heavily in men and in treasure; but the estimate of Plutarch (*Caesar*, ch. 15), that their casualties amounted to one million killed and two millions captured, need not be taken literally. For the results of the conquest see **GAUL**.

GALLICUS, see **RUTILIUS**.

GALLIENUS, **PUBLIUS LICINIUS EGNATIUS**, son of Valerian, appointed Augustus by the Senate in A.D. 253. While his father lived, he commanded in the West and fought a series of successful campaigns against German tribes on the Rhine. In 258 he checked an invasion of Italy by the Alamanni at Milan. After the capture of Valerian (late 258?), the full burden fell on the son. Leaving the East to Macrianus, Ballista, and Odenathus, Gallienus successfully crushed two rebels, Ingenus and Regalianus, in Illyricum (258–9). The revolt of Postumus (early 259?) detached Gaul and the West, and Saloninus, younger son of Gallienus, who had succeeded his brother Valerian II as Caesar in 257, was put to death. In 260 the Eastern armies revolted. But the two Macriani were destroyed, as they marched West, by Aureolus in Thrace, and Odenathus then defeated Quinctus and Ballista in Emesa (261). The rising of Aemilian was crushed in Egypt, a military revolt in Byzantium was suppressed, and Gallienus celebrated his 'decennalia' with great pomp. An attempt to recover Gaul failed: Gallienus won a victory, but Aureolus did not press the pursuit. In the East, Odenathus of Palmyra made a successful attack on Persia, taking Ctesiphon, and was recognized by Gallienus as his vicegerent, but fell victim to a domestic plot in 267. Zenobia defeated the general, Hecracianus, whom Gallienus sent against her.

The great barbarian invasions, by land and sea, of Asia and Illyricum recommenced, after some years' interval, in 267. Gallienus gained a brilliant victory over the Goths at Naissus, but was recalled to Italy by the revolt of Aureolus, backed by Postumus. Gallienus

defeated Aureolus and besieged him in Milan, but was murdered by his own staff, who chose Claudius to succeed him. A massacre of the friends of Gallienus in Rome followed.

The reign of Gallienus is notable for several reasons. By excluding senators from military commands, he broke the power of the *ordo* and earned its relentless hate. He developed a field army and an independent cavalry corps, based on Milan. He reversed his father's policy of persecution and granted recognition and peace to the Christian Church.

Later tradition has blackened his character and made of him the typical tyrant, cruel, lascivious, and inefficient. In point of fact, he brought the Empire, without complete disaster, through a grim succession of crises, and showed a sound understanding of the essential requirements of his age.

A. Alföldi, *CAH* xii, ch. 6; Parker, *Roman World*, 167 ff. II. M.

GALLIO: LUCIUS JUNIUS NOVATUS, brother of the philosopher Seneca, was adopted by the senator L. Junius Gallio, by which name he was then known. As proconsul of Achaia c. A.D. 52 (*SIG* ii³, 801) he refused to consider the case put by the Jews against St. Paul (*Acts* xviii. 12). He was consul at some unknown date. Seneca dedicated some works to him. After his brother's ruin he was compelled to commit suicide.

GALLUS (1), GAIUS LUCRETIVUS, praetor commanding the Roman fleet against Perseus in 171 B.C., destroyed Haliartus and captured Thisbe. He oppressed the Greek allies, e.g. Chaleis, and requisitioned corn, e.g. from Athens. Returning to adorn Antium with spoil, he was convicted and fined.

Livy 42. 48 and 63; 43. 4 and 6-8.

A. H. McD.

GALLUS (2), GAIUS SULPICIVS, the Roman astronomer, as military tribune under Aemilius Paullus, predicted the eclipse of the moon on 21 June 168 B.C., before Pydna. Consul in 166, in Liguria, he was envoy to Pergamum in 164. He wrote, or adapted, an astronomical work from Greek sources (*Pliny, HN* 2. 53 and 83).

De Sanctis, *Stor. Rom.* iv. 1. 369.

A. H. McD.

GALLUS (3), GAIUS CORNELIUS (c. 69-26 B.C.), poet and politician, friend of Augustus, was born at Forum Iulii, possibly of a native Gallic family. He is said to have saved the farm of his friend Virgil. Servius' allegation that a first draft of *Georgic* 4 contained a eulogy of him is doubtful; but the tenth Eclogue is dedicated to him. In the war against Antony and Cleopatra, as general of Octavian, he guarded Africa, occupied Paraetonium, and contributed most to the victory. He was in consequence the first governor of Egypt, where he crushed two rebellions. He advanced beyond the First Cataract, received envoys of the Ethiopian king, and appointed a vassal-prince in the buffer-state of Triakontaschoinos. But his administration was bad, and his vanity is attested by an inscription at Philae (*ILS* 8995). Some other obscure reason contributed to his recall. He was condemned to banishment and committed suicide (26 B.C.).

Of Gallus' poetry only part of a line survives (*Morel, FPL* 90), unless we accept, as several scholars have done, the theory of F. Skutsch (*Ant. Vergils Frühzeit*, 1901, and *Gallus und Vergil*, 1906) that he wrote the *Ciris* (see APPENDIX VERGILIANA). But whether that is his work or not, Gallus was outstanding among the *neoterici* (q.v.) of his age for his development of the love elegy. He wrote after the Alexandrian manner of Euphron and according to Servius translated into Latin some of his epyllia. Imbued with the traditions of pastoral elegy and influenced by the love-stories of Parthenius, he

transferred the theme of wounded love from mythological or bucolic settings to the real and personal sufferings of a deserted lover (cf. Verg. *Ecl.* 10). In his four lost books of love elegies 'Lycoris' (i.e. the coquette mime-actress 'Cytheris', a stage-name for Volumnia) was the heroine (*Ovid Am.* 1. 15. 29-30; *Tr.* 2. 445; *Serv. ad Verg. Ecl.* 10 ad init.). Echoes of his poems are woven by Virgil into the tenth Eclogue, where it is felt poetically appropriate to introduce him as an Arcadian shepherd. In *Ecl.* 6. 64-73 the obeisance of the Muses and the presentation to him of the reed pipes are designed to mark his eminence in pastoral poetry. See ELEGIAC POETRY and EPYLLION.

*PIR*³, C 1369; E. Norden, *Sitz. preussisch. Akad.* 1934, 627; R. Syme, *CQ* 1938, 39; A. Rostagni, *La letteratura di Roma repubblicana ed augustea* (1939), 306; 348-51; Schanz-Hosius, §§ 270-2; J. Hubaux, *Les Thèmes bucoliques dans la poésie latine* (1930), 87 ff. A. M. and J. W. D.

GALLUS (4), MARCUS AELIUS, Prefect of Egypt after Gallus (3) above and before C. Petronius. Influenced by prevalent and exaggerated reports of the wealth of Arabia Felix, Augustus instructed him to invade that land. The expedition, which lasted two years (25 and 24 B.C.), was a complete failure; the blame was conveniently laid upon the treachery of the Nabatean Syllaeus. Aelius Gallus wrote upon medical topics and was a personal friend of Strabo the geographer. It is highly probable that he adopted the son of the distinguished Roman knight L. Seius Strabo (see SEJANUS).

R. S.

GALLUS (5), GAIUS ASINIUS, son of C. Asinius Pollio, was consul in 8 B.C. and proconsul of Asia two years later. Augustus judged him ambitious enough to aim at the principate (*Tac. Ann.* 1. 13). Tiberius disliked him, perhaps because of his marriage with Vipsania (see AGRIPPINA 1)—a marriage which produced at least five sons—after Tiberius had been forced, against his will, to divorce Vipsania in 12 B.C. His behaviour in the Senate was designed to provoke the anger of Tiberius when emperor, and Gallus was arrested in A.D. 30, perhaps as an associate of Sejanus (so Dio Cass. 58. 3, but cf. *Tac. Ann.* 4. 71), and died of starvation after three years' imprisonment.

For coin-portrait see M. Grant, *From Imperium to Auctoritas* (1946), 387.

J. P. B.

GALLUS (6), AULUS DIDIUS (*cos. suff. anno incerto*), a prominent Claudian senator. When legate of Moesia c. A.D. 46 he conducted an expedition to the Cimmerian Chersonesus and established Cotys as king of Bosphorus, for which service he received the *ornamenta triumphalia*. He was also *curator aquarum* and proconsul of Asia or Africa. Legate of Britain from 52 to 58, Didius made no noteworthy advance, though interfering with the Brigantians, and was able to maintain the conquests of his predecessors. The fragmentary inscription *ILS* 971 (Histonium) may be referred to him.

R. S.

GALLUS (7), APPIUS ANNIUS, *consul suffectus* between A.D. 62 and 69, was dispatched as general by Otho against Vitellius in 69. In 70 he was legate of Germania Superior against Civilis.

Klebs, *PIV* i. 2268; *PIR*³, A 653.

GALLUS, see also FADIUS, TRIBONIANUS.

GAMES. One of the earliest games played in Greece, if we may believe Athenaeus, was marbles. According to his story the suitors of Penelope shot their alleys in turn against another marble, which represented the queen; the first one to hit had another turn, and if he were successful again he was considered to be the presumptive bridegroom. A favourite game at Athens was draughts (*παιδιά*). The board was divided into thirty-six squares, and on them the oval pieces were moved;

the centre line was called *ἐπὶ γραμμῇ*, perhaps because when you crossed it you were on the enemy's ground. A tablet somewhat resembling a backgammon board has been found in the Palace of Cnossos. More popular still was the 'Wine-throw' (*κότταβος*), especially at the end of dinner. The players, reclining on their left elbow, had to throw with their right hand the last drops of wine from their cups into a basin set in the middle, so that none was spilt. This was the simplest form; alternatively the basin was filled with water on which saucers floated, and the game was to sink the saucers with the wine; in a third variety the wine had to fall into a scale suspended over a small figure—Manes—so that the two came into contact.

At Rome the two favourite games were 'Twelve Lines' (*duodecim scripta*) and 'Robbers' (*ludus latruncularum*). The first resembled our backgammon or race-game. The other, also played on a board, had pieces of different value, *calculi*, *latrones*, *mandrae*, and the object was either to take or check—*ad incitas redigere*—your opponent's pieces. There were also two games, common to Greeks and Romans, whose names explain themselves, 'Odd and Even', and 'How many fingers do I hold up?' See also *ASTRAGALUS*, *ATHLETICS*, *BALL-GAMES*, *DICING*, *LUDI*.

Athenaeus, 15. 2-7; *Panegyricus in Pisonem*, 180-200.

F. A. W.

GAMES, PUBLIC, (1) in Greece, see *FESTIVALS* and the names of the particular games, *OLYMPIC*, *PYTHIAN*, etc.; (2) at Rome, see *LUDI*, *SECULAR GAMES*.

GAMES, SECULAR, see *SECULAR GAMES*.

GANYMEDES (*Γανυμήδης*; probably not Greek, but suggesting to a Greek ear γάνος or a cognate, cf. *Etym. Magn.* s.v.; older Latin *Catamitus*). Son of Tros (*Il.* 5. 265; 20. 232; later authorities, from the *Little Iliad* on, make him son of one of the other Trojan princes), carried off by the gods to be Zeus' cup-bearer, his father being given in exchange a marvellous breed of horses (*Il.* loc. cit.) or a golden vine (*Little Iliad* ap. schol. Eur. *Or.* 1392, *Tro.* 821). The older authorities say nothing definite of the manner of his carrying off, though the reason given is his beauty, and Zeus, who gives the horses or the vine, is clearly the prime mover. In the *Homeric Hymn* to Aphrodite it is a storm-wind, *ἄελλα*, which takes him (208), but at some unknown date, probably not early, it was said that he was snatched up by an eagle (Verg. *Aen.* 5. 255), or Zeus himself in that shape (Ov. *Met.* 10. 155 ff.). The eagle, in the former version, was turned into the constellation Aquila, Gany-medes himself becoming Aquarius (*Homil. Clement.* 5. 17; [Eratosth.] 26; 30). The earlier versions also imply simply that the gods wanted a handsome cup-bearer; the later ones (from Theognis 1345) make him Zeus' minion. His childishly pretty figure is a favourite in Hellenistic and later literature and art. See for examples Drexler in Roscher's *Lexikon*, s.v.

H. J. R.

GARDENS. Minoan and Helladic pottery, wall-paintings, and artistic objects, evincing manifest pleasure in decorative flowers, anticipate the Homeric appreciation of wild and planted flora, notably trees (cf. *Il.* 6. 419; *Od.* 5. 64), including the imported date-palm (*Od.* 6. 162), and prepare for palace gardens like that of Alcinoüs (*Od.* 7. 112 ff.). The emphasis, however, is upon vegetables and fruit. Cultivated roses are first mentioned in 648 B.C., though the appreciation is much older in Homeric epithets. Royal parks (*παράδεισοι*) derive from Persia, and Hellenistic examples are described in the *Geoponica*, a work containing extracts from earlier writers compiled by Cassianus Bassus in the tenth century A.D. (10. 1; 11. 23; 3. 13), by Longus (4. 2), and Achilles Tatius (1. 15). Closely connected are the sacred groves (*ἄλσος*), as at Antioch-Daphnae. A wide range of

plants is mentioned by Theophrastus (passim), while private gardens occur in Aleiphron (fr. 6. 1-9).

In Rome also the *hortus* is old, but primarily a kitchen garden, part of the *heredium*. Flower-gardens, however, soon grew up in the *xystus* or *viridarium* of the courtyard house. But the word for gardener (*topiarius*) is of the late Republic, and so is the formal garden, with topiary work (Plin. *HN* 12. 13) and *ambulationes* of given sizes (*CIL* vi. 29774, 29975). Wall-paintings give a vivid picture of the scope of Roman gardening, from formalism to landscape-gardening (cf. *Röm. Mitt.* v (1890), 783; *JDAI* 1904, 103). Much attention was paid to irrigation. Large pleasure gardens are very late, the earliest in Rome being the *horti Lucullani*, and they always remained the privilege of emperors, aristocrats, and wealthy freedmen. Sacred groves were no less frequent than in Greece.

P. Grimal, *Les Jardins romains* (1943).

I. A. R.

GARGANUS, MONS, see *APENNINES*, *APULIA*.

GARGILIUS MARTIALIS, QUINTUS, wrote on gardens (*De hortis*), probably in the third century A.D.; Galen is already quoted by him. The remnants preserved in late excerpts do not allow a judgement about the book as a whole; they show, however, that Gargilius relied on his own experience as well as on a carefully discriminating study of the literature. The book apparently was very famous, since Servius, in commenting on Virgil (*G.* 4. 147-8): 'haec . . . praetereo atque aliis post me memoranda relinquo', tersely remarks: 'aliis: Gargilius Martialem significat'. Cassiodorus recommended Gargilius' work, like those of Hippocrates and Galen. If this Gargilius is identical with the Gargilius who wrote on the diseases of oxen, both treatises may have been part of a book on agriculture. The identification with the otherwise unknown historian Gargilius who wrote about Alexander Severus is as uncertain as is that with the statesman G., mentioned in inscriptions of the same time.

GAUL (Transalpine). Geographically, the territory bounded by the Alps, the Rhine, the Ocean, the Pyrenees, and the Mediterranean forms a unity, and most of its history has been a sequence of unifying cultural developments, followed by catastrophes. Such a cultural unity was achieved in respect of religious feeling in the neolithic period (c. 2000 B.C.), when megalithic tombs are found spread over the area, and maintained itself more or less till disrupted by the invasions of the Celts across the Rhine. Commencing perhaps as early as 900, these spread with varying thickness a layer of Celtic culture over the country, represented from c. 500 by the artistic style of La Tène. An 'erratic' in this picture is the Phocaean colony of Massilia, founded c. 600, which established trading-posts along the Mediterranean, and spread Hellenism in the hinterland.

2. Rome's interest in Transalpine Gaul was at first confined to the security of communications with Spain, and these were guarded by her old ally Massilia. When Massilia, however, was threatened by a Celtic coalition, Rome intervened (121) and annexed a belt of territory between the Cévennes and the Alps. Threat to the *status quo* in the shape of Helvetic and German inroads led to the campaigns of Julius Caesar (58-51), by which all Transalpine Gaul was annexed.

3. Formal settlement came with Augustus. The earlier conquests, called Gallia Narbonensis from their capital Narbo (q.v.), became senatorial; the remainder

(Gallia Comata) became imperial, and was eventually divided into three provinces, cutting deliberately across ethnological divisions.

4. Narbonensis (the *provincia* above all others, its inhabitants 'provinciales') had an Italian air. There were five military colonies; the important native towns enjoyed Latin rights, and eventually the name, and, in some cases at least, the full privileges of a Roman colony. Throughout the country *tria nomina* (the badge of citizenship) are as normal as they are rare in Gallia Comata, and legionary soldiers with Narbonensian domiciles are numerous.

5. In Gallia Comata, Lugdunum, Augusta (*Augst*), Noviodunum (*Nyon*), and subsequently Cologne are the only Roman colonies. Native towns enjoying at later date the title of colony are also rare (e.g. Trier, Avenches), as is possession of the citizenship or entry into the legions. Under Claudius Aeduan nobles were admitted to the Senate (A.D. 48). Local government was based on the old tribes (now *civitates*) with their subdivisions of *pagi* and *vici*.

6. Romanization proceeded apace with construction of new towns in place of hill-forts, public buildings (temples, theatres), and roads; the expense of the process indeed provoked local revolts (A.D. 21), which were easily suppressed by the troops of the Rhine. Here eight legions with auxiliaries were stationed in two commands, intended as much to overawe Gauls as to repel Germans; and a rebellion in 68 against Nero was similarly suppressed by them; while a national movement started by the Treveri under cover of disturbances in the frontier garrisons (69-70) failed not least owing to the lukewarmness of the Gauls, who were realizing the advantages of the Roman connexion.

7. Roman ideas were introduced by the application of Roman names to native gods, which often maintained, however, extraordinary shapes (e.g. horned, cross-legged Cernunnus); and by the imperial cult, which may have been utilized to supplant Druidism (suppressed by Claudius). The centres of worship were Narbo and the river-junction below Lyons, itself the financial centre of the Comata. To the latter the sixty Celtic *civitates* sent deputies to form a provincial parliament.

8. Gaul developed a vigorous if somewhat upstart culture, and was famous for good foodstuffs (and good eating). Its pottery industries, undertaking orders of thousands of mass-produced pieces, competed successfully even in the Italian market. Inroads on capital wealth and a series of devastating barbarian invasions (notably 253 and 276) crippled its prosperity, which was but partially restored in the fourth century. Studded with fortresses and posts connected with State supplies, with its towns huddled into a fraction of their former area behind walls made of the debris of temples, with brigands (*Bagaudae*) abroad, Gaul had a sad look. Christianity, however, which was becoming important in the second century, had firm hold by the fourth, and was responsible, incidentally, for extinguishing the Gaulish language: its development stimulated the Gallic taste for story-telling (Sulpicius Severus) and vigorous rhetoric (Hilary of Poitiers, Salvian). The later Empire shows a veritable Indian summer of interesting if rather mediocre literary figures (Ausonius, Paulinus of Nola, Sidonius).

9. The withdrawal of Roman garrisons in the fifth century, and the slow development of federate barbarian settlements into independent kingdoms, mark the end of the Roman Empire in Gaul. But though there are decisive dates (e.g. the cession of Auvergne in 475, the victory of Clovis in 486 or 487), the process was gradual. Of formal movements of independence there were virtually none; indeed, even the 'reignum Galliarum' (260-70) was a device of military expediency rather than a separatist movement. Gaul through all its history remains a document of the success of romanization.

GAVIUS (1) BASSUS, contemporary with Cicero, wrote *De Origine Verborum et Vocabulorum* and other works quoted by Gellius and Macrobius; see H. Funaioli, *Gram. Rom. Fragmenta*, pp. 486-91; also *PIV* s.v.

GAVIUS (2) SILO, an orator to whose eloquence in pleading cases Augustus testified when he heard him at Tarraco 26 B.C. (Sen. *Controv.* 10 *praef.* 14).

GAVIUS, see also **PONTIUS (1)**.

GE, see **GAEA**.

GELA (Γέλα), a Dorian colony, founded by Cretans and Rhodians (690 B.C.) on fertile Sicilian territory in southern Sicily, was the celebrated 'metropolis' of Acragas (q.v.) and scene of Aeschylus' death (456). Its earliest personalities are tyrants: Cleander (505-498) and Hippocrates (498-491), who made Gela temporarily Sicily's strongest State. Gelon, however, soon depopulated Gela by seizing Syracuse and transporting Geloans thither (c. 485). Hieron of Syracuse exiled many others. When the refugees returned after 466 Gela began to prosper: it recolonized Camarina (q.v.) and supported Syracuse against Athens (415). However, Carthage sacked it (405) and Gela never fully recovered: Timoleon's efforts to revive it (338) were undone by Agathocles' massacre of 4,000 Geloans (312). Finally, in 280, Phintias of Acragas transferred Gela's inhabitants to his new city of Phintias; thereupon the Mamertini razed Gela, which thus disappeared (reject Pliny, *HN* 3. 91). The *Gelenses* mentioned by Cicero (*Verr.* 3. 103; 192; 4. 73) inhabited Phintias.

GELLIUS (1) POPLICOLA, Lucius (cos. 72 B.C.), *homo notus* and friend of C. Papirius Carbo (consul 120 B.C.), was praetor in 94. As governor (of Macedonia?) in 93 he tried to reconcile the rival schools of philosophers in Athens. As consul (72) he defeated Spartacus. He was censor (70) and legate of Pompey (67-66). In 63 he warmly supported Cicero. In 59 he opposed Caesar's agrarian law. A. M.

GELLIUS (2), GNATUS, the Gracelian annalist, whom Cato attacked in defence of L. Tullius, wrote *Annales* from the origins of Rome to at least 146 B.C., reaching the Sabine Rape in bk. 2, the year 389 in bk. 15, and the year 216 in bk. 33 (or 30); a reference to bk. 97 is incorrect. His work is fuller than the previous

annals; the reason is probably the publication of the *Annales maximi* and the first use of Hellenistic methods in elaborating source material. Dionysius used his work.

H. Peter, *HRRel.* 2 (1914), pp. cciv, 148; K. J. Beloch, *Röm. Gesch.* 103-4; M. Gelzer, *Hermes* 1934, 55; 1935, 269.

A. H. McD.

GELLIUS (3), AULUS (c. A.D. 123-c. 165), born perhaps in Rome (18. 4. 1), studied literature (*grammatica*) there with eminent teachers, and was intimate with Fronto (19. 8. 1). He went to Athens for at least a year, hearing Calvisius Taurus on Plato and Aristotle, and enjoying the hospitality of Herodes Atticus. At Rome he was appointed judge in private cases (14. 2. 1), probably after his return from Greece; the requisite age was 25 (*Digest* 42. 1. 57; 50. 4. 8), and some legal experience may be assumed. He continued practice at the bar to the end of his life (*Praef.* 23-4), keeping up his interest in general learning.

WORK. *Noctes Atticae* in twenty books (lacking beginning and end, and bk. 8 except chapter-headings and brief fragments): discussion of points of law, grammar, antiquities, history and biography, textual and literary criticism, and other topics. G. began to collect material during the winter nights in Attica (*Praef.* 4), to assemble it under Antoninus Pius, and had partly finished bk. 20 in the principate of Marcus Aurelius.

Little is known about G. except from his writings; all the dates of his career are uncertain; he was of good family and some means, well educated, generally conscientious and accurate, but of moderate ability. He gave considerable thought to the composition of the *Noctes*, devising ingenious methods of introducing his discussions, but not always using them or carrying them through consistently. His defects are largely those of his period: he sometimes refers to original sources when he got his information at second hand, and tries to pass off the learning of others as his own; but his book is of real interest and value, and it preserves extracts from Greek and Roman writers (275 are named), whose works are otherwise wholly, or in great part, lost. He gives it additional interest by accounts of excursions to famous places (2. 21. 1), of monthly dinners with his fellow-students (15. 2. 3), and of visits to the villas of Atticus and others. He was used by many later writers (a full list in Hertz, ed. mai., pp. v ff.), especially Nonius Marcellus and Macrobius, and is highly praised by Augustine (*De Civ. D.* 9. 4) and Erasmus (*Adagiorum Chiliads*, 1. 4. 37). As a rule he is easy reading, but his style is that of his age and is sometimes made obscure by unusual and archaic words and expressions, in spite of his own remarks on that subject (11. 7; cf. 1. 10). See **ARCHAISM**.

GELLIUS, see also **EGNATIUS**.

GELLO (Γέλλω), a female daemon that steals children, in ancient, medieval, and modern Greek belief, from Sappho (fr. 104 Diehl) on. According to Suidas, s.v. Γέλλοις παιδοφιλῶντες, she was a woman who died untimely, ἄσπερος, notoriously a dangerous kind of ghost. Cf. Leo Allatius, *De Graec. hodie quorundam opinationibus*, 3; B. Schmidt, *Volksleben der Neugriechen*, 139 f.; P. Perdrizet, *Negotium Perambulans in Tenebris* (1922).

H. J. R.

GELON (Γέλων) (c. 540-478 B.C.), son of Deinomenes. He became commander of cavalry to Hippocrates (q.v. 1), tyrant of Gela, whom he succeeded by dispossessing his sons (probably in 491). In 485 he restored the expelled Gamori of Syracuse and made himself tyrant (possibly, but not certainly, with the title of *στρατηγὸς αὐτοκράτωρ*). He handed over Gela to his brother Hieron. Under his rule Syracuse became a large and strongly fortified city of great wealth. Being allied with Theron of Acragas (q.v.), he constituted the greatest Greek power of the time. Therefore, in 480, Athens and Sparta asked his help against Xerxes. According to Herodotus, G. offered to send a big army and fleet, but drew back when they refused to appoint him commander-in-chief. In fact, he could not afford to leave Sicily defenceless. Some months later, simultaneously with Xerxes' attack on Greece, if not in concert with it, a great Carthaginian army under Hamilcar invaded Sicily, but was entirely defeated by Gelon and Theron at Himera. G. now became lord of almost all Sicily, and lived two more years as a great and popular ruler, though idealized by later tradition.

GEMINUS of Rhodes, a Stoic philosopher and a pupil of Posidonius, wrote (about 73-67 B.C.) a treatise on the scope of the mathematical sciences entitled *Περὶ τῆς τῶν μαθημάτων τάξεως* or *θεωρίας*, in at least six books, citations from which are made by various writers, especially Proclus and the scholiasts on Euclid bk. 1, including the Arabian an-Nairizi (c. A.D. 990), who also drew on Simplicius. The treatise included a classification of the mathematical sciences, arithmetic, geometry, mechanics, astronomy, optics, geodesy, *canonic* (musical harmony) and *logistic* (practical calculation), an examination of the first principles, definitions, postulates, axioms, and of the whole structure based upon them (bk. 6 dealt with conic sections). Geminus also classified 'lines' (including curves), from 'simple' lines (straight lines and circles) to higher curves, e.g. the conics, the cissoid, 'spiral' curves and the cylindrical helix; so also with surfaces. Geminus gave a proof of the special property of 'uniform' lines (the straight line, the circle, and the cylindrical helix). Simplicius (*in Phys.* 991-2 D.) quotes from a commentary by Geminus on Posidonius' *Meteorologica*. An extant work attributed to Geminus, an *Introduction to Phenomena* (*Εἰσαγωγή εἰς τὰ φαινόμενα*), edited by Manitius (Teubner 1898), may be only a compilation by a later editor based on an original *εἰσαγωγή*; it is an elementary treatise on astronomy suitable for teaching purposes, setting out the most important doctrines of Greek astronomy from the standpoint of Hipparchus. It deals with such subjects as the motions of the sun, moon, and planets, the circles on the heavenly sphere, the milky way, risings and settings, the calendar, the lengths of months and years, and the various 'cycles'.

On Geminus generally see K. Tittel, *De Geminii Stoici studii mathematicis* (1895), and *PW* vii. 1026. T. H.

GEMINUS, see also **TANUSIUS**.

GEMS. Precious stones were valued in antiquity as possessing magical and medicinal virtues, as ornaments, and as seals when engraved with a device. Such engravings (intaglios) in soft mediums like steatite or ivory are found in Early Minoan days (see **SEALS**); the use of hard stones dates from the Middle Minoan Age. Late Minoan and Mycenaean gems have a rich repertory of human and animal designs; the favoured shapes are the lenticular (round) and glandular (sling-stone). In sub-Mycenaean and Geometric times the art of working hard stones was largely lost. A revival in the seventh century B.C. is usually associated with the island of Melos, and the commencement of classical gem engraving in the sixth

century is marked by the introduction of the scarab (beetle) form of seal from Egypt. This was soon abandoned in Greece for the scaraboid, which omits the beetle-back. The late fifth and fourth centuries mark the climax of Greek gem engraving. In Hellenistic times the choice of subjects grows restricted, but excellent work was done in portraiture. In Italy the Etruscans used the scarab until the third century; gems of the later Roman Republic show a wide range of subjects, combined with clumsiness of execution. With Augustus begins the large series of 'Graeco-Roman' gems with few local characteristics. A period of decadence in the middle Empire is succeeded by a revival under Constantine.

Cameos, in which the design is in relief, are for ornament only; apart from some experimental developments of the scarab in the fifth century, they are not older than the Hellenistic period, and the finest are of the early Empire.

Several gem-engravers are recorded in literature, e.g. Pyrgoteles, who worked for Alexander the Great; others are known from their signatures on extant stones, though many signatures are false.

F. N. P.

GENETHLIACON, a birthday poem. We do not know of such poems at Rome before the last century of the Republic. Though there were Greek antecedents in the conception of the *δαίμων*, in the rhetorical handling of natalician themes, and in epigrams of the Anthology, yet the typical birthday poetry of Rome was so intimately associated with the worship of the Genius, that as a separate genre it made one of the original features in Latin literature. Virgil's fourth Eclogue stands apart as a mystical herald of an expected birth. The birthday poetry of Tibullus and in the *Corpus Tibullianum* shows more independence of Hellenic mythology than Propertius does, and more devotion to Roman religious tradition. Propertius' single example (3. 10) greets Cynthia with an anticipation of banquet and festivity. In him and in Horace (*Carm.* 4. 11, invitation to Phyllis to celebrate Maecenas' birthday) there is formal excellence, but a sincerer human note marks Tibullus and Ovid. Ovid pours out his personal feelings: *Tr.* 3. 13 deplors the melancholy birthday of an exile for whom there is no white robe or altar ceremony; and 5. 5 expresses his sympathy with his innocent wife on her birthday.

Persius in his second *Satura* turns birthday congratulations into a homily on praying aright; and Statius in *Sile.* 2. 7, addressed to Lucan's widow on the dead poet's anniversary, blends birthday elements with those of the *laudatio funebris* and *consolatio*. Martial proves the importance attached to birthdays: he celebrates a friend's anniversary, which he loves like his own (9. 52; cf. 10. 24; 12. 60); he sends three epigrams to Lucan's widow recalling his anniversary (7. 21; 22; 23); another is on Virgil's (12. 67), which Pliny (*Ep.* 3. 7. 8) says Silius kept more strictly than his own birthday; others are bantering pieces, on being passed over for a birthday feast, on being asked for the day after, on a man of 'no birth' who entertains the highest society on his birthday, on one who, as he does not want gifts on the day, might oblige Martial with a gift instead (7. 86; 11. 65; 10. 27; 8. 64; 9. 53). The last pagan poem in this class is Ausonius' address to his grandson entering his sixteenth year (*Idyll.* 5), where the Genius no longer counts. Christian poets break the ancient tradition by their faith that death is a new birthday, though in structure poems of the sort by Sidenius Apollinaris, Ennodius, and Julianus are indebted to classical rules.

GENIUS, literally 'the begetter', cf. *ludius*, 'player'. In classical and pre-classical Latin the attendant spirit of every man, a sort of guardian angel, whose activities were apparently directed largely towards fostering the natural desires and their satisfaction; 'suom defrudans genium' (Terence, *Phorm.* 44) means living very parsimoniously; 'genio indulgere' is to enjoy oneself. Although in common parlance every male, bond or free, seems to have a *genius*, in family cult only one *genius* was honoured in each household, that of the *paterfamilias*, particularly on the occasion of his marriage, as Festus, p. 83. 23 Lindsay ('genialis lectus, qui nuptiis sternitur in honorem geni'), but also in the ordinary worship at the *lararium*, see, e.g., Boyce in *Am. Ac. Rome* xiv, plate 17. 1 (one large serpent, bearded and therefore male, a well-known art-convention, underneath a scene of sacrifice); 18. 1 (two such serpents, one beardless, i.e. female, presumably the *iuno* of the *materfamilias*, cf. JUNO). It is quite conceivable (see Rose in *CQ* xvii (1923), 57 ff.) that originally the *genius* is the life-force of the family or clan, always in the guardianship of the *paterfamilias* for the time being and passing on at his death to his successor.

Be that as it may, in classical times the *genius* seems to have been thought of as exactly equivalent to the *ἰδιος δαίμων* (cf. BIRTHDAY); Horace even says that it is mortal (like its possessor: *Epist.* 2. 2. 188), though adding 'in unum quodque caput', which might imply that it passes to another person on the death of the first one. By a curious extension, gods are said to have a *genius* (first in 58 B.C., *CIL* i. 166 = Bruns 90, line 16). It is more understandable that corporations and places are said to have each its *genius* (Wissowa, 178). The fact that occasionally the *genius* of a dead person is mentioned (examples in De-Marchi, 71) is certainly Greek; cf. the occasional dedications to the *daimon* of the departed. It is the divine guardian who still watches over him in another world.

A. De-Marchi, *Il culto privato di Roma antica* i (1896), 69 ff.; Wissowa, *RR* 175 ff., and the larger classical dictionaries s.v.
H. J. R.

GENOS, a family in the widest sense, e.g. Eumolpidae in Athens, or Aegeidae in Sparta (with branches in Thebes and Cyrene); narrower than the *phratría* (q.v.) of which it formed part, wider than the *ἄγχιστεῖς* (or *συγγενεῖς*) (see ANCHISTEIS). Its members were *γενήτραι*. The *genos* in Athens was a corporate body, and could hold property; a member introduced his legitimate male children to the *genetai* as a body, who accepted or rejected them (cf. PHATRATIA); if they were rejected, an action could be brought in the diastery to prove legitimacy and so compel acceptance. Membership of a *genos* was not, however, necessary for citizenship (at any rate after Solon); and most scholars now believe that the *gene* were all aristocratic families (cf. EUPATRIDIAT), i.e. that most citizens were not members of any *genos*. It is not, however, necessary to assume that all the members of a *genos* were noble or rich; the *gene* might include nobles at the head and many poor peasants and artisans as well, like the Scottish clans; and the influence in early times of powerful *gene* like the Eumolpidae and Philaidae was probably largely due to this.

Some *gene* at Athens had a hereditary right to certain priesthoods, as the Eumolpidae and the Kerykes, a right not disturbed in the democratic constitution of Cleisthenes. The names of some ninety Athenian *gene* are known.
A. W. G.

GENS (etymologically related to *figere*) indicates a Roman clan, or a group of families linked together by a common name and their belief in a common ancestor. Beside this, purity of blood, personal liberty, descent from free-born parents, and freedom from any shameful punishment implying *destitutio capitis*, were held the

essential claims to membership of a *gens*. Theories that the *gentes* existed before the State, or were set up by law, or originated from an artificial partition of the community, have been refuted by anthropologists and historians, who have rightly emphasized how the rapid economic improvement of the wealthier classes in a predominantly agrarian State would soon lead to a marked distinction between upper and lower classes, and later to the establishment of an order with a narrow family organization. Yet the *gentes*, despite their political and social importance, never fulfilled any specifically public or political duties, apart from the superintendence of several cults and ceremonies. The privacy of the *gentes* and the fact that their members (*gentiles*) neither recorded nor worshipped their founders confirms their relatively late origin. A further proof that the gentile assemblies were not regarded as legally capable of passing resolutions binding on the whole community is that the annalists never mention any public enactment carried in these assemblies, although they often record measures taken by the *gentes* (cf. Livy 6. 20. 14). Although the *gentes* played little part in Roman constitutional and political history they greatly influenced the development of law and religion, even after the prohibition of intermarriage between the orders, which caused the early collapse of several patrician *gentes*, had been abrogated by the *Lex Canuleia* (see CANULEIUS). When social equality was attained, the wealthiest plebeian families had already organized themselves on the model of the patrician *gentes*, to which some of them probably gained admission. This, rather than a supposed original difference of race, settlement, or nationality, explains best the existence of both plebeian and patrician families within the same *gens*, and both *minores* and *maiores gentes*. If a member of a *gens* died intestate, his *gentiles* inherited all in default of direct agnates; this fact supports the view that in early times land-property was based on the principle of family, rather than individual, ownership. The gentile assemblies dealt with questions concerning testaments and bequests, *adrogatio*, adoption, emancipation, guardianship of minors, and appointment of *curatores* for insane or spendthrift members; their resolutions had to come twice a year before the *comitia calata* which also had to ratify resolutions referring to the *detestatio sacrorum* and the consequent *transitio ad plebem*. Clients and servants of the *gentiles* shared in their worship and ceremonies, and were often buried in their masters' family tombs. These *sacra gentilicia* mainly consisted in honouring the guardian divinities of the *gens*. They frequently came to be worshipped by the whole community; so, for instance, faith and flattery transformed Apollo, the 'private god' of the *gens Iulia* and of Augustus, into the most honoured god of imperial Rome.

Mommsen, *Röm. Staatsr.* iii³, 9 ff.; B. Kübler, *PIW* s.v.; A. H. J. Greenidge, *Roman Public Life* (1911), 9 ff.; G. De Sanctis, *Stor. Rom.* i. 229 ff. P. T.

GENUA, the modern *Genoa*, although presumably always Liguria's chief town, is not mentioned until 218 B.C. when already under Roman control (Livy 21. 32). After its destruction in the Hannibalic War Rome restored Genua and used it as a base against the Ligurians (Livy 30. 1; 32. 29; Val. Max. i. 6. 7). A boundary quarrel between Cnates and Veiturii Langenses was settled by Roman adjudicators in 117 B.C. (*ILS* 5946). Although an important harbour and road-centre, ancient writers seldom mention Genua. For its exports and imports see Strabo 4. 202. E. T. S.

GENUCIUS, LUCIUS, tribune of the plebs in 342 B.C., is credited with three laws of which only the first has historical support: (1) forbidding the lending of money on interest as a temporary measure (which was soon

disregarded) to relieve social troubles, caused by debts, usury, and a military rebellion; (2) fixing a ten-year interval before a second tenure of the same office (this was seldom observed and its attribution to Genucius is doubtful); (3) according to Livy (7. 42. 2) allowing both consuls to be plebeian, or more probably making one plebeian consulship obligatory.

G. Billeter, *Gesch. d. Zinsfusses* (1898), 135 ff.; F. Klingmüller, *Sav. Zeitschr.* 1902, 72 ff.; G. Niccolini, *Fatti dei tribuni della plebe* (1934), 66 ff. P. T.

GEOGRAPHY (γεωγραφία, 'delineation of land'). It was the Greeks who created geography as a science (the Romans being merely their pupils). The Greeks based their geography on fewer adjunct sciences than modern geographers, and throughout they lacked good technical appliances, and therefore could not obtain technical accuracy. Their knowledge of the globe covered but a fraction of the Old World; and scientific study merged with imaginative speculation and *a priori* deduction about the unknown. Within these limitations, however, their achievements in mathematical and descriptive geography were considerable.

2. In Homer and Hesiod the earth was a round ocean-girt plane, symmetrically vaulted by heaven above and Tartarus below. In the following centuries the gradual discovery of the Mediterranean basin and of the adjacent lands not only gave wider knowledge of geographical details, but stimulated the Ionian philosophers (from c. 625 B.C.) to investigate the real causes of the earth's structure and to map the earth and heavens more systematically. The Pythagoreans (after c. 525 B.C.) put forward the theory that the earth was a sphere, and Aristotle proved it. Heraclides Ponticus (c. 388–315) declared that the earth revolved round its axis, Aristarchus of Samos (c. 310–230) stated that it might also be revolving round the sun. But only the theory of the earth's sphericity won general acceptance, and after 450 the 'universal' geography of the Greeks tended to be replaced by a more narrow study of the *οἰκουμένη* or inhabited land-mass of the earth.

3. Geographic elucidation of the *οἰκουμένη*, progressing continually with geographic discovery, was expressed in a literature comprising the following classes:

A. WORKS ON PARTICULAR REGIONS. (a) Reports of discoveries. These were partly official, e.g. the reports of Hanno on north-west Africa, and of Nearehus (embodied in Arrian's *Indica*) on the Asian coast from Indus to Euphrates. Some of Caesar's chapters are geographical, e.g. *BGall.* 5. 12–13, 6. 25. A surviving unofficial specimen is the *Periplus of the Erythraean Sea* (see PERIPLUS).

(b) Reports of surveyors. Of this class we possess fragments from Alexander's surveyors in Asia, and the *Parthian Stations* of Isidorus of Charax. These were in the nature of road-books, giving the important halts on the routes described.

(c) Manuals for travellers, sometimes based on firsthand information. A large proportion of these consisted of coastal descriptions for practical navigators (*περίπλοι*, *παράπλοι*, *ἀνάπλοι*). Fragments of an early example (c. 500 B.C.) are reproduced in Aviculus; an almost complete specimen survives in the so-called 'Periplus of Scylax' (c. 350). We also have large pieces of Arrian's *Periplus of the Euxine Sea*, and of the *Stadiasmus Maris Magni* (3rd c. A.D.), detailing landmarks, harbours, and waterpoints of the Mediterranean coasts, with distances in stades. To this class also belong the surviving *Itineraries* (q.v.).

(d) Maps (q.v.), issued in connexion with the above works, or published independently.

B. GENERAL TREATISES OF DESCRIPTIVE GEOGRAPHY. These comprised comprehensive surveys (*γῆς περίοδοι* or *περιγηγήσεις*), with or without maps, coupled with

descriptions of separate lands and land-groups (*χωρογραφίαι*), or of particular places (*τοπογραφίαι*). They sometimes included physical geography and ethnography. The *ἤης περίοδος* of Hecataeus (c. 510-490) described towns and peoples as well as geographic features; the geographic insertions in Herodotus' *History* contain much ethnological material. Of two fourth-century historians who included geography Ephorus attempted ethnography and historical geography, and devoted entire books to descriptive geography. Timaeus dealt largely with the general geography of western Europe. The contemporary historians of Alexander contained much useful geographical material. The description of India by Ctesias (c. 400) was overloaded with fable, but that of Megasthenes (c. 295) gave a good description of the Ganges valley, of which he had personal knowledge.

The opening up of the Near East by Alexander's successors was reflected in Agatharchides' description of the Red Sea coasts (c. 110—partly extant), and in the geographical chapters of Diodorus Siculus (c. 100-20), that of western Europe by the Romans in the geographical excursuses of Polybius and of Posidonius. A general resumptive work on Mediterranean and Near Eastern geography was composed by Artemidorus (c. 100). This was eclipsed a century later by the treatise of Strabo, which includes topography, physical, historical, political, and also mathematical geography. The only other descriptive geography of scientific value was the *Descriptio Orbis* of Agrippa, containing a commentary to his map of the world. Other works of this class were bks. 2-6 of the *Natural History* of Pliny (little more than a gazetteer); a description of Africa by Juba II (25 B.C.-c. A.D. 24); a versified description of the whole known world by Dionysius Periegetes (c. A.D. 300?); and school primers like that of the versifier miscalled 'Scymnus' (c. 100 B.C.?) and of Pomponius Mela (c. A.D. 43).

C. MATHEMATICAL GEOGRAPHIES. Scientific analysis of the earth's surface and a more accurate plotting of maps became possible when Aristotle demonstrated the earth's sphericity, Eratosthenes made a reasonably exact measurement of the earth's circumference, and latitudes were determined by means of shadow-sticks or by calculation from the length of a solstitial day. Aristotle introduced the general principle of dividing the globe into zones. Dicaearchus (c. 310) laid down a basic line of latitude from Gibraltar to the Himalayas; Eratosthenes drew several parallels of latitude and longitude to a main line of latitude and a meridian intersecting at Rhodes; Hipparchus (c. 150) divided Eratosthenes' main parallel of latitude into 360 degrees, drew parallels of latitude computed from the duration of the longest day, and proposed to plot all places on the map by latitude and longitude. A comprehensive attempt to apply the principles of mathematical geography was made in the *Γεωγραφικὴ ὑφήγησις* of Ptolemy (c. A.D. 150-60). Though the greater part of his geographical data was not actually determined by astronomical observation, he systematically expressed them in reference to curved lines of latitude measured northwards from the Equator, and curved meridians measured eastwards from the Canary Islands. Unfortunately the works of the mathematical geographers and of Strabo did not command the attention which they deserved; the erroneous beliefs of older writers were preserved by tradition, and the authors of later date than Ptolemy were for the most part mere compilers from variegated and incongruous sources. See also ITINERARIES, MAPS, PERIPLUS, and articles on the persons mentioned above.

E. H. W.

GERMANI. The earliest home of the German race was south Scandinavia, Jutland, and the north German coast from the Weser to the Oder. In the long period from the last glaciation to the Iron Age many different immigrant groups arrived from south-west, south, and east, and the mixed ancestry of the race is further shown by the earliest skeletal remains, which exhibit differing anthropological characteristics. From c. 1000 B.C. Germans expanded southwards and westwards, so that by 600 there were Germanic elements in the lowlands around the lower Rhine mixing with the peoples already established there. As the Germans moved southwards they came into contact with the Celts, who held the belt of highlands from the Ardennes to Bohemia against them for some centuries to come. In the third century German pressure became serious, and a fresh horde crossed the lower Rhine, while others pushed into the Westervald and Taunus region of the middle Rhine and crossed to the Moselle, where they brought a Germanic strain into the Treveri. A new invasion west of the lower Rhine brought in the *Germani cisrhenani* known to Caesar, and some of the mixed population was driven down into the Marne-Aisne basins (see BELGAE). The migration of the Cimbri and Teutoni followed shortly after 120, and the Helvetii south of the Main, already suffering from the pressure of tribal movements, retreated into Switzerland. This general falling-back of the remaining trans-Rhene Celts was hastened when early in the first century B.C. a new German host, the Suebi, moved south-west to the Main and Rhine.

2. Corresponding expansion took place among the Germans to the East. Those of the Baltic coast had spread over a wide area before the second century B.C., but were pushed away from the sea by the arrival of successive tribes from Scandinavia (q.v.), Vandals from Jutland, Burgundians from Bornholm, the Langobardi from Gotland, the Rugii from south Norway, and the Goths from south Sweden. The vanguard of the east Germans were the Bastarnae, who appeared on the borders of Thrace c. 200 B.C. By the first century A.D. the Vandals, with the Lugii, occupied Silesia, the Burgundians were behind them astride the Wartlie, and the Langobardi had moved in the wake of the Cimbri and Teutoni to the lower Elbe, leaving the Rugii on the Pomeranian coast, while the Goths held the lower Vistula.

3. The origin of the name *Germani* is explained in Tacitus, *Germania*, 2. One of the tribes or tribal groups taking part in the great offensive along the lower Rhine of the third century B.C. had been called *Germani*, and this name was adopted by the Gauls to designate the whole race (cf. the analogous case of *Alamanni* and *Allemanni*).

4. The Germans themselves believed that they were descended from the god Tuisto, born of the earth; his son Mannus (Man) had three sons, the ancestors of the three west German groups, Ingaevones (northern and north-western tribes), Istaevones (Westphalian and Rhenish tribes), Herminones (Suebi, Chatti, Cherusci, etc.). The absence of the east Germans from this classification points to its originating in a period before they became differentiated. They worshipped Woden (Mercury), Donar or Thor (Hercules), Ziu or Tiu (Mars). Goddesses were as a rule less important, though notable exceptions like Nerthus and Tamfana are known, both the central deities of important religious federations. Though there were no temples in the classical sense, there were from an early age places—most commonly sacred groves—set apart for the worship of the gods.

5. German society of the time of Tacitus was aristocratic, and consisted of chiefs, freemen, and slaves. The kings were generally elected from one princely house in each tribe, but on occasion special leaders were elected for special campaigns. Great chiefs maintained a *comitatus*

which lived by warfare. A rudimentary law had already been developed and was generally dispensed by the priests. Women were under the guardianship of father or husband and had no independent legal or political rights, but they exercised considerable influence in religious matters. Agriculture had been practised from very early times and the Germans lived in settled communities.

Tacitus, *Germania*, ed. Anderson (1938); L. Schmidt, *Gesch. d. deut. Stämme—Die Ostgermanen*² (1934), 40–85; G. Ekholm, *CAH* xi, ch. 2 (with bibliography). O. B.

GERMANIC RELIGION, see RELIGION, TEUTONIC.

GERMANICUS JULIUS CAESAR (15 B.C.–A.D. 19, before adoption, NERO CLAUDIUS GERMANICUS?), son of Drusus (q.v. 3) and husband of Agrippina (q.v. 2). His name Germanicus was inherited from his father. In A.D. 4 he was adopted by Tiberius, whom he accompanied against the Pannonians and the Germans. Sent again to the Rhine as a commander (A.D. 13), he faced a mutiny upon the death of Augustus and substantially met the legionaries' demands. His popularity became well established. He was sensitive, gentle, and ambitious. Like his father, he was considered Republican in his sentiments. The unpopularity of Tiberius worked in his favour. He hoped to emulate his father and conquer a large part of Germany. He successfully led the repentant soldiers over the Rhine against the Marsi. In 15 he rescued Segestes from Arminius (q.v.), against whom his army advanced in three divisions. He reached the Teutoburgian Forest, where he paid the last honours to Varus, and pursued Arminius eastwards. After an indecisive battle he suffered heavy losses on his return. For the campaign in 16 a great fleet was prepared. The troops apparently landed on the western bank of the Ems and then had to cross the Weser in the face of the enemy. After a battle at Campus Idistaviso and a second engagement Germanicus returned to his base without any result. He had vainly tried to starve the enemy and to overcome transport difficulties by approaching from the sea; a winter residence in Germany, indispensable to victory, proved impossible. Tiberius recalled Germanicus, wishing to use him in the East. Germanicus celebrated a triumph in Rome (A.D. 17). The whole of the Eastern provinces were assigned to him with a *maius imperium*. In 18 he was consul with Tiberius and travelled to Asia. He crowned Zeno, son of Polemo I, king of Armenia, and reduced Cappadocia and Commagene to the status of provinces. In 19 he offended Tiberius by travelling unauthorized to Egypt, which his romantic curiosity prompted him to visit. On his return to Syria the enmity between him and Cn. Piso, whom Tiberius had unhappily appointed governor of Syria with the intention of controlling him, became intolerable. Shortly after, he died at Antioch, convinced that Piso had poisoned him. His mysterious death enhanced his popularity. He translated into Latin and revised the *Phaenomena* of Aratus (see ARATEA) and compiled another work which modern critics call *Prognostica* (mainly lost). The Emperor Gaius and Julia Agrippina, Nero's mother, were among his nine children.

GEROUSIA, the Council of Elders at Sparta, consisting of twenty-eight γέροντες of over sixty years of age, together with the two kings. Elected similarly to the ephors (q.v.), by acclamation of the citizens (a childish system, Arist. *Pol.* 2. 1271^a), the *gerontes* held office for life, but at some later date the office was made annual, and under the Roman Empire re-election became a frequent practice. Possessing both deliberative and

judicial functions, they considered questions of public policy and prepared business for the Apella (q.v.), whose decisions, in early times at least, they were competent to reverse, in conjunction with the kings. They heard cases involving death, exile, or *ἀρῖστα*, and could try even the kings; when the ephors laid charges before them they joined them in passing sentence. In spite of its wide powers and high prestige the Gerousia was not free from drawbacks inherent in old age, in the greater readiness of the ambitious or rich to seek election, and in the opportunities afforded for corruption in its judicial capacity.

Gerousia was also a common name for city councils of an aristocratic or plutocratic type, whether survivals of the Homeric Councils of Elders, or new creations, as in the Greek towns of Asia Minor in Hellenistic or Roman times.

A. M. W.

GESORIACUM (Bononia under the later Empire), modern *Boulogne-sur-Mer*, and almost certainly the Portus Itius (i.e. 'channel harbour') of Caesar; under the Empire the normal port of embarkation for Britain and station of the *Classis Britannica*. Its lighthouse was constructed by Caligula. Carausius' fleet was blockaded here in A.D. 292.

C. E. S.

GESTURES. Since the peoples of southern Europe notoriously make more use of gesture than the northerners, it is not surprising that gesticulation was frequent and lively among the ancients. (a) The natural signs of the emotions were less restrained than with us. Thus, to jump for joy would appear to be no mere metaphor nor confined to children and excitable young people; Q. Cicero says he did it on receiving good news (*Fam.* 16. 16. 1). Angry or troubled people bite their nails or their fingers (Hor. *Epod.* 5. 48; Persius 5. 162). Achilles, disturbed by bad news, smites his thighs (*Il.* 16. 125), and so do many after him, but it was too violent a gesture for an orator till Cleon introduced it (Quint. *Inst.* 11. 3. 123). One or two gestures are strange to us, as the angry or perplexed scratching of the ear or cheek (Apul. *Met.* 6. 9; Heliodorus 2. 8 (p. 44. 29 Bekker)). (b) Orators and actors naturally made a study of gesture. The former were at first very restrained, particularly at Athens, where it was not good form till after Pericles to withdraw the hand from under the mantle (Aeschin. 1. 25); later they elaborated, keeping, however, within narrower limits than those of the stage (Quint. loc. cit., 89; see the whole passage for oratorical usage). Concerning actors we are not so well informed, especially for tragedians of the classical Greek period, who cannot have gesticulated freely in their heavy costume. Of New Comedy we can say a little more, owing to the descriptions by characters of their own movements, e.g. Plaut. *Capt.* 794 ff., where Ergasilus runs about the stage, shouldering through an imaginary crowd. In farce and pantomime much could be conveyed by gesture (e.g. Suet. *Nero* 39; Lucian, *Salt.* 37 ff.). (c) Religious and magical gestures: the most common gesture of prayer was to look up, or down, according as a celestial or infernal power was invoked, holding the hands palm upwards, or downwards (*Il.* 3. 275; 24. 307; Picard in *Rev. Hist. Rel.* 1937, 137 ff.). In the latter case the ground might be struck or stamped upon (as *Il.* 9. 568; Cic. *Tusc.* 2. 60), which perhaps is why the latter is not very common as a mere sign of irritation. Kneeling or prostration were not usual in Greece (Theophr. *Char.* 16. 5, where see H. Bolkenstein, *Theophrastus' Charakter der Deisdaimonia*), quite common in Rome. Kissing statues was common (Cic. *Verr.* 2. 4. 94), also blowing kisses to them (Min. Fel. *Oct.* 2. 4). In human relationships a friend kissed the face, a suppliant the

hand (Sittl, *op. cit. infra*, 79, 166); handshaking was more solemn. The most common magical gesture (to avert the evil eye, etc.) was to hold the hand so as to imitate the *pudenda* of one or the other sex, Sittl, 101 ff.

It is not surprising that there grew up a sign-language, ranging in signification from rudeness (Pers. 1. 58-60) to arithmetical calculations and even a sort of deaf-and-dumb alphabet (Bede, *De computo vel loquela digitorum*; critical text in Sittl, 256 ff.).

C. Sittl, *Die Gebärden der Griechen und Römer* (1890). T. Elworthy, *The Evil Eye* (1895), *Horns of Honour* (1900), contain much but inaccurate and unsystematic information. H. J. R.

GETA (1), LUCIUS SEPTIMIUS, younger son of Septimius Severus and brother of Caracalla, became Caesar in A.D. 198 and Augustus in 209. During the Scottish campaigns he was left as governor of Britain at York. The mutual hatred of the two brothers was intensified after their father's death, especially as Geta was popular with the soldiers. On their return to Rome they lived in different parts of the Palace. After some vain attempts at reconciliation by their mother, Geta was assassinated by his brother in 212. See AURELIUS (2). H. M. D. P.

GETA (2), HOSIDIUS (2nd c. A.D.), contemporary with Tertullian (*De praescr. haeret.* 39), patched together from lines or phrases of Virgil a cento (q.v.) to form dialogue and choruses of a tragedy *Medea*, probably identical with that in *Anth. Lat.* (codex Salmasianus).

Text: Bachr. *PLM* iv. 219 ff. Cf. Teuffel, 370. 5; O. Delepierre, *Littérature du Centon* i. 37 ff. J. W. D.

GETAE, a Thracian tribe situated on the lower Danube (see THRACE). The name was subsequently applied by Greek and Latin writers to the Goths, with whom the Getae had nothing in common.

GIANTS, a mythological race of monstrous appearance and great strength. According to Hesiod they were sons of Ge (Earth) from the blood of Uranus which fell upon earth; he describes them as valiant warriors (*Th.* 185). Homer considers them a savage race of men who perished with their king Eurymedon (*Od.* 7. 59). The prevailing legend of the fight of the gods and the G. was formulated in archaic epics and was embroidered by many later writers. A substantial account is given by Apollodorus (1. 34 ff.). When the gods were attacked by the G. they learned that they could win only if they were assisted by a mortal. They called in Heracles, who killed the giant Aleyoneus and many others with his arrows. Zeus, who led the gods, smote with his thunderbolt Porphyryon who attempted to ravish Hera; Athena killed Pallas or Enceladus; Poseidon crushed Polybotes under the rock that became the island of Nisyros (Strabo p. 489); Apollo shot Ephialtes; Hermes slew Hippolytus; Dionysus killed Eurytus and many other giants besides who were caught in his vine; and Hephaestus aided the gods, throwing red-hot iron as missiles. The G. were defeated and were believed to be buried under the volcanoes in various parts of Greece and Italy, e.g. Enceladus under Aetna. Bones of prehistoric animals were occasionally believed to be bones of giants.

The Gigantomachy was one of the most popular myths in Greece and accordingly the names of participants and the episodes of the battle vary from writer to writer and from representation to representation. Zeus, Heracles, Poseidon, and later Athena, are the usual protagonists. In its early stage the myth seems to represent a variation of the popular motif of the tribe that attempted to dethrone the gods; in a more advanced stage of culture the myth was interpreted as the fight of civilization against barbarism.

In art the giants are first shown as warriors or wild men (Hanfmann, *Art Bull.* 1937), later as snake-legged monsters. (Waser, *PIW* Suppl. iii, s.v. 'Giganten'). The

most famous sculptural renderings are found on the archaic treasury of the Siphnians and on the Hellenistic altar of Pergamum. G. M. A. II.

GLABRIO (1), MANIUS ACILIUS (*cos.* 191 B.C.), a *novus homo*, tribune in 201 B.C., plebeian aedile in 197, rose under the aegis of Scipio Africanus to the praetorship in 196, crushing an Etruscan slave revolt, and became consul in 191 in the Syrian War. He defeated Antiochus at Thermopylae and began operations against the Aetolians; he extended the Delphic sanctuary. After triumphing (190) he stood for the censorship, but withdrew under a charge of peculation supported by Cato in opposition to the Scipionic group. In 181 his son dedicated a temple to *Pietas* vowed at Thermopylae. The *Lex Acilia de intercalando* belongs to his consulship.

Livy 33. 36; 36. 14 ff.; 37. 57. De Sanctis, *Stor. Rom.* iv. 1, 158, 376, 586; G. Daux, *Delphes au II^e et au I^{er} siècle* (1936), 225; R. Flacelière, *Les Aitoliens à Delphes* (1937), 356; A. H. McDonald, *JRS* 1938, 162. A. H. McD.

GLABRIO (2), MANIUS ACILIUS, husband of Mucia (daughter of Q. Scaevola 'Augur') and supporter of the Gracchi, was the author, as tribune (probably 123 B.C.), of the *Lex Acilia Repetundarum*, excluding senators from the juries, and providing a choice in procedure between conviction at the first hearing and a second hearing (see AMPLIATIO). Mommsen's identification of this law with the partly extant *Lex Repetundarum* is generally accepted.

GLADIATORS. Gladiatorial combats, in which armed men fought one another, were borrowed by the Romans from Etruria, where originally they may have been part of the ceremonies at a chief's funeral. The first recorded instance of their appearance in Rome was at the funeral games given by his sons in honour of M. Brutus, 264 B.C. On that occasion only three pairs of gladiators were engaged, but in 174 B.C. at the funeral games of T. Flamininus thirty-seven pairs fought, and finally at private celebrations, such as these funerals, 100 pairs became common. At the games given by Julius Caesar as aedile 320 pairs fought. Under the Empire the numbers steadily mounted, and Trajan exhibited 5,000 pairs in his triumph over Decebalus.

Gladiators were usually prisoners of war, slaves bought for the purpose, or condemned criminals. They were trained in a school—*ludus*—under very harsh discipline by a professional—*lanista*—who either owned the establishment himself or was employed by the State or private persons. The town of Capua was a favourite training-ground for gladiators; a gladiatorial school has also been discovered at Pompeii. Under the Empire these slaves were often joined by free men who being reduced to poverty liired themselves to a *lanista* at a wage, and were bound by an oath—*auctoramentum gladiatorium*—to serve for a fixed period. The last stage was reached when men and women of rank entered the arena and fought, either of their own accord or at the Emperor's bidding.

Gladiators were of four main types. The *Mirmillo* and the *Sarnite* were heavily armed with oblong shield, visored helmet, and short sword. The Thracian had a round buckler and a curved scimitar. The *Retiarius*

fought almost naked, with a net and trident as his only weapons. Defeated combatants were usually dispatched by the victors; but their lives were sometimes spared at the instance of the onlookers, who would wave their handkerchiefs as a signal of pardon.

GLADIUS, see ARMS AND ARMOUR, ROMAN.

GLASS (ὑάλος, *vitrum*). The art of producing a vitreous surface on clay, frit, or quartz (faience) was known in predynastic Egypt and passed to Crete, where plaques and figurines from the Palace of Knossos illustrate the high level attained in the second millennium B.C. Faience objects are common on Greek sites of the archaic period, some of them Egyptian imports, others probably made locally. In Hellenistic and Roman times Egypt and Asia Minor were centres of fabrication, and St. Rémy-en-Rollat in southern France produced vases during the Early Empire.

Objects composed entirely of glass paste begin to appear in Egypt about 1500 B.C., when two allied processes seem to have been in use: modelling molten glass about a core of sand, and pressing it into an open mould. The chief Mycenaean glass is *κύανος*, of dark blue imitating lapis lazuli, used for beads, inlays, and architectural ornaments. In the sixth century small vases made by the sand-core process became known in Greece; they have opaque blue or white bodies decorated with polychrome bands formed by fusing coloured threads rolled round the body. Their place of origin is unknown, though the Greek character of the shapes suggests native production. In the Hellenistic period bowls made in moulds come into fashion; these were mainly produced in Egypt. Here the tradition of opaque polychrome glass was continued far into Roman times with the *millefiori* vases (identified by some with the *murrina vasa*, q.v.), in which coloured patterns were fused into the vase. In the same tradition are the vases in two layers of which one is carved like a cameo: the Portland Vase in London is the best-known example.

The invention of glass-blowing in the first century B.C. (probably in Syria) wrought a profound change in the glass industry which, hitherto limited to luxury articles, now became capable of cheap mass production. Under the Roman Empire glass largely replaced pottery for domestic use and funeral furniture. Foundries have been located in many provinces; like the *terra sigillata* potteries, the manufacture tended to move away from the Mediterranean towards the borders of the Empire. Thus in the later Empire, Belgic Gaul and Germany had taken the place of Italy and southern Gaul. The vases, even when plain, show much variety of form, and there are several styles of decoration—tooling or applying relief ornament to the surface when warm, cutting or engraving when cold. Window glass, made by a primitive process of rolling, was known at Pompeii, and later became common; in the late Empire also begins the use of glass for mirrors.

GLAUCIA, GAIUS SERVILIUS, leader of the *Populares* during the period of Marius' rise to power. Low-born, and an effective demagogue, he obtained the support of the *Equites* as well as of the plebs. As tribune (presumably soon after 106 B.C.; but see Grenville and Clay, *Sources*, p. 225 for another view), by his law *De Repetundis*, he restored the jury-courts to the *Equites*, and made compulsory the procedure of *comperendinatio*, an adjournment or division of a trial into two parts. As praetor, Glaucia took a leading part in the democratic agitation

of 100. He hoped to be chosen consul for 99, but was killed in the disorders which followed the murder of his rival C. Memmius.

F. Münzer, *PIV* ii. A. 1796; J. P. Balsdon, *BSR* 1938, 98 ff. M. H.

GLAUCUS, in mythology, (1) a Lycian, son of Hippolochus, second in command of the Lycian contingent before Troy (*Il.* 2. 876 and often). He encounters Diomedes (q.v.), and exchanges armour with him in sign of friendship when told that they are hereditary ξένοι, getting the worse of the bargain, since his is gold and that of Diomedes bronze (*Il.* 6. 234-6; proverbial later). Wounded by Teucer (12. 387-8), healed by Apollo (16. 527 ff.), he rallies the Lycians after the death of Sarpedon. Killed, over the body of Achilles, by Aias son of Telamon (Quint. Smyrn. 3. 278 ff.), Apollo caused the winds to snatch his body from the pyre and take it to Lycia, where the Nymphs made the river of like name to spring up about his grave (*ibid.* 4. 4 ff.). (2) Of Anthedon in Boeotia. He somehow (*Ov. Met.* 13. 920 ff. is but one of several versions; see Drexler in Roscher's *Lexikon* i. 1679-80) became immortal by a magic herb (or a magic bath, schol. on *Pl. Resp.* 611 c) and then for some reason leaped into the sea and became a sea-god. He was renowned for his prophecies (schol. *ibid.* and often); vainly wooed Scylla (1) (q.v.; *Ov. ibid.*). (3) Of Corinth (*Il.* 6. 154), son of Sisypheus and father of Bellerophon (qq.v.), therefore great-grandfather of Glaucus (1) (Bellerophon-Hippolochus-Glaucus). His most famous legend is connected with Potniae in Boeotia, where he kept a stud of mares and fed them on human flesh (or they ate a herb which drove them mad, or Aphrodite was angry with Glaucus because he would not let them mate), till they devoured him at the funeral games over Pelias, whereupon he became a Taraxippos (horse-frightener) which scared the teams at the Isthmus (*Verg. G.* 3. 267, Servius and 'Probus' ad loc., Pausanias 6. 20. 19; *Etym. Magn.* 685, 41). That the name belongs to these and some dozen other persons (Drexler, op. cit.) is due to it being (a) an epithet of the sea, (b) an adjective appropriate to the 'bright' eyes of a vigorous man.

H. J. R.

GLAUCUS (4) of Chios (or Samos, according to some late authors), to whom is ascribed the invention of welding iron (σιδήρου κόλλησις; not of soldering, which is a modern process), made for Alyttes of Lydia (reigned 617-560 B.C.) a stand of iron, supporting a silver bowl; this was for Herodotus (1. 25) 'worth seeing above all the other offerings at Delphi'. In the time of Pausanias (10. 16. 1) the bowl had disappeared, but the stand remained, tower-shaped with an upward taper, the sides of openwork with crossbands, and decorated with figures and animals (*Ath.* 5. 210).

F. N. P.

GLAUCUS (5) of Rhegium (c. 400 B.C.) wrote an important work *On the Ancient Poets and Musicians* (used by [Plut.] *De mus.*), which began the ancient study of the history of lyric poetry. His comments on Homer and his discussion of the plots of Aeschylus may have formed part of this work. The name Glaucus has been thought to be a pseudonym of the sophist Antiphon.

FHG ii. 23 f.; E. Hiller, *Rh. Mus.* 1886. J. F. L.

GLOSSA, GLOSSARY (Greek). In Greek literary criticism γλῶσσαι meant any words or expressions (not being mere neologisms or metaphors) ἃ οὐδεὶς ἂν εἴποι ἐν τῇ διαλέκτῳ (*Arist. Poet.* 1458^b32), i.e. belonging not to the spoken language familiar to the critic (1458^b6), but to a dialect, literary or vernacular, of another region or period (1457^b4). The interpretation of Homeric γλῶσσαι, misunderstood already by Hesiod, fell, no doubt, from the first, to schoolmasters (cf. *Ar. Daitaleis*) and rhapsodes, and it appealed to sophistic interest in language: cf. Democritus, *Περὶ Ὀμηρον ἢ ὁρθοεπειῶν*

καὶ γλωσσέων. The living dialects were early used for the purpose (cf. Arist. *Poet.* 1461^a12), but, apart from Aristarchus, Alexandrian commentators, no less than the Pergamenes, usually preferred to explain by etymology, as did Neoptolemus of Parium in *Περὶ γλωσσῶν Ὁμήρου*. Interest in dialects was fostered by fifth-century linguistic speculations, and in the next two centuries by Peripatetic studies, not least in natural history and its vocabulary, and by monographs based on personal knowledge of local dialects before the levelling operation of the κοινή. The spirit of Alexandrianism in literature further encouraged search for linguistic oddities. Sometimes literary glosses were collected with only sporadic dialectal illustration, as the Homeric Glosses of Philletas and Simmias. Some specifically dialectal collections were devoted to Homer, Aleman, the Old Comedy, etc.; others were not so related to particular authors or styles, e.g. the *Φρύγλαι φωναί* of Neoptolemus, the *Ἑθνικά λεξίς* of Zenodotus (perhaps not the Alexandrian), and the *Αἰολικά γλώσσα* of Antigonus of Carystus. The *Ὀνομαστικόν*, often with dialectal variants, also became common: e.g. Callimachus compiled names of winds, fishes, and months; Dionysius Iambus had a chapter on fishermen's terms, and Eratosthenes other vocational vocabularies. Aristophanes of Byzantium excelled all in the scope and diversity of his lexicographical labours (cf. Acl. *NA* 7. 47). In his footsteps followed his pupil Artemidorus (on Doric, and cookery), Philistides (on names of family relationships), and many others, notably, in the first century B.C., Cleitarchus of Aegina, who proved a fertile source of dialect glosses under the Empire. The *Περὶ τῶν ὑποπενομένων μὴ εἰρησθαι τοῖς παλαιοῖς* of Aristophanes is a prototype of the 'Atticist' lexica which were common in the first century A.D. and still more in the following centuries. The first professed Atticist was Eirenaeus of Alexandria (end of 1st c. B.C.), and the ultimate sources of most later Atticists are also Alexandrian. As to glosses of all kinds, in the first century B.C. compilation largely displaces independent research, and almost exclusively prevails under the Empire; to the latter period, down to Constantine, the extant scholiasts and lexicographers are directly or indirectly indebted; but the sources thus absorbed have generally perished.

K. Latte, *Philol.* lxxx (1925), 136; R. Reitzenstein, *Geschichte d. Gr. Etymologika* (1897); see also under GRAMMAR, ETYMOLOGY.

P. B. R. F.

GLOSSA, GLOSSARY (Latin). The need for marginal or interlinear interpretations of difficult or obsolete words (γλώσσα) is coincident with the serious study of literature. The earliest reference to Latin glosses is in Varro (*Ling.* 7. 10: "tesca" aiunt sancta esse qui glossas scripserunt). Some of the work of Republican scholars like Opilius and Ateius was of a glossographical kind, and Verrius Flaccus was indebted to collections of glosses on Plautus, Ennius, Lucilius, etc.

2. The extant Latin glossaries (generally named from their first item, e.g. *Abstrusa*, *Abavus*, or from the home of their chief MS., e.g. St. Gall, Erfurt) cannot be traced back farther than the sixth century A.D. They arose from the needs of monastery teachers who in the first instance gathered together (as *glossae collectae*) and arranged in a roughly alphabetical order the trivial marginalia from copies of the Bible, Terence, Virgil, Orosius, etc., in their own or neighbouring libraries; only rarely did such marginalia contain any scholarly comment, and few glossary compilers had access to e.g. Festus or the *Etymologiae* of Isidore from which to borrow. Copies of a glossary thus constructed sometimes had a wide circulation; for example, *Abstrusa* (which contained material from a good Virgil commentary) and *Abolita* (which contained Festus items and Terence and Apuleius glosses) form the foundation for *Abavus*, *Asiatum*, etc.,

and above all for the huge (early 9th c.?) encyclopaedic *Liber Glossarum* or *Glossarium Ansileubi* (which also includes long passages from Jerome, Ambrose, Gregory, Isidore, etc.). The value of such glossaries is threefold: (a) their interpretations often contain Late Latin or Early Romance words; (b) they sometimes contain latent evidence for readings in the text of an author; (c) occasionally they transmit some fragment of ancient learning.

3. Amongst later collections of glosses the best known are those of Salomon (10th c.) and Papias (11th c.), both of which rely on the *Liber Glossarum*.

4. Of bilingual glossaries may be mentioned: (a) the (6th-c.?) Cyrillus glossary (Greek with Latin interpretations) wrongly attributed to the fifth-century patriarch of Alexandria and not yet fully published; (b) the Philoxenus glossary (Latin with Greek interpretations) wrongly attributed to the consul of A.D. 535; (c) the *Hermeneumata* (Greek with Latin interpretations) wrongly attributed to Dositheus; (d) glossaries with Anglo-Saxon, Celtic, or Germanic interpretations.

BIBLIOGRAPHY

J. Tolkieln, s.v. 'Lexikographie', and G. Goetz, s.v. 'Glossographie', in *PIW*; Schanz-Hosius § 1119; Fr. Lammert in *Bursian*, vol. cclii; W. M. Lindsay in *Journ. Phil.* xxxiv. 255 ff. and 267 ff.; in *AJPhil.* xxxviii. 349 ff.; in *CQ* xi. 119 and 185; in *CR* xxxi. 158 and 188; W. M. Lindsay and H. J. Thomson, *Ancient Lore in Medieval Latin Glossaries* (1921); J. F. Mountford, *Quotations from Classical Authors in Medieval Latin Glossaries* (1925). Vol. i (1923) of the *Corpus Glossariorum Latinorum* (ed. G. Goetz), entitled *De origine et fatis glossariorum latinorum*, consists entirely of prefatory material; vols. ii-v give apographs of the oldest MS. of the chief early medieval glossaries (with readings of other MSS. in the app. crit.); ii (1888) contains Latin-Greek (= Philoxenus) and Greek-Latin glossaries; iii (1892) contains the pseudo-Dositheus *Hermeneumata*; iv (1889) contains *Abstrusa* + *Abolita* (under the name *gloss. cod. Vat. lat. 3321*) and short derivative glossaries; v (1894) contains the *Placidus* glossary, excerpts from the *Liber Glossarum*, etc.; vols. vi and vii (1899-1901), entitled *Thesaurus Glossarum Emendatarum*, present the items of vols. ii-v in alphabetical and corrected form. The series *Glossaria Latina* (ed. W. M. Lindsay and others) gives critical editions of the chief glossaries with the fullest possible indication of the source of each item: vol. i (1926) contains the purely glossary material of the *Lib. Gloss.* in its entirety; vol. ii (1926) contains the *Arma*, *Abavus*, and *Philoxenus* glossaries; vol. iii (1926) contains *Abstrusa* and *Abolita*; vol. iv (1930) contains *Placidus* (and an ed. of Festus based on glossary material); vol. v (1931) contains the *Abba* and *AA* glossaries. Of Latin-Anglo-Saxon glossaries, the *Leyden* glossary has been edited by J. H. Heuzels (1906), the *Corpus* glossary by W. M. Lindsay (1921). Latin-Celtic glossaries were edited by Whitley Stokes and John Strachan, *Thesaurus Palaeohibernicus* (1901-3) two vols. with *Supplement* (1910); cf. R. Thurneysen, 'Irische Glossen' (*Zeitschrift für Celtische Philologie* xxi); and Latin-Germanic by E. Steinmeyer and E. Sievers (*Die Althochdeutschen Glossen*, 4 vols. 1879-98). J. F. M.

GLYCON (1), poet of unknown date and place to whom the *Γλυκωνέϊον* or glyconic metre is attributed by Hephaestion (p. 33, 12). Nothing else is known about him. The epigram in *Anth. Pal.* 10. 124 on the unreason of the universe is thought to be by a different poet of later date, since it appears with other late poems.

S. Leichsenring, *De Metris graecis quaestiones onomatopoeicae* (1885). C. M. B.

GLYCON (2), sculptor, of Athens; known from signature of Farnese Heracles (Winter, *KB* 333. 4) in Naples. The statue was found in the baths of Caracalla, and is proved by the ancient inscription on another example in Florence to be a copy of a Heracles by Lysippos (q.v. 2). Nothing in the copy suggests a date later than the first century B.C.

G. Lippold, *Kopien und Umbildungen* (1925), 56. T. B. L. W.

GLYCONIC, see METRE, GREEK, III (8).

GNIPHO, MARCUS ANTONIUS, a scholar of the Ciceronian age. He taught in the home of Julius Caesar and had a school of his own. His lectures on rhetoric were attended by Cicero during his praetorship (66 B.C.). He is said (by his pupil Ateius Philologus) to have composed only two books *De sermone latino*; but there is evidence that he wrote a commentary on the *Annals* of Ennius.

Cl. Tiedd, § 159. 5; Schanz-Hosius, § 105. 3. J. F. M.

GNOME (γνώμη). From the root-meaning 'expression of opinion' various specialized meanings spring, one of which is 'pregnant utterance', the pithy expression of a general thought. The sense is something like 'epigram' (in the commonest modern sense of that word), or, when the epigram has become current coin, 'proverb'. Man must have begun to think of gnomes almost as soon as he was capable of making general propositions. At any rate we meet them on the threshold of Greek literature; for Homer's αὐτὸς γὰρ ἐφέλλεται ἄνδρα σίδηρος (*Od.* 16. 294) is a gnome. The famous γνώθι σεαυτὸν and μηδὲν ἄγαν are unsurpassable for brevity. Hesiod is full of gnomes, and so, centuries later, is Euripides, in whose day the cult of the gnome in intellectualist circles is satirized by Aristophanes (see L. & S., s.v. γνωμίδιον, γνωμοτυπία, and cognate words). In prose, the gnomic tendency is strongly marked in Heraclitus (q.v., and e.g. fr. 43), and even more so in Democritus (q.v.). The use of the gnome as not merely an ingredient in poetry or prose but as a literary form in itself can be traced back to Phocylides and Theognis (qq.v.) in the middle of the sixth century B.C., and Democritus (c. 460–370 B.C.) himself talks of his works as γνωμίων (fr. 35). For the collection of gnomic sayings into anthologies, see CHREIA. See also SENTENTIA.

PW, Suppl. vi. (1935), pp. 74–90 (Horn and v. Fritz).

J. D. D.

GNOSTICISM is a modern term applied to a group of sects and theosophical writers, most if not all of whom broke with Christianity to set up eclectic systems which rivalled Catholicism, not in points of detail, but in their total outlook on life. The most important of these were Simon Magus, the Ophites, Marcion, Valentinus, Basilides, and Mani. Not all Gnostics advocated the same varieties of worship, some give no evidence of interest in cultus at all; but many groups formed sects of their own, the ceremonies and theology of which were, at least in theory, community secrets.

2. The beginnings of these radical heresies may perhaps be seen in Paul's opponents at Colossae, but the period of their greatest success was in the second and third centuries A.D. They were disseminated throughout the Empire, but exhibit a tendency to rise in and return to the Orient. Their imagery and religious temper were Oriental, and it is no accident that the first and last of the great Gnostics were Simon in Syria and Mani in Persia. Their philosophy, however, was Greek, a feature characteristic of the Hellenistic cultural tradition of which they were the last and most decadent religious product.

3. In the religion of the Hellenistic age special importance was attached to knowledge which enabled men to understand and control the forces conditioning their destiny and to adapt themselves effectively to their demands and restrictions. Confidence in the last of the great classic epistemologies, that of Chrysippus, was shattered by Carneades, and philosophy in the first century B.C. entered upon a phase of intuitionism and mysticism, playing with various combinations of Platonism and Stoicism of which the most successful was the system of Posidonius. The material and phenomenal worlds were connected by a middle ground in which intermediate dynamic forces were released in dramatic interplay. These forces could be unified as the activities of the divine mind (*logos*) to which man had immediate and intuitive access, or personalized and imagined as the background of cult legends. Plato's *Timaeus* and the early chapters of Genesis lent themselves easily to this treatment and we have examples of non-Christian gnosticism in Philo and in Hermetic literature, and relatively orthodox Christian parallels in Clement of Alexandria and Origen. To popular apprehension this knowledge was communicated by revelations contained

in sacred books and dramatized in esoteric rites. The books gave accounts of the origin and history of the universe and of the life and death of a god who offered salvation to his followers; the rites involved participation of the imagination and feelings in the heroic events of the god's career and a share in their supernatural benefits which included security (*soteria*) from the ruthlessness of fate and the hostility of demons and men, and the assurance of a happy life after death.

4. To the educated adherents of these cults of salvation through knowledge the mythical revelations symbolized an abstract philosophy; to the uneducated they became the vehicles of superstition and undisciplined living. Astral speculation found a ready reception into this mixed world of thought and fancy and Marcus' eucharistic hocus-pocus, and the text regarded by Dieterich as a liturgy of Mithras shows its magical aspects, while an inscriptional record of a vision of Mandulis Aion strikingly illustrates the underlying zest for revelations.

GOLD (χρυσός, *aurum*). Gold is a rare metal in Greece, and the source of the rich treasures found in tombs of the Bronze Age (Mycenae, etc.) is unknown. The island of Siphnos prospered in the sixth century B.C. by its gold production; later the mines were flooded. Mines on Thasos, opened by the Phoenicians, were working in 'Thucydides' day. Macedonia and Thraee had a large auriferous area, where the mines of Mt. Pangaea were working before 500 B.C. More fruitful than the home supplies were probably those from overseas. Nearest at hand were Mysia, Phrygia, and Lydia; their fame as gold-bearing lands is attested by the stories of Midas, Croesus, and the river Pactolus. Colchis also furnished gold, and Scythians brought supplies from inner Asia. Yet there was a scarcity of gold in Greece until the conquests of Alexander made available the hoards of Persia.

Early Etruscan tombs show a wealth of gold furniture comparable to that of Bronze Age Greece. Traces of early mining are found in several districts of Italy, in particular the Pennine Alps. At Rome the metal long remained rare; it probably first became common through war indemnities. Under the late Republic and early Empire the main source of supply was Spain, where the north-west and Baetica yielded immense quantities. Gold was also mined in southern France and dredged

from rivers in other parts of Gaul; there are also workings in south Wales. After the first century the western gold-fields were largely superseded by those of the Balkans, Noricum, and Dacia. When the supply from these fell off during the third century a shortage of the metal appears to have been generally felt.

GONATAS, ANTIGONUS, see ANTIGONUS II.

GORDIAN. **GORDIAN I** (MARCUS ANTONIUS GORDIANUS), Roman emperor, A.D. 238, was descended on his father's side from the Gracchi, while his mother was a relative of Trajan. When proconsul of Africa he was at the age of eighty-one invited to become emperor by some young nobles who had conspired against Maximinus. From a mixture of fear and ambition he accepted, and assumed his son, **GORDIAN II**, as colleague. The Senate and most of the European provinces acknowledged him, but Capellianus, governor of Numidia, rebelled and moved on Carthage. Gordian II opposed his legionary army with a volunteer militia, and when he was killed his father committed suicide after a reign of twenty-two days (238).

GORDIAN III, son of Gordian I's daughter Maccia Faustina, was, after the murder of Balbinus and Pupienus (see **BALBINUS**) in A.D. 238, saluted emperor by the Praetorians at the age of 13. The conduct of affairs was at first in his mother's hands, but in 241-4 it passed to the praetorian prefect Timesitheus (q.v.). In 242 Timesitheus accompanied Gordian to the Danube to repel an invasion of Goths, and the next year defeated the Persians at Rhesaena. But while a campaign against Ctesiphon was being planned he died of an illness. In his place Gordian appointed an Arab called Philippus, who soon showed his imperial aspirations. Profiting by a food shortage he appealed to the soldiers who wanted a man, not a boy, as their ruler. Gordian was murdered at Zaitha in 244 (see **PHILIPPUS I**).

For bibliography see **MAXIMINUS I**.

H. M. D. P.

GORGAS (1) of Leontini (c. 483-376 B.C.), sophist and rhetor, who won renown at Athens (427) by his eloquence, wrote a philosophical treatise, in which he despaired of attaining positive knowledge, and then devoted himself to revealing the power of λόγος and the value of artistic form in prose speech. The treatise (*Περὶ φύσεως ἢ π. τοῦ μὴ ὄντος*) is lost, but it is known to have maintained three theses—that nothing exists; that if anything exists, it is unknowable; that if anything can be known, the knowledge cannot be communicated by language. The chief philosophical influences which G. came under seem to have been Empedocles and Zeno the Eleatic. The *Ἑλπίς ἐγκώμιον* and *Παλαμήδης* have survived, as well as a few fragments of his speeches (*Πυθικός*, *Ὀλυμπικός*, *Ἐπιτάφιος*). He wrote no *πέρων*, and his teaching is gathered from his writings and from the remarks of Plato and others. He aimed at a prose which should rival poetry in its effects. Hence his advocacy of (1) poetic words, metaphors, coinages, (2) figures embodying parallelisms and musical effects (anaphora, parallelism, paronomasia, assonance, rhyme), as substitutes for metre. He also pointed out the effects of propriety, brevity, prolixity (*αὐξησις*), and other devices (Kroll, *Rhet.* § 6). As the founder of artistic prose he made the teaching of style an essential part of rhetoric.

Testimonia and fr. in Diels, *Vorbereit.* 2, 271-307. PF vii, 1898. J. W. H. A.

GORGAS (2) (1st c. B.C.), Athenian rhetor of Atticist tendencies (Sen. *Centur.* 1, 4, 7), who taught Cicero's son 44 B.C. and wrote *Π. ὑψηλότερον* (lost), which was illus-

trated by examples drawn from classical and Asiatic orators and was translated into Latin (abridged) by P. Rutilius Lupus (Halm, *Rhet. Lat. Min.* 3-21). J. W. H. A.

GORGON or **MEDUSA**, a terrible monster in Greek mythology. G. was the daughter of the marine deities Phorcys and Ceto. She had a round, ugly face, snakes instead of hair, a belt of the teeth of a boar, sometimes a beard, huge wings, and eyes that could transform people into stone. She had two immortal sisters, who in art are also shown in the shape of Gorgons, Sthenno ('the Strong') and Euryale ('the Wide Leaping'), with whom she lived in the far West, where Poseidon loved her. Perseus went in search of the G., killed her with the aid of Athena, and escaped (Hes. *Theog.* 270). The head of G. adorned the aegis (q.v.) of Zeus and also that of Athena (*Il.* 5. 738). From the body of the G. blood sprang forth; from one vein blood that Asclepius used to revive the dead, from the other blood which he used to harm men (Apollod. 3. 120). In the moment of her death Gorgo-Medusa gave birth to Pegasus and Chrysaor.

The myth of Gorgo-Medusa as known in classical Greece contained religious and folkloristic elements of diverse origin. The head of Gorgo, buried under the Agora of Argos (Paus. 2. 21. 5), seems to indicate that the Gorgoneion was originally an independent embodiment of apotropaic power. Medusa again may have been originally an independent earth goddess (L. Maltin, *JDAI* 1914, 184; 1925, 121 ff.). In art, Perseus killing Gorgo and pursued by Gorgons is a popular subject during the archaic period; Gorgo alone, a running winged daemon, is also frequently shown, especially in Corinthian art. In the Classical period G. is humanized, and Hellenistic representations develop a definitely beautiful type of head for the dying maiden Gorgo (cf. Cic. *Verr.* 4. 124). Her head always remained a popular apotropaic symbol.

GORTYN, one of the most important towns of Dorian Crete, was situated in the southern central plain of the island. Many ruins have been excavated, and many inscriptions found, among them the famous 'Code of Gortyn', containing large parts of a supplementary codification (probably c. 450 B.C.). It included many older laws, or referred to them; some of these are also preserved in other inscriptions. The code contains rules of civil law only, but some facts of public law are mentioned. The laws, lacking systematic order, deal with the family and family-property, with slaves, surety, donations, mortgage, procedure in trials, and other items. Generally in accordance with what we know about early Greek and Indo-European legal usage, the code of Gortyn is a mixture of primitive and developed regulations. Most interesting is the position of the slaves, who had certain rights for their protection; they were also allowed to have their own property, and even to marry free women. There was a clear distinction, especially in matters of hereditary right, between family and private property. There were detailed and rather liberal regulations on adoption and sole heiresses. Criminal law was still closely connected with family law, but in many cases money penalties had replaced previous forms of punishment, and frequently the fines were payable to the State. Self-defence was forbidden. Witnesses and compurgators, and the oath of the party, served to establish a case; but the judge decided at his own discretion. On the whole, the laws of Gortyn are the most important source of pre-Hellenistic Greek law, and reveal rather a high standard of juristic conceptions.

GOTHS, a German tribe which had migrated from its original home, Götaland in south Sweden, to the lower Vistula by the first century B.C. In the second century A.D. they began to displace tribes farther south, and by the third century their advance-guard was settling in south-west Russia, whence they transmitted the influence of Graeco-Sarmatian culture to the Germanic north and west. C. A.D. 238 they began to raid the Roman Empire. They harried Greece and Asia Minor as well as the Danube provinces; successive emperors failed to drive them out until the victories of Claudius Gothicus (268-70) stemmed the tide. The division into Ostrogoths and Visigoths now began to form; the Visigoths made good their hold on a large part of the old province of Dacia, and Constantine, after much warfare, made a treaty with them. He also re fortified the Danube frontier, and the peace was maintained in general for thirty-five years. Many Goths served with the Roman armies. The Ostrogothic kingdom between Dnieper and Don became large and powerful under Hermanric (mid-fourth century), but was brought to a sudden end by the invasion of the Huns (370), and the Ostrogoths were driven in the wake of the Visigoths to seek asylum in the Empire. In 376 the Visigoths had entered Moesia, and in the resultant war Valens was defeated and slain at Adrianople (378). Theodosius was able to subdue them, but allowed them to remain. Under Alaric they invaded Italy and sacked Rome (410); they were finally diverted to Gaul, where they founded the kingdom of Toulouse (419) and extended their dominion over Spain. The Ostrogoths entered Italy later and set up a kingdom under Theodoric (493). In the middle and later fourth century Christianity was penetrating among the Goths, through the efforts of missionaries such as Ulphilas, but the majority of them embraced Arianism, which embittered their subsequent conflicts with the Empire.

Iordanes, *de Getis*; Ammianus; Zosimus. L. Schmidt, *Geschichte der deutschen Stämme—Die Ostgermanen* (1934), 195-528. O. B.

GRACCHUS (1), TIBERIUS SEMPRONIUS (cos. I 215 B.C.), curule aedile (216) and *magister equitum* to Junius Pera after Cannae, commanded two legions of *volones*, slaves enrolled after Cannae. As consul he thwarted Hannibal at Cumae, as proconsul (214) near Beneventum he defeated Hanno who was trying to join Hannibal from south Italy. Consul II (213); as proconsul in 212 he was surprised and killed probably in Lucania. H. H. S.

GRACCHUS (2), TIBERIUS SEMPRONIUS, the censor, was augur in 204 B.C., accompanied the Scipios to the East in 190, negotiating with Philip V, and as tribune at the time of the prosecution of L. Scipio saved him from imprisonment. Envoy to Greece in 185, he became curule aedile in 182, and as praetor in 180 succeeded Q. Fulvius Flaccus in Spain. Here he completed the reduction of the Celtiberians by systematic operations and a liberal settlement (180-179), founding Graechuris and giving peace for a generation. Consul in 177, he ruthlessly subjugated Sardinia (cf. Livy 41. 28. 8-10). Censor in 169, with C. Claudius Puleher, he intervened in the levies, opposed the *publicani*, and restricted the rights of freedmen; his austerity became famous. He served on embassies to the East (165, 161), was again consul (163), and died in 154. A man of high character and liberal thought, a fine strategist and great colonial governor, he dominated the policy of foreign consolidation and internal restoration towards the middle of the century. He married Cornelia, daughter of Scipio Africanus, and his twelve children were followed by Tiberius and Gaius Graechus.

Livy 37. 7; 38. 52 ff.; 39. 24 and 33; bks. 40-5; Polyb. bks. 25 and 31-2; Appian, *Hispan.* 43; Gellius 6. 19; Cicero, *Proo. Cons.* 8. 18. A. Schulten, *Numantia* I (1914), 329; De Sanctis, *Stor. Rom.* iv. 1, 240, 440, 463, 596, 611; J. Carcopino, *Autour des Gracques* (1928), 47; A. H. McDonald, *JRS* 1938, 163, *Cambr. Hist. Journ.* 1939, 135, 138; R. M. Geer, *TAPA* 1938, 381. A. H. McD.

GRACCHUS (3), TIBERIUS SEMPRONIUS, tribune in 133 B.C., the great reformer and founder of the party of the *Populares*, was the son of Gracchus (2) and of Cornelia (q.v. 1), and the husband of Claudia, daughter of App. Claudius (q.v. 9), cos. 143. Educated, like his brother, by Greek philosophers, he was apt to apply Greek democratic conceptions and methods in Roman politics, just as contemporary Roman jurists introduced Greek practices and ideas into the Law. He served under his sister's husband, Scipio Aemilianus, at Carthage in 146; as quaestor, in 137, he took part in the Numantine War, and after the defeat of Mancinus (q.v.) negotiated terms which the Senate rejected; hence perhaps arose his later bitterness against the *Optimates*. We may trust his brother's testimony that the sight of the *latifundia* (q.v.) of Etruria, on Tiberius' journey to Spain, inspired him to proceed with the agrarian scheme of C. Laelius 'Sapiens'.

Tiberius' Agrarian Law aimed at recovering the vast tracts of public land from its *possessores* (each of whom could, however, retain 500 *iugera*, plus an extra 250 *iugera* for each of 2 sons). On the land thus made available, poor citizens were to be settled as tenants, paying rent to the Treasury. Tiberius thus hoped to restore the old yeoman-farmer population which had always been the backbone of the Roman armies. The board of *IIIvirs* appointed to carry out this plan consisted of Tiberius' father-in-law, Appius Claudius, and of the brothers Tiberius and Gaius Graechus. Though the proposal roused intense opposition from large landowners, including most of the Senate, it was supported by such influential men as the jurist, P. Mucius Scaevola (cos. 135) and his brother Crassus Mucianus, Gaius' father-in-law. To obtain funds for equipping the new settlers Tiberius introduced a plebiscite ordering that some part of the legacy of Attalus III of Pergamum should be devoted to this end; Tiberius thus invaded the Senate's field of financial control and possibly also of foreign policy.

When Octavius (q.v. 2) suddenly vetoed the Agrarian Bill, Tiberius created a constitutional crisis by insisting, on Greek principles, on the deposition of Octavius. The Bill was then passed, but a further crisis followed when Tiberius presented himself for re-election as tribune, for which there was no recent precedent. Tiberius was killed on the day of the elections by his cousin Scipio (q.v. 12) Nasica.

Many of Tiberius' partisans were executed in 132 (see *POPILLIUS LAENAS*): but the work of the *IIIvirs* continued successfully, as is shown by the census-lists.

Sources: Greenidge and Clay, *Sources* 1-10, cf. F. B. Marsh, *Hist. Roman World*, 378-80. Modern works: A. H. J. Greenidge, *A History of Rome* i, chs. 1-5; H. Last, *CAH* ix, ch. 1; J. Carcopino, *Autour des Gracques* (1928); G. Cardinali, *Studi Graccani* (1912); D. Konechalowski, *Rev. historique cliii* (1926), 161 ff. M. H.

GRACCHUS (4), GAIUS SEMPRONIUS, husband of Licinia (daughter of Crassus Mucianus), was the great organizer of the reform-party founded by his elder brother Tiberius. He proceeded vigorously, after Tiberius' death, with the work of the Agrarian Commission; and, returning specially from service in Sardinia, was elected tribune for 123 B.C. with a well-prepared series of reforms. The exact order of these measures, and even their distribution between the years 123 and 122, is uncertain; but their underlying aim was clearly to undermine the Senate's authority by uniting permanently with the plebs the rich business class (later known as the *Equites*). By the *Lex Acilia* (probably 123) the *Equites* were given control of the jury-courts for *res repetundae* (q.v.); by Gaius' own enactment they were favoured by the arrangement that the censors should sell, at Rome, the lucrative contracts for the tithes of the province of Asia. Gaius also enabled them to enrich themselves, while serving the State by their ability,

through contracts for carrying out his big plans for road-building in Italy, and for providing warehouses and wharves in connexion with his improvement of the corn-supply of Rome. Gaius attracted various elements among the poorer plebeians by providing corn at reasonable prices, by re-enacting Tiberius' Agrarian Law (restoring the judicial powers which the *Illviri* had lost in 129), and by a large programme of colonization both in Italy and overseas, including Tarentum and Carthage (to be named Junonia). A declaratory law was also passed (under which Popillius (q.v. 2) was exiled); it insisted that capital courts could only be established by the people. Gaius, however, was prevented by his mother from passing a law, aimed at Octavius (q.v. 2), precluding men deprived of office by the people from standing for further offices.

In Gaius' second tribunate (122) resistance hardened; the counter-proposals of Drusus (q.v. 1) may have attracted the plebs, and the *volte-face* of Carbo (q.v. 1) was perhaps symptomatic of a feeling among moderate reformers that Gaius' plans were too revolutionary. The most far-reaching (and far-seeing) of Gaius' proposals, in which he followed the aims of Fulvius (q.v. 4) Flaccus for the extension of the Roman citizenship to Latins and Italians, was not passed; and he failed to obtain reelection to a third tribunate. A riot followed, in which Flaccus and the extremists carried matters beyond the wishes of Gaius himself. The consul Opimius was called by the Senate's *Ultimum Decretum*, then first used, to defend the State; and Gaius was killed in the struggle. The resultant legacy of bitter hatred led directly to the violent party-strife of the Marian period—and, in due course, to the fall of the Republic.

Greenidge and Clay, *Sources*, 19-36. For modern works see above, s.v. GRAECINUS (3), esp. II. Last, *CAH* ix, ch. 2. M. II.

GRAECINUS, JULIUS, quoted by Columella (e.g. i. 1. 14; 4. 3. 6) for his work on vines; probably son of the Graecinus addressed by Ovid, *Am.* 2. 10, *Pont.* 1. 6, and father of Julius Agricola (Tac. *Agr.* 4), whose name may allude to farming tastes. Agricola's father was executed A.D. 39 or 40. J. W. D.

GRAIAE (*Γραῖαι*), in mythology, daughters of Phorcyx and Ceto, by name Pemphredo, Dino, and Enyo, sisters of the Gorgons (Hes. *Theog.* 270 ff.); they were three (Aesch. *PV* 794 ff.). They are an incarnation of age, grey-haired from birth (Hesiod), with one eye and one tooth left (Aesch.). Perseus (q.v.) stole their eye and so made them tell him the way to the Gorgons (Pherecydes ap. schol. Apoll. Rhod. 4. 1515); or threw it away (Aesch. ap. [Eratosth.] 22) and left them blind and unable to help their sisters. H. J. R.

GRAMMAR, GRAMMARIANS (Greek). Linguistic analysis and classification begin, in Greece, with the fifth-century sophists. Their phonetic studies are reflected in the title of a lost work of Democritus 'On euphony and cacophonous letters', in a fragment of Euripides' *Palamedes* *ἄφωνα καὶ φωνεῖντα συλλαβὰς τιθεῖς* . . . Plato (*Cra.* 424 c; cf. *Th.* 203 b) mentions a classification of the alphabetic sounds as (a) voiced (the vowels), (b) *ἄφωνα* but not *ἄβλαβγα* (the *ἡμίφωνα* of Aristotle), and (c) *ἄφωνα καὶ ἄβλαβγα* (the largest class); the last are the *ἄφωνα* of the Alexandrians, who followed Aristotle in dividing them into *δαδά*, *ψιλά*, and *μέσα* (*χ θ ς, κ τ ρ*, and *γ δ β*), and used *συμφωνία* (consonants) to include both second and third classes, (b) and (c) above.

2. Plato notices two distinctions of accentual intonation, 'acute' and 'grave' (*Cra.* 369 b). Aristotle also a third, intermediate, our circumflex (*Post.* 145^b 33). In Pa.-Arcad. at p. 185—probably a sixteenth-century interpolation—Aristophanes of Byzantium is said to have invented signs for the accents (and other marks); but

earlier work in this subject was eclipsed by that of Aristarchus.

3. Grammatical classification of words begins with Protagoras, who first distinguished *γένη ὀνομάτων* as *ἄρρενα*, *θῆλεα*, and *σκεύη*. Aristotle has the same terms, but sometimes uses *μεταξύ* for *σκεύη*, and notes that many *σκεύη* are *ἄρρενα* or *θῆλεα*. Later, *οὐδέτερον* (neuter) came into use, and *κοινόν* (common) was added, and *ἐπίκοινον* (i.e. of one gender but used of both sexes).

4. Plato (*Soph.* 261 d) makes a practical discrimination between examples of two classes of words, *ῥήματα* and *ὀνόματα*, distinguished by their potential functions as predications and designations respectively, in a sentence. Aristotle (*Poet.* 20) names and defines *ὄνομα*, *ῥήμα*, *σύνδεσμος*, and *ἄρθρον*; but as to the two last the text is disputed as to both definitions and examples. These four, however, with *στοιχεῖον*, *συνλαβή*, *πῶσις*, and *λόγος* (composite statement—possibly without verbs) Aristotle calls parts of speech. He includes under *πῶσις* all forms of the noun (which comprises also our pronoun, adjective, and adverb) other than the *κλήσις*, our nominative, and all verb-forms except the present indicative (*ῥήμα* in the narrowest sense). These flexions, whether nominal or verbal, have no separate names. Subject and predicate are distinguished as *ὑποκείμενον* and *κατηγορημένον*.

5. The stages leading up to Stoic grammar are obscure. There is evidence that Chrysippus discriminated *τὰ προσηγορικά*, perhaps as a class of noun. Diogenes Babylonius recognized five parts of speech—Aristotle's with the addition of *προσηγορία* (common noun). His pupil, Antipater of Tarsus, added a sixth, named by him *μεσότης* (as allied to noun and verb), by others *πανδείκτης*, but excluded from the final Stoic classification, which was the same as that of Diogenes. The terminology of inflexion—as of most phenomena—was greatly developed by the Stoics. In Chrysippus, *On the Five Cases*, the fifth was almost certainly the adverb (cf. Aristotle); for the Stoics did not reckon the vocative a case. The nominative they called *ὀρθή* or *εὐθεία*; the others (*πλάγαι*, oblique) were *γενική*, indicating a *γένος*, *δοτική*, used after verbs of giving, and *αἰτιατική*, denoting the *αἰτιατόν*, the result caused. A tense (*χρόνος*), present (*ἐνεστώς*) or past (*παρωχημένος*), might be *ἁτελής* (sometimes called *παρατακτικός*), imperfect, or *τέλειος* (or *συντελειός*), perfect; a past tense might be described as *ἀόριστος*, undefined in respect of this distinction. The future tense was named *ὁ μέλλων* (*χρόνος*). Predications by finite verbs (*κατηγορηματα* or *συμβάματα*—*ῥήματα* being, in contrast, restricted to the infinitive) were classified as active (*ἐνεργητικά*), passive (*παθητικά*, including reflexives, *αἰτιπεποιθότα*), and *οὐδέτερα* (neuter, e.g. *ζῶ*); or, on another basis, as complete (our intransitive) and incomplete (our transitive—requiring an object), with other refinements as to *παρασυμβάματα* (e.g. *μέλει μοι*).

6. From their predecessors the Alexandrians adopted *ὄνομα* (but not, as an independent part of speech, *προσηγορία*), *ῥήμα*, *σύνδεσμος*, and *ἄρθρον*; also the adverb (including our interjections), under a name, *ἐπίρρημα*, the history of which is obscure. To these they added *ἀντωνυμία* (personal and possessive pronouns only) and *πρόθεσις*—a term which Chrysippus used, but in what sense does not appear; the later Stoics had a class of *πρόθετικοί σύνδεσμοι*. The eighth part was created by separating the *μετοχή* (participle) from the verb; and some proposed, in vain, to give the infinitive and possessive adjective a like status. These eight were known to Aristarchus, and were standardized by the text-book of his pupil, Dionysius (q.v. 16) Thrax.

7. Systematic syntax made little progress until the first century A.D. (see HAUSSON and THOM 1); the next century saw, however, the great and original work of Apollonius (q.v. 15) Dyscolus.

For the history of kindred studies, see GLOSSA (GREEK) and ETYMOLOGY.

J. E. Sandys, *Hist. of Class. Schol.* i (1903); L. Lersch, op. cit. (1838-41, unreliable); H. Steinthal, *Geschichte d. Sprachwissenschaft b. d. Gr. und Römern* (no index); Christ-Schmid-Stählin. The most important Greek grammarians have been, or are to be, published in Teubner's *Grammatici Graeci* and *Lexicographi Graeci*. P. B. R. F.

GRAMMAR, GRAMMARIANS (Latin). The Romans' interest in formal grammar was stimulated, even if not first aroused, by Crates of Mallos (c. 169 B.C.). The Greek influence on Roman grammatical theory was permanent and is clearly indicated by the Latin terminology, e.g. *casus* (πτῶσις), *accentus* (προσῳδία), *coniugatio* (συνζυγία). It was the doctrines of the Stoic scholars of Pergamum in their *τέχνη περὶ φωνῆς* (a part of the theory of *διαλεκτική*), and not (as is sometimes asserted) the work of Dionysius Thrax, which afforded the model for Roman grammatical treatises. The short school grammar, no less than the large comprehensive expositions, had three essential sections: (a) on *vox, littera, syllaba*, with an introduction defining *ars* and *ars grammatica*; (b) on the parts of speech with details of declensions, conjugations, etc.; (c) on the *vitia* and *virtutes orationis*. When fully expanded, section (b) treated each of the eight *partes orationis* according to their *accidentia*: thus, nouns (including adjectives) were subdivided according to *qualitas* (*propria* or *appellativa*), *genus* (= gender), *figura* (*simplex* or *composita*, as *felix*: *infelix*), *numerus*, and *casus*; verbs according to *qualitas* (as *perfecta*, *inchoativa*, etc.), *genus* (*activum, passivum, neutrum, deponens*), *figura* (*simplex* or *composita*), *persona*, *numerus*, *modus*, *tempus*, *coniugatio*. Section (c) included discussions of *barbarismus, solecismus, cetera vitia* (e.g. *pleonasmus, tapinosis, tropi* (e.g. *metaphora, onomatopoeia, metaplasmas, schemata lexeos, and schemata dianoae*). Syntax was treated incidentally in sections (a) and (b), but sometimes (as in Priscian) a further section *de constructione* was appended. The later grammars frequently included other sections: *de orthographia, de differentiis, de idiomatibus* (i.e. divergencies between Greek and Latin usage, e.g. *sequor te*: σοὶ ἑπομαι), *de metris* (in which all metres were frequently derived by *additio* and *deductio* from the dactylic hexameter and the iambic trimeter); but these topics were often the subjects of separate treatises.

2. Interest in grammatical matters is first attested in the ninth book of Lucilius. In the second century B.C. Aelius Stilo, in the first century B.C. Gniphio, Opilius, Cosconius, Ateius, Nigidius Figulus, and Santra are known as writers on grammar; but it is Varro's grammatical system (included in bk. 1 of his lost *Libri disciplinarum* and implicit in his *De Ling. Lat.*) which is the earliest we can reconstruct with any fullness. He distinguished only four parts of speech: nouns (including adjectives and pronouns), verbs, participles, and particles (including adverbs). The genitive, dative, and ablative cases he called *casus patricius, casus dandi, and casus sextus* (the last of which persisted for centuries alongside of *ablativus*); and nouns he grouped according to the ending of the nominative singular. The terms *declinatio* and *modus* were apparently not used by him, nor were the conjugations clearly defined.

3. No complete grammatical work of the first century A.D. is extant (if we except the very interesting sketch in Quintilian 1. 4-8), but the *Ars* of Remmius Palaemon, known to Quintilian and quoted by later writers, was clearly a work of great importance. Planned on a large scale, it brought a new clarity into grammatical exposition. The eight parts of speech are now satisfactorily differentiated, the ending of the genitive singular becomes the basis for classification into declensions, and the four conjugations (I, II, III *correpta*, III *producta* [= IV]) are distinguished by the final syllable of the

second person singular present active indicative. Furthermore, the practice of illustrating points by quotations from standard authors is firmly established.

4. Except for the *De Orthographia* of Velius Longus and a similar work of Terentius Scaurus, nothing remains of second-century A.D. grammatical work, though both these writers, like Flavius Caper, seem to have written comprehensive grammars. Of the third-century writers, Julius Romanus is known only by fragments, and the relatively short work of his contemporary Sacerdos (which omits the *vitia et virtutes orationis* and includes a section on metre) remains as our oldest extant Latin grammar. Possibilities of originality and innovation were apparently exhausted by the fourth century; for, apart from short grammars of the school-book type (e.g. Aelius Donatus), authors either boldly copied out with minor modifications large sections of their predecessors' work (e.g. Charisius) or fashioned a minute mosaic of borrowed phrases and ideas (e.g. Diomedes); in either case they achieved a fictitious novelty by their combination of sources and their illustrative quotations. To this century belong, besides those mentioned, Albinus, Cominianus, Marius Victorinus, Servius (who expanded the *ars* of Donatus), and the bilingual Dositheus. From the fifth century have been preserved the treatises of Asmonius, Cledonius, Consentius, Phocas, Pompeius, and Rufinus, none of which is of major importance; but the early sixth century witnessed the publication of the vast grammar of Priscian (in eighteen books) which remained a standard work of reference for grammatical matters in the Middle Ages.

H. Keil (and others), *Grammatici Latini*, 8 vols. (1855-78), contains all the extant treatises of third to sixth centuries A.D. (but for Charisius the standard ed. is now that of Karl Barwick, 1925; for Dositheus, that of J. Tolliehn, 1913); G. Funaioli, *Grammaticae Romanae Fragmenta* (1907), gives the remains of Republican and early Imperial grammarians. A. Gudeman, s.v. 'Grammatik' in *PW*; K. GRAMMATEIS, secretaries, of various kinds; generally not responsible magistrates, though like them elected (mostly by lot), and serving for a year only. They are found in most Greek States (sometimes called *γραμματισταί* or *γραφεῖς*). In Athens the *grammateis* of the Boule was, until c. 367 B.C., an elective official; but he served for a prytany only. After this the Boule had two secretaries, both elected by lot (but not from the *bouleutae*) and serving for one year. The *γραμματεὺς τῆς βουλῆς* performed the general secretarial duties. The *γραμματεὺς κατὰ πρυτανείαν* supervised the copying, registering, and preserving of all State documents, and (at first) arranged for their publication when this was ordered; his name was normally put at the head of a published document as a guarantee of its accuracy. The *γραμματεὺς τῷ δήμῳ* or *τῆς πόλεως* read out dispatches, etc., to the Ecclesia. The *prytaneis* (q.v.) also had a *grammateus* (one of their own number); and collegiate magistracies, as the Eleven, the *Hellenotamiai*, the *Thesmothetai*, had theirs—the last chosen from the *phyle* not represented by the nine archons, and performing some duties for his *phyle*.

A more important official, though serving for a year only, was the *γραμματεὺς τοῦ κοινοῦ* or *τῶν συνέδρων* of Federal States, such as the Actolian and Achaean Leagues. He generally ranked next after the higher military officers. A. W. G.

GRAMMATICUS in rhetoric has a wider meaning than 'grammarian', and implies a professor of literature, who carried on the clementary work of the *litterator* and trained a student for advanced rhetoric or even trenchanted in its province. (Quint. *Inst.* 2. 1. 4-6). The Greek *γραμματικός* supplanted the Latin *litteratus*: *grammatici* were *poetarum explanatores* (Cic. *Div.* 1. 116) and

expounders of a still more extensive field of knowledge (Cic. *De Or.* 187). Suetonius (*Gram.* 4) gives an instructive summary. See EDUCATION, III. 3. J. W. D.

GRANIUS LICINIANUS wrote a handbook of Roman history in annalistic arrangement going back ultimately to Livy, but including antiquarian material, e.g. signs and wonders, anecdotes, and curiosities. The remains, preserved in a London palimpsest, come from bks. 26 (?), 28, 33 (?), 36, referring to events of 165, 105, 78 B.C. The work, which shows archaism in style, an interest in Sallust, and the aim of school use, was written after Hadrian's completion of the Olympieum in Athens, and may be Antonine in date.

GRAPHE (γραφῆ) in Athenian practice was a public suit in which the plaintiff could be a volunteer (ὁ βουλόμενος), whereas in a private suit (δίκη) no one but the party concerned could be plaintiff. The injured party could always bring a criminal action in his own behalf. The designation γραφή indicates that the indictment was written, while a δίκη was initiated orally. A plausible reason for this distinction is that commonly the plaintiff was a stranger whose name should be recorded at the inception of the prosecution. The γραφή was doubtless a device of Solon (G. Calhoun, *Growth of Criminal Law* (1927), 104). When the court fixed the penalty (ἀγών τιμωτός) a second trial was held forthwith to decide between the penalty asked by the plaintiff and that suggested by the defeated defendant. R. J. B.

GRAPHE PARANOMON (γραφῆ παρανόμων) was an action at law which might be taken under the Athenian democracy in order to annul a resolution of the Boule or Ekklesia, on the ground that it contravened an existing statute, or that it had been passed by an improper procedure. It was usually directed against the person who had moved the resolution or had put it to the vote, and the dicastery which tried the case might impose upon him any penalty at its discretion. After the lapse of twelve months from the passing of the resolution, an action might no longer be taken against the mover or the presiding magistrate, but the measure itself might be submitted to a dicastery for confirmation or annulment; in this case the Ekklesia appointed advocates (συνδικοί) to plead in its defence. The date at which the *Graphē Paranomon* was instituted is uncertain: it is first mentioned in connexion with the Revolution of the Four Hundred (411 B.C.). In the fourth century it was frequently used as a means of obstruction by rival politicians; but it probably served a useful purpose as a check upon precipitate action by the Boule or Ekklesia. M. C.

GRATIAE, see CHARITES.

GRATTIUS 'FALISCUS' (less correct 'Grattius', Buecheler, *Rh. Mus.* xxxv (1880), 407; *CIL* vi. 19-117 ff.; his connexion with Falerii, based on l. 40 and the epithet 'Faliscus' reported from a lost MS., are not universally accepted), Augustan poet contemporary with Ovid before A.D. 8 (*Pent.* 4. 16. 34), has left one work in about 540 hexameters, the *Cynegetica*. In it he treats of the chase and especially the management of dogs for hunting. It is difficult to decide whether he owes anything to Xenophon (or pseudo-Xenophon) and Plutarch; for his list of breeds of dogs he may have used an Alexandrian source. The Latin influence most operative upon him is that of Virgil's *Georgics*; borrowings from the *Aeneid* are less certain. Authorities differ as to his influence on the similar poem by Nemesianus, third century. See DIDACTIC POETRY, LATIN.

The earlier part of his work, after a proem, deals with equipment for capturing game (nets, snares, spears, and arrows); the remaining and longer part (150-541) deals with huntsmen, dogs, and horses. Here, the allotment of nearly 300 lines to dogs (their breeding, points, and ailments) justifies his title. Fortunately for a reader's interest, G. diversifies his theme by the introduction of episodes. There is pleasant relief in these digressions—a eulogy on the chase, the accounts of two clever huntsmen (Dercylus and, considerably later, Hagnon), the homily on the deleterious effects of luxurious fare on human beings (somewhat amusingly juxtaposed with plain feeding for dogs), and two descriptive passages, a Sicilian grotto and a sacrifice to the huntress deity Diana. The concluding portion on horses is mutilated. Good scholars have praised the elegance of Grattius' hexameters; his alliterations may imply imitation not only of Virgil but of earlier Latin poets.

GREECE (*Geography*). Greece constitutes, in regard to its land-forms, the terminus of the central mountain structure of southern Europe. From the central Alps a southern extension of mountain ridges, the Dinaric Alps, runs south-east; over the Greek frontier Mt. Olympus and the main range of Pindus and the central Greek mountains that divide Epirus from Thessaly constitute the concluding portion of this Dinaric Alpine projection. The three prongs of the Peloponnese are its final terminations, except where it emerges again as the island of Crete and swings due eastwards to link up with the Taurus range in Anatolia. Crete is definitely the end of the curve of this submerged mountain ridge, for the depth of water on the south side of Crete is the greatest in the Mediterranean (2,000 fathoms to the west and 1,350 to the east). The Cyclades are the emergent subsidiary and minor peaks of the sunken mountain terminus. It seems that the whole southern extension of this main mountain mass acquired an inclination on the south that led to its submergence. There is no high ground in Africa which resumes the system. Asia Minor is largely independent of this main structure, belonging as it does to the Asiatic systems, which run mainly west-east. The Aegean probably formed a depression in the land between Greece and Asia Minor.

2. Geologically, Greece is composed of rocks mainly Tertiary, consisting principally of grey-blue limestone. In places Cretaceous formations are known, as in Crete and Cephalonia, where a soft yellow rock prevails. Granite emerges in certain places such as Delos, or on the Thracian coast. The blue limestone mountains have, in some places, been metamorphosed under great pressure into crystalline forms, and the upper parts of many mountains and islands are thus of marble. Thasos in the north, Paros and Naxos in the Cyclades, and Mt. Pentelicus at Athens were all sources of white marble. Coloured marbles are found at Tenos in the Cyclades (red), at Skyros (variegated), Euboea (green striated), and Thessaly (*verde antico*). These were always sources of income to Greece. Some mountains, like Mt. Hymettus, are only partly metamorphosed, and consist of grey marble with a slight crystalline structure.

3. The soil of Greece is mostly rich in iron and reddish, consisting of decomposed limestone. It is good for vines and olives, but inferior for crops, which require a

black and more carbonized earth. The only exceptions are the volcanic regions, such as Thera and Melos; an active volcano in the former and an extinct or dormant volcano in the latter have provided a very rich soil.

4. In almost all regions of Greece the heavy winter rainfall washes down earth to the lower parts of the mountains, but also washes away in the rivers much earth from the plains. This steady process of enrichment and denudation almost balances, though the plains often suffer undue erosion. This is particularly evident north of the Corinthian Gulf, where the rivers wash down an enormous silt to the sea. The Alpheus in the Peloponnese also heavily denudes the valleys of Arcadia. The Achelous in the north is its equivalent.

5. The principal centres of extensive cultivation in Greece are few. The plain of Thessaly is by far the largest and richest. The Spercheus valley north of Thermopylae and the Cephissus valley and plain in Boeotia are the only cultivable land in central Greece. In the west the plain of Ambracia and the southern parts of Acarnania are cultivable. In Attica the plains of Eleusis and Athens, and the Mesogaia, provide an arable area, but insufficient for the inhabitants. In Peloponnesus the plain of Elis is rich, and the coastal flatlands of Messenia productive, and small areas of fairly good land lie behind the modern Kalamata, in the Vale of Sparta, and in the Argolid. But without proper irrigation all these tend to become barren. In comparison the coastal plains of Asia Minor are unbelievably fertile and well watered. The wealth of the Ionian cities was due to the wider extent of cultivable land and to its essential excellence.

6. Mountains in Greece are not high, the highest being Olympus, about 9,000 feet. Nowhere is there permanent snow except in the unlit valleys of the highest mountains, and even Olympus is clear of snow by August. The rivers mostly run dry, or nearly so, in summer. The northern rivers, the Vardar, the Strymon, and the Hebrus, are deep and constant. To the south only the Peneus, the Alpheus in Peloponnesus, and the Cephissus in Boeotia are non-periodic.

7. Greece is thus essentially a land where life is organized on the periphery of mountain masses and on the coast, so that sea communication is essential for survival. An inter-island life developed and is continued to-day with hardly any change in its main economy. Ancient modes of life can therefore be closely compared with modern. Greek colonization is the essential consequence of a rise in population in a land where the limits of possible population are quite clearly defined.

GREECE (History). I. Greek history is generally taken to begin at the point when the northern invasions which broke down the prehistoric civilization of Greece came to an end, and when the colonization of the west coast of Asia Minor, partly by refugees from the northern invaders, and partly by the invaders themselves, was completed (roughly c. 1000 B.C.). The elements out of which the Greek people of historic times was composed were now all assembled in Greece, and an age of migrations was followed by a period of settlement.

In the first stage of the period of settlement the Greeks (as the inhabitants of Greece may henceforth be called) lived in village communities and were bound together by a loose tribal organization. Within each tribal State a hereditary king (*βασιλεύς*) discharged the functions of a war-lord and chief priest, and exercised a voluntary jurisdiction (see also MONARCHY). A nobility, consisting of the chief landowners of the community, advised the king in council (*γερονσία*). The common people were occasionally convened in a folk-moot (*ἀγορά, ἐκκλησία*), but this assembly carried less weight than the Council of

Nobles. The details of early tribal organization are very imperfectly known, and the relations of the tribe to its sub-groups, the *phyle*, *phratry*, and *genos* (q.v.), are uncertain. But it is clear that the authority of the tribal kings was precarious, despite their hereditary position and their claim to divine descent, and that they lacked the power to suppress private warfare within the community. For this reason, and because of the prevalence of inter-tribal wars and forays, life in the early period of settlement remained very insecure, and the foundations for a high civilization had not yet been laid.

II. In the eighth century a new turn was given to Greek history by the growth of cities, which in most parts of Greece replaced the village as the ordinary unit of settlement (see POLIS, SYNOECISMUS). The early Greek cities were mostly situated on an easily defensible site, at some distance from the sea, and their original purpose was to provide security against raiders and pirates; but the convenience of towns as centres of government was soon recognized, and the city-state came to replace the tribal State in most parts of the Greek world. In some districts, as in Attica and Laconia, one city (Athens, Sparta) absorbed an entire tribal State or several such States, and controlled a territory of a thousand square miles. More commonly the tribal State was split into several city-states, each of which, as a rule, had only some hundred square miles attached to it and counted not more than five thousand citizens.

Between 750 and 500 B.C. another movement of population took place, which led to the foundation of numerous Greek colonies in the north Aegean area, in the Black Sea district and its approaches, in Cyrenaica, Sicily and south Italy, and at other isolated points of the Mediterranean lands (see COLONIZATION, GREEK). This colonial expansion, which probably had its chief cause in the scantiness of cultivable land in Greece proper, but was partly due to political discontents and the growing pains of the city-state (see below, III), was the other main event of early Greek history. It gave the Greek people a large frontage on the Mediterranean seaboard, it provided them with a sufficiency of land, and it stimulated their industry and commerce. But the colonies, with rare exceptions, became fully independent States, and the consequent large increase in the number of these complicated the problem of Greek political union.

III. In the meantime, and partly as a result of the colonial movement, the internal development of the city-states proceeded at a rapid, and sometimes at a revolutionary, rate. The government of the cities was in the first instance monarchical; but after 700, and almost universally before 500, the city-kings were supplanted by the nobles, who combined their forces against the monarch (see ARISTOCRACY). The aristocracies abolished the right of private war and compelled the reference of disputes to their courts of law; but they incurred unpopularity by using their power to exploit and in some cases to enslave the peasantry.

With the growth of industry and commerce the ascendancy of the nobles was challenged by a new class of artisans and traders, and was undermined by a loss of solidarity among the ruling class. In some towns the ensuing struggle between nobles and commons ended in a peaceful compromise, like the Conflict of the Orders at Rome; in others the aristocracies were forcibly ejected from power, and were replaced by tyrannies (q.v.) exercising autocratic rule. The tyrants generally sought to conciliate the commons and introduced a more enterprising government. They adorned their cities with public buildings, they patronized art and literature, they entered foreign alliances and carried out schemes of colonization. But it was never long before they became 'tyrannous' in the modern sense and succumbed to a

counter-revolution. The first tyranny was set up (at Sieyon) c. 650; by 500 this form of government had almost everywhere been abolished.

After the fall of the tyrants most Greek cities reverted to some form of government by a privileged class, for which the magistracies and the seats on the Council were reserved (*see* OLIGARCHY). But these oligarchies were based on wealth rather than on birth, so that enriched families could from time to time bring fresh blood into the ruling class; and in some cities they allowed the commons an ultimate control over the affairs of State. This control was exercised by an Ecclesia (q.v.), which usually obtained the right of deciding important issues like those of peace and war, and sometimes also elected the magistrates and revised their judgements on appeal. By 500 most of the Greek cities had established a strong but responsible government, and one which gave the ordinary citizen a sufficient share in the affairs of State to draw him out and make him a keen student of politics.

IV. But the patriotism which the city-states fostered was apt to become perverted. Participation by the commons in political affairs whetted their appetite for a larger share of power, which the ruling class was reluctant to concede. A perpetual conflict thus arose between democratic and oligarchic parties within each city, and feeling at times rose so high that democrats would use armed force to overthrow the oligarchs, and vice versa. The history of many city-states was therefore punctuated with revolutions, in which now one party and now the other killed its opponents and confiscated their property. Although *stasis* (party rancour) was vigorously denounced by the best Greek minds, it went on asserting itself so long as the Greeks retained their political freedom.

Again, the legitimate pride which the Greeks felt in their cities was apt to degenerate into aloofness or even hostility in their relation to other towns. It is true that by 600 the Greeks had become conscious of their common nationality; the poetry of Homer, religious institutions such as the oracle of Delphi and the athletic festival at Olympia, and increasing contacts between themselves and non-Greek peoples, had made the Greeks aware of their common culture, and they had accordingly applied to themselves the national name of 'Hellenes'. The recognition of Greek nationality also brought with it the beginnings of political co-operation. Cities sometimes facilitated mutual commerce by means of consuls (*see* PROXENOI), or by entering into treaties for the peaceful regulation of trade disputes (*see* SYMBOLA); they occasionally referred disputes of a territorial or political character to a third city for arbitration (q.v.); and in a few cases they combined into a rudimentary federation (*see* FEDERAL STATIS). But more substantial progress towards political union was hindered by the geographical barriers which divide Greece internally, and more especially by an exaggerated municipal pride, which insisted that each city should possess not only the right to make its own laws and administer its internal affairs (*see* AUTONOMY), but complete and sovereign independence.

V. The more usual method of settling political disputes was therefore a resort to war. The inter-city wars of the Greeks, it is true, were fought under certain decent conventions (*see* WAR, RULES OF), and seldom resulted in heavy casualties; but they kept alive ill-feeling and created 'hereditary enemies'.

The only practical remedy for this state of things was that one city should outstrip all the others in power and use its strength to enforce a general peace, in the same way as the 'pax Romana' was subsequently established by Rome. By 500 two such potential leaders of a united Greece had emerged, Sparta and Athens. Of these two States Sparta had undergone a development which was almost unique among the Greek cities. In order to keep

down its serf population (*see* HELOTS), it had constituted itself as a totalitarian military State, whose citizens gave their whole time to training for war. But the Spartan army developed from a means of defence into an instrument of conquest. By 500 the greater part of Peloponnesus had been brought together in a permanent military alliance under Spartan control (*see* PELOPONNESIAN LEAGUE), and all Greece recognized in Sparta the predestined *hegemon* or war-leader in the event of national danger.

Athens had a more normal development, except that it made slow progress until 600 and then went ahead rapidly. It possessed large natural assets—rich silver-mines (*see* LAURIUM), clay beds and marble quarries, and a capacious and centrally situated harbour (*see* PIRAEUS). In the sixth century its tyrant Pisistratus (q.v.) fostered its material development; its legislators Solon and Cleisthenes (qq.v.) gave it a constitution which conferred large political powers upon the common people and strengthened their public spirit. Finally, Themistocles (q.v.) provided it with a war-fleet far surpassing that of any other Greek city.

VI. The political development of the Greek people and its colonial expansion were favoured by the absence of any foreign pressure upon it during its early history. But after 650 a regrouping of foreign Powers to east and west checked its expansion and endangered its independence. Between 650 and 550 the Greeks of Asia Minor were attacked, and for lack of any concerted resistance were subdued one by one, by the kings of Lydia. Soon after 550 they were absorbed with the rest of the Lydian kingdom into the empire of Persia, and an attempt at rebellion on their part in 499-493 (the 'Ionian Revolt') was suppressed. The Persians followed up their victories in Asia by invading the Greek mainland in 490 and again in 480-479. The former expedition, which was aimed primarily at Athens, was beaten off single-handed by the Athenians at Marathon. In the second invasion King Xerxes brought to Greece an army and fleet of unprecedented size, but had to face a coalition of Greek States under Spartan leadership. He overran Greece as far as the Isthmus of Corinth, but his navy was eventually defeated at Salamis, and his land forces at Plataea. During the next thirty years (478-449) the Athenians led the Aegean Greeks in a counter-attack which resulted in the liberation of the Asiatic Greeks (*see* PERSIAN WARS).

In the western Mediterranean the Carthaginians opposed further Greek expansion after 600; by 500 they had almost confined the Greek colonists to Sicily and southern Italy, and in 480 they made a determined attempt to conquer all Sicily. The Sicilian Greeks, who had been forcibly united under the rule of a military tyrant, Gelon (q.v.) of Syracuse, beat off this attack, but they did not recover any of the lost ground in the west.

VII. The Greeks ever after regarded their victory in the Persian Wars as their greatest national achievement. They rightly emphasized the superiority of morale which they, as a self-governing people, had shown over the subjects of the Persian autocrat; but they did not sufficiently appreciate the important part which unity of command on the Greek side had played, and they did not adequately recognize the need of continued co-operation, or at least of the avoidance of further inter-city warfare. It is true that the Athenians induced most of the Aegean Greeks (including the Asiatic Greeks whom they had freed from Persia) to enter into a permanent alliance (the Delian League, q.v.), whose object was to maintain a durable peace on the Greek seas. Though the Athenians presently gave grounds for complaint to their allies by needless interference in their internal affairs, the Delian League, while it lasted, was the chief stabilizing agency in Greek politics. At the same time the Athenians,

under the guidance of Pericles (q.v.), carried out a series of bold constitutional experiments, by which almost the entire administration of the city was placed in the hands of the common people. As the pioneer of democracy, Athens became the rallying-point of the many Greek cities in which the democratic movement was gaining strength at this time. After the Persian Wars, moreover, Athens acquired commercial supremacy in the Greek world and was becoming its intellectual centre. The city was now marked out as the future leader of Greece.

In the meantime Sparta had been content to revert to its former position as head of the Peloponnesian League, and offered no sustained opposition to the growth of Athenian power. But in 431 the two chief cities of Greece were involved through a series of small incidents in a war that drew in behind them the greater part of the Greek world (see PELOPONNESIAN WAR). In this Greek 'World War', which lasted twenty-seven years, the Athenians threw away the advantage of a stronger fleet and greater financial resources in ill-advised adventures. In the later stages of the conflict they also had to contend with Persia, which gave the Spartans support, on condition of receiving back the Asiatic Greeks. The war therefore ended in a decisive defeat for Athens.

VIII. The hegemony of Greece was now resumed by the Spartans, who had acquired control, by conquest or alliance, over most of the mainland and the Aegean area. But the benefits of the Spartan peace were, in the opinion of the Greeks, outweighed by the harshness of Sparta's dominion over them, for the Spartans now made a general practice of imposing unwelcome oligarchic governments upon them, and enforced their authority in many towns by means of garrisons. In 395 the next four strongest States in Greece, Argos, Athens, Corinth, and Thebes, combined in an attempt to shake off the Spartan yoke, and they received support from the Persians, whom the Spartans had offended by going back on their bargain about the Greek cities of Asia. Eventually the Spartans won back the Persians to their side by fulfilling their previous compact, and by the 'King's Peace' of 386 they confirmed their hold upon the Greeks of the mainland. But by repeating their former political mistakes they provoked fresh rebellions, and in 371, at the battle of Leuctra, they sustained a resounding defeat at the hands of a Theban general named Epaminondas (q.v.), who greatly improved upon the conventional Greek tactics. In the general uprising that followed this defeat Sparta finally lost her ascendancy, both in the rest of Greece and in Peloponnesus. The Thebans, however, made but a half-hearted attempt to substitute their dominion for that of Sparta, and in the peace settlement of 361 they reverted to the principle of autonomy for all the mainland cities, and hegemony for none. In the meantime the Athenians had enrolled some of the Aegean Greeks in a second maritime confederacy, but this always lacked vitality and by 350 it was visibly falling to pieces.

IX. In the fourth century Persia, though still alert to snatch advantages from Greek disunion, no longer had the strength or the will to undertake a new invasion of Greece. In the west the Carthaginians persisted in their attempts to conquer Sicily, but the Greeks in that island were saved in spite of themselves by a succession of fresh tyrants in Syracuse, who forcibly rallied the other cities and beat off several Carthaginian attacks (see DIONYSIUS I; AGATHOCLES).

But to the north of Greece, where weak tribal monarchies had kept each other in play since the beginnings of Greek history, a new conquering power arose in 359, when Philip II (q.v.) of Macedon created a centralized realm and trained up an army which was more than a match for the Greek hoplites (see WAR, ART OF). Against the encroachments of Philip the Greeks offered no

combined resistance, until the Athenian orator Demosthenes (q.v.) brought about a coalition of Athens, Thebes, and a few other cities. But the scratch force which the allies put into the field was irretrievably defeated by Philip at the battle of Chaeronea (338), and the Greek homeland now accepted his rule. The Macedonian king used his authority to impose upon the Greeks a federal union which obliged them to settle their disputes in future by arbitration in place of war, and to send delegates to a regular Hellenic parliament at Corinth. Though nominally the Greek confederacy was on a basis of alliance with Macedon, in fact Philip, who kept garrisons at Corinth and other key points of Greece, could dictate his terms to it, and he had himself appointed captain-general of a national Greek army which was to co-operate with the Macedonians in an attack upon Persia.

X. By the sudden death of Philip the command of the joint forces devolved upon his son Alexander III (q.v.), who overran and annexed the whole Persian Empire (334-325). The empire thus formed by Alexander was the largest which the world had yet seen; but after his premature death in 323 it broke into pieces, and during the next forty years Alexander's chief officers (mostly Macedonian noblemen) fought one another for its fragments. By 275 three new dynasties had been established: the Antigonids held Macedonia, with a few outlying dependencies in Greece (notably Corinth); the Seleucids had acquired most of Alexander's Asiatic possessions; the Ptolemies ruled Egypt, together with southern Syria, Cyprus, and Cyrenaica. The Greek homeland, after passing through the hands of successive Macedonian overlords, for the most part recovered its independence, but the federal constitution with which Philip had presented it was allowed to lapse. Athens and Sparta again became disconnected city-states. Athens, though still acknowledged as the intellectual centre of the Greek world, had lost much of its commercial importance and soon renounced all hopes of hegemony in Greece. Sparta still nursed ambitions of renewed leadership, but never realized them.

The rest of the Greek homeland was for the most part incorporated into two sectional confederacies, of which the Aetolian League came to comprise most of central Greece, and the Achaean League the greater part of Peloponnesus. More important than this redistribution of political power was the fact that continual contact between Greeks and Macedonians brought about a peaceful conquest of victorious Macedonians by the vanquished Greeks. By 200 the Macedonians, acknowledging the superior culture of the Greeks, had become fully hellenized.

XI. Between 275 and 200 the Greek world was again distracted by continuous sectional wars. Of the three new dynasties, the Ptolemies repeatedly came in to conflict with the Seleucids over the possession of Syria, and they endeavoured to keep the Antigonids in play by fomenting movements against them on the Greek mainland and in the Aegean area. At the end of the century the territory of the Ptolemies had undergone little change, but that of the Seleucids had been enormously reduced. Unable to form a front against the Ptolemies, and at the same time to hold down the vast masses of their Oriental subjects, they allowed most of these to slip out of their grasp. By 200 they retained little else besides Mesopotamia, northern Syria, and southern Asia Minor; in western Asia Minor they acquiesced in the formation of yet another Greek monarchy, which the Attalid dynasty set up round the city of Pergamum. The Antigonids on the other hand gradually increased their hold on the Greek homeland. In 225 an attempt by the Spartans to recover control of Peloponnesus led to an alliance between the Antigonids and the Achaean League. At the battle of

Sellasia (222) King Antigonos Doson finally destroyed Sparta's hopes of hegemony; at the same time he reduced the Achaean League to a position of virtual dependency, and thus acquired an authority in Greece not unlike that which Philip and Alexander had secured for themselves.

XII. The conquests of Alexander had imposed upon the Greeks (under which term the Macedonians may henceforth be included) the problem of administering vast territories with non-Hellenic populations. Alexander's scheme for the government of his empire appears to have been based upon the amalgamation of Macedonians and Persians in the first instance, and a more general fusion of his European and Asiatic subjects to follow. But his plan for the 'marriage of Europe and Asia' was deliberately rejected by his successors. During the first century at least of their rule both Seleucids and Ptolemies sought to maintain a sharp distinction between Greeks and Orientals; they reserved the more important administrative posts for the Greeks, and they recruited their armies principally from the Hellenic settlers in their kingdom.

In Egypt the Ptolemies, following the tradition of the Pharaohs, set up a highly centralized government, entailing a large staff of professional administrators. Their special interest lay in the collection of a large revenue, and to this end they exercised a close control over the economic activities of their subjects and imposed a highly complicated system of taxation upon them. The Seleucids, whose territory was more extensive and less homogeneous, maintained the Persian system of devolving authority to their district governors, and they accorded a considerable measure of self-government to the numerous Greek cities which they founded in the Nearer East (see COLONIZATION, HELLENISTIC).

In the Greek homeland the Achaean and Aetolian Leagues (qq.v.) devised a system of federal government which adequately safeguarded the autonomy of the constituent cities and prevented the larger towns from acquiring a dangerous preponderance over the rest. But they failed to provide an adequate substitute for the Hellenic federation of Philip and Alexander, or to prevent the recrudescence of sectional warfare in Greece.

XIII. After 200 the history of Greece becomes progressively merged in that of Rome. The intrusion of Rome into Greek affairs was in the first instance due to Antigonos Doson's successor Philip V, who offended the Italian republic by intervening in the Second Punic War, and also came to blows with the kingdom of Pergamum and the city of Rhodes. An appeal for help from these two States brought the Romans into the field against Philip and gave them their first victories on Greek soil (200-196). For the time being they attempted no more than to guarantee the liberty of the lesser Greeks against the Antigonids; but they again became embroiled with the Antigonids, and the Greek cities endeavoured to shake off their protectorate. After further forcible interventions they annexed Macedonia (148) and dissolved the Aetolian and Achaean Leagues, so as to reduce the political power of the Greek homeland to a nullity (146). Henceforth the Greek cities enjoyed an almost unbroken peace, but the people lost their interest in politics and left their municipal government in the hands of the wealthier classes.

About 200 a revival of Seleucid power was achieved by King Antiochus III, who temporarily recovered most of the lost eastern provinces and captured Syria from the Ptolemies. But by an ill-judged intervention in the affairs of the Greek homeland he was drawn into conflict with Rome (192-189), and at the battle of Magnesia he sustained a defeat which shattered Seleucid authority in Asia. Within the next sixty years the eastern Seleucid provinces finally secured their independence, while the Jews set up a free State in Palestine. By 100 B.C. the Parthian monarchy had seized Mesopotamia, and the

Seleucid realm had shrunk to a small principality in Syria. During the second century Rome's former allies, Pergamum and Rhodes, and the Ptolemaic kingdom (which had always cultivated friendly if somewhat distant relations with Rome) gradually lapsed into the condition of dependent allies. The final settlement of the Greek East by Pompey, Caesar, and Augustus accomplished little more than to give Roman authority a more definite shape.

While the Macedonian conquest had the paradoxical effect of giving the Greeks extended power, the Roman domination definitely reduced them to subject status. But under Roman rule the Greeks still enjoyed a large measure of autonomy, and their culture continued to spread in the Near East. A Greek-speaking Byzantine monarchy was therefore able to rule the Near East for many centuries after the fall of the Roman Empire.

GREEK LANGUAGE, see DIALECTS, GREEK.

GRILLIUS (5th c. A.D.), grammarian. Extracts from his *Commentum in Ciceronis libros de inventione* are extant (cd. Halm, *Rhet. Lat. Min.* 596-606). Cf. Teuffel, § 445. 7; Schanz-Hosius, § 1122.

GROMATICI, land-surveyors, from *groma* (derived, through Etruscan, from *γνῶμων* or *γνώμα*), an instrument for taking bearings to fix lines of orientation; the name survived as a professional title, beside the commoner *agrimensores*, after the instrument was obsolete. They formed a special profession to which we find reference made as early as in Plautus (*Poen.* 48). Their services were used for the plotting of camps (*castrametatio*), the planning of colonies, and the measurement and division of estates, by subdivision into rectangles, and for census. During the land assignments of the last century of the Republic the demand for surveyors was probably met by private enterprise; under the later Empire official surveyors formed a highly organized branch of the civil service. Military surveying, which in Caesar's army was done by the centurions, became a specialized profession, and inscriptions show that each legion had *mensores* attached. Besides the practical work of measuring and dividing land, public or private, and producing plans (*formae*) and schedules (*commentarii*), the *gromatici* also acted as arbitrators or as expert assessors in private land-disputes (*controversiae*). The combination of mathematics, practical advice, and law which we find in Roman writings on this subject, does not occur in Greece, although the mathematical basis is Greek.

The technical literature of the profession is represented by a collection of miscellaneous treatises, ranging in date from the first to the fifth century, and dealing with the technique of mensuration, boundary-marking and map-making, and the rules of land-tenure as they concern the surveyor. The collection has come down to us in an edition of the sixth century, in which the original matter has suffered much from corruption and interpolation. Besides excerpts from Frontinus (q.v.), embedded in a commentary by Aggenius Urbicus, it contains works ascribed to Hyginus, Junius Nipsus, Siculus Flaccus, and Innocentius (see these names), some shorter treatises, anonymous or ascribed to unknown authors, notes on geometry, and extracts from official registers of surveys. The wide differences in date between the parts are reflected in their latinity; the writing is crabbed, often to the point of obscurity, and devoid of literary merit.

The only complete edition is *Die Schriften der Römischen Feldmesser*, by F. Blume, K. Lachmann, and A. Rudorff (two vols. 1848, 1852); vol. ii contains essays by Lachmann, Rudorff, and Mommsen which are still valuable. Of the Teubner edition by C. Thulin (*Corpus Agrimenorum Romanorum*) only vol. i, part 1 (1913) has appeared, containing Frontinus, Aggenius Urbicus, Hyginus, and Siculus Flaccus. Teuffel-Schwabe, *Hist. of Lat. Lit.*, Engl. Transl., Index (s.v.); PIV vii. 188 b.; H. Stuart Jones, *Companion to Roman History* (1912), 13 ff.; F. Haverfield, *Ancient Town-Planning* (1913), passim. C. J. F. and K. O. B.

GUARDIANSHIP. (a) **GREECE.** The development of the law of guardianship in Greece and Rome was influenced by the change in the conception of guardianship itself, which began as a right of preserving and protecting the ward's property in the interest of the whole kin (as contingent heir of the ward), but became gradually a duty of the guardian in the interest of the ward himself. This explains the restrictions imposed upon the guardian with regard to his control over the child's property, and the increasing supervision of public authorities over his activity as guardian. The Greek guardian was either *ἐπίτροπος* of boys and girls until their majority—eighteen years in the case of boys—and registration in the citizen list, or *κύριος* of women for lifetime or until marriage. Guardians were appointed by the father's will; failing testamentary appointment the next relatives (brother or uncle), being the most

likely successors, were entitled to claim the guardianship; in the absence of these an official (the Chief Archon in Athens) appointed the guardian. The guardian had to provide for the ward's education, attend to all his interests, and represent him in legal transactions: in general he was required—as Plato, *Leg.* II. 928 recommends—to act on his behalf with the same solicitude as for a child of his own. The administration of property by the guardian, especially of landed property, was submitted to the control of magistrates. Action for damages caused by the guardian might be brought against him by the ward within five years of the end of the guardianship. The principles of guardianship of women were analogous; but a woman could dispose freely of objects of lesser importance, without the help of her *kyrios*.

2. (b) **ROME.** Roman law distinguished between *tutela* and *cura* as types of guardianship of persons *sui iuris*, not subject either to *patria potestas* or *manus* (qq.v.). *Tutela* concerned children below the age of puberty (*impuberes*: boys under 14, girls under 12) and women; *cura* comprehended *puberes* under twenty-five (*minores*), lunatics (*furiosi*), and spendthrifts (*prodigi*). The XII Tables admitted the appointment of a tutor by a *pater familias* to his child (who by the parent's death became *sui iuris*). In the absence of a testamentary tutor, the next agnate became *tutor legitimus* as appointed by law. In default of a *tutor legitimus*, the guardian was appointed by the competent magistrate (at Rome there was for a long period a special *praetor tutelar*is).

3. The whole institution of guardianship was in ancient law intended to keep the property within the agnatic family; therefore both *tutela mulierum* and *cura furiosi* and *prodigi* passed likewise to the nearest agnates. Under the developed law guardianship became a public duty (*munus*), depending more and more on the magistrate. Persons duly appointed might, however, refuse to assume the burden of guardianship, on the ground of high office, advanced age, ill health, a certain number of children or guardianships, etc.

4. In the ancient law the *tutor* stood *domini loco* in regard to the ward's property. The effects of all his transactions primarily concerned himself, and he could not oblige the ward. But before long the capacity of *impuberes* to conclude transactions with *auctoritas* of his tutor was recognized. This *auctoritas* was at first a formal act, but later informal. The classical law gave greater scope to the supervision of the tutor by the magistrate. He might be compelled to give security; alienation or hypothecation of landed property could be operated only with authorization of the magistrate, etc. For misconduct the guardian could be removed from his trust. Another remedy, originating also in the XII Tables, was available in case the tutor embezzled the child's property. A later action, *actio tutelae*, served for the recovery of damages, in case of any intentional or negligent breach of duty by the tutor. Since his responsibility rested on the principle of *bona fides*, it was susceptible of a wide interpretation; condemnation involved infamy.

5. The *tutor* of an adult woman did not administer her property; his authorization was required for more important transactions only. In the last century of the Republic *tutela mulierum* fell into decay.

6. The latest type of *cura* was created exclusively in the interest of minors. By reason of the *Lex Plaetoria* (c. 200 B.C.) and the praetorian remedy in *integrum restitutio*, transactions with a *minor sui iuris* (originally freely admitted) might be impugned, if his inexperience was misused to his detriment; therefore dealings with him became risky, and his right to administer his estate was practically illusory. For this reason a *cura minorum* was introduced, so that the co-operation of the *curator* might protect transactions with the minor. *Curatores* were appointed by the magistrate on demand of the

minor, originally only for one affair, later for more general purposes. By later development the rights of permanent curators were considerably enlarged to the detriment of the minor's independence. In post-classical and Justinian's law *tutela* and *cura* were largely assimilated, but remained distinct.

GYES, see HECATONCHEIRES.

GYGES, king of Lydia (c. 685-657 B.C.), founded the Mermuad dynasty by murdering King Candaules and marrying his widow; attacked Miletus and Smyrna, captured Colophon, and sent offerings to Delphi. He sought protection from Assyria against the Cimmerians, but lost it later by helping Psammetichus of Egypt, and was killed in a new Cimmerian invasion. He was the first ruler to be called 'tyrant', possibly a Lydian word. To the Lydia of Gyges belongs the momentous invention of coins.

GYLIPPUS, Spartan general, was sent in 415 B.C. to help Syracuse against Athens. By his very arrival he encouraged the besieged Syracusans; he organized their resistance with activity and courage, and he succeeded in turning the scales and vanquishing the Athenians. But his honesty was not beyond doubt; later on (after 405) he was convicted of having taken public money and had to escape from Sparta.

GYMNESIAE, see BALEARES INSULAE.

GYMNASIARCHOS. This official appears in Egypt under the Ptolemies as a functionary of Greek type, charged with the supervision of gymnasia in towns or

villages where there was a hellenized community; the office was probably a voluntary one. The Roman authorities seem to have allowed an organization of the Graeco-Egyptian population to subsist under officials with Greek titles, of whom the gymnasiarch ranked as the chief; his duties, judged by the evidence of papyri, were extended from the gymnasia to all kinds of public works. The office thus became in practice a liturgy. At first the normal tenure was apparently a year; as the impoverishment of the Graeco-Egyptian class increased two men might share the burden; in the third century several are found acting together or for short periods. As even children are named as gymnasiarchs, the title would seem to have been given to any person of means who could be asked for money. The only place where the gymnasiarchs played a part of more than local importance was Alexandria; in the time of Strabo they were not of sufficient standing there to be named as city officers, but half a century later they were the leaders of the Nationalist opposition to Rome, and reappeared as such on occasion till the end of the second century.

B. A. van Groningen, *Le Gymnasiarque des métropoles de l'Égypte romaine* (1924). J. G. M.

GYMNASIUM. The Greek γυμνάσιον was a sports ground, usually outside the city walls; a public institution, and open to all citizens. Its main feature was a running-track, but it usually also contained a *palaestra* (q.v.). The site was often a sacred grove beside a stream, as was the case with the three gymnasia at Athens, the Lyceum on the banks of the Cephissus, the Academy and the Cynosarges by the Eridanus and the Ilissus. The two first of these were large enough for riding lessons and cavalry parades, and besides the running-track there were jumping-pits and ranges for throwing the discus and javelin. The buildings included bathtubs, undressing-rooms, an oil store, a dust-room where the athletes powdered themselves before exercise, a room for ball games, and a room for practising boxing with hanging punch-balls of different sizes. The gymnasia were especially frequented by the *ephebi* (q.v.). At Athens they were managed by a board of ten *Sophronistae*, in other cities by an honorary magistrate, the gymnasiarch, who employed and paid professional trainers, the *gymnastai* and *paidotribai*. See EDUCATION, III. 2.

H

HABRON, of Phrygia and Rhodes (1st c. A.D.), a Greek grammarian at Rome. His *Περὶ ἀπορρηγμάτων* is cited, sometimes with approval, by Apollonius Dyscolus.

Fragments: R. Berndt, *B. Phil. Woch.* xxxv (1915).

HADAD, see ATARGATIS.

HADES (Ἅιδης, Epic Ἥιδης, 'the Unseen'), one of the sons of Kronos (q.v.), lord of the lower world, 'the House of Hades'; the name is always that of a person, never of a place, in classical Greek, the dead going *εἰς Ἅιδου*. He has next to no mythology, except the story of his wedding with Persephone (see PERSEPHONE). Personally, he is represented as grim, unpitiful, a severe punisher of wrongdoers (in those pictures of the lower world which find room for a Hell or a Purgatory), but never as evil; Greek mythology has no Satan. Nor does he appear as the actual tormentor of the wicked dead, that being the business of the Erinyes (q.v.).

Under his own name he has almost no cult, the one exception being his precinct at Elis (Paus. 6. 25. 2). But under various titles he is heard of here and there. Of these the best known is Pluton (*Πλούτων*), i.e. the Rich One, obviously connected with Plutus (q.v.). For example, at Byzantium there was a temple of Pluton (Dionysius Byzant. fr. 9 Müller; *GGM* ii. 23). For others see CLYMENEUS, EUBULEUS; more examples in Farnell, *op. cit.* inf. 281 ff. He is quite often called Zeus, with some distinguishing title. It seems reasonable to recognize three motives at work: (a) reluctance to name anyone so ill-omened as the god of the dead, to which may be added a feeling that he has little to do with the living, save in so far as they are solicitous for the condition of their dead kin; (b) confusion of such a god, as lord of the depths of the earth, with deities concerned with its fertile surface (cf. DEMETER); (c) comparatively developed theological ideas, which extended the activity of Zeus beyond his proper sphere of the sky and air.

Farnell, *Cult. III*, 252-8 and refs.

H. J. R.

HADRIAN (PUBLIUS AELIUS HADRIANUS), Roman Emperor A.D. 117–38, son of P. Aelius Hadrianus Afer and of Domitia Paulina of Gades, was born A.D. 76, probably at Italica. His paternal grandfather (a senator) had married Ulpia, aunt of Trajan. Left fatherless in 85, Hadrian became the ward of Trajan and of P. Aelius Attianus (q.v.) and took a regular place in Trajan's childless household. He became tribune successively of Legio II Adiutrix, probably at Aquincum (95), V Macedonia in Lower Moesia (96), and XXII Primigenia under L. Julius Ursus Servianus in Upper Germany (*ILS* 308). Thence, in 99, he accompanied Trajan (now emperor) to Rome, marrying Vibia Sabina (q.v.) in 100. He became imperial quaestor (101); staff-officer in the First Dacian War (101–2); senatorial archivist; plebeian tribune (105); commander of Legio I Minervia in the Second Dacian War (105–6), and simultaneously praetor (106); governor of Lower Pannonia (107); suffect consul (108, June); member of priestly colleges. He was in high favour with Trajan and Plotina and friendly with the chief court-officers; though, lacking any public mark suggesting that he would succeed Trajan, he was perhaps viewed askance by some of the more senior men. Nevertheless, in 111 or 112 he was elected archon of Athens—a significant honour—and in 114 (less probably 117) he was appointed governor of Syria (S.H.A. *Had.* 4.1) during Trajan's Parthian war, being designated *cos. II* in 117.

2. Trajan died in Cilicia on 8 August 117. On the 9th it was announced at Antioch that he had adopted Hadrian as his successor, and, on the 11th (Hadrian's *dies imperii*), that he was dead. The circumstances were unfortunate, even ambiguous. Trajan had not advertised his dynastic intentions (but see *B.M. Coins, Rom. Emp.* iii, pp. lxxxvi, 124); men like Neratius (q.v.) Priscus and Servianus were senior in experience; Plotina was known to favour Hadrian; Trajan's swift death denied the formal investigations which Rome might have seen. The ancient biographers regarded the 'adoption' as fictitious, forgetting that Hadrian was given the key-position in Syria during Trajan's absence in the East—the culmination of a life of intimacy and advancement under Trajan, who would hardly leave the succession a matter for armed contention, still less for senatorial decision. The fact of the adoption may be accepted.

3. A formal declaration of accession to the Senate (with guarantees of senatorial privilege) and a double military donative preceded Hadrian's journey to Rome in 118. There he held a Parthian triumph in Trajan's name. Called quickly to Moesia, he subdued the Sarmatae and Roxolani, and gave unified command of Dacia and Pannonia to Q. Marcius Turbo (q.v.), displacing Lusius (q.v.) Quietus from honour. Thus he perhaps brought to a head the disaffection of the 'old guard', in the conspiracy of the four 'consulars': Quietus, A. Cornelius Palma, L. Publilius Celsus, and C. Avidius (q.v.) Nigrinus were said to have plotted against Hadrian's life, and were swiftly executed by the Senate in his absence. Returning to Rome (118), he attributed full responsibility to Attianus, now praetorian prefect, and by favours (an extra public largesse, remission of accession-gifts for Italy, a week's gladiatorial show, reform in the postal services, grants to the *alimenta*, financial assistance to poor senators, and especially a ceremonial cancellation of 900,000,000 HS. worth of debts to the State) sought to placate a suspicious public opinion. Orthodox circles, however, cannot have relished his prompt abandoning of Trajan's imperialist policy in the East. Nor could senatorial sentiment welcome Hadrian's development of the Imperial Civil Service, now enlarged and staffed by graded and salaried knights (headed by the praetorian prefects), or of the imperial *consilium* (q.v.). But senatorial prerogative was not sensibly diminished (S.H.A. *Had.* bk. 8; Dio 69. 5. 7).

4. Various reasons prompted Hadrian to tour his

provinces: military organization and defence; administrative co-ordination; the need to recognize—and guide—provincial aspirations by showing himself as their common symbol; and his own desire to learn provincial conditions, especially in the hellenized areas. He deliberately advertised his policy by coins (cf. *B.M. Coins, Rom. Emp.* iii, pp. clxxi ff.). In 120 or 121 he travelled to Gaul, and thence to the Rhine, where, living a simple soldierly life, he instituted stricter regulations for legionary discipline. Crossing from Holland to Britain in 121 or 122 (cf. *CIL* iii. 4279; a previous detour by Raetia and Noricum is very unlikely), he established the triple *limes* (see WALL OF HADRIAN). Returning to Gaul (where he commemorated Plotina's death by a temple at Nîmes), he reached Spain in 122; his personal intervention in the Mauretanian campaign (S.H.A. *Had.* 12. 7) is very doubtful. In 123 he sailed from Spain, and toured Asia, the Troad, Propontis, and Phrygia, founding or restoring or favouring communities, until he left for Greece in 125, returning to Rome in 127 by way of Sicily. Next year he visited Africa, to review the troops (*CIL* viii. 2532, 18052) and to revise conditions of land-tenure on imperial domain-lands (ibid. 10570). After a few weeks in Rome he left (late 128) to winter in Athens, where he dedicated the Olympieum, himself—the new Zeus Panhellenios—accepting the title 'Olympius'. In 129 he travelled to Caria, Cilicia, Cappadocia, and Syria; in 130 he journeyed up the Nile (there to lose Antinous, q.v.), and returned to Rome in 131.

5. These travels influenced a foreign policy which aimed at peaceful economy and secure defence, as witness the restoration of the Flavian *status quo* in the East, the building of the British 'sentry-walk', the consolidation of Dacia (the contemplated destruction of the Danube bridge deserves no credence), and the demarcation of a customs-palisade on the German-Raetian frontier. Risings in Britain and Mauretania called for purely punitive measures. Only in Judaea was his policy questionable: the building of a shrine to Jupiter Capitolinus on the site of the Temple at Jerusalem (itself to be renamed Colonia Aelia Capitolina), with or without the prohibition of circumcision, precipitated a revolt (132–5) which perhaps drew Hadrian to Antioch for a time. After a siege of Jerusalem and widespread repressive measures Judaea became *Syria Palaestina*, under a consular legate with two legions; and the new colony and temple were established. To Christianity as such Hadrian's attitude was that of Trajan.

6. His general administrative policy was unsensational. There was reorganization in the army; the *alimenta* continued in Italy; the system of *curatores* was developed to supervise local finance; provincial extortion was rare; and conditions of slavery were ameliorated. In jurisdiction there was real progress, of which the appointment of four consular circuit-judges to administer law in Italy was but a symptom. By 129 one consolidated code had been drawn up by L. Salvius (q.v.) Julianus. It may be noted that Hadrian allowed no treason charges.

7. Spanish-born and Greek-inspired, intellectual critic and connoisseur, littérateur, accomplished executant in music and the arts, Hadrian enjoyed from 131 to 138 the mature pleasures of peaceful life at Rome. Government was enlightened centralization, in which his debt to the gods was plain (cf. *B.M. Coins, Rom. Emp.* iii, p. clxiv f.). The succession must be made clear, especially if plotting now began: Servianus and his grandson Fuscus were both executed in 136. Hadrian, weakening in health, in the same year adopted L. Aelius (q.v.); after Aelius' death (138) he turned to Antoninus (q.v.) Pius. In 138, consumptive and dropsical, he died, aged sixty-three, with now famous verses on his lips. Buried in the Mausoleum which he had built, he was deified at length by a Senate perhaps alienated, perhaps apathetic, but not above the prompting of Antoninus.

BIBLIOGRAPHY

ANCIENT SOURCES. (a) *Literary authorities*. The garbled biography in the *Historia Augusta* contains a few statements from Hadrian's lost Autobiography and from Marius (q.v.) Maximus (see B. W. Henderson, *Life and Principate of the Emperor Hadrian*, A.D. 76-138 (1923), 274 f.). Cf. also fragments of Dio Cassius, bk. 69, and brief references in Aurelius Victor and Eutropius.

HADRUMETUM (modern *Sousse*), a seaport 60 miles south of Carthage. Phoenician emigrants settled there in the ninth century B.C. Hannibal made Hadrumetum his base for the Zama campaign. It joined the Romans in 146 B.C., and was made a *civitas libera et immunis*. In 46 B.C. it opposed Caesar; he planned a colony there which was probably carried out in 42-40 (M. Grant, *From Imperium to Auctoritas* (1946), 227). Under Trajan it was entitled *Colonia Concordia Ulpia Traiana Frugifera*. Hadrumetum grew very prosperous from agriculture, horse-breeding, and shipping. Later it became capital of the Byzacene and an important Christian centre with extensive catacombs. W. N. W.

HAEMON (*Ἀἴμων*), (1) eponym of Haemonia, i.e. Thessaly, and father of Thessalus (Rhianus, fr. 25 Powell). (2) Grandson of Cadmus (q.v.); leaving Thebes on account of homicide, he came to Athens, and his descendants went successively to Rhodes and Acragas; Theron, tyrant of the latter city, claimed him as an ancestor (schol. Pind. *Ol.* 2. 16). (3) Son of Creon (q.v.). For his legend as usually told see ANTIGONE; but according to Apollodorus (3. 54) he was killed by the Sphinx (cf. the *Oedipodia* ap. schol. Eur. *Phoen.* 1760). Homer makes him father of Maeon, one of the Thracians who ambushed Tydeus (*Il.* 4. 394). II. J. R.

HAIR-DRESSING, see TOILET.

HALICARNASSUS, a town of Caria, situated on a promontory of the Ceramic Gulf. It received Greek settlers from Argolis (Troezen and perhaps Argos) c. 1000 B.C., but retained a native Carian element, which was subsequently reinforced by Mausolus (q.v.). As a vassal of Persia it was ruled by tyrants, one of whom, Artemisia (q.v.), accompanied Xerxes on his invasion of Greece. After the expulsion of the tyrants (460-455) Halicarnassus joined the Delian League. In the fourth century it fell into the hands of the Carian dynasts Hecatomnus and Mausolus, the latter of whom made it into his residence (c. 362). His tomb, the Mausoleum (q.v.), built by his widow Artemisia in the centre of the theatrical area in which the town stood, made Halicarnassus into one of the show-towns of the ancient world. The city was captured and partly destroyed by Alexander, after a stout defence by the Persian garrison (333). Under the rule of the Ptolemies (c. 280-200) and the Romans it had little importance. Its ring-walls are fairly well preserved, but nothing remains *in situ* of the Mausoleum.

C. T. Newton, *Travel and Discovery in the Levant* (1886) iv, chs. 35-41, 43. M. C.

HALIRRHOTHIUS, in mythology, son of Poseidon; for the usual legend about him see ARIS. There is, however, another account, according to which he was

sent by his father to cut down Athena's sacred olives, but his axe missed the trees and mortally wounded him (schol. Ar. *Nub.* 1005, cf. Servius on Verg. *G.* 1. 18).

II. J. R.

HALTERES (*ἀλτήρες*) were heavy pieces of iron shaped and gripped like our dumb-bells. They were especially used in the standing long-jump, where they were swung to and fro until sufficient momentum had been gained for the leap. They were also employed in various gymnastic exercises and in musical drill. F. A. W.

HALYS (the 'Salt River', so called from the salt springs in its upper course), the longest river in Asia Minor, rises in Antitaurus near the Armenian border and flows first south-west through Cappadocia and then in a northerly direction past Phrygia (later Galatia) and through Paphlagonia to join the Euxine west of Amisus. In the time of Croesus it divided the Lydian Kingdom from the Persian Empire; hence 'Croesus by crossing the Halys destroyed a great empire'. Herodotus knew of a bridge across it, and, probably in error, made the Royal Road from Sardes to the Cilician Gates cross the Halys.

HAMARTIA, see FATE, para. 3 and bibliography.

HAMILCAR (1) (5th c. B.C.), Carthaginian general, son or grandson of the great Mago (q.v.). He commanded a large army against the Sicilian Greeks. At the hard-fought battle of Himera he was completely beaten and probably killed by Gelon (q.v.) (480 B.C.).

Hdt. 7. 165 f.; Diodorus 11. 20 ff.

V. E.

HAMILCAR (2) **BARCA**, a great Carthaginian general of the time of the First Punic War. As commander of the Carthaginian fleet, Hamilcar ravaged the coast of Bruttium (247 B.C.). Landing in Sicily he seized Herete (q.v.), where he held the Romans at bay by frequent skirmishes, again raiding the Italian coast as far as Cumae. In 244 he advanced to Mt. Eryx (q.v.), but failed to relieve the siege of Drepana. After the Punic defeat at Aegates Insulae he negotiated the terms of peace and laid down his command. When attempts to suppress the subsequent revolt of the mercenaries failed, Hamilcar was reappointed commander-in-chief (241). He thrice defeated the mercenary leader Spendius; then, co-operating with Hanno, his old enemy, he defeated the other leader Matho and reduced Utica (238), thus ending the revolt. In 237 he was sent to Spain with his young son, Hannibal. Based on Gades he conquered southern and eastern Spain, advancing the frontier to Cape Nao and building a fortress at Alicante. To a Roman protest, prompted by Massilia, he replied that his conquest was designed to secure money to pay his country's war indemnity (231). While withdrawing from the siege of Helice (? *Elche*) he was drowned (229-228). The anti-Barcid tradition, found in some Roman writers, that he conquered Spain against the will of the Carthaginian government, is tendentious and designed to shift the responsibility of the Hannibalic war on to the Barca family and to represent it as a personal war of revenge not countenanced by the home government. The immediate purpose of Hamilcar's conquest was to add the mineral wealth and man-power of Spain to his country's empire, which had lost Sicily and Sardinia; whether he ultimately hoped to invade Italy is uncertain, but each of his three sons, Hannibal, Hasdrubal, and Mago, attempted this adventure. II. H. S.

HANNIBAL, the great Carthaginian general, born in (late) 247 B.C., was the eldest son of Hamilcar (q.v.) Barca. After making Hannibal swear eternal hatred to Rome Hamilcar took him in 237 to Spain, where he served until he assumed command in 221 on the death of

Hasdrubal (q.v.). Although he married a Spanish princess from Castulo, he reverted to his father's warlike policy by attacking the Olcades (Upper Guadiana). In 220 he advanced Carthaginian arms beyond the Tagus, defeating the Vaccaci and Carpetani. He then besieged Rome's ally, Saguntum, which fell after an eight months' blockade (219). Although his action may have broken no formal agreement with Rome, he knew that it involved the risk of war.

2. Hannibal intended to win the war, which he had precipitated, by a bold invasion of Italy before Rome was prepared. He would sacrifice his base in Spain, cross the Alps recruiting *en route*, and seek a new base on the northern plain of Italy, where he could encourage the Italian allies of Rome to revolt. Leaving Carthago Nova in April 218 with some 35,000-40,000 men he reached the Rhône. Thence by a heroic effort, made more difficult by early autumn snow, he crossed the Alps (somewhere between the Little St. Bernard and Mt. Genève passes: the perennial problem of the exact route does not admit of a definite solution) and reached Turin, but with only 26,000 men. After defeating P. Scipio in a cavalry engagement at Ticinus, he won a great victory at Trebia over the combined forces of Scipio and Ti. Sempronius Longus, thanks to his outflanking tactics combined with an ambush (Dec. 218). In May 217 Hannibal crossed the Apennines, ravaged Etruria and entrapped the army of Flaminius (q.v.) in a defile between the hills and lake of Trasimene: nearly two Roman legions were destroyed. But as no towns revolted to him Hannibal marched to Apulia and then into Campania, where he failed to force Fabius (q.v. 5) to an open battle and was thus compelled to retire to Apulia for the winter. In 216 at Cannae (q.v.) he inflicted on the Romans the worst defeat they had known. Capua and many towns in Campania and south Italy went over to him, but as the Romans refused to acknowledge defeat and central and northern Italy remained loyal to them, he had to devise a wider strategy to force them to dissipate their strength (see PUNIC WARS), while in Italy he vainly tried to provoke another pitched battle.

3. While the Romans held the line of the Volturnus Hannibal wintered in Capua, where it was alleged (falsely?) that luxurious quarters undermined the discipline of his troops. The failure of his attacks from Mt. Tifata on Cumae, Nola, and Puteoli (215-214), which were parried by Marcellus, Gracchus, and Fabius (qq.v.), forced him to abandon his offensive in Campania. He won over Tarentum and other Greek cities in 213, but after failing to force the Romans to relax their siege of Capua (started in 212) by a vain march against Rome itself (211), he retired to Apulia. Ever pressed farther south, Hannibal suffered a setback in the Roman capture of Tarentum (209), while his hope of reinforcements was sadly diminished when his brother Hasdrubal (q.v. 2) was defeated at Metaurus (207). Forced to withdraw, unaided and undaunted, to Bruttium, he lost Locri in 205 and held on desperately like a lion at bay until ordered to return to Africa to defend Carthage (autumn 203). After sixteen years in enemy country he withdrew his unconquered army and advanced to final defeat by Scipio Africanus at Zama (qq.v.) in 202. He escaped to Carthage and counselled peace.

4. As suffete (between 197 and 195; probably 196) Hannibal weakened the power of the oligarchs at Carthage by constitutional reforms; he also reorganized the revenues and encouraged commerce and agriculture. His political enemies replied by telling Rome that Hannibal was intriguing with Antiochus of Syria. When a Roman commission of inquiry arrived in Carthage, Hannibal fled, ultimately to Antiochus, whose hostility to Rome he is alleged to have encouraged. He was ready, it was said, to stir up the Carthaginians against Rome and even to invade Italy if given an army by Antiochus.

In fact he took only a small part in the subsequent war: he was defeated in a small naval engagement off Side in Pamphylia by the Rhodian fleet under Eudamus (190). After Antiochus' defeat at Magnesia Hannibal fled to Crete and then to Prusias of Bithynia whom he supported against Eumenes of Pergamum (184). He took his own life to avoid a Roman extradition order (183 or 182).

5. Adjudged by common consent one of the world's greatest soldiers, Hannibal was the disciple of Alexander and Pyrrhus as well as of his father Hamilcar. He developed the Hellenistic system of combining infantry and cavalry till he could surround and annihilate the enemy. But beside extraordinary tactical skill and a wide and bold conception of strategy he possessed a capacity for leadership which commanded the loyalty of mercenary troops amid danger and defeat. His strategical plans and his reforms at Carthage should win for him the name of statesman. Above all it is his character (which remains unsullied despite accusations of perfidy and cruelty deriving from Roman propaganda) that counts and that has given to the Hannibalic war its epic quality and invested his name with an undying glamour (see, e.g., Polybius 9. 21-6, 10. 32-3, 11. 19, 23. 13 and Livy 21. 4).

For bibliography see PUNIC WARS; fundamental for his campaigns are the works of J. Kromayer and G. De Sanctis there cited (cf. De Sanctis in *Enc. Brit.* s.v.). For his statesmanship: E. Grogan, *Hannibal als Politiker* (1929). H. H. S.

HANNO (1), Carthaginian, sent to west Africa before 480 B.C., founded Thymiatium (*Mehedia*), Carian Fort (*Mogador*), Acra (*Agadir*), etc., beyond Soloeis (*C. Cantin*), and river Tensift. After staying by river Lixus (*Draa*) and founding Cernc (*Herne*?), H. reached river Chretes (*Senegal*), the Guanches, and C. Verde, river Gambia, West Horn (*Bissagos Bay*), God's Chariot (*Mt. Kaku-lima*?), S. Horn (*Sherbro Sound*), where gorillas (dwarfs? apes?) were caught, and Sierra Leone. Of his report, written in Punic, a Greek translation survives.

GGM i. 1-14 (later refs. to H. are confused). Translations: M. Cary and E. Warrington, *Anc. Explorers* (1929), 47 ff.; Warrington, *Greek Geography* (1934), 72 ff. E. H. W.

HANNO (2), a Carthaginian commander, surnamed the Great, who raised supplies in Africa for the First Punic War. A good organizer, but a poor general, he helped after failures and quarrels with Hamilcar Barca to crush the rebel mercenaries (241-238 B.C.). He represented the landed nobility who wished to maintain good relations with Rome and to exploit the Carthaginian land empire in Africa. He thus disapproved of the Hannibalic War and argued for peace after Cannae (216). He may be identified with a Hanno who participated in the peace negotiations after Zama. H. H. S.

HARBOURS. The first steps in harbour improvement must be connected with the increase of commerce during the Greek age of colonization and the development of trade routes centring on certain cities. Beginning with Delos in the eighth century, the more prosperous communities guarded their natural harbours with moles of rough stone and built quays, to which ships, now larger, tied up. Harbour works increased steadily in magnitude, carefulness, and complexity. Whereas the earlier port had often been some distance from the city, to assure neutrality of commerce and to protect the city itself (cf. *Arist. Pol.* 7. 5), by the fifth century the importance of commerce and of the grain trade demanded that the urban walls should contain at least one harbour, and many cities possessed two. The moles were fortified and ended in lofty towers, the ancestors of the lighthouse (q.v.), between which chains could be strung to close the entrance. Within the harbour were storerooms for warcraft, and the market, with a sales hall, grain hall, and other buildings. Such a complex as the Piraeus (q.v.), with its three harbours, Cantharus, Zea, and

Munychia, all enclosed by walls and connected by the famous Long Walls with Athens itself, possessed a greater unity and self-sufficiency than our modern harbour.

The new ports of the Hellenistic period were built on a more regular plan which took less account of natural protection. In the Roman Empire military and commercial harbours were separated for the first time, and architects gained complete independence of nature. The great Claudian harbour at Ostia, measuring over 170 acres—the largest in antiquity—was constructed on a bare shore by extensive excavation and the sinking of a large ship as artificial island breakwater.

Strabo 17. 1. 6-10 (Alexandria); Pliny, *Ep.* 6. 31 (Centumcellae). K. Lehmann-Hartleben, 'Die Antiken Hafenanlagen des Mittelmeeres', *Klio*, Beiheft 14 (1923). C. G. S.

HARMODIUS, Athenian tyrannicide, see **ARISTOGITON**.

HARMONIA, see **ARES**.

HARMOST (*Ἀρμοστής*) was the title borne by officials sent by Sparta after the downfall of Athens in 404 B.C., usually in command of a garrison to govern subject cities of her empire. It was also applied to commanders controlling large areas with stronger forces, e.g. Thibron in Asia Minor (Xen. *Hell.* 3. 1. 3; 4. 2. 5), Teleutias in Chalcidice (ibid. 5. 2. 18 and 37). A *Ἀρμοστής* is attested in Cythra by an inscription (*IG* v. 1. 937, ? 4th c. B.C.); but it is uncertain whether such officials regularly governed the towns of the *Periœci* in Laconia. A. M. W.

HARPALUS (c. 355-323 B.C.), a Macedonian noble and a close friend of Alexander from earliest youth. A cripple, and hence no soldier, he accompanied Alexander to Asia as paymaster, but gave early evidence of his unreliability by a sudden flight to Greece, of which the occasion is unknown. Alexander reinstated him, and later (331) entrusted him with the central treasury of the Empire at Babylon. During Alexander's absence in India (327-5) Harpalus was guilty of gross extravagance and malversation, if not of positive treason, and when Alexander returned he decamped with money and soldiers. He sought refuge in Athens, and probably bribed various Athenian politicians, including Demosthenes; but failing of his purpose he took his force to Crete, where he was killed by one of his officers.

Berve, *Alexanderreich*, no. 143.

G. T. G.

HARPALYCE, in mythology, (1) see **ALASTOR**, **CLYMENUS**. (2) Daughter of Harpalycus, king of the Amymonoi in Thraee. Her mother dying, her father brought her up as a warrior, and on one occasion she saved his life in battle. After his death she became a brigand, but at last was caught and killed. At her tomb rites were celebrated which included a sham fight (Hyg. *Fab.* 193; Servius on *Aen.* 1. 317). Cf. Verg. loc. cit. (earliest mention); his Canilla is modelled upon her. H. J. R.

HARPOCRATES, see **HORUS**.

HARPOCRATION, **VALERIUS**, of Alexandria, lexicographer. His date is not known: some place him under Tiberius; others identify him with the teacher of Verus named by Capitolinus. It has been held that he wrote not long after Athenaeus, the latest author used by him, from whose *Deipnosophistae* H. apparently drew some of his information on cups and hetærae. His *Lexicon of the Ten Orators* is preserved in an early abridgement and in a longer form, closer to the original but not free from corruptions. It is based mainly on works of the Imperial age, e.g. by Didymus, Dionysius of Halicarnassus, and Dionysius son of Tryphon, but cites also Aristophanes of Byzantium, Aristarchus, of γλαυκοπύργου, and many historical and antiquarian

sources such as Hecataeus, Hellanicus, Theopompus, Ister, and Apollodorus. The contents are words (including proper names) and phrases, mainly from the Orators, in alphabetical order, generally assigned to their sources, with explanations of points of interest or difficulty. Some of the entries are drawn from non-oratorical literature, and in his explanations throughout H. quotes, from time to time, nearly every important Greek writer, from Homer downwards. Besides stylistic details he has valuable notes on architectural, religious, legal, constitutional, social, and other antiquities.

Editions: I. Bekker, 1833; W. Dindorf, 1853. C. Boysen, *De H. lex. fontibus*, 1876. P. B. R. F.

HARPYIAE, **HARPIES** (*Ἄρπυιαι*), supernatural winged beings, apparently winds in origin, who 'snatch', as the name implies, and carry off various persons and things. They have at the same time some characteristics of ghosts, and, as the ideas of wind and spirit are closely allied (cf. the etymology of the words in Greek, Hebrew, Latin, and other tongues), it is perhaps most correct to say that they are spirit-winds. Their names are Aello, Oeypete, and Celaeno (Hesiod, *Theog.* 267, who says that they and Iris, q.v., are daughters of Thaumias and Electra daughter of Ocean). They appear in *Od.* 20. 77 as carrying off the daughters of Pandareus, apparently to the other world, since they are given as servants to the Erinyes (q.v.). Much later (Ap. Rhod. 2. 188 ff.) they plague Phineus (q.v.) by carrying off his food and defiling what they leave with their excrement. Whence this detail comes is not known; it is an ingenious suggestion (W. R. Dawson, *Bridle of Pegasus*, p. 27) that Apollonius had heard of the voracious and filthy fruit-eating Indian bat. Virgil (*Aen.* 3. 210 ff.) follows Apollonius in part, but describes them as birds with women's faces, in this agreeing with their ancient representation, as on the Harpy-tomb from Xanthus in Lydia. H. J. R.

HARUSPICES. This word, variously spelled (*haru-*, *aru-*, *hari-*, *ari-*, *are-*) and probably cognate with *χορδή*, Latin *hira*, etc. (Walde-Hofmann, *Lat. etym. Wörterb.*, s.v.) and the root of *specio*, was applied to diviners imported into Rome from Etruria (where an *haruspex* was called *netwis*; *GIL* xi. 6363). Appearing, according to Livy 1. 56. 4-5, in the reign of Tarquinius Superbus, *haruspices* increased in importance from the Second Punic War, and though long regarded as barbarous (Cic. *Nat. D.* 2. 11), gradually encroached upon the field of the augurs. From the late Republic on they formed an *ordo haruspicum* LX, headed by a *summus*, *primarius*, or *maximus haruspex*, while others served in Italian municipalities. The art was practised to the time of Theodosius (Cod. Theod. 16. 10), and still seriously discussed as late as Laurentius Lydus (6th c.) or later. The principles were contained in priestly books (Cic. *Div.* 1. 72), which legend derived from Tages (q.v.; also Cic. *Div.* 2. 50 and Pease's n.), and some of which were translated into Latin by L. Tarquinius Priscus (C. Thulin, *Ital. sakrale Poesie u. Prosa* (1906), 1-5).

This Etruscan discipline sought to interpret three types of phenomena (Cic. *Div.* 1. 12, 2. 26): *exta*, *monstra* (*ostenta*, *portenta*, *prodigia*), and *fulgura*. Significant for the *exta* were the size, shape, colour, and markings of the vital organs, especially the livers and gall-bladders of sheep, changes in which were believed by many races to arise supernaturally (cf. Pl. *Tim.* 71 a ff.; Cic. *Div.* 1. 118; Iamb. *Myr.* 3. 16) and to be susceptible of interpretation by established rules. Models of the liver—e.g. from Piacenza (Etruscan), Boğazkeui (Hittite), and Babylonian—were probably intended for instruction in extispicy. *Monstra* (from *monere*) or *prodigia* (see *PROPTA*) included teratological or otherwise unusual births or growths and abnormal meteorological phenomena.

Fulgura were interpreted by their frequency, the precise one of the sixteen Etruscan divisions of the heavens in which they were seen, and by their physical effects. Of these three types of divination that through the *exta* was deliberately sought (*impetratium*), but those by *monstra* or *fulgura* were considered divinely sent (*oblatus*) and hence usually demanding some expiation (*procuratio*). See also ETRUSCANS, para. 4; RELIGION, ETRUSCAN.

For bibliography see under DIVINATION.

A. S. P.

HASDRUBAL (1), leader of the democratic party in Carthage and son-in-law of Hamilcar (q.v. 2) Barca, whom he accompanied to Spain (237 B.C.). Later he reduced a Numidian rising in Africa and according to Fabius Pictor (Polyb. 3. 8) schemed to overthrow the Carthaginian constitution. He succeeded to the command in Spain on Hamilcar's death (229) and achieved more by diplomacy than force of arms. He married an Iberian princess and founded Carthago Nova (q.v.), whence he advanced to the Ebro, which was later recognized as the boundary of Carthaginian and Roman spheres of influence in a treaty with Rome (226). In 221 he was murdered by a Celtic slave. The view of Fabius that Hasdrubal ruled as viceroy in Spain independent of his home government is improbable.

H. H. S.

HASDRUBAL (2) (BARCA), son of Hamilcar (q.v. 2) and younger brother of Hannibal, was left in command in Spain (218 B.C.). Repulsed by Cn. Scipio (218), he launched a combined land and sea attack which terminated in a naval defeat off the Ebro (217). Reinforced and with his rear secured by his defeat of the Turdetani (216), Hasdrubal took the offensive with the ultimate hope of joining Hannibal in Italy, but was defeated at Ilera on the Ebro owing to the failure of his enveloping tactics (215). Recalled to Africa, where he crushed the rebellious Syphax, he returned to Spain (212) and defeated Cn. Scipio at Ilorci (211), so that Carthaginian control was extended to the Ebro. Tactically outwitted by P. Scipio at Baecula, he withdrew his army from complete defeat and reached Gaul through the western Pyrenees (208); crossing the Alps, perhaps by the pass used by Hannibal, he raised his forces to 30,000 and moved south to join Hannibal (207). Unexpectedly faced by two consular armies through the arrival of Claudius Nero (q.v. 2) he could not force the coast road and so withdrew along the Metaurus (q.v.) valley by night, either to retire to north Italy or more probably in a desperate attempt to reach central Italy. Overtaken and defeated in a decisive battle, he died fighting. A good organizer and a fairly competent soldier, his generalship did not match his courage (Polyb. 11. 2).

H. H. S.

HASDRUBAL (3) (son of Gisgo) commanded a Carthaginian army in Spain 214–206 B.C. With Mago he compassed the destruction of P. Scipio (211), but later was driven from his base Orongis to Gades (207) and was completely defeated with Mago at Ilipa by Scipio Africanus (206). He fled via Gades to Africa, where as commander-in-chief he relieved the siege of Utica (204), but his camp was burnt by Scipio and his newly raised army was defeated at Campi Magni (203). After some guerrilla warfare he was accused of treason and committed suicide before Zama.

H. H. S.

HASDRUBAL (4) (2nd c. B.C.), commanded the Carthaginian forces against Masinissa and was defeated in 150 B.C. Although condemned to death, he escaped and was reinstated in his command at the outbreak of the Third Punic War. He organized resistance first in the country-side (149), twice repulsing the Romans at Nephcris, and then, on the arrival of Scipio Aemilianus, in Carthage itself during the siege (148–146). In this he showed more ability than Polybius' unflattering

characterization might suggest (38. 1–2), but when the city was doomed Hasdrubal surrendered, later to grace Scipio's triumph, while his wife and children preferred death to capture.

H. H. S.

HASTA, HASTATI, see ARMS (ROMAN) and LEGION.

HATÆRIUS, QUINTUS (*cos. suff.* 58 B.C.), Augustan orator and declaimer, of senatorial family, noted for facility of improvisation and impetuous delivery (*Tac. Ann.* 4. 61; *Sen. Ep.* 40. 10), which called forth Augustus' remark 'Haterius needs a brake' (*Sen. Controv.* 4. *pr.* 6–11). He died A.D. 26, nearly 90 years old.

C. J. F.

HEATING for cooking or warmth was primarily supplied in the classical world by charcoal stoves: hence the importance of charcoal-burning. The stoves took the form of chafing-dishes, gridirons, or braziers, elaborated in the Hellenistic world into jacketed vessels heated by fire or boiling water, of which magnificent examples for table use have been discovered at Pompeii. Equally old is the oven, extending from baker's shop to field-army, without a flue and heated by blazing wood withdrawn upon exhaustion of the air within. The use of hot water for bathing is as old as Homer (*Od.* 8. 249, 253) and precedes him at Cnossos, while Herodotus (4. 75) mentions sweat-baths, traditionally assigned to Sparta (Strabo 3. 154; *Mart.* 6. 42. 16) and warmed with heated stones, as in Lusitania. In Italy, where public bathing was widely introduced by the third century, heating was revolutionized by the introduction of the heated floor or hypocaust (q.v.). See BATHS.

I. A. R.

HEBE (*Ἥβη*, i.e. adolescence, youthful beauty), daughter of Hera (q.v.) and Zeus, sister of Ares and Eileithyia (q.v.) (Hesiod, *Theog.* 922). She is unimportant in cult (temple at Philus, Paus. 2. 12. 4; 13. 3, where she had been anciently called Ganymeda, cf. GANYMEDES), but occasionally associated with other deities (Heracles at Cynosarges, Paus. 1. 19. 3; Aphrodite, Farnell, *Cults* ii. 624, 744). In mythology she is the cup-bearer of the gods, as *Il.* 4. 2 and often later. Heracles has her to wife from *Od.* 11. 603 (a doubtfully genuine passage) onwards, and she appears now and again in a scene of Olympian domesticity, e.g. she bathes Ares after his encounter with Diomedes (*Il.* 5. 905), as a sister might an earthly brother in Homeric society. She intervenes to make the aged Iolaus young again, Eur. *Heracl.* 349 ff.; according to Ovid (*Met.* 9. 401–2) Heracles induced her to make him young again. See von Sybel in Roscher's *Lexikon*, s.v.

H. J. R.

HECABE, see HECUBA.

HECALE or **HECALINE**, a goddess worshipped with Zeus Hecalos in the deme Hecale; said to have been an old woman who entertained Theseus.

Callimachus, *Hecale* (see CALLIMACHUS); Plutarch, *Theseus*, 14; Deubner, *Attische Feste*, 217.

HECATAEUS (1), son of Hegesandrus, of Miletus, was active in the Ionian Revolt, 500–494 B.C., travelled in Egypt and elsewhere, and wrote in 'pure Ionic' dialect two works, each the first of its kind: (1) *Γεωγραφικά* ('*Ἡρωδογία*, '*Ἰστορίαι*'), a collection of family traditions and pedigrees, including his own (*Hdt.* 2. 143), without chronological scheme; beginning with scornful reference to current 'stories many and absurd', and offering unorthodox and rationalist views; seldom quoted later. (2) *Περὶ ἡγῆσεως* (*Περίοδος*), a 'journey round the world' in two parts, 'Europe' and 'Asia' (with Egypt and Libya); long popular, though later criticized; pre-Alexandrian silence probably reflects sophistic superiority. Callimachus attributed 'Asia' to some 'islander', but Eratosthenes accepted it; a fourth-century forgery (Cobet,

Sieglin (Wells) is unlikely (Diels). Among geographers, Hecataeus stands next to Anaximander (q.v.); Aristagoras may have used his map (Hdt. 5. 49); Heraclitus distrusted his judgement; Strabo compared him with the poets. Herodotus, profoundly influenced, quotes him as 'the λογοποιός' (2. 143), correcting and amplifying; and was accused of wholesale borrowing (Euseb. *Præp. Evang.* 10. 3. 16 and 23); demonstrable loans are all from Egypt. Copious fragments (333) refer to peoples and places, from Tartessus to India, but mainly Mediterranean; frs. 284, 286-7, 291-2 are descriptive, fr. 324 is narrative.

FHG i. 1-31, iv. 627 b; *FGH* i. 1-373; *PW*, s.v.; Diels, *Hermes* xxii (1887), 411-44; Wells, *JHS* xxix (1909), 41-52; L. Pearson, *Early Ionian Historians* (1939), ch. 2 (bibliography pp. 106-8). See LOGOGRAPHERS. J. L. M.

HECATAEUS (2) of Teos. His history of Egypt (*Αἰγυπτιακά*) under Ptolemy I, c. 300 B.C. popularized the theory of Egypt as the source of civilization, and was the basis of Manetho's more official account.

FHG ii. 384.

HECATE, an ancient chthonian goddess (a kind of fish, *τρίγλη*), is sacrificed to her, Apollodorus ap. Ath. 325 a, and fish are a typical offering to under-world powers, cf. F. J. Dölger, *Ίχθυς, passim*, of obscure origin and early history. She is frequently confused with Artemis (q.v.), whose functions overlap to some extent with hers, also with Selene, the theory that she is a moon-goddess being supported also by many modern authors, though without justification, as no cult of the moon is to be found in Greece; however, a goddess of women, such as she was, tends to acquire some lunar features. Her associations with Artemis are so close and frequent that it is not always easy to tell to which of them a particular function or title belongs originally (Farnell, *Cults* ii. 516 ff.).

Hecate is not mentioned at all in Homer, but comes into sudden prominence in a sort of hymn to her in Hesiod, *Theog.* 411 ff., a passage whose genuineness has been much disputed. There she is daughter of Coeus and Phoebe, other authors giving other genealogies in a way which suggests that her connexion with Greek, or even pre-Greek and Titanic, deities was precarious. Zeus honours her exceedingly, giving her power and honour on earth and sea and also in the heavens, and taking away none of her original rights. If a man invokes her, she can benefit him in all manner of ways, for she is powerful in courts of law and in assemblies, can grant victory in war and athletics and success in horsemanship, in fishing, and cattle-breeding; she is also a nurturer of children (*κουροτρόφος*, a title likewise of Artemis). No other passage rates her so high, and this one must reflect the enthusiasm of a strong local cult, Boeotian or other, of which no more is known. Generally she is associated with uncanny things and the ghost-world. For this reason she is worshipped at the cross-roads, which seem to be haunted the world over. Hence her statues, of which the most famous was by Alcamenes, often have three faces or three bodies, less commonly four.* Here the notorious 'Hecate's suppers' were put out monthly for her (Ar. *Plut.* 594 ff. with schol.). It was a rite of purification, and one of its common constituents was dogs' flesh (Plutarch, *Quæst. Rom.* 290 d); cf. eggs. Hecate is herself a formidable figure, *Μεταία* (see Hesychius s.v.), i.e. a bogey which 'meets' and frightens wayfarers. Hence it is not remarkable that she is associated with sorcery and black magic, from at least the tragic Medea (Eur. *Med.* 394 ff.) onwards. Thus we find her invoked to go away and take an obsessing spirit with her

(Sophron, new frag.; see Festa in *Mondo classico* ii. 476 ff. for recent text); to help a dangerous love-charm which may bring destruction on the person it is aimed at (Theoc. 2. 12 ff.); and very often in magical papyri, etc. However, a more respectable cult of her seems also to have continued, see Farnell, *Cults* ii. 501 ff., 596 ff.

For bibliography see references in the text.

H. J. R.

HECATOMPEDON, see ACROPOLIS.

HECATON (*ἑκάτων*) of Rhodes, a Platonizing Stoic, pupil of Panaetius, wrote chiefly on ethics, and was, next to Panaetius and Posidonius, the most influential member of the middle Stoic school. Works: *Περὶ ἀγαθῶν*, *Περὶ ἀρετῶν*, *Περὶ παθῶν*, *Περὶ παραδόξων*, *Περὶ τελεῶν*, *Περὶ τέλους*, *Χρεῖαι*, *Περὶ καθήκοντος*. Cicero preserves some of his arguments with regard to conflict of duties, from which he seems to have been interested in casuistry.

PIR vii. 2797. H. Gomoll, *Der Stoische Philosoph Hekaton* (1933). W. D. R.

HECATONCHEIRES, hundred-handed monsters, Cottus, Briareos, and Gyes, sons of Heaven and Earth (Hes. *Theog.* 147 ff.); aided Zeus against the Titans (713 ff.). Briareos (called Aegæon by men) was brought by Thetis to protect Zeus against Hera, Poseidon, and Athena (*Il.* 1. 396 ff.).

HECTOR, in mythology, eldest son of Priam and Hecuba (qq.v.), and the bravest of the Trojan champions; husband of Andromache (q.v.) and father of Astyanax (*Il.* 6. 394 ff.). His name appears to be Greek ('holder', 'stayer'), and it is possible that he is the invention either of Homer or of some earlier poet. In the *Iliad* he first appears leading the Trojans out to battle (2. 807 ff.); he reproaches Paris for avoiding Menelaus (3. 38 ff.), and arranges the truce and the single combat between the two (85 ff.). He takes a prominent part in the fighting of bks. 5 and 6, but in the latter leaves the field for a while to advise the elders to make offerings to the gods. He thus sees Andromache for the last time and returns with Paris to the battle. In bk. 7 he challenges any Greek to single combat, and is met by the greater Aias, who has somewhat the better of it; they part with an exchange of gifts. In the next book he drives the Greeks back to their camp and bivouacs with his army on the plain. In the long battle of bks. 11-17 he takes a prominent part, leading the chief attack on the fortification of the camp and being struck down with a stone by Aias (14. 409 ff.), but restored by Apollo at the command of Zeus (15. 239 ff.). He dispatches Patroclus (16. 818 ff.). After the appearance of Achilles at the trench he again bivouacs in the open, against the advice of Polydamas (18. 249 ff.). After the rout of the following day he refuses to enter Troy (22. 35 ff.), but waits for Achilles, despite the entreaties of his parents. At Achilles' approach he flees, but after a long chase halts, deceived by Athena into thinking that Deiphobus has come to his aid. In the subsequent fight he is killed and his body dragged behind Achilles' chariot to the ships. After the burial of Patroclus, Priam ransoms his body (24. 188 ff.), and his funeral ends the *Iliad*. Later poets add nothing of importance to Homer's account.

Hector had a hero-cult in several places, notably at Troy and at Thebes, his supposed bones having been brought to the latter city at the bidding of an oracle (Julian, *Ep.* 79 Bidez-Cumont; Lycophron, 1205 ff. and schol. there; Paus. 9. 18. 5). See Halliday in *Literary Annals* xi, pp. 3 ff.

Farnell, *Hero-Cults*, 325 f.; the larger dictionaries s.v.

H. J. R.

HECUBA (*Ἑκὺβη*, Lat. *Hecuba*), in mythology, chief wife of Priam (q.v.), daughter of Dymas king of the Phrygians (*Il.* 16. 719; but later writers, as Eur. *Hec.* 3, call her father Cisseus). Who her mother was was a

* The typical cross-road is a place where a side path joins a main road; for particulars see Reicher in his *Lexikon*, I. 1904 ff., to which cf. *Il. Iliad*, *Medea*, 5. 23 Abet (in his *Organon*); *Periclitandus*, *PGM* iv. 247-18; *Lydia*, *Med.* 3. 5, p. 41. 20 Winkler, for her fourfold aspect.

problem of mythologists in Tiberius' time (Suet. *Tib.* 70). She was the mother of Hector (q.v.) and eighteen others of Priam's fifty sons (*Il.* 24. 495-7), the most noteworthy being Paris (q.v.).

In Homer she is a stately and pathetic figure, coming only occasionally into the foreground, as in the lament for Hector (*Il.* 24. 747 ff.). In Tragedy she is more prominent. Euripides (*Hecuba*) tells the following story of her last days. Her son Polydorus (q.v.) had been murdered by the Thracian Polymestor, to whom he had been entrusted; the discovery of his body came as a final blow to Hecabe after the sacrifice of her daughter Polyxena (q.v.). By a desperate appeal to Agamemnon, she got permission to revenge herself and, enticing Polymestor into her tent, she and her women killed his children and blinded him. He then foretold that she should turn into a bitch before her death, the place Cynos Sema getting its name from her tomb. In Eur. *Tro.* 969 ff., she so convincingly accuses Helen that Menelaus promises to kill her on reaching home, one of Euripides' curious departures from tradition. In several plays no longer extant, e.g. Ribbeck *TRF, incert.*, 5, from some Greek model, she was represented as dreaming, while carrying Paris, that she brought forth a torch, which burned all Troy (Apollod. 3. 148). All these legends appear in numerous variants, with rationalizations, more or less fanciful additions, and so forth, as is usual with much-handled themes.

H. J. R.

HEDYLUS (fl. 270 B.C.), Greek epigrammatist, has three excellent poems in the *Anthology*, and several others are quoted by Athenaeus. He belonged to the gay poetic circle at Samos which was headed by Asclepiades and Posidippus, and he imitates and answers their poems.

R. Reitzenstein, *Epigramm und Skolion* (1893), 87; U. v. Wilamowitz-Moellendorf, *Hellenistische Dichtung* (1924), i. 144. G. H.

HEGEMON of Thasos, parodist, described 'by some' as a poet of Old Comedy (Ath. 1. 5 b. But Ath. 15. 699 a γέγραφε δὲ καὶ κωμῳδίαν εἰς τὸν ἀρχαῖον τρόπον ἣν ἐπιγράφουσιν Φιλίην suggests a later date for him). For Aristotle (*Poet.* 2. 1448^a12) Hegemon is ὁ τὰς παρωδίας ποιήσας πρῶτος, in that Hegemon raised Parody (already cultivated by others, see PARODY) into an independent genre with a separate place of its own in competitions. A passage of Hegemon (21 vv.) is quoted by Athenaeus (15. 698 f.) from Polemon: Hegemon's verses claim for his performance 50 drachmae, the second prize, and Polemon attests the victory of Hegemon at Athens with his *Gigantomachia* and other parodies.

For two verses of the *Philine* see CAF i. 700. Brandt, *Corp. poes. ep. Graec. lud.* 37 ff.; FCG i. 214 f. W. G. W.

HEGESANDER of Delphi (2nd c. B.C.) wrote at least six books of *Memoirs* (ὑπομνήματα: Ath. 162 a), an ordered collection of unreliable anecdotes concerning Hellenistic kings, parasites, courtesans, philosophers, etc.; references mainly in Athenaeus (*FHG* iv. 412-22).

HEGESIAS (1) of Cyrene, head of the Cyrenaic school between Paraebates and Anniceris in the time of Ptolemy Soter (who died 283 B.C.); nicknamed Πεισιθάνατος because in his *Ἀποκατρεπὼν* he advocated suicide. He was expelled from Alexandria because of the scandal caused by his lectures.

PIV vii. 2607.

W. D. R.

HEGESIAS (2) of Magnesia (fl. c. 250 B.C.) wrote speeches and a *History of Alexander* of which a few passages survive (Gorgias II. σχήμ., Dion. Hal. *Comp.* 4, and Strabo 10. 396). Long recognized as the arch-corrupter of style, he was the chief representative of the earlier Asianism. His style, based on that of Charisius, accentuated the worst Gorgian faults, and his short jerky

sentences, his unnatural word-order, bold metaphors, and the rest were severely condemned by Dion. Hal. and others. See further ALEXANDER (3), Bibliography, Ancient sources.

J. W. H. A.

HEGESIPPUS (1) (d. not earlier than 325 B.C.), son of Hegesias of Sunium, Athenian orator, contemporary of Demosthenes. He is believed by Libanius and many modern scholars to be the author of [Dcm.] *De Halonneso* (342). If this is correct, Hegesippus had in 357 prosecuted Callippus of Paeania in connexion with the affairs of Cardia. A vigorous supporter of the anti-Macedonian policy (he is called by schol. on Aeschin. 1. 64 μισοφιλιππος), he opposed the peace of Philocrates (346) and was the head of an embassy sent to Philip to discuss modifications of the treaty (343; Dem. 19. 331). In 342 he accompanied Demosthenes and Lycurgus on a tour of the Peloponnese for the purpose of raising opposition against Philip (Dem. 9. 72). He was nick-named κρόβυλος ('top-knot') because he affected the old fashion of wearing his hair in a roll on the top of his head (Aeschin. 3. 118).

The speech *De Halonneso* is a retort to Philip's offer to give to Athens an island which was of little value to either side. The national party at Athens insisted that he was only restoring to them what was really their own.

Dionysius of Halicarnassus, who belived the speech to be by Demosthenes, pointed out that it is in many ways unworthy of him, and recalls the manner of Lysias; there is no attempt to avoid hiatus, and certain tricks of style recur with monotonous frequency.

J. F. D.

HEGESIPPUS (2), New Comedy poet, who, like others in this period, mentions Epicurus (fr. 2). In fr. 1 a vainglorious cook expatiates upon his art.

FCG iv. 479 ff.; CAF iii. 312 ff.

HEGESIPPUS (3) (fl. 300 B.C.), a professional writer of epigrams: eight of his poems are in the *Greek Anthology*, most of them authentic inscriptions for tombs and votive tablets. His language is noticeably formal, archaic, and impersonal.

HEGESIPPUS (4) of Micyberna, see NOVEL, GREEK.

HEIMARMENE, see FATE.

HEKTEMOROI (ἑκτημόροι), 'sixth-parters', in Athens before Solon's legislation, men who worked another's land, paying or receiving for it (for ancient authorities and modern scholars are divided) a sixth part of the produce; paying one-sixth would be a very moderate rental, five-sixths severe but not unparalleled. The *hektemoroi* had been free peasants, but in hard times they had first mortgaged their lands and then their persons and their children to their rich neighbours—so as to become tied serfs. Solon (q.v.) freed them once and for all by his *seisachtheia*.

A. W. G.

HELEN (Ἑλένη), daughter of Zeus and Leda, or Nemesis (qq.v.). She is one of the most plausible examples of a 'faded' goddess, i.e. one whose original deity has been forgotten, and consequently made into a mortal woman in mythology. This is not proved by her having had a cult at Sparta and elsewhere (Farnell, *Hero-Cults*, p. 323); we may compare, for instance, the much more widely spread worship of Heracles (q.v.). But her non-Greek name, her association with trees (Δενδρέτις at Rhodes, Paus. 3. 19. 10, with a story that she was hanged on a tree, cf. Artemis Ἀπαγχνομένη, *ibid.* 8. 23. 6-7; 'Helen's tree' at Sparta, Thcoc. 18. 43 ff.), and her connexion with birds (she is born from an egg and Zeus takes bird-form to visit her mother; cf. Nilsson, *Minoan-Mycenaean Rel.*, ch. 10, for epiphanies of Minoan gods in bird-shape) all fit an ancient, pre-Hellenic

goddess, probably connected with vegetation and fertility, better than a dimly remembered princess, or even a purely imaginary human member of an ancient royal family. It is in no wise impossible that an old deity traditionally worshipped by the pre-Dorian population of Laconia had been taken, long before Homer, for an ancestress of their kings. Even in Homer she has something daemonic about her, e.g. the mere fact of being her husband is Menelaus' passport to Elysium (*Od.* 4. 569).

In the *Iliad* and *Odyssey* she is the human wife of Menelaus, who has been carried off to Troy by Paris (q.v.). She is, while at Troy, Paris' wife, not his mistress, but feels deeply the anomalous position of being the legal wife of two different men in different places (see *Il.* 3. 139-40, 443 ff.; 24. 763 ff.). Her sympathies are on the whole with the Greeks, but on occasion she is decidedly pro-Trojan, as *Od.* 4. 274 ff. There seems to have been no difficulty about a reconciliation between her and Menelaus after the war, and in the *Odyssey* she is living happily with him at Lacedaemon. Her carrying off by Paris is the cause of the war (*Il.* 3. 87 and often).

Later authors, not realizing that Agamemnon was overlord of Mycenaean Greece, elaborate the reasons for the war. Besides the original plan of Zeus (cf. NEMESIS, and add Hesiod, fr. 96. 58 ff. Rzach), she was wooed by the noblest men in Greece, and they all swore to support the rights of her husband, whoever he might be (authorities and variants in Rose, *Handb. Gk. Myth.* 249, note 7). Others tell the story of her earlier and later life. She was carried off when a mere child by Theseus (Plut. *Thes.* 31 and elsewhere; cf. DIOSCURID). At the sack of Troy Menelaus was at first disposed to kill her (see Robert, *Bild und Lied*, 76 ff.; cf. HECUBA). She never went to Troy at all, but Paris carried off a phantom of her, Stesichorus (J. Vürtheim, *Stesichoros' Fragmente* (1919), 64 ff.). She appears as St. Elmo's fire (schol. Eur. *Or.* 1637, Pliny, *HN* 2. 101). See also ACHILLES.

Farnell, *Cults* ii. 675; *Hero-Cults*, 323 ff.; and the dictionaries and handbooks of mythology. H. J. R.

HELENUS, in mythology, son of Priam, warrior and prophet. In the *Iliad* he gives prophetic advice to Hector (6. 76, 7. 44), and is wounded by Menelaus at the battle of the ships (bk. 13). Captured by Odysseus, he prophesied the fall of Troy if Philoctetes was brought there with his bow (Soph. *Phil.* 604-13). After the fall of Troy he was carried off by Neoptolemus, who gave him Andromache as his wife (Eur. *Andr.* 1243). They settled in Epirus and made 'a little Troy'; there they were visited by Aeneas, to whom Helenus prophesied his future wanderings (Verg. *Aen.* 3. 294-505). C. B.

HELIAEA (ἡλιαία, Doric ἀλιαία, Public Assembly; see Bonner and Smith, *Administration of Justice*, i. 157, n. 5) was originally an Athenian court of appeal instituted by Solon (Lys. 10. 16). The word ἡλιαία and its derivatives survived both in official documents and in everyday speech as the equivalent of δικαστήριον after the disappearance of the Solonian court. The dicasts oath continued to be called ὄρκος ἡλιαστικός or τῶν ἡλιαστῶν ὄρκος. In the oath itself there appears ἡλιασις. Religious conservatism doubtless accounts for the continued use of ἡλιαία (Dem. 23. 97), in the curse with which the herald opened the meetings of the Assembly, 'accursed be he who in speech deceives ἡ βουλῇ ἢ ὄμῳ ἢ τῇ ἡλιαίᾳ'.

When the Solonian appeal was abandoned and a number of dicasteries (q.v.), divisions of the ἡλιαία, were substituted for the whole body, one of the new courts was called the ἡλιαία of the *thermōthetai*. This was due to the fact that this court met in the commodious quarters of the old ἡλιαία. They were needed because sometimes several panels of 500 each assembled for the

trial of important cases. On one occasion the entire group of 6,000 dicasts sat on a case (*Andoc.* 1. 17).

The court was used also for other legal purposes. Arbitrations involving members of the tribes of Oeneus and Erechtheus and possibly others were held there.

See also DICASTERIES, and the bibliography there.

R. J. B.

HELICON, the largest mountain of Boeotia (5,868 feet), between Copais and the Corinthian Gulf; and particularly the summit behind Thespiac, which contained the sanctuary of the Muses in a glen. There are remains of an Ionic temple, theatre, and statues of the Muses; games were held every fourth year in their honour. On its slopes lay Asera, the home of Hesiod. The spring Hippocrene, struck by Pegasus' foot from the rock, the inspiration of poets (Prop. 3. 3; legend and function are Hellenistic), is a little below the summit.

Paus. 9. 28-31; Bölte, Mayer, and Fiehn, *PW* viii. 1 ff., 1853 ff.; xvi. 696 ff., 821; see also THESPIAE.

T. J. D.

HELIODORUS (1) of Athens wrote (c. 150 B.C.?) *Ἀναθήματα* (title varies), fifteen books on artistic works on the Athenian Acropolis, with historical and other digressions.

Ath. 6. 229 c; 9. 406 c; 2. 45 c (?); Pliny 1. 34-5; *FHG* iv. 425-6; *PW* viii. 15-18.

HELIODORUS (2), a metrist who flourished in the middle of the first century A.D. He edited Aristophanes' comedies with a colometry (division of the text into cola), with metrical signs (σημεία) and a running commentary. Much of his labours is preserved in the scholia to Aristophanes. He was the principal authority used by Juba (q.v. 3).

J. D. D.

HELIODORUS (3), a popular surgeon of the time of Juvenal (who lived c. A.D. 60-140; cf. *Juv.* 6. 373), probably from Egypt. He belonged to the pneumatic school. Works: (1) *Χειρουργούμενα* (principal work, chiefly known from Oribasius); (2) *Περὶ ἀφθρῶν πραγματεία* or *Ἐπιμήχανος*; (3) *Περὶ ὀλοισθημάτων πραγματεία*; (4) *Περὶ ἐπιδέσμων* (on bandages); (5) *Περὶ μέτρων καὶ σταθμῶν*; (6) *Epistula phlebotomiae* (Lat. transl.). See SURGERY, para. 6.

PW viii. 41.

W. D. R.

HELIODORUS (4), author of a Greek novel called the *Aethiopica* or *Theagenes and Charicleia* (τὰ περὶ Θεαγένου καὶ Χαρίκλειαν Αἰθιοπικά), says that he was a Phoenician of Emesa, son of Theodosius, of the race of the Sun. Emesa, famous for a cult of Helios with which the last statement implies some family connexion, was included in Syria Phoenike already in the reign of Elagabalus and reached the height of its glory in that period. H., a pagan influenced by Sun worship and Neo-Pythagorean thought, may have written soon after the publication of Philostratus' *Life of Apollonius of Tyana* (c. A.D. 220), which he seems to have known; but the tradition that he later became a Christian and bishop of Trikka in Thessaly (Socrates, *Hist. Eccl.* 5. 22) has not been disproved.

Summary: Charicleia, white daughter of the king and queen of Ethiopia, was exposed at birth by her mother. She was rescued and passed into the care of a Greek priest who took her to Delphi, treating her as his own daughter. She and Theagenes meet, fall in love, and with the help of Calasiris, a visiting Egyptian priest, escape from Delphi and after some adventures reach the coast of Egypt in the hands of pirates. Fortune separates them, but later all three meet again at Memphis, where Calasiris dies. The lovers, sometimes masquerading as brother and sister, survive many threats to their lives and honour and finally come to Meroe as prisoners of the Ethiopians, then at war with Persia. Recognition and

reconciliation just save them from being sacrificed as the first-fruits of victory, and their marriage is then blessed by Charicleia's parents.

A summary does less than justice to H., who diversifies his main plot with subsidiary, but relevant, stories and develops it with unusual skill. In style he is rhetorical, but rarely ridiculous; he shows himself to be a man of considerable culture, well acquainted with classical literature. Though not free from the faults inherent in the literary form, he is the most successful of the extant novelists, and when translated in the sixteenth century he exercised some influence not only on romance but also on drama.

HELIOGABALUS, see ELAGABALUS (2).

HELIOPOLIS (modern *Baalbek*) was the religious centre of the Ituraean tetrarchy, after whose dissolution it was incorporated in the territory of Berytus (17 B.C.). Septimius Severus made it a separate colony, with *ius Italicum*. The huge temple of Jupiter, begun by Antoninus Pius and completed under Caracalla, the adjacent temple of Venus, and another small circular temple are among the most impressive monuments of the Syrian school of Hellenistic architecture.

T. Wiegand, *Baalbek* (1921-5).

A. H. M. J.

HELIOS, the Sun-god. The general attitude towards the heavenly bodies in Greece seems to have been that although undoubtedly gods (cf. the indignation at Athens over Anaxagoras' announcement that the sun was a material body, Diog. Laert. 2. 12; and Nilsson's comments, *Harv. Theol. Rev.* 1940), they were no concern of mankind, or at most were beings to be saluted with due reverence on occasion (Plato, *Leg.* 887 e), not to receive a regular cult, as did those gods who dwelt in the cities or country-side, like Athena or the Nymphs, or at farthest on hill-tops, like Zeus. Hence the traces of sun-cult in Greece proper are few and often uncertain (see Farnell, *Cults* v. 419 f.). Rhodes, however, had a vigorous cult of Helios, which is one of several non-Greek features in its classical culture. He appears to have been the chief national god (Diod. Sic. 5. 56. 4), and the local legend (Pind. *Ol.* 7. 54 ff.) makes the island his peculiar property, chosen by him before it rose to the surface of the sea, and his sons its chief early inhabitants, after whom the leading towns were named; their mother was the eponymous nymph of the country, Rhodos. His festival was the Halieia (Nilsson, *Griechische Feste*, 427); it was celebrated with much splendour and included important athletic contests, though never rising to the level of the Great Games. Outside of actual cult, Helios is often appealed to as a witness of oaths and the like, as *Il.* 3. 277, because, as there stated, he sees and hears everything.

He has not much mythology; for the most interesting story about him see PHAETHON. He is regularly conceived as a charioteer, who drives daily from east to west across the sky. The question how he got back again during the night was evidently discussed very early, and the quaint solution evolved that he floated around the earth by the stream of Ocean in a huge cup (references collected in Athenaeus, 469 c ff.).

In later times the theological importance of Helios increased considerably, owing to the growing tendency to identify him with other gods. In the case of Apollo (q.v.), this is as early as the fifth century B.C., and doubtless the allegorizing tendency of the Stoics, who very commonly sought a physical explanation of myths, made its contribution a century or so later; but the strongest impetus in this direction was given by the late imperial increase of actual cult of the Sun, culminating in making him in some sense the principal god of the Empire from Aurelian on. The *locus classicus* is Macrobius, *Sat.* 1. 17. 2 ff., where by a series of ingenious arguments the proposition is supported that all the gods, 'dumtaxat qui sub caelo sunt', i.e. with the omission of the transcendental powers outside the material universe, are powers or activities ('uirtutes', 17. 4) of the sun; but Macrobius' own quotations, beginning with Verg. *G.* 1. 6, show that the theory had been long growing.

H. J. R.

HELLANICUS, son of Andromenes, of Mytilene was born in 500 B.C. (*Ol.* 70. 1 Eusebius) or later; in 497 if he was 65 in 432 (*Aul. Gell.* 15. 23); not before 491 if he mentioned Arginusae (406, schol. *Ar. Ran.* 694) and died at 85 (*Lucian, Macr.* 22). Dionysius Halicarnassensis (*Thuc.* 5) groups him with Charon (q.v.) and Herodotus; Thucydides (1. 97) thought his Athenian history slight and ill-dated. He is quoted, under twenty-five titles (both prose and verse), on myths and primitive history, and on many countries and cities; on the *Priestesses of Hera in Argos*, and on the *Carneian Victors*. Suidas ranks him as 'successor' to Hecataeus (q.v.), but as an historian he was soon superseded. His unorthodox conjectures, etymologies, identifications of sites, and duplications of personages were distrusted by Strabo (10. 2. 6; 11. 6. 2; 12. 3. 21; 13. 1. 42) and by Josephus (*Ap.* 1. 16), but his mythology was used freely by Dion. Hal. (especially for the early West) and by Apollodorus, *Bibliotheca*. His style was undistinguished (*Hermog. Id.* 2. 12; *Cic. De Or.* 2. 12. 53).

J. L. M.

HELLANODIKAI were the judges of the Olympian Games (q.v.). They were chosen from the ruling families of Elis, to whom also the revenues of the festival accrued. Dressed in purple robes, they had special seats, presented the victors with their crowns, and presided over the banquet which ended the festival. They exercised disciplinary authority over the athletes and imposed fines for breaches of their rules.

F. A. W.

HELLE, see ATHAMAS.

HELLEBORE, see ANTICYRA.

HELLEN (*Ἕλλην*), eponymous ancestor of the Hellenes, son or brother of Deucalion (q.v.); *Thuc.* 1. 3. 2; schol. *Pind. Ol.* 9. 68). His sons were Dorus, Xuthus (q.v.), and Aeolus (q.v.) (*Hesiod, fr.* 7 Rzach); i.e. the Dorians, Ionians, and Aeolians have a common ancestry. This is not mythology, but early ethnological theory cast in the traditional mythological form of a genealogy. H. J. R.

HELLENES (*Ἕλληνες*), the national name of the Greeks. Originally it was confined, as well as the territorial name of Hellas, to a small tribe in south Thessaly (*Hom. Il.* 2. 683 f.). Perhaps these were in some way related to the Selloi or Helloi of Dodona (though these were a priesthood, not a tribe); the surroundings of Dodona were called Hellopia (cf. *Arist. Mete.* 1. 352^a 31 ff.). The name of 'Hellenes' wandered southwards, probably in connexion with the migration of the Dorians

and the western tribes. We do not know how the name spread farther. In order to give it a general meaning, more or less covering the whole Greek people, the form of 'Panhellenes' was introduced. It is confirmed by linguistic research that, in this sense, 'Panhellenes' was earlier than 'Hellenes'. Homer, who only once (in the Catalogue of Ships, *Il.* 2. 530) mentions 'Panhellenes and Achaeans', generally calls the Greek people Achaeans, Argives, or Danaï. Hesiod and Archilochus (both c. 700 B.C.) were, as a later Greek writer put it, 'the first to know that all Greeks were called Hellenes as well as Panhellenes'. For their eponymous ancestor, Hellen, father of Dorus, Aeolus, and Xuthus (whose sons were Ion and Achaeus), see the preceding article. The name of the judges at the Olympic Games (*Hellaniotikoi*, q.v.), the earliest testimonial of which is an inscription of c. 600 B.C., proves that during the seventh century the name of Hellenes had been generally acknowledged as that of the Greek people.

A. R. Burn, *Minoans, Philistines and Greeks* (1930), 123; V. Ehrenberg, *Ost und West* (1935), 54 ff., 215 f. V. E.

HELLENICA OXYRHYNCHIA, *see* OXYRHYNCHUS HISTORIAN.

HELLENOTAMIAI ('Treasurers of the Greeks') were the financial overseers of the Delian League, with their office in Delos from 477 to 454 B.C., thereafter in Athens; from the first, however, they were Athenian officials. They were ten in number, perhaps elected by vote, normally one from each *phyle*. They received, through the *apodektai* (q.v.), the tribute from the cities of the League, subject to audit by the *logistai* (q.v.). They had general management of the tribute for the year, paying out sums on the instruction of the Ecclesia, chiefly to *strategi*, sometimes for other purposes (such as the Acropolis buildings). After 411 they received wider powers (*see* KOLAKRETAI); with the fall of the Athenian Empire in 404 the office was abolished. A. W. G.

HELLESPONT, the narrow strait dividing Europe from Asia at the final exit of the waters of the Black Sea and Marmara into the Aegean—the modern Dardanelles. It was crossed by the Persian army under Xerxes between Sestos and Abydos, at the narrowest part near the modern Nagara Point. It was again crossed by Alexander the Great in 334 B.C. A strong current runs out from the Hellespont into the Aegean. Callipolis (*Gallipoli*), Lamp-sacus, Sestos, and Abydos are on its shores, with the sites of Troy and Dardanus on the Asiatic side. All cities alike derived much of their wealth from the fisheries, and from the passage of people and armies from Europe to Asia and vice versa. The name Hellespont is connected with the legend of Phrixus and Helle (*see* ATHAMAS). S. C.

HELOTS (ἐῷλωτες), the name applied to the serfs of the Spartans both in Laconia and Messenia, appears to be related to ἀλίσκομαι and thus to designate captives. Though the helots spoke Doric, they must have belonged largely to the pre-Doric stock. They far outnumbered their masters and were a constant threat, always ready to revolt. To keep them in check a secret police of young men was organized (*krypteia*), while any overt act could be justified by the declaration of war issued annually by the ephors. Yet many helots must have been trustworthy, for helots accompanied Spartiates in the field and in addition, particularly during the Peloponnesian War and later, considerable numbers were used in the army and rewarded for their services by grants of freedom, thus becoming *neohelots*. Yet the precise status of the helots is difficult to define. Our sources frequently call them δοῦλοι and so fail to differentiate them from slaves, but there are a few more precise statements. The remark that they occupied a middle position between slave and

free (Pollux 3. 83) justifies their classification as serfs, while the reference to them as in a sense State slaves (Ephorus in Strabo 8. 365; cf. Paus. 3. 20. 6) shows that they were the property of the State. It also is clear that only the State could set them free. They were assigned to definite estates and paid a fixed quota of the products. In addition to helots the Spartans had regular slaves, and the manumission of individuals recorded in inscriptions must refer to the latter.

G. Gilbert, *The Constitutional Antiquities of Sparta and Athens* (1895), 30-5; A. H. J. Greenidge, *Greek Constitutional History* (1896), 83-6; G. Busolt, *Griechische Staatskunde* ii (1926), 667-71 et passim. U. Kahrstedt, *Griechisches Staatsrecht* (1922), 57-70, maintains that the helots were the only servile class of Sparta and were private property. J. A. O. L.

HELVETII, a Celtic tribe originally located in south Germany, which migrated gradually c. 200 B.C. to an area between the Rhine, the Jura, and the lake of Geneva. Part of the tribe joined the Cimbri c. 111, and a mass migration (263,000 persons; Caes. *BGall.* 1. 29. 1) in 58 was defeated by Caesar, who sent the remnants home, allowing them, however, the privilege of a *foedus*. Under Augustus they formed part of *Gallia Belgica*, with the normal organization of a cantonal senate at the capital, Aventicum (*Avenches*), and *pagi*. The region paid dearly for opposition to Vitellius (A.D. 69); Vespasian, however, restored Avenches with the title of colony, and a period of prosperity began. From c. A.D. 260, when the *Limes* was abandoned, the region was exposed to the attacks of Alamanni and was heavily fortified. By 460 it was under the control of Burgundians and Alamanni.

F. Stähelin, *Die Schweiz in Römischer Zeit* (1931). C. E. S.

HELVIDIUS PRISCUS, son of a *centurio primipilaris*, was *tribunus plebis* in A.D. 56, praetor in 70. He married Fannia, daughter of Pactus Thrasca (q.v.), and when the latter was forced to commit suicide in 66 Helvidius was exiled; but Galba recalled him in 68. A keen follower of the Stoic sect, his own exile and the murder of Thrasca turned him into a fanatic. He appeared in 70 as the spear-head of senatorial opposition to Vespasian and eventually preached out-and-out republicanism. His activities, which even extended to the mob, became so dangerous that Vespasian was forced to exile him and finally to have him executed (? 75).

HENDEKA. The Eleven (ἑνδεκα) at Athens as executive officials had charge of prisons and executions; as judicial officers they presided at the trial of various classes of thieves known as *κακοῦργοι*. As a board they had themselves the right to try and convict confessed *κακοῦργοι*. R. J. B.

HENIOCHUS, Middle Comedy poet. One of his plays was named *Πολύεικτος*, not necessarily after the well-known partisan of Demosthenes: it was a common name. From the prologue of a piece (fr. 5), perhaps entitled *Πόλεως*, 18 verses are spoken by a deity or abstraction who introduces the assembled States; they have come to Olympia to make thank-offerings for freedom, but the disturbing influence of *δημοκρατία* and *ἀριστοκρατία* thwarts their purpose. This probably refers to the time of the Corinthian alliance under Philip, 335 B.C.

W. G. W.

HEPATOSCOPY, *see* DIVINATION, PART. 5, HAPLICES, and RELIGION, ETRUSCAN.

HEPHAESTION (1) (c. 356–324 B.C.), son of Amyntor, a Macedonian noble, became a friend of Alexander the Great from childhood, and remained his closest companion. His military career after 330 was distinguished, and he was evidently a competent commander, though probably not the equal of Craterus, Nearchus, or Ptolemy (or others who proved themselves later). His valour to Alexander, however, apart from personal affection, lay in his sympathetic understanding of his dearest plans for the empire. Alexander revived for him the Persian office of 'chiliarch' (vizir), which, with other honours, marked him out as his first subordinate (324). Hephaestion seems to have been of an arrogant and possessive nature, and he was not universally popular, but his death (by fever) caused Alexander great grief, and he was mourned extravagantly.

Berve, *Alexanderreich*, no. 357.

G. T. G.

HEPHAESTION (2), metrist, probably to be identified with the tutor of Verus (A.D. 130–69). His treatise *Περὶ μέτρων*, originally written in forty-eight books, was reduced by successive abridgements to an *ἐγχειρίδιον* in one book, in which form it is extant. Ancient commentaries on H. sometimes enable us to reconstruct the earlier, fuller, versions; and parts of the extant treatise appear to belong to one of these versions, not to the final abridgement (*II. σημείων* and *II. παραβάσεως*), while others may not come from H. at all (*II. ποιήματος*, *II. ποιημάτων*). The work is divided into the following parts: (1) on long and short syllables; (2) on *συνεκφώνησις* (synizesis); (3) on feet, in general; (4) on catalexis; (5)–(13) on the various feet, including the antispast (— — —); (14) on cola composed of heterogeneous feet; (15) on *ἀσυνάρτητα* (combinations of two cola separated by diaeresis, e.g. the Archilochean colon); (16) on *πολυαχρημάτιστα* (cola which assume varying forms). There follow appendixes dealing with the building of a poetic structure out of lines and cola (*II. ποιήματος*, *II. ποιημάτων*) and with notation for elucidating that structure (*II. σημείων*). Besides the *Encheiridion* various other works on metre are ascribed to H. by Suidas.

Hephaestion belonged to the school of metrists who sought to explain metre by analysing it into its primary elements (*μέτρα πρωτότυπα*), that is, the feet, as opposed to others who derived all metres from the Homeric hexameter and the iambic trimeter. His treatment of lyric metre is almost confined to solo lyric and comedy, and he rarely tries his hand on the more difficult measures of choral poetry and tragedy. His procedure is extremely mechanistic, and we learn little from him directly of the true nature of Greek metric. But he has preserved many fragments of lost poems which are of great value to metrical science.

Text: M. Consrubach (Teubner, 1906). Commentary: T. Gaisford (2nd ed. 1855).

J. D. D.

HEPHAESTUS (*Ἡφαίστος*), god of fire and especially of the smithy fire. It is, however, extremely unlikely that this was his original character. Examination of the distribution of his cult (facts in L. Malten, s.v. 'Hephais-tos', in *PW*) shows that it spreads from the volcanic regions of Asia Minor via Lemnos, which is also volcanic. This decidedly indicates that he was originally an Asianic deity of volcanic fire; that he is associated with volcanoes in Greek mythology (his forge is under Aetna, or one of the neighbouring islands, Callim. *Dian.* 47; Verg. *G.* 4. 170 ff., *Aen.* 8. 416 ff.) is less cogent, as such a notion might have grown up independently, to explain the eruptions of the mountain, considered as a huge chimney. But there is no doubt that for the Greeks he was a craftsman's god and himself a divine craftsman; hence the distribution of his cult in Greece itself, where it is practically confined to the most industrialized regions, being particularly prominent at Athens and partly displacing the old native worship of Prometheus.

His mythology is what might be expected from his development into a smith-god, which had taken place before Homer. He is lame (in an early community a lame man with strong arms would naturally become a smith, being handicapped for farming, fighting, or hunting), and consequently awkward in his movements and somewhat ridiculous (*Il.* 1. 597 ff.). He is constantly employed in making marvellous works of all sorts (as *Il.* 18. 373 ff.; *Od.* 7. 91 ff.), clearly magical (a smith is often a magician also). He makes various famous objects, as Achilles' armour, Harmonia's necklace (see CADMUS), Agamemnon's sceptre (*Il.* 2. 101 ff.). His workmen are the Cyclopes (q.v.), though not in Homer (see Callimachus and Virgil, locc. cit. supra). He makes Pandora, the first woman (Hesiod, *Op.* 70 ff.), or mankind in general (Lucian, *Hermot.* 20); cf. PROMETHEUS. His parents are Zeus and Hera (Homer), or Hera alone (Hes. *Theog.* 927), but he was cast out of heaven by Hera, because he was misshapen (*Il.* 18. 395 ff.), or by Zeus, because he defended Hera against him (*Il.* 1. 590 ff.). A comic story of his return was told by Epicharmus in his *Κωμασται* (see Hyg. *Fab.* 166 and Rose ad loc.). His wife is Charis (*Il.* 18. 382) or more usually Aphrodite (as *Od.* 8. 266 ff.), which is little more than an allegory, Craftsmanship allied to Grace or Beauty.

Malten, op. cit.; Rapp in Roscher's *Lexikon*, s.v.; Farnell, *Cults* v. 374 ff. Cf. ATHENA.

H. J. R.

HERA (*Ἥρα*, Epic *Ἥρη*), an ancient, pre-Hellenic goddess. Her Greek name seems to be a title, 'lady', fem. of *ἥρως*; her native name is unknown. She is regularly said to be wife of Zeus, his numerous connexions with other goddesses being explained away by making them either former wives or mistresses. But the natural suggestion that she is the earth, a common consort of the sky-god, lacks cogent evidence (see Farnell, op. cit. infra, 181 ff.). She is rather a deity of marriage and of the life, especially the sexual life, of women. Her connexion with Zeus is perhaps best explained by supposing that the Greeks on arrival found her cult too strong to be suppressed or ignored, supposing that they wished to do so, and made room for her by making her the wife (and sister) of their own principal god. It seems conceivable that the persistent stories of the quarrels of the divine pair (e.g. *Il.* 1. 540 ff.) reflect a faint memory of a time when the two cults were not fully reconciled. That in pre-Hellenic belief she should be very prominent and have either no male partner or none of any importance is quite in accord with what is known of early, especially Cretan, religion.

2. Mythologically, she is one of the children of Kronos and Rhea (e.g. Hes. *Theog.* 454); later versions differ only in details, as Hyg. *Fab.* 139, where Hera has not been swallowed by her father (cf. KRONOS) and saves Zeus from him. She is the mother of Ares, Eileithyia, Hebe, Hephaestus, and, in one account, of Typhon (qq.v.). Beyond these points her story consists mainly of her hostility to Troy, and consequently in later authors, such as Virgil, to Aeneas (q.v.), and generally her bitterness against her numerous rivals and their offspring, see, e.g., LETO, SEMELE. In the story of the Argonauts (q.v.) she appears in all accounts as the friend and helper of Jason (q.v.). For her part in the Judgement of Paris, see PARIS.

3. Her most ancient place of worship seems to be Argos, hence her very common title of *Ἀργεία*. But Samos certainly worshipped her from very early times also (references in Farnell, p. 253 f.), and there is abundant evidence for cults of her, many certainly old, all up and down the Greek world, both alone and with Zeus. Perhaps her most characteristic rite is the sacred marriage (q.v.), whereof more or less clear evidence can be had for eight places (Farnell, p. 185). She is also connected with the ritual of ordinary human marriage, as

at Ceos (Callim. *Act.* 3, fr. 1. 4 Mair), at least in legend. To her functions as marriage-goddess several of her titles refer, as Zygia, Gamelia, and so forth; for her remarkable surnames at Stymphalus see EPITHETS, para. 2. She is also frequently connected with birth and the nurture of children; not only is she mother of Eileithyia (q.v.), but she is called Eileithyia herself (Hesychius s.v. (Argos), Farnell, p. 247, note 28 c (Attica)).

4. At some places, especially Argos and Samos, she rises to the status of a city-goddess, a not unnatural development, considering the vital importance of increase to any State; but not many of her titles bear witness to a civic side of her activities (Farnell, p. 196 f.).

5. Associations with deities other than Zeus are occasionally to be found; for example, she is paired with Aphrodite, q.v. (Paus. 3. 13. 9; Sparta, where an ancient statue of her was called Hera Aphrodite), and once or twice elsewhere.

6. Her ritual for the most part is not remarkable; at Argos she is connected with the ancient ceremonial of the Shield. At her festival, the Heraia, a shield was the prize at the athletic contests which took place, and an armed procession was a prominent feature. The latest discussion of this somewhat unusual proceeding for the cult of a goddess (I. R. Arnold in *AJArch.* 41, 436 ff.) would associate it with the Minoan-Myenaean sacred shield and shielded goddess.

7. Hera was commonly identified with Juno (q.v.), occasionally with other foreign goddesses.

Farnell, *Cults* i. 179 ff.; Nilsson, *Minoan-Myenaean Religion*, Index s.v.; Roscher in his *Lexikon*, s.v. H. J. R.

HERACLEA (*Ἡράκλεια*) (1), nowadays *Policoro*, a Tarentine foundation in Lucania (Diod. 12. 36; Strabo 6. 264; Livy 8. 24), scene of Pyrrhus' costly victory over Rome, 280 B.C. (Plut. *Pyrr.* 16). By granting Heraelea an exceptionally favourable treaty Rome detached it from Tarentum c. 278 B.C. (Cic. *Balb.* 21 f.; *Arch.* 6 f.). The so-called *Lex Iulia Municipalis* (see *LEX*, *LEGES*) was found here (Dessau, *ILS* 6085).

J. Bérard, *Bibliogr. topogr.* (1941), 55.

E. T. S.

HERACLEA (2) (*ἡ πρὸς Ἀδρυμῶ*) was a small town at the top of the Latmian Gulf, some 10 miles east of Miletus. Its ring-wall, constructed c. 300 B.C. by Cassander's brother Pleistarchus, is the finest surviving example of Hellenistic fortifications.

F. Krischen, in Th. Wiegand, *Milet* iii. 2 (1922).

M. C.

HERACLEA (3) **PONTICA**, a Megarian and Boeotian colony founded c. 560 B.C. among the Mariandyni, whom the colonists reduced to serfdom, but agreed not to sell outside the city territory. Heraelea at one time controlled much of the coast as far as Cytorus; it founded two colonies, Callatis and Chersonesus, and was active in Euxine trade, its people being among the chief navigators there in the days of Xenophon. Civil discord led to tyranny, which lasted eighty-four years (until 281 B.C.), and is said, when at its height, to have been the town's best period. The rise of the Bithynian and Pontic kingdoms and the settlement of the Galatians in the interior steadily weakened the city. Taken and sacked by the Romans in the Third Mithridatic War, it finally lost its prosperity, and the colony which Caesar founded there did not endure. Heraelea became a metropolis of the Pontic *Keïnen* in the second century A.D.

Memoon, in *HHG* iii. 525 ff.; Xenophon, *Anab.* bk. 5-7; Strabo, *FF.* 541-3.

T. R. S. B.

HERACLEA (4) **TRACHINIA**, a Spartan colony founded in 426 B.C. in a strong position about 5 miles from Thermopylae, as a halting-place for armies marching to Chalcidice and also as a naval base. Owing to misgovernment by Spartan officials and raids by local tribes the

colony scarcely fulfilled expectations. In the Corinthian War Heraelea was captured by Boeotians and Argives, who expelled the Peloponnesians. After a brief revival of Spartan control, Jason of Pherae dismantled the fortifications and handed the city over to the Oetaeans. Heraelea was forced to join the Aetolian League in 280 and was sacked by the Romans in 191.

Y. Béquignon, *La Vallée du Spercheios* (1937).

H. D. W.

HERACLES (*Ἡρακλῆς*, *Ἡρακλῆς*). Many details must remain obscure for us concerning this, the most popular and widely worshipped of Greek heroes. In the first place, we have lost all the older continuous accounts and also Plutarch's *Life* of him, which no doubt contained much valuable information, and are reduced to patching together many scattered references, with such late documents as [Apollodorus] 2. 61 ff., Hyginus, *Fab.* 29-36 as our basis. However, the following conclusions may be accepted as fairly certain.

2. He is a hero, not a god, although occasionally worshipped as a god (Farnell, op. cit. infra, 97; on his cult see also Ch. Picard, *BCH* xlvii (1923), 241 ff., H. Seyrig, *ibid.* li (1927), 185 ff. and 369 ff.), for his name is theophoric, and no Greek deity is thus named from another. Heracles (cf. 'Diocles') 'Hera's glory', i.e. probably 'glorious gift of Hera (to his parents)', is a typically human name. Behind all the rest of the story, then, must lie a man, real or, less likely, imaginary, the son of a Hera-worshipping people. This fits excellently with the constant tradition that he was an Argive, or rather a Tirynthian, apparently of a younger branch of the Perseid dynasty (cf. *Il.* 19. 105), related to Eurystheus of Argos, for whom he performed the Labours. If the real Heraeles was prince or baron of Tiryns, the king of Argos (or Mycenae) might well have been his overlord, and it seems possible that distinguished service in some forgotten war or other exploit may have laid the first foundations of his vast reputation for strength and courage, though the stages by which he rose to his unique position in popular favour remain unknown. But his Argive nationality is supported by the geography of his Labours, six of them belonging to the Peloponnesus. By all accounts, these were (1) The Nemean Lion. For authorities see Rose, *Handbk. Gr. Myth.* 211, note 113; it may be remarked that in the earliest versions the beast was apparently not invulnerable (O. Berthold, *Die Unverwundbarkeit* (1911), 2-5). (2) The Hydra of Lerna. (3) The Boar of Erymanthus. (4) The Hind of Ceryncia. (5) The Birds of Stymphalus. (6) The Stables of Augeas (authorities, Rose, *ibid.*, note 117 ff.). Nor are the other six Labours inconsistent with Argive origin and residence. The seventh, the Cretan Bull, and the eighth, the Horses of Diomedes (q.v. 1), are in or near the Greek world, but the other four are quite outside it, and so about equally remote wherever we suppose Heracles' home to have been; they are (9) The Girdle of the Amazon (q.v.). (10) Geryon, (11) Cerberus, (12) The Apples of the Hesperides. All these last three are variants of one theme, the conquest of Death. The hero must go to an island in the extreme west, Erytheia (q.v.), and there overcome a triple-bodied monster, Geryon, and his attendants and take his cattle; or he must descend to the House of Hades and steal the infernal watch-dog; or, finally, he must pluck the golden apples from the dragon-guarded tree at the world's end (further details and references in Rose, op. cit. 214 ff.). All these are manifestly more elaborate forms of the simple and ancient tale that on one occasion Heracles met Hades and wrested him (*Il.* 5. 395 ff., cf. Pind. *Ol.* 9. 33). The fact that they are variants one of another indicates that the cycle of the twelve Labours is artificial, made up to the round number, familiar anywhere in the wide region which used the Babylonian sexagesimal counting, by including duplicates.

3. But the story is complicated by an attempt on the part of Thebes (already known to Homer, *Il.* 19. 99) to acquire Heraeles; cf. ALCMENE, AMPHITRYON. The only legend of his birth and early adventures which we have is laid in Thebes, and in this connexion we must notice that he is often called Alcides, a name explained by that of the father of Amphitryon, Alcaeus (Apollod. 2. 50). As a matter of fact, Ἀλκαῖος and Ἀλκείδης are variants, respectively Boeotian, as we may suppose, and a translation from it into a more normal Greek patronymic, of a name which meant no more than Valiant; and it is a reasonable guess that this Alcaeus was a Theban hero, with whom Heraeles became identified by local zeal. To Alcaeus we may attribute the little group of Boeotian adventures, the conquest of Orchomenus (Apollod. *ibid.* 67 ff.), the killing of the lion on Mt. Cithaeron (*ibid.* 65), which suspiciously resembles the Nemean labour, and the episode of the daughters of Thespius, all fifty of whom the hero enjoyed while the guest of their father (*ibid.* 66).

4. Finally, an attempt was made by the Dorians to acquire him, with some success, since it was for a time a dogma of modern researchers that he was a Dorian hero. See AEGIMIUS, HERACLIDAE.

5. The Athenians were content to model their national hero upon him; see THESEUS.

6. So far we have dealt with him simply as a hero; it is to be noted that he was on occasion identified with foreign gods. The story that he was sold into slavery to Omphale, queen of Lydia (Soph. *Trach.* 252; Apollod. *ibid.* 131-3), probably has behind it some myth of an Oriental goddess and her inferior male consort. At the other end of the Mediterranean the famous temple of 'Heracles' at Gadeira (*Cádiz*), in a region under Carthaginian influence and with its Semitic-sounding tabu on swine (Silius Italicus 3. 22-3), is no doubt a shrine of Melqart (cf. Arrian, *Anab.* 2. 16. 4). In Egypt, Herodotus identifies him with one of the native deities (2. 43). The ancients themselves had noticed the diversity of these identifications, and early evolved a theory that Heraeles was not one person but several (Herodotus and Arrian, *loc. cit.*).

7. Outside the cycle of the Labours, the chief events of his life, as generally told, are as follows. Hera pursued him from childhood with implacable enmity; here we may see a stock feature of the myths of Zeus' children imported into a legend where, to judge by the hero's name, it is little in place. She first attempted to destroy him by sending serpents to attack him in his cradle (Pind. *Nem.* 1. 39 ff., and many later passages). These he strangled. Later, when for his services to Thebes he had been given Megara, daughter of Creon (q.v. 2), to wife and she had borne him children, he murdered (her and) them in a fit of madness sent by Hera (Eur. *HF*, which puts this after the Labours; Apollod. *ibid.* 72, makes them the penance prescribed by Delphi for his purification). In addition, incidentally to the Labours, he had a vast number of other adventures, traditionally classified into the *πράξεις*, or independent exploits, and the *πάρεργα*, which merely happened as incidents in the Labours proper. Of these only a few examples can be given. For the former, we may instance his dealings with Laomedon king of Troy, whom he killed and sacked his city, sparing, however, his son Podarees, later known as Priam (q.v.). This arose out of a *πάρεργον*; on his return from the ninth Labour, bringing the girdle of Hippolyte, queen of the Amazons, he touched at Troy and found the city in distress as a result of Laomedon's treacherous dealings with Apollo and Poseidon, whom he cheated of their wage when they built the wall of his city. A sea-beast was ravaging the country and must be appeased by the sacrifice of Hesione, Laomedon's daughter. Heraeles promised to kill the monster and save her if Laomedon would give him his famous horses; he

fulfilled his part of the bargain, but Laomedon would not keep his, hence the campaign later (see Apollod., *ibid.* 103-4, 134-6). For his second marriage and death see DEIANIRA; it is noteworthy that the manner of his death, by burning on a pyre on Mt. Oeta, when he found Nessus' poison overcoming him, is an interpolation into his original story, though an early one, due to the desire to find an *aition* for the ancient fire-ceremony there (Nilsson, *Hist. Greek Rel.* 63 f.; to the refs. there add *Nordisk Tidskrift* (1923), 125). He is an intruder into the Argonautic story, hence perhaps the dropping of him early in the adventure, cf. HYLAS. One of the most singular ramifications of his legend is the story of Heraeles the Daetyl (Paus. 8. 31. 3, statue at Megalopolis; 5. 7. 6 ff., foundation of the Olympian Games by him and not, as generally said, by Heracles son of Alemene). No plausible connexion between the hero and this gnome-like being has ever been suggested.

8. Something has incidentally been said of his cult. Details are given in Farnell, chap. 5. It is interesting that, especially in private worship, he was commonly appealed to as warder-off of evils and victor over them (ἀλεξίκακος, καλλίνικος). Naturally, his sundry identifications with other deities and his ambiguous status (mostly worshipped as a hero but occasionally as a god) led to very great local varieties in his ritual. The Cynic and Stoic schools seized on his reputation for hardness, simple living, and valour in the service of mankind to idealize him into the exemplar of the follower of their doctrines.

See also STONES, SACRED.

Farnell, *Hero-Cults*, 95 ff.; Preller-Robert, *Griechische Mythologie* ii. 422 ff. H. J. R.

HERACLIDAE (Ἡρακλείδαι). The Dorians, who seem to have little mythology of their own, having tried to make Heraeles (q.v.; cf. AEGIMIUS) a kind of connexion of theirs and his eldest son Hyllus a Dorian by adoption, formed the adventures of his sons into a legend legitimizing their conquest of the Peloponnesus by making their kings descendants of the Perseidae. After sundry adventures, in which the sons of Heracles were persecuted by Eurystheus and defended by Athens (Eur. *Herac.*), they inquired of Delphi when they might return, and were told to do so at 'the third harvest'. Hyllus supposed this to mean the third year, but failed and was killed in single combat against a Peloponnesian champion at the Isthmus. A hundred years later his descendant Temenus again inquired, and got the same reply, which was now interpreted for him as meaning the third generation. The Dorians therefore tried again, in three companies, led by Temenus, Cresphontes, and the sons of Aristodemus, Eurysthenes, and Procles. They entered by Elis, taking, again by oracular advice, the 'three-eyed man' for their guide; he turned out to be Oxylus of Aetolia, whose mule, or horse, had but one eye. Conquering the Peloponnesus, they divided it into three parts, whereof Cresphontes took Messenia, Temenus Argos, and the sons of Aristodemus Laedaemon, thus founding the dual kingship of Sparta. In the fighting Tisamenus, son of Orestes and grandson of Agamemnon, was killed, thus ending the line of the Pelopidae.

See Apollodorus 2. 167 ff.; Pausanias 1. 41. 2; 3. 1. 6; 5. 3. 5 ff.; 8. 5. 1; Herodotus 9. 26. 4 ff. H. J. R.

HERACLIDES (1) (Ἡρακλείδης) of Haelea on the Pontus (Black Sea), called **PONTICUS** (Diog. Laert. 5. 86), Academic philosopher and writer, c. 390-310 B.C. (sec Voss, 16 f.). He was the son of one Euthyphron, of a noble and rich family. When he came to Athens, probably during Plato's second voyage to Sicily (367-365), he became Speusippus', and later Plato's, pupil (D.L. *loc. cit.*). On Plato's request he tried to collect copies of Antimachus' poems in Colophon (Procl. *In Ti.*

1. 90 Diels). He is referred to as 'joint editor' of Plato's lectures 'On the Good' (Simpl. *In Phys.* p. 453 Diels). The testimonies calling him a pupil of Aristotle and the Pythagoreans (D.L.) are likely to have been deduced from the character of his writings. H. was left in charge of the school during Plato's third Sicilian journey (361-360; Suid. s.v.). On Speusippus' death (338) he competed with Xenocrates and Menedemus for the mastership of the Academy. Xenocrates being elected, H. returned to Heraclaea (*Acad. index Herc.* col. 6. 39), where he opened a school of his own.

There is no book of H. preserved. An incomplete catalogue of his numerous writings, classified as ethical, physical, grammatical, musical, rhetorical, and historical, is given by Diogenes Laertius (5. 88).

Heraclides' most important contributions to science are his molecular theory, which purports to overcome the mechanical character of Democritus' atomic doctrine (Diels, *Dox. Graec.*, Index, s.v.), and his astronomical discoveries. Taking the views of the Pythagorean Eephanthus as a starting-point, he taught that the so-called lower planets Mercury and Venus circulate round the sun, not round the earth (Chalcid. *In Tim.* 176 Wrobel). He even put forward the hypothesis that the sun rests without motion in the centre of the universe and the earth circulates around it, i.e. the later so-called Aristarchian or Copernican system (Simpl. *In Cael.* p. 444; 541 Heib.).

Heraclides was not a scientist in the strict sense of the word. He believed strongly in supernatural and occult knowledge, to which he devoted many writings. He also inaugurated the romantic belief in Pythagoras' divine wisdom which greatly influenced later centuries. Subjects like these he discussed in dialogues whose literary and artistic character rendered them famous throughout antiquity.

In life H. appears to have shown a similar sense for mystery and a lofty dignity (D.L. 86, 89 f.).

Müller, *FHG* 2. 197; O. Voss, *De Heraclidis Pontici vita et scriptis*, thesis, Rostock 1896 (good collection of the frs.); E. Zeller, *Plato*, etc., Engl. Transl., 606 f.; T. Gomperz, *Greek Thinkers*, Engl. Transl. 1. 121 f.; 4. 13 f.; Uebervogel-Fraechter, *Grundriss*, 345; *PIV* viii. 472; T. L. Heath, *Aristarchus of Samos*, 259-83. K. O. B.

HERACLIDES (2) of Cyme, author of a Persian history (*Περσικά*) written c. 350 B.C. One of Plutarch's sources for the life of Artaxerxes II.

FHG ii. 95.

HERACLIDES (3) LEMBOS of Callatis or Alexandria became an Egyptian civil servant at Oxyrhynchus, and was living at Alexandria in 170 B.C. Works: (1) *Ἱστορίαι*, a mythological and historical commonplace-book, only known by five frs.; (2) *Λεμβεντικός λόγος*, perhaps about Homer. (3) The Epitome of the Lives of Satyrus, and (4) the Epitome of the *Διαδοχή* of Sotion. These two collections of biographies of the Greek philosophers were much used by Diogenes Laertius. (5) A life of Archimedes in Eutocius, *In Arch. circ. dim.*, may be by him. (6) A selection from Aristotle's *Πολιτεία*.

Fr. in Müller, *FHG* iii. 167. *PIV* viii. 488.

W. D. R.

HERACLIDES (4) of Tarentum (fl. c. 75 B.C.), physician. He was trained in the Herophilean school, but later became more empirical in his methods and, indeed, the most important empirical physician of antiquity. He is highly praised by Galen for his technical skill and for his objectivity in the pursuit of truth. He seems to have practised dissection of human bodies, and this makes it probable that he worked in Alexandria. The names of fourteen works by him are known, and fragments of some of them are preserved in Galen; his most important work was done on pharmacology, therapeutics, and dietetics.

PIV viii. 493.

W. D. R.

HERACLIDES (5) PONTICUS the Younger, grammarian, from Heraclaea Pontica, pupil of Didymus, later taught at Rome under Claudius and Nero, and wrote three books in Sapphic hendecasyllables (Ath. 649 c) called *Λέσχαι*, which may have influenced Statius' *Silvae*. These were erudite and obscure (*Etyim. Gud.* 297, 50, Artem. 4. 63) in the style of Lycophron. He also wrote epic poems and *Pyrrichiae* of which nothing is known.

Usseimihl, *Geich. gr. Litt. Alex.* ii. 196.

C. M. B.

HERACLITUS (*Ἡράκλειτος*) (fl. c. 500 B.C.), son of Bloson of Ephesus, probably came of royal blood and surrendered the (nominal) kingship voluntarily to his brother. He is said instead of publishing his *λόγος* or treatise (written c. 500 B.C.) to have deposited it in the temple of Artemis.

Following Anaximander, H. conceived the universe as a conflict of opposites controlled by eternal Justice. In this conflict he found at once the apparent relativity of nature and her hidden unity. 'The damp dries itself, the parched grows moist', so that the same thing is (e.g.) both moist and dry together and is called one or other only from a partial standpoint. 'Men do not understand how what is at variance agrees with itself; it is an attunement of opposite tensions like that of bow and lyre' (fr. 51 Diels). Unlike his predecessors H. disbelieved in the genesis of the world from an original element, and the Stoics thought wrongly that he believed in a periodic world-conflagration. All particular things are 'an exchange for Fire, as goods for gold'; but the world-order (*κόσμος*) itself 'was not made by god or man, but always was, is, and will be everliving Fire being kindled and quenched in due measures' (fr. 30). The order discovered in the world by the soul (*ψυχή*) he does not distinguish from the soul's discourse upon it; both are the *Logos* which is 'the same for all men', and is, amid the conflict and streaming change of creation, itself eternal. Nature becomes, the *Logos* is.

Heraclitus' challenge to mankind is to learn to understand (*ἐννοεῖν*) the discourse of nature, i.e. to know the right use of language or discourse (*λόγος*, *λέγειν*) as such. Wisdom lies not in much learning but in the awakening of the entire soul from the slumber of its private wants and opinions to consciousness of the world-order which is 'one and the same for those who are awake'. Thus all knowledge is self-knowledge (he says of his own philosophy 'I sought for myself') and morality and understanding coincide. 'The dry soul is wisest', for it resembles more the divine Fire which (like Anaximander's Infinite) governs the universe. Nevertheless, compared with God man is a child in wisdom, his speech at best a hisping version of the divine discourse. Accordingly H. writes consciously in the oracular style of Delphi, aiming 'neither to say nor conceal but to indicate' the truth.

Heraclitus' physics and astronomy are elementary. His achievement is that he is the first Greek writer to explore the nature of knowledge and the soul. By finding the intelligible principle of the Universe not only (like Anaximander) in an external order, but primarily in the depths which the philosophic soul discovers within itself, he became the first mental philosopher.

HERAEUM, see *ARGOS* (1).

HERALDS (*κήρυκες*) in Homeric times were important aids of the kings used for a multiplicity of tasks such as maintaining order in meetings, making proclamations, and bearing messages. They were under the protection of Hermes, were inviolable, and carried a herald's staff

as a symbol of authority. In later Greece they retained much of their importance, assisting magistrates in assemblies and law courts and bearing messages to other States. In this capacity they are to be distinguished from ambassadors, who were authorized not only to transmit messages but also to negotiate. The Roman public crier (*praeco*) was a more humble attendant of magistrates.

E. Saglio, *Dar.-Sag.*, s.v. 'Praeco'; J. Oehler, *PW*, s.v. 'Keryx'.
J. A. O. L.

HERCTE (*Ἑρκτή, Εἰρκταί*), a mountain near Panormus (Palermo) in Sicily, seized and held by Hasdrubal Barca (247-244 B.C.) in order to strike at the rear of the Roman armies besieging Drepana and Lilybaeum and to threaten Panormus. Its identification with Monte Pellegrino has been maintained by De Sanctis (*Stor. Rom.* iii. 1. 181) against J. Kromayer (*Antike Schlachtfelder* iii. 1), who identifies it with Monte Castellaccio north-west of Palermo.

Polybius, i. 56.

H. H. S.

HERCULANEUM was built on a spur projecting from the lower slopes of Vesuvius, c. 5 miles from Naples, on the coast road to Nuceria Alfaterna; it covered c. 26 acres. Strabo (5. 4. 8.) says that it was settled, like Pompeii, successively by Oscans, Etruscans, Pelasgians, and Samnites; but the Greek character of the town plan suggests Greek colonization (6th c.?) and the influence of Naples. During Samnite occupation Herculaneum was in the league headed by Nuceria, but Roman intervention in Campania (326-307 B.C.) brought the town into the Roman confederacy. In the great Italian rebellion Herculaneum joined the rebels, was reduced in 89 B.C., and became a Roman *municipium*; her *meddix tuticus* was superseded by *duoviri*. Though small (c. 4,000) the town was wealthy; in the early Empire her public buildings were richly ornamented, and her upper classes lived elegantly. The earthquake of A.D. 63 did serious damage (Seneca, *QNat.* 6. 1. 2); the eruption of Vesuvius in A.D. 79 was fatal. Herculaneum was buried deep under heavy volcanic ash; the covering solidified to a form of tufa. As a result the buildings have collapsed more completely than at Pompeii, but, having been more completely sealed, their furnishings are better preserved.

In the eighteenth century excavation began in search of works of art. By shaft and tunnel the theatre and, later, the basilica were reached and robbed. In the nineteenth century tunnelling was abandoned in favour of complete excavation; systematic work was resumed in 1927.

Herculaneum differs profoundly from Pompeii. The Greek town plan is completely regular. The streets show no signs of heavy traffic, there are no stepping-stones for pedestrians, no painted notices on the walls; shops are less obtrusive. Herculaneum was a residential, not a commercial town, the main industry being fishing. The houses show great variety in construction and plan, more modern than Pompeii. The principle of lighting from inner court and windows is freely used; upper stories are built with confidence. Most of the houses show taste and refinement as well as wealth, notably those that overlook the sea, with their terraces and gardens. In contrast is the *Casa graticcio*, lightly built of rubble in a timbered frame, with small apartments separately accessible.

Luxurious villas were common in the neighbourhood, and the Villa of the Papyri, north-west of the town, excavated in the eighteenth century, yielded numerous statues and an Epicurean's library of papyrus rolls, mainly the work of Philodemus of Gadara.

HERCULES, Roman pronunciation of Hēracles (q.v.). His is perhaps the earliest foreign cult to be received in Rome, the Ara Maxima (see Platner-Ashby, 253), which was his most ancient place of worship, being within the *pomerium* of the Palatine settlement. It was probably desired to make the Forum Boarium, in which it stood, a market-place under the protection of a god better known than the local deities. The theory of some ancients (as Propertius 4. 9. 71 ff.) that he is identical with Semo Sancus Dius Fidius (q.v.), although revived in modern times by Preller (Preller-Jordan, *Römische Mythologie* ii. 272 ff.) is untenable, and seems ultimately to rest on nothing better than the interpretation of *Dius Fidius* as *Iovis filius*. His cult had become very popular with merchants, no doubt because of his supposed ability to avert evil of all kinds (see HERACLES) and the long journeys involved in his Labours and other exploits. It was common to pay him a tithe of the profits of an enterprise (see, e.g., Eliz. C. Evans, *Cults of the Sabine Territory* (U.S.A. 1939), 70 ff.); this was not confined to commercial dealings but included spoils of warfare.

His worship at the Ara Maxima had some interesting features. No other god was mentioned (Plut. *Quaest. Rom.* 90, citing Varro); no women were admitted (Propert. *ibid.* 21 ff.); dogs were excluded (Plut. *loc. cit.*). The ritual was originally in the hands of two *gentes*, the Potitii and Pinarii, of whom the former were senior (Plut. *ibid.* 60, Veranius ap. Macrobi. *Sat.* 3. 6. 14); in the censorship of Appius Claudius Caecus, 312 B.C., it passed to the State (Asper ap. Macrobi. *ibid.* 13). It was performed in Greek fashion (Varro ap. Macrobi. *ibid.* 17). The exclusion of women is found also in his cult at Lanuvium (Tert. *Ad nat.* 2, 7).

For his numerous other places of worship at Rome, see Platner-Ashby, *ibid.* Identification or comparison with him was common among the later emperors, as Commodus (S.H.A. *Comm.* 1. 8. 5), Maximinus (*Maxim.* 18. 4. 9; 6. 9).

Wissowa, *RK* 271 ff. J. Bayet, *Les Origines de l'Hercule romain* (1926).
H. J. R.

HERCYNIAN FOREST, German mountains, properly the wooded heights of Thuringia and Bohemia. Originally put near the Pyrenees (schol. ad Dionys. *Pcr.* 286) or among Celts (schol. Ap. Rhod. 4. 640) near the Northern Ocean (Diod. 5. 21, etc.), Aristotle (*Mete.* 1. 13) placed it in north Europe, Timaeus found the Danube's sources in it ([Arist.] *Mir. Ausc.* 105). Caesar (*B Gall.* 6. 24. 5) heard that it was more than nine days' journey wide, sixty days' travel long from the Black Forest along the Danube's northern bank, and thence turned north. Strabo (7. 290) extends it from Lake Constance and Danube sources to the north frontier of Bohemia and Moravia. After the exploratory conquests of Tiberius and Drusus the Hercynian Forest was clearly distinguished from the Alps and was identified with the heights extending round Bohemia and through Moravia to Hungary (Plin. *HN* 4. 80, 100; Tac. *Germ.* 28, 30). In Ptolemy (*Geog.* 2. 11. 7) the name is restricted to a range between the Sudetes and the Carpathians.

HEREDIA, see CENTURIA.

HERENNIUM, RHETORICA AD, see RHETORICA.

HERENNIUS DEXIPPUS, PUBLIUS, see DEXIPPUS.

HERENNIUS SENECIO (1st c. A.D.), a native of Hispania Baetica, was its quaestor and afterwards supported Pliny the Younger in the prosecution of Baccius Massa, an oppressive governor of Baetica (A.D. 93). He wrote the life of Helvidius Priscus and was put to death by Domitian. His memory was attacked by M. Aquilius Regulus.
A. M.

HERILLUS of Carthage, pupil of Zeno of Citium and founder of a separate Stoic sect. He seems to have treated knowledge as the supreme end, the life of moral virtue as a subordinate end (*ὑποτέλεις*), and to have added that the subordinate end differs in detail for different men according to their circumstances; the natural goods of life, in distinction from knowledge and virtue, he treated as strictly indifferent. The sect of the *Ἡριλλοῖοι* seems not to have survived 200 B.C.

Testimonia in von Arnim, *SVF* i. 91-3. *PIV* viii. 683. W. D. R.

HERMAE were marble or bronze pillars surmounted by a bust and given a human semblance by the addition of the genitals in the case of a male. Usually two beam-shaped projections near the shoulders were added to hold wreaths. Originally *Hermæ* represented only the god Hermes, but later they served for portrait busts or for other deities. The herm was not known in sculpture before the fifth century. Alcámenes made a famous herm of Hermes Propylæus at the entrance to the Acropolis at Athens. He may have originated the type. *Hermæ* stood in large numbers in the streets and squares of Athens and other cities. The defacement of the *Hermæ* at Athens in 415 B.C. was a sacrilegious act which led to the banishment of Alcibiades (q.v.). S. C.

HERMAGORAS of Temnos (*fl.* c. 150 B.C.) wrote *Téxvai ῥητορικά* (6 bks.), in which he revived rhetorical theory (neglected by Asianists and denounced by philosophers) and gave to it new direction. His teaching (cf. Quint. 3. 6; Hermogenes *passim*) was confined to forensic oratory and to a treatment of *eûpeis*. He claimed for rhetoric the right to deal with all non-technical matters (*πολιτικά ζητήματα*), whether particular causes (*ὑποθέσεις*) or general questions (*θέσεις*), thus meeting the attacks of contemporary philosophers. By his *στάσις* (Lat. *status*) theory—according to which, *στάσις* (i.e. questions to be considered in all disputes) were of two main kinds, logical or legal (Susemihl, *Gesch. gr. Litt. Alex.* 2. 471 ff., Kroll, *Rhet.* § 26)—he introduced some sort of system into the study. On actual practice he had little influence; nor was he interested in either stylistic or philosophical matters. His doctrines, with modifications, became the basis of all school-teaching; and with him began that scholastic hair-splitting associated with later phases of rhetorical study.

J. W. H. A.

HERMAPHRODITUS or *Aphroditus*. The concept of this bisexual divinity is perhaps due originally to certain marriage rites in which the sexes exchange clothing; the god was then fashioned to fit and explain the rite. *Aphroditus* (Hesych. s.v.; Macrobi. *Sat.* 3. 8. 2) is found at Amathus in Cyprus. A unique dedication, of the early fourth century B.C., attests the cult of H. in Attica (*Ath. Mitt.* 1937, 7-8; cf. Theophr. *Char.* 16. 10; *Alciph.* *Epist.* 3. 37). Fourth-century art portrayed H. as a beautiful youth with developed breasts; later art as an *Aphrodite* with male genitals. Ovid (*Met.* 4. 285-388) relates the myth of the union in one body of H., the son of *Hermes* and *Aphrodite*, and the nymph *Salmacis*.

M. P. Nilsson, *Griechische Feste* (1906), 369-74. F. R. W.

HERMARCHUS of Mytilene, Epicurean, studied under Epicurus in Mytilene before the school was moved to Lampsacus in 310 B.C., and in 270 he succeeded Epicurus as head of the school. Epicurus' will enjoins his heirs to put part of the revenues of his estate at Hermarchus' disposal for the maintenance of the school, and bequeaths to him the whole of Epicurus' library. With Epicurus, Metrodorus, and Polyaenus, Hermarchus was treated as representing the authoritative form of the Epicurean doctrine. Works: *Ἡπὲς Ἰλατίων*, *Ἡπὲς Ἀριστοτέλη*, *Ἐπιστολὰ κατὰ τὴν Ἐπεδοκλεῖον*, *Ἡπὲς τῶν μεθυσμάτων*, all of them polemical works.

PIV viii. 721. K. W. G. Kroll, *Der Epikureer Hermarchos* (1921). W. D. R.

HERMEIAS (1), tyrant of Atarneus (in Mysia, opposite Lesbos) c. 355 B.C. A former student of the Academy (though he never met Plato), he introduced a more moderate régime, admitting the Platonists Erastus and Coriscus of Scepsis to a share in his power and encouraging them to found a new philosophical school at Assos. There they were joined on Plato's death (348) by Aristotle, Xenocrates, and Callisthenes, and later by Theophrastus. Aristotle became an intimate friend of Hermecias and married his niece and adopted daughter Pythias. Hermecias possessed a formidable naval, military, and financial power, and was virtually independent of the Persian Empire. He negotiated, with Aristotle's assistance, an understanding with Macedonia. In 341, however, he was treacherously arrested at a conference with Mentor, and sent captive to the Great King, who vainly tried to coerce him into revealing Philip's plans and executed him.

W. Jaeger, *Aristotle* (1934), 105; D. E. W. Wormell, *Yale Studies in Classical Philology* v (1935). D. E. W. W.

HERMEIAS (2), choliambic poet, of Curion, not before the third century B.C., reviled the Stoics (*Ath.* 563d).

J. U. Powell, *Collectanea Alexandrina* (1925), 237; G. A. Gerhards, *Phoenix von Kolophon* (1909), 213.

HERMES (*Ἑρμείας*, *Ἑρμῆς*), one of the younger gods in myth, for in reality he is probably one of the oldest and most nearly primitive in origin. The most plausible explanation of his name is that it is connected with *ἔρμα*, and signifies the daemon who haunts or occupies a heap of stones, or perhaps a stone, set up by a roadside for some magical purpose (examples of such in Frazer, *GB*, see index s.v. 'Stones' and art. STONES (SACRED) herein). Tradition and cult facts combine to make him Arcadian; he was son of Zeus and Maia daughter of Atlas, born on Mt. Cyllene on the fourth day of the month (*Hymn. Hom. Merc.* 19; four is Hermes' number). He was cunning from birth, and on the first day of his life invented the lyre, stole Apollo's cattle, impudently denied the theft, and was reconciled to his elder brother. The merry tone of the hymn is characteristic. Hermes never had much concern with the higher moral or philosophical developments of religion: the writings ascribed to Hermes (q.v.) Trismegistus have nothing to do with the Greek Hermes but are the result of fathering on the Egyptian Thoth, who was identified with him, certain late mystical philosophizings. For the most part, H. occupies a subordinate part in myth, being rather a messenger of the greater gods, and especially of Zeus, than an independent actor. Hence the shape he takes when represented in fully human form is that of a herald, equipped for travelling with a broad-brimmed hat and a stout pair of sandals and carrying the *kerykeion* (Lat. *caduceus*) or herald's staff (to be distinguished from the magic wand which also he bears on occasion, see de Waele, *The Magic Staff*, The Hague, 1927). But he was from early times shown, and continued to be so represented, as a mere stock or stone, a herm, having generally a human head carved at the top and a phallus half-way up it. The latter is, indeed, a characteristic emblem of this god, who was always interested in fertility; which perhaps is why we find him occasionally united with a goddess connected with fertility, *Aphrodite* (mother by him of *Hermaphroditus*, Ovid, *Met.* 4. 288; of Priapus, q.v., see Hyginus, *Fab.* 160, cf. H. Herter, *De Priapo*, 64), *Hecate* (q.v.), or *Brimo* (schol. *Lycophron*, 1176, cf. *Propert.* 2. 2. 11-12), *Herse* daughter of *Cecrops* (Ovid, *Met.* 2. 708 ff.). One of his most striking functions may also derive in part from his connexion with fertility, though his occupation as messenger probably has something to do with it. He is the Guide of Souls, from *Homer* (or at least *Od.* 24. 1 ff., be that genuinely Homeric or not) onwards. In this respect he is unique among the gods, unless we count the *Dioscuri* (q.v.) as

originally divine; for the others belong either to the upper or the lower world, the peculiar position of Persphone, for whom see DEMETER, not constituting a real exception. It is in this connexion especially that his magic wand (see above) becomes prominent (e.g. Verg. *Aen.* 4. 242 ff., where see the further material collected by Pease ad loc., and add Wilamowitz-Moellendorf, *Glaube der Hellenen* ii. 147, note 2). Such a wand is the characteristic implement of a necromancer. It is not particularly remarkable that he is the god of merchants and others who use roads, including thieves, though the latter characteristic illustrates his non-moral nature (for illustrations see Ar. *Plut.* 1155, with schol., *Plut. Quaest. Graec.* 55, with Halliday's note). In Crete we find him associated with a piece of ritual topsy-turveydom, for which cf. KRONOS, SATURNUS. At the Hermaea there (city not specified) masters waited on their slaves as they feasted (Ath. 639 b). For a deity with chthonian associations he has very little to do with divination and oracles; Apollo grants him an obscure minor form of divining, in the Homeric Hymn, 550 ff., and he had an oracle at Pharae (Paus. 7. 22. 2-3). Here the consultant, after paying his respects to the god, stopped his cars till he got beyond the market-place where the temple stood; the first words he heard when he unstopped them were the answer to any question he had asked of Hermes. This is no more than a systematization of one of the most usual forms of omcn, the κληδών or unintentionally significant utterance.

Two other functions show a longer development from the old daemon of the roadside, if that is what he originally was. A herald must of course state his business plainly and on occasion plead the cause of those who sent him. Hence from a fairly early date Hermes is associated with oratory. When to this is added the invention, already told, of the lyre, we can see how he became in time a general patron of literature, Horace even calling those who follow it 'Mercuriales uiri' (*Carm.* 2. 17. 29-30). It is less evident why he is constantly regarded, in classical times, as the patron of young men and their exercises, and himself represented in statuary as a young man. The stages are perhaps as follows: fertility easily passes into the notion of luck or good fortune; luck is needed by those who engage in athletic contests (cf. HECATE); but the most regular practitioners of such things are the younger men, whose athletic training formed an important part of their education in every normal Greek State.

Farnell, *Culte*, v. 1 ff., for his worship generally; Nilsson, *Griechische Feste*, 388 ff., for his non-Attic; Deubner, *Attische Feste*, 217, for his (unimportant) Attic cult; cf. the larger dictionaries s.v. H. J. R.

HERMES TRISMEGISTUS, a clumsy translation of Egyptian 'Thoth the very great', with the adj. emphasized by repetition (W. Scott, *Hermetica* i. 5, note 1). When so named, Thoth is the reputed author of the philosophico-religious treatises known collectively as *Hermetica* (see Gnosticism), also of sundry works on astrology, magic, and alchemy. These are invariably late, Egyptian in the sense of being produced in Egypt by men of Greek speech and (except for the astrological books: Nock, *Gnomon* 1939, 359 ff.) contain little or nothing of native Egyptian doctrine or custom. Their attribution to the Egyptian god of letters is a result of the then prevalent enthusiasm for the supposed ancient wisdom of Egypt and of the older Oriental cultures generally.

W. Scott-A. S. Ferguson, *Hermetica* (1924-36); edition by A. D. Nock and A. J. Festugière i- (1946); A. J. Festugière, *La Révélation d'Hermès Trismégiste* i- (1944). H. J. R.

HERMESIANAX of Colophon, probably born c. 300 B.C., was a pupil of Philetas (schol. Nic. *Ther.* 3). His mistress's name, which he took as title for his collection of elegies, was Leontion (Ath. 13. 597 b).

WORKS. The *Persica* (schol. Nic. *Ther.* 3) may have contained the story of Nanis and Cyrus (Parth. 22 = fr. 6). The *Leontion* was in three books. One line describing Polyphemus gazing out to sea is definitely cited from bk. 1. This suggests a treatment of the Polyphemus-Galatea story, cf. fr. 7. 69-74, and two other bucolic love-stories (frs. 2 and 3) may have been narrated in this book. Bk. 2 contained the tale of Arceophon and Arsinoe, the rejected suitor and the callous maid, who is punished by being turned into stone (Ant. Lib. *Met.* 39), possibly also the story of Leucippus' incest with its tragic sequel (Parth. 5). From bk. 3 Athenaeus (13. 597 b) has preserved a 'catalogue of love-affairs'. In the manner of contemporary Peripatetic biographers, e.g. Chamaeleon, H. details the loves, unrequited or otherwise unlucky, of a series of poets, starting with Orpheus and ending with Philetas, and of philosophers (Pythagoras, Socrates, Aristippus). Three times in the fragment the poet addresses Leontion herself, but it is unlikely that he used this device throughout the poem. Of the remaining fragments (8-11) one is cited from an 'Elegy on the Centaur Eurytion'.

The loss of most early Alexandrian poetry has given to the long fragment from the *Leontion* an importance which it hardly merits. It is true that H. illustrates many features found in later representatives of that poetry, e.g. a fondness for 'glosses', an interest in love, especially if it be unhappy, and in aetiology, but, though he is a tolerable metrist despite his monotonous habit of ending the first half of a pentameter with an adjective and the second with the substantive which it qualifies, he possessed, to judge by what remains of his poetry, a very mediocre brain.

Texts: J. U. Powell, *Collectanea Alexandrina* (1925), 96-106; E. Diehl, *Anth. Lyr. Graec.* vi (1924), 214-20. General literature: Heibges, 'Hermesianax (2)', in *PW* viii. 823-8. E. A. B.

HERMIONE, in mythology, daughter of Menelaus and Helen (qq.v.; *Od.* 4. 14 and often in later authors). Possibly she was originally a goddess, as her name occurs as a title of Demeter and Persephone (Hesychius s.v.). She was at various times (details differ in different authors, see Weizsäcker in 'Roscher's *Lexikon*, s.v.) betrothed to Orestes and Neoptolemus (qq.v.). According to Eur. *Or.* 1655 Neoptolemus never married her, but in Eur. *Andr.* he did so, was murdered by Orestes while at Delphi inquiring why Hermione was childless, and she was carried off by Orestes. All authors, save schol. Pind. *Nem.* 10. 12, citing Ibycus, who says she married Diomedes, agree that she became Orestes' wife and mother (Paus. 2. 18. 6) of his son Tisamenus. H. J. R.

HERMIPPUS (1) (5th c. B.C.), Athenian comic poet; brother of Myrtilus, also a writer of comedies. His first victory at the Dionysia was in 435 B.C. (E. Capps, *Hesperia*, xii). The *Ἀγαμέμνων* (*Lex. Mess.* 283. 15) may have been a parody of Aeschylus, and it is clear that parody (cf. Ath. 15. 699 a) played a large part in H.'s plays: e.g. fr. 63, a parody of Homer occurring in the *Φορμφοροί* ('The Porters', between 430 and 424 B.C.). The *Ἀθηνᾶς γοναί* must have been a mythological burlesque of the type common in Middle Comedy, cf. Nicophon's *Ἀφροδίτης γοναί*, Araros' *Πανὸς γοναί*, etc. The *Ἀρτοπᾶλιδες* (421-418 B.C.) (Ar. *Nub.* 551-7, and schol.) was a violent attack on Hyperbolus and his mother, whose low birth and bad Greek (fr. 11) are satirized. The *Μοῖραι* (c. 430 B.C.) contained a violent attack on Pericles and his Fabian tactics. The *Στρατιῶται* had a similar theme, and some have supposed it a *διασκευή* of the *Μοῖραι*. H. did not confine his hostility to the stage, but actually brought an action against Aspasia for *ἀσέβεια* (Plut. *Per.* 32) in which he attacked Pericles

also (*ibid.* 33). That H. was essentially a 'political' dramatist is seen from his attacks on Peisander (*fr.* 9), Cleon (*fr.* 42), and others.

FCG ii. 380 ff.; CAF i. 224 ff.; Demiańczuk, *Suppl. Com.* 53. M. P.

HERMIPPUS (2) of Smyrna (*fl.* 3rd c. B.C.), Peripatetic biographer and follower of Callimachus, wrote a vast work (descending to his own time) on famous writers, philosophers, and law-givers, which Plutarch used. H. deliberately falsified history, revelling in sensationalism, particularly in death scenes. Fragments in Diog. Laert. Perhaps H. also wrote *Φαινόμενα*.

FGH iii. 35-54; additional frs. listed by Heibges, *PW*, s.v.

F. W. W.

HERMOCRATES (5th c. B.C.), Syracusan statesman and general. His anti-Athenian policy first became manifest at the conference of Gela (424 B.C.), where he achieved a pan-Siceliote alliance. In 415 he failed to unify Sicily against the Athenian invasion. Next year, as general, he fought without success, but he supported Gylippus (q.v.) in organizing the Syracusan resistance, and, by a stratagem, he caused the final disaster of the Athenians (413). He insisted on carrying the war to the East, and took part in the Aegean campaigns of 412-410; after the loss of the fleet at Cyzicus he was banished, but still fought on the Spartan side as a mercenary leader. In 408 he returned to Sicily, but in spite of considerable successes he was not allowed to enter Syracuse, his opponent being the democratic leader Diocles, and he was killed in trying to force his entry (407). His daughter was married to Dionysius I.

Thuc. bks. 6-8; Xen. *Hell.* bk. 1; for the last years Diod. Sic. bk. 13. Lenschau, *PW*, s.v. 'Hermokrates'.

V. E.

HERMOGENES (1) (c. 200 B.C.), a Greek architect. His only known works are the temple of Dionysus at Teos and the temple of Artemis Leucophryene at Magnesia-on-Maeander, both in the Ionic Order. From these, and from his books about them, Vitruvius (q.v.) derived some of the principles of proportion included in his own book. But the remains of the two temples do not exactly agree with the precepts he attributes to Hermogenes; nor was the octastyle pseudodipteral type of temple invented by Hermogenes as he states. He also includes Hermogenes among those architects who objected to the use of the Doric Order in sacred buildings because of the complications arising from the spacing of the triglyphs. Strabo praises the Magnesian temple, and it is probable that Hermogenes' influence on Roman architecture of the Augustan period was considerable.

Vitruvius 3. 3; 4. 3; 7 *praef.*; Strabo 14. 1. 40 (c. 647). H. W. R.

HERMOGENES (2) of Tarsus (b. c. A.D. 150), sophist, a famous orator in his youth. His technical writings, forming a complete course in school rhetoric, include *Προγυμνάσματα*, *Π. τῶν στάσεων*, *Π. εὐρέσεως*, *Π. ἰδεῶν*, and *Π. μεθόδου δεινότητος*. In *Π. ἰδεῶν*, which owed much in form and detail to Ps.-Aristides' *τέχναι* (see ARISTIDES 5), he tried to arrive at the laws of style by an analysis of the qualities of ancient writers. He divided his subject into (1) *λόγος πολιτικός*, (2) *λόγος παιγνυρικός*; distinguished seven main *ἰδέαι* or forms, *σαφήνεια*, *μέγεθος*, etc.; established Demosthenes and Plato as models; and recommended a blending of Demosthenes' qualities for the highest eloquence (*δεινότης*) (Kroll, *Rhet.* § 40). With the philosophical treatment of rhetoric he was not concerned; he limited himself mainly to the elaboration of unending distinctions and over-subtle rules, which rendered rhetoric fixed and sterile. Yet by this work, and by his *στάσις*-teaching, he achieved lasting fame in the schools, from the fifth century onwards, and especially in Byzantine times his influence was considerable.

Text, L. Spengel, *Rhet.* ii (1834), 3-426; H. Rabe (Teubner, 1913).

J. W. H. A.

HERMOPOLIS (mod. *Ashmunein*) in Graeco-Roman times marked the boundary between Middle and Upper Egypt, where dues were collected on goods passing along the Nile. The mounds there have yielded many papyri, but the buildings described by Jomard (c. 1800) have almost disappeared. Recent excavations have disclosed important religious and sepulchral structures in the western quarter, with interesting Graeco-Egyptian wall-paintings. The papyri give useful information about the organization of the town under the Romans.

E. Jomard, *Description de l'Égypte*, *Antiq.* ch. 14, pl. 50-2; G. Méautis, *Hermopolis-la-grande* (1918) (chiefly on papyri); S. Gabra in *Illustrated London News* 4. 3. 1933, 21. 4. 1934, 8. 6. 1935, 12. 6. 1937, 2. 7. 1938 (excavations).

J. G. M.

HERNICI inhabited the Trerus valley and hills north of it in Italy (Strabo 5. 231: inaccurate). Their treaty with Rome in regal times is possibly apocryphal (Dion. Hal. 4. 49; Festus, p. 476 L.). But they certainly signed a defensive alliance with Rome c. 486 B.C., and in the subsequent wars against Aequi and Volsci fought staunchly (Dion. Hal. 8. 64 f.; Livy 2. 41, etc.: untrustworthy). Later, in 387 and 362, the Hernici opposed Rome but renewed the old alliance in 358 (Livy 6. 2 f.; 7. 6 f.). After remaining loyal in the Latin War the Hernican cities, except Ferentinum, Aletrium, and Verulac, were led into war against Rome in 306 by Agnania, but were easily conquered and granted partial, later full, citizenship (Livy 9. 42 f.; Festus, p. 262 L.). Hernican territory became part of Latium and the Hernici were so completely latinized that their own language cannot be discovered. It may have been Oscan (q.v.), but more probably belonged to the Latinian group (J. Whatmough, *Foundations of Roman Italy*, 262).

HERO (*Ἡρώ*) and **LEANDER** (*Λεάνδρος*), a pretty love-story of apparently Alexandrian origin (earliest surviving authorities Ov. *Her.* 18 and 19, where see Palmer's note, and Verg. *G.* 3. 258 ff.). Hero was priestess of Aphrodite at Sestos; Leander lived at Abydos, saw her at a festival, fell in love with her, and used nightly to swim the Hellespont to see her until a storm put out the light by which she guided him across and he was drowned; she threw herself into the sea after him. Cf. Strabo 13. 1. 22.

H. J. R.

HERO-CULT, the worship, as being superhuman, of noteworthy dead men and women, real or imaginary, normally at their actual or supposed tombs. The nature of the cult did not differ appreciably from that given to other chthonian powers (black victims, generally not shared by the worshippers, evening or night rather than day for the ritual, blood and other liquids poured into a trench, hearth, or low altar, *εσχάρα*, rather than the high Olympian altar, *βωμός*), except that it was seldom practised at more than one place, or if at more, usually because several places claimed to possess the bones of the hero or heroine. The most noteworthy exception, Heracles (q.v.), was on his way to become a god and, indeed, received divine honours in some places. Hero-cult must be distinguished from the ordinary tendency of the dead, i.e. the performance of certain rites, including offerings of food and drink, intended to make them comfortable in the next world, for this did not involve worship.

Hero-cult is not found in Homer, where the word *ἥρως* means simply 'gentleman, noble'; *Iliad* 2. 550-1, supposing it genuine, is proof rather that Erechtheus (q.v.) was regarded as a god than that hero-worship was then practised. But in classical and post-classical Greece it is exceedingly common, and its typical objects are the traditional *ἥρως* of Homer and other writers of saga, though this is not the only category, see below. It

is therefore likely that it began after the Dorian migration, when the ancient chieftains had become legendary figures, idealized because native and not belonging to the new invading aristocracy. Whatever its origin, it spread to include many persons who had never existed save in the imagination of their worshippers.

These imaginary figures may be considered as a class in themselves; for more elaborate classification, see Farnell (op. cit. infra). It includes the so-called 'faded gods', that is to say figures originally divine, which for one reason or another had come to be considered dead men, and their places of worship tombs. Many such are of course doubtful, see ASCLEPIUS, HELEN, IPHIGENIA, for examples. Others are practically certain, as Hyacinthus (q.v.), Trophonius, and Agamedes (see TROPHONIUS), who, although they have a characteristic folk-tale told of them concerning their prowess as master-builders and master-thieves (Paus. 9. 37. 5 ff.), have no other existence except that the former is the possessor of a famous oracle. Generally the following characteristics may be looked for in a 'faded' figure. The name often, if Greek, is significant of something directly connected with the ritual; Trophonius seems to be the 'feeder', a natural enough name for a chthonian power, but odd for a human being. The legend, if one exists, is generally irrelevant to the cult altogether, as in the case of Hyacinthus, or explains some detail of it only, as with Glaucus (q.v. 3), whose connexion with the Taraxippos at the Isthmus is obviously secondary. The connexion with a genealogy is non-existent, fluctuating, or artificial (Hippolytus may be a case in point, see Farnell, p. 64 ff.; Aeneas, perhaps an offshoot of Aphrodite to begin with, becomes an ancestor by suspicious processes, cf. Farnell, p. 55, and *Cults*, ii. 638 ff.). Finally, the ritual generally contains something alien to normal worship of the dead, as the curious performances connected with the Delphic 'heroine' Charila (Plut. *Quaest. Graec.* 12).

The more normal heroes, i.e. those who, if they ever really existed, were human, are simpler. Many naturally are worshipped by their descendants or former subjects; indeed, this is the ordinary case, as with Theseus (q.v.) at Athens and the Tritopatores (q.v.) in the same city. Many, again, are characters from the epic poems, and here ancestral connexion, although desirable (presumably the alleged fetching by the Spartans of Orestes' bones from Tegea, Hdt. 1. 67. 3 ff., had to do with their adoption of the house of Agamemnon as in some sense theirs) was not necessary; the Thebans who imported the bones of Hector (q.v.) did not claim to be descended from him, nor the Athenians from Oedipus (q.v.); the mere presence in the land of the bodies of such men was a blessing, however they came there. Others, though regarded as ancestors, are transparent inventions, made up from the name of the city or its people, as Messene (see Farnell, p. 360). Finally, a considerable number were fully historical, heroized because of some notable action or even mere strangeness, as Brasidas at Amphipolis (Thuc. 5. 11. 1) and the homicidal lunatic Cleomedes at Astypalea (Paus. 6. 9. 6 ff.). (See also EUTHYMUS.)

Theological speculation busied itself with the possibility of heroes ultimately becoming gods (see Plutarch, *De def. or.* 415 b), not the least interesting part of the common Hellenistic and later belief that men could turn into gods if sufficiently virtuous.

See also RELICS. Older standard work E. Rohde, *Psyche* (1907); completest, with many references to ancient and modern literature, L. R. Farnell, *Greek Hero-Cults* (1921). On the ritual cf. W. S. Ferguson and A. D. Nock, *Harv. Theol. Rev.* xxxvii (1944). See CITY FOUNDERS, RIDER-GODS.

HEROD (1) THE GREAT (c. 73-4 B.C.), on his father Antipater's murder (43 B.C.), succeeded jointly with his elder brother Phasaël to his position of vizier to Hyrcanus II. Phasaël was killed in the Parthian invasion, but Herod escaped to Rome, where Antony nominated him king

of Hyrcanus' ethnarchy with Idumaea. Despite the intrigues of Cleopatra, who coveted his kingdom, he retained Antony's confidence and was in 30 B.C. confirmed by Octavian, who added to his dominions several cities and later (in 24 and 20) large parts of the Ituraean (q.v.) tetrarchy. Herod was an able king. He relentlessly enforced order and greatly developed the economic resources of the country, building for it a new port (Caesarea, q.v. 2). He also endeavoured to promote hellenization, celebrating games in Jerusalem and re-founding several cities within his dominions, as well as bestowing lavish gifts on many without them. These activities increased the hatred of the Jews towards him, and his power was based on his fortresses and his mercenary barbarian army, his secret police, and a centralized bureaucracy. He ruthlessly crushed the old aristocracy, building up in its stead a new nobility of service, many of them Greeks, and a subservient priesthood, drawn in part from the Dispersion, from which he filled the Sanhedrin and the high-priesthood, now held during the king's pleasure. Till late in his reign he secured the acquiescence of the Pharisee party, but neither his effective championship of the rights of the Dispersion nor even his magnificent new temples won him popularity. His family life was embittered by intrigues fomented by his sister Salome, later assisted by his eldest son, Antipater, against his favourite wife Mariamne (executed 29 B.C.) and her sons, Alexander and Aristobulus (executed 7 B.C.); he finally executed Antipater shortly before his own death. At first respected by Augustus and Agrippa, he later lost the former's confidence owing to his savagery to his family and his high-handed conduct in a dispute with the Nabataeans.

Ancient sources: Josephus, *BJ* 1. 203-673; *AJ* 14. 158-17. 192. Modern accounts: W. Otto, *PIV*, Suppl. ii (1913), cols. 1-158; A. Momigliano, *CAH* x. 316-37; A. H. M. Jones, *The Herods of Judaea* (1938), 28-155. A. H. M. J.

HEROD (2) ANTIPAS, on the death of his father (Herod the Great, q.v.), was appointed tetrarch of Galilee, where he founded two cities, Sepphoris and later Tiberias (q.v.), and of Peraea, where he built the town of Livias (later Julias). He was a trusted friend of Tiberius, who in A.D. 36 gave him the task of mediating between Rome and Parthia. He divorced his first wife, a daughter of Aretas IV (who in revenge invaded Peraea in 37), in favour of his niece Herodias. Incited by her, he petitioned Gaius for the title of king, but was deposed on a charge of treason trumped up by his nephew Agrippa I (39). A. H. M. J.

HEROD AGRIPPA, see AGRIPPA I.

HERODAS (HERONDAS?), a third-century B.C. writer of *mimiambi*, literary mimes in iambic scazons. A papyrus containing eight of his pieces was discovered in 1890; they are short, subtle, realistic presentations of typical mime-themes, perhaps intended for solo performance. 1. *The Bawd*. Metriche, whose lover (husband?) has gone to Egypt, is visited by old Gyllis, who urges her to transfer her affections to a young athlete, Gryllus. She refuses with refreshing firmness and politely dismisses Gyllis with a cup of wine. 2. *The Pimp*. Battarus delivers a harangue in court against a trader for house-breaking and attempted abduction of one of his slave-girls. The vulgar, unctuous, menacing yet entirely mercenary pimp is perhaps the author's masterpiece. There is much parody of legal forms. 3. *The Schoolmaster*. The voluble Metrotime, exasperated by poverty and the pranks of her incorrigible son Cottalus, brings him to the dry schoolmaster, Lampriscus, for a flogging, which is duly administered. 4. *The Women Worshippers*. Cynno, her friend Coccale, and the maid (mute) bring their humble offering to the temple of Asclepius at Cos. The matter-of-fact, short-tempered mistress Cynno, the naïve

Coeale, lost in admiration at the temple-statues, and the oily sacristan are effectively portrayed. 5. *The Jealous Mistress*. Bitinna, furious at discovering the infidelity of Gastron, her slave-paramour, orders him off for flogging, in spite of his entreaties; then she hastily sends her maid Cydilla to fetch him back for branding; finally Cydilla wheedles her into granting a provisional pardon. 6. *The Private Conversation*. Metro calls on Coritto to ask for certain information, and the two dear friends converse with admirable cynicism. 7. *The Shoemaker*. Metro introduces some prospective lady-customers to the fashionable shoemaker Cerdon, an outstanding portrait of the salesman, alternately oily and truculent. 8. *The Dream*. A farmer (clearly Herodas himself) relates his dream of how his goat was torn limb from limb by certain worshippers of Dionysus, and how, in the subsequent contest, he won the prize. Herodas is evidently referring to the harsh treatment of his works by his critics, and his hopes of ultimate recognition as the successor of Hipponax.

Annotated editions: J. A. Nairn (1904); W. Headlam and A. D. Knox, with translation (1922); O. Crusius (2nd ed., by R. Herzog, 1926); A. D. Knox (Loeb, with Theophrastus' *Characters*). W. B.

HERODES ATTICUS of Marathon (A.D. 101-77), famous sophist and patron of learning, who did much by his benefactions, his eloquence, and his culture to enhance the glory of Athens. Of his writings, including letters, diatribes, and *ἐφημερίδες* (a literary diary), a fragment of a diatribe against Stoic teaching (Gellius 19. 12, Latin transl.) and one *μελέτη* (II. *πολιτείας*) alone have survived. The latter is based on a harangue of Thrasymachus, and its style is modelled on that of Critias.

J. W. H. A.

HERODIAN(1)(**AEIUS HERODIANUS**), son of Apollonius Dyscolus, of Alexandria, grammarian at Rome under M. Aurelius. He wrote works on the accentuation of the *Iliad* and *Odyssey*, and of Attic. These he afterwards included in his *Καθολικὴ προσῳδία*, reviewing the accentuation of (it is said) some 60,000 words. It was in twenty-one books: 1-19 contained rules of accentuation, the 20th dealt with quantities and breathings, and the last with enclitics, synaloepha, and some other points concerning words in combination. This immense work survives only in later citations, and in extracts such as those by Theodosius and Ps.-Arcadius. It was largely based on Aristarelius and his successors in this field. Two of Herodian's other works are extant—*Περὶ μνηρῶν λέξεων* (on anomalous words) and *Φιλέταρος*, a short Atticist lexicon. He disagrees, however, with his father's extreme doctrines of ἀναλογία, expressly repudiating such forms as *ἴμι* (see APOLLONIUS DYSCOLUS). Of his many other works the titles of about thirty survive, together with extracts and quotations by later scholars: they cover many departments of grammar, including, e.g., treatises on various parts of speech, figures, declensions, conjugations, defective verbs, and some anomalous words such as ὄψωρ. Herodian ranks with his father as one of the greatest, as he is the last, of original Greek grammarians.

Editions: *Φιλέταρος*: Pierson, 1739; *Π. μνηρ. λέξ.*: Dindorf, 1823; *Π. μνηρ. λέξ.*, II. *Ἀνακτ. προσῳδία*, II. *διχρονία*, Lehrs, 1848. *Herodiani Reliquiae* (much conjectural reconstruction) Lentz in Teubner's *Gramm. Gr.* C. A. Lobbeck's *Pathologiae Gr. terminis elementa* (1852-63), is based on Herodian.

P. B. R. F.

HERODIAN (2) of Syria, a subordinate official in Rome early in the third century A.D., wrote *Τῆς μετὰ Μάρκον βαυδαίας ἱστορίας* in eight books from M. Aurelius to Gordian III (A.D. 180-238). Moralizing and rhetorical, his work is superficial, although his value increases with his contemporary knowledge.

Text: L. Mendelssohn (1883); K. Savienhagen (1922); E. Rieu. Dr. Herodian's *formal et cetera* (1929). A. H. McD.

HERODICUS of Babylon (perhaps late 2nd c. B.C.), author of *Κωμωδοῦμνοι* (persons satirized in Comedy, see AMMONIUS 1), *Συμμικτα ὑπομνήματα*, and *Πρὸς τὸν φιλοσωκράτην*.

M. Müller, *De Seleuco Homérico* (1891), 10 ff.; J. Steinhäusen, *Κωμωδοῦμνοι* (1910); A. Dittmar, *Aischines von Sphettos* (1912), 56-7. J. D. D.

HERODORUS OF HERACLEA, see LOGOGRAPHERS.

HERODOTUS (1), son of Lyxes, of good family in Halicarnassus, and related to Panyassis, a 'reviver of epic', was born 'a little before the Persian War, and lived till the Peloponnesian War' (Dion. Hal. *Thuc.* 5): in 468 B.C. he was 'well known' (Gell. 15. 23); in 432 he was fifty-three (Eusebius, *Chronica*); he records events of 431-430; and his preface was parodied in 425 (Ar. *Ach.* 513 ff.). In civil strife at Halicarnassus Panyassis was killed by the tyrant Lygdamis, grandson of Artemisia (q.v.), and Herodotus withdrew to Samos. By 454 Halicarnassus was pacified and a Delian tributary; but if H. returned, he did not remain; for he had travelled, and lectured in Greece, and visited Athens, before he joined the Athenian colony at Thurii (founded 443). Here his tomb and epitaph were shown. He was described as 'of Thurii' until the third century, when Halicarnassus reclaimed him, erecting a statue and figuring him later on coins.

2. **TRAVELS**. Besides acquaintance with Samos (3. 60), Athens (5. 79), and south Italy (4. 14. 99), H. records travels—(a) in Egypt, to Elephantine, during the Nile flood and ebb, after the Persian reconquest (449), perhaps also before the revolt of 460-454; (b) to Gaza (3. 5), Tyre (2. 44), and down the Euphrates (1. 185) to Babylon (1. 178-83); (c) in Seythia, to Olbia (4. 16) and up the Borysthenes (4. 81), and in the north Aegean from Bosporus (4. 87) to Thasos (6. 47). For inland Asia Minor and for Persia there is no 'eyewitness'; Cyrene (4. 156-203) was on a sea-route to Egypt. Some of these visits were deliberate, in search of information (2. 3. 44), and were supplemented by inquiries (2. 29) from natives of over forty places. At Delphi especially tradition was corroborated by monuments (1. 14. 50, 9. 51). Silence about western journeys suggests that the main motive was not geographical but historical, and that the visit to Athens was a crisis in life and outlook: acquaintance with Sophocles, who wrote him verses (*Anth. Lyr. Graec.* 1. i², p. 81), interest in Pericles and Alcmaeonid house-lore, in Cimon's ancestors (4. 137-8; 6. 34 ff., 103 ff.), and in topographical details (5. 77, 8. 53) enhance the significance of his eulogy and vindication of Athenian aims and achievements (7. 139). From the Athenians he is said to have received a gift of ten talents; for a literary reward the amount is without parallel. Allusions to events about 431 are consistent with a return from Thurii to Athens, but do not prove it; it is an independent question when and why the book achieved its actual form.

3. **OTHER SOURCES**. Besides his own travels and inquiries H. has wide geographical, historical, and literary knowledge. Among many other writers he quotes Homer and Hesiod, discusses the authorship of the *Cypria* (2. 117), notes suspect or misapplied oracles (7. 6; 8. 20, 43), and defends genuine ones (8. 77); dissents from current Ionian theories (2. 15, 20, 143; 4. 36; 6. 137), and expressly criticizes and derides Hecataeus, from whom, however, he borrows freely. Other anonymous loans may be presumed, as H. rarely quotes individual sources, though he frequently mentions Argives and other peoples.

4. **TEXT**. There are a few lacunae, and the account of the Pyramid kings (2. 124-26) should follow 2. 69. An unfulfilled reference to *Μεσοποταμίου λόγον* (1. 184) indicates that a Mesopotamian counterpart to the description of Egypt has been lost, or was not written.

5. PLAN AND SCOPE. The plan of the *History* is stated in its opening words (1. 1). Great deeds have value in retrospect, whether done by Greeks or by others (and H.'s portraits of Persians are masterly), and it is reasonable to ask, of the Great War, 'what they fought each other for'. Current theories explain nothing; peoples and States must be studied objectively. Blame for clash of Persians with Greeks is on Croesus, whose headstrong attack on Cyrus ruined Lydia (1. 6). The story of that 'middle kingdom' (1. 7-94) is interrupted characteristically by a pair of digressions (1. 59-68) explaining why neither Athens nor Sparta helped Croesus. The rise of the Medes, their subjection by Cyrus, and a sketch of him and his Persians (1. 95-140) lead to his conquest of the Asiatic Greeks (1. 141-77). The story of the Empire under Cyrus, Cambyses, and Darius (1. 178 to 5. 27) includes a long account of Egypt (bk. 2) which balanced the lost 'Assyrian story' (1. 181). The accession and reforms of Darius (3. 61-87, 150-60) are interleaved with his first oversea success, against Polykrates of Samos (3. 39-60; 120-49), and followed by pendant narratives of his aggressions in Thrace and Scythia (4. 1-144; 5. 1-27) and in Libya (4. 145-205). After all this retrospect comes the Ionic Revolt (5. 28-38), its suppression (5. 97-6. 42), and the consequent Marathon campaign (6. 94-120), similarly alternated with events in Greece, involving Sparta (5. 39-54; 6. 51-84) and Athens (5. 55-96; 6. 85-93, 121-40) in resistance to Persia. In bks. 7, 8, 9 the accession of Xerxes, and his choice between policies (7. 1-19), lead to pendant narratives of preparation, Persian (7. 20-131) and Greek (7. 131-75). Then the sea-fight at Artemisium (7. 175-95) and the land-battle at Thermopylae (7. 196-239), with their sequels (8. 1-23, 24-39), prepare for the crucial struggle at Salamis (8. 40-112) and its aftermath, the return of Xerxes (8. 113-32), and the winter parleys (8. 133-44). Finally, the land-battle of Plataea (9. 1-89) and naval operations at Mycale (9. 90-106) are the counterpart of Artemisium and Thermopylae.

6. The *History* has been regarded as unfinished; but the brief epilogue (9. 107-22) elaborately displays Persian demoralization, contrasted with initial hardness. If H. meant to go beyond the capture of Sestus (9. 117-21), it was to be a fresh 'account' of new aims and events; and it is where our text of Herodotus ends that Thucydides begins his retrospect (1. 89) of *τὰ μετὰ τὰ Μηδικά*. The clumsy division of the work into nine 'Muses' is some librarian's fancy: H. himself cross-refers to this or that *λόγος*.

7. LITERARY ART. Within this broad design the main story is clearly distinguished from 'additions' (*προσθήκαι* 4. 30; *παρενθήκαι* 7. 171) large and small, some composed for their place, some utilizing earlier drafts. Such digressions have Epic precedent, and those of Herodotus—for which he apologizes (2. 13)—are deliberate. His literary art must be compared with Pindar's notions of relevance, and with the tragedians' use of choral odes, annotating rather than interrupting the development of the plot. Like the dramatists, too, H. chooses a hero—Croesus, Polykrates, Cleomenes, Mar-donius—and traces his response to events and persons, in success and in disaster. Through *peripetecia* and *catastrophe* the question—*δι' ἣν αἰτίην*—answers itself: only rarely need H. intervene, chorus-like, to point a moral; for his public, like the audience of a tragedy, knew the story. Hence economy of detail, significant hearsay without guarantee of veracity; Aeschylean word-painting, Pindaric allusiveness, Aristophanic humour, above all, Sophoclean irony; a new literary art and expository skill, applied in lucid prose to a fresh field of research—the causes of 'men's deeds'—which establish Herodotus as the 'Father of History'.

8. HISTORICAL METHOD. Like earlier writers of *λόγοι* (see LOGOGRAPHERS), H. professes to record things seen

and heard. His book results from his journeys; yet it is no mere *periódos* γῆς or *ἐπιδημιαί*, but *ιστορίας ἀπόδειξις*, the outcome of research. Eyewitness (*ὄψις* 2. 99, 147; 4. 81; cf. 5. 59), hearsay (*ἀκοή* 2. 99-106; 6. 81; 7. 30), and written authority (poets, oracles, Ionian travellers, and theorists) are to be supplemented and verified by inquiry (*ιστορίη* 2. 19, 44, 75, 113, 118; 6. 96) and criticized by common sense (*γνώμη* 2. 24; 5. 3). He states alternative versions and views with discreet reticence (2. 3, 46-7), and reserves judgement or offers conjecture (*εἰκασίη* 2. 24; 4. 11-12; 7. 22) when evidence fails. Ethnographical and historical interests have outrun (but not extinguished) physical and geographical. Historical facts have intrinsic value and rational meaning. Patriotism is tempered by comparison of régimes and customs, and by respect for age-long Oriental experience: Plutarch calls H. *φιλοβάρβαρος*. In Egypt he believed that he had received mystic teaching; but he reveals nothing, because 'all men know equally about divine things' (2. 3).

9. PERSONALITY. His personality is written in his book. Explorer, observer, and listener, he combines encyclopaedic interest and curiosity—about deeds rather than ideas—with humane sympathy and goodwill. Childlike, he loves wonders and secrets, enjoys a tale and a joke, and tells them vividly. Devoid of race-prejudice and intolerance, he venerates antiquity and is fascinated by novelties; and in these things trusts informants over-much. Without linguistic skill, he extracts information from all; without military insight, he has recorded a great war. For a philosophy he has common sense, moral honesty, and piety. In a world regulated by fate (*μοῖρα*) but deranged by chance (*τύχη*), the gods (or 'the divine') maintain righteousness and punish wrongdoers. They can warn, but they cannot prevent, though they intervene to punish arrogance. Amid these external forces, and with the guidance of law and usage, man, using experience and reason, has freedom of choice and is responsible (*αἴτιος*) for his acts.

10. Of such work, criticism was immediate and persistent. H. himself replies to critics (6. 43); Thucydides (1. 20) challenges statements (6. 43; 9. 53); Aristophanes parodies the preface (*Ach.* 513 ff.); Ctesias contradicts; Plutarch (*De Malignitate Herodoti*) imputes unfairness and perversion of facts; Christian writers make charges of plagiarism, which Sayce (1883) has repeated and amplified. But closer study and better acquaintance with the resources, equipment, and literary custom of ancient writers have restored Herodotus' reputation for industry and honesty, while noting mistakes and omissions.

J. L. M.

11. Herodotus' style probably owes little to the early logographers, whose scanty fragments hardly reveal any style at all—an impression confirmed, on the whole, by Dion. Hal. *Thuc.* 5 and 23. To Homer he undoubtedly owes much, in ease of thought as well as in language (Norden, *Antike Kunstprosa* i. 40). What other literary influences may have gone to the moulding of him it is hard to say. Nor is it easy to analyse the surpassing beauty of his prose, for H. has no mannerisms. Sometimes it is traceable to a subtle disposition of long and short words, as in the majestic poem (comparable, in this respect, to the openings of Sappho's *Ode to Aphrodite* and Lucretius' poem) and in 1. 45, ad fin.; sometimes to other technical means (1. 119, unobtrusive word-echoes; 1. 45, loc. cit., hyperbaton; 1. 32, asyndeton and initial assonance). But hardly a single technical device can be said to be characteristic of H. Each is used when, and when only, it is needed, as the period, for example, is reserved for great moments (e.g. 1. 45, 86). The first book is peculiarly rich in noble passages: Solon and Croesus (29-33, with the unforgettable solemnity of *τὸ θεῖον πάντων ἐὼν φθονερόν τε καὶ παραχῶδες* and *πάν ἐστί ἀνθρώπος συμφορῇ*, and 86-90); Harpagus eating his children's flesh (119, with the master-stroke at the

close, where the historian is transformed into the hushed, yet curious, spectator). Such passages are the perfection of tragedy, as Don't-care Hippocleides pirouetting on his head is the perfection of comedy. They reveal a side of H. not always perceived by modern readers or by ancient critics, who praise his sweetness and beauty, but find him lacking in emotional power (c.g. Cic. *Orat.* 39 'quasi sedatus amnis fluit'; Quint. *Inst.* 10. 1. 73 'dulcis et candidus et fusus H.'). Dion. Hal. *Pomp.* 3 and *Thuc.* 23 (comparisons with Thuc.); Ath. 3, p. 78 c (μολύγγπος). Hermogenes, however (*Id.* 2, p. 421), does recognize H.'s grandeur and emotional power. H. has suffered the fate which befell Mozart. His charm, wit, and effortless ease have diverted attention from the note of profound sadness and pity sounded not seldom in his History.

HERODOTUS (2), pupil of Agathinus and adherent of the pneumatic school of medicine, in the Flavian period (A.D. 70-96), wrote *Ἱστορίαι* and *Περὶ βοηθημάτων* (lost); *Διάνοσις περὶ τῶν ὀξέων καὶ χροῶν νοσημάτων* (extant). *PIV* viii. 990.

HERON of Alexandria (date uncertain), known as ὁ μηχανικός, was also an able mathematician. In geometry he wrote *Metrika* (mensuration of figures), three books; other titles are *Definitions*, *Geometrica*, *Geodesia*, *Stereometrica*, *Mensurae*, *Liber Geoponicus*; no doubt these collections are in part by others who borrowed Heron's name. Of his *Commentary on Euclid's Elements* a few extracts are given by Proclus and An-Nairizi. Heron's other works are: *Mechanica*, three books (but for some extracts by Pappus, only an Arabic version exists), *Pneumatica*, two books, *On Automaton-making* (*Περὶ αὐματοποιτικῆς*), *On the Dioptra*, *Belopoeica*, *Chirobalistra*, *Catoptrica* (*On Mirrors*) known in a Latin translation only.

In the *Metrika* we have the mensuration of regular polygons up to the hendecagon, circles, cones, pyramids, etc. Heron solves quadratic equations arithmetically, approximates to square roots of non-square numbers, and to cube roots. In the *Mechanics* we find the parallelogram of velocities, problems on centres of gravity, etc., Heron's solution of the problem of the two mean proportionals, motion on an inclined plane, the five mechanical powers, the mechanics of daily life. The *Pneumatica* treats of such things as siphons, penny-in-the-slot machines, 'Heron's fountain', a fire-engine, a water-organ, and many contrivances operating by means of compressed air, water, or steam. See *PHYSICS*, para. 5.

Heron's Opera, 5 vols. (Teubner, 1879-1914); F. Hultsch, *Heronis Alexandrini geometricorum et mechanicorum reliquiae* (1894); and, for the *Belopoeica* and *Chirobalistra*, Thévenet, *Pneumatique mathématique* (1891); C. Weisler, *Polystichos der Geom.* (1927); V. Prou, *Notes et Extraits* (1927). The first ed. of the *Dioptra* is that of H. Diels and E. Schramm in *Abh. Berl. Akad.* (1913). *PIV* viii. 992.

T. H.

HEROPHILUS of Chalcedon, one of the leading dogmatic physicians, lived in Alexandria in the first half of the third century B.C.; his school was still flourishing at the end of the first century B.C. Herophilus stressed the importance of experience no less than that of reasoning. Though a great scholar, his work seems primarily determined by the practical task of the physician; health he went so far as to consider the indispensable foundation of all physical and intellectual happiness. His greatest original contributions were his anatomical inquiries based on the human cadaver; he probably wrote a systematic outline of anatomy (particularly famous was his study of the brain—to him the organ of the soul, of the liver, the eye, the sexual organs). He discovered the rhythm of the pulse and formulated a mathematical law of its systole and diastole. Much interested in the aetiology of diseases, he explained their origin through humours. In therapy he paid careful attention to prognostics and used drugs abundantly; but he was also an authority on dietetics and gymnastics. Through his books, in which practical questions were emphasized, he exercised a considerable influence. See *ANATOMY AND PHYSIOLOGY*, para. 7.

Text. Fragments: K. F. H. Marx (1838); Marx, *De vita, scriptis*, etc. (1842). List of writings: Susenmihl, i. 787. Translation and Commentary: J. F. Dobson, *Proceedings of the Royal Society of Med.*, Section Hist. of Med. (1925), indispensable translation and interpretation of the more important fragments. Literature: the handbooks on history of medicine. Pupils of H.: H. Gossen, *PIV* viii. 1104.

L. E.

HESIOD, son of an unsuccessful citizen of Cyme in Aeolis, who with two sons, Hesiod and Perses, migrated to Greece and settled at Ascra on the slopes of Helicon. Some time after the father's death Perses, who had already obtained more than his share of the estate, tried with the help of the rulers (*βασιλῆες*) to obtain still more. It is not known how the dispute was settled, but it appears to have led H. to begin a series of moral admonitions in hexameter verse which afterwards resulted in the poem *Works and Days* (see *DIDACTIC POETRY*). The above account of his life is derived from H. himself (*Op.* 27-41, 633-8; cf. 650-62 and *Th.* 22-35). We are told also that he contended with Homer (*Schol. Pind. Nem.* 2. 1 = fr. 265 Rzsch), whence arose the *Agon* (see *Agon Homeri et Hesiodi*), and that he met a violent death (*Thuc.* 3. 96) which legend made him to deserve (c.g. Plutarch, *Corr. sept. sap.* 19. 162). It is impossible to determine his date exactly; the general opinion in the fifth and fourth centuries B.C. was that H., like Orpheus, Musaeus, and Homer, was one of the earliest teachers and civilizers of man (*Ar. Ran.* 1032 ff.; *Pl. Ap.* 41 a). Herodotus (2. 53) makes him contemporary with Homer, but later antiquity was uncertain. Modern opinion generally regards him as later than Homer, but there is no agreement about his date. T. W. Allen (*Homer: the Origins and Transmission* (1924), ch. 4) would put him as early as 800 B.C.

WORKS

1. *Works and Days* (*Ἔργα καὶ ἡμέραι*). The composition may have been spread over a long period, but though many ancient sayings have been incorporated (e.g. in 286-382, 706-64), there is no reason to suspect wholesale interpolation, with the possible exception of the *Days* (765-828). H. addresses himself to his brother Perses on the subject of their dispute (see above) and preaches the need for every man to work for his living. He supports this thesis with a myth (the punishment of the presumptuousness of Prometheus), and elaborates it with an account, partly historical, of the Five Ages of the World. After a series of moral precepts follows the famous description of a year's farm-work (383-617). H., having expounded first the necessity for work, then its righteousness, now explains its performance. Emphasis is laid on the proper time for various operations

and this is indicated in various ways, e.g. by the positions of constellations and by the migrations of cranes and other movements of animals. Advice is given on farm labour and implements, on feeding and relaxation, and on clothing, especially in winter. Indeed, the lines (504-63) on the month Lenaeon, though suspected by some, are justly famous; not even Homer has surpassed this unforgettable picture of mid-winter in a bleak mountain homestead. There follow advice on navigation and much other proverbial lore, then finally (765-828) an account of days lucky or unlucky for various operations, chiefly but not entirely agricultural. Their genuineness has been suspected (M. P. Nilsson, *ARW* xiv. 439 n.), but not in antiquity (Heraclitus ap. Plut. *Cam.* 138 a); Herodotus, too (2. 82), alludes to this part of H.'s work.

2. *The Theogony* (*Θεογονία*) is the first piece of conscious religious writing in Greek. Here, too, H. is gathering ancient material; he attempts to bring traditions concerning the gods into a consistent connexion with each other and with his conception of the Universe as a whole. Zeus is the supreme god, but he is a late-comer, and neither he nor any other being is named Creator. Creation meant procreation. So, starting from Chaos and Gaea, with Eros to unite them, the genealogy of the gods is deduced—Uranus, Kronos, Zeus. The other offspring of Uranus and their descendants are listed; the myth, not in Homer, of the mutilation of Uranus by Kronos is told, and finally how Zeus overthrew Kronos, Titans, and Giants, and assumed the overlordship of the gods. Then follows an account of Zeus' numerous offspring, and another of the progeny of goddesses in union with mortals. The last two lines indicate that there was to follow a list of mortal women, presumably the lost *Ehoiai*.

In spite of Pausanias 9. 31 (story that H. was author only of the *Erga*), there is no good reason for doubting that H. was the author, and the mention of his name (22) is to be regarded as a *σφραγίς*. Hdt. 2. 53 is very definite. Like the *Works and Days* it is something of a medley, but there is more apparent unity of subject-matter. The long prooemium and the digressions should probably be regarded as characteristic of the poetical practice of the time rather than as evidence of multiple authorship.

3. *The Shield* (*Ἀσπίς*) begins with the catalogue formula *ἢ οἷη* ('or like her who'), and the first fifty-six lines refer to Alcmene. The opening formula suggests, and it is stated in the 'Argument', that lines 1-56 are an extract from the Hesiodic *Catalogue of Women* (*Ἡ οἰαι, Ehoiai*). For the rest (the fight between Heraeas and Cycnus and the description of Heracles' shield), the opinion of Aristophanes of Byzantium (cited in the Argument) is generally accepted—that it is not by H. 'but by some other person who had the notion of imitating the Homeric Shield' (*Il.* 18. 478-609). Its date is uncertain, but some of the scenes depicted (e.g. 215-17) appear to resemble those on vases of the late seventh and early sixth centuries (J. M. Woodward, *Percus*, p. 46; R. M. Cook in *CQ* xxxi (1937), 204).

4. *Lost Works*. Numerous fragments exist both in ancient citations and in papyri of H.'s *Catalogues* (*Κατάλογοι*), of which the *Ehoiai* seem to have formed a part. Some fragments exist of the following works, which are of doubtful authenticity: *Ἀστρονομία*, *Δάκτυλοι Ἰδαίου*, *Αἰγίμιος*, *Κήρυκος Γάμος*, *Μελαμπόδεα* (divinations of Melampus), *Χείρωνος ὑποθήκαι* (gnomie), *Μεγάλοι ἦοιαι*, *Μεγάλα ἔργα*, but nothing remains of the *Ὀρνιθομαντεία* attested by Proclus on *Op.* 828.

HESIONE (*Ἡσιόνη*), in mythology, (1) an Oceanid, wife of Prometheus (Aesch. *PV* 560). (2) Wife of Nauplius and mother of Palamedes (q.v.), Oeax, and Nausimedon (Apollod. 2. 23). (3) Daughter of Laomedon (q.v.; *ibid.* 3. 146). After her rescue from the sea-monster by Heracles (q.v.), she was taken prisoner by him when he captured Troy, given as the prize of valour to Telamon, and granted leave to save any prisoner she chose; she therefore bought (*ἐπίατο*) her brother Podarces for a nominal price, and he was henceforth called *Πριάμος*. By Telamon she became mother of Teucer (q.v.; Apollod. 2. 136; 3. 162). H. J. R.

HESPERUS (*Ἑσπερος* Lat. *Vesper*, *Vesperugo*), the Evening Star; shown in art as a boy carrying a torch. Father of the Hesperides (see *HERACLES* 2) or their mother Hesperis (Diod. Sic. 4. 27. 2-3; Serv. on *Aen.* 4. 484).

HESTIA, goddess of the hearth, etymologically identical with Vesta (q.v.), and not unlike her in cult, though less important and not having her virgin priestesses. In early times, when it was a difficult and slow process to make fire, to keep a hearth burning continually was very advisable, and it would seem that in communities of that age, both in Greece and in Italy, the hearth of the chief or king was especially important, probably for practical reasons and certainly also from magico-religious motives; it seems to have been considered in some sense the life of the people (the equation 'fire = life' is very widespread). Hence the cult of the communal or sacred hearth was apparently universal, but the goddess never developed, hardly even achieving anthropomorphization. She therefore has next to no mythology. Homer never mentions her, the word *ἱστῆρ* meaning simply a fire-place; Hesiod and later authors after him make her daughter of Kronos (q.v.) and Rhea (*Theog.* 454), and the *Homeric Hymn* to Aphrodite says (21 ff.) that she 'liked not the works of Aphrodite', and so refused to marry either Poseidon or Apollo, but swore to remain a virgin, and he accordingly granted her sundry honours, especially to 'sit in the midst of the house taking the fatness'. Of her private cult not much is known; swine or, on occasion, cows were offered to her, no doubt according to the means of the household (Ar. *Vesp.* 844 and schol.; Callim. *Cer.* 109). At the Amphidromia (Plato, *Theaet.* 160, schol. there and lexicographers s.v.), when the five-days-old child was received into the family and named, part of the ceremony was to run with it around the hearth, but it does not appear that the goddess was thought present in any personal way. Publicly, she has 'the council-houses' (*prytaneia*) for her portion' (Pind. *Nem.* 11. 1), confirmed by the public hearth in the *prytaneia* of many cities (Farnell, op. cit. inf. 348). Since the senate-house often had a sacred hearth also, Hestia is not infrequently called *Βουλαία*, 'she of the Senate'. She commonly received the first of the sacrifice, or a preliminary sacrifice for herself, was named first in prayers and first or nearly so in oaths (Pruener in Roscher, 2616 ff.; Farnell, 346, 349; Rose in *Harv. Theol. Rev.* xxx (1937), 172).

Farnell, *Cults*, v. 345 ff.; Pruener in Roscher's *Lexikon*, s.v. (cf. his *Hestia-Vesta*, 1864); Dichi, *Anthologia Lyrica* ii. 301 f. (hymn of Aristonous at Delphi). H. J. R.

HESTIASIS, *see* LITURGY.

HESYCHIUS of Alexandria, lexicographer. If the Eugenius to whom he addresses the introductory epistle of his lexicon is E. ὁ σχολαστικός, H. (like Eugenius) probably belongs to the fifth century A.D. The comprehensive scope of his design is indicated both in that epistle and in the title, *Συναγωγή πασῶν λέξεων κατὰ στοιχείων*. The work, H. says, was based on the specialist lexica (*see* GLOSSA, GREEK) of Aristarchus, Heliodorus (1st c. B.C.), Apion, and Apollonius, son of Archibius (pupil of Apion), and on Diogenianus and Herodian; H. seems to have added the interpretations of a number of proverbs which are included. The lexicon is known only from a fifteenth-century MS., badly preserved, and in many places interpolated (even obliterated) by expansions and other notes made by the first editor, Marcus Musurus (1514). Bentley showed that the Biblical Glosses in H. are interpolations; less successful attacks have been made on the Latin and Atticist items. The original, as H. says, included the sources of the rare words listed. The sources, however, have disappeared in the severe abridgement which has reduced the lexicon to a glossary, copious though that remains. H. often preserves correct readings for which easier synonyms have been substituted in our extant MSS. of Greek literature. His dialectal items are sometimes imperfect: he writes *φ* either as *B* (less often *Y*) or as *I* (less often *T*), as, e.g., *Γοῖδα* οὐκ οἶδα [sic cod.], *Πισγόν* [sic cod.] *ἴσων*. Nevertheless, he is of the greatest value for the study of Greek dialects and the interpretation of inscriptions.

Editions: Alberti, 1746-66; Schmidt, 1858-68; ed. minor, 1867; A. von Blumenthal, *Hesychiustudien* (1929). P. B. R. F.

HETAIIRIAI (*ἑταιρία*) (1) in Crete. In many Cretan cities all male citizens were grouped into *hetairiai* as part of the military system; the members fed in common in *andrea* very similar to the military messes at Sparta.

(2) In Athens *hetairiai* may have been social clubs at the outset; but since c. 425 B.C. they appear as political associations of oligarchic character. They served primarily for mutual assistance in the dicasteries, but under the influence of extreme oligarchs like Antiphon (q.v.) they became instruments of revolution, and they were principally responsible for the movement of the Four Hundred (q.v.). A. W. G.

HETAIROI (*ἑταῖροι*, Companions), first applied to the 2,500 Myrmidons of Achilles in the *Iliad*, this title in classical times was peculiar to Macedonia. Anaximenes (fr. 4 Jacoby *FGH*) ascribed the institution of *hetairoi* and *pezetairoi* to Alexander. Probably the *hetairoi*, as Cavalry-Companions, had existed for centuries before the *pezetairoi* or Infantry-Companions were formed; since Macedonia was not economically emancipated until the fourth century, the *pezetairoi* system may be ascribed to Alexander II (369-368 B.C.). By adopting the nobles of Upper Macedonia and able Greeks into the Companions, Philip II welded together his expanding State on a military basis. The *hetairoi*, to whom Philip granted estates of conquered land, numbered 800 c. 340 B.C. (Theopompus fr. 225 Jacoby). Alexander the Great increased their number, and late in his life enrolled Asiatics even in the royal bodyguard who served as his Council. In war the *pezetairoi*, equipped by Philip with *sarissa* and *pelta*, formed the defensive phalanx, and the *hetairoi*, equipped with a thrusting spear, delivered the offensive, usually from the right wing; they formed the core of the invincible army led by Alexander the Great. After his death Seleucus commanded the survivors of the *hetairoi* in one hipparchy, which later split up among the Successors. Further references in Arrian, *Anab.* N. G. L. H.

HIATUS, the gap that occurs when a word ending with a vowel is immediately followed by a word beginning with a vowel.

I. HIATUS IN GREEK VERSE

For hiatus at end of line or colon *see* METRIC.

Hiatus within line or colon, (1) without shortening of the first vowel, (2) with shortening:

(1) Hiatus without shortening is common in Homer, at certain points in the line, and, after certain words, in Comedy. Elsewhere it is rare, except that post-Homeric poets allow themselves some epic freedom in hexameters. Broadly speaking, the post-Homeric examples fall into the following classes:

(i) Where the second word is digammatized (e.g. *ἀραξ, ἔπος, ἴον*), hiatus cannot be truly said to exist in the case of poets (e.g. Aleman, Pindar, Bacchylides, Epicharmus) for whom the digamma was a living letter. Further, memory of the digamma makes tolerable such juxtapositions as *δέ οἱ* (dative) in Sophoclean lyric. Hiatus is also tolerated (ii) before certain proper names in lyric poetry (e.g. *Ἰσθμός*, Pind. *Isthm.* 1. 9 and 32); (iii) often in drama after, or between, exclamations: e.g. *ἔλεγε ἔλεγε* (Aesch. *PV* 877), *αἰαί, ἰκνούμαι* (Soph. *El.* 136), *ὦ Ἡράκλεις*, often in Comedy. Even in tragic trimeters, *ὦ οὗτος* (Soph. *OC* 1627). Similarly with quasi-interjectional expressions: *ἴθι ἴθι* (Soph. *Phil.* 832), *παί, ἡμί, παῖ* (Ar. *Ran.* 37); (iv) after *τί*, occasionally in tragic trimeters, very frequently (and also after *ὅτι, ὅτε*) in Comedy, especially in such phrases as *τί ἔστι; τί οὖν;* (v) *εὖ οἶδα* (*ἴσθι, ἴστε*) very occasionally in tragic, more frequently in comic, trimeters; (vi) in Comedy, often after *περί*, occasionally after *πρό* and *μέχρι* (*ἄν*); (vii) *οὐδέ* (*μηδέ*) *εἰς* (*ἐν*), occasionally in Old Comedy, very often in Middle and New Comedy; (viii) in the phrase *μη ὥρας, ὥρασι* (Comedy).

It will be noticed that in drama hiatus is mainly found within a more or less closely unified word-group, where the *concursum vocalium* seemed hardly more objectionable than within a single word (e.g. *δοκρός*). Perhaps, therefore, the freer toleration of hiatus (as of crasis) in Comedy is a consequence of a delivery more rapid, and less articulated, than that employed in Tragedy.

(2) Hiatus with shortening, sometimes called 'Epic correction' because of its commonness in epic (and elegiac) verse, is found in the dactylic cola of the early lyric poets (e.g. Sapph. fr. 116 οἶον τὸ γλυκύμαλον ἐρευνθεταί ἄκρω ἐπ' ὕδα), and is frequent in the dactyloepitrites of Pindar and Bacchylides. In the lyrics of Tragedy, Sophocles uses it far more frequently (e.g. *El.* 162-70) than Aeschylus or Euripides (who in his later plays almost banishes it). It is found in the anapaestic dimeters of Tragedy and Comedy (in the resolved arsis as well as in the thesis), and in the catalectic anapaestic tetrameters of Comedy (much more often in earlier than in later Aristophanes). A monosyllabic thesis does not admit correction; consequently all cases in *dochmii*, and the few cases in lyric iambs, occur in resolved arses (e.g. Soph. *Aj.* 349 μόναι ἐμῶν). The shortened syllable is much more frequently a diphthong (especially, perhaps, an accentually short diphthong in *-αι* or *-οι*) than a single vowel.

See J. Deserix, *Le Trimètre iambique* (1931), 26-9 and *for* bibliography *see* E. Kallias in *Berlin, Jahrb.*, 1930, pp. 472-4. J. D. D.

II. HIATUS IN GREEK PROSE

1. *Theory*. Isocrates (*TG* 377) deprecates hiatus generally; Hermogenes and his scholiast and Longinus except this ruling (Walz, iii. 289; vi. 102-3; ix. 560). [Arist.] *Rh. Al.* 1435^b probably concerns ambiguous elision not hiatus. Dionysius distinguishes: the austere style (Thucydides) allows hiatus freely; the middle style (Demosthenes) allows a little; the smooth style avoids

it carefully—Isocrates and Theopompus too carefully (*Comp.* 22-3; *Dem.* 4, 38, 40, 43; *Isoc.* 2; *Pomp.* 6). Plutarch satirizes Isocrates' scrupulousness (*Mor.* 350 e). Demetrius thinks marked hiatus desirable in the grand style, but too dignified for the simple style (*Eloc.* 68-74, 207, 299-301). Cf. also Cic. *Orat.* 77, 150-2, *De Or.* 3, 171-2; Quint. 9. 4. 33-7.

2. *Practice.* Marked avoidance of hiatus first appears in Thrasymachus, then in Gorgias (*Pal.*) and Alcidas (*Soph.*); there is moderate avoidance in Antisthenes and Lysias; little in Andocides; none in Antiphon. (Benseler assumes that pre-Isocratean writers cannot have avoided hiatus, and rejects as spurious those works which show avoidance.)

3. Isocrates is the pattern of the technique of avoidance, in securing which he relies little on crasis, elision, or pauses, but much on word-order and word-choice; hence some hyperbaton and such plurals as *ταῖς ἀληθείαις, σεμνότησιν*. His few licences are chiefly before *ἀν, οὐν*, and after *καί, περί, πρό, ὦ*. He avoids long vowels in hiatus (especially *η*) more strictly than short. His judicial speeches show rather more freedom than the rest.

4. Demosthenes, though careful, allows hiatus also before *ὥς* and after *εἰ, ἦ, ὅτι, μή*, and the article; at pauses within and after sentences; and with proper names and set phrases (*ἐν τῷ ἐμῷ ὕδατι εἰπάτω*). He often elides.

5. Further, hiatus is avoided carefully: by Lycurgus, Dinarchus, Demades, Theopompus, Polybius, Philodemus; by Isaeus and Plutarch sometimes; by Plato in his latest works and in *Phdr.* and *Menex.*; by Aristotle in *Pol.* and *Metaph.* 1. It is tolerated by Aeschines and Hyperides, and freely allowed by Herodotus, Thucydides, and usually Xenophon.

G. E. Benseler, *De hiatu in oratoribus Atticis* (1841; detailed, dogmatic); F. Blass, *Attische Beredsamkeit*³ (1887-98); S. Skimina, *Études sur le rythme de la prose grecque I* (1937). W. H. S.

III. HIATUS IN LATIN VERSE

There are three groups of fairly homogeneous cases:

(1) 'Epic correction' in or before Greek words from Cicero to Horace: *etesiāe* Cic. *Aratea* (Phaen.) fr. 24 (marked by himself, *Orator* 15. 2) and Lucr. 6. 716, *Peliō Ossam* Verg. G. 1. 281 (imitated—Ov. *Met.* 1. 155), *insulāe Ionio Aen.* 3. 211; cf. *Ecl.* 6. 44, G. 1. 437, 4. 461, *Aen.* 5. 261, Ov. *Am.* 2. 13. 21. Without a Greek word: *valē* Verg. *Ecl.* 3. 79 (imitated—Ov. *Mct.* 3. 501); cf. *lectulō*, Catull. 57. 7. This licence is of Greek origin and conditioned by metrical necessity.

(2) Hiatus without shortening is not infrequent in Virgil, e.g. *pecori*, | *apibus* G. 1. 4, *dea*. | *ille Aen.* 1. 405 (cf. Hor. *Epod.* 5. 100, *Carm.* 1. 28. 24). In some of these cases Greek technique is obviously imitated, e.g. *Glauco* | *et Panopeae* G. 1. 437, *castaneae* | *hirsutae* *Ecl.* 7. 53 (cf. Hor. *Epod.* 13. 3, Ov. *Met.* 3. 184, 5. 625).

(3) Cases like *qui a(m)at*, *dum ab(est)* = *α(ν)τ(ο)*. They are frequent in dramatists (especially Plautus) and Lucretius (see Munro on 2. 404), and occur sporadically in Catullus (55. 4), Virgil (c.g. *Ecl.* 8. 108), Horace (*Satires*), etc., but not in Ovid or later. This phenomenon is not of Greek origin and its prosodical character is doubtful, disyllabic and monosyllabic pronunciation being both possible.

Apart from these three groups there are some hundreds of cases of hiatus in Plautus, many of them complicated by problems of prosody or textual criticism. Some scholars think that hiatus in the caesura is legitimate in Plautus; but it has not yet been proved that hiatus is more frequent in the caesura than it would be if it was legitimate at any place in the line.

Literature: Luc. Mueller, *De re metr.*³ 368-79. Kalinka in *Russian's Jahresh.* ccl (1935), 407-11. P. M.

HIBERNIA (*Ἰέρνη*), Ireland, first known to the Greeks through Massiliote mariners (c. 525 B.C.) as being 'five days' sail from Brittany, near the Albion's island'. Eratosthenes (c. 235), probably through Pytheas' circumnavigation of Britain (c. 310-306), placed Ireland correctly on his map. Strabo (4. 201) says that, oblong in shape, it lay near and north of Britain and contained greedy incestuous cannibals. Mela (3. 6. 53) makes Ireland nearly as large as Britain, oblong, with pastures that caused the cattle to burst, and savage untrustworthy husbandmen. Pliny gives as its area 800 × 100 miles. Agricola may have reconnoitred Ireland. Ptolemy (*Geog.* 2. 2) shows fair knowledge of the whole coast, giving sixteen peoples of counties Wicklow, Kildare, Waterford, Wexford, Kerry, Dublin (Eblana), Connaught province; rivers Shannon, Barrow, Lagan, Avoca, Boyne. Solinus added the detail that Ireland has no snakes. The older tendency to place Ireland between Britain and Spain was due probably to early direct voyages from Spain.

Cary-Warmington, *Explorers*, 29 ff.; Orpen, *Journ. R. Soc. Antiqu. of Ireland*, June 1894 (Ptolemy); MacNeill, *New Ireland Rev.*, Sept. 1906. E. H. W.

HICETAS of Syracuse, Pythagorean, probably the teacher of Ecphantus and younger than Philolaus, is said to have been the first to teach that the earth moves in a circle (also ascribed to Philolaus). His view probably was that the earth rotates on its own axis while the heavenly bodies are at rest.

Testimonia in Diels, *Vorsokr.*⁵ 1. 441-2. *PIV* viii. 1597. W. D. R.

HIEMPSAL, see NUMIDIA.

HIEROCLES, Stoic of the time of Hadrian (A.D. 117-38), wrote (1) an *Ἠθικὴ στοιχειώσις* (*Elements of Ethics*) which may have been an introduction to (2) a work on ethics, frs. of which are preserved in Stobaeus. The former was a scientific work dealing with the instinct of self-preservation (*πρώτη οικειώσις*) as the starting-point of the Stoic ethics, and with self-consciousness as the foundation of this instinct. The latter was a work of edification dealing with duties, *Περὶ καθήκοντων*. The teaching in both works followed the orthodox doctrine of the early Stoics.

Ed. H. von Arnim, *BKT* 4 (1906). *PIV* viii. 1479. W. D. R.

HIERODOULOI, a relatively late term (first in 3rd-c. B.C. papyri), though temple-slaves, performing the menial tasks, existed from early times in Greece as elsewhere (cf. Martiales at Larinum, Cic. *Clu.* 43). The word *hierodouloi* can designate such chattels of a god; it can also bear certain special connotations. In Ptolemaic Egypt the *hierodouloi* take minor roles in the ceremonies, tend the sacred cats (*PSI* 440), or collect temple revenues (*PHib.* 35). In Asia Minor they may be the serfs, rather than actual slaves, attached to the great temple estates (Strabo, bks. 11-12, *passim*). The religious prostitutes of Comana Pontica (Strabo 559) and Corinth (Athen. 573-4; Strabo 378) are called *hierodouloi*, and the term has hence been mistakenly applied to all sacred prostitution (q.v.). In Oriental cults a devotee might consider himself the slave of a divine master (cf. *δοῦλος τοῦ θεοῦ* in Christian inscriptions); the *κάποχοι* of Egypt (cf. SARAPIS) and some of the *ἱεροί* in Anatolia may fall in this category. In the Hellenistic period arose the custom of manumitting slaves through a fictitious sale (or occasionally dedication) to a god, who thus became the guarantor of their freedom; persons thus freed were occasionally called *hierodouloi* (A. Cameron, *Harv. Theol. Rev.* 1939, 154-5, cf. 149).

See METRAGYRTES.

F. R. W.

HIEROMNEMONES, religious officials, found in many Greek States. Aristotle (*Pol.* 1321^b), classifies them with the civil registrars of public and private

documents, and temples frequently served as record offices. Their functions varied widely: some appear as archivists, others as financial officers, some managed the festivals or controlled temple properties, and in several cities, e.g. Issa and Byzantium, they were the eponymous magistrates. They usually formed a college, and the position was one of responsibility and honour. Best known are the *hieromnemones* who represented their States in the Delphic-Pylaeian Amphictiony. Their number was normally twenty-four, but varied considerably under the Aetolian domination (c. 290-191 B.C.). Their exact relationship to the other delegates, the *pylagorai* (in the Aetolian period called *agoratroi*), is not clear. The duties of the *hieromnemones* are set forth in a law of 380 (IG ii². 1126). Their tenure of office varied from State to State: in the fourth century the Thessalian *hieromnemones* served for several years, the Athenians one year, while the Malians sent different *hieromnemones* for each of the semi-annual meetings; a Chian decree of 258-254 (SIG 443) stipulates that their delegate should serve one year and be ineligible for reappointment. For *hieromnemon* as a functionary of a private cult association see *AJArch.* xxxvii (1933), 254. The term was sometimes used to translate the Latin *pontifex*. F. R. W.

HIERON (1) I was appointed ruler of Gela when his brother Gelon (q.v.) became master of Syracuse. He succeeded in Syracuse in 478 B.C. and successfully overcame the counter-claims of his brother Polyzelus. Free from immediate Carthaginian menace, he intervened in south Italy, helping Sybaris and saving Locri from destruction by Anaxilas of Rhegium (477). In 474 he saved Cumae and destroyed Etruscan sea-power by a great naval victory (for dedicated helmet, see Tod, no. 22). To maintain this influence Hieron founded a short-lived colony in Pitheceusae (Ischia). Meanwhile he tried to strengthen his power in Sicily by refounding Catana under the name of Aetna with 10,000 new settlers (475). His alliance with Agragras broke down and he destroyed the tyranny there (472). His court was open to poets and philosophers—Aeschylus, Pindar, Bacchylides, Simonides, Xenophanes, Epicharmus; his victories in the Games extended his prestige. He died in 467/6.

Sources: Diodorus, bk. 11 (from Timaeus). Cf. Pindar and Bacchylides, *Odes*, 3-5. Modern literature: Th. Lenschau, *PIB* viii. 1496; R. Hackforth, *CAH* v; U. v. Wilamowitz-Moellendorf, *Hieron und Pindaros*, *Sitz. Preuss. Akad. Berl.* 1901, 1273 (cf. *Pindaros*, 1922). See also under SICILY, SYRACUSE. A. M.

HIERON (2) II (c. 306-215 B.C.), of an unimportant family, later claimed descent from Gelon. He was appointed commander of the Syracusan army c. 275. Severely defeated by the Mamertines (q.v.), he later defeated them at the river Longanus and was saluted as king (265?). When they held Messina with Carthaginian help, Hieron broke with tradition and joined the Carthaginians when the Romans seized Messina. Driven back by Roman forces, he concluded a peace with Rome (263) by which he became Rome's ally, retained about half his territory, provided ships and supplies for Rome during the Punic Wars, paid 100 talents, and promised an annual tribute of 25 talents for fifteen years. This last was remitted when the alliance was renewed in 248. Under Roman protection and Hieron's mercantile policy Syracuse became wealthy and magnificent. He maintained a good fleet to police the seas (for his enormous ship see Athenaeus 5. 40) and utilized the genius of Archimedes in the defence of the city. The *Lex Hieronica*, which regulated the tithe-system, shows Hellenistic influences. He himself wrote books on agriculture. He remained Rome's loyal ally till his death (215).

HIERON (3), admiral of Alexander the Great, see ARABIA.

HIERONYMUS (1) of Cardia, the contemporary and trustworthy historian of the period from the death of Alexander (323 B.C.) to the death of Pyrrhus (272), or perhaps as far as 263, the year of the treaty between Antigonus Gonatas and Alexander of Epirus. He appears first in the service of Eumenes of Cardia, fighting for him against Perdiccas and Antigonus until Eumenes' execution by the latter after the battle of Gabiene (316). H. entered the service of Antigonus, was appointed harmost of Boeotia (293) by his son Demetrius Poliorcetes, and assisted Antigonus at the battle of Ipsus (301). He retained the friendship of Antigonus Gonatas until his death (c. 250). His account of this period, perhaps entitled *Αἱ περὶ Διαδόχων Ἱστορίαι*, was the most important source behind Arrian (*Tὰ μετὰ Ἀλέξανδρον*) and Diodorus (bks. 18-20), and the later books were Plutarch's chief authority for his life of Pyrrhus.

FHG ii. 450.

G. L. B.

HIERONYMUS (2) of Rhodes, philosopher and historian of literature, lived at Athens c. 290-230, under the protection of Antigonus Gonatas. Trained in the Peripatetic school, he left it when it was declining under Lycon's leadership, and founded an eclectic school. Works: *Περὶ ἐποχῆς*; *Περὶ μέθης*; *Συμπόσιον*; a work on ethics; *Περὶ ἀοργησίας*; *Περὶ ποιητῶν*; *Ἱστορικά ὑπομνήματα*; *Σποράδην ὑπομνήματα*; *Περὶ Ἰσοκράτους*; *Ἐπιστολαί*. The extant frs. illustrate chiefly his love of literary gossip.

PIV viii. 1561.

W. D. R.

HIERONYMUS (3), EUSEBIUS (SOFRONIUS) (c. A.D. 348-420), generally known as St. JEROME, is the most important to the classical student of all the Fathers. Born at Stridon, in Dalmatia, he was taken early to Rome; it was his good fortune to be taught by the greatest teacher in that age, Aelius Donatus. The best training in rhetoric followed. There he was baptized, but this did not prevent him from indulging in immorality. After his studies he proceeded to Trèves (Trier), and dedicated himself to religion. Later, at Antioch, he laid the foundations of his theological training, and mastered Greek. The ascetic life had a growing attraction for him, and he visited the Chalcis desert (375 to 378), where he learned Hebrew with great difficulty. The theological disputes of Antioch brought him no peace. He decided to return to Rome. He received priest's orders from the Bishop of Antioch. On his way westwards, at Constantinople, about 381, he made the acquaintance of the great Greek theologian Gregory of Nazianzus. His stay in Rome lasted from 382 to 385. It was then that Pope Damasus compelled him to revise the old Latin texts of the Gospels, in view of the variety of such texts then in existence. The revision took two directions: first, the Latinity was made more literary; second, the underlying Greek texts were brought into accord with the type of Greek text closely related to that in the Codex Sinaiticus, now in the British Museum. Several ladies of the Roman nobility found in him a valued religious adviser. The death of Damasus (384) made things difficult for Jerome, as he was suspected of aspiring towards the papal chair. He left Rome, Aug. 385, and travelled by Antioch to Jerusalem, then to Egypt to see ascetic life at close quarters, and subsequently with some like-minded friends to Palestine and Bethlehem. There, 389, he founded a religious house and spent his days in study and writing. He died 30 Sept. 420.

Of all Christian Latin writers Jerome most closely approaches the standard of classical purity, when writing his best. He had so absorbed Cicero, Virgil, Horace, and other Latin writers that we hear constant echoes of them

in his works. Though he tried hard to 'declassicize' himself, he could not succeed. His pagan master was Cicero; his Christian was Origen. His most important works are his *Chronicle* (partly based on Suetonius) translated from Eusebius and expanded (380-1), a leading authority for dates of ancient historical events; *De Viris Illustribus* (392), short notices of 135 Christian writers; his revision and translation of the Latin Bible (called since 9th c. *Vulgata [editio]*), and his correspondence, full of interest to students of scripture and to historians of morals. His controversial works are characterized by the foulest abuse. His reputation is due to his immense services to the study of Scripture in the West rather than to saintliness of character.

Migne, *PL* xxii-xxx; newly discovered works, ed. G. Morin, *Anecdota Maredsolana*, vol. iii (3 parts) (Maredsous, 1895-1903); *Chronicle* (J. K. Fotheringham, 1923; R. Helm, 1913). See H. Goelzer, *Étude lexicographique et grammaticale de la latinité de Saint Jérôme* (1884); lives by G. Grützmacher and F. Cavallera. A. S.

HIEROPHANTES, head of the Eleusinian cult, was the most revered priest in Attica. He was chosen for life from the hieratic family of the Eumolpidae (see EUMOLPUS). He was distinguished by a head-band (*στροφίον*) and a long purple-dyed robe ornamented with embroideries. His principal duty was to preside over the Mysteries. Before the celebration he sent forth *spondophoroi* to proclaim truce for the period of the Mysteries. He opened the ceremonies with a proclamation that barbarians, murderers, and those defiled must keep away, and he had the right to refuse admittance to others. To the initiates he revealed the secrets of the Mysteries; for this purpose it was necessary that a man of impressive voice should be selected for the office. He was assisted by the *daduchos* (*δαδούχος*, torch-bearer) and hierophantess (*ιερόφαντις*). He also took part in other State festivals and had several minor public duties. In the Imperial period his only legal name was Hierophantes; on entering office he performed the ceremony of casting his old name into the sea.

Méautis, *Les Mystères d'Éleusis* (1934), 35 f. See F. Cumont, *ATArch.* xxxvii (1933), 243 f. on the use of this title in the cults of Dionysus. J. E. F.

HIEROPOIOI, see DELOS, para. 3.

HILARY (*Hilarius*) of Poitiers (d. A.D. 366), after receiving the complete pagan education, in which he failed to find satisfaction for his soul, was converted by Scripture study. He became a protagonist in the conflict with Arianism. Being banished to Asia, he used the opportunity to increase his knowledge of Greek literature. He wrote commentaries on Matthew and on the Psalms, and a 'liber mysteriorum', but the greatest of his works is his *De Trinitate* (in twelve books). He was also the author of three Latin hymns, the earliest we have.

Ed. Migne, *PL* ix-x; partly in *GSEL* xxii (1891), lxx (1916); tr. E. W. Watson, *Post-Nicene Fathers*; A. S. Walpole, *Early Latin Hymns* (1922). A. S.

HILDESHEIM TREASURE, a collection of Roman silver plate found in 1868 at Hildesheim in south Hanover and now in Berlin; assigned to the Augustan age and possibly booty from the camp of Quintilius Varus in the Teutoburger Wald (A.D. 9). The principal piece is a mixing-bowl covered with floral relief resembling that of the Ara Pacis; there is also a series of drinking-bowls with embossed designs of Minerva, Hercules and the snakes, reliefs of Cybele and Men-Attis, and Bacchic emblems.

E. Pernice and F. Winter, *Der Hildesheimer Silberfund* (1901). F. N. P.

HIMATION, see DRESS, para. 2.

HIMERA (*Ἰμέρα*), Stesichorus' birthplace, the only independent Greek city on Sicily's northern coast, was founded by Zancle (= Messina), 648 B.C., with mixed Chalcidian and Dorian settlers. Here Theron of Acragas and Gelon of Syracuse overwhelmed the Carthaginians, traditionally on the day of the battle of Salamis (480). After 461 Himera flourished until the vengeful Carthaginians literally obliterated it (408). Thermae (mod. *Termini Imerese*), Agathoeles' birthplace, 7 miles to the west, replaced Himera. Although founded by and subject to Carthage, Thermae acquired Himera's refugees and became completely Greek, sometimes even being called inadvertently Himera. It came under Roman dominion after the First Punic War; Augustus made it a *colonia*. Himera lay on a similarly named river (nowadays *Fiume Grande*), which together with another R. Himera (nowadays *Fiume Salso*) long separated Greek from Carthaginian Sicily.

Strabo 6. 272; Hdt. 7. 165 f.; Thuc. bks. 6 and 7; Xen. *Hell.* 1. 1. 37; Diod. bks. 11, 13, 14; Cic. *Verr.* 2. 35. J. Bérard, *Bibliogr. topogr.* (1941), pp. 57, 112. E. T. S.

HIMILCO (1), Carthaginian navigator who explored north-wards four months from Gades but not beyond Brittany (probably before 480 B.C.). His complaints about calms, shoals, tangled seaweeds, which held ships back, have been taken to indicate that he reached also, or was blown to, the Sargasso Sea. But he may never have gone out of sight of Spain and France. Whether he ever visited Britain is unknown.

See Pliny 2. 169; Avienus, *Ora Maritima*, 114-34, 380-9, 406-15; Cary-Warmington, *Explorers*, 31-3; Warmington, *Greek Geography* (1934), 75-7. E. H. W.

HIMILCO (2), a Carthaginian general. In 406 B.C. he conquered and destroyed Acragas, Gela, and Camarina, but pestilence among his troops forced him to conclude peace, albeit a very favourable one for Carthage. In 397 he resumed operations in Sicily with a small force; in 396 he brought up a big army, and succeeded in conquering the whole western and northern coast. He founded Lilybaeum (q.v.). After a naval victory by his admiral he blockaded Syracuse. But again a dreadful plague broke out in the Carthaginian army. Himilco could not resist the attack of the Syracusans, and was entirely beaten. By agreement with Dionysius he managed to save his citizen-soldiers. After returning home he committed suicide.

Diod. bks. 13, 14. Lenschau, *PH*, s.v. 'Himilkon'; J. B. Bury, *CAH* vi, ch. 5. V. E.

HIPPALUS (probably 1st c. B.C.), a Greek merchant who discovered the full use of monsoon-winds to and from India. Becoming aware of the general shape of the Arabian Sea and the southward projection of India and the existence of regular winds between Aden Gulf and north-west India, one summer he sailed across from Ras Fartak to the Indus. This resulted in cross-sea voyages even to south India and back by Greeks and vast increase in commerce with India. Hippalus' name was given to the south-west monsoon, to an African cape, and to part of the Arabian sea.

Thiel, *Eudoxus Van Cysicus* (in Dutch, 1939); W. Otto and H. Bengtson, *Abhandlungen d. bayerischen Ak. d. Wissenschaften, philosophisch-historische Klasse* 1938, 194 ff. E. H. W.

HIPPARCHUS (1), younger son of Pisistratus of Athens by his first wife; constantly associated with his elder brother Hippias, under whom he acted as patron of literature and art. Anacreon and Simonides came to Athens at his invitation, and the artistic movements of Pisistratid Athens, which included the first great developments of red-figured vase-painting and corresponding

activities in sculpture and architecture, owed much to this frivolous and amorous but cultured prince. His personal vices led to his murder by Harmodius and Aristogiton in 514 B.C.

For bibliography, see HIPPIAS.

P. N. U.

HIPPARCHUS (2) (*fl.* c. 260 B.C.), New Comedy poet and (probably) actor. In frs. 1 and 3 foreign drinking-cups (κόπδν, λαβρώνιος) are mentioned, and in *Ζωγράφος*, fr. 2, the painter praises professional skill.

FCG iv. 431 f.; CAF iii. 272 ff.

HIPPARCHUS (3), greatest of Greek astronomers, born at Nicaea in Bithynia about 190 B.C., made observations between 161 and 126 (the best of them at Rhodes). We possess his commentary *In Eudoxi et Arati phaenomena* (ed. Manitius 1891); but his matured astronomy takes its definitive form in Ptolemy's *Syntaxis*. Hipparchus adhered to the geocentric system, accounting for the movements of the sun, moon, and planets by the hypotheses of epicycles and eccentric circles and combinations of the two. He is the first person known to have made systematic use of trigonometry in his work. He compiled a Table of Chords in a Circle, equivalent to trigonometrical sines. He made great improvements in the instruments used for observations, and compiled a catalogue of 850 stars or more (see F. Boll, *Sphaera* 1903, 83). He gave improved estimates of the sizes and distances of the sun and moon, and calculated the tropic year at $1/300$ th part of a night and day less than 365½ days. His calculation of a 'great year' gives for the mean lunar month a figure differing by less than one second from the present accepted figure. His greatest discovery was no doubt that of the Precession of the Equinoxes (Ptol. *Alm.* 7. 1). He wrote a *Geography* (*Ἰππάρχου Γεωγραφία*), which is lost, as also a book *On things borne down by their weight* (Simpl. in *Cael.* 264 f.). Arabian writers attribute to him a work 'on the art of algebra', which subject he may easily have learnt from Babylon.

PIV viii. 1666.

T. H.

HIPPASUS, an early Pythagorean, treated fire as the substance out of which the world is made and into which it is from time to time resolved. He is said to have discovered the harmonic mean (the arithmetical and the geometrical mean being already known).

Testimonia in Diels, *Vorsokr.* i. 107-10. PIV viii. 1687. W. D. R.

HIPPEIS, Cavalry. Only a few districts in Greece being suitable for horse-breeding, cavalry was rare in the Greek States, and played a very restricted part in warfare. Thessaly produced the best horses, and its ruling aristocracies relied mainly on their cavalry; Boeotia had the next largest force, but one quite subordinate to its infantry. About 450 B.C. Athens organized a body of 1,000 horse, which played an occasional part in warfare; as the men provided their own horses it was a rich man's corps. Like the infantry, they were divided into ten regiments, one from each *phyle*, commanded by *phylarchoi*; at the head of the whole corps were two *hipparchoi*.

In Athens it was also the name of the second of the four census-classes into which the citizens were divided—men possessing property productive of between 500 and 300 *medimnoi* of corn or the equivalent in other produce or money. As the minimum—300 *medimnoi*—was not a high one, many, and probably most, of the citizens in this class served as *heplitai* (q.v.). See also PENTACOSIOMEDIMNOI, ZEUGITAI, THURTES.

There was a body of 300 *hippeis* at Sparta; but by the sixth century this corps had become an élite of infantry.

A. W. G.

HIPPIAS (1), tyrant of Athens 527-510 B.C., eldest son and successor of Pisistratus; associated with his brother Hipparchus, he continued his father's policy both at home and abroad, sending out Miltiades II to the Chersonese. But after Hipparchus' murder (514) his rule became harsher, while the Persian conquests in Thrace deprived him of one root of his tyranny, his revenues from the Pangaeum mines, whence perhaps his alleged attempt to devalue the drachma. Attacked by the Spartans under the influence of the Alcmaeonidae, Hippias first defeated them, but when King Cleomenes occupied Athens he retired to Sigeum and Lampsacus, and thence to the court of Darius. He was with the Persian forces at Marathon.

¹ Herodotus, bks. 1, 5, and 6; Thucydides, bks. 1 and 6; Aristotle, *Ath. Pol.* C. T. Seltman, *Athens* (1924).

P. N. U.

HIPPIAS (2) of Elis, sophist, a younger contemporary of Protagoras (who lived c. 481-411), is vividly depicted in Plato's *Hippias Major* and *Hippias Minor*. He acquired great fame and wealth by travelling all over Greece as a teacher and orator, claiming competence in mathematics, astronomy, grammar, poetry, music, and the history of the heroic age, as well as in various handicrafts, and was frequently employed on State business by his native city. That his claims had a solid basis is indicated by the fact that he can probably be identified with the Hippias who discovered the *quadratrix*, the first curve other than the circle to be recognized by the Greek geometers. It was probably discovered in the attempt to solve the problem of trisecting the angle, but was subsequently used in the attempt to square the circle. Of his immense output, the following works are known by name: an elegy on the drowning of a chorus of boys from Messenia; a *συμπαγωγή* (probably archaeological in its contents); a *Τρωικός λόγος*; an *Ὀλυμπιονικῶν ἀναγραφὴ*; *Ἐθνῶν ὀνομασίαι*.

Testimonia and frs. in Diels, *Vorsokr.* ii. 326-34. PIV viii. 1706. W. D. R.

HIPPIATRICI are veterinarians, more strictly those who treat animals of the farm (Varro, *Rust.* 2. 7. 16: 'De medicina vel plurima sunt in equis et signa morborum et genera curationum . . . itaque ab hoc in Graecia potissimum medici pecorum *ἱππιατροί* appellati'). The *Hippiatrici* gave medical and surgical treatment in more difficult cases; ordinary diseases were handled by the farmers themselves. The so-called *Corpus Hippiatricorum Graecorum*, collected in the ninth century A.D., has preserved only excerpts dealing with horse-medicine, hardly any of them earlier than the Christian era. The authors mentioned (Apsyrus, Eumelus, Theonnestus, Anatolius, Hierocles, etc.) are only names. Of older books nothing is known. The treatise of the Athenian Simon (5th c. B.C.) and Xenophon's *Ἱ. ἱππικῆς* are written by gentlemen-amateurs, interested in horse-breeding or the selection of horses; Ps.-Aristotle, *Historia Animalium* 8. 21 f., treats of animal diseases from a more theoretical point of view.

Within the *Corpus Hippiatricorum* the semeiotics of diseases plays an important part; for 'animals cannot speak'. Cures consist in drugs and diet; the prevention of diseases is considered even more important than their treatment. Magical remedies are rejected, at least by physicians (for farmers cf. *Geoponica* xvii). All these features are reminiscent of human medicine; in fact, conclusions based on the observation of men seem valid for animals and vice versa. The great achievement of veterinary art is certainly dependent on the fundamentally agrarian character of ancient life and the resulting close contact with animals, but also on the fact that animal anatomy had been practised continuously since the fifth century B.C.

Text. *Corpus Hippiatricorum Graecorum*, E. Oltmanns-Horn (Leipzig, 1924-7). Latin translation, *Medicina Veterinaria*.

E. Oder (Teubner, 1901), the original written about A.D. 400; MSS., G. Björk, *Rev. Ét. Grec.* (1935).

MODERN LITERATURE. General survey, Sir Fr. Smith, *The Early History of Veterinary Literature* i (1919), antiquated in its literary data; survey on literature, G. Sarton, *Isis* (1937). Date of collection not tenth century, as formerly assumed, Hoppe, op. cit. ii, xv; relative chronology of authors, *ibid.* vi; cf. Björk, *Uppsala Universitets Årsskrift* 1932, 1944, who also proves that Heraclides Tarentinus (2nd c. B.C.) did not write on veterinary medicine. PIV viii, 1713.

HIPPO, see HIPPON.

HIPPO REGIUS (near modern *Bône* in Algeria), a seaport of great antiquity. A quay of megalithic stones marks the site of the original harbour. An early centre of the Numidian kings, it passed to the suzerainty of Carthage and later Rome. It became a *municipium* under Augustus, and later acquired colonial rights. Its fortifications checked Gaiseric's Vandals; its bishop, St. Augustine, inspired the defence. W. N. W.

HIPPOBOTUS (fl. late 3rd c. B.C.) wrote a philosophico-historical *Περὶ αἰρέσεων* and *Φιλοσόφων ἀναγραφὴ*, used by Diog. Laert. (Frs. catalogued by v. Arnim, *PW*, s.v.)

HIPPOCOON (*Ἰπποκόων*), in mythology, son of the Spartan or Amyclaeon hero Oebalus, and elder brother of Tyndareos (q.v.). He and his many sons drove out Tyndareos and his other brother Icarius from Sparta (Apollod. 3. 124). Later Heracles, offended at some action of Hippocoon, attacked and killed him and his sons (Alcman fr. 15 Bergk). H. J. R.

HIPPOCRATES (1), tyrant of Gela, succeeded his brother Cleander (c. 498 B.C.). He conquered several cities of east Sicily. In 493 when Samian refugees were invoked by Anaxilas (q.v.) of Rhegium to occupy Zancle, which was under his supremacy, he did not help the Zancleans, but came to an agreement with the Samians. He defeated the Syracusans, but was prevented from capturing their city by the intervention of Corinth and Corcyra. Soon after he died in a battle against the Sicels (probably 491). He was the true precursor of the great Sicilian tyrants.

Hdt. 6. 23; 7. 154 f.

V. E.

HIPPOCRATES (2), the Asclepiad of Cos, a contemporary of Socrates (469–399), though the most famous Greek physician, is yet the one least of all known to posterity. That he was of small stature, that he travelled much, that he died at Larissa is probable; more about his life and his personality cannot be ascertained.

According to Plato, Hippocrates claimed that one cannot understand the nature of the body without understanding the nature of the whole. That means, Plato adds, that one must ask whether the body is simple or multiform and, whatever the answer, then determine what is its power of acting on or being acted upon by other things. Thus, Hippocrates considered the body an organism; medical practice he based on the knowledge resulting from the comprehension of the scattered particulars into one concept and the division of the whole in turn into its natural species, in Platonic language, on dialectic. Diseases he explained, as Aristotle's pupil Meno relates, by assuming that if food is not digested air is excreted from the remnants, invades the body, and causes illness.

Such a conception of medicine is not to be found in any of the so-called Hippocratic books, though these writings, dealing with all subjects of medicine, with prognostics, dietetics, surgery, pharmacology, with health and diseases, show the most widely different attitudes towards medicine. Being inconsistent in themselves they were never attributed to Hippocrates in their entirety; moreover, there is not a single book the

authenticity of which was not disputed already in antiquity. Only fractions, and always different fractions, were ascribed to Hippocrates by later centuries according to their constantly varying conception of Hippocrates as a philosopher or a mere practitioner, a dogmatist, an empiric, a sceptic, a believer in the four humours or in the pneuma-theory, a surgeon or a theoretical scientist.

It seems likely that none of the books preserved under the name of Hippocrates is genuine. Their content does not agree with the pre-Alexandrian testimonies. Moreover, the authenticity of hardly any of them seems to be attested by good tradition; in this case one would expect unanimity of the critics at least in regard to one or a few books. It is probable rather that the writings came to Alexandria as the remnants of medical literature which had circulated in the fifth and fourth centuries, but that they were anonymous, as technical literature of that era commonly was. Philological criticism then attributed them to Hippocrates on the basis of what was considered Hippocratic doctrine in the various periods. But since the proof of genuineness depended on logical argument alone, not on tradition or testimonies, no general agreement could be reached.

All that can be said of the identity of Hippocrates, then, is that he is a physician whose works are lost, though he is not a mere name; his method and doctrine are known; he is the founder of scientific medicine in the Platonic sense; moreover, his fame has been recognized since Plato's time. If one asks what Hippocrates meant to the Greeks, the Middle Ages, the Renaissance, what he means even to-day, the answer is that by a complicated historical process he has become the embodiment of the ideal physician. See the references under HIPPOCRATIC COLLECTION.

HIPPOCRATES (3) of Chios (c. 470–400 B.C.), mathematician, the first person to compose a book of *Elements of Geometry*; his work anticipated much of Euc. bk. 3, as well as some later parts of Euclid. He contributed (a) to the problem of squaring the circle, by succeeding in squaring three out of the five 'lunes' which can be squared by means of the straight line and the circle; (b) to the problem of doubling the cube by reducing it to the finding of two mean proportionals.

PIV viii, 1780.

HIPPODAMIA, *see* PIRITHOUS.

HIPPODAMUS (5th c. B.C.) of Miletus, a Greek architect and town-planner, chiefly celebrated for his association with the introduction into European Greece and Italy of 'gridiron' methods of planning towns. He designed Pericles' Panhellenic colony at Thurii (443 B.C.), and remodelled Piraeus at about the same period. *See* TOWNS.

H. W. R.

HIPPODROME, *see* CIRCUS.

HIPPOLYTUS (*Ἴππολύτος*, i.e. 'loosed horse', query wild driver or rider?), in mythology, son of Theseus by the Amazon Hippolyte (cf. AMAZONS). Hippolyte being dead, Theseus married Phaedra daughter of Minos (q.v.). Her character varies in Tragedy. Apparently in the (lost) *Ἴππολύτος καλυπτόμενος* of Euripides and certainly in the *Phaedra* of Seneca she was a lustful and wholly unscrupulous woman; in the surviving *Hippolytus* of the former she is much more interesting, having intense natural desires but a strong sense of modesty. Theseus being long absent (on his journey to the lower world, according to Euripides), Phaedra conceived a passion for Hippolytus, but he, being honourable (Euripides makes him anti-sexual), repulsed her. She thereupon hanged herself, leaving behind a letter which accused him. Theseus returned, read the letter, and would not believe Hippolytus' protestations of innocence. He banished Hippolytus and used one of the three wishes which his father (Poseidon, in this version; cf. AEGEUS) had given him in asking for his death. Poseidon sent a sea-monster which frightened Hippolytus' horses as he was driving away, and he was thrown from his chariot and dragged to death; Theseus learned the truth from Artemis too late.

In cult Hippolytus is associated with Aphrodite, who had a shrine *ἐφ' Ἴππολύτῳ* on the Acropolis at Athens; while at Troezen, the place of his death, he had a ritual including laments for him and offerings of hair from girls about to marry (Eur. op. cit. 1423 ff., Paus. 2. 32. 1); the local legend said that he did not die as above described but became the constellation Auriga, but this clearly is not early. Whether he was originally god or hero is disputed (Farnell, *Hero-Cults*, 64 ff.).

The story that Aesclepius restored him to life is as old as the *Naupactica* (Apollod. 3. 121); it led to his identification with Virbius (*see* DIANA) at Nemi (*see* Verg. *Aen.* 7. 765 ff., and Servius on 761).

H. J. R.

HIPPOLYTUS, alternative title for Seneca's tragedy *Phaedra*.

HIPPON, also called **HIPPONAX**, natural philosopher of the Periclean age, probably came from Samos. He treated water or the moist as the principle of all things, reasoning chiefly from observation on the semen of animals. He considered the soul (seated in the brain) to be derived from the semen and to be itself moist, and devoted special attention to the development of the human body from the embryonic state to maturity. Aristotle describes him as a second-rate thinker, probably because of his materialistic bias.

Testimonia and frs. in Diels, *Vorschr.* i. 385-9. *PH* viii. 1889. W. D. K.

HIPPONACTEUM, *see* METRE, GREEK, III (10).

HIPPONAX (fl. 540-537 B.C.; Plin. *HN* 26. 11), iambic poet, of Ephesus, whence he was banished and went to Clazomenae. By making the iambic trimeter end with a spondee he invented the *σάξων* or *χαλιάρης*, and in this metre he wrote satirical, colloquial verse. Some of his fragments are concerned with his love for Arete (frs. 15-22), others with his quarrel with the two sculptors Rupalus and Athenis. The story was that they made a statue which caricatured him and were so

distressed by his lampoons that they committed suicide (Suidas s.v. *Ἴππώναξ*, cf. frs. 1, 13, 15, 20). He also fell foul of the painter Mimnes (fr. 45). Polemon credited Hipponax with the invention of parody (Ath. 698 b), and frs. 77-8 show the existence of a poem in mock-heroic verse on the adventures of the glutton Eurymedontiades. Hipponax has a vivid, terse style and drew for his vocabulary on life.

HIPPONAX, *see also* HIPPON.

HIPPOTHOON, in mythology, son of Poseidon and Alope daughter of Cereyon (Hyg. *Fab.* 187, who calls him Hippothous); eponym of the Attic tribe Hippothoontis (Paus. 1. 5. 2; Harpocration s.v. *Ἀλόπη*; Hesychius s.v. *Ἴπποθώντειον*).

HIPPOTROPHIA, *see* LITURGY.

HIRTIUS, AULUS (cos. 43 B.C.), since c. 54 B.C. an officer of Caesar, who sent him as envoy to Pompey in Dec. 50. In the Civil Wars he served in Spain and the East; in 46 he was praetor and next year governed Gaul. After Caesar's murder he was consul designate, and Cicero induced him to take arms against Antony (43). With Octavian he raised the siege of Mutina, but was killed in the victory, receiving with his colleague Pansa (q.v.) a public funeral. Hirtius added to Caesar's *De Bello Gallico* an eighth book, the preface to which, supported by linguistic arguments (cf. A. Klotz, *Cäsarstudien*, 1910, pp. 180 ff.), proves him author as well of the *Bellum Alexandrinum* (q.v.); his correspondence with Cicero, published in nine books, and the draft for Caesar's *Anticato* have not survived. His writings show little sign of military experience, and suggest that Caesar admired Hirtius, an agreeable epicure, for his literary gifts alone.

HISPANIA, *see* SPAIN.

HISTIAEUS, tyrant of Miletus, rendered service to Darius during the Scythian campaign (c. 512 B.C.). He was presented with Myrcinus near the later city of Amphipolis, but Darius growing distrustful invited him to Susa, where he was kept in honourable confinement. Meanwhile his son-in-law Aristagoras (q.v.) ruled Miletus. They both seem to have co-operated in preparing the Ionian Revolt; the details given by Herodotus, however, are not trustworthy. After the destruction of Sardes (498) he was sent on his own request to pacify Ionia, but tacking between both sides he was unsuccessful. He settled at Byzantium as a mere pirate, and fought on his own account on the islands and in Asia Minor. In 494 or 493 he was captured and crucified. He probably was no more than a restless adventurer and had no large political ideas.

Hdt. bks. 4-6. Swoboda, *PH*, s.v. 'Histiaios'. Cary, *CAH* iv. 213 ff. V. E.

HISTORIA AUGUSTA, a collection of the lives of thirty Roman emperors from Hadrian to Numerian (A.D. 117-284), dealing also with the *Caesars* and *Usurpers*; a gap must have contained the lives of Philip, Decius, Gallus, Aemilian, and part of Valerian (244-53). Whether the lives of Nerva and Trajan have been lost cannot be ascertained, as we do not possess the preface to the work. Aelius Spartianus, Julius Capitolinus, Vulscius Gallicanus, Aelius Lampridius, Trebellius Pollio, and Flavius Vopiscus appear as the authors, who ostensibly wrote between 284 and 337, as several lives are dedicated to Diocletian, several to Constantine the Great. This date, though defended by H. Peter and by M. Schanz (*Geschichte der römischen Literatur*, iv. 1², 1914, 51 ff.), cannot be accepted, since it has been proved by decisive

arguments that the *Historia Augusta* must be of later date. Different results have been obtained by different scholars: thus Mommsen dated it to the time of Diocletian and Constantine, yet believed the collection had been revised twice, first c. 330, later in the time of Valentinian and Theodosius; H. Dessau, whose contribution to the problem was great, dated it c. 380-95; O. Seeck suggested 409-10; A. von Domaszewski, later sixth century. The whole question has been put on a new level by N. Baynes, who in a careful investigation almost certainly has established that the *Historia Augusta* was written in 362-3 as propaganda for Julian the Apostate.

The *Historia Augusta* must be divided into two groups of different historical value, the first mostly relying on Latin, the second on Greek sources. Group I (till Caracalla), in which an annalistic and a biographical source can be traced, shows, except in the lives of the Co-regents and Usurpers, a good knowledge of the public administration (cf., e.g., the first chapters of *Vit. Hadr.* and *ILS* 308). Group II, which besides Greek sources used the so-called 'Kaiserchronik' of Enman, freely invented facts where reliable information was not obtainable. Thus a great many obviously forged documents (as imperial letters, senatorial decrees) have been incorporated into group II, which is only to be used with the utmost caution; nothing which lacks independent proof must be taken as reliable. The *Historia Augusta* directly utilized the *Caesares* of Aurelius Victor (A.D. 360) but did not consult Eutropius (369-70); only the latter's source, the 'Kaiserchronik', was used. Whether one or more writers composed the *Historia Augusta* cannot be decided upon with certainty; the identity of Pollio and Vopiscus has been established by E. Hohl. The hypothesis was advanced by Baynes (op. cit. 146 f.) that an author (Capitolinus?), perhaps incited by the success of Aurelius Victor, conceived the plan of group I and completed the draft, while another author (Vopiscus?) planned a propaganda book in favour of Julian. After joining forces, they then completed the collection more or less hurriedly, perhaps aided by some friends.

HISTORIOGRAPHY, GREEK. The most progressive Greek towns began to keep records from c. 700 B.C., which were later embodied in local histories, and to compile lists of kings, eponymous magistrates, etc.; yet it was not from annalistic sources that Greek historiography arose. Historical writing only came into being with the awakening of the Greek mind under the influence of science and rationalism. Following the example of the Ionian physicists and geographers, the so-called *logographoi* (prose writers, as opposed to epic poets) assumed a critical attitude towards the traditions of poetry and mythology, and thus created historical science. The greatest of the *logographoi* to our knowledge, the Milesian Hecataeus, was the first to submit tradition to the test of reason.

2. The followers of Hecataeus (Xanthus, Hellanicus, Scylax, etc.) either confined themselves to local history, or wrote general history (not Greek history exclusively) from a Persian standpoint. A noticeable exception was a contemporary of Hecataeus, Antiochus of Syracuse, who wrote a history of the Greek colonies in southern Italy and Sicily. Herodotus also may be styled a disciple

of Hecataeus. He felt such admiration for the achievements of the Persian kings that he planned to write both a history of the wars they had waged and a geographical survey of their empire. Only at a later stage, when he fell under the spell of the Athenian democracy, did he realize the greatness of the victory of Greece over Persia, and made this the chief subject of his narrative. Even so, his account showed so much sympathy with the vanquished that later Greek writers, probably influenced by Isocratean panhellenism, did not hesitate to brand Herodotus as a friend of the barbarians (cf., for instance, Plutarch's treatise 'On the Malignity of Herodotus').

3. The immediate success of Herodotus was great; but his history was too discursive to satisfy the literary taste of succeeding generations, and too remote from the problems of party politics and of Athenian imperialism which took the place of the Persian Wars as the centre of Greek political interest. These problems produced two new kinds of historical writing: (1) an objective and scientific account of the Peloponnesian War by Thucydides; (2) a violently biased propaganda on the part of Greek conservatives, who cast their programmes into the mould of an idealized or merely fictitious past, and published pamphlets against the Athenian democracy (Pseudo-Xenophon) and its leaders (Stesimbrotus), as well as schemes of fantastic constitutions (Critias, Theramenes, etc.). Meanwhile, a new branch of historical writing, the memoir, was created by Ion of Chios and others.

4. In the fourth century Greek historiography was influenced by the prevailing dissatisfaction with public life, the growing detachment from politics, and a renewed interest in foreign Powers (Persia and, later, Macedonia) which showed signs of becoming the deciding factor in Greek politics. It was the Asiatic Greek Ctesias who was chiefly responsible for the revival of interest in Persian history and civilization. Thucydides himself had prepared the way for these tendencies, for in the final draft of his *History* he had emphasized the bearing of moral ideas on history, and had shown that the subject of historical writing could not be confined to politics alone. His continuators, however, neglected his method of research and his accuracy and obeyed new masters, Socrates, Plato, and Isocrates. The latter, besides imposing new rules of style, taught the principles of panhellenism, while both Socrates and Plato laid down principles of morality as standards of political judgement. Xenophon, Theopompus (both of whom started at the point in the Peloponnesian War where Thucydides had left off), and Ephorus combined the two methods and created a new form of historical writing. Xenophon inaugurated a literary fashion in associating historical memoirs and romance (in the *Anabasis* and the *Cyropaedia*); his political partisanship and eulogistic rhetoric appealed to every class of reader and secured for his *Hellenica* a wholly unmerited influence. Ephorus envisaged the history of the Greek peninsula as a unity, and was the first to write a complete account from the mythical age down to Philip of Macedon. The success of his work, which was to become the 'vulgate' of Greek history, is best attested by the fact that it was never repeated. In his principal work, the *Philippica*, Theopompus accomplished something unique in ancient historical writing. Psychological insight into his protagonist, Philip, whom he saluted as the creator of a new age, moral and political discussions, geographical digressions in which he boasted that he had surpassed Herodotus, made of the *Philippica* the crowning achievement of classical and the forerunner of Hellenistic historiography.

5. A more scientific if less ambitious school of historiography was founded in the fourth century by Cleidemus and Androtion, who wrote local histories of Attica (*Atroides*) based on documentary evidence, and by Aristotle and Philochorus, who also collected and

published records of public and religious institutions, games, and literary competitions. These research historians laid the foundations of Hellenistic scholarship and antiquarianism. But the principal historians of the Hellenistic age, disregarding documentary evidence and technique of historical writing, aimed, as a general rule, not at being accurate and learned, but readable. The political and military accounts of the expedition of Alexander the Great written by official authors such as Aristobulus, Nearchus, and Ptolemy (on whom Arrian is chiefly dependent) were soon superseded by the highly rhetorical and romantic stories of Callisthenes, Onesicritus, and Cleitarchus, who founded the 'vulgate' tradition represented by Diodorus and Plutarch, as well as by Justin and Curtius.

6. In the third and second centuries the field of historiography was similarly divided between men of political and military experience, such as Hieronymus, Aratus, and Polybius, and writers who sought to entertain or to excite their readers by a pathetic or realistic style of narrative (Duris, Phylarchus). The latter school was more generally read; because of the prominence which it gave to outstanding personages, it was largely utilized by biographers and ultimately became the chief source of Plutarch.

7. Since no Hellenistic historian, with the exception of Polybius, survived the change in Greek taste and mentality towards the end of the first century B.C., Plutarch is indisputably the author who provides the best survey of the methods, peculiarities, and defects of Hellenistic historiography. Plutarch established the principle that history is the product, not of dry abstractions, such as economics, parties, climate, environment, etc., but of the will and the passions of individuals. Another feature of Plutarch's biographies, the equal measure of importance which he attached to Greek and to Roman personages, illustrates the readiness with which Hellenistic historians perceived the significance of the Roman conquests and influenced Roman culture and historical writing. Greek authors were the first to realize the problem and importance for world-history of the Roman Empire, and through them the Romans became conscious of the mission they were called on to fulfil. A far-sighted interest in the beginnings of Roman history was shown by Timaeus, a Sicilian Greek of the early third century, who coupled the history of his native island with that of Greece and Italy. Polybius, taking up the story where Timaeus left off, at the beginning of Rome's Punic Wars, made it the object of his work to bring home to his compatriots the military, political, and moral advantages which gave the Romans their victory and guaranteed its permanence. The providence of God had imposed on Rome the task of building an empire, and this empire was actually working out to the material and moral benefit of its subjects. This idea Polybius' continuator, Posidonius, also sought to convey; in his view, apparently, the commonwealth of God was reflected in the world-wide Roman republic, and the unity of history was realized in the unity of the Roman Empire. The immense influence exerted by Posidonius is attested by the revival of historical feeling which he promoted. Not only did he become the model and the chief source of universal historians and epitomizers, such as Diodorus and Nicolas of Damascus, and of geographers such as Strabo, but he also suggested inquiries into less familiar fields. It was under his spell that interest in primitive or non-European races was felt and satisfied. In the Augustan age the literary critic, Dionysius of Halicarnassus, turned to explore the origins and early history of Rome. In a similar spirit Flavius Josephus, proceeding along the path paved by Philo, wrote under the Flavians a history of the Jews, in order to show the similarity of their civilization with that of the Greeks and Romans.

8. It is with Plutarch and Arrian, in the first half of the second century A.D., that Greek historiography properly comes to an end. No later author showed any creative power, or interest in philology, or (despite Lucian's treatise 'How to write history') insight into historical technique. But the work of epitomizers, such as Appian of Alexandria, who related the wars of the Republic down to the Augustan Principate, and Dio Cassius, who narrated at length the history of the Republic and Empire down to the dynasty of the Severi, was of importance, for it was through them, and others like them, that knowledge of Greek and Roman antiquity reached Byzantine scholars (e.g. Procopius), and the methods of Greek historiography (either directly or through the mediation of Latin authors, such as St. Augustine and Orosius) were bequeathed to Western thinkers, as elements of a new conception of history which Christianity was called on to promote. See also the articles on individual historical writers and the bibliographies attached.

TEXTS. The fragments of the lost Greek historians are collected (with a Latin translation) in C. Müller, *Fragmenta historicorum graecorum* (FHG), 5 vols. (1841 ff.), and F. Jacoby, *Die Fragmente d. griech. Historiker* (FGH) (with German introductions and commentary, 1923 ff.). The papyrus fragments (with the exception of the Hellenica Oxyrhynchia—see OXYRHYNCHEUS HISTORIAN) have been collected by F. Bilabel (1923).

GENERAL LITERATURE. C. Wachsmuth, *Einleitung in das Studium d. alten Gesch.* (1895); U. v. Wilamowitz-Moellendorf, *On Greek Historical Writing* (1908; the enlarged German text republished in *Reden u. Vorträge* II, 1926); J. B. Bury, *The Ancient Greek Historians* (1909); B. Croce, *La storia greca* (1911); E. Schwartz, *Die griechische Geschichtsschreibung* (1911); J. Bruns, *Die Perser* (1908); P. Scheller, *Die griechische Geschichtsschreibung* (1908); B. Lavagnini, *Saggi sulla storia greca* (1938); L. Pearson, *The Early Ionian Historians* (1939); G. De Sanctis, *Storia dei Greci* (1939).

9. MODERN STUDIES. The study of Greek history as an independent branch of Greek scholarship was a product of the new aesthetic interest in the Greek world evoked by Winckelmann, and of the political interest aroused by the French Revolution. The aesthetic school of Greek historiography was founded by K. O. Müller (*Geschichte der griechischen Stämme und Städte*, 1820), and had its most finished exponent in E. Curtius (*Geschichte Griechenlands*, 1857). The political lessons of Greek history were first set forth systematically by two severe critics of democracy, J. Gillies (*History of Ancient Greece*, 1786) and W. Mitford (*History of Greece*, 1784-1818). Neither of these works attained a high standard of scholarship. Before a truly scientific history of Greece could be written much systematic sifting of evidence was still required. The most important products of this spade work were H. F. Clinton's *Fasti Hellenici* (1824), which laid the foundations of modern Greek chronography, A. Boeckh's *Staatshaushaltung der Athener* (1817), which paved the way for the study of Greek economics, and his *Corpus Inscriptionum Graecarum* (1828 ff.). The *Histories of Greece* by C. Thirlwall (1835-44) and G. Grote (1846-56) were the first to attain modern standards of scientific exactitude; Grote's work, though not free from democratic bias, definitely fixed the main outlines of modern Greek historiography. Hellenistic history (until recently the Cinderella of modern historiographers) first came by its own in the epic narratives of J. G. Droysen (*Geschichte Alexanders des Grossen*, 1833; *Geschichte des Hellenismus*, 1836-43). The general place of Greece in world history was first set forth clearly by Ed. Meyer (*Geschichte des Altertums*, 1884 ff.).

For more recent works, see the bibliography *supra* under (1939).

M. C.

HISTORIOGRAPHY, ROMAN. The foundations of Roman historical writing lie not solely in the pontifical tradition but in Hellenistic historiographical theory. The first Roman historians, Fabius Pictor, Cincius Alimentus,

Postumius Albinus, and C. Acilius, wrote in Greek to justify their free institutions and confederate policy to the Greek world upon which they were imposing their protection. Their work thus comes under the class not of annalistic chronicles but of the Hellenistic episodic histories. Political writers, not professional historians, *narratores*, not *exornatores rerum*, they fell short of Cicero's Isocratean standards (*De Or.* 2. 51-2; *Leg.* 1. 5), but their quality is reflected in the *ἐπιστολία* of Scipio Africanus (Polyb. 10. 9) and Scipio Nasica (Plutarch, *Aem.* 15 ff.). Their tradition inspired Polybius to analyse and set in its perspective the imperial rise of Rome, and their work was continued in Latin, in its same form, by Cato in his *Origines* (see ANNALS).

2. It was Cato, after Ennius, who inspired national historiography in Rome. The 'early' annalists, Cassius Hemina and Calpurnius Piso, began the systematic reconstruction of Roman history; and the study of pontifical law, cult and constitutional antiquities, public and private law, reflects the growth of historical consciousness, influenced by Stoic thought, which led to the publication of the *Annales Maximi* (c. 123 B.C.). This definitive work of documentary reconstruction and formal arrangement founded the annalistic historiographical *γένος*; the influence of Hellenistic theory furthered its development. Cn. Gellius probably first applied the rhetorical Isocratean methods to elaboration of the records; certainly the Sullan annalists, Valerius Antias and Claudius Quadrigarius, by free legalistic reconstruction and conventional rhetorical elaboration, fully established the literary form, which was accepted by Livy and adapted by the Imperial annalists and Tacitus.

3. In contemporary historiography Polybius' work was continued by Posidonius, and his methods followed by Sempsonius Asellio. Aemilius Scaurus and Rutilius Rufus wrote autobiography, Catulus and Sulla left *ὑπομνήματα*. Coelius Antipater introduced the historical monograph and Asianic style; Hellenistic biography grew on the tradition of the *laudatio funebris* (q.v.). It may be said that all the Hellenistic historiographical *γένη* were established in Rome, with increasing literary independence, by the time of Sulla.

4. Sisenna practised the dramatic Peripatetic art of Cleitarchus in his work on Sulla. Annalistic history continued with Macer, the democrat, and Tubero, the Caesarian. Contemporary history is represented by names from Cn. Aufidius to Tanusius Geminus. Antiquarian studies flourished with Nigidius Figulus and Varro, and Cornelius Nepos shows the advance of biography. Caesar's *commentarii* represent the Hellenistic military *ὑπομνήματα* in Latin. The Caesarian and anti-Caesarian writings, the *Catonae* and *Anticatones*, mark the maturity of political propaganda.

5. It is in this setting that Sallust wrote and Cicero defined the tasks of Roman historiography. Sallust represents an Atticist standpoint, associating Catonian archaism with Thucydidean *severitas*, and joining to rhetorical device the syntactical aggressiveness of his style. Cicero held the Hellenistic view that history, an 'opus oratorium maxime', should be based on the rhetorical Isocratean canons represented by Theopompus. These theoretical principles reflect their different historical purpose, Cicero justifying the tradition with dignity, Sallust attacking present corruption against the background of the past. The issue in thought and in mode was defined, and Livy's Augustan idealism could follow Cicero, Tacitus draw inspiration from Sallust.

6. Augustan historiography marks the balance of Roman tradition and Hellenistic influence. Memoirs dealing with the end of the Republic are common, from Augustus himself to Tiro. Asinius Pollio represents Atticist theory. Livy, on the one side, glorified the Republican tradition; Pompeius Trogus, on the other, set Rome in her Hellenistic perspective. To the Isocratean

rules Livy adds elaborate rhetorical and Peripatetic effects, practising the fine psychological interpretation which had come to maturity in Rome from Hellenistic studies. Poetical colour makes his opening books the prose epic of Rome; the later books enshrine the annalistic tradition and adapt the form to contemporary history. Trogus used Peripatetic methods, avoiding direct rhetoric.

7. The Augustan achievements were final in their own field. Fenestella might add antiquarian interest, L. Arruntius Sallustian style to the annalistic tradition, but Livy was followed, after Velleius Paterculus, only by the Epitome and its dependent writers. Trogus, unchallenged, was joined by Curtius Rufus, but Thallus, L. Cornelius, Bocchus, and Vibius Maximus led merely to Justin's Epitome. After the Republican work of Cremutius Cordus, however, the Imperial annalists appear: Aufidius Bassus, the Elder Pliny continuing his work, the Elder Seneca, and Bruttidius Niger; then Cluvius Rufus, Vipstanus Messalla, and Fabius Rusticus. Imperial rule increased biography, not only of the emperors but of their administrators, and memoirs were common. *Exempla* were published by Valerius Maximus and Hyginus. Ethnography and geography entered into history. Rhetorical theory developed in declamation; style passed through an Asianic stage to Atticism; and historical drama, perhaps, strengthened the appeal of dramatic historiography.

8. Thus the Roman historiographical *γένη* took on fresh life in this century, and Tacitus adapted them in unity of conception and stylistic mastery. Historical in his treatment of rhetorical theory, biography, and ethnography, he pressed these in their turn into the service of history. Roman in his central theme, traditional in accepting the annalistic conventions, he strove for dramatic concentration, pathetic and horrific description, and psychological depth, in the full maturity of Peripatetic art; to rhetorical effect he added the *severitas* and syntactical aggressiveness of Sallust. Drawing on historical tradition and historiographical technique, he created a work of original genius.

9. Imperial biography attained its highest point with Suetonius, but after Marius Maximus degenerated to the *Historia Augusta*. Only Greek historiography now had life; Roman historiography entered the age of epitome and chronicle, and style became archaistic. The handbooks of Ampelius and Julius Obsequens, chronological work, the *breviaria* of Florus, Granius Licinianus, Aurelius Victor, Eutropius, and Festus, lead to Hieronymus and Orosius. Ammianus Marcellinus alone shows historical quality in his continuation and imitation of Tacitus, but his technique and style, for all their power, betray his historiographical isolation. Yet the Gothic history of Cassiodorus, himself a chronicler, shows that historiography might revive under fresh historical inspiration.

10. MODERN STUDIES. The systematic study of Roman history first arose out of the interest of the Roman Church for the Roman Empire. Its first notable product was the *Histoire des empereurs romains* by a Jesuit scholar, Lenain de Tillemont (1700-38). This treatise was based on a full and critical use of the ancient literature, but contented itself with a bald narrative of events. Tillemont's book served as a foundation for E. Gibbon's *History of the*

Decline and Fall of the Roman Empire (1776-88), a work which remains unsurpassed in its firm grasp and clear exposition of Late-Roman politics and culture. The French Revolution diverted interest to Rome's republican beginnings. The early history of Rome (to c. 250 or 200 B.C.) was studied in a sympathetic but critical spirit by B. G. Niebuhr (*Römische Geschichte*, 1811-12), who made the first serious attempt to sift fact from legend in the ancient sources, and by T. Arnold (*History of Rome*, 1838-40). The Republican period as a whole received an authoritative exposition in the *Römische Geschichte* of T. Mommsen (1854-6), which rivalled Gibbon's *Decline and Fall* in its penetrating and comprehensive analysis of Roman life and politics, and in its brilliance of narrative. Mommsen subsequently produced innumerable researches on points of detail, and several systematic treatises on special aspects of Roman History, notably the *Römisches Staatsrecht* (1871-87) and the *Römisches Strafrecht* (1899), which remain fundamental for the study of Roman public law. In addition, he initiated and directed the international enterprise of the *Corpus Inscriptionum Latinarum* (1863 ff.), and in *The Provinces of the Roman Empire from Caesar to Diocletian* (Engl. Transl. 1886) he laid the foundation of regional study of the Empire's component parts. All later writers on Roman History are disciples of Mommsen. The only large field in which he left much pioneer work to be done was that of economics. This field has recently undergone systematic exploration by T. Frank (*Economic History of Rome*, 1927) and M. Rostovtzeff (*Social and Economic History of the Roman Empire*, 1926).

HISTRIA, see ISTRIA (2).

HOMER. The Greeks, with insignificant exceptions, believed that both the *Iliad* and the *Odyssey* were composed by Homer, but they had no certain or accepted facts about his life. His date was very variously given, as contemporary with the Trojan War (Tzet. *Chil.* 12. 183), soon after it ([Plut.] *Vit. Hom.* A 5), at the time of the Return of the Heraclidae (? Crates Theb. ap. Tatianum *Ad Gr.* 31), at the time of the Ionian wandering (Philostr. p. 194. 9), in the middle of the ninth century (Hdt. 2. 53), and 500 years after the Trojan War (Theopomp. *Hist.* ap. Clem. Al. *Strom.* 1. 117). This great divergence indicates that external evidence was lacking and that the Greeks knew little more than we do. If we try to date the poems by internal evidence, some facts emerge. Archaeology gives ambiguous results, but forbids an early date, since the sitting statue of *Il.* 6. 302-3 cannot be earlier than the eighth century, the shield of Agamemnon in *Il.* 11. 19 ff. may be even later, and the use of the phalanx in warfare (*Il.* 13. 131 ff.) may be later still. Even if we regard these passages as later corrections or additions, the *Iliad*, though it contains echoes of much earlier times in the *Shield of Achilles*, certainly does not describe the culture of the Mycenaean age as a contemporary document should. Literary evidence gives at least a *terminus ad quem* in the seventh century, when Terpander is said to have recited Homer at Sparta and echoes of him are to be seen in Tyrtæus (frs. 6-7, 21-8 from *Il.* 22. 71-6, fr. 8. 29-34 from *Il.* 16. 215-17), Semonides (fr. 29 from *Il.* 6. 146), and Aleman (fr. 1. 48 from *Il.* 9. 124, fr. 73 from *Il.* 3. 39). We may even place the date earlier than this, since Archilochus (c. 700 B.C.) seems also to give variations on Homeric phrases at fr. 65 (*Od.* 22. 412), fr. 41 (*Od.* 14. 228), fr. 38 (*Il.* 18. 309), and though the date of Hesiod is not known, he seems to be later than Homer, since *Op.* 159-60 may owe something to *Il.* 12. 23 and *Th.* 340 ff. to *Il.* 12. 20 ff. We may then perhaps place Homer before 700 B.C., though we must admit that there is always a possibility of his text having been altered and the indications of date being additions. But Theopompus

may not have been far from the truth in making Homer a contemporary of Archilochus.

2. His place was a matter of dispute in antiquity. Of the different possibilities Chios and Smyrna are best supported. Chios was regarded as his home by Semonides of Amorgos (fr. 29), and it was there that the Homeridae lived and maintained his memory (schol. Pind. *Nem.* 2. 1), while Smyrna was supported by Pindar (fr. 279). The predominance of Ionic elements in Homeric language points to Ionia as Homer's home, and this is supported by hints in the poems, notably by similes which mention the Cayster (*Il.* 2. 459 ff.), the Icarian Sea (ibid. 144 ff.), and a Maconian or Carian woman (*Il.* 4. 141-2), and by a certain geographical acquaintance with the Troad, the weeping Niobe on Sipylus (*Il.* 24. 614 ff.), and the towns of the Aeolic peninsula. Since in certain places (*Il.* 9. 4-5, 11. 305-8) he implies a shore facing west, he may have the Asiatic coast in his mind. On the other hand, in the *Odyssey* there is certainly some, not always exact, information about the islands round Ithaca and the Peloponnese, which may be due to personal acquaintance or simply to hearsay. He seems on the whole to have lived in Ionia, since his apparent ignorance of the Dorians in the Peloponnese indicates that he knew little of it.

3. Other traditions of his life, embodied in the ancient *Lives*, are almost without value. The episodes in them are usually to be traced back to episodes in the *Iliad* and *Odyssey*. The tradition that he was blind is better founded, since bards were often blind and the Homeric *Hymn to Apollo* 172 speaks of a blind poet in Chios and may refer to him. His condition may well have resembled that of the bards in the *Odyssey* who earned a livelihood by singing lays at the courts of princes. In the *Iliad* and *Odyssey* the poet says next to nothing about himself. This may imply that he was of a social position inferior to that of his patrons, and belonged to the class of *δημιοεργοί* (*Od.* 17. 383). His tastes may to some extent be seen in his similes, which are drawn from contemporary life and show an interest in humble people quite unlike the heroes and heroines of his poems, in handicrafts and agricultural pursuits, in animals and birds.

4. Our ignorance of Homer's date, place, and life has led to scepticism about his existence. It has been thought that the poems are collections of lays put together from different sources, or original poems much expanded and altered, or single examples of poems of which many different variants existed. The early arguments for such views, based on the belief that no man could have composed poems of such a length before writing was known, have now been dispelled by our knowledge of what memory can do when writing is not familiar. Other arguments, such as the presence of repetitions and inconsistencies, are less powerful when we realize that such poems were meant not to be read but to be heard, and that in such conditions the poet cannot be so exact about details as he can when he is helped by a written text. Still other arguments based on the varying treatment of the gods, of moral questions, of history and mythology, do not necessarily prove variety of authorship, since it is at least possible that Homer belonged to an old tradition which provided him with a very mixed collection of materials, on which he drew freely and not always critically.

5. On the other hand, the *Iliad* and the *Odyssey* each shows in itself the marks of a controlling and unifying poet. In the *Iliad* the whole poem hangs on the wrath of Achilles, and though many other episodes are introduced, this gives a unity to the whole. The last book picks up the themes of the first and shows the end of the wrath with which the poem began. The *Odyssey* shows what Ithaca was before Odysseus returned and then his return with his triumphant conduct of it. In each poem the characters are admirably consistent, convincing, and even

elaborated—a trait unlikely if many hands have been at work. In each poem the language, rich, complex, and traditional though it is, seems to show no real differences between one section and another. The use of abstract nouns, of the digamma, of Aeolic forms, of patronymics, all seem to be spread equally through the whole work. Any serious omission of a long passage from either poem in the belief that it is a later addition seriously impairs the structure and makes the plot less easy to understand. In both poems devices such as similes are used on a consistent plan, revealing the individual tastes of the poet and providing a variety where it is most needed in the narrative. Each poem shows that it is a whole and suggests that even if many hands have gone to its making, most of the poets preceded the actual author, who made use of their work but harmonized it according to his own ideal of composition.

6. These considerations do not prove that the *Iliad* and *Odyssey* were necessarily composed by the same poet. This has been doubted even by some who believe that each is itself the work of a single man. The Alexandrian grammarians who held this view were known as the 'Chorizontes'. There are certainly differences between the two poems, though not all are equally important. Much may be explained by differences of theme and of setting. The *Iliad* deals with war, the *Odyssey* with peace; therefore the social structure of life at Troy is different from that at Ithaca. The *Iliad* with its long accounts of battles is more monotonous than the *Odyssey*; therefore it uses many more similes to diversify its narrative. Many words appear in one poem and not in the other, but that is to be expected from two stories so different. The *Odyssey* has an element of fairy-tale almost lacking in the *Iliad*, but that is natural in telling of a man's wanderings at the ends of the world. It places its emphasis on wits, while the *Iliad* places its on courage, but that does not mean that the poems were written in different ages; for a heroic age may well admire cunning as much as bravery, and in any case the cunning of Odysseus is already manifest and admired in the *Iliad*.

7. The *Odyssey* certainly looks as if it were composed to be a sequel to the *Iliad*. The events which fall between the two stories, the Wooden Horse, the sack of Troy, the returns of the Achaean, the murder of Agamemnon, are all introduced, so that we have in effect a continuous narrative. Important characters of the *Iliad* who have no essential part in the story of Odysseus—Helen, Menelaus, Nestor, even Achilles and Aias—appear at one point or another, before or after death, in the *Odyssey*. The *Odyssey* closes with a second *ἔκκλις* in which the great ghosts of Troy make their last bow on the stage as if to make a finale to both poems. Moreover, these characters preserve their individuality from one poem to the other; Odysseus, though depicted on a far greater scale, is recognizably the same man that he was in the *Iliad*, Nestor is no less garrulous and reminiscent, Helen still shows wisdom learned in suffering. Both poems, too, are similar in structure, though the *Odyssey* shows an advance in its treatment of events which take place contemporaneously. In both we find similarities of technique, such as the way in which an action is first suggested and then postponed, the abrupt transition from one episode to another, the rapidity with which the final crisis comes when it comes, the slackening of tension after the crisis, and the quiet end. In both we find repeated lines and even passages which suggest that the poet, well instructed in his formulae, felt no qualms about using them when they suited his need. Compared even with Hesiod or the *Homeric Hymns* the *Iliad* and *Odyssey* seem to belong to a world of their own and suggest that they are the work of a single poet.

8. On the other hand, there are, undeniably, serious differences between the two poems. The *Odyssey*, at least in its second half, seems to lack the rapidity and

force of the *Iliad*. The poet does not lead to his crisis with the same directness, and in the handling of it there is not the same immediacy of effect. The difference may of course be due to advance of years; Homer may have begun to fail in his later poem (as [Longinus] suggests, *Subl.* 9). Again, in the *Odyssey* the gods are not what they were in the *Iliad*. Certain episodes show the old gay touch, but their position is, on the whole, different, and in the relations between Odysseus and Athene we may perhaps see a new view of the ways of the gods with men. Finally, the *Odyssey* seems to take a different view of life from the *Iliad*. The Suitors are lower characters than anyone except Thersites, and their end, deserved though it may be, is conceived in a harsher and less tragic temper than that in which Achilles revenges the death of Patroclus on Hector. These differences can be explained either as the result of passing years on a single poet or as the work of a second poet who admired and imitated the poet of the *Iliad* but did not see eye to eye with him on all points. The first alternative seems more likely because the differences are outweighed by the similarities and are at least explicable if we assume the *Odyssey* to be the later of the two poems.

9. Even if we admit that a single poet composed both poems, we must also admit that he owed a very great deal to tradition. The extent of his debt may be seen in the many stories which he mentions but does not elaborate, showing that they were already known, in his use of standard epithets for his characters, who have often grown beyond them, in his inconsistent treatment of the gods, now as real moral forces, now as figures of comic relief, in the episodic character of his narrative, a survival from the method of short narrative lays, in his language, which was never a spoken tongue, but, being drawn from different dialects and full of archaisms, artificial lengthening, synonyms, and alternative forms, shows the marks of many years given to its making. Above all, this traditional character is apparent in the important fact that Homer composes not with words but with groups of words or formulae. In almost every line we find a set of words that occurs elsewhere, often many times. This technique belongs to improvised verse. The poet who improvises must learn formulae before he can practise his art, and though there is no reason to believe that the *Iliad* and *Odyssey* were ever improvised, it is clear that their technique is derived from improvisation. Of these formulae many must have existed before Homer, and at times we may see traces of his indebtedness when a phrase is not perfectly suited to its context. But such formulae were no doubt altered and new formulae invented, and there is no reason to think that Homer took over all his from other poets. In fact the success of many parts of his poetry is unthinkable if he confined himself entirely to traditional phrases. So, too, in his plots we may find hints of an earlier treatment which is not his. In the poems which lay behind the *Iliad* Achilles seems actually to have mutilated Hector, but Homer avoids this and makes his hero give back the dead body to Priam. In the stories of Odysseus there must have been variants of the means by which he was recognized; in the *Odyssey* these are combined and worked into a single story. These earlier versions were obliterated by Homer and quite forgotten, but it seems next to certain that he used them and improved on them.

10. Even if Homer composed the *Iliad* and *Odyssey*, we cannot assume that we have them just as he left them. There are certainly interpolations in them. Some are not serious; others, like passages in *Od.* 11, may easily be detected. But it is quite possible that there are still others, though there is no sure way to mark them. The language, too, has certainly been altered from its first appearance, notably by the substitution of Attic forms due to the recitation of the poems at Athens and to the

fact that Athens was the centre of the Greek book-trade. Other changes are due to the misunderstanding of archaic words and their distortion or replacement by others. And the text may have suffered more than this. If it was preserved, as is possible, in the oral tradition of the Homeridae, it cannot but have suffered seriously in the centuries between Homer's death and the appearance of the first texts in the time of Pisistratus. Even if it was written down much earlier and preserved with reverence as a sacred book, it may still have suffered serious changes. In any case it is not as we have it that the author left it, and we cannot confidently restore it to its original purity.

For the allegorical interpretations of Homer, see ALLEGORY.

HOMERIC HYMNS, see EPIC POETRY, GREEK, para. 5.

HOMERIDAE, rhapsodes, who spread the knowledge of Homer's poems in Greek lands. The title was originally confined (Aeolus and Hellanicus cited by Harpocration, s.v. *Ὀμηρίδαι*) to Homer's descendants, who recited his poems by hereditary right, but was afterwards extended to others who were not related to him (schol. *Pind. Nem.* 2. 1). They were supposed to have special knowledge of Homer (*Pl. Resp.* 599 c; *Isocr.* 218 c; cf. *Pl. Ion*, 530 c), sometimes contained in esoteric verses, *ἀπόδετα* (*Pl. Phdr.* 252 b-c). Analogy with other Greek families and guilds confirms the early and reliable authorities against critical doubts, ancient and modern.

HOMERUS LATINUS, see ILIAS LATINA.

HOMICIDIUM, see PARRICIDIUM.

HOMONOIA, agreement or concord between the members of a community. The bitter experience of faction in Greek States led to much theoretical praise of concord, also from early Hellenistic times to a certain amount of cult (altar at Syracuse, *Livy* 24. 22. 13; at Olympia, *Paus.* 5. 14. 9; inscriptional dedications, see *Stoll in Roscher's Lex.* i. 2701, 30 ff.), also quite common occurrence on coins (*ibid.* 2702, 31 ff.), which may or may not connote actual cult in the States issuing them. Hence the cult was occasionally projected into remote antiquity, as *Apoll. Rhod.* 2. 717 ff., where the foundation of a shrine of Homonoia is ascribed to the Argonauts (q.v.). No doubt some of the dedications, etc., refer at least equally to Concordia (q.v.).

Cf. in general *Ellis Skarl, Euryetes-Concordia* (1932), 67 ff.; W. W. Tarn, *Alexander the Great and the Unity of Macedonia* (1931).

H. J. R.

HONESTIORES were persons belonging to the upper classes of Roman society. A definition of this term is not to be found in the works of Roman jurists, nor is there a list of the categories of citizens possessing this distinctive qualification. Their counterpart were the *plebei*, *humiliores*, *teniores*. In Imperial times, especially from the third century onwards, they enjoyed a privileged position

in criminal law, as being subject to milder forms of punishment for some crimes, in particular where the lower classes and slaves were liable to capital punishment. The *poena capitis* was applied to them only in quite exceptional cases, and could never be carried out by crucifixion or *bestiis obicere*. There was the same restriction on corporal punishment (*justibus non subiciuntur*), heavy forced labour in mines (*in metallis*), torture in criminal procedure, and the like. They had also some privileges in procedure on appeal. These exceptional rules were applied in some cases to all *honestiores* generally, in others only to certain classes, (*decuriones, veterani*, etc.).

A. B.

HONESTUS of Corinth, author of ten epigrams in the *Anthology* and eleven lately discovered in inscriptions in Bocoia, was contemporary with the Emperor Gaius (c. A.D. 40). The inscriptions are polite ceremonial greetings: the others are mild, faintly pedagogic (*Anth. Pal.* 11. 230) conceits.

C. Cichorius, *Röm. Stud.* viii. 11 (1922).

G. H.

HONEY (*mel*, μέλι), the chief sweetener known to the ancients, who understood apiculture (cf. Varro, *Rust.* 3. 16) and appreciated the honey-producing qualities of flowers and localities. Hymettus honey was famed for pale colour and sweet flavour; Sicilian (particularly Hybla) as proverbially good; Corsican, harsh and bitter; Pontic, poisonous, inducing madness. Honey was used in cookery, confectionery, and medicine, and valued for its preservative qualities. Its religious associations derive from the notion that it is a *ros caelestis*, which bees gather in the upper air as well as from flowers (cf. Aristotle, *Hist. An.* 5. 22, p. 553²⁹). Poets repeat the fancy that it dripped from trees in the Golden Age. As celestial it possesses mystic virtues, was used in libations for the dead (see S. Eitrem, *Opferitus*, 1915, *passim*), and in literature is given to infants to impart numinous qualities, as wisdom or eloquence (see H. Usener, *Kleine Schriften* iv (1913), 398-417). Bees fed the infant Plato with honey (*Cicero, Div.* 1. 78: cf. A. S. Pease, ad loc.), and Zeus was called *Melissaios* from a similar legend of his Cretan birth. And see W. H. Roscher, *Nektar und Ambrosia* (1883); W. Robert-Tornow, *De apium mellisque apud veteres significacione et symbolica et mythologica* (1893); W. Telfer, *JTS* xxviii (1927), 167 ff. See also BEE-KEEPING.

W. T.

HONORARIUM, see ADVOCATUS.

HONOS and VIRTUS. These abstractions had three temples in Rome; one outside the Porta Collina (*Cicero, Leg.* 2. 58), to Honos; one *ad portam Capenam*, dedicated originally to Honos by Q. Fabius Maximus Verrucosus in 234 B.C., then enlarged into a double temple to both by M. Marcellus (*Livy*, 25. 40. 2-3; 27. 25. 7-9; 29. 11. 13), because two deities could not be worshipped in one cella; one somewhere near the Capitolium, built by Marius after defeating the Cimbri and Teutones (*Platner-Ashby*, p. 259, q.v. for further particulars); cf. Wissowa, *RE*, 149 ff.

H. J. R.

HOPLITES (ὁπλίται) were the regular type of heavy-armed infantry in the Greek city States. Citizens who could not maintain horses, yet had sufficient property to equip themselves with full personal armour, were required to serve as hoplites. In the later fifth century at Athens the hoplite qualification was regarded as equivalent to the old Solonian class of the *zeugitai* (q.v.). The body-armour of the hoplite consisted of a helmet with nasal and cheek pieces, a breastplate, and greaves of bronze. The heavy bronze shield was his chief defence; it was elliptical in shape and was usually secured on the left arm and hand by leather bands (ὄγκροι). The iron sword was short and straight; the spear, some 9 feet long,

was held in the hand for thrusting. When in proper formation on their appropriate terrain hoplites were able to sustain effectively the assaults of archers or cavalry. But they were slow and heavy in attack, and when in difficult country or scattered they were easily defeated in detail.

J. Kromayer and G. Veith, *Heerwesen und Kriegführung der Griechen und Römer* (1928), 50 ff. H. W. P.

HORACE, see **HORATIUS** (2) **FLACCUS**.

HORAE, goddesses of the Seasons in Greek mythology. In Homer the Horae roll aside the veil of clouds from the gate of Olympus (*Il.* 5. 749; 8. 393), which is perhaps a mythological expression of the belief that H. could give rain or heat. Hesiod (*Th.* 900) makes H. daughters of Justice and gives to them individual names, *Eunomia* (Good Government), *Dike* (Right), and *Eirene* (Peace). Commonly H. are, however, regarded as goddesses who come with the changes of seasons and make flowers and plants grow. Their names and number vary from region to region. In Attica these names were *Thallo*, *Karpo*, and perhaps *Auxo*, referring to growth, flowering, and ripeness of vegetation (C. Robert, *Comment. in hon. Mommsen*, 143). These H. of fertility had a place on the lips of peasants (Ar. *Pax* 1168). The Hesiodic H., who stand for ethical and political ideas, are mentioned in some later inscriptions (Kaibel, *Epigr. Gr.* 1110). Because H. have the power to make things and beings grow and because the gifts of H. are pleasant, they are welcome guests at marriages and births of Olympians and heroes (Hes. *Op.* 73; *Hymn. Hom. Ven.* (vi), 1; Pind. *Pyth.* 9. 60; Paus. 2. 13. 3; Mosehus 2. 164). When Hellenic religion develops to a more unified and intellectual state, the Seasons, whether three or four, are also called *Horae*. Spring, Summer, Autumn, Winter all bring their proper blessings and are depicted in art with appropriate attributes. The regularity of seasons was a favourite argument of Greek philosophers for the existence of a divine world order (Plato, *Epin.* 977 b; Von Arnim, *SVF* i, no. 499; cf. Aratus, *Phaen.* 550). Seasons appear in Roman houses and on Roman tombs (F. Cumont, *Rev. Arch.* 1916, ii, p. 1). H. are associated with many deities, e.g. Demeter, Kora, Pan, Apollo, Dionysus, Aphrodite, and Helios, but only as subordinate companions. Philochorus describes some details of the cult of H. in Athens (ap. Athen. 2. 38; 14. 656). They were worshipped also in Argos and Olympia. In art, Horae are first shown on the François vase, without any individualizing attributes, whereas the later Season-Horae are carefully distinguished from each other by attributive plants and animals.

P. Herrmann, *De Horarum figuris* (1887); J. A. Hild in *Dar.-Sag.*, s.v.; A. Merlin, *Monuments Piot* 1934, 133; M. P. Nilsson, *Primitive Time Reckoning* (Lund, 1920); L. R. Farnell, *The Cults of Greek City States* iv (1907), 130. G. M. A. H.

HORATII were, according to a popular tradition (probably independent of Greek literary influence), three Roman brothers, two of whom were killed in combat with the Curiatii, three Alban brothers, while the survivor was tried, but acquitted on appeal, for the murder of his sister Horatia. An ancient ritual celebrated at the *Tigillum sororium* and traditionally explained as a commemoration of Horatia probably gave rise to the story, unless it was invented as a precedent for the institution of the *provocatio ad populum* (see *PROVOCATIO*). P. T.

HORATIUS (1) **COCLES**, a Roman who traditionally held back the Etruscans from the wooden Sublician bridge until it could be demolished, and then, despite his wounds, swam across the Tiber to safety. Polybius, however, records (6. 55) that Horatius was drowned. The story is probably an aetiological myth. Opposite the Sublician bridge, in the area consecrated to Vulcan,

there stood an ancient statue of a lame, one-eyed man, erected traditionally to Horatius. In fact, however, it represented not the wounded Horatius but Vulcan (one-eyed as a sun god, and lame like the Greek Hephaestus, or rather because the primitive sculptor could not express the movement of the legs). The earliest allusion to the story is probably in a recently discovered passage of Callimachus' *Aetia* (*Διγηγήσεις*, ed. Norsa-Vitelli, v. 26 ff.).

G. De Sanctis, *Riv. fil.* 1935 (contra, G. Pasquali, *Stud. Ital.* 1939). P. T.

HORATIUS (2) **FLACCUS**, **QUINTUS** (**HORACE**) was born on 8 Dec. 65 B.C. at Venusia in Apulia. His mother is nowhere mentioned. His father was a freedman, probably of Italian stock, and as collector of dues had amassed sufficient money to purchase a small farm. Being a man of ambition, he refused to send his son to the local school and had him educated by Orbilius at Rome along with sons of knights and senators. When about twenty, H. removed to Athens for further study, but in autumn 44 joined Brutus' army as *tribunus militum*. Returning to Rome 'with clipped wings' after Philippi (42), he found that his father was dead and his farm confiscated. He therefore purchased the post of *scriba quaestorius*, and poverty, as he tells us, drove him to write verses. About this time he made the acquaintance of Virgil and Varius, who secured him an introduction to Maecenas; and in 38 he was finally admitted to the circle of M.'s friends. This event not only marked the beginning of a lifelong friendship but was a turning-point in H.'s career. It introduced him to the society of the leading poets and statesmen of Rome; it won his sympathies for the cause, and later for the régime, of Augustus; and it freed him from financial worries and brought him, five years later, the gift of his beloved Sabine farm. Henceforth he devoted himself to the writing of poetry, declining Augustus' offer of a private secretaryship; and after Virgil's death in 19 he was virtually a Poet Laureate. He died on 27 Nov. 8 B.C., only a few months after Maecenas.

Horace was short and stout in appearance, of delicate health, and prematurely grey. In character he was independent, tactful, kindly, and sensitive. He never married.

WORKS

1. *Epodes (iambi)*: a collection of seventeen poems composed between 41 and 31 B.C. and published in 30. H. claims that in them he first introduced the Parian iambs of Archilochus to Latium (*Epist.* 1. 19. 23-5): eleven employ a purely iambic metre (1-10, couplets of trimeter and dimeter; 17, trimeters throughout); the other six have various combinations of iambs and dactyls. The subject-matter is threefold: (a) Lampoons, especially on the witch Canidia (5 and 17). These are at times both coarse and bitter despite H.'s claim (loc. cit.) that he reproduced Archilochus' spirit and metres but not his themes and venomous invective. Perhaps his animosities were less personal than those of A., for he describes himself as a watch-dog of society (6). (b) Political: 1 and 9 are connected with Actium, at which H. was apparently present. 16 expresses the disillusionment caused by the Perusine War in 41 B.C. and suggests that the Romans should migrate to the shores of Ocean where they will enjoy a new Golden Age. Virgil's 4th Eclogue is probably an answer to this Epode. (c) Erotic and miscellaneous: the love-poems (11 and 15) have some merit, and in 2 a Roman money-lender gives a charming eulogy of country-life.

The *Epodes* are experimental and immature, but in parts (especially 13 and 16) show considerable poetical power.

2. *Satires*. H. calls them *satirae* (miscellanies) or, jointly with the *Epistles*, *sermones* (discourses). Hexameter

poems in two books: Book I (10 poems) was published c. 35 B.C., Book II (8 poems) c. 30 B.C. They are modelled on Lucilius and show the diversity of topics traditional in Roman satire. Some are homilies on conduct, literature, and even gastronomy (2. 4) and legacy-hunting (2. 5); others are descriptions of various incidents, e.g. H.'s journey to Brundisium (1. 5), his encounter with a bore (1. 9), Priapus and the witches (1. 8), Nasidienus' dinner (2. 8). The following elements are noteworthy: (a) Autobiography: H. gives us many details about his early career—his debt to his father, his education, his relations with Maecenas, his life in town and country. There is also much frank self-revelation of character: like Lucilius, H. 'entrusted his secrets to his writings' (2. 1. 30-4). (b) Moralizing: H. had acquired an early and lasting interest in practical ethics from his father (1. 4. 105 ff.); and satire which, as successor to the Cynic diatribe (cf. *Epist.* 2. 2. 60), purveyed popular philosophy to the Roman world, gave this full scope. He discourses on avarice, contentment, tolerance, etc., but does not profess any of the current creeds. In Book I he is, on the whole, Epicurean in sympathies and ridicules the Stoic paradoxes that all sins are equal and that the Wise Man is king (especially 3). Book II reveals the increasing appeal of Stoic earnestness: 3 and 7 are Stoic sermons on the madness and inconsistency of mankind. (c) Literary criticism (esp. 1. 4 and 10; 2. 1): H. discusses the nature of satire and distinguishes it from true poetry. He demands that the satirist should vary his tone, and declares that humour is a more effective weapon than sarcasm. Above all he insists on the necessity for finish, criticizes Lucilius for slovenliness, and defends the moderns against the ancients.

Written in racy, conversational style, the *Satires* provide many vignettes of scenes and characters, and present a varied and intimate picture of contemporary life. Satire in the modern sense is rare; H.'s humour is genial, and is directed against types rather than individuals, foibles rather than vices. Book I contains some very early work (e.g. 7, c. 43 B.C.) and is less finished, though livelier, than Book II; unlike the latter, it also prefers monologue to dialogue. With H. Roman satire first became great literature.

3. *Odes (Carmina)*: four books containing 103 lyrical poems varying in length from 8 to 80 lines and modelled chiefly on Sappho and Alcaeus. The commonest metres are Alcaics, Sapphics, and Asclepiads, but there are occasional experiments in other metres (see LYRIC POETRY, LATIN). Except in 4. 8 (probably spurious in part), the number of lines is always divisible by four. The *Odes* were written to be read and not sung, but a musical accompaniment is occasionally assumed as a literary convention. The poems are carefully arranged within their books to give variety of metre and subject-matter, but an exception is provided by the six Alcaic 'Roman Odes' (3. 1-6) which naturally stand together.

The *Odes* were published in two collections:

(1) Books I-III, 23 B.C., containing poems written from 31 onwards. H. apparently regards this as his greatest achievement. In the prologue he confesses his ambition to be ranked among 'lyric bards' (1. 1. 29-36); in the epilogue he proudly claims that he has completed his 'monumentum aere perennius' (3. 30).

(2) Book IV, c. 13 B.C. This owed its inception to Augustus' command that H. should celebrate the Alpine campaigns of Drusus and Tiberius in 15 B.C. Poems 4 and 14 are devoted to this, and 5 and 15 extol Augustus' government. These four official *Odes* are good of their kind; the remainder show little loss of lyric power.

Each *Ode* normally has (a) an addressee, e.g. Augustus, Lydia, Apollo, the Roman people, the ship of State, a wine-jar, the fountain of Brundisium; (b) an occasion, real or imaginary, e.g. a great flood, Virgil's departure for

Greece, a banquet, a wintry day, the death of Quintilius, the defeat of Cleopatra. Within this framework there is an almost infinite variety of theme and treatment. The subjects range from love and wine to the greatness of Rome and the character of the ideal citizen. In some poems the tone is light and playful (e.g. 1. 22, 2. 4, 3. 9); in others there is the high seriousness of the moralist, the patriot, and the 'priest of the Muses' (e.g. 1. 35, 2. 1, 3. 1-6 and 29, 4. 9). Many contain quick changes of mood, and perhaps the most typical of H.'s genius are those which contrast the beauty and permanence of Nature with the shortness of man's life (1. 4, 2. 3, 4. 7). The incomparable grace, economy, and inevitability of H.'s language in the *Odes* and his complete success in 'adapting Acolian song to Italian measures' are universally recognized; but some of their charm is also due to his selection of beautiful material and to his skilful use of mythology and proper names. According to Quintilian (10. 1. 96), he is practically the only Latin lyric poet worth reading.

4. *Carmen Saeculare*: a Sapphic hymn to Apollo and Diana written by the command of Augustus for the Secular Games in 17 B.C. and sung by a chorus of 27 boys and 27 girls.

5. *Epistles I*: nineteen familiar letters and an envoi, written in hexameters and published in 20 B.C. They are in essentials a development of the *Satires*, and the scholiasts comment on the similarity of metre, diction, and subjects. Some are personal, e.g. 4 comforting Tibullus; 9 introducing Septimius to Tiberius; 7 tactfully informing Maecenas that H. cannot resign his independence. One (19) rebuts charges of unoriginality in his *Odes* and defends his poetic ideals. The majority, however, are strongly philosophical in tone and contain genial reflections and advice on life and conduct. In 1 H. states his position: though now a Stoic, now a Cyrenaic, he swears allegiance to no school, but seeks to work out his own rule of life. In this task he finds more help in Homer than in the professed philosophers (2). He concludes (6) that peace of mind depends on the attitude of will which refuses to set store by external goods ('nil admirari'). True happiness is within us: change of place avails nothing without change of heart (11), but the simple life of the country approaches closely to the ideal of 'living in harmony with nature' (10; 14). Though he describes himself as 'Epicuri de grege porcum' (4. 16), his growing seriousness inclines him rather towards Stoicism (cf. 16).

There is some justification for those who hold with Lehrs that 'the real H. is never found in his *Odes*' and that *Epistles I* is his greatest achievement. The *Epistles* gave full scope to his peculiar qualities—his sympathetic and penetrating outlook on life, his philosophy of moderation in all things, his humour which could laugh at himself as well as others. His moral homilies are enlivened by anecdote and fable, and made palatable by confession of his own faults. As compared with the *Satires*, the *Epistles* show a greater mellowness and depth, and a more perfect command of the varied tones of the hexameter.

6. *Epistles II*: two long letters in hexameters chiefly concerned with literary criticism. 1, which is addressed to Augustus (c. 13 B.C.), upholds the standards of Augustan poetry against its detractors; describes the social function of poetry; enumerates the difficulties which confront a would-be writer of tragedy at Rome; and incidentally gives many interesting (if hardly profound) criticisms on the development of Roman poetry and the earlier Roman poets (Livius, Ennius, Plautus, etc.). 2 is to Florus, the young poet of *Epist.* 1. 3, and was probably written between 20 and 17 B.C. After describing his education and early life, H. discusses style and the proper use of archaisms and neologisms.

7. *Ars Poetica (Epistula ad Pisentem)*: a discussion of poetry in a long hexameter letter to a certain Piso and

his two young sons ('iuvenes', *Ars P.* 24). If Piso be identified with Cn. Piso (*cos.* 23 B.C.), its composition falls roughly between 23 and 20; if with L. Piso (*cos.* 15 B.C.), it belongs to the last few years of H.'s life. The second identification is supported by Porphyrio, who also states that the poem embodies the literary precepts of Neoptolemus of Parium (3rd c. B.C.); and it is perhaps significant that the writings of Philodemus from which we derive our knowledge of Neoptolemus were discovered in L. Piso's villa at Herculaneum. The title *Ars Poetica*, which first occurs in Quintilian (8. 3. 60), is misleading: the poem is not a systematic treatise but a series of rather desultory precepts, and its marked preoccupation with tragedy and the satyr-play seem to connect it with a deliberate attempt to revive Roman drama. Though H. may have owed to Neoptolemus many of his maxims and his general framework (*poesis, poema, poeta*), most of the content is the fruit of his own experience. The chief topics are: artistic unity; style and vocabulary; metre and the genres; originality and imitation; the proper end of poetry; genius and art; the uselessness of mediocrity and the need for taking infinite pains. The *Ars* is the only piece of serious Latin criticism written by one who was also a great poet; and its literary influence, especially in the seventeenth and eighteenth centuries, has been immense (see LITERARY CRITICISM, LATIN, para. 3).

Augustus' conviction that H.'s writings would be immortal ('mansura perpetuo') has been justified by time. He was, like Virgil, a school classic by A.D. 100 (Juv. 7. 226); he was commented on by various ancient scholars (notably Acron and Porphyrio); and in modern times he has been repeatedly edited, imitated, and translated. His popularity springs from three principal sources: (1) He reveals his personality in his works (esp. *Sat.* and *Epist.*) to a degree hardly paralleled in any other ancient poet; and his frankness, his tolerance, his sanity, his kindly humour tinged with melancholy make him somehow seem an intimate friend (cf. Pers. 1. 116-17). (2) He displays, alike in his descriptions and his musings, a truthfulness to perennial human nature which gives them an abiding interest. Though lacking profundity of thought and intensity of passion, he is a shrewd critic of life on its ordinary levels, and as poet of the 'golden mean' and of the average man he is perhaps unique. (3) His perfection of form gives charm even to his slighter pieces. Subtle in structure and 'sparing of his strength', he prefers the allusive touch and swift transition to the painstaking elaboration which 'oppresses the weary ears' (*Sat.* 1. 10. 9-14). In his consummate mastery of metre and diction he illustrates the principles of Classicism and of the 'limae labor et mora' which he preached; and if many of his famous phrases are now hackneyed, it is because his 'curiosa felicitas' gave perfect expression to the thought once and for all. See LYRIC POETRY, LATIN, para. 5

HOROLOGIUM, see CLOCKS.

HORSE AND CHARIOT RACES. Horse-racing was as popular in Greece and Rome as it is in our own country, but the horses were usually harnessed to chariots, two or four abreast, instead of having a rider on their back. In the four Panhellenic Festivals there were races both of driven and of ridden horses, and Pindar gives us the name of one race-horse, Pherenikos, belonging to Hieron of Syracuse, which won the race for single horses both at the Olympian and at the Pythian Games. This race, however, was only a sprint of under 6 furlongs, and was held of far less importance than the four-horse chariot-race which was the chief event of the day. The Hippodrome was a long rectangle of about 600 yards, with pillars at each end round which the horses turned. The chariots were light two-wheeled cars with a rail in front and at the sides; the driver wore a long white robe girt at the waist, and held a whip in his right hand, the reins in his left. The fields were large, forty teams sometimes starting, but the distance was twelve laps, nearly 9 miles, and as accidents at the turning-points were frequent it is probable that few teams finished.

From the Greeks chariot-races passed on to the Romans, who found an ideal site for a race-course in the centre of Rome in the level space between the Palatine and Aventine hills. This *Circus Maximus* they gradually surrounded with permanent stands, which in the fourth century A.D. could hold over 200,000 spectators. Down the length of the course there ran a low wall—*spina*—ornamented with two obelisks, seven stone dolphins, and seven stone eggs. At one end were the twelve closed stalls—*carceres*—from which the chariots started when the presiding magistrate gave the signal; at the other was a wide semicircle where the chariots turned, the race being usually seven laps, and twenty-four races forming a full day's programme. The chariots were drawn by two, three, or four horses, the most important horse being that in the left-hand traces. The driver wore a short tunic, with the reins fastened round his body and a knife in his girdle to cut them in case of need, together with a cap bearing the colour of the faction which he represented. These factions were a Roman development; in Greece chariot-racing had been possible only for rich men, in Rome it passed into the hands of companies. There were four of these, distinguished by their colours, white, red, blue, and green, the last two of which gradually absorbed the others. The Roman onlooker displayed his favourite colour and betted on it, and the rivalry between the blues and the greens became so intense that at Constantinople it led to the famous Nika riot.

Friedländer, ii. 19-40. For other literature see ATHLETICS.

F. A. W.

HORSES. From the beginning of history two separate species of horse were known to the ancients. There was the primitive horse of Europe and Asia, an animal with ugly head, large joints, dun colour shading to white, tail set low on croup, bad-tempered, and driven with a bit. There was also the so-called Arab or blood horse, a different species from the European-Asiatic, developed in north Africa; slightly built with small joints, fine head, tail set high, bay colour, often with white star on forehead and white braeclets on legs, skin blue-black, temper so gentle that it could be ridden with a nose-band only. These Libyan horses were used by the early kings of Egypt and by Solomon, and the best breeds known to the Greeks and Romans were the results of a cross

between them and the European stock. In Thessaly there was a good strain from which Alexander got the mounts for his cavalry; in Sicily there was another which won many prizes for the Sicilian tyrants at Olympia; the horses sent from Africa by Hasdrubal gave Hannibal his most effective arm against the Romans; and the Gallic black and grey cobs known as *manni* were found very serviceable as carriage horses. The ordinary Athenian horse was a poor creature, often both lazy and vicious, so that it is not surprising that the young Athenians did not usually ride for pleasure. The average price of horses seems to have averaged between 20 and 50 pounds; Bucephalus (q.v.) is said to have cost 4,000. Horses were sometimes branded, either with letters *sanpi* and *koppa* or with devices such as a bull's head.

Xenophon, *On Horsemanship*; Vergil, *Georgics* 3. 72-208; W. Ridgeway, *Origin and influence of the Thoroughbred Horse* (1905).
F. A. W.

HORTENSIUS (1), **QUINTUS**, was appointed dictator c. 287 B.C., despite his obscure descent, to reconcile the Orders after debts and usury had provoked the final secession of the plebs to the Janiculum. He carried a *Lex Hortensia* by which *plebiscita* were to be binding on the whole community and the Senate had to recognize such measures as legal before they were put to the plebeian assembly. Another *Lex Hortensia* (probably 287) provided that lawsuits should take place on the *nundinae*, when the peasants, taking advantage of the country-holiday, came to Rome on business.

Mommsen, *Röm. Staatsr.* iii. 153, 372 f.; G. W. Botsford, *The Roman Assemblies* (1909), 313 ff.; E. Costa, *La 'lex Hortensia de plebiscitis'* (1912); V. Costanzi, *Riv. fil.* 1914.
P. T.

HORTENSIUS (2) **HORTALUS**, **QUINTUS** (114-50 B.C.), was for many years the great forensic rival of Cicero; he first crossed swords with him in the trial of P. Quinctius (81 B.C.) and later in that of Verres, whom he defended. He was consul in 69 B.C., and as a staunch supporter of the supremacy of the Senate he opposed the proposals of Gabinus and Manilius (67; 66). Later he co-operated with Cicero in the defence of C. Rabirius (63), L. Murena (63), P. Sulla (62), L. Flaccus (59), and P. Sestius (56). In 57 he pressed the claims of the consul Lentulus to the Egyptian command, and in 52 he opposed the *Lex Pompeia de vi*. He married (i) Lutatia, daughter of Q. Catulus (q.v. 2), who bore a son Quintus (who was at first a Caesarian, but later helped Brutus and fell at Philippi), and (ii) Marcia, also wife of Cato Uticensis.

Hortensius' fame rests mainly on his oratory; his influence is shown by the order of speaking in the Senate in 61, where he ranked fourth after Piso, Cicero, and Catulus. He was the leader of the 'Asiatic' school, which relied for its effect on florid ornament and verbal conceit. The rapid and high-pitched flow of his speeches was convincing, but easily degenerated into bombast (Cic. *Brut.* 228-30, 301-29). He was also a prominent art-collector (Pliny, *HN* 34. 48; 35. 139).
J. M. C.

HORUS, called Harpocrates (Horus the child) by the Greeks, was originally a god of lower Egypt. His characteristics and his unique qualities as they were known to the Greeks came almost entirely from his role in the myth of Osiris. The myth is given in a late, hellenized form by Plutarch in his essay concerning Isis and Osiris. After the murder of Osiris Isis gave birth to a son, Horus, who, after many trials, succeeded in punishing the wicked Set (Typhon). Egyptian mythology dealt at length with the obstacles which the untamed youth had to overcome, and, in later times, Horus the child drew the affections of the Greeks and Romans. There are a few dedications to Horus outside Egypt, and he is sometimes represented as a mounted warrior with the head of a hawk. In unnumbered instances,

however, he appears as Harpocrates and is represented as a chubby infant with his finger held to his mouth. He is frequently represented within Egypt and outside as a baby being suckled by his mother Isis, less frequently as a youth with pomegranate or a child on a lotus flower. Harpocrates is usually found as a member of the cult of the Egyptian deities, along with Isis and Sarapis, his mother and father. Representations of him are almost innumerable, from rings and amulets to life-size statues of him as a youth. In his various forms he is at times identified with Heracles, Eros, and Apollo.

HOSIDIUS GĒTA, see GĒTA.

HOSTIA, see PROPERTIUS.

HOSTILIUS MANCINUS, **GAIVS**, as consul (137 B.C.) campaigned against Numantia. After several defeats he was surrounded with 20,000 men, but obtained peace through his quaestor, Ti. Gracchus. But the Senate, influenced by Scipio Aemilianus, would not recognize the pact and delivered Mancinus as a scapegoat, bound and naked, to the enemy, who refused to accept him. A law restored to him his civil rights. He was subsequently praetor again.
A. M.

HOSTIUS, the epic poet, followed a well-established tradition in writing about a Roman war, the *Bellum Histricum* of 129 B.C. Perhaps he dealt with contemporary events as Naevius and Ennius had. Scanty fragments survive.

Morel, *FPL* 33 f.

HOUSEHOLD WORSHIP, see WORSHIP, HOUSEHOLD.

HOUSES (Greek). The ordinary Greek house of the classical period was modest in appearance and irregular in plan. The Hellenistic house which developed from it was more luxurious, but similar in essentials. The fundamental features were the *andrōn* (men's room) and the *gynaikōn* (women's room). When possible these were approached through an *aule* (courtyard), often small in towns, probably larger in the country. In all but the humblest houses secondary rooms (*thalamoi*) for sleeping, storage, and other special uses were built along the sides of the *aule*, which was often entirely surrounded except for a vestibule (*thyroreion*) inside the street door or recess (*prothyron*) outside it. Most of the room doors opened into the *aule*, and so did most of the windows (*thyrides*), though street windows were not rare. The plan-system was *radial* rather than *axial*; exact mirror symmetry of the whole plan about a major axis-line was exceptional even in Hellenistic times. The smaller sorts of unit were combined into a larger sort, the *court surrounded by buildings*, an inward-looking quadrangle, not necessarily rectangular, which could be fitted to all kinds of sites and, on occasion, doubled. The *aule* was the 'hub' of the plan; shady and cool in summer, sheltered and sun-trapping in winter, it formed an invaluable overflow area, especially for the women. In better-class houses *loggias* (*exedrai*) were formed by omitting the inner wall from one of the secondary rooms. Threshold areas, always favourite sitting-places, were sheltered by porch (*prostas*, *pastas*, *parasias*, *prothyron*) and colonnade (*prastai*), which also protected the walls and rooms behind from damp and heat. In Hellenistic times these rooms and sheltered colonnade-walls were often decorated with brightly coloured frescoes; as early as the fifth century a few Athenian houses had painted walls. Colonnades were at first restricted to one or two, or at most three sides of the *aule*, but in the third century the

complete *peristylon* begins to occur, a feature which in its more contracted form closely resembled the larger sorts of Roman *cavaedium*. Two-storied colonnades, like those used in the *stoa* and hypaethral temple-cell, were sometimes used in two-storied houses.

2. The palatial 'Greek House' of Vitruvius (q.v.) has two 'quadrangles', each with its own colonnaded *aule* and street door. The first, called *gynaecitis*, contains all the more private and indispensable rooms and is, in fact, the house proper. The second, called *andromitis*, is a luxurious reception-suite for the men, with richly decorated *peristylon* surrounded by large dining-rooms (*trichinia*) opening externally on gardens, and by loggias (*exedrae*), and even libraries (*bibliothecae*) and picture-salons (*pinacothecae*); small private suites (dining-room, bedroom, store) are provided for guests from abroad—an improvement on the earlier practice of bedding them in the porch or colonnade. Even in one-quadrangle houses there was some kind of *gynaecitis*; sometimes in an upper story, like the Homeric *hyperōton*.

3. Upper stories were in common use from 600 B.C. onwards. In Hellenistic times they were sometimes planned as independent 'flats' with front doors of their own. Pitched roofs and flat terraces were both common. Latrines, slop-flushed and discharging into the gutter outside, were sometimes placed near the street door. In large houses the entry might be flanked by a porter's lodge and stables. Gardens were fairly frequent at the back. Water-supply was from public fountains or private wells or underground rain-water-cisterns; artificial lighting by torches and oil lamps; heating by *escharai* (hearths), internal and external, and *anthrakia* (chafing-dishes). Smoke escaped through smoke-holes (*kapnodochai*) and through doors and windows.*

See also ARCHITECTURE, PALACES, TEMPLES, TOWNS.

* Architectural terms were very loosely used by classical writers. The meanings indicated above are the most usual ones.

HOUSES (Italian). TYPES. Two types of town-house coexisted in Italy. One type had as its main feature an *atrium*, i.e. an unroofed or only partially roofed area with rooms round about, which were lighted from it and arranged along a central axis in a more or less stereotyped order (viz. the *tablinum* and its flanking rooms at one end, the *alae* separating the *tablinum* end from the rest, and small rooms on each of the sides and also flanking the door, which lay opposite the *tablinum*). The other was a combined shop and dwelling—a shop facing the street and living quarters either above or behind it. *Atrium*-houses, self-contained and secluded, were the homes of the well-to-do; shop-houses, usually placed one against another in rows, were the homes of humble artisans and shopkeepers. The former tended to be spacious and one-storied, the latter to be cramped and many-storied. Architecturally the two types of house developed more or less independently.

2. **ATRIUM-HOUSE.** The origin of the *atrium*-house is uncertain. The triple division of the *tablinum* and its flanking rooms is possibly related to the triple division of the *cella* of an Etruscan temple, and the whole house may derive from the Etruscans. The earliest extant examples are found at Pompeii, e.g. the Casa del Chirurgo (4th to 3rd centuries B.C.). This house, when first built, had no *impluvium* (a basin in the floor designed to catch rain-water). This feature is not found earlier than the second century, but thereafter became normal. In the absence of an *impluvium*, it is not known if the *atrium* of the Casa del Chirurgo was roofed. A century later this type of house had grown more imposing in size and design (e.g. Casa di Sallustio at Pompeii). The *atrium* had an

impluvium, which implies that except for the *compluvium* (a rectangular opening in the centre of the roof) the arca was roofed. The darkening of the *atrium*, which was a consequence of the roofing, was offset by large windows in the *tablinum* and adjoining rooms, which opened on a portico running round the outside wall and overlooking a garden. The rooms on the street-side were converted into shops, an innovation inspired by the plan of the shop-house.

3. **SHOP-HOUSE.** Shop-houses in their more complex forms were typical of large cities like Ostia and Rome. At least three types are known, viz. (i) a single row of shops facing the street, with living-quarters behind or above. At Ostia in the late-Republican and early-Imperial age such rows of shops reached an imposing dignity, having upper balconies or porticoes over the pavement of the street; (ii) a double row of shops built back to back; (iii) rows of shops surrounding a central area. The shops might face on the street or might be in a double series, one facing outwards, the other facing into the courtyard. In its most elaborate form (e.g. the Casa di Diana at Ostia) this type of dwelling formed a huge, many-storied *insula*. All three types can be seen at Ostia and in the *Forma Urbis Romae*, and the first and the third at Pompeii also.

4. **HYBRID TYPES AND FOREIGN INFLUENCE.** The *atrium*-house and the shop-house were gradually modified, partly through importations from the Greek and Hellenistic East. (a) As early as the third to second centuries B.C. at Pompeii (Casa di Sallustio) shop-houses were inserted in the façade of the *atrium*-house. From the first century B.C. onwards, when the use of brick-faced concrete became common and, owing to its solidity, made high buildings easier to construct, the growing popularity of these shops—with living-rooms above and often with external balconies and separate entrances from the street—made the *atrium*-house almost unrecognizable. (b) In the *atrium*-house the most striking Hellenistic importation was the use of a peristyle surrounding a courtyard, which either (i) was incorporated as an additional feature behind the *atrium*, or (ii) led to the insertion of rows of columns round the edge of the *impluvium* to support the roof, thus giving to the *atrium* the appearance of a small peristyle, or (iii) superseded the *atrium* altogether.

5. In shop-houses Greek influence is apparent in type iii (e.g. Casa del Triclinio, Casa di Diana, Casa del Tempio Rotondo at Ostia). Behind façades of shops lies an open area with entrances from the street, surrounded by narrow corridors on several floors with rooms opening off them and on one side a large, high room, sometimes with two columns supporting the lintel. In these *insulae* the façades and the multiplicity of floors are Roman, the internal arrangement is Greek and can be paralleled at various times during the fifth to third centuries B.C. from the Palace at Vouni, from Olynthus, Priene, and Delos.

6. In the first century A.D. the *atrium*-house fell out of use in towns. The shop-house, however, especially in the elaborate form of the *insula*, was typical of Imperial cities, and was destined to hand on many of its characteristics to the great *palazzi* of medieval Italy, and, through them, to the modern world. See also VILLA.

HUNTING (*κυνήγεια*, *venatio*) was practised by the Greeks and Romans, but, except in Homeric times, not in a very sporting spirit. In Homer the animals hunted have a fair chance of escape and the hunter incurs a certain amount of danger, as Odysseus did when faced by the wild boar (*Od.* 19. 429-46). But in classical Greece the hunter ran little risk; hunting, as Xenophon tells us, meant chiefly pursuing hares on foot, with dogs and nets placed to catch the quarry, which was then dispatched with a club. In hunting the roe deer nets were used and snares in the form of a wooden clog, which caught the deer's foot and hindered its escape; another method was to catch a fawn and to entice the dam into the open—"that is the moment to set the hounds on and ply the javelins". In hunting the wild-boar caution comes first: "Provide yourself with Indian, Cretan, Locrian, and Laconian hounds, boar-nets, javelins, spears, and caltrops; also a company of hunters, for the task of capturing the beast is no light one." The Romans followed the same methods; but under the Empire the hunting of big game for the arena became an important business. (See *VENATIONES*, *DOGS*.)

Xenophon, *Cynegeticus*; Oppian, *Cynegetica*; Nemesianus, *Cynegetica*. F. A. W.

HYACINTHUS, a pre-Hellenic god worshipped at Amyclae. In historical times his cult was subordinate to that of Apollo, and a story was told that he was a beautiful boy whom the god loved, killed accidentally with a discus (in one version Zephyrus, who was Apollo's rival, blew the discus aside so that it struck Hyacinthus on the head), and mourned for, in token of which the flower of the same name, a sort of iris, sprang from the boy's blood and is marked αἰαί ('alas, alas!'; cf. *AIAS* 1). But the ritual of the festival, the Hyacinthia (*Ath.* 139 d ff.), the representation in local art of Hyacinthus as bearded (*Paus.* 3. 19. 4), the name of Artemis Ὑακινθότροφος, and the pre-Greek *-nthi-* of the name, all point to the truth. Various Dorian cities had months named after Hyacinthus.

See Rose, *Handbk. of Myth.* 142, 160; Farnell, *Cults* iv. 125, 264 ff., *Hero-Cults*, 22, 27; Nilsson, *Minnoan-Mycenaean Religion*, 485 ff. Machiel J. Mellink, *Hyacinthos*, diss. 1943. Chief ancient references, besides those already given: *Nic. Ther.* 902 ff. and schol.; *Apollod.* 1. 16-17; 3. 116; *Palaephatus*, 46 (47). H. J. R.

HYADES (Ὑάδες, 'the rainers'), a group of five stars in Taurus, so named because their acronychal rising and setting (respectively 17 Oct. and 12 Apr. according to Eudoxus) are at rainy times of the year; absurdly called *Suculae* in Latin, as if from *ūs*. Mythologically they were nurses of Dionysus (q.v.; see *Hyg. Fab.* 182. 2 and Rose ad loc.); but the story, which seems to go back to Pherecydes, is very confused in the forms which we have. Another account (*Hyg. Poet. Astr.* 2. 21; schol. *Il.* 18. 486; *Eustath.* p. 1155. 45 ff.) is that they are sisters who cried themselves to death when their brother Hyas was killed hunting. H. J. R.

HYDROSTATICS, see *PHYSICS*, para. 4.

HYGIEIA (Ὑγίεια), personified Health, usually said to be daughter of Asclepius (q.v.), and associated with him in cult. She is the most important of his attendants, having a cult at Titane (*Paus.* 2. 11. 6), apparently almost as honoured as his. In the Hippocratic oath her name follows immediately on his and before that of Panacea (*Kühn*, p. 1), and Licymnius (fr. 4 Diehl) addresses her as 'mother most high', curiously, for she is usually said to be virgin. The word occurs also as a title of Athena (q.v.; *Plut. Pericles*, 13), earlier than the introduction of Asclepius to Athens. H. J. R.

HYGINUS (1). GARGIUS; a Spaniard (according to another account, an Alexandrian brought to Rome by Caesar), a freedman of Augustus, appointed by him

librarian of the Palatine Library (*Suet. Gram.* 20). A pupil of Alexander Polyhistor, he was himself a teacher and was a friend of Ovid, who addresses him in *Tr.* 3. 14. His writings, now lost, covered a wide range of scholarship: (a) a treatise *De Agricultura*, perhaps including the *De Apibus* cited by Columella, who calls him 'Virgil's teacher' (1. 1. 13); (b) a commentary on Virgil, cited by *Gellius* and *Servius*, apparently both exegetical and critical; (c) historical and archaeological works—*De familiis Trojanis*, *De origine et situ urbium Italicarum*, *De vita rebusque illustrium virorum, exempla*; (d) works on religion—*De proprietatibus deorum*, *De dis penatibus*.

See H. Peter, *HRRel.*; Funnioli, *Gramm. Rom. Fragm.* See also *SCHOLARSHIP*, *LATIN*, IN *ANTIQUITY*. C. J. F.

HYGINUS (2), *gromaticus*, of Trajan's time; author of treatises (1) on boundaries, (2) on types of land-tenure, (3) on land-disputes. He refers to another work not extant, a handbook of imperial land-regulations. A treatise *De limitibus constituendis* to which his name is attached is generally assigned to a later author. C. J. F.

HYGINUS (3). Two extant Latin works are attributed to a H. who cannot be identified with Augustus' freedman or with the *gromaticus*.

(a) *Genealogiae*, a handbook of mythology, compiled from Greek sources, probably in the second century A.D. Abbreviated, perhaps for school use, the work has suffered later accretions; its absurdities are partly due to the compiler's ignorance of Greek. The usual title *Fabulae* is due to the *editio princeps* of Micellus (Basle, 1535), now the only authority for the text; the manuscript which he used is lost. See *MYTHOGRAPHS* (ad fin.). Critical ed.: H. J. Rose, Leiden 1934.

(b) A manual of astronomy, based on Greek sources, possibly by the same author. C. J. F.

HYLAS. Theiodamas king of the Dryopes attacked Heracles because the latter had seized and eaten one of his plough-oxen. After a desperate struggle in which even Deianira took part, Theiodamas was defeated and killed. Heracles spared his young son Hylas and made him his page. They went together on the voyage of the Argonauts (q.v., para. 2), till the landing at Cios. There Hylas went to fetch water, found a spring, and was pulled into the water by its nymphs, who were in love with his beauty. Heracles stayed to look for him and the rest, after some discussion, went on without him; cf. *DIOSCUR.* It would seem that this story connects with a local custom, for Apollonius says (1354) that in his day the people of Cios still looked for Hylas. Ritual search for a deity, perhaps of vegetation, is not unfamiliar in the Greek world, see Athenaeus, 619 f (*Dormos* among the Marian-dyni), Rose, *Handb. Gk. Myth.* 118 (*Britomartis*). See *Ap. Rhod.* 1. 1177 ff. and schol.; *Theocr.* 13. H. J. R.

HYLLEIS, see *DORIANS*.

HYLLUS, in mythology, eldest son of Heracles (q.v.) by Deianira (*Soph. Trach.* 55, etc.) or Melite (schol. *ibid.* 54). See *HERACLIDAE*.

HYMENAEUS. It was customary at Greek weddings to cry Ὑμνῆ Ὑμνῆ or ὦ Ὑμνῆ Ὑμνῆ (*Ar. Pax.* 1334 ff.; *Catull.* 61. 4, etc.; 62. 5, etc.). Rightly or wrongly, this was understood as an invocation of a being called Hymen or Hymenaeus, and various stories were invented of him, all to the effect that he was a very handsome young man who either married happily or had something happen to him on his wedding-day. See *Sauer in Roscher's Lexikon*, s.v. H. J. R.

HYMNS. A *ῥῆμα* is any metrical address to a god, originally sung. The word is of doubtful origin, possibly non-Greek. It occurs once in Homer (*Od.* 8. 429), and a choral hymn to Apollo is described in *Il.* 1. 472-4.

Hesiod speaks of winning a prize for a ὕμνος (*Op.* 651 ff.). Hymns were both lyric and hexametric, and Callim. *Lav. Pall.* may be based on earlier elegiac models. Although all choral lyric poetry seems religious in origin, and hymns were written by the well-known early lyricists (e.g. Alcaeus), the hexameter was in antiquity considered the earlier form. (Cf. esp. Pausanias, who knows of Olen, Pamphus, Orpheus, Musaeus, and Homer as hymn-writers.) The content was usually an accumulation of names and epithets of the god (suggesting an original element of magical compulsion), and recital of his deeds, followed by a short prayer. Hymns written to invoke a local god on special occasions must have existed from very early times. An example survives in the Elean invocation of Dionysus (Diehl. *Anth. Lyr. Gr.* ii, p. 206). Hexametric hymns mentioned by Pausanias have the same local and ritual nature, and were sometimes written for private mystical groups, e.g. the Lycomid *genos* (Paus. 9. 30. 12). The Homeric Hymns (8th to 6th cc.; see EPIC POETRY, GREEK, para. 5) are literary rather than devotional, and the myth is the chief feature. The ascription to Homer suggests the aristocratic epic tradition, and they were probably delivered in competition by professional rhapsodes at festivals (cf. *Hymn. Hom. Ven.* (vi) 19). Geographically they are widely scattered. Lyric hymns tended to displace the hexametric (cf. Pindar's ὕμνοι and Παίανες, and in the sphere of cult the paean to Aesclepius found in four copies, J. U. Powell, *Collectanea Alexandrina*, 137 f.), but the hexameter survived for purposes of cult. (For ritual hymns in the classical period see also F. Adami in *Jahrb. f. cl. Phil. Suppl.* xxvi (1901), 215 ff.) Hymns were sung at Symposia (Plato, *Symp.* 176 a), as—according to his accusers—was Aristotle's paean in honour of Hermias (Diehl *l.c.* i. 117–19; for its literary *genre* see C. M. Bowra in *CQ* xxxii (1938), 182 ff.). The Hellenistic period provides the elegiac hymns of Callimachus and many cult-hymns from inscriptions, e.g. the paean of Isyllus to Apollo and Aesclepius (Wilamowitz, *I. von Epidauros*, 1886; cf. J. U. Powell and E. A. Barber, *New Chapters in the History of Greek Literature* (1921), 46 f.). Some found at Delphi have musical notation, a valuable addition to the scanty evidence for Greek music. Epigraphical material increases in the Graeco-Roman age, especially from Asia Minor, telling, e.g., of guilds of ὑμνοδοί and their performances. The Palaikastro hymn to the Cretan Zeus, with interesting magical element (Diehl ii. 279 f.), is recorded in a copy made not earlier than A.D. 200, but reproduces a Hellenistic or earlier composition. In a series of pregnant prose sentences, which were reworked by later writers into hexametric and iambic form, the goddess Isis recounts her own virtues (W. Peek, *Der Isis-Hymnos von Andros und verwandte Texte*, 1930), illustrating the age's craving for revelation. From Imperial times we have the prose hymns of Aristides, the directions of the rhetorician Menander for the writing of such compositions, and the hexametric hymns of 'Orpheus' (ed. E. Abel, 1885), syncretistic and with a flavour of popular Stoicism, which were almost certainly written for a cult-society on the coast of Asia Minor (O. Kern in *Hermes* xlv (1911), 431 ff.).

From Cleanthes onwards appears the philosophico-religious hymn, beloved of the Neoplatonists. Finally the growth of superstition brought back the magical hymn in elaborate forms.

R. Wünsch s.v. 'Hymnos' in *PW*; E. Norden, *Agnostos Theos* (1913), and, for early Roman hymns, *Aus altrömischen Priesterbüchern* (1939, including, pp. 271 ff., a discussion of the Palaikastro hymn).

W. K. C. G.

HYPERBOLUS (d. 411 B.C.), Athenian demagogue of humble origin. During the Archidamian War he was a prominent member of the radical war-party and became its leader after the death of Cleon. In 417 an ostracism was held by which Hyperbolus expected to secure the

removal of Alcibiades or Nicias, but they secretly allied against him, and he was himself ostracized. He went to Samos, where he was murdered by oligarchic revolutionaries. He is condemned by Thucydides in unusually violent terms (8. 73); but, since he was the constant butt of comic poets, his influence must have been considerable.

H. D. W.

HYPERBOREANS. A legendary race of Apollo-worshippers living in the far North, highly revered by the Greeks. (Earliest mention is *Hymn. Hom. Bacch.* 28–9; for their blessed existence see esp. Pind. *Pyth.* 10.) In Delphic legend Apollo spent the winter months with the H. Offerings from them arrived at the Delian shrine (Hdt. 4. 33), not brought by the H. themselves (a myth gives the *aition* for this), but passed 'from city to city' until brought to Delos by the men of Tenos. 'The Greek stages are given carefully, but the Northern ones are unknown' (How and Wells). The name has been variously interpreted as 'beyond the North wind', 'beyond the mountains', and 'carriers round or over' (cf. the περφέρες, officials at Delos, Hdt. loc. cit.). W. K. C. G.

Various historical substrata to the legend of the Hyperboreans have been sought by modern scholars. Some have suggested that the line of stations by which the offerings of the Hyperboreans reached Delos was an actual trade route for amber in Herodotus' day. But no finds of amber have been made on this route, and we know from Callimachus that the offerings were ears of wheat (*Del.* 283–4). A more plausible theory is that the wheat was sent as first-fruits to Apollo by some lost Greek colony in the cornlands of the lower Danube (C. T. Seltman, *CQ* 1928, 155). But the route by which the offerings travelled cannot be traced back beyond Epirus; their place of origin must remain conjectural.

M. C.

HYPERIDES (Ἵππερίδης) (380–332 B.C.), son of Glaucippus, an Athenian of good family, shared the political views of his contemporary Lycurgus. At first a professional speech-writer, he made a name later as a prosecutor in public trials. In 360 he impeached the general Autochles on a charge of treason, and in 343 prosecuted Philocrates. As a delegate to the Amphictionic Council he staunchly supported the policy of Demosthenes. After Chaeroneia he proposed extreme measures, including the manumission of slaves, for the public safety, and was impeached by Demades for illegality. Shortly before this he had proposed a decree to honour Demosthenes, but later he was one of the prosecutors of Demosthenes in the affair of Harpalus (q.v.), 324 B.C. After the death of Alexander, H. was chiefly responsible for the Lamian War, and pronounced the funeral oration on the Athenian dead. The general Leosthenes, who was among the fallen, was his personal friend, and the speech deals mainly with him. After the battle of Crannon, Antipater demanded that H., together with Demosthenes and others of the war-party, should be surrendered to him. H. was arrested and put to death (322).

WORKS. Except for a few fragments H.'s work was unknown to the modern world until 1847. Between that year and 1892 papyri were discovered containing several of his speeches, in whole or in part. The speech *Against Athenogenes* gives an interesting picture of Athenian life. It concerns an attempt to invalidate a contract made for the purchase of slaves. In the *Lycophron* (fragments) a cavalry commander is impeached for a moral offence. In the *Philippides* H. charges Philipides with making an illegal proposal. For *Euxenippus*: a hill in the territory of Oropus, restored to Athens by Philip, was assigned to two Athenian tribes, but the question was raised whether it was already sacred to Amphiaraus. Euxenippus and two others spent a night in the shrine of the hero in the

hope that he might appear and tell them the truth. One Polyeuctus impeached Euxenippus for giving a false report of the vision; Lyeurgus prosecuted and H. defended. *Against Demosthenes* (fragments) was delivered in the trial of Demosthenes in connexion with the Harpalus scandal. For the *Funeral Oration* see EPITAPHIOS.

Hyperides was a pupil of Isocrates, whose influence may be traced in the exalted style of the *Epitaphios*, but in general tone he is more akin to Lysias. He borrowed words and phrases from Comedy, thus bringing his language into touch with the speech of everyday life. Linguistically his speeches have been studied in relation to the rise of the *κοινή*. [Longinus] *On the Sublime* draws attention to his wit, his suavity and persuasiveness, his tact and good taste. He can be sarcastic and severe without becoming offensive; his reproof often takes the form of humorous banter. He speaks with respect of his adversaries, and avoids scurrilous abuse. Ancient opinion ranked him second only to Demosthenes as an orator.

For general bibliography see ATTIC ORATORS. Text: O.C.T. (Kenyon, 1907); Teubner (Jensen, 1917). Text and translation: Colin (Budé). Special studies: L. Gromska, *De Sermone Hyperididis* (1927); V. Pöhlle, *Die Sprache des H. in ihren Beziehungen zur Koine* (1928). Index: H. Reinhold (in Teubner text). J. F. D.

HYPERION, a Titan, husband of his sister Theia and father by her of the Sun, Moon, and Dawn (Hes. *Theog.* 371 ff., cf. 134 f.). Often the name is used as an epithet of the Sun himself, as *Od.* 12. 133.

HYPNOS, the god of sleep in Greek mythology. H. is fatherless, son of Nyx and brother of Thanatos (Hes. *Theog.* 211, 756). According to Hesiod he lives in the underworld and never sees the sun, but in contrast to his brother he comes softly and is sweet for men. In Homer, however, H. lives on Lemnos and gets from Hera the Charis Pasithea as wife. He is human at first, but changes into a bird of the night before he makes Zeus fall asleep (*Il.* 14. 231 ff.). Throughout antiquity H. was usually thought of as a winged youth who touches the foreheads of the tired with a branch or pours sleep-inducing liquid from a horn (Verg. *Aen.* 5. 854). Myths about H. are few: he helps to bury Sarpedon (*Il.* 16. 672) and is said to have fallen in love with Endymion whom he made to sleep with open eyes (Ath. 13. 564 c). He had a cult in Troezen (Paus. 2. 31. 3). In art, H. carried by Nyx was shown on the chest of Cypselus; on vases, H. and Thanatos carry Memnon, Sarpedon, and human warriors to the grave. A beautiful Hellenistic statue known through several copies shows H. gliding over the ground and pouring sleep-bringing liquid from his horn.

HYPOCAUST (ὑπόκαυστον, *hypocaustum*), a raised floor heated from below by a furnace (ὑπόκαυστις), a device applied c. 100 B.C. to baths (Val. Max. 9. 1. 1; Pliny, *HN* 9. 168) and occurring also in private houses by the time of Vitruvius (5. 10). During the first century A.D. box-tiles (*tubuli*) were introduced into walls and roof, permitting the development of Roman bathing from the simple Greek sweat-bath (*laconicum*) to an elaborately graded system (Celsus, *Med.* 1. 4; 2. 17). Heat was conveyed by radiation, the floors being carried upon many thin pillars, while walls were continuously jacketed. The furnace might also carry hot-water boilers (*alena*, Vitruvius 5. 10). A second type, the channelled hypocaust, employed charcoal to heat large masses of masonry intersected by channels, and warmed the room above by air introduced through the heated channels (Pliny, *Ep.* 2. 17. 23). While Pliny's Italian villa boasted few hypocausts, they were common in colder lands for heating living-rooms ('dieta-rooms' *hypocaustarium*, Dig. 32. 1. 55).

HYPODOCHMIUS, see METRE, GREEK, III (7).

HYPORCHEMA, see DANCING.

HYPOTHECA, see SECURITY.

HYPOTHESIS (Greek). (1) Prefixed to plays. Very few Greek plays lack a hypothesis, and some have several. Many hypotheses are in iambs; Soph. *OC* III is in elegiacs. The word strictly means 'subject', and some hypotheses give no more than a résumé, sometimes very brief, of the plot. In others we find further information of the kind to be met with in a modern introduction. Points regularly mentioned are the date and scene of the play, the composition of the chorus and identity of the prologist, the names of the other prize-winners and the other plays produced simultaneously by the author; occasionally also the name of the choregus or the principal actor. The treatment of the legend by other authors, especially dramatists, is often touched on; also, particularly in the case of comedies, the historical background, sometimes the intention or moral of the play (Soph. *Aj.*, exposure of the dangers of ambition; Ar. *Ach.*, pacifism; *Ran.* IV, σκοπὸς τοῦ παρόντος δράματος). Attention is called to points of interest about the production of plays (διασκευὴ of *Clouds*, repetition of *Frogs*, posthumous production of *OC*, *Plutus* the last play produced in Ar.'s own name), and to incidents in the authors' lives (Soph. a demesman of Colonus, and elected general on the strength of the *Ant.*). Titles and names of characters are explained (*OT*, *Lys.*, *Phlt.*). There is a good deal of literary criticism. Sometimes a play is simply styled 'good' (*OC* θανμαστόν δράμα). The *Andromache* is 'second-class', though certain passages are commended. *Alcectis* and *Orestes* approximate to satyric drama and comedy. The *Phoenissae* is 'painful (πενιπλοῦς ἄγαν)', has a lot of characters, and is full of fine γῶμαι; there are fine stage effects, but parts are patched on inorganically. The *Orestes* 'acts well, but all the characters except Pylades are bad'. We learn why the prologist in the *Ajax* has to be Athena, and why Electra in the *Orestes* sits at her brother's feet, not his head.

The date and authorship of these hypotheses have been much debated. Two are assigned by the copyists to late authors (*OC* IV, *Ran.* III), *Ale.* I (by the copyist of the Laurentian MS.) to Dicaearchus, many to Aristophanes of Byzantium. Dicaearchus is said to have written hypotheses to Sophocles and Euripides, and ὁ Πραγματικὸς (presumably Ar. Byz.) to have based his hypotheses on the *Pinakes* of Callimachus. The metrical hypotheses to *OT* and many comedies of Aristophanes ascribed to Ar. Byz. are almost certainly to be considered spurious on grounds of versification and diction. But many of the prose hypotheses to tragedies and comedies—including some not bearing his name—may be wholly or partly his work. (Körte holds that Symmachus is the source of the hypotheses to Aristophanes' comedies.)

Cohn in *Plt.* ii, 928-9; Körte, *Hermes* xxxix (1924), 481-98 (on the hyp. to Cratinus' *Dionysalexandros*, contained in a papyrus of the 1st and c. A.D.); Achelis, *Philol.* lxxii-lxxiii (1913-14).

(2) Hypotheses to the speeches of Demosthenes, written by Libanius for the proconsul Montius, an enthusiastic admirer of Demosthenes.

(3) A particular case propounded for discussion in rhetorical schools, contrasted with a general question (*θέσις*) discussed in dialectical schools. The distinction is, however, not always observed.

H. Thom, *Die Thesis* (1922), 61-2.

For *Hypothesis* in Latin Literature, see ARGUMENTUM.

HYPSAEUS, see PLAUTUS (2).

HYPICLES of Alexandria (second half of 2nd c. B.C.) is known as the author of 'Book xiv' added to Euclid's *Elements* (see Heiberg, *Euclidis opera omnia* v. 2-36).

which has some interesting propositions regarding the regular dodecahedron and icosahedron inscribed in one sphere. He gave also a definition of a polygonal number quoted by Diophantus (i. 470). He was the reputed author of the *Ἀναφορικός*, on the times taken by signs of the zodiac to rise, in different conditions (ed. Manitius, Dresden, 1888); the tract may be only a clumsy reproduction of an original work. We find in it the first occurrence in Greek of the division of the zodiac circle into 360 degrees. It distinguishes the 'time degree' (μοῖρα χρονικῇ) from the 'degree in space' (μοῖρα τοπικῇ).
T. H.

HYPSICRATES (probably 1st c. B.C.), historian, may be identified with the grammarian Hypsicrates of Amisus; he may have served Caesar, who freed Amisus in 47 B.C., as Theophanes served Pompey. His work was perhaps rather a history of the times than a local chronicle or *Ποιητικά*, and was possibly Strabo's source for Bosporean affairs.

FGH ii, B, p. 923; BD, p. 618.

A. H. McD.

HYPSIPYLE. The women of Lemnos having neglected the rites of Aphrodite, the goddess plagued them with a foul odour. Their husbands left them in disgust and took to themselves concubines from Thrace; whereat the women planned to murder all the males on the island. The massacre was successful; but Hypsipyle, daughter of King Thoas the son of Dionysus, hid her father and managed to convey him out of the country. She governed Lemnos and received the Argonauts (q.v.) when they came. She and her women now mated with them (nothing more is heard of Aphrodite's curse), and Hypsipyle had two sons (see EUNEOS) by Jason. Some time after their departure she was captured by pirates and sold to

Lycurgus king of Nemea, whose wife employed her as nurse to her child Opheltes or Archemorus. For the sequel, see ADRASTUS.

Authorities: Euripides, *Hyphs.*; Apollonius Rhodius i. 609 ff., and schol. there; Statius, *Theb.* 4. 715 ff.; 5. 28 ff.; Apollod. i. 114 f.; 3. 64 f.; Hyginus, *Fab.* 15; 74.
H. J. R.

HYPSISTOS was, like Hypatos, a not uncommon title in Greece of Zeus as the supreme god, or as a mountain or sky god; it was popular in Macedonia. Theos H. seems generally to have been an unofficial synonym for Zeus H. In the Orient H. was applied under the Empire to various native gods of Asia Minor and to the local Baals of Syria, many of whom were mountain divinities. Numerous bilingual inscriptions of Palmyra equate Zeus H. and the anonymous god 'whose name is blessed forever'. This cult was pagan but shows clear signs of Jewish influence (H. Seyrig, *Études syriennes* (1934-8), i. 98 f. = *Syria* 1933, 249 f.). The epithet is frequent in Hellenistic Judaism, and hellenized Jews and Gentile sympathizers could meet in a common cult of Theos H., as at Gorgippia and Tanais. A Jewish background appears also in dedications and prayers for vengeance to Theos H. at Delos. But except where Jewish influence is indicated, its presence need not be assumed, and in general the term implies only a tendency to exalt one god to a pre-eminent position.

I

For Greek and Latin proper names whose standard English form begins with J, such as *Janus*, *Jason*, *Javolenus*, *Jaxartes*, *Julius*, *Juno*, *Jupiter*, see under J.

IACCHUS (*Ἰακχος*). A minor deity (*τῆς Δήμητρος δαίμωνα*, Strabo, 10. 3. 10) associated with the Eleusinian deities and probably in origin a personification of the ritual cry *ἰακχ' ὦ ἰακχε* (Ar. *Frogs* 316); cf. Hymenaeus (q.v.). The deity, the song of which these words apparently formed the refrain, and the day (Boedromion 19) on which his image was fetched to Athens from Eleusis with other holy things were all called by the same name, Ar. op. cit. 320, Hesychius s.v. *Ἰακχος*; cf. MYSTERIES, PROCESSION. Iacchus was variously said to be the son of Demeter, of Persephone, and of Dionysus, or the consort of Demeter (refs. in Höfer, see below); in art he is seen torch in hand (cf. Ar. op. cit. 340 ff.) conducting the mystics, Deubner, plate 5. 1 (pinax of Ninnion). But, owing to the resemblance between his name and *Ἰάκχος*, the title of Dionysus, he is often identified with the latter, not only in literature (e.g. Eur. *Cyc.* 69, Verg. G. i. 166, Strabo, loc. cit.), but to some slight extent in cult; at the Lenaea, when the daduehus said 'Invoke the god' the congregation answered *Σεμελή!* *Ἰακχε πλουτοδότα* (Schol. on Ar. op. cit. 479). In Italy he was on occasion identified with Liber (q.v.), as in the temple of Ceres on the Aventine, where Ceres Liber and Libera are Demeter Iacchus and Kore.

L. Deubner, *Attische Feste* (1932), pp. 73-4; Höfer in Roscher's *Lexikon*, s.v. *Ἰακχος*.

IACULUM, see ARMS AND ARMOUR, ROMAN.

IALMENUS, in mythology, son of Ares and Astyoche; leader, with his brother Ascalaphus, of the contingent from Aspledon and Orchomenus at Troy (*Iliad* 2. 511 ff.).

IAMBELEGUS, see METRE, GREEK, III (15).

IAMBIC POETRY, GREEK. The word *ἰαμβος*, of unknown but probably Asiatic origin, is first used by Archilochus (fr. 20) and seems to refer to his own satirical verse written in the iambic metre. It is possible that he was not the first so to use it, since Aristotle (*Poet.* 4) regards the Homeric *Margites* as the first work in which it appeared. He considers that its use for such purposes as satire and ridicule was due to its nearness to common speech. Archilochus' debt to the *Margites* may be seen in his use of a line from it (fr. 103), but he certainly developed iambic satire in his own way and used it especially to portray his own likes and dislikes. So, too, he used iambic epodes and the trochaic tetrameter for similar purposes. He probably influenced Semonides of Amorgos, who used the simple iambic trimeter, and seems both to have shown less personal spite and to have been more dependent on traditional fables than Archilochus was. Hipponax, however, follows the Archilochian tradition in giving full vent to his hatreds and in using everyday language. His chief innovation was the substitution of the *σκάζων* for the true iambic, but this did not alter his essential similarity to Archilochus.

Satirical iambs were also written in the sixth century by Anacreon, though his fundamental good nature does not seem to have left him except in his lines on Artemon (fr. 54) which are not strictly iambic in metre, though their temper is violently satirical. These poets all belong to Ionia, and iambic verse, as they practised it, was characteristic of free Ionian life. Elsewhere it took rather different forms. In Syracuse the *ιαμβισται* were a choir who carried *phalli* in honour of Dionysus (Ath. 181 c) and may have sung abusive songs, while the use of trochaics by Epicharmus in his early dramatic pieces indicates that he may have owed something to this tradition, while it must be to him and his kind that Attic comedy owed its use of iambic and trochaic verse. In Athens the iambic and trochaic measures were used from about 600 B.C. by Solon to answer his critics and justify his political decisions. He shows little rancour or abuse, and his temper is quite unlike that of the Ionian iambic poets, but he probably owed the form to them. It was the best means available for personal controversy, and that, no doubt, was why he used it. His example does not seem to have inspired many followers in Athens, and though such work is attributed to Euenus of Paros, its real influence is to be seen in Comedy. A possible follower of Solon is Chrysogonus (fl. 408 B.C.), whose poem *Πολιτεία* was wrongly ascribed to Epicharmus (Ath. 648 d).

In the Hellenistic age the satirical iambic was revived with some success. Some oddities appeared, like Castorion's *Hymn to Pan*, in which each dipody in the trimeter ended with the end of a word (Ath. 454 f), and the riddles attributed to Panareos (Diehl, *Anth. Lyr. Graec.* i. 3, p. 70), but the traditional use may be seen in Alcaeus of Messene's political diatribes against Philip of Macedon (Euseb. *Praep. Evang.* 10. 3. 23) and the philosophical invectives of Timon of Phlius, Heraclides Ponticus, and Hermecias of Curion. In this kind the most important practitioner was Callimachus, who wrote iambic, choliambic, and trochaic verses in the character of a new Hipponax, into whose mouth some of the verses are put. But he is less bitter than his predecessor, and the remains indicate that his *Iambi* were quite mild and humorous, with plentiful fables and discursions on varied topics. He seems to have widened the scope of topics for which the iambic metre was used, and his influence may be seen on Cercidas, whose *seizons* deal with topics of popular morality and make fun of pretentious speculations, and on Phoenix of Colophon, who wrote on such different matters as Ninus and the song of beggars in Rhodes. More primitive were the verses of Sotades, which belong essentially to this tradition and were famous for the scurrility and impropriety of their abuse. A new turn was given to iambic verse by Menippus of Gadara, who is best known through Varro's Latin adaptations and wrote criticisms of all manner of men and things, set his situations in fantastic backgrounds, and mixed verse with prose. In the Roman period iambic verse was put to new uses, some of them instructive, as when 'Seymnus' wrote his geography, Diodotus about plants, and Simylus about literature.

Texts: E. Diehl, *Anth. Lyr. Graec.*; J. M. Edmonds, *Elleg. and Iambus* (Loeb).

IAMBIC POETRY, LATIN. The use of iambic metres for personal invective and the censure of contemporaries is not widespread in Latin poetry, where the spirit of Archilochus and Hipponax is most often enshrined in Phalaecian hendecasyllables and elegiac couplets (cf. Catullus, Ovid's *Ibis*, and Martial). The iambic senarius of the Republican dramatists (cf. METRE, LATIN) was, indeed, used occasionally for non-scenic purposes, as by Pacuvius and others for epitaphs and by Vellicius Sedigitus for literary criticism; yet Lucilius (like Horace, Persius, and Juvenal) preferred the dactylic hexameter

for satire and included *senarii* in his 28th and 29th books only. In the first half of the first century B.C. Cn. Matus introduced the *scazon* (limping iambic) in his *mimiambi* (in imitation of Herodas), and Laevius in his *Erotopaegnica* experimented with iambic dimeters, *seizons*, hendecasyllables, and other metres; Varro also achieved a mastery of the iambic trimeter in his *Menippeae*. The *scazon* found some favour with Catullus, Cinna, Calvus, and Bibaculus; and of the eight poems of Catullus in this metre, all except no. 31 contain some personal criticism or abuse. Horace avoids the metre, but it occurs twice in the *Appendix Vergiliana* (Catal. 2 and 5, both critical of *rhetores*) and occasionally in the salacious Priapea. Martial was not strongly attracted to the metre, though he employed it in seventy-seven of his poems with epigrammatic effect. The iambic trimeter appears in Catullus in three poems only—nos. 4 (not scurrilous), 29, and 52; and when (in hendecasyllabic poems: nos. 36, 40, 54, and frag. 1) he mentions his 'iambi', he probably has in mind the critical spirit of his attacks rather than the exact metres (trimeter or *scazon*) in which a few of them were made. Horace's claim (*Epist.* 1. 19. 23) to have been the first to introduce *Parvi* (= Archilochian) *iambi* into Latin is therefore not unjustified; for all his *Epodes* (in which abuse, friendship, moralizing, and patriotism provide the themes) have iambic elements used in the manner of Archilochus; in nos. 1–10 the couplets consist of a trimeter followed by a dimeter, 11–16 show iambic and dactylic elements variously combined into couplets, and 17 is entirely in trimeters. In this type of poetry Horace had no real successor. In the *App. Verg.* three poems (Catal. 6, 10, and 12) are in trimeters and one (no. 13) in iambic couplets; all except no. 10 (a parody of Catullus 4) are vituperative. In the first century A.D. Phaedrus used iambs for his fables; but his 'trimeters' (like those of the maxims of the mimographer Publilius Syrus, 1st c. B.C.) admit spondee in the 2nd and 4th feet and so are nearer to the dramatic *senarius* than to the stricter forms employed by Horace. Seneca, who in his tragedies uses elegant trimeters in the dialogue and some dimeters in the lyric parts, is far removed from the spirit of the *ιαμβος*; Martial, who might have made powerful use of iambs, almost entirely neglects the dimeter and trimeter; and the apotheosis of the iambic metres (especially the dimeter) is found in Christian poets such as Prudentius (*Cathemerinon* and *Peristephanon*) and the author of 'Veni creator spiritus'.

Texts of minor authors and fragments in: E. Bachrens, *PLM*; W. Morel, *FPL*; F. Hübeler, *Carmina Lat. Epigraphica* (in A. Riese's *Anthologia Latina*). J. F. M.

IAMBILICHUS (1) (fl. c. A.D. 160), born in Syria, wrote a Greek novel called the *Babyloniaca* or *Rhodantes and Sinonis*. An abstract by Photius and a few fragments preserved by Suidas suggest that while it was less probable in incident and more discursive than the extant novels, it shared their general characteristics. See also NOVEL, GREEK.

Text: R. Hercher, *Erotici Scriptores Graeci* i (Teubner).

R. M. R.

IAMBILICHUS (2) (probably c. A.D. 250–c. 325), Neoplatonist philosopher, born at Chalcis in Coele Syria, studied under Porphyry in Rome or Sicily; later he founded his own school in Syria (? at Apamea). Extant writings: (1) *Περὶ τοῦ Πυθαγορικοῦ βίου* (Vit. Pyth.); *Λόγος ἀπορρητικός εἰς φιλοσοφίαν* (*Protreptic*); and three treatises on mathematics (see bibliography: the authorship of *Geom. opitha* is disputed). These five formed part of a semi-popular encyclopaedia of Pythagoreanism. *Protrepticus* is a catena of extracts from earlier writers, and valuable as a source-book. (2) The 'Reply of Abammon to Porphyry's Letter to Ambo', a defence of ritualistic magic, generally known as *De mysteriis*, is

attributed in our best manuscript to Iamblichus, on the authority of a lost work of Proclus. The ascription, which Zeller doubted, is probably right (C. Rasehe, *De I. libri . . . de myst. auctore*, 1911). Though ill-written and philosophically worthless, the book is a curious guide to the superstitions of its age. Iamblichus' lost writings include a *Περὶ ψυχῆς* (excerpts preserved in Stobaeus); a *Περὶ θεῶν*, used by Macrobius and Julian; an elaborate exposition of 'Chaldaean' theology; and a number of highly tendentious commentaries on Plato and Aristotle, much quoted by Proclus.

Iamblichus' extant works are superficial; but his successors credit him with important contributions to the architecture of the Neoplatonic system. On the other hand, he corrupted Plotinus' teaching by introducing theosophical fantasies from alien sources; and his tendency is to substitute magic for mysticism, *θεουργία* for the Plotinian *θεωρία*.

TEXTS: Vit. Pyth., L. Deubner (1937); Protrep., H. Pistelli (1888); *Περὶ τῆς κοινῆς μαθηματικῆς ἐπιστήμης*, N. Festa (1891); *Εἰς Νικομάχου ἀριθμητικὴν εἰσαγωγή*, H. Pistelli (1894); *Θεολογούμενα τῆς ἀριθμητικῆς*, V. de Falco (1922); *De myst.*, G. Parthey (1857), Germ. trans. and comm. Th. Hopfner (1922).

IDEAS AND INFLUENCE: K. Praechter in *Genethliakon Robert* (1910), 108 ff.; J. Bidez, *Rev. Ét. Gr.* 1919; E. R. Dodds, *Proclus' Elements of Theology* (1933), xix ff.; *PIW* ix. 645 ff. Cf. bibliography under NEOPLATONISM. E. R. D.

IAMUS, legendary son, by Apollo, of Evadne (q.v. 1). She bore him while alone and left him in a bed of (?) gillyflowers (*ἰά*, hardly violets, for they were yellow and red, Pindar, *Ol.* 6. 55). Aepytus, her guardian, learning at Delphi what had happened, had the baby searched for, and found that he had been fed with honey by serpents. From the flowers he was called Iamus. Coming to young manhood, he prayed to Poseidon and Apollo, and the latter bade him go to Olympia; there he became a prophet and ancestor of the clan of the Iamidae, which continued at Olympia well into the third century A.D. (L. Weniger, *ARW* xviii (1915), 53 ff.). H. J. R.

IAPETUS, in mythology, son of Earth and Heaven, father by Clymene the Oceanid of Prometheus, Epimetheus, Atlas, and Menoetius (Hes. *Theog.* 134, 507 ff.). His name yields no plausible Greek etymology, and it is far from unlikely that it is to be connected with that of Japhet son of Noah, both probably going back to some very old figure of Asianic mythology, variously handled by Greek and Hebrew tradition. H. J. R.

IAPYGES, see MESSAPII.

IAPYGiA, the name given by the Greeks to Calabria (q.v.).

IARBAS, see DIDO.

IASUS, IASIUS. These names seem to be etymologically identical, are perpetually confused, and occasionally are confounded with Iasion, Demeter's lover (see DARDANUS, DEMETER). Apart from Dardanus' brother, they are borne by a number of persons, all totally insignificant and uninteresting, e.g. two early kings of Argos, Arcadian and also Boeotian heroes, etc.; list given by Höfer in Roscher's *Lexikon* ii. 88-9. H. J. R.

IBERIA, (1) one of the ancient names for Spain (q.v.); (2) the name of the mountain-girt land (roughly coincident with mod. Georgia) south of the Caucasus, north-east of Armenia, between the Black Sea and the Caspian. Its chief river was the Cyrus (*Kur*). The Greeks, after Pompey's exploration in 65 B.C., knew four entrance-passes: from Colehis by Sheharapani; from the north by the Caucasian Gates (*Darial Pass*); from Albania by Derbent Pass; from Armenia through Kars. The people, organized in four classes (chiefs, priests, fighter-tillers,

slaves), were subject probably to Persia and certainly to Mithridates VI. They were not included in the Roman Empire except occasionally as 'clients'.

Strabo 11. 491-2, 497, 500-1, 528; Ptol. *Geog.* 5. 9. 27 ff.; 8. 18. 2; 19. 1. 5. E. H. W.

IBYCEAN, see METRE, GREEK, III (5).

IBYCUS, son of Phytius, of Rhegium, lyric poet of the sixth century B.C., whose *floruit* is given by Suidas as 564-561 B.C. and by Eusebius-Jerome as 536-533 B.C. He seems to have begun by writing lyrical narratives in the style of Stesichorus, and fragments indicate that he told of the Funeral Games of Pelias (Ath. 4. 172 d), the Sack of Troy (fr. 16), and the Calydonian boar-hunt (fr. 28). He also wrote about Ortygia (fr. 21) and told Sicilian stories (Ael. *NA* 6. 51). He left Sicily because, it was said, he refused to become a tyrant (Diogenian. 1. 207) and went to Samos, where he worked at the court of Polycrates (Suid. s.v. *Ἰβυκος*). To this period may belong his most striking fragments, notably those about love when he is getting old (frs. 6 and 7), and the lines to Euryalus. *POxy.* 3 has been attributed to him, since it mentions Polydates, but the attribution is uncertain. If it is his, it is more probably concerned with the tyrant's son than with the tyrant himself, and seems to be a playful leave-taking of his earlier manner for the erotic poetry in favour at Samos. His works were collected in seven books and seem to have consisted largely of choral poems, of which some were *encomia*, and personal love-songs, written in a great variety of metres. He has a rich and brilliant style, a vivid imagination, a great capacity for describing the emotions, especially love, and a real love of nature (frs. 9, 11, 13, 21). He is said to have been killed by robbers, who were brought to justice by birds who saw the murder (Plut. *Garr.* 14; Antip. Sid. ap. *Anth. Pal.* 7. 745), and was buried at Rhegium (*Anth. Pal.* 7. 714).

TEXT: Diehl, *Anth. Lyr. Graec.* ii, pp. 48-60. CRITICISM: U. von Wilamowitz-Moellendorf, *Sappho und Simonides* (1913), 121-8; C. M. Bowra, *Greek Lyric Poetry* (1936), 248-83. C. M. B.

ICARIAN SEA, see AEGEAN SEA.

ICARIUS or **ICARUS** (but the latter name is usually that of Daedalus' son (see DAEDALUS)), in mythology, (1) an Athenian who received Dionysus hospitably when he came to Attica, and was given the vine. He made wine and gave some to his neighbours, who on feeling the effects concluded that they were poisoned and killed him. His daughter Erigone was guided by their dog Maera to his body and hanged herself for grief. In memory of her the festival of the Aiora was instituted, in which swinging played a part, and Aristaeus propitiated the shade of Icarus; in consequence, a pestilence on Ceos which had followed their reception of the murderers of Icarus ceased. Icarus became the constellation Boötes; Erigone, Virgo; the dog, Canicula (Procyon). See schol. *Il.* 22. 29; Hyginus, *Fab.* 130 and Rose ad loc.; *Poet. Astr.* 2. 4. (2) Father of Penelope (q.v.; *Od.* 1. 329 and often). Tyndareus induced him to give Penelope to Odysseus in return for the latter's good advice to make Helen's wooers take the oath (see HELEN). Icarus tried to induce them to remain with him in Laedaemon, but, on the choice being left to her, she indicated that she would follow her husband to Ithaca (Apollod. 3. 132; Paus. 3. 20. 10). H. J. R.

ICILIUS, Lucius, a plebeian hero, betrothed to Verginia and leader of the second secession, has little claim to historical existence, but the *Lex Icilia de Aventino publicando* (traditionally dated 456 B.C.), the text of which was still preserved in Augustus' time in the Aventine temple of Diana (Dion. Hal. 10. 32. 4), is

indisputably a genuine document of c. 450. The law provided allotments on the Aventine to the plebs either as agricultural or (very probably) as building land. It was later attributed to Icilius merely because of his renown as a popular hero. P. T.

ICTINUS (*fl.* after 450 B.C.), a Greek architect. His best-known work was the Parthenon (q.v.), in which he was assisted by Phidias and Callicrates (qq.v.), and about which, according to Vitruvius (7 *praef.*), he and a certain Carpinion wrote a book, since lost. According to Pausanias (8. 41), he was the architect of the temple of Apollo Epicurius at Bassae, which was noted for beauty in its day and, like the Parthenon, had several unusual features (see *BASSAE*). According to Vitruvius (7 *praef.*), Ictinus also rebuilt the Telesterion at Eleusis on a greatly enlarged scale. H. W. R.

ICTIS, probably *St. Michael's Mt.* by Penzance. Diodorus (5. 22. 2, 4) records that the people of Belerium (*Land's End*) brought tin in wagons at ebb-tide to the adjacent island Ictis. Pliny (4. 104 from Timaeus) puts Ictis six days' sail inwards from Britain, perhaps confusing it with Vectis (*Isle of Wight*) or the Scillies. E. H. W.

IDAEAN DACTYLS (*Δάκτυλοι Ἰδαῖοι*), literally the Fingers of Ida, but whether the Phrygian or the Cretan Ida and whether their name refers to craftsmanship, dwarfish size, or something else, the ancients were in doubt. The oldest mention surviving is in the *Phoronis*, ap. schol. Apoll. Rhod. 1. 1129, which says they were called Celmis, Damnameneus, and Aemon, that they were big and powerful, wizards, servants of 'Adresteia of the mountains', presumably the same as Cybele or Rhea, Phrygians, and inventors of smithcraft. But Apollonius (*ibid.*) says they were Cretans, sons of a nymph Anchiata, who grasped handfuls of dust in her birthpains, or (the language is ambiguous) produced them by throwing handfuls of dust. More and divergent accounts of them in the schol., *ibid.*, and still more collected by Lobeck, *Aglaoph.* 1156 ff.; von Sybel in Roscher's *Lexikon*, s.v. 'Daktyloi'. For their dwarfish size cf. Paus. 8. 31. 3, and for their connexion with Heracles see *HERACLES*. See also *MAGIC*, para. 4. H. J. R.

IDAEUS, 'connected with Ida', and so (a) a title of Zeus (*Iliad* 16. 605 (Trojan) and on Cretan coins and (usually in a dialect form) inscriptions); (b) a stock name for sundry little-known Trojans or Cretans (list in Stoll in Roscher's *Lexikon* ii. 95). (c) Magic name for a finger, perhaps the index (*PMG* iv. 455). H. J. R.

IDAS, in mythology, son of Aphareus and brother of Lynceus. He was 'the strongest of men' (*Iliad* 9. 558), and drew his bow against Apollo (*ibid.*). The reason, according to later authorities (Chest of Cypselus in Paus. 5. 18. 2; Apollod. 1. 60-1), was that after he had won his bride Marpessa from her father Euenus, son of Ares (add Baechylides 19), Apollo in turn carried her off; Idas fought him and Zeus made peace by giving Marpessa her choice between them; she preferred Idas. He was one of the Argonauts (q.v.; Ap. Rhod. 1. 152 and often), valiant but hot-tempered. He also took part in the Calydonian boar-hunt (Apollod. 1. 67), as was natural, for Meleager (q.v.) was his son-in-law (*Il.* 9. 556). Though his final encounter with the Dioscuri (q.v.) is variously told, Pindar (*Nem.* 10. 60) makes Idas kill Castor, while Lynceus, whose sight was preternaturally sharp, looks out for the approach of the twin. H. J. R.

IDMON, 'the knowing one', name of several skillful persons, especially a seer, son of Apollo or Abas (Ap. Rhod. 1. 139 ff. and schol.), who accompanied the Argonauts (q.v.) although he foreknew he would not return alive (*ibid.*, and 2. 815 ff.); he was killed by a boar in the country of the Mariandyni. H. J. R.

IDOMENEUS (1), in mythology, leader of the Cretan contingent before Troy (*Iliad* 2. 645); of distinguished valour although older than most of the warriors (13. 210 ff., 361 ff.). He was of Minos' race and one of Helen's suitors (Hesiod, fr. 96. 16 ff. Rzach). The story of Homer's Vow (Stith Thompson, S241) is told of him (Servius on *Aen.* 3. 121); in a storm he vowed to sacrifice to Poseidon the first thing which met him on his return. This was his son; fulfilling or trying to fulfil the vow he was forced to leave Crete for Italy because a pestilence broke out. H. J. R.

IDOMENEUS (2) (c. 325-c. 270 B.C.), biographer and politician of Lampsacus, and friend of Epicurus (cf. Usener, *Epicurea*, frs. 128-38).

WORKS (*PHG* ii. 489-94). (1) *Περὶ τῶν Σωκρατικῶν* (Diog. Laert. 2. 20): fragments on the Socratic Aeschines. (2) *Περὶ δημαγωγῶν* in at least two books; fragments in Plutarch and Athenaeus concern leading Athenian politicians. (3) *Ἱστορία τῶν κατὰ Σαμοθράκην*, cf. Suidas s.v. 'Idomeneus'. Following the Peripatetic, anecdotal method, I. reproduced much unreliable scandal, perhaps attacking politicians whose ideas he disliked; after Hermippus he was not used. F. W. W.

IDUMAEA. The Edomites, pushed westwards by the Nabataeans, occupied the arid country (henceforth known as Idumaea) south of Judaea in the fourth century B.C. They were conquered and forcibly converted to Judaism by John Hyrcanus (see *JEWS*), but detached from Judaea and organized as the two cities of Adora and Marisa (both prominent commercial towns since the 3rd c. B.C.) by Pompey in 63 B.C. Idumaea was granted to Herod in 40 and became a toparchy of his kingdom. Early in his reign an Idumaean noble, Costobar, tried to revive the national cult of Kose, but the mass of the people were fanatical adherents to the Jewish faith. A. H. M. J.

IDYLL, see *PASTORAL POETRY, GREEK*.

IGUVINE TABLETS, see *TABULAE IGUVINAE*.

ILIAS LATINA (*Homerus Latinus*), a version of the *Iliad* in 1,070 hexameters. The ascription of the work (entitled merely 'Homerus') to Silius Italicus on the grounds of two acrostics is untenable; but the author may be a Baebius Italicus. The allusion to the Julian house in 899 ff. precludes a date of authorship later than A.D. 68. Though important for its perpetuation of the *Iliad* during centuries ignorant of Greek, the work is in general a meagre epitome devoid of artistic merit, characterized by free and uneven treatment, a straightforward style thickly embellished with Virgilian and Ovidian echoes, and careful versification.

TEXTS: F. Vollmer, *PLM* iii. 3 (1913); F. Phasis (1885). Cf. J. Tolkiehn, *Hom. u. die römische Poesie*, 1920. A. H. W.

ILIAS PARVA, see *EPIC CYCLE*.

ILIONA (*Ἰλιόνη*), in mythology, eldest daughter of Priam and Hecabe (qq.v., Verg. *Aen.* 1. 653-4). Wife of Polymestor (see *ITICUA*), she saved the life of Polydorus by passing him off as her son, Polymestor thus murdering his own child (Hyginus, *Fab.* 109, cf. Pacuvius, fr. of *Iliona*). H. J. R.

ILIU PERSIS, see *EPIC CYCLE*.

ILIUM, an Aeolian foundation, established in the seventh century B.C. on the site of ancient Troy. Its importance derived from the famous temple of Athena (visited by Xerxes and Alexander), the centre, from the fourth century onwards, of a religious syndicon. The landing of Livius Salinator (192) inaugurated cordial relations with Rome (though Ilium was sacked by Fulvius's uncle

troops in 85); and the emperors followed Julius Caesar's example in patronizing Ilium and its temple, because of the legend that the founders of Rome were of Trojan origin.

A. Brückner, in Dörpfeld's *Troia und Ilion* (1902), ii. 549.

ILLYRICUM, the territory of the Indo-European Illyrians, was a geographical notion of varying extent. According to the Greeks Illyricum was bounded by the Adriatic, the Eastern Alps, the Danube, the Shar-Dagh, and the Ceraunian Mountains. In the sixth and following centuries the coast was partly colonized by the Greeks, who may have been attracted by the mines of the interior. But the difficulty of access to the inland and the reputation of the natives for piracy retarded the opening up of the country. The great number of independent tribes delayed the formation of a national kingdom until the third century B.C., when in the south the kingdom of Scodra arose. Against this the Romans fought in the First and Second Illyrian Wars (229–228, 219 B.C.), for they then considered the Adriatic their sphere of interest. In 167 B.C., after the defeat of Genthius, Illyricum (sc. *regnum*) was divided into three parts under Roman control. As the Roman conquest, especially of the Dalmatians, progressed, so Illyricum became a more clearly defined geographical expression, the southern districts together with Apollonia and Dyrrhachium being allotted to Macedonia in 148–147. First administered by consuls from Italy, later (since Sulla?) Illyricum was connected either with Macedonia (cf. the governorship of M. Brutus) or with Gallia Cisalpina (cf. Caesar's governorship). In the Civil War some tribes surrendered to Caesar in 46, but soon fighting was renewed (see DALMATIA). It was finally subdued by Octavian in the Illyrian War (35–33), in which first the Iapudes and Pannonii and later the Dalmatians were conquered (cf. N. Vulić, *JRS* 1934, 163 ff.). In 27 B.C. Illyricum became a senatorial province, but was put under imperial administration again (? 11 B.C.), no doubt because of the operations against the Pannonii which had begun in 13. The subdued tribes were added to Illyricum, which thus was extended to the Danube and was reorganized in 11 B.C. (A list of the legates between 8 B.C. and A.D. 6 is given by R. Syme, *JRS* 1934, 130.) After or even during the Pannonian-Illyrian revolt (A.D. 6–9), which was repressed by Tiberius, Pannonia was disconnected from Illyricum, the remaining part of Illyricum sometimes being called *superior provincia Illyricum*, till later the name 'Dalmatia' (q.v.) prevailed, whereas Illyricum meant the great customs-area of the *portorium Illyricum* covering Raetia, Noricum, Dalmatia, Pannoniae, Moesiae, and Dacia (cf. Marquardt, *Röm. Staatsverw.* ii². 273; i². 295 f.; M. Rostovtzeff, *Geschichte der Staatspolitik in der röm. Kaiserzeit* (1904), 393 f.; Ruggiero, l.c. inf. 25 ff.). From the time of Diocletian Illyricum denoted two dioceses, namely *Illyricum orientale* or *diocesis Moesiarum*, and *Illyricum occidentale* or *diocesis Pannoniarum*.

Antwerp Fine, *JRS* 1936, 24 ff. on the early Roman wars.

F. A. W. S.

ILUS, in mythology, (1) son of Dardanus (q.v.; Apollod. 3. 140). (2) His grand-nephew, son of Tros and father of Laomedon (qq.v.). He founded Ilium, being guided to the site by a cow (cf. CADMUS) and received the Palladium from heaven (ibid. 141–3).

IMAGINES, the death-masks of distinguished ancestors at Rome, where the *ius imaginum* belonged to families numbering curule magistrates among their forebears. These masks, of wax or more durable material, were kept in cupboards in the *alae* of a Roman house, and on the

death of a similarly qualified member of the family they were worn by actors in the funeral procession. The custom originated in magical observance, but acquired an ethical and later a social significance. Outside Italy death-masks occur in the shaft graves of Mycenae and occasionally throughout classical Greece.

Polybius 6. 53. Annie Zadoks-Jitta, *Ancestral Portraiture in Rome* (Amsterdam, 1932).

IMAGINES, see also SIGNA MILITARIA.

IMBREX, see LICINIUS.

IMMORTALITY, see AFTER-LIFE.

IMMUNITAS. Under the Roman Republic exemption from taxation was granted to the States of the Italian Confederacy and to the few provincial cities possessing a treaty or *libertas*. There is some doubt as to whether tribes and kings with whom Rome concluded treaties possessed *immunitas*: probably the practice varied. Possibly before the end of the Republic, and certainly in the Principate, *libertas* did not involve *immunitas*, which was regarded as a separate privilege that could be granted to communities or to individuals (Suet. *Aug.* 40). Many 'free' cities normally paid tribute under the emperors (Tac. *Ann.* 2. 47; 12. 63). When Nero gave *libertas* to the cities of Greece he explicitly granted *ἀνεσφοπία* as well (SIG. 814). The most important Gallie tribes were termed *foederata* or *libera*, and they certainly paid taxes. *Immunitas* might be granted (usually for a fixed period) to cities of any type. Provincial *coloniae* and *municipia* were not necessarily *immunes*. The most valuable form of immunity was the *ius Italicum*, which exempted a community from the payment of the *tributum soli* as well as the *tributum capitis*. It is probable that *immunitas* of the ordinary type exempted only from the latter (Dig. 50. 8. 7).

G. H. S.

IMPERATOR (αὐτοκράτωρ), a generic title for Roman commanders, became a special title of honour. After a victory the general was saluted *imperator* by his soldiers. He assumed the title after his name until the end of his magistracy or until his triumph. Sometimes the Senate seems to have given or confirmed the title. The origin of this form of honour is unknown, but some religious meaning is possible (cf. the formula *Iuppiter imperator*). The first certainly attested *imperator* is L. Aemilius Paullus in 189 B.C., as the evidence about Scipio Africanus is uncertain. The title was assumed especially by pro-consuls and gained new importance through Sulla before he was appointed dictator. The increasing influence of the army in the late Republic made *imperator* the symbol of the military authority. Pompey emphasized that he was saluted *imperator* more than once. Caesar first used the title permanently, but it is doubtful whether in 45 B.C. he received from the Senate a hereditary title of *imperator* (as Dio Cass. 43. 44. 2 states). Agrippa in 38 B.C. refused a triumph for victories won under Octavian's superior command and established the rule that the *princeps* should assume the salutations and the triumphs of his legates. Henceforth, apparently, Octavian used *imperator* as praenomen (*imperator Caesar*, not *Caesar imperator*), perhaps intending to emphasize the personal and family value of the title. Thus the title came to denote the supreme power and was commonly used in this sense. But, officially, Otho was the first who imitated Augustus. Vespasian definitively converted the name *imperator* into a praenomen of the *princeps*. The formula *imperator Caesar* was sometimes extended to members of the family of the *princeps* who were associated with him in power. On the death of a *princeps*, or during a rebellion, the *salutatio* of a general as an *imperator* by an army indicated that he was the candidate of that body to the imperial dignity.

The use of the praenomen did not suppress the old usage of *imperator* after the name. After a victory the emperor registered the *salutatio imperatoria* after his name (e.g.: Imp. Caesar . . . Traianus . . . imp. VI). From the second half of the third century the emperor was deemed to receive a *salutatio* every year. The number of the salutations became practically identical with the number of the years of the reign.

Theoretically, governors of senatorial provinces, having their own *auspicia*, could assume the title of *imperator*. But the last instance of such a *salutatio* is that of Junius Blaesus, proconsul of Africa in A.D. 22 (Tac. *Ann.* 3. 74).

D. McFayden, *The History of the Title Imperator under the Roman Empire* (U.S.A. 1920); M. A. Levi, *Riv. Fil.* 1932, 207; G. De Sanctis, *Studi in onore di S. Riccobono* (1932), ii. 57; J. Carcopino, *Points de vue sur l'impérialisme romain* (1934), 127; J. Stroux, *Die Antike* 1937, 197; H. Nesselhauf, *Klio* 1937, 306; A. v. IMPERIUM was the supreme administrative power, involving command in war and the interpretation and execution of law (including the infliction of the death penalty), which belonged at Rome to the kings and, after their expulsion, to consuls, military tribunes with consular power (from 445–367 B.C.), praetors, dictators, and masters of the horse. It was held later in the Republic by members of certain commissions (e.g. boards for the distribution of land, Cic. *Leg. Agr.* 2. 28) and by proconsuls and praetors, who were either ex-magistrates or *privati*, on whom a special command had been conferred. Its application was increasingly restricted; first, when two consuls replaced the king, by the principle of *collegium*. Secondly, by the *Leges Valeriae*, traditionally assigned to 509, 449, and 300 B.C., and the *Leges Porciae*, probably of the second century B.C., magistrates were not allowed to execute Roman citizens at Rome without trial, a prisoner at Rome having the *ius provocandi ad populum*. This right of appeal was extended, probably by convention and not by legal enactment, to Roman citizens on service with the armies and in the provinces (A. H. J. Greenidge, *The Legal Procedure of Cicero's Time* (1901), 430 ff.; CR 1896, 225–33; 1897, 437–40, against J. L. Strachan-Davidson, *Problems of the Roman Criminal Law* (1912), i. 115 ff.). Thirdly, the *imperium* of pro-magistrates both legally and conventionally, and of magistrates by convention, was restricted to the bounds of their *provinciae* (see further *PROVINCIA*). *Imperium* needed ratification by a *lex curiata*—a convention which persisted to the end of the Republic (Cic. *Leg. Agr.* 2. 26; Fam. 1. 9. 25). To a pro-magistrate or a *privatus cum imperio*, *imperium* was granted for a year at a time, or until his commission was achieved. Grants of *imperium* for a specified term of several years occur only at the end of the Republic, the earliest being the grant of *imperium* to Pompey for three years by the *Lex Gabinia* of 67 B.C.

2. Octavian held *imperium, pro praetore* and later as consul in 43 B.C., as triumvir from 42 to 33 B.C., and as consul in 31–23 B.C. When in 27 B.C. he was given the administration of a large number of provinces and their armies for ten years, he was given *imperium* for their government. In 23 B.C., when he resigned the consulship, his constitutional power rested on the *tribunicia potestas* and on the *imperium*, which was *imperium proconsulare maius* (so E. G. Hardy, *Studies in Roman History* (1910), 283 ff., and most historians, against Pelham, *Essays on Roman History* (1911), 65–71, who thought it was *imperium consulare*). By virtue of this right Augustus was entitled in an emergency to interfere in the public provinces, as is proved conclusively by the Cyrene Edicts (JRS 1927, 34–8, 42 ff.; cf. Dio Cass. 53. 32. 5 and Ulpian in *Digest* 1. 16. 8); he was also by special dispensation allowed to exercise his *imperium*

from within the city of Rome (Dio Cass. l.c.). *Imperium* was granted to him for ten-year periods in 27 and 8 B.C. and A.D. 3 and 13, and for five-year periods in 18 and 13 B.C. It was voted to succeeding emperors at their accession by the Senate (Dessau, *ILS* 229, at Nero's accession), though the senatorial decree was probably ratified formally by a *lex curiata* (Gaius, *Inst.* 1. 5, 'lex de imperio'). The *imperium proconsulare* should be dissociated from the *praenomen imperatoris*. This was used by Augustus; though refused by Tiberius, Gaius, and Claudius, it appears frequently in inscriptions, and from the Flavian period onwards it was in common use. It is probable that this *praenomen* was inherited by Augustus from Julius Caesar, who used *Imperator* as *cognomen*.

3. *Imperium* was recorded in a different sense in the titles which followed the emperor's name. Under the Republic a general, after winning a victory and being saluted by his troops, adopted the official title *Imperator* (q.v.) until he celebrated his triumph. Under the Empire the whole army fought under the emperor's *auspicia*, and he, rather than the general who was his deputy (*legatus*), was accorded the *salutatio*. Emperors therefore recorded, among the titles which followed their names, the number of salutations which they had received, the first being the acclamation at the time of their accession. Claudius, for example, at the end of his life was *Imperator xxvii*.

4. *Maius imperium* was sometimes conferred on others besides the emperor, for the creation of a single military command—in this way it was granted to Germanicus in the East in A.D. 17 (Tac. *Ann.* 2. 43) and to Corbulo in A.D. 63 (Tac. *Ann.* 15. 25). If given for no such specific purpose, its recipient was indicated as a suitable successor to the Principate; in this sense it was granted to Agrippa in 18 B.C. (Dio Cass. 54. 12) and to Tiberius in A.D. 13 (Vell. Pat. 2. 121; Tac. *Ann.* 1. 3).

INACHUS, an Argive river and river-god, father of Io (q.v.). He was made judge between Poseidon and Hera when both claimed Argos, and decided in favour of Hera, whose cult he introduced (Apollod. 2. 13; Paus. 2. 15. 4–5); Poseidon therefore dried up his waters. He is often represented as a mortal, ancestor of the Argive kings. H. J. R.

INARIME, see AENARIA.

INCENSE, see SACRIFICE, PRAYER.

INCUBATION denotes the practice common among the Greeks and Romans of sleeping within the precincts of a temple for the purpose of receiving a vision, revelation, or relief from disease or pain. All gods could speak in dreams, but not all were thought capable of being induced by specific means to give an answer or perform a function. Some deities made a profound impression of their power upon the mind of the visitor. At the oracle of Trophonius at Lebadea, for instance, one received a memorable emotional experience by descending into the earth and visiting the god (Paus. 9. 39). The technique of incubation was generally used for producing cures, although it could be used to regain lost articles or to discover some important item of information. The technique, in a way, was akin to magic in that it brought performance on the part of the deity when one used the proper procedure. Incubation was most widely used in the temples of Aesclepius. The practice is attested for the cult of this

deity at Epidaurus (*IG* iv². 121-7); Pergamum and Smyrna (Aristides, *Sacred Orations*); Rome (*GIG* 5980); Lebene (Hamilton, *Incubation* 69); Cos (Pliny, *HN* 29. 4, Strabo, 14. 2. 19). The cult of Amphiarus (q.v.) also fostered the practice, especially at Oropus (*Hermes* xxi. 91 ff. = *IG* vii. 235; Paus. i. 34), and Strabo (14. i. 44) mentions the practice at the three Plutonia in Asia Minor. The ability to heal was attributed to Isis, and Sarapis was widely acclaimed as a deity who communicated cures in dreams. Usually there was a regular ritual to be followed in practising incubation. The incubant frequently sacrificed an animal and slept on the animal's hide. Previously, very likely, he had been purified by lustration, and had fasted or abstained from certain foods. Incubation, as described in the record of cures from Epidaurus, involved mainly faith-healing, since medical remedies are not often mentioned. In the later inscriptions and literary works, especially in the *Orations* of Aristides, a medical prescription is usually given by the god. In some instances at least, the cure is regarded as having been produced by a combination of faith and drugs. Votive offerings frequently testify to cures produced by dream-revelations, and long inscriptions were often set up which detailed at some length the miraculous cures ascribed to the deity. In some temples (in the temple of Sarapis at Delos for instance) there were official interpreters of dreams as well as aretalogists whose duty it was to sing the praises of the god. Many of the dreams and the miracles which they wrought had no connexion whatever with cures or disease, though there must have been many cures recorded, especially cures of nervous ailments and mental complaints (see *MIRACLES*).

ANCIENT SOURCES: in addition to the sources cited, for the early period see Aristophanes, *Plut.* 658 ff., and Paus. 2. 27. 3. For the later period: A. D. Nock, 'A Vision of Mandulis Aion', *Harv. Theol. Rev.* 1934; *POxy.* 1381; P. Roussel, *Les Cultes égyptiens à Delos* (1916).

INCUBO, see FAUNUS.

INDIA. This country had early trade connexions with east Africa; but it remained unknown to Mediterranean peoples until the extension of the Persian Empire to the Indus and the voyage of Darius' admiral Scylax down the Kabul and Indus rivers and round Arabia to Suez (Hecataeus, frs. 244-9 Jacoby; *Hdt.* 3. 98 ff.; 4. 44). Even so, India remained a land of fable and wonders (as in the *Indica* of Ctesias, c. 400 B.C.); it was believed to lie in the Farthest East, yet Indians were confused with Ethiopians, and in popular belief India and Ethiopia formed one country. The conquests of Alexander (327-325) brought accurate knowledge of north-west India as far as the river Hyphasis (*Beas*), and vague information about the Ganges valley and Ceylon; and the voyage of Nearchus (q.v. 2) opened up a sea connexion with the Persian Gulf. Seleucus I perhaps penetrated to the river Jumna, but in 302 he relinquished India to the Mauryan king Chandragupta. He kept a resident named Megasthenes at Chandragupta's court in Patna, who published much detail about India (see *MEGASTHENES*, *PALIBOTHTRA*); and King Asoka (264-227) sent embassies to the Hellenistic kings. In the second century north-west India was reoccupied by the Greco-Bactrian rulers (see *DEMETRIUS* (9), *MENANDER* (2)); but the rise of the Parthian Empire separated India from the Greek lands, and invaders from Central Asia (c. 80-30 B.C.) obliterated the Greek principalities in the Indus valley. In the first century A.D. Chinese silk reached the Roman dominions through India, but land-communications with India remained irregular. The chief routes to India were (1) via Meshed and the Bolan or Mula passes, (2) via Merv, Balkh, Kabul, and Peshawur.

2. Sea communications between India and the Persian

Gulf were probably maintained by the Seleucids, but were interrupted under Parthian rule. Direct travel from Egypt to India was impeded for long by the Arabs of Yemen, whose monopoly of trade was not seriously challenged by the Ptolemies, and the voyages of Eudoxus (q.v. 3) to India proved abortive. The Arab obstruction was removed by the imperious appetite of Rome for Eastern luxuries in the prosperous days of Augustus, and by the discovery of open-sea routes from Africa to India. In the first century B.C., or soon after, the periodicity of the monsoons in the Indian Ocean and the right seasons for navigation were discovered by Hippalus (q.v.), and direct crossings to various points of the western coast were subsequently established (Pliny 6. 96-100). Augustus received Indian envoys (Dio Cass. 54. 9), and Greek merchants organized a regular trade from Egypt. In Augustus' day 120 ships sailed to India every year, and under his early successors the drain of Roman money to pay for Indian imports caused passing anxiety (Pliny 6. 101; 12. 84). The principal imports to Rome were perfumes, spices (especially pepper), gems, ivory, pearls, Chinese silk. The Romans exported linen, coral, glass, base metals, etc., and also sent much gold and silver (and later copper) coin, of which large hoards have been found in south India.

3. The chief marts on the west coast were Barbaricon (*Baharidpur*) and Barygaza (*Broach*) and, above all, the Tamil towns Muziris (*Cranganore*) and Neleynda (*Kottayam*). Beyond Cape Comorin the Greeks visited Colchoi (*Kolkai*), Camara (*Kaviripaddinam*), Poduce (*Pondicherry?*), and Sopatma (*Madras*); a few reached the Ganges mouth and brought news of Burma, Malaya, and of the Thinae or Sinac (in S. China—see *SERES*). Greek traders figure in Tamil literature as residents in many of the inland centres (A.D. 70-140). The Maldives and Laecadives were now discovered, Ceylon was circumnavigated (see *TAPROBANE*); and one Alexander, taking advantage of the Bay of Bengal monsoon, sailed past Burma and Malaya to Cochinchina and even to China proper (Ptolemy 7. 1-2). Nevertheless, Greek geographers always underrated the extent of India's southward projection and exaggerated the size of Ceylon. From c. A.D. 200 direct Gracco-Roman trade declined, communications with India passed into the hands of intermediaries (Arabians, Axumites, Sassanid Persians), and India again became a land of fable to the Mediterranean world. The founders of Christian settlements in India were mostly Persians.

INDICTIO, a prescribed charge or impost, especially a levy in kind (*annona*, q.v.) as opposed to precious metals. The *indictio* can be traced from the early Empire, especially in Egypt, but as an occasional and irregular charge. It assumed a new meaning and importance in A.D. 297 when Diocletian established the *indictio* as the schedule of rate of tax to be raised on *capita* and *iuga* for a period of fifteen years, divided into three census-periods of five years. If more was needed, a *superindictio* was added. The *indictio* was now applied to the whole Empire and was freely used as a method of dating, though there is some doubt whether the first *indictio* began in A.D. 297 or 312. The latter date is supported by E. H. Kase, *A Papyrus Roll in the Princeton Collection* (U.S.A. 1933), 25. H. M.

INDIGETES or **-ITES**, **INDIGITAMENTA**. Both words, also the corresponding verb *indigitare*, are fairly common and there is no doubt that they mean respectively a class of Roman gods, a list of gods and their titles, and to address by the proper name or title. Concerning their more exact meaning and relation to one another three views have been held. (1) Peter in Roscher's

Lexikon, s.v., explains the *indigetes* as the *di minuti* (*Sondergötter*), deities of extremely limited function, as Cinxia, who looks after the child in the cradle, Cinxia, who sees to the bride's girdle, etc. (2) G. Wissowa, *Gesammelte Abhandlungen*, 175 ff., refuted this. The *indigita-menta* contain names of other gods, including Apollo (Macrob. *Sat.* 1. 17. 15) and the Bona Dea (q.v.); *ibid.* 12. 21). Furthermore (Wissowa loc. cit. 304 ff.), the lists of the *di minuti* show many features suggesting late grammatical learning, not early priestly lore. He explained the *di indigetes* as native gods, from *indu*+*rt. gen.*, an impossible etymology, but the latter half of the word could be explained (Th. von Grienberger, *Indogerm. Forsch.* xxiii. 337 ff.) as from root of *agere*, 'dwell'. *Indigita-menta* Wissowa supposed to be from *indu*+*rt. agh.*, 'say'. Modifications of Wissowa's view are proposed by E. Goldmann (*CQ* xxxvi. 43) and H. Wagenvoort (*Imperium*, 1941, 85). Both understand *indiges* as 'active within', though they interpret this differently. (3) C. Koch, *Gestirnwahrnehmung im Alten Italien* 1933, 78 ff., points out the absence of any sort of proof that the *indigetes* were native as distinct from foreign gods, or even an important class of deities. Starting from the cult of Sol Indiges he takes the epithet to mean 'ancestral' (but his proof is very unconvincing, see Rose in *Harv. Theol. Rev.* xxx (1937), 165 ff.) and makes *indigitare* mean 'treat as an indiges', i.e. worship, *indigitamenta* the formulae of address in such worship. At present *indiges* seems of doubtful meaning, but the connexion of it with the other two words likely.

H. J. R.

INDUSTRY (Greek and Roman). Craftsmanship in wood, bone, shell, earth, stone, and leather, as well as use of colour for painting and of fire for cooking purposes, and the preparing of primitive tools are palaeolithic, craftsmanship in textiles, pottery, architecture, flint-mining, and ship-building neolithic. Metal-work and glass production began with the Bronze Age, and rationalization of craftsmanship by written prescriptions, exact measures, and weights in the Ancient Oriental towns. The Indo-European and Semitic tribes of the Neolithic and Cuprolithic Ages had wandering craftsmen who performed the more difficult work of larger households. The crafts of smiths originated in the Bronze Age, representing the first village artisan, with his own workshop in some places. The Ancient Oriental, the Minoan, and Mycenaean metal-workers, potters, ship-builders, brewers, weavers, leather-workers, artists, and doctors occupied more often special workshops, mostly provided for them by kings, temple-rulers, and wealthy owners.

2. Homer and Hesiod mention a considerable variety of craftsmen. But only the smiths had their own workshops, a standard which was gradually reached by potters and, perhaps, ship-builders in Corinth, Athens, and other towns during the eighth and seventh centuries B.C. The money economy of the sixth century produced the *ergasterion*, a workshop able to produce for the needs of expanding markets, with a number of slaves and free workers under the control of foremen. *Ergasteria* of potters, leather-workers, and smiths are known from paintings of sixth-century Attic vases. Many other branches of craftsmanship followed during the fifth and fourth centuries, primarily those producing for export and the military and naval requirements of the Athenian Empire and other States. Craftsmanship in metal, leather, wood, bone, and pottery therefore reached a higher economic and social standard, and was specialized to a higher degree. Craftsmen of the branches of leather manufacture (Clon. Anytus, Lysias father of Iphicrates), pottery (Hyperbolus), and of work in metal, wood, and bone (Cleophon, the fathers of Sophocles and of Demosthenes) could reach political and social honours in democratic Athens. Here we find shops with at least 20 to 30 slaves (owned by Demosthenes' father), yielding

annually from c. 15 to 30 per cent. of the invested capital. Division of labour is known in *ergasteria* which produced metal-work and from potters' shops, but was not usual everywhere. The craftsmen of Athens and other big towns seem to have sold more of their products to merchants and traders than to private customers. Only a few wandering craftsmen may have existed even in rural districts of Greece during the Classical period, the only exception being artists who roamed from town to town and from court to court. On the other hand, there existed wandering Greek metal-workers in the Persian Empire, in South Russia, Italy, and the Alps, who immigrated for longer or shorter periods and produced Greek merchandise on the spot. Specialized crafts of metal- and leather-workers, potters, dyers, musicians, and *fabri* (primitive all-round craftsmen), are ascribed by tradition to Rome under the kings. These craftsmen were organized in *collegia*, which were originally institutions with military obligations, but later of political and economic importance as well.

3. The Hellenistic age, and that of the later Roman Republic, produced a growth of the Greek *ergasterion* system which spread throughout the whole civilized world, and was introduced into textile and food production. Glass-blowing was invented; several glass producers of the first century B.C. and a potter, Aristion, of c. 200 B.C., seem to have had workshops in different towns. The Ptolemaic Empire combined the craftsmanship of the whole of Egypt in its industrial enterprises. The baths of Egypt, the production of papyrus rolls, oil, perfumes, textiles (perhaps not woollen goods), and beer became government monopolies. The craftsmen of these trades became State employees, who were controlled by tax-farmers and government officials, received salaries and, in the oil production, a share of the profit for their work. The State issued a production schedule each year and provided the workshops with tools and raw materials. Privileges were granted to temples and to distinguished owners who combined large estates with commercial, industrial, and banking enterprises; but State control was even there not completely removed. Large enterprises for fish-curing, for the production of metal-work and of bricks, also belonged to the Ptolemaic State, which might be considered the greatest trust organizer in the Ancient World.

4. Craftsmanship in Republican Rome developed on Greek lines during the second and first centuries B.C., periods of a considerable specialization and expansion of slave *ergasteria* throughout the whole of Italy. The petty craftsmen often combined general retail trade with the sale of their own products. Another characteristic of Roman craftsmanship was the prevalence of great capitalistic enterprises which united different branches of industry with banking, commerce, and agriculture, and gave their slaves and freedmen the necessary capital for half-independent workshops. Among persons of this type we need mention only the elder Cato, the publisher Pomponius Atticus, and Rabirius Postumus with his big *terra sigillata* workshops.

5. Organizations of craftsmen were more common during these centuries than in the Classical period. Those of the city-states had almost exclusively social and religious intentions. They were tools of the Ptolemaic Government for orders and concessions throughout the Egyptian country-side. The Roman *collegia* mixed so much in politics that they had to be dissolved or strictly controlled (*see* *claus.*).

6. The period of the Roman Principate saw craftsmanship of the Greek and Roman type with its specialization, *ergasteria*, and great capitalistic enterprises, spreading over the provinces of the Empire. The Egyptian monopolies were broken up or changed into monopolistic concessions for small districts farmed out to independent craftsmen. Nevertheless, remains of controlled economy

were found throughout the whole Empire as a Hellenistic heritage, especially in mining districts, temples, and public domains. Gradually the craftsmen of public and private estates began to furnish the local markets of provincial districts with bricks, coarse pottery, cheap leather- and metal-work, *terra sigillata*, cheap textiles, etc., and even to supersede town craftsmen. A regulated economy began to grow in many small regions from the second century A.D. Finally the State built up its own workshops for the needs of army, court, and administration, or commanded private corporations of craftsmen for State purposes, and used them for the farming out of concessions and monopolies. During the crisis of the third century A.D. the craftsmen of whole regions became dependent on orders of the administration.

7. The Late Roman period, which begins with Diocletian, made this organized compulsion final. It did not mean a breakdown of technical knowledge; but the number of independent workshops decreased everywhere, and estate workshops and union between craftsmen and traders became the rule in the country-side of the Late Roman world. The State provided for its own requirements by establishing factories in all provinces and by regulating the more important *collegia* of craftsmen throughout the Empire. Sons had to follow their fathers' trade, and large taxes in merchandise had to be paid collectively by the corporations, which thus gained a new economic unity. Gradually they received privileges (especially during Justinian's reign), which enabled them to influence prices, to buy raw materials cheaply for all members, to regulate production and sale, workshop capacity, and the number of their members. The guilds of Byzantium, which are known from the tenth century A.D. and preserved a fundamental nucleus of Graeco-Roman technique and craftsmanship, originated directly from these earlier corporations, and the Christian, Jewish, and Islamic guilds of the Middle Ages are doubtless either in historic connexion with Byzantine institutions or, what is more likely in some cases, with Late Roman and similar Sassanian corporations of the periods before the Germanic and Arabic conquests in West and East. See ARCHITECTURE, DYEING, FULLING, METALLURGY, MINES, MONOPOLIES, POTTERY, SPINNING, WEAVING.

INFAMIA, condemnation for certain private delicts (e.g. theft, fraud) or in civil actions, where the defendant was guilty of breach of confidence (e.g. in case of *fiducia*, deposit, partnership, or guardianship), entailed for the condemned person diminution of his personal dignity (*existimatio*): he became *infamis* in the same manner as those who exercised certain shameful professions. Dishonourable or unseemly actions and bankruptcy involved *infamia*. The praetorian edict contained a long list of persons 'qui notantur infamia' (*Dig.* 3. 2); Justinian considerably extended this. *Infamia* entailed different disabilities for persons subject to it: incapacity to act for another at law; *intestabilitas* in some cases (see *TESTIMONIUM*); exclusion from offices and dignities (e.g. that of a judge); and so forth.

INFERI, see AFTER-LIFE, para. 8.

INHERITANCE, LAW OF. (a) GREECE. In Greek law (as at Athens and Gortyn) intestate succession was favoured. The sons and male descendants of the deceased came first in order of succession. In default of them his brothers and their descendants inherited, and in the third place the sons of his grandfather and their male descendants. Ascendants were excluded if the descendants were living: a brother of the deceased excluded the father, an uncle the grandfather. Adoptive sons were treated on the same footing as natural ones. The claims of sons and male descendants could not be set aside by testamentary dispositions. In general, males excluded females in the same group of kinship. A daughter inherited only if no sons or male descendants of predeceased sons existed; she was obliged to marry the man to whom her father had destined her either in his lifetime or by will. Failing such disposition the next collateral could claim the daughter, together with her father's fortune. But if a son remained, the daughter had no right to succeed and could demand only a dowry, to be determined at her brother's discretion.

2. Wills (introduced into Attic law by Solon) were allowed only when the testator had no sons; disinheritance was unknown. But testamentary provisions for the division of the inheritance were admitted, and legacies might be left. The institution of an heir was possible only when combined with adoption. No special forms such as setting down the will in writing were prescribed; it was usual to declare the will before witnesses. Legitimate sons could take possession of the inheritance without any formality, and they had no right to refuse it; other relatives needed an official authorization.

3. (b) ROME. The legal order of succession came into force only in cases of intestacy. The validity of a *testamentum* depended upon the appointment of an heir (*heres*), to whom the rights and duties of the testator passed as a whole. The ancient testamentary forms were subject to the supervision of the people assembled in *comitia*, or in military array (if war was imminent). A later form of merely private character was *testamentum per aes et libram*: the testator mancipated his estate to an intimate friend, obliging him to distribute it after his death according to his directions. The ancient forms soon fell out of use, and the mancipatory will became the normal form in classical times. The testator usually delivered his instructions on wax tablets to the fiduciary trustee, accompanying this action with a solemn oral declaration (*nuncupatio*). By a further development the praetor granted possession of the inheritance (*bonorum possessio*) to the successor designated in tablets sealed by seven witnesses (just the number of persons assisting at *mancipatio*, q.v.), irrespective of *nuncupatio*. This was the origin of the praetorian will, which was more convenient and more widely applicable than the quiritary forms. Thus there originated a dualism between civil and praetorian law, since the praetor preferred the successor appointed by such a simplified will to one who claimed the inheritance on intestacy in the absence of a civil will. Post-classical forms of wills had a partly public character, being entered on the rolls of a court or imperial chancery or deposited in public archives. Justinian adopted a form which was legalized by a constitution of A.D. 439, and required the presence of seven witnesses and their seals and signatures in addition to the testator's.

4. There was also a contrast between civil and praetorian law on intestacy. The former entitled only agnatic relatives (i.e. people being in the same *patria potestas*, q.v.): in the first place, the descendants subject directly to *patria potestas* of the deceased, who became *sui iuris* by his death (*sui heredes*, males and females equally, natural and adoptive, the wife *in manu* being considered

as a daughter); in the second place, the next agnates (brothers, sisters from the same father). The praetorian law took into consideration blood relationship (*cognatio*) independent of *potestas*, and granted *bonorum possessio* to a group of persons neglected by *ius civile*, such as emancipated sons and their children, cognates up to the sixth and sometimes the seventh (partly) degree, adopted children, and many others. An important praetorian reform was the admission of further relatives when the successors of a foregoing class or nearer degree refused the succession, a practice unknown in the civil law. Lastly, when no blood relatives existed or all of them refused, *bonorum possessio* was given to husband or wife reciprocally; this was of particular importance in marriage without *manus*. After various subsequent innovations the succession in cases of intestacy was reformed by Justinian (*Novels* 118 and 127), who established the order of succession of descendants, ascendants, and collaterals on the cognatic principle.

5. Roman law recognized the claims of some next relatives even against the testator's will. *Sui heredes* of the *ius civile* could not be passed over in silence in a will, and must be formally excluded from inheritance, otherwise the will was void; similar provisions were introduced by the praetor with regard to all children. If disinheritance was not made correctly, *bonorum possessio* was given to the person omitted, contrary to the will. Later legislation, however, required a material provision in favour of such relatives and excluded an express disinheritance, unless there was a just cause for it. If the exclusion was not justified, the privileged successor could obtain by a special remedy (*querela inofficiosi testamenti*) a fourth part of what he would get on intestacy. INIURIA, see LAW AND PROCEDURE, ROMAN, III. 6.

INNOCENTIUS, *gromaticus*. An *agrimensor* of this name is known in A.D. 359 (Amm. Marc. 19. 11. 8), but the obscure treatise ascribed to I. in the *corpus gromaticorum*, apparently an exercise in map-reading, is of later date.

INNS were common in Greece and later throughout the Roman Empire. They had in general a bad reputation, though Strabo mentions that there were good inns in Egypt, and no doubt comfortable hotels existed in the larger towns and at watering-places. Wealthy men usually put up at *detersoria* of their own or in the houses of friends, but even they might have to content themselves with *cauponae*, as Maecenas did on his journey with Horace to Brundisium. Some inns were managed by the slaves or freedmen of the owner of a neighbouring villa. In the remoter parts of the Empire official resting-places (*prartoria*) were built by the government for its travelling officials, and accommodation could no doubt be secured in the *mansiones* of the *civitas publicus*.

Friedländer i. 200-3; W. A. Becker, *Gallus* (Engl. Transl. 1868), 351 ff. G. H. S.

INO, see ATHAMAS, LEUCOTHEA.

INSTITUTIONES were elementary text-books of Roman law. The most renowned work of this kind is the *Institutiones* of Gaius (q.v.). The same title was given

to an introductory part (*totius legitimae scientiae prima elementa*) of Justinian's codification published on 21 Nov. 529 shortly before the *Digest*, with which it contemporarily came into force six weeks later. This work, which was chiefly based on Gaius' *Institutes* and their system (*personae, res, actiones*), on his *Res cottidianae*, and on the *Institutiones* of other jurists (Marcian, Florentinus, Paulus), was compiled by Tribonianus (q.v.) and the eminent scholars Theophilus and Dorotheus, known also as collaborators in the *Digest*, to which they often refer. A considerable part of the book refers to Justinian's reforms. Numerous historical reminiscences and comparisons with earlier law increase its value.

C. Ferrini, *Opere* (1929), vol. i; A. Zocco-Rosa, *Justiniani Institutionum Palingenesia* (2 vols., 1908). A. B.

INSUBRES lived north of the Po. The most powerful people in Cisalpine Gaul, they frequently exercised dominion over the neighbouring Taurini, Salassi, etc. Their capital was Mediolanum (Strabo 5. 213). Livy (5. 34) represents them as Aedui who entered Italy via the Mont Genève Pass; but his account is untrustworthy. These Gauls, however, certainly established themselves about the Ticinus c. 400 B.C., and were henceforth called Insubres—probably a pre-Celtic name. C. 232 B.C. they clashed with Rome. At Clastidium (222) Marcellus stripped the *spolia opima* from their king. In 218 the new Latin colony at Cremona and Hannibal's arrival incited them to fresh efforts, until finally they were subjugated in 194 (Polyb. 2. 17 f.; Livy, bks. 21-34). Subsequently they disappeared as a separate nation. Insubrian districts obtained Latin rights in 89, full citizenship in 49 B.C. For bibliography see CISALPINE GAUL. E. T. S.

INSULAE, see HOUSES (ITALIAN).

INTERCESSIO was the right of the magistrate to veto a motion carried by another magistrate, provided the former was invested with *maior* or *par potestas*. A dictator's measures could not be vetoed as his authority was supreme. *Intercessio* arose from the idea of magisterial collegiality, and was reputed to be a necessary precaution against any abuse of their power by magistrates. The same principle was later applied to municipal administration. A particular form of *intercessio* was the right of the tribunes (*intercessio tribunicia*) to veto any measure which they held to be contrary to the interests of the plebs or the whole community. As, however, every tribune possessed this right, every one of them could veto any of his colleagues' measures. *Intercessio* was valid only within the sphere of civil legislation and within Rome, and fell into disuse when it was conferred upon the emperors, as a part of their *tribunicia potestas*. See also COLLEGIIUM.

INTERCIDONA, see PILUMNUS.

INTERDICTUM, see LAW AND PROCEDURE, ROMAN, II. 11.

INTEREST, RATE OF. The rate of interest in Greece and Rome is known from the fifth century B.C., throughout which the temple of Delos gave loans at 10 per cent. The Roman Republic fixed interest at 8½ per cent. (*fenus uncium*) in 357 B.C. A *Lex Genucia* of 342 forbade usury completely; but this law, though re-enacted several times during the fourth, third, and second centuries, fell into disuse because it was economically impossible.

During the fourth century the interest of town mortgages in Athens amounted to c. 5 per cent., and of country mortgages to c. 6-12 per cent. Other loans brought from 10 to 33½ per cent., and on the average c. 12 per cent. A contemporary Delphic law fixed the

interest of normal loans at 9 per cent., of small short-term loans at, perhaps, 25 per cent. Safe investments in the Greek motherland brought 6 to 10 per cent. during the third century, 24 per cent. in the Hellenistic East of the same period, from 5 to 10 per cent. in Egypt during the later second century.

The maximum rate of interest introduced by Lucullus and Cicero for their Asiatic provinces was 12 per cent.; Sulla decreed in 88 B.C. a maximum of $8\frac{1}{2}$ per cent., and the Roman Senate in 51 B.C. 12 per cent., a regulation valid throughout the Roman Empire for centuries. Interest in Rome during the first century B.C. was normally c. 6 to 10 per cent. for safe investments, while loans in kind brought up to 50 per cent.

The maximum rate of interest was increased to 12½ per cent. during the fourth century A.D. More capital seems gradually to have accumulated during the following centuries, and Justinian was able to fix the ordinary interest at 6 per cent., that for trade investments at 8 per cent., and that which senators might demand at 4 per cent. Bottomry loans (q.v.) were excepted from these and earlier regulations.

INTERNATIONAL LAW, see **LAW**, INTERNATIONAL.

INTERPRETATIO ROMANA, literally, 'Roman translation' (Tacitus, *Germ.* 43. 3); the use of a Latin divine name, as Mercurius, to signify a foreign god, as Odin. This is merely a particular case of the assumption that all peoples worshipped the same gods; thus the Greeks regularly call Minerva Athena, and the Romans speak of Zeus as Iuppiter. Foreign divine names were hardly used unless no native equivalent could be found, as Apollo in Rome, or a foreign cult (e.g. Isis, Mithra) was adopted.

G. Wissowa in *ARW* xix (1916-19), 1 ff.; cf. H. J. Rose, *Roman Questions of Plutarch*, 53 ff. H. J. R.

INTERREX was originally the magistrate appointed by the senators on the death of a king to exercise provisional authority. On the simultaneous death, illness, or resignation of both consuls, an *interrex* was successively appointed from each of the senatorial *decuriae* for five days, until the auspices were taken and the new consuls elected. The *interrex* had to be a patrician and a senator. He exercised all the functions of the consulship, and was escorted by twelve lictors. The last known example of *interregnum* occurred in 43 B.C. *Interreges* also held temporary office in cities of Latin Italy until the dawn of the Imperial age.

INUUS, see **FAUNUS**.

INVULNERABILITY. Such stories of invulnerable men or beasts as are found in classical mythology mostly conform to the Sigurd type, in which there is one vulnerable spot (see **ACHILLES**, **AIAS** (1)), or the Balder type, in which there is one thing which can wound (Nemean lion; own claws, Theoc. 25. 277. Caeneus, q.v.; (?) wooden pikes, Hyg. *Fab.* 14. 4 and Rose ad loc.).

O. Berthold, *Die Unverwundbarkeit* (1911); and see **MESSAPUS**. H. J. R.

IO, in mythology, priestess of Hera at Argos; usually said to be daughter of Inachus (q.v.). Zeus loved her, but to conceal her from Hera gave her the shape of a heifer. Hera asked to be given the heifer, which Zeus could hardly refuse; she set Argos (q.v. 3) to watch her. On his being killed by Hermes Hera plagued Io with a gadfly, which drove her out of the country. After long wanderings she came to Egypt, where Zeus restored her

with a touch of his hand; hence the son which she bore him was called Epaphus (from ἐπάπτειν). For his descendants see **DANAUS**. See especially Aesch. *PV* 561 ff.; *Ov. Met.* i. 583 ff.; *Apollod.* 2. 5 ff. Io was identified with Isis (q.v.; *Apollod.* 9); this is in turn due to Isis' identification with Hathor, who has bovine shape. Rationalizations of the story were current early, as *Hdt.* i. 1. 4-5 (she was kidnapped by Phoenicians); *Ephorus ap. schol. Ap. Rhod.* 2. 168 (she was kidnapped and the Egyptians sent Inachus a bull for compensation). It has been suggested that she was originally a moon-goddess (hence the cow-horns), or a form of Hera (q.v.); see Engelmann in *Roscher's Lexikon* ii. 269; Farnell, *Cults* i. 200; *Eitrem in PW* ix. 1732 ff. H. J. R.

IOCASTA, see **OEDIPUS**.

IOLAUS, see **IPHICLES**.

ION (1), eponymous ancestor of the Ionians; his legend as we have it seems to be Attic in all its forms. He is the son of Creusa (q.v. 1), but his father, in the tradition followed by Euripides, is Apollo (Patroös); elsewhere, as in *Apollod.* i. 50, he is Xuthus, son of Hellen (q.v.). After the death of Erechtheus, Xuthus, Ion, and his brother Achaeus (q.v. 1) have adventures which vary from author to author and obviously have more to do with early ethnological theory than real tradition (see *Stoll in Roscher's Lexikon*, s.v., for particulars), but regularly Ion settles sooner or later in Athens and divides the people into the four traditional Ionian tribes, Hopletes, Geleontes, Argadeis, and Aigikoreis (named after his four sons, *Eur. Ion* 1575 ff.). H. J. R.

ION (2), of Chios, but equally at home in Athens, Greek poet, was probably born about 490 B.C. He was on friendly terms with Cimon, whom he met, with Themistocles, at a dinner party in Athens about 475, and whose sociability he contrasted with the aloofness of Pericles; and in 462 he heard Cimon speak in the Assembly in favour of assisting Sparta when hard-pressed by her neighbours (*Plut. Per.* 5, *Cim.* 9, 16). Anecdotes record his meeting with Aeschylus at the Isthmian Games (*Plut. De prof. virt.* 8), with Sophocles at Chios in 441-440, when the latter was a general in the Samian War (*Ath.* 13. 603 e), and possibly with Socrates (*Diog. Laert.* 2. 23). He was fond of his wine and other pleasures—the satyric element which, as he said, virtue, no less than tragedy, needed to complete it (*Plut. Per.* 5). He died before 421 (*Ar. Pax* 835 and *schol.*). His first appearance as a tragic poet was about 451 B.C. (*Suidas*, s.v.); in 428 he was defeated by Euripides when the latter produced the *Hippolytus* (*Arg. Eur. Hipp.*), but on another occasion he won the first prize at the Great Dionysia for both tragedy and dithyramb, and in his delight made a present of Chian wine to every Athenian citizen (*Ath.* 1. 3 f.). The number of his plays was variously given as 12, 30, or 40 (*Suidas*, s.v.). The known titles include, from the Heracleian cycle of legend, *Alcmene*, *Eurytidae*, and the satyric *Omphale*; from the Trojan, *Agamemnon*, *Laertes*, *Teucer*, *Φρσποποι* (dealing with Odysseus' entry into Troy as a spy); and besides these, *Argivi*, *Phoenix* or *Caeneus*, and *Μέγα Δράμα* (a title unparalleled for a Greek tragedy); but fragments are few and insignificant (*TGF*, pp. 732-46). The Alexandrian critics admitted him to the *Canon*—their select list of outstanding tragic poets (*Cramer, Anecd. Par.* 4. 197, etc.); Aristarchus and Didymus wrote commentaries on his plays (*Ath.* 14. 645), and Baton (2nd c. B.C.) a monograph on him (*Ath.* 10. 436). In the treatise *On the Sublime* (23) he is described as a faultless and perfectly finished writer in the 'smooth style', but without the force and fire of Pindar and Sophocles. In addition to his tragedies he composed elegiac poems, epigrams, encomia, paeans, hymns, scolia, possibly a comedy, at least one cosmological work in prose, a history

of the founding of Chios (of which Pausanias 7. 4. 8 made use), and memoirs (perhaps of several kinds) in which there were personal reminiscences of a number of famous men. (The exact meaning of the titles *Ἐπιδημῆται* and *Συνεκδημητικός* is uncertain. The former may have given an account of the visits of distinguished persons to Chios, as Bentley suggested, or of his own travels; the latter may have been a 'travelling companion'. The title *ὑπομνήματα* probably covers both: cf. Ath. 13. 603, schol. Ar. Pax 835, Pollux 2. 88, etc.)

A. W. P.-C.

IONIAN SEA (*Ἰόνιος, Ἰώνιος κόλπος*), a name used alternatively with 'Adriatic Sea' for the waters between the Balkan Peninsula and Italy; no clear line of demarcation can be drawn between the two seas. The name 'Ionian', like that of 'Adriatic', was sometimes extended to include the sea to east of Sicily.

M. C.

IONIANS (*Ἴωνες, Ἰάφονες*), a section of the Greek people mentioned but once by Homer (*Il.* 13. 685, *Ἴδονες ἄλκχιτῶνες*), but important later, after the central part of the west coast of Asia Minor (still non-Greek in Homer) had become known as Ionia.

Ionia was colonized, according to early traditions, by refugees from the Greek mainland, flying before the Dorians and other tribes from north-west Greece (Mimnermus in Strabo, p. 634; Hdt. 1. 145-8; Thuc. 1. 12). Herodotus (1. 146-7) speaks of the mixed blood of the colonists, and adds that some of them took the women of the conquered Carians. All were, however, reckoned as Ionians 'who trace their descent from Athens and keep the Apaturia' (q.v.).

The claim of Athens to be the mother-city of all Ionians will not hold, as Herodotus himself says; and the eponymous ancestor Ion (q.v.) could only artificially be worked into the Athenian genealogies, themselves extremely artificial. But the Athenian claim to be the 'eldest land of Ionia' was as old as Solon, and long preceded any Attic claims to political predominance (Arist. *Ath. Pol.* ch. 5); and it receives some confirmation from the reappearance of the four ancient 'tribes' of Attica—the Aigikoreis, Hopletes, Geloantes, and Argadeis—in inscriptions of Delos, Teos, Ephesus, Perinthus (a Samian colony), Cyzicus, and Tomi (Milesian colonies). There may be truth in the Athenian claim to have organized the emigrants.

The Ionic dialect, first known to us from Homer, was spoken (with local variations) in a compact region comprising the Cyclades, Ionia proper, Euboea, and Attica. The fact that inscriptions from Chios show some forms akin to the adjacent Aeolic and the surviving Aeolicisms in Homer—mostly *metri gratia* (εἶος, λαός, for εἰος, λαῶς, etc.), but also gratuitously (e.g. *Ναυσικία, ὄπατο*)—suggest that Ionic arose after the migrations, among the States whose culture-centre was at Delos. Its area was subsequently expanded by colonization.

A mixed race, inheriting something of the Aegean civilization, and highly 'selected' amid the turmoil of the migrations, the Ionians, from about 800 B.C., developed precociously (see the brilliant picture in the *Hymn to the Delian Apollo*). Indeed, the whole achievement of Greek colonization (q.v.) and Greek rationalism belongs to them and to those neighbouring Greeks who came within their orbit. Throughout the East 'Yavani' (Javan: *Genesis* x. 2) became the generic term for 'Greek' (cf. Frank, *Feringhi*). They were, however, exposed to attack from the Lydian and Persian monarchies, and the effort to throw off the despotic though beneficent yoke of Darius ended in ruin after a heroic struggle of six years (492). Then came Athenian overlordship and the unmerited depreciation of Ionians as unwarlike (Hdt. 1. 143; 5. 6; Thuc. 5. 9; 6. 77; S. 25). To fifth-century Greek

theory 'Dorian' and 'Ionian' corresponded to 'Nordic' and 'Mediterranean' in modern Europe (Hdt. 1. 56). The generalization that credited the former with more steadfastness, the latter with more intelligence, is in each case open to numerous exceptions: contrast the sobriety of Ionian Olbia or Massilia (Strabo 179-80; Dio Chrys. *Borysthenite Discourse*) with the unstable brilliance of Dorian Syracuse and Tarentum in Thucydides and Livy.

D. G. Hogarth, *Ionia and the East* (1909); *CAH* iii, ch. 21. See also CIIOS, EPHESUS, MAGNESIA, MILETUS, PHOCAEA, PRIENÉ, SAMOS.

IONIC, see DIALECTS, GREEK.

IONIC, MAJOR and MINOR, see METRE, GREEK, III (13).

IOPHON, son of Sophocles, competed with frequent success, sometimes with his own tragedies, sometimes, it was suspected, with his father's (or at least with his father's help) (Ar. *Ran.* 73 ff. and scholia). He won the second prize in 428, Euripides being first and Ion third (Arg. Eur. *Hipp.*). The story that he tried to obtain control of his father's property by accusing him of senile decay, and that Sophocles disproved the charge by reading from the *Oedipus Coloneus*, is very doubtful (*Vit. Soph.*, etc.). He wrote an epitaph for his father's monument after his death (Val. Max. 8. 7. 2). He was credited with fifty plays (Suidas, s.v.).

TGF 761.

A. W. P.-C.

IPHIANASSA, see AGAMEMNON, ad fin.

IPHICLES, in mythology, twin brother of Heracles (q.v.), also called Iphiclus. He was Heracles' companion on some exploits and father of Heracles' better-known companion Iolaus. Two other children of his were killed by Heracles in his madness (Apollod. 2. 61 ff.; schol. on Lycophr. 38 and *Od.* 11. 269; Nic. Dam. fr. 13 Jacoby).

H. J. R.

IPHICRATES (c. 415-353 B.C.), Athenian general. A man of humble origin, he first won fame by commanding a company of peltasts who annihilated a Spartan division (390). During the Corinthian War he led successful raids from the Isthmus, and afterwards (386) took service as a mercenary commander in Thrace, where he married Cotys' daughter, and in Syria against the Egyptian rebel kings. After returning to Athens (373) he was sent to relieve Corcyra from a Spartan invasion. He succeeded, but caused dissatisfaction by failing to prevent Epaminondas from invading the Peloponnese (369). He led the Athenian attempts to recover Amphipolis (367-364), but on his failure ceased to be *στρατηγός* and retired to Thrace. With his son Menestheus he commanded the Athenian fleet at Embata (355), and was afterwards prosecuted by his colleague, Chares, but acquitted. Two forensic speeches, now lost, were cited under his name (*Dion. Hal. Lyr.* 12).

Iphicrates was notable as the general who first established the importance of peltasts (q.v.). He also had a reputation for strictness of discipline and the ingenuity of his stratagems.

Xenophon, *Hellenica*, and Diodorus, lvi. 14-16 (passim); *Nepos' Life* (poor); C. Rebstant, *Vie d'Iphicrate*, etc. (1845); U. Eberstedt, *Ph.*, s.v. 'Iphikrates'; *Plutarch, Ath.* 7737.

H. W. P.

IPHIGENIA (*Ἰφίγεια*), perhaps a by-form of Artemis (A. Iphigeneia at Hermione, Paus. 2. 35. 1; *Ἰφίγεια* ἡ Ἰφίτατος, Hesychius) (q.v.), but in mythology a daughter of Agamemnon. For some reason he was obliged to sacrifice her, either because he had vowed to sacrifice the fairest thing born in a particular year, and she was born then, or because he had offended Artemis by an impious boast (*Eur. IT* 20 ff., cf. *schol.*; *Soph. El.* 569, whereon see Jebb). She enforced this by

delaying the fleet at Aulis with contrary winds until the sacrifice was made (Aesch. *Ag.* 184 ff. and elsewhere; the story is from the *Cypria*). Iphigenia was therefore sent for to Aulis, under pretext that she was to be married to Achilles before the fleet sailed (*Cypria*; Eur. *IA*), and led to the altar. Aeschylus (loc. cit.) implies that she was actually killed; but the story in the *Cypria*, followed by Euripides, *IT*, is that Artemis snatched her away, substituting a hind for her, and brought her to the country of the Tauri. There, according to the version followed by Euripides, she was Artemis' priestess, and by the local rite she had to superintend the sacrifice to the goddess of all strangers caught in the country. At length Orestes (q.v.) came there with Pylades, having been instructed that he could finally get rid of the Erinyes if he brought to Greece the Taurian image of Artemis. Both were taken prisoner, but during the preparations for sacrifice Iphigenia discovered who they were and under pretence of purificatory rites got them and the image away from the temple to the sea-shore, whence they escaped with the help of Athena. The image was duly brought to Halae in Attica (cf. *ATTIC CULTS*), where Iphigenia continued to be priestess, the goddess was given the title of Taurobolos, and a pretence of human sacrifice (a slight cut made in a man's throat) was kept up.

The local legend of Brauron said that the sacrifice of Iphigenia took place there, and that a bear, not a hind, was substituted for her (schol. Ar. *Lys.* 645, an interesting example of adaptation of a Panhellenic story to particular purposes; for the rite which it purports to explain, see *ARTEMIS*). Antoninus Liberalis, 27, says the surrogate was a calf, and that Iphigenia finally was made immortal and married to Achilles (q.v.) on Leuce.

P. Clément in *Antiquité classique* iii (1934).

H. J. R.

IPHIS, in mythology, (1) father of Eteocles, one of the Seven against Thebes, and of Euadne, wife of Capaneus (q.v.). (2) A young Cypriot, who loved Anaxarete, a noblewoman of that island. She would have none of him, and he finally hanged himself at her door; she looked, unmoved, from her window, and was turned by Aphrodite into stone. The resulting image was called *Aphrodite prospiciens* (ἐκκύπτουσα?).

See Ovid, *Met.* 14. 698 ff., cf. Ant. Lib. 39 (from *Hermesianax*).

H. J. R.

IRIS, the goddess of the rainbow, and for the most part hardly distinguishable from the natural phenomenon itself. She appears to have had no cult at all, being simply, when thought of as in human form, a messenger of the greater gods, presumably because the rainbow seems to touch both sky and earth. In Hesiod (*Theog.* 266 ff.) she is daughter of the Titan Thaumas and Electra the Oceanid, and sister of the Harpyiae (q.v.). According to Alcaeus (fr. 13 b Diehl, from Plutarch, *Amat.* 765 e) she is the mother by Zephyrus of Eros, a conceit which means no more than that in moist spring weather men feel amorous; a few later writers catch it up. As messenger of the gods she is specialized to Hera in many of the later poets, e.g. Callimachus, *Del.* 228 ff., where she sleeps under her throne like a dog; Homer represents Zeus as her usual employer.

H. J. R.

IRON. The earliest specimens are mainly of meteoric origin, though smelted iron belonging to the third millennium has been found in Mesopotamia. Probably meteoric iron was used for Mycenaean jewellery, and Homer mentions it as a valuable metal. In the thirteenth century it was mined in Hittite territory. It appears suddenly as the material for weapons in Greece in perhaps the eleventh century. The change was probably due to the failure of bronze-supplies, as in other countries the replacement was gradual. It was hardly an advance, as early iron was of uncertain quality. Homer speaks of an iron knife, but has no explicit reference to iron swords.

Greece possesses small iron-deposits, but the main sources in classical times were Elba and the Chalybes country behind Trapezus. The manufacture of iron articles was concentrated at Athens and the Isthmus States. As geographical knowledge extended, other sources became available. The magnetite sands of Thrace were used at an early date. Spanish iron was prized under the Roman Republic, and from about 40 B.C. Rome drew on the deposits of Noricum. The mines of inner Dalmatia are of later date. In many parts of Gaul are enormous slag-heaps, and British iron was used locally. Indian iron is mentioned, but cannot have been of economic importance.

The furnaces of the ancients could not normally produce cast iron. Statues were made by chasing pure wrought iron. Weapons were of mild steel. Quenching to harden is known as early as Homer, and certain waters were thought (without real reason) to be particularly suitable. The Romans understood intentional carburization and annealing, and by complicated damascening they produced blades which would not snap. They did not use water-power, and all iron-working was by hand. Semi-nomadic natives often reduced the ore in the mountains, and sold the blooms at cities or at military forts, where they were forged into tools.

O. Davies, *Roman Mines in Europe* (1935).

O. D.

ISAEUS (1) (c. 420–350 B.C.). Nothing is known with certainty about the life of this orator; it is even doubtful whether he was an Athenian by birth, and some ancient authorities call him a Chalcidian. Traditionally he was a pupil of Isocrates and a teacher of Demosthenes. His political views, if he had any, were never allowed to intrude into his speeches, which were all composed for delivery by others. All the extant speeches are concerned directly or indirectly with questions of inheritance. The earliest of these, if we follow Jebb (*Attic Orators* ii. 350), is *Or.* 5, which he assigns to the year 390 B.C., but a later date (372) is possible, in which case the earliest is 377. The date of the latest is c. 353.

WORKS. Of fifty speeches which the biographer (Ps.-Plutarch) considered genuine we possess eleven and the fragment of a twelfth. Six deal with disputed inheritance. Three refer to prosecutions for false witness in testamentary cases. *On the estate of Hagnias* throws light on the Athenian law of collateral succession. In the *Euphiletus* the speaker appeals to have his name restored to the roll of his deme. Dionysius quotes a fragment from the *Eumathes* for comparison with the style of Lysias.

Isaeus is our chief authority for the laws of inheritance, in which he was an expert. In addition to his minute legal knowledge, he possessed a singular skill in stating a case, so that the most complicated pleadings assume, under his treatment, the appearance of lucidity. His language is comparable to that of Lysias for simplicity, but he uses a certain number of words which have a poetical association, and some few colloquialisms. Dionysius considered him artificial in comparison with Lysias, but the examples which the critic gives do not make this statement obvious. His efficiency is beyond question; to read his speeches is a fine intellectual exercise; but he makes no appeal to the senses.

For general bibliography see *ATTIC ORATORS*. Text: Teubner (Thalheim, 1903). Commentary: W. Wyse (1904). Text and Translation: E. S. Forster (Loeb); P. Roussel (Budé). Index: W. A. Golligher (in *Hermathena* li–liii; in progress). J. F. D.

ISAEUS (2) (1st c. A.D.), Syrian rhetor, famous in Trajan's time at Rome for improvisation and for impassioned and epigrammatic utterance (Plin. *Ep.* 2. 3; Juv. 3. 74).

ISAGOGIC LITERATURE denotes didactic compositions addressed to particular recipients and intended as an introduction (εἰσαγωγή) to the knowledge of a

science or to the practice of an art or of an activity, administrative or political. The word is used in Latin under its Greek form or latinized, *isagoga* (Gell. 1. 2. 6; 14. 7. 2; 16. 8. 1). Sometimes it is rendered by *institutio* or *introductio*. An author occasionally employs the method of question and answer, and often divides his work into two principal parts, *ars* and *artifex*: e.g. Quintilian bks. 2-11, *ars oratoria*; bk. 12, *orator*. Conformably with Roman practical inclinations, isagogic literature had a wide range at Rome.

We may cite as specifically isagogic: Cato, Varro, Columella, their treatises on agriculture; Cicero, *Partitiones Oratoriae*; Q. Cicero, *Commentariolum petitionis*; Horace, *Epistula ad Pisones*; Vitruvius, *De Architectura*; Celsus, *De Medicina*; Frontinus, *De Aquis*; Quintilian, *Institutio oratoria*; Vegetius, *Epitoma rei militaris*.

L. Mercklin, 'Die isagogischen Schriften der Römer', *Philol.* iv (1849); Jahn, 'Über römische Encyclopädien', *Berichte der sächs. Gesellsch. der Wissensch.* ii (1850); E. Norden, 'Die Poetik des Horaz als isagogische Schrift', *Hermes* xl (1905), 508.

C. F., transl. J. W. D.

ISAURIA was the inland face of the central chain of Mt. Taurus, corresponding to Pamphylia on the seaward slope. Its inhabitants were notorious for brigandage. They evaded attempts to reduce them until the Roman general Servilius (q.v. 2) Isauricus systematically captured their strongholds, chief among them Isaura Vetus and Isaura Nova (76-75 B.C.). Isauria was included by Augustus in the province of Galatia. Though pacified, it was little developed; Isaura Vetus, the chief stronghold, was the only place to attain municipal status. M. C.

ISAURICUS, see **SERVILIUS** (2) and (3).

ISCA, British river-name, hence applied to sites on rivers so called:

(1) Ptolemy's Isea (2. 3. 3), where he fixes the Second Legion (ibid. 14) is apparently a site on the Axe (Bradley, *Archaeologia* xlviii. 390), and there are traces of the Second Legion near its mouth (*Eph. Epigr.* ix. 1268 a).

(2) Modern Exeter on the Exe was occupied as a military post under Claudius and became a walled town, the capital of the Damnonii (or Dumnonii), with trading connexions (cf. *Numismatic Chronicle* xvii. 1-12). See Shortt, *Sylva Antiqua Iscana* (c. 1840); publications of the Devon Archaeological Exploration Society.

(3) Modern Caerleon on the Usk was probably from c. A.D. 75 the fortress of Legio II Augusta. Originally consisting of timber buildings surrounded by a clay bank, it was gradually rebuilt in stone, and its bank fronted with a stone revetment from 99-100 (*JRS* xviii. 211). During periods of reduced occupation in the second century its buildings decayed; but a complete overhaul occurred under Severus and his successors; a partial rebuilding is recorded 254-60 (*ILS*, 537). The legion left Isea towards the end of the century. Christian martyrs Aaron and Julius may be realities (Gildas, 10), but an archbishopric is fabulous. Administrative buildings (including a hospital?), barrack-blocks, and, of extramural works, an amphitheatre and baths have been excavated.

Archaeologia Cambrensis lxxiv-lxxvii, xc; *Archaeologia* lxxviii. 111-218 (Amphitheatre); R. G. Collingwood, *Archaeology of Roman Britain* (1930), 22-4, 104. C. E. S.

ISIDORUS (1), a Greek of Charax, near Tigris mouth, wrote c. A.D. 25 on Parthia and its pearl-fisheries (Ath. 3. 93 d), and, to judge from Pliny, a general geographical work, a portion perhaps of which is the extant *Ἐταίριοι Ἠερθεῖς*, a meagre description of 'stations' from Zeugma on the Euphrates through Seleucia, Ecbatana, Rhagae, Caspian Gates; Hyrcania, Parthia, etc., to Alexandria (Kandahar).

OGM i, lxxv ff., 244 ff.; W. Schoff, *The Parth. Stations of I. of C.*; *PL* ix. 2064-5. E. H. W.

ISIDORUS (2) **HISPALENSIS**, bishop of Seville (A.D. 602-36), one of the most important links between the learning of antiquity and the Middle Ages. His chief works were: (1) *Chronica*, a history extending to his own times; (2) *Historia Gothorum*, preserved in two editions; (3) *De natura rerum*, (4) *Differentiae*, in two books, (5) *Quaestiones in vetus Testamentum*; (6) *Etymologiae* or *Origines* (now divided into twenty books), a widely used encyclopaedia which deals not only with the seven liberal arts but also with geography, law, medicine, natural history, prodigies, gems, foods, drinks, etc. (See **ENCYCLOPAEDIC LEARNING**.) Though Isidore does not often mention his sources, it is clear that he gathered his information from a wide range of authorities (including Pliny and Suetonius). His works are printed in J. P. Migne's *Patrologia Lat.*, vols. lxxxii-lxxxiv, and the *Etymologiae* are separately edited by W. M. Lindsay (2 vols., 1911).

Cf. Teuffel, § 496; M. Manitius, *Geschichte der Lat. Lit. des Mittelalters* i. 52-70. J. F. M.

ISIGONUS of Nicaea (1st c. B.C. or 1st c. A.D.), a writer of *paradoxa* (see **PARADOXOGRAPHERS**), who probably drew to some extent on Varro, and was himself drawn upon by Pliny the Elder.

A. Westermann, *Paradoxographi* (1839), 162-3; *FHG* iv. 435-7.

ISIS, in Egyptian religion, was the wife of Osiris and the mother of Horus. In addition to her position as a national deity in Egypt, Isis acquired in the Hellenistic age a new rank as a leading goddess of the Mediterranean world. Her worship was established in Piraeus by the fourth century by Egyptians residing there. Most of the foundations of her cult in the Aegean area during this period, however, included her as a member of the new Hellenistic cult of the Egyptian (q.v.) deities along with Sarapis, Harpocrates, and Anubis (qq.v.). Many of these cults in the Greek cities soon became public ones and were managed by priests who were magistrates of the State. Yet one finds attached to some of these public cults such groups as the *melanephoroí*, a fact which indicates that there probably was some sort of periodic ritual or ceremony carried on. While we know of relatively few temples of Sarapis in Egypt during the Ptolemaic era, most of the priests in Greece are known as priests of Sarapis or of Sarapis and Isis. In Egypt, however, even in the city of Alexandria, Isis seems to become very soon the more important of the two deities. The inscriptions written by Greeks in Egypt mention the cults and festivals of Isis more frequently than those of Sarapis, and the name of Isis usually appears ahead of that of Sarapis. The cult of these gods was highly Hellenized, at least in externals: the statues and temples are frequently Greek in design and execution, the priests, in Greece at least, are usually civic functionaries, and the language of the cult is Greek. The practices of the cult, such as incubation, the interpretation of dreams, festive banquets, and cult societies, have a Hellenic character, though there are Egyptian analogies for many of them. Herodotus had identified Isis with Demeter, but in the early Hellenistic age she is identified, via Hathor, with Aphrodite, with Arsinoë II the wife of Ptolemy II, and with later Ptolemaic queens. The plastic representation of her in Greece is almost uniformly Hellenic in character, portraying her with the ancient Egyptian head-dress, in a long garment with a characteristic knot of drapery on the breast. In her most Hellenic form she is shown with serene, ideal, and typically Greek features, with no head-dress, but a curl or braid of hair hanging down each side of her face. It is came more and more to mean all things to all men. In the great hymns which celebrate her manifold accomplishments, virtues, and miracles, she is addressed as 'O Thou of countless Names', and is identified with many and varied goddesses. Although the cult of Isis had, in many instances in Greece, the external

appearance of a typical public city-state cult, it had also, to some extent in Greece and in the West, the characteristics of a mystery cult as well. The range of experience involved in participation in the cult runs all the way from individual initiatory rites to the elaborate cult drama which celebrated the old myth of the death and resurrection of Osiris. At Rome, Pompeii, near Corinth, and probably at other places the elaborate mysteries of Isis were carried out. At the numerous other temples of Isis which we know in the Graeco-Roman world it is frequently difficult to say just what form the ritual of the cult assumed. Prominent among the characteristics of the cult of Isis which distinguished it from ordinary Greek and Roman cults were the appearances of an Egyptian professional priesthood, the regular ritual, the use of sacred water from the Nile, elaborate processions, penitents, dances, and the use of musical accompaniments. Certain festivals were of especial importance, one of the most significant being the Ploiaphesia which marked the opening of the season of navigation. That these Mysteries and their attendant ritual could awaken a deep religious emotion is testified by the conversion of Lucius which Apuleius describes (*Met.* bk. 11). Of all the temples of Isis known to us, the one at Pompeii is most perfectly preserved. Here we find at the top of a flight of steps a high platform upon which sacred rites were performed, a cistern for holding Nile-water, homes or cells for the priests, and many of the other arrangements necessary for the celebration of the worship. Although Sarapis and other deities of the group associated with Isis were worshipped in her temples, it is she who appears as the chief deity, occupying the place that Sarapis had frequently held in the public cults of Greece. The goddess Isis as she was presented in the Mysteries, however, must have drawn a more devoted and significant type of worship than was ever inspired by a civic deity. Not only are the statues and monuments of her worship found in all parts of the Roman Empire and her symbols quite commonly used on rings, gems, pins, and other jewellery, but many grave reliefs and tombs show representations of her symbols, particularly the *sistrum* and the *titula*. The deceased, if a woman, was frequently portrayed on the funeral monument in the costume characteristic of the deity.

ISMENE, see ANTIGONE (1).

ISOCRATES (436-338 B.C.), Athenian orator, is reputed to have studied under Prodicus and Protagoras, to have visited Gorgias in Sicily, and to have been a friend of Socrates. His family estate having been dissipated in the course of the Peloponnesian War, he adopted the profession of rhetoric. He at one time conducted a school of rhetoric in Chios—perhaps in 404-403 (Jebb). Owing to nervousness and the poorness of his voice he never appeared in court, but between 403 and 392 he composed numerous speeches for others. About the latter date he opened a school at Athens, and continued his work as a teacher till after 351. The last period of his life was mainly occupied in writing: his intellect remained unimpaired to the end, for at the age of ninety he published one of his most important works, the *Philippus*; and between 342 and 339 he wrote the *Panathenaicus*. His last composition was a letter congratulating Philip of Macedon on his victory at Chaeronea (338). He died a few days later.

2. Isocrates, apart from his technical skill, is important for his views on education and his political theories. (a) He may himself be described as a sophist in the older and honourable sense of educator. He used the speech-form as Plato used the dialogue, where modern practice uses the essay. Most of his speeches and some of his letters are simply tracts. *On the Sophists* is directed not against the profession as a whole, but against those members of it who betray their high calling; they are dishonest, for they promise more than they can possibly perform. Only the first half, composed c. 390, is extant, and it contains only destructive criticism; but the speech *On the Antidosis*, c. 355, contains I.'s *apologia* for his own life and profession. His 'Philosophy' is distinguished from abstract speculation, from 'eristic', from literary work *per se*, and from the practical rhetoric of the law courts. It is, in fact, a laborious training for practical political life.

(b) Isocrates was a patriot, but beyond the narrow limits of life in a city-state he could look out on a Hellenism which was to civilize the world. In 380 he composed the *Panegyricus* for recitation at the Olympic festival. He saw no way to establish peace and unity unless some common cause could teach the Greeks to regard themselves as a nation. He suggested that Sparta and Athens should make a compromise in their claims to leadership and head a union of all States in a national war against Persia. His hopes were dashed by the rise of Thebes to supremacy, but in 368 he suggested to Dionysius of Syracuse that he should come forward as a national champion. Again disappointed, he appealed in 356 to Archidamus, king of Sparta, to put an end to civil war and curb the insolence of the barbarians. Finally, in 346, I. directed a masterly appeal to Philip of Macedon to take the lead and unite the four principal cities in a great expedition to conquer the East. After the battle of Chaeronea he may well have thought that his hopes could at last be realized.

3. WORKS. (a) Educational. *Against the Sophists* (390 B.C.). *On the Antidosis* (355 or 353)—the forensic form, though suggested by the fact that I. had been respondent in a case for *antidosis* in 355, is not maintained throughout.

(b) Political. *Panegyricus* (c. 380). *Plataicus* purports to be a speech for delivery in the Ecclesia on the occasion of the destruction of Plataea by the Thebans in 373. *On the Peace* (355) includes strong criticism of Athens' present politics and of the treatment of her allies under the old Empire. *Areopagiticus* (355) supplements the *De Pace* and contrasts the conditions of life under Solon and Cleisthenes with those of I.'s own days. *Philippus* (346 B.C.), see supra. *Archidamus*, an imaginary speech by the Spartan king discussing proposals of peace made by Thebes (366).

(c) Exhortations. *To Demonicus* and *To Nicocles* (374) concern the duties of a monarch, *Nicocles* (372) the duties of subjects.

(d) Epideictic Speeches. The *Busiris* (391) and *Encomium of Helen* (370) show how legendary subjects should be treated (see ENCOMIUM). The *Evagoras* (c. 365) is a panegyric on the late king of Salamis. The *Panathenaicus* (342-339) deals mainly with the historical aspect of the greatness of Athens.

(e) Forensic Speeches. I. considered this type of speech unworthy of him. We possess six examples of such early work. The *De Bigis* (No. 16) is spoken by the younger Alcibiades against Tisias, who asserts that the father of A. robbed him of a team of horses.

(f) Letters. A number of letters, mostly addressed to kings, are ascribed to I. Their authenticity, often disputed, is defended by Blass (*Att. Ber.* ii. 326-31).

4. The works of Isocrates represent Attic prose in its most elaborate form. Dionysius (*Comp.* 23) compared it to 'closely woven material', or 'a picture in which the

lights melt imperceptibly into shadows'. He seems, in fact, to have paid more attention to mere expression than any other Greek writer. He was so careful to avoid hiatus that Dionysius could find no single instance in the whole of the *Arcopagiticus*; he was very sparing even in the elision of short vowels, and crasis, except of *καί* and *αἰ*, occurs rarely. Dissonance of consonants, due to the repetition of similar syllables in successive words, and the combination of letters which are hard to pronounce together, is similarly avoided. These objects are attained without any perceptible dislocation of the natural order of words. Another characteristic of the style is the author's attention to rhythm; though avoiding poetical metres, he considered that prose should have rhythms of its own, and approved of certain combinations of trochee and iambus. His periods are artistic and elaborate; the structure of some of the longer sentences is so complex that he overreaches himself; he sacrifices lucidity to form, and becomes monotonous. His vocabulary is almost as pure as that of Lysias, but while the simplicity of Lysias appears natural, the smoothness of Isocrates is studied.

ISOPOLITEIA is a term that probably originated in the practice of granting citizenship to new citizens on terms of equality with older citizens and thus means practically the same as *politeia*. The word was used frequently in grants to individuals but also became a technical term, used both in documents and literature, for grants to the entire citizen body of a State and particularly for reciprocal grants between two States. This use of the term occurs first in the second half of the third century, though the institution existed earlier; a unilateral grant occurs as early as 405/4 B.C. (Athens to the Samians), and there were several reciprocal grants in the fourth century. Cities connected by *isopoliteia* were not merged but remained distinct; in fact *isopoliteia* is included in several treaties of alliance. Instead, the citizens of one State became potential citizens of the other; to become active citizens it was necessary to establish residence and be registered. For the others there were such privileges as *enktesis* (the right to own land), *epigamia* (the right to contract a marriage), and the right to trade without paying import and export duties. *Isopoliteia* was used extensively by Miletus and the Aetolians.

MODERN LITERATURE: C. Lécrivain in *Dar.-Sag.*, s.v.; J. Oehler, *Phil.*, s.v.; E. Szanto, *Das griechische Bürgerrecht* (1892), ch. 2; G. Busolt, *Griechische Staatskunde*, index. J. A. O. L.

ISTER was the name given by the Greeks to the lower Danube. From a knowledge of its estuary, where they established a colony before 600 B.C. (see **ISTRIA** 1), the Greeks drew conclusions as to the size of the Danube. Hesiod mentioned it as one of the four great streams of the world (*Theog.* 337). Herodotus regarded it as the largest river of Europe and a northern counterpart to the Nile (4. 47-51). He correctly stated that it had a constant volume of water, but mistakenly assumed that its last bend was to the south and was quite in the dark as to its source. In the third and second centuries the Greeks probably ascended as far as the Iron Gates, but they remained ignorant as to the river's upper course; perhaps misled by a vague inkling of the river Save, and by the name of the Histri in the hinterland of Trieste, they imagined that the Ister threw off an

arm into the Adriatic. This error was corrected by the Roman advance from Italy into the Danube basin after 200 B.C.; the identity of the Ister with the Danuvius was probably established during Octavian's Illyrian campaign in 35 B.C. (Sall. *Hist.* fr. 79). See also **DANUVIUS**.

M. C.

ISTER of Cyrene (c. 250-200 B.C.), pupil of Callimachus. His chief work was concerned with the mythical period of Attica in some sixteen books, quoted under various titles, *Συναγωγή τῶν Ἀθιδῶν*, *Ἀττικά*, etc. Contrary to the practice of the other attidographers, Ister in none of the fragments refers to the historical period, and there is no trace of any chronological arrangement. Accounts of festivals and cults appear in widely different books, which suggests a subject system, perhaps by kings or localities. It was a compilation from the earlier attidographers dealing only with the mythical period, and the last in the series of *Ἀθιδῶν*.

ISTHMA. The Isthmian Games were athletic competitions held at Corinth in honour of Poseidon, the prize being a crown of wild celery. According to one legend they were founded by Sisyphus, king of Corinth, to commemorate his kinsman the sea-god Melicertes Palaemon. The Athenians preferred the story that they were established by Theseus after he had killed the robber chief Sinis. This was one reason why the Athenians especially patronized the Isthmian Games, but there were others: the journey was easily made, Corinth was the pleasure city of Greece, and, although there was less parade, there were more amusements at the Isthmian than at the other three festivals. They were definitely organized, as an international festival held in every second year, in 581 B.C.

F. A. W.

ISTRIA (1) or **ISTRUS**, a Milesian colony, founded between 650 and 600 B.C. on an island south of the Danube estuary. Originally a fishing-village, it soon became a trading centre for the lower Danube basin, where it distributed Ionian, Corinthian, and (after 525 B.C.) Attic pottery. It maintained a factory near modern Braila, and its coins had a wide currency. In the third century it forwarded Greek wines (especially those of Thasos and Rhodes) as far as the Iron Gates, and withstood attempts by Lysimachus to curtail its independence (315), and by the Byzantines to control its commerce (260). After 200 Istria was often attacked by the hinterland peoples; in 72 M. Lucullus made it into a Roman dependency.

M. C.

ISTRIA (2) or **HISTRIA**, a peninsula at the north-eastern extremity of the Adriatic, lying between Venetia and Illyricum and extending inland towards the Julian Alps. The Illyrian Istri inhabited the peninsula, eastwards to the plateau of the Cicceria and Monte Maggiore, and to the river Arsia; the western strip of the Istrian Peninsula was inhabited by the Liburni. The Istri were known as pirates, but the Romans did not interfere before 221 B.C., when the Istri seized a ship carrying corn. How far they were subdued then is not known, for the Second Punic War must have hindered the Romans from establishing their power in Istria. As the Istri showed a hostile attitude when Aquileia was founded, the Romans conquered them after capturing their chief settlement (178-177). Though under Roman supremacy, the Istri did not cease threatening Aquileia, as is shown by Livy 43. 1. 5 (171 B.C.). In 129 the Istri and Iapudes were defeated by C. Sempronius Tuditanus (cf. *CH.* i. 652 and addit., p. 725). In 32 the Istri attacked Terpete (*Trieste*), to whose aid Caesar sent troops; this probably was the reason for their siding with Pompey in the Civil War. In the west their territory must once have reached the

Timavus (Strabo 5. 9, 215 c), but the Formio was made the frontier in the first century B.C., no doubt because the Celtic Carni had occupied the territory round Tergeste. Istria, which was part of Illyricum during the Republic, became part of Italy under Augustus, and with Venetia formed *regio X*.

ISYLLUS of Epidaurus, author of six poems found inscribed at Epidaurus in a hand of about 300 B.C. Nos. I and III are dedications, the first in trochaic tetrameters, the other in an elegiac couplet followed by three hexameters. II is a hexameter poem in which the poet praises himself for the introduction of a procession to Phoebus and Asclepius to Epidaurus. IV is a paean to Apollo and Asclepius, and V a hymn in hexameters to Asclepius, in which the poet thanks the god for defending Sparta from the attack of King Philip, and which may refer to the war of 338 B.C. The poems have little poetical merit.

ITALIC DIALECTS, *see* DIALECTS, ITALIC.

ITALICA (nowadays *Santiponce* near Seville) was founded by Scipio Africanus as an outpost against the Lusitanians (206 B.C.). It received municipal status, probably from Augustus, and contributed to Rome three emperors, Trajan, Hadrian (who made it a *colonia*), and Theodosius I. Its wealth is attested by the remains of the fourth largest amphitheatre of the Roman world, and by its coins, statues, mosaics, etc. (Seville Museum). The magnitude of its oil exports is indicated by the fragments of amphorae from Italica in the Monte Testaccio at Rome.

Conde de Aguiar, *Italica* (1929).

J. J. Van N.

ITALY. The name *Italia*, probably a graecized form of Italic Vitelia (= 'calf-land'), was originally restricted to the southern half of the 'toe' but was gradually extended. By 450 B.C. it meant the region subsequently inhabited by the Bruttii (q.v.) (Theophr. *Hist. Pl.* 5. 8); by 400 it embraced Lucania (q.v.) as well (Thuc. 6. 4; 7. 33). Campania (q.v.) was included after 325, and by Pyrrhus' day Italia as a geographical expression meant everything south of Liguria and Cisalpine (q.v.) Gaul (Zonar. 8. 17); this area, however, only acquired political unity after the Social War. Cisalpine Gaul was not officially incorporated until Augustus' time when, accordingly, Italy reached its natural Alpine frontiers. Unofficially, however, whatever the administrative divisions, the whole country south of the Alps has been called Italy from Polybius' time onwards. The Augustan poets also call Italy *Hesperia* (= 'the western land'), *Saturnia* (= strictly Latium), *Oenotria* (= strictly SW. Italy), *Ausonia* (= 'the land of the Ausones', *Opica* to the Greeks: strictly Campania).

2. Italy's greatest length is roughly 700 miles; the greatest breadth of the peninsula proper is some 150 miles. Its long coast-line possesses comparatively few, mostly indifferent, ports, Genoa, Spezzia, Naples, Tarentum, Brundisium, Ancona, and Pola being noteworthy exceptions. In compensation, however, Italy could exploit its central position to build a Mediterranean empire. Mountains, valleys, and plains in juxtaposition feature the Italian landscape. On the north are the Alps, a natural but not impassable frontier: the Carnic Alps pass is not formidable and the Brenner from time immemorial has been used by invaders attracted by Italy's pleasant climate, fertility, and beauty; the Alps actually are steeper on the Italian side. Between Alps

and Apennines lies the indefensible North Italian plain watered by the Padus (q.v.). The Apennines (q.v.) traverse peninsular Italy, impeding but not actually preventing communications; the ancients' belief that they abounded in minerals was erroneous, since Italy only possessed some alluvial gold, copper (Etruria), iron (Elba), and marble (Liguria).

3. Despite fertile upland valleys the mountain districts usually permitted only a frugal existence. The plains, however, were amazingly productive, being enriched partly by volcanic activity (Euganean district in the north, Alban Hills in Latium (q.v.), Mons Vultur in Apulia (q.v.), the still-active Vesuvius in Campania), partly by fertilizing silt carried down by numerous rivers which in winter contained adequate amounts of water. (Northern Italy also possessed important lakes, but not central and southern Italy apart from Trasimene, Fucinus, and water-filled craters like Albanus and Avernus.) Italy's natural products were consequently abundant and varied: olives, various fruits, cereals, timber, etc., even though some typically Italian products of to-day, e.g. oranges, were unknown in antiquity. The variety is explained chiefly by the varied climate, which is temperate if not cold in the mountains and northern Italy and warm if not hot in southern Italy. Possibly the ancient climate was slightly more equable; malaria was certainly less prevalent. Italy contained excellent pasture; in many districts ranching supplanted agriculture. Also its seas abounded in fish.

4. Italy was thus well adapted to support human life and attract invaders, and actually did so from very early times. Traces of Neanderthal not to mention palaeolithic man have been found, while remains of neolithic people, chalcolithic *terramaricoli* (*see* TERREMARE), and iron-using Villanovans (q.v.) are copious. Long before the rise of Rome Italy was well populated and civilized from end to end. On the east coast were Illyrian immigrants: Veneti, Picenes, Messapii (qq.v.); these occasionally penetrated to the west. Hardy Sabelli (q.v.) and the related Umbrians and Volsci (qq.v.) held and tended to expand from the mountainous central regions. The southern coast-lands comprised Magna Graecia (q.v.). In the north Gauls began to settle c. 400. Various peoples inhabited the west: Ligurians, who were possibly of neolithic stock and originally held a wider area; Etruscans; Latini and the related Falisci and Hernici (qq.v.); Aurunci-Ausones and Oenotri (= Sicels?). These various peoples differed greatly from one another in race, language, and civilization, and Italy's mountainous configuration accentuated and perpetuated their mutual divergencies.

5. But ultimately they were united under the hegemony of Rome. Her political unification of Italy, however, was a protracted task finally accomplished only in Augustus' day. The romanization of Italy took much longer and, indeed, was never fully achieved.

6. After unifying Italy Augustus divided it into eleven administrative districts:

- i. Latium, Campania, Picentini district.
- ii. Apulia, Calabria, Hirpini district.
- iii. Lucania, Ager Bruttius.
- iv. Region inhabited by Samnites, Frentani, Marrucini, Marsi, Paeligni, Aequiculi, Vestini, Sabini.
- v. Picenum, Praetuttii district.
- vi. Umbria, Ager Gallicus.
- vii. Etruria.
- viii. Gallia Cispadana.
- ix. Liguria.
- x. Venetia, Istria, Ccnomani district.
- xi. Gallia Transpadana.

This arrangement lasted almost unaltered until Constantine's time, when the islands were customarily included in Italy.

BIBLIOGRAPHY

ANCIENT SOURCES: Strabo's detailed description (bks. 5 and 6) is good; *inter alia* it corrects Polybius' assertion (2. 14) that Ptolemy's account (*HN* 3. 38-132) is based on Pomponius Mela (2. 58-73). Ptolemy's *Itinerarium* are less important. Amongst others Varro (*Rust.* 1. 2. 11), Virgil (*G.* 2. 136 f.), Dionysius of Halicarnassus (1. 36 f.), Propertius (3. 22. 17 f.), Pliny (*HN* 37. 201 f.), and Rutilius Namatianus (2. 17 f.) extol Italy's beauty and fertility. Roads are described in the Itineraries, especially the Antonine Itinerary (4th-c. copy of a work of c. A.D. 212) and Peutingerian Table which is probably based on Castorius' world-map of A.D. 366. See, too, the separate articles: VIA APPIA, etc.

ITERDUCA, see JUNO.

ITHACA was the name given by the Greeks in historical times to the small island east of Cephallenia (mod. *Thiaki*). This island conforms generally to the description of Homer's Ithaca, but ancient writers found a difficulty in *Od.* 9. 21-7, and especially in ll. 25-6, where Ithaca is described as the outermost and westernmost of the Ionian isles, which Thiaki is not; and Strabo (10. 454-5) was not successful in explaining this passage away. The problem was recently restated by W. Dörpfeld, who identified Homer's Ithaca with Leucas and sought to prove his case by excavation. Others defend the claims of Thiaki, and British scholars have excavated several sites on Thiaki. On both islands remains of the appropriate (Late Helladic) date have been found, but nothing decisively Homer's has come to light. The question therefore remains an open one.

For recent summaries of either theory, see W. Dörpfeld, *Alt-Ithaka* (1927), and Sir Rennell Rodd, *Homer's Ithaca* (1927); also Büchener in *PIV* xii. 2240-57. M. C.

ITHOME, a prominent and easily fortified mountain rising isolated in the Messenian plain (2,646 feet), was the rallying point of the Messenians in their struggles for independence against Sparta. In the first Messenian War they held it for twenty years; on its fall they lost their freedom. In 464 the revolted helots fortified it, and maintained it against all assaults. Epaminondas founded the town of Messene on its west side, fortifying it with some of the finest extant Greek walls, which include Ithome as an acropolis.

Tyrtæus; *Thuc.* 1. 101-3.

T. J. D.

ITHYPHALLIC VERSE, see METRE, GREEK, III (2).

ITINERARIES were in the form of *itineraria adnotata* (road-books) and *itineraria picta* (maps). Much of the information used by the compilers of such productions was originally derived from the map of the Roman Empire set up in Rome under Augustus by Agrippa (Plin. *HN* 3. 17), but with the development of the road-system the amount of detail available was greatly increased. The most important surviving example of an *itinerarium adnotatum* is the so-called Antonine Itinerary, which probably dates from the early third century A.D. but contains later additions. It covers almost the whole of the Empire, but its arrangement is so unsystematic that it can scarcely be an official publication. It is, however, of great value in establishing the sites and

names of Roman towns. Other itineraries are the *Itinerarium Maritimum*, which gives distances by sea in the Mediterranean, and the Jerusalem Itinerary, composed in the fourth century for pilgrims to the Holy Land. The latter follows the roads from Bordeaux to North Italy, Sirmium, and Constantinople, and then through Asia Minor, and gives two alternative routes for the return journey. The only extant example of the *itinerarium pictum* is the so-called Peutinger Table. As it is in the form of a strip of 21 feet by 1 it is not a map in the modern sense: it gives not only distances but representations of natural features. Itineraries were regarded as of special value to generals operating in unfamiliar country.

H. F. Tozer, *History of Ancient Geography*³ (1935). 366 ff.; W. Kubitschek, s.v. 'Itinerarien' in *PW*; G. Parthey and M. Pinder, edition of Antonine Itinerary (1846). G. H. S.

ITINERARIUM AETHERIAE ABBATISSAE, see PEREGRINATIO AD LOCA SANCTA.

ITURAEA. The Ituraeans, a predatory Arab people, occupied the Libanus, Antilibanus, and Hermon, and the Massyas, where lay Chalcis their capital and Heliopolis (q.v.) their religious centre. In the early first century B.C., under their tetrarch and high-priest Ptolemy, they almost captured Damascus, having conquered most of the country north and south of it. Ptolemy was confirmed by Pompey (64); his son Lysanias was killed by Antony (35), who granted his dominions to Cleopatra. The tetrarchy was restored by Octavian (30) to Zenodorus, who was, however, soon deprived of most of it owing to his depredations (24). Parts were granted to Herytus, Sidon, and Damascus; part became the tetrarchy of Abilene; Batanaea, Trachonitis, and Auranitis went to Herod, who on Zenodorus' death in 20 received Pnacas and Gaulanitis also. Herod's Ituraean dominions passed to his son Philip (4 B.C.-A.D. 34), Agrippa I (37-44), who from 41 also ruled Abilene, and Agrippa II (53-c. 93), who ruled Abilene and in addition Arcene, an Ituraean tetrarchy in northern Libanus which had never belonged to the main principality. Chalcis formed a kingdom for Herod, brother of Agrippa I (41-8) and Agrippa II (50-3). The Ituraeans were gradually broken of their predatory habits, but remained a primitive people, living in villages. Famed as archers, they contributed three cohorts and an *ala* to the imperial army.

ITYLUS, see AEDON.

ITYS, see PHILOMELA.

IUDEX. In the Roman civil procedure (see LAW AND PROCEDURE, ROMAN, II), with its bipartite arrangement in two stages in *iure* and *apud iudicem*, the *iudex* was a private person taken from the higher social classes (senators and, later, *equites*). No special juridical education was legally required; only persons with physical defects, women, and *minores* were excluded. For a particular trial the judge was designated by both parties, or, in default of such agreement, by choice from a panel of qualified jurors (*album iudicum*). Normally the plaintiff proposed the judge, but the defendant could reject persons whose impartiality seemed to him suspect. The parties' choice, approved by the magistrate in *iure*, was binding for the *iudex*, who was unable to refuse the commission conferred upon him by the magistrate's *iussu iudicandi*, except when he could adduce motives for exemption such as old age, a numerous family, or a privileged profession (philosopher, physician, rhetorician). For the proceedings *apud iudicem* see the article quoted above. The functions of the *iudex*, assisted during the trial by juridical advisers (*consilium*), ended

with the sentence pronounced by him orally in the presence of the litigants. He could, however, refuse to pass a sentence when the matter did not appear to him quite cleared up, in which case the trial was repeated before another *iudex*. In classical times the *iudex* had full discretion in appraising the evidence and was not bound by previous decisions in similar cases. Nevertheless, judicial sentences (*res iudicatae*) tended to acquire authority in later times (*Dig.* 1. 3. 38) and were not without influence on the evolution of the law. The *iudex* was responsible to the wronged party for an unjust decision passed by unfairness or negligence. The XII Tables punished by death the judge convicted of bribery; the praetorian edict introduced a special civil remedy against the careless or corrupt judge (*qui litem suam fecit*). In special cases the judge was called *arbiter* (being more expert than *iudex*), where the matter at dispute required more professional knowledge, or estimates and technical calculations, as in the division of property or inheritance. His discretion was larger than that of *iudex*. As a rule a single judge was provided (*unus iudex*), but there were also courts composed of several persons, *recuperatores*, *centumviri* (qq.v.), and *decemviri stlitibus iudicandis* (see VIGINTISEXVIRI).

In the *cognitio extra ordinem* the judge was appointed by the imperial law officer alone or later by the emperor, independently of the parties. He was now called *iudex datus*, *pedaneus*, or *specialis*, and his competence (final decision or only a partial cognition of the case) depended on his commission. Under the late Empire the use of the term *iudex* became much larger: each official endowed with jurisdictional or administrative power was so called. Therefore '*iudex*' was often interpolated in classical texts in place of judicial magistrates. Justinian's constitution, *Cod.* 3. 1. 14. 1, demonstrates the wide application of the term.

For the bibliography, see the article quoted above. A. Steinwenter, *PW*, s.v. '*iudex*' (vol. ix and Suppl. v); J. Mazeaud, *La Nomination de unus iudex* (1933); P. Collinet, *Le Rôle des juges* (Recueil d'études F. Gén y, 1935). A. B.

IUDICIA POPULI. An old Roman rule sanctioned by the XII Tables prescribed that only the people assembled in *Comitia Centuriata* could pass sentence of death on a Roman citizen. Hence each capital sentence passed by the competent magistrate (except the dictator) was subject to revision in a trial before the people (*iudicium populi*), judging in second instance on account of the appeal (*provocatio ad populum*) of the condemned. Appeal was also admitted when the magistrate imposed a fine (*multa*) exceeding the legal maximum (thirty oxen and two sheep or about 3,000 *asses*); such matters were brought before the Tribal Assembly.

The proceedings before the magistrate in cases where a *iudicium populi* was obligatory (only on appeal from a citizen) were peculiar in that the investigation by the magistrate was made *in contione*, i.e. before the assembled people, who subsequently judged by what they heard, as repetition of the evidence was not prescribed. The people had no option but wholly to confirm or to quash the magistrate's sentence; alteration was not admissible. The case was decided by a majority of votes; voting was by word of mouth until 107 B.C., by ballot after that date. A magisterial acquittal was final. The activity of the *iudicia populi* diminished with the increase of criminal jurisdiction by *quaestiones* (q.v.). As a manifestation of civic liberty they could not survive the Republic.

Mommsen, *Röm. Strafr.* (1899); C. H. Brecht, *Sav. Zeitschr.* lix (1939), 261 ff.; E. G. Hardy, *JRS* 1913, 25 ff. A. B.

IUDICIUM, see LAW AND PROCEDURE, ROMAN, II. 6.

IULUS, see ASCANIUS.

IUNO, see JUNO.

IUPPITER, see JUPITER.

IURIDICUS was a judicial functionary of praetorian rank in Italy (except Rome and its environs), nominated by the emperor. The first mention of *iuridici* is in A.D. 163. By introducing them Marcus Aurelius imitated the *consulares* created by Hadrian but abolished by Antoninus Pius. The field of their competence (confined to civil cases) was one or more districts, *regiones*; the procedure was *cognitio extra ordinem*. The *iuridici* disappear under Diocletian; later uses of this title (as in the *Digest*) are to be referred to the *iuridicus Alexandriae*, a high jurisdictional officer in Egypt, known also from the Greek papyri as *δικαιοδότης*. In other imperial provinces there were *legati iuridici* (called in some inscriptions simply *iuridici*), also appointed by the emperor, with a limited jurisdictional competence. A. B.

IUS CIVILE. This term appears in different senses. Its original signification, derived from the definition '*ius quod quisque populus ipse sibi constituit*', was the proper law of and for Roman citizens. The earliest *ius civile* was called *ius Quiritium*. In contradistinction to *ius honorarium* or *praetorium*, which comprehends the law introduced by the magistrates and especially by *praetores* (see *EDICTUM*) in order to support, amplify, or correct the *ius civile*, the latter includes the law originating in other sources (*Dig.* 1. 1. 7), such as legislation of the *comitia (leges)* or *concilia plebis (plebiscita)*, *senatus consulta*, authority of jurists, and imperial constitutions (see *CONSTITUTIONES*). Another contrast is between *ius civile* (in its widest sense, including the law in all its appearances arising from all recognized legal sources) and *ius naturale*, a vague conception influenced by Greek philosophy, not elaborated by the Roman jurisprudence as a legal notion and far from being a real source of law. Its content is all '*quod naturalis ratio inter omnes homines constituit*' (Gaius), and therefore it is always *aequum et bonum* (*Dig.* 1. 1. 11), and in this sense it coincides (by a false terminology) with *ius gentium*, as a law common to all peoples, '*ius quo omnes gentes utuntur*'. For the contrast between *ius civile* and *ius gentium*, wherein *ius civile* signifies the law applied exclusively to Roman citizens, see IUS GENTIUM. A. B.

IUS GENTIUM. This term has two main senses: (1) legal rules concerning relations between two independent States in times of peace and war corresponding to the modern international law; (2) the complex of legal institutes and rules which, originating in commercial and other contracts between Romans and foreigners, infiltrated and fertilized the Roman private law. Originally the relations between Romans and foreigners were based solely on reciprocal trust, as the formal institutions of the old *ius civile* and the procedure of *legis actiones* were inaccessible to *peregrini* acting generally according to the laws of their own State. The development of international trade made it necessary to recognize some institutions of other legal systems, which, being free from the rigid formalities of Roman law, were applied profitably in commercial relations, and to admit foreigners to the legal protection of Roman courts and specific Roman institutions (adapted, e.g., by using the foreigner's language in the *stipulatio*). From this arose—especially after the creation of *praetores peregrini*, who had occasion to adopt legal principles and ideas from the law of other nations in trials between Romans and *peregrini*—a new mass of legal rules which grew continuously with the subjection of other nations and acquisition of new provinces. This *ius gentium* represents in the development of Roman private law a later stratum of highest importance, in that it was equally applied to Romans and non-Romans.

It exercised a special influence on the law of contracts,

whilst the law of family and succession preserved more faithfully its national character. The final result was the complete fusion of the old *ius civile* and the new *ius gentium* into one system, some parts of which retained more elements of the former, whilst others retained more of the latter. After the *Constitutio Antoniniana de Civitate*, when the same law was applied to Romans and *peregrini*, the distinction between *ius civile* and *ius gentium* was only an historical reminiscence. See IUS CIVILE.

A. B.

IUS ITALICUM represents the legal quality of the territory of a Roman colony in Italy or, later, of Italian ground in general: the land is free from *tributum soli* and can be possessed in full ownership *ex iure Quiritium*; the inhabitants are not liable to *tributum capitis*. The distinction arose when colonies were founded outside Italy, from which such privileges might be withheld. Under the Empire this was the highest privilege obtainable by a provincial municipality. Augustus only gave it to genuine citizen colonies, mostly his eastern foundations. Later it was granted along with colonial rights to Roman municipalities, but, for fiscal reasons, sparingly. Severus, however, distributed it not only to three municipalities of Africa, his native province, but, after their co-operation in the civil war, to several Greek cities. This development typified the assimilation of East and West, which the *Constitutio Antoniniana* completed (see CITIZENSHIP, ROMAN).

For bibliography, see COLONIZATION, ROMAN.

A. N. S.-W.

IUS LATII. The Latin rights of the Empire were a continuation of the rights enjoyed by the Latin Name (see LATINI) of the Republic, which were derived from the social and political ties existing between the original *populi Latini*. Latins after 338 B.C. shared *comubium* and *commercium* (q.v.) with Rome, and possessed the *ius mutandae civitatis* together with the closely associated *ius exsilii*. Hereby individual Latins settling permanently in Rome acquired the Roman citizenship, and vice versa. Later, when this encouraged the depopulation of the Latin States, the more limited *ius civitatis per honorem adipiscendae* was substituted for it (c. 150 B.C.). This gave Roman citizenship to Latins holding the magistracies of their local communities. Less important was the right of Latins temporarily resident in Rome to vote in the *concilium plebis*. The *ius provocacionis* was possibly added in 122 B.C. There were no different kinds of Latin rights, although sometimes special regulations might be included in the charter establishing a Latin colony or group of colonies. In 89 B.C. Latin rights were conferred *en bloc* upon the Transpadane Gauls. Their communities were remodelled on the pattern of the earlier Latin colonies, adopting Latin language and law. When in 49 B.C. the Transpadanes received Roman citizenship, *ius Latii* was extended to many parts of *Gallia Narbonensis* and *Hispania Ulterior*, and thus became an intermediate, temporary stage—henceforth stereotyped—in the promotion of *peregrini* to Roman citizenship. Under Hadrian *Latium maius* appeared, whereby *decuriones* (q.v.), as well as magistrates, received the citizenship *per honorem*.

For bibliography, see LATINI.

A. N. S.-W.

IUS PRIMAE RELATIONIS. When in 23 B.C. Augustus ceased to hold the consulship, certain compensatory rights and powers were voted to him by the Senate in order that his position might not be weakened, among them the *ius primae relationis* (Dio Cass. 53. 32. 5). His *tribunicia potestas* gave him the right to introduce business in the Senate: the *ius primae relationis* either allowed him to submit proposals to the Senate in writing (so Mommsen, *Staatsr.* II(3), §99) or, far more probably, gave him, for one piece of business at each meeting of the Senate, the prior right of reference that would otherwise

have belonged to the consuls (so H. F. Pellian, *Essays in Roman History* (1911), 74-7). This right is specified as '*relationem facere*' in the *Lex de imperio Vespasiani* (Dessau, *ILS* 244). Later the number of items of business for which the emperor was given precedence was raised as high as five (*Vita Alexandri* 1).

J. P. B.

IUS TRIUM LIBERORUM, a privileged status which was conferred by the *Lex Papia Poppaea* (A.D. 9) upon the fathers of three children at Rome, of four children in Italy, and of five children in the provinces. Other persons (e.g. Pliny the Younger) obtained this status by special grant of the emperor. Persons possessing the *ius trium liberorum* were exempted from various charges (e.g. that of guardianship), and had a prior claim to magistracies.

M. C.

IUSIURANDUM. In some trials the oath of a litigant could terminate litigation already *in iure*, when the plaintiff offered an oath (*deferre*) to the defendant and the latter swore that he did not owe anything to the plaintiff. He might, however, offer back the oath (*referre*) to the plaintiff, who in this case was obliged to swear to his claim. Refusal entailed loss of the case. In some special cases a *iusiurandum calumniae* was admitted: on demand of a litigant his adversary was compelled to swear to the good faith of his claim or defence. Justinian made it likewise obligatory for the parties' advocates. In the proceedings *apud iudicem* the oath served only for evidence or assessment of the value of the object at issue.

Except in the matter of procedure the oath had but restricted application. An extra-judicial oath of a party affirming the truth of his claim gave occasion to a special action based solely on this fact.

A. B.

IUSTITIA, Roman equivalent of Dike (q.v.); mostly in poetry, but had a temple from 8 Jan. A.D. 13 (Ovid, *Pont.* 3. 6. 25, *Fasti Praen.* under 8 Jan.; see further Wissowa, *RR*² 353). In inscriptions she sometimes has the title *Augusta*.

IUSTITIUM (from *iuris stitium* = *ius sistere*), temporary suspension of all jurisdictional activity of magistrates, *iudices*, and courts, in civil and criminal matters, on account of events disturbing the whole of public life, as in the case of great national calamities, riots, and the like. A *iustitium* could be proclaimed by the Senate; it produced immediate suspension of *iurisdictio* and inhibition of *iudicia* (Cic. *Har. Resp.* 26. 55).

A. B.

IUVENES (or **IUVENTUS**—i.e. *Equestris ordinis iuventus*, Val. Max. 2. 2. 9). When, usually at the age of fourteen, a Roman boy adopted the *toga virilis*, he became a *iuvenis*. At the age of seventeen those who intended to follow an equestrian or a senatorial career started the military service which Augustus made a necessary preliminary to those careers. In the interval the *iuveneres* of fourteen to seventeen years of age who were *equites* (whose number included the sons of senators) served at Rome their *tirocinium*, a preparation for military service. They practised physical exercises and riding, paraded at great festivals, and held their own games, the *ludi sevirales* (the *lusus Troiae* being celebrated by those who were still *pueri*). This institution, which had precedents in the Roman Republic (Cic. *Caehl.* 11), was thoroughly organized by Augustus, with a view to invigorating the youth of the upper classes at Rome (cf. Maecenas' speech, Dio Cass. 52. 26). It was extended also, for free-born youths, in the *municipia* of Italy and, by the second century A.D., had spread widely through the western provinces of the Empire. Nero held games called *Iuvenalia* and organized a body of picked youths, perhaps known as *Iuvenes Augustiani*. A *collegium iuvenum Augustianorum* was established later, perhaps by Domitian.

⁴ *Iuventus* was also used in a wider sense to indicate at Rome the whole body of *equites equo publico* (i.e. *equites* under the age of thirty-five who were still 'iuniores' technically, and sons of senators under the age of twenty-five who had not yet held a senatorial magistracy), organized in six *turmae* and parading, for inspection by the emperor, under the *sevir equitum* at the *recensio equitum*. This is the sense of *iuventus* in the courtesy title 'Princeps Iuventutis' (q.v.).

M. Rostovtzeff, 'Römische Blcitesserae', *Klio*, Beiheft iii (1905), 59-93. J. P. B.

IUVENTAS, goddess, not of youth or youthful beauty in general, but of the *iuvenes*, or men of military age (contrast *HEBE*). She had a shrine in the vestibule of Minerva's *cella* in the Capitoline temple (Dion. Hal. *Ant. Rom.* 3. 69. 5), and is said to have been there before the temple was built, she and *Terminus* (q.v.) refusing to leave (*ibid.* and *Livy* 5. 54. 7). When any young man took the *toga virilis*, a contribution was made to her temple chest (Dion. Hal. 4. 15. 5).

Cf. Wissowa, *RK*² 135 f.

H. J. R.

IUVENTUS, see *IUVENES*.

IXION, the Greek Cain, the first to murder one of his kin (Pindar, *Pyth.* 2. 31 f.); as other accounts (e.g. schol. Apoll. Rhod. 3. 62, quoting Pherecydes) make the victim his father-in-law *Eioneus*, whom he killed to avoid paying bride-price, either Pindar is speaking loosely or *Eioneus* was also his blood-relation. Zeus purified him, but he attempted the chastity of Hera; consequently he was first deceived with a cloud-image of her, on which he begat the Centaurs (q.v.) or their father, and afterwards attached to a revolving wheel. Pindar, *ibid.* 21 ff.; scholiasts on Pindar and Apollonius (above).

Weizsäcker in Roscher's *Lexikon* ii. 766 ff.; A. B. Cook, *Zeus* i. 198 ff. H. J. R.

IYNX (ἰνύξ 'wryneck') was in legend a nymph, daughter of Peitho or Echo, who by magic spells won the love of Zeus for herself (or for Io), and was turned to a bird by Hera. The legend may be due to the use of the wryneck, spread out on a wheel, as a love-charm, which Pindar says (*Pyth.* 4. 214) Aphrodite invented to enable Jason to obtain the love of Medea. The *inyx* used by Simaetha in Theocritus *Id.* 2 was probably a simple wheel, pierced with two holes, and threaded with string, the twisting of which caused the wheel to rotate (see Gow, *JHS* liv. 1-13). C. B.

J

JANICULUM, the prominent ridge on the west bank of the Tiber at Rome, some 3½ miles long. The name was anciently connected with Janus, but the only trace of his cult on the hill is the shrine of his son Fons or Fontus. The place was early a defensive outpost (*Livy* 1. 33) and was later enclosed in a great salient of Aurelian's Wall. Here lay the Locus Furrinae, scene of the death of C. Gracchus and later occupied by the temple of the Syrian cults favoured by Commodus and the Severi and restored by Julian.

The district was primarily industrial, with mills driven by the Aqua Traiana (*CIL* vi. 1711), and nurseries for sacred fish fed from the same source.

P. Gauckler, *Le Sanctuaire syrien du Janicule* (1912); F. Cumont, *CRAcad. Inscr.* 1917, 275-84; Darier, *Les Fouilles du Janicule à Rome* (1920). I. A. R.

JANUARIUS NEPOTIANUS, author of a loose and imperfect epitome of Valerius (q.v. 17) Maximus before the sixth century A.D. It was inferior to that by Julius Paris.

JANUS. The word properly means a gate or barbican (*Livy* 1. 19. 2 and often); especially the monument there named, the *Ianus geminus* in the Forum 'ad infimum Argiletum', though other structures of a like kind were so called also. They were mostly free-standing, not part of a city or other wall, and used originally for ceremonial purposes,* and it is very probable that such *iani* as that in the Forum were used for the formal setting out of an army or other party, to make sure that they began in the proper way. Hence *ianua*, the outer door of a house, and the god Janus, who is the *mumen* of both it and the arch. But to enter house or city one must pass through the gate or the door; hence Janus tended to become a god of beginnings. He is named at the beginning of any list of gods in a prayer, even before Jupiter (as *Livy* 8. 9. 6); the first month of the reformed calendar, Ianuarius, is his and his festival comes in it (see *AGONIUM*). His priest is the *rex sacrorum*, his proper

offering a ram, and the place the Regia (Varro, *Ling.* 6. 12; Ovid, *Fasti* 1. 318)—perhaps some ancient piece of ritual connected with the king's door. All this seems to have given rise to the notion that he was a very great god ('diuum deus', hymn of the Salii ap. Varro, op. cit. 7. 27), and finally a sky-god or cosmic god (e.g. Ovid, *ibid.* 101 ff., where see Frazer's note for modern adaptations of this theory). When represented otherwise than by the gate, his symbol was a double-faced head, a very old art-type, sometimes awkwardly joined to a body. The closing of the *Ianus geminus* signified peace (i.e. no need for war-magic).

Wissowa, *RK* 103 ff.; Platner-Ashby, p. 275 ff.

H. J. R.

JASON (ι) (Ἰάσων), in mythology, son of Aeson and leader of the Argonauts (q.v.). Apart from his adventures on the voyage the chief events in his life are as follows. On the usurpation of Pelias his parents smuggled him out of Ioleus, under cover of a mock funeral and a report of his death, and gave him to Chiron to bring up. On reaching young manhood he returned to claim his heritage, and arrived in the city with but one sandal, having lost the other in crossing a torrent. Pelias, who knew that the man with the one sandal was to be fatal to him (or in general, that one of the Aeolidae should overthrow him), managed to induce him to go for the Golden Fleece (Pindar, *Pyth.* 4. 71 ff., for earliest surviving account). The episode of the lost sandal is variously explained, the most interesting story being that Hera disguised as an old woman met him and asked to be taken across the river, in struggling through which he lost his shoe in the mud. It seems possible that originally Pelias did not neglect to sacrifice to her (Ap. Rhod. 1. 14) but refused to carry her across. See in general Apollonius, loc. cit. and schol.; *Γένος Ἀπολλωνίου*; Hyginus, *Fab.* 12 and 13. After the return from the voyage the chief incident is his desertion of Medea (q.v.; cf. CREON 1); thereafter there is nothing interesting save the manner of his death (foretold Eur. *Med.* 1386-7, whereon see schol.): as he slept under the stern of the Argo, part of it fell on him and killed him.

H. J. R.

* There is a right and a wrong way to march out through a gate (*Livy* 2. 49. 8); the Fabii go out to war 'infelici uia, dextro iano [arch] portae Carmentalis'.

JASON (2), tyrant of Pherae c. 380-370 B.C., probably son of Lycophron. He sought to gain control of all Thessaly, and finally gained his object in 374 by winning over Pharsalus. Elected *tagus* (q.v.), he modernized the organization of the Thessalian State and extended his influence over northern Greece. He maintained friendly relations with Athens and allied himself to the Thebans, who summoned him to Leuctra immediately after their victory (371). He refused to use his well-trained mercenaries on their behalf and negotiated an armistice between them and the Spartans. In 370 he caused alarm in Greece by mobilizing the entire Thessalian army at the time of the Pythian Games, but he was assassinated before the completion of his preparations, and their object remained unknown.

The success of Jason in uniting a potentially strong people, long weakened by inter-city feuds and external intervention, affords proof of his ability. His ambition to establish a Thessalian hegemony over Greece remained far from accomplishment, but his methods foreshadowed, and may in some degree have suggested, those adopted by Philip of Macedon.

Xenophon, *Hellenica* 6. 1. 2-19 and 4. 20-32; Diodorus, bk. 15. F. Stähelin, *PIW*, s.v.; H. T. Wade-Gery, *JHS* 1924, 51; H. D. Westlake, *Thessaly in the Fourth Century B.C.* (1935), chs. 4-6. H. D. W.

JASON (3), a hellenized Jew of Cyrene, wrote a history of the exploits of Judas Maccabaeus in five books, of which 2 Maccabees is an epitome; he was probably a contemporary (2 Macc. ii. 23).

JAVOLENUS PRISCUS, a prominent Roman jurist, born before A.D. 60, died after 120. He held high official and military appointments, governed as *legatus consularis* the provinces of Britannia, Germania Superior, and Syria, and became proconsul of Africa (cf. *CIL* iii. 2864, pp. 1062, 1965). He enjoyed a high reputation among his contemporaries and was chief of the Sabinian School; but posterity did not cite him very frequently. This may be explained by the fact that his literary production consisted mainly of epitomes of the works of elder jurists (*libri ex Cassio, ex Plautio, ex Posterioribus Labeonis*), in which the personal view of the author's part, and proved that he was a sagacious respondent and not only a critical and judicious epitomator. He was a renowned teacher: the great Salvius (q.v.) Julianus was his disciple.

A. Berger, s.v. 'Octavius Javolenus' (*PIW* xvii. 1830 ff.); *Bull. Inst. dir. rom.* xlv. 92 ff. (1937). A. H.

JAXARTES, Asiatic river (*Syr Darya*, flowing into the Aral Sea). Though known perhaps to Herodotus by repute, it was discovered by Alexander, who founded Alexandria Eschate (*Khodjend?*) on it. The Greeks thought that it flowed into the Caspian (which perhaps was once true—see *CASPIAN SEA*), and sometimes confused it with the Araxes (*Aras*). Ptolemy gives geographical details of tribes on its banks.

Strabo 11. 507 ff.; *Ptol. Geog.* 6. 12-14.

E. H. W.

JERUSALEM (*Ἱεροσόλυμα*), GREEK AND ROMAN, the capital of Palestine. The town, after the Babylonian captivity, was reoccupied by the Jews in 538 B.C., and the second Temple dedicated in 516; the walls were rebuilt in 445. It became a city, under the name of Antioch, early in the reign of Antiochus IV, who later (167) dedicated the Temple to Zeus Olympius, building a

citadel (the Acra) to dominate it. The Temple was rededicated to Jehovah in 164, and from 152 Jerusalem became the capital of the Maccabee kings, who in 142 demolished the Acra. Jerusalem was captured in 63 by Pompey, who demolished the walls; they were rebuilt by Caesar's permission in 47. In 37 the town was again stormed by Sosius, who handed it over to Herod. Herod adorned it with many buildings, a theatre, hippodrome, and amphitheatre, a palace protected by three famous towers (the Mariamne, Phasaël, and Hippicus), the fortress of Antonia, and the magnificent third Temple, which was severely damaged in the riots following his death, and slowly repaired by the Roman procurators. Agrippa I began to fortify the northern suburb Bezetha; Agrippa II paved the streets. Jerusalem was at this time a large and prosperous town, frequented by thousands of pilgrims. In the First Jewish War it was the centre of resistance and was razed by Titus in A.D. 70, becoming the camp of Legio X Fretensis. Reoccupied by Barcochba in the Second War, it was rebuilt by Hadrian in 135 ('Colonia Aelia Capitolina'), and was peopled with aliens, no Jew being allowed to enter it. Though immune and ruling a large territory, Aelia never flourished greatly, till the rise of Christianity revived the pilgrim traffic. Of the Herodian city there survive one of the three towers ('the Tower of David') and parts of the containing wall of the Temple platform (including 'the Wailing Wall'); of Aelia the east gate ('Pilate's Arch').

G. A. Smith, *Jerusalem* (1907-8); H. Vincent, F. M. Abel, *Jerusalem* (1922-6). A. H. M. J.

JEWISH GREEK LITERATURE. By the beginning of the second century B.C. the Greek language and Greek civilization were widely diffused over Judaea, and continued to flourish there up to the fall of Jerusalem. The revolt of the Maccabees against the extreme hellenization attempted by Antiochus Epiphanes (175-164 B.C.) stopped the spread of Greek religion, but not that of Greek culture; and Herod the Great (37-4 B.C.) was an enthusiastic Philhellene. But the Jews of the Diaspora were naturally more influenced by Hellenism than the Jews of Judaea. Jews were numerous in Egypt, particularly in Alexandria, the centre of Hellenistic-Judaic literature. Here the Septuagint (q.v.) translation of the Bible was made in the third and second centuries B.C. for the benefit of the Jews of the Diaspora, to whom Hebrew was largely an unknown tongue, and formed the foundation of Hellenistic-Judaic literature. This literature was largely apologetic and propagandist in aim, being designed to show that the Jews possessed all that was most valuable in Greek thought, an orientation which inevitably led to a certain hellenization of Jewish ideas.

The literary forms were sometimes Jewish (Hebraic histories, collections of wise sayings, prophetic books, etc.). At other times they were taken over from the Greeks—philosophy (see *PHILO* (4) and *ARISTONOLUS* (2)), sometimes in dialogue form, imaginary letters, epic, and tragedy, but no comedy. The first writer of Jewish history in Greek was the Jew Demetrius (end of 3rd c. B.C.), who wrote simply and did not hellenize the great figures of Jewish history. Eupolemus (q.v.) was freer in his treatment of the biblical tradition. The greatest of these historians were Josephus and Justus of Tiberias (qq.v.). See also **JASON** (3) and *FHG* iii. 211-30.

Three Jewish authors treated themes from Jewish history in the forms of Greek poetry. Philo the Elder (? c. 200 B.C.) wrote an epic, *Ἡπὶ τῇ Ἱεροσολύμῃ*, of which 24 lines in an obscure style survive (A. Ludwig, *De P. carmine graeco-iudaico*, 1920); Theodotus (date unknown) a *Ἦν Ἰουδαίου*, another epic of which 47 lines in a clear and simple style survive (A. Ludwig, *De T. carmine graeco-iudaico*, 1899). Ezechiel (date unknown) wrote a drama *Ἐξέστης*, describing the Exodus from Egypt; 269 trimeters survive, in simple Euripidean Greek

(A. Kuiper, *Mnemos.* xxviii (1900), 237-80). Among *pseudepigrapha* (see PSEUDEPIGRAPHIC LITERATURE) may be mentioned the fictitious letter of Aristeas about the Septuagint translation (Engl. Transl. H. St. J. Thackeray, 1917) and the *pseudo-Phocylidea*, probably of the first century A.D. (M. Rossbroich, *De pseudo-Phocylideis*, 1910). See, in general, E. Schürer, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* iii⁴ (1909).

J. D. D.

JEWS (in Greek and Roman times). A. JUDAEA. Early in Antiochus IV's reign the hellenized priestly aristocracy, led by Jason, who usurped the high-priesthood from his brother Onias, obtained from the king permission to establish a gymnasium and the ephebate, and to incorporate Jerusalem as the 'city of Antioch'. Misunderstanding this movement, Antiochus in 167 B.C. dedicated the Temple to Zeus Olympius and endeavoured to suppress Judaism, building a citadel in Jerusalem and occupying it with royal troops. The result was a profound religious reaction, which expressed itself in the formation of the Pharisee party, and a popular revolt, led by Judas Maccabaeus, a priest of the house of Hashmon. In 164 the regent Lysias allowed the Temple to be re-dedicated to Jehovah, but the hellenizing aristocracy remained in power and the revolt went on. Judas was killed in 160, but his brother Jonathan continued the fight, and was in 152 appointed high-priest by Alexander Balas, who sought his support against Demetrius I. In 150 he was rewarded with the governorship of Judaea, to which Demetrius II added three toparchies of Samarcitis. Jonathan was treacherously killed by Tryphon in 143, but his brother Simon in 142 expelled the Seleucid garrison and was confirmed as high-priest by a national assembly; he later conquered Joppa and colonized it with Jews. His son John Hyrcanus (134-104) was subdued by Antiochus VII, but after that ruler's death conquered the Samaritans and Idumaeans, forcibly converting the latter to Judaism. His elder son Aristobulus (104-103) took the title of king and conquered and judaized the Ituraeans of Galilee. His younger son Alexander Jannaeus (103-76) judaized the Peraea and captured and destroyed many cities on the coast and in the north-east.

2. But as it grew in military strength the dynasty lost touch with the people. John quarrelled with the Pharisees, and Alexander faced several popular revolts, which he quelled with his Pisdian mercenaries. His widow Alexandra Salome (76-69) reversed his policy, reigning peacefully with Pharisee support. On her death her younger son Aristobulus, supported by the discontented military leaders, expelled his brother Hyrcanus, who, incited by an Idumaeen noble, Antipater, fled to Aretas III of Arabia. Aretas was besieging Aristobulus in Jerusalem when Pompey intervened, stormed the city, and appointed Hyrcanus high-priest of an ethnarchy comprising Galilee, Samarcitis, Judaea, and Peraea; all the conquered cities, including Adora and Marisa in Idumaea, were made independent (63). Gabinius split the ethnarchy into five autonomous communes, leaving Hyrcanus only his spiritual powers (57). In 48 Antipater (Hyrcanus' vizier since 63) gave important aid to Caesar at Alexandria, and Hyrcanus was in recompense reinstated as ethnarch and granted Joppa. Antipater was murdered in 43 but succeeded by his sons, Phasael and Herod. In 40 the Parthians installed Antigonus, son of Aristobulus, as king; Hyrcanus was carried off to Babylonia and Phasael was killed, but Herod escaped to Rome, whence he returned as king (for his reign see HEROD 1).

3. On Herod's death his kingdom was divided. Antipas (q.v.) ruled Galilee and Peraea till 39. Samarcitis, Judaea, and Idumaea were, after Archelaus' brief reign (4 B.C.-A.D. 6), annexed and ruled by Roman procurators, under whom there was much unrest; the Zealot party

(founded in A.D. 6) aimed at national independence. In 39-40 Gaius almost provoked a rebellion by his attempt to place his statue in the Temple, and Claudius thought it wise to make Agrippa I (q.v.) king of the whole country. On Agrippa's death (44) the kingdom was annexed and, under the often tactless rule of the procurators, discontent, increased by famines, developed into guerrilla warfare, led by the *Sicarii*, a terrorist organization. Under Gessius Florus the masses, despite the efforts of the priestly aristocracy and Agrippa II to restrain them, broke into an open rebellion (66); this was crushed by Vespasian and Titus, who in 70 destroyed Jerusalem. Temple worship was abolished, and the two-drachma tax which every Jew had paid to the Temple funds was diverted to Jupiter Capitolinus.

4. Despite this blow, Judaism, now centred in the synagogues, flourished in Palestine, and a famous school of Rabbis established itself at Jamnia. At the end of Trajan's reign there was unrest in Palestine, quelled by Lusius Quietus. Under Hadrian a serious rebellion broke out under the leadership of Barcochba, which was ruthlessly crushed by Julius Severus (135). Another revolt was crushed under Antoninus Pius, and yet another under Septimius Severus. As a result of these wars the highlands of Judaea seem to have been almost depopulated; Jews were, however, still thick on the coastal plain and in Galilee, where Tiberias became the chief centre of rabbinical studies. The Palestinian Jews resisted hellenization, and their literature was written in Aramaic, the language of the people.

B. THE DISPERSION. A great number of Jews never returned to Jerusalem, but remained in Babylonia. In the Hellenistic age many migrated from Babylonia and from Palestine to all the eastern Mediterranean lands. The kings, who found in the Jews loyal and industrious subjects and good soldiers, sometimes actively promoted the movement, and generally encouraged it by granting special privileges to them. By the first century B.C. almost every city in the eastern half of the Empire had its Jewish community, and the larger towns of the west were beginning to be invaded. The Jews had by now, owing to their exclusiveness, become thoroughly unpopular with their pagan neighbours, but the Roman government—notably Caesar and Augustus—upheld their privileges, such as the right to hold assemblies and collect and send money to Jerusalem, and protected them and their synagogues from violence. Gaius' dislike of the Jews, who refused to worship him, encouraged local pogroms, the most serious of which was at Alexandria, but Claudius reaffirmed Jewish privileges. The revolt of 66 was the signal for further pogroms, especially in Syria, but Vespasian still maintained the liberties of the Jews except that he appropriated to Jupiter Capitolinus the tax formerly sent to Jerusalem. In 115-16 the Jews of Cyprus, Cyrenaica, and Egypt raised a bloodthirsty revolt, and those of Cyrenaica and Egypt rose again at the time of the Barcochba revolt. Hadrian retorted with severe penal laws, prohibiting circumcision, but these laws were allowed to lapse by Pius, and henceforth the Jews enjoyed toleration. They were from the second century subject to the spiritual jurisdiction of a hereditary patriarch resident in Palestine, who collected dues from them and appointed synagogue officers. The Jews of the Dispersion early forgot Hebrew and adopted Greek (except for liturgical purposes), using a translation of the Scriptures—the Septuagint—which was begun at Alexandria under Ptolemy II.

JOCASTA, *see* OEDIPUS.

JOSEPHUS (b. A.D. 37-8), a priest of aristocratic Jewish family and a Pharisee, was in 66 appointed by the Sanhedrin joint governor of Galilee, where he paid more attention to curbing the zeal of the insurgents than to organizing them. In 67 he was besieged in Iotapata and captured, but saved his life by prophesying that Vespasian would become emperor. When this prophecy was fulfilled he was released, but remained in attendance on Titus till the fall of Jerusalem. He then settled in Rome, where he was granted Roman citizenship and a pension. He first wrote a history of the war in Aramaic for the benefit of Mesopotamian Jews. This he next translated into Greek with the aid of collaborators who seem, to judge by its smooth style, to have rewritten the entire work. The *de Bello Judaico* (*Ἰστορία Ἰουδαϊκοῦ πολέμου πρὸς Ῥωμαίους*) appeared in 75-9; it comprises seven books, of which the first and half the second are an introduction, recording Jewish history from the Maccabean revolt. Josephus next wrote the *Antiquitates Judaicae* (*ἡ Ἰουδαϊκὴ Ἀρχαιολογία*), which appeared in 93-4. It is a history of the Jews from the Creation to A.D. 66 in twenty books; its laboured style suggests that Josephus composed it himself in Greek. His last works are his autobiography (*Vita*) and two essays in which he vindicates the Jewish race against the aspersions of Apion, an anti-Semite Alexandrian scholar (*Contra Apionem*). Josephus' principal sources are for the earlier history the Old Testament, for the period 175-174 B.C. Nicolaus of Damascus (and, in the *Antiquities*, 1 Maccabees), for the war his own contemporary notes and the *commentarii* of Vespasian and Titus. Politically Josephus was pro-Roman, and he had no sympathy with extreme Jewish nationalism; but he was a zealous defender of the Jewish religion and culture.

Holscher, *Phil.* ix, 1934-2000; R. Laqueur, *Der jüdische Historiker Flavius Josephus* (1920); H. St. J. Thackeray, *Josephus the man and the historian* (1929). A. H. M. J.

JUBA (1) *I* (*Ἰόβας*) (d. 46 B.C.), king of Numidia, succeeded to the domains of his father Hiempsal II. He supported the Senate in the Civil War, because of his *paternum hospitium* with Pompey and his personal grievances against Caesar and Curio (Caesar, *BCiv.* 2. 25). His decisive defeat of Curio (q.v. 2) in 49 gave him two years' respite in which to build up a strong army. In the campaign of 47-46, notwithstanding a diversion by the Mauretanian king Bocchus in Numidia, Juba himself came to the aid of Metellus Scipio, the Pompeian commander-in-chief. He was not present at the battle of Thapsus, as Scipio had divided his forces. The victorious Caesar then turned against Juba, but he had already fled to his capital of Zama, where he killed himself. Most of his realm was made into a Roman province. Juba's ruthless cruelty and arrogance were notorious; he remained faithful to Pompey because he dared not hope for forgiveness from Caesar.

Sources: Caesar, *BCiv.*; Appian, *BCiv.* bk. 2; Dio, bks. 41-2. J. M. C.

JUBA (2) *II* (c. 50 B.C.-c. A.D. 23), king of Mauretania and son of Juba (1) of Numidia, was sent to Rome for Caesar's triumph of 46 and brought up in Italy; he received Roman citizenship, and accompanied Octavian on his expeditions. Perhaps first reinstated in Numidia, he was then transferred (25 B.C.) to Mauretania. He married first Cleopatra Selene, Antony's daughter, and secondly Glaphyra, daughter of Archelaus, king of Cappadocia. An insurrection of Gaetuli compelled him to call in Roman help. He was above all a man of learning, who endeavoured to introduce Greek and Roman life into his kingdom. The city of Iol was transformed into Caesarea (q.v. 1). His collections of artistic treasures were remarkable. He wrote many books (now lost) in Greek:

a history of Rome; works about Libya, Arabia, and Assyria; grammatical and literary researches; a treatise on the plant Euphorbia, which he discovered and named after his doctor Euphorbos; and *Ὅμοιότητες*, chiefly a comparison of Greek and Latin antiquities. Plutarch and Pliny the Elder used his writings.

Fragments in C. Müller, *FHG* iii. 464; *FGH* iii A (1940), 127 ff.; G. Funaioli, *Gramm. Rom. Fragm.* i. 451. Cp. F. Jacoby, *Phil.* ix, 2384; S. Gsell, *Histoire anc. de l'Afrique du Nord* viii (1929), 206; J. Carcopino, *Le Maroc antique* (1943); M. Durry, *Études d'archéologie romaine* (1937), 111. A. M.

JUBA (3), of Mauretania (2nd c. A.D.), wrote a treatise (now lost) on metric, which later grammarians used. Unlike Varro and Cnecius Bassus, Juba followed the Greek Heliodorus and did not derive all metres from the daetylic hexameter and iambic trimeter.

JUCUNDUS, *see* CAECILIUS (5).

JUDAEA, *see* JEWS (§ A).

JUGURTHA was a grandson of Masinissa (q.v.), whose successor Micipsa adopted him and educated him with his own sons, Hiempsal and Adherbal. In 134 B.C., commanding the Numidian contingent at Numantia, Jugurtha took the measure of the Roman aristocracy, and (relying on senatorial venality) aimed, after Micipsa's death in 118, at uniting Numidia under his own rule. In a complicated series of intrigues and struggles, Hiempsal was murdered and Adherbal defeated; but in the sack of the capital, Cirta, many Italian business men met their death (112). This enabled tribunes like Memmius to stir up a popular agitation, so that the Senate dispatched an army to Africa under L. Calpurnius Bestia, who was soon persuaded by Jugurtha to cease operations (111). After further tribunician agitation Jugurtha was summoned to Rome under safe conduct in order to explain the situation, but he was forbidden to speak by another tribune; after murdering a cousin he left Rome, *urbs uenalis*. War was resumed but a Roman army under A. Spurius Albinus capitulated (110). After the establishment of a court of inquiry (*see* MAMILIUS 3) the Senate sent out an efficient commander, Q. Metellus, but Jugurtha's skill and personality prolonged the struggle even after Metellus, in two vigorous campaigns (probably 109 and 108), had driven him from Numidia proper—where, however, he still retained many strongholds until Marius, Metellus' successor, with a larger force made a systematic 'drive' throughout the country (probably 107 and 106). There were always many Numidians ready to join Rome, though Jugurtha had nearly succeeded in making Numidia into a nation-state. In the later phases of the war Jugurtha showed his mastery of guerrilla warfare, as long as his treasures enabled him to hire Gaetulan nomads; and even after he had been deprived of this resource by Marius' capture of his stronghold near the Muluceha, he made an all-but-successful effort, near Cirta, to defeat Marius in the field, with the help of his father-in-law Bocchus of Mauretania (Orosius, 5. 15. 10-17). Finally he took refuge with Bocchus, who was induced by Sulla's daring diplomacy to surrender him; he was strangled in the Tullianum after Marius' triumph (104).

Sallust, *Bellum Jugurthinum* (translations); S. Gsell, *Hist. anc. de l'Afrique du Nord* viii (1928); M. Holscher, *JRS* 1928; H. Lott, *Gall.* ix, ch. 3. M. H.

JULIA (1), daughter of Caesar and Cornelia, betrothed to Q. Servilius Caepio, but married in April 59 to Pompey, whom her affection bound more strongly to her father. In 55 the sight of Pompey returning from the *comitia* bespattered with blood caused a miscarriage; and next year she died in childbirth, the child dying a few days later. On the people's insistence, she was buried in the Campus Martius, and in 46 Caesar held magnificent shows over her tomb. G. E. F. C.

JULIA (2) MAJOR (39 B.C.–A.D. 14), daughter of Augustus, was married to her cousin Marcellus (25) and after his death to Agrippa (21), to whom she bore five children (Gaius Caesar, Julia, Lucius Caesar, Agrippina, and Agrippa Postumus). She accompanied Agrippa to the Eastern provinces in 16–13. Her third marriage, with Tiberius (11), is said to have been happy at first, but estrangement followed, and Julia's licentious conduct may have contributed to the decision of Tiberius to retire to Rhodes. In 2 B.C. Augustus had her banished for adultery (to Pandateria; later she was allowed to live in Rhégium). Anecdotes attest her culture and wit, and Macrobius contrasts her licentiousness with her 'mitis humanitas minimeque saevus animus'.

Velleius 2. 100; Seneca, *Ben.* 6. 32; Dio Cassius, bks. 48 and 53–6; Macrobius, *Sat.* 2. 5. G. W. R.

JULIA (3) MINOR (c. 19 B.C.–A.D. 28), daughter of Agrippa and Julia, married (c. 4 B.C.) L. Aemilius Paullus (cos. A.D. 1). She was banished for immorality to the island of Trimcrus in the Adriatic (c. A.D. 8).

Pliny, *HN* 7. 149; Tacitus, *Ann.* 3. 24 and 4. 71; schol. ad Juv. *Sat.* 6. 158.

JULIA (4) DOMNA, a native of Syria, was the second wife of Septimius Severus. Outwitted in the political world by Plautianus, she collected about her a large coterie of men of learning (e.g. Galen and Philostratus), and exercised a wide influence over them. Cultured, witty, and beautiful, she combined oriental credulousness with a ratiocination derived from philosophical study, and was not undeservedly called ἡ φιλόσοφος Ἰουλλία. She accompanied her husband to Britain in 208, and after his death endeavoured unsuccessfully to support the claims of Geta against Caracalla. She died in A.D. 217 at Antioch.

J. Réville, *La Religion à Rome sous les Sévères*; T. Whittaker, *Apollonius of Tyana and other Essays* (1906). See also SEPTIMIUS SEVERUS. H. M. D. P.

JULIA (5) MAESA, daughter of Bassianus and sister of Julia Domna, was the wife of Julius Avitus, by whom she had two daughters, Julia Soaemias and Julia Mamaea. After Caracalla's death she returned from Rome to Emesa. She assisted in the proclamation of the Emperor Elagabalus and accompanied him to Rome, becoming Augusta and 'mater castrorum et senatus'. Later she induced Elagabalus to adopt his cousin Alexianus. She died after Elagabalus' murder and was consecrated as Diva.

G. Herzog, *PW* x. 940. Coins: H. Mattingly, etc., *The Roman Imperial Coinage* iv. 2 (1938), 62, 101. A. M.

JULIA (6) SOAEMIAS BASSIANA, daughter of Julia (5) Maesa, spread the report that Elagabalus was her son by Caracalla; she followed him to Rome and took part in political life. She is said to have intervened in the deliberations of the Senate. She was slain with Elagabalus (A.D. 222). A. M.

JULIA (7) MAMAEA, daughter of Julia (5) Maesa, was, unlike her sister Soaemias, a woman of refined tastes and noble ideals. She directed the early education of her son Severus Alexander, secured his acceptance by the Praetorians, and after her mother's death virtually ruled the Empire. Her fear of malign influences upon her son, however, drove her to an almost possessive domination. She chose his wife and later from jealousy had her exiled. Finally her attempts to dictate foreign policy alienated the army and led to the murder of herself and her son (235; see SEVERUS ALEXANDER). For bibliography see SEVERUS ALEXANDER. H. M. D. P.

JULIANUS, FLAVIUS CLAUDIUS ('Julian the Apostate'), the younger son of Julius Constantius (half-brother of Constantine I), and Basilina, was born in A.D. 332. In

337 the soldiers rose and destroyed most of the house of Constantine, in order to secure the succession to his three sons. Julian and his brother, Constantius, were almost the only survivors. From 337 to 357 the boys were brought up quietly at Nicomedia and, later, in Cappadocia. But when Constantius II in 357, shaken by the death of Constans and the rebellions of Magnentius and Vetranio, called Constantius Gallus to be his Caesar, Julian obtained freedom to move as he pleased. Gallus was a sorry failure and was put to death in Italy in 354. But the emperor still needed a Caesar of his own house, and after much vacillation nominated Julian (November 355) and gave him his daughter, Helena, in marriage. Julian was sent to Gaul, and, by bold and resolute strategy, relieved the province from the Alamanni and Salian Franks who beset it. He was less successful in his relations with his staff, whom he suspected, perhaps unjustly, of hampering his policy. When Constantius in 360 demanded Gallie troops for the Persian War, a movement of the army, not seriously checked by Julian, raised him to the throne (at Lutetia Parisiorum). Constantius refused any compromise, and civil war was inevitable. Julian struck first and had already reached Naissus, when the death of Constantius left him undisputed emperor.

2. Julian proved himself a friend of the Senate, a vigorous reformer, and a stern enemy of the Christian Church. But, above all, he was resolved to re-establish Roman reputation in the East. In 363 he invaded Persia and reached Ctesiphon in triumph. But he refused offers of peace and, becoming entangled in a difficult campaign, died in June 363, near the little village of Maronga. Jovian, chosen to succeed him, patched up a peace and marched home.

3. Great soldier as he was, Julian is even better known as the 'Apostate', who attempted to reverse the Christian revolution. Educated as a Christian and baptized, Julian rebelled against the faith of the men who had butchered his kindred. His own strong religious instincts, fostered by pagans like Libanius and Maximus, turned to the old paganism and, in particular, to the sun-worship which was hereditary in his family. While not an actual persecutor, Julian encouraged divisions in the Church and forbade Christian children to receive the old 'Greek' education. What is more, he attempted to improve the organization and morale of the pagan priesthood. But this noble visionary was sadly out of touch with his time, as his bitter quarrel with the people of Antioch shows. It is probable that the 'Historia Augusta' preserves much of the attitude to religion and history characteristic of his reign. As a reformer, he set his face against the eunuch régime of Constantius, fought against high prices, and reformed the coinage.

4. Julian was a voluminous and vigorous writer. Of his surviving works we may mention encomia of Constantius II and his wife Eusebia, addresses to King Helios and to the Mother of the Gods, the *Συμπόσιον* or *Καίσαρες*, a highly satirical sketch of the princes who had sat on the imperial throne, and the *Μισοπώγων*, a bitter retort to the Antiochenes, who had mocked his philosopher's beard. Of his lost works, some dealt with his campaigns in Gaul. Another, which we would fain possess, was a definite attack on the Christian Church. Intolerant of any nonsense that was not his own, he exposed, from intimate knowledge, all that he found weak or unsound in the Christian teaching and practice. He was probably hardly conscious himself of the bitter prejudice which controlled him.

Works: *Juliani imperatoris epistulae, etc.*, edited by J. Bidez and F. Cumont (1922); W. C. Wright (Loeb), J. Geffcken, *Kaiser Julianus* (*Das Erbe der Alten* viii, 1914); A. Rostagni, *Giuliano l'Apostata* (1919); J. Bidez, *Vie de Julien* (1930). H. M.

JULIANUS, see also SALVIUS JULIANUS.

JULIUS (1) AFRICANUS, a speaker of the first century A.D., ranked by Quintilian, who knew him, alongside of Domitius Afer and admired for his force (*Inst.* 10. 1. 118; 12. 10. 11).

JULIUS (2) AFRICANUS, a Christian philosopher of Aelia Capitolina, went c. A.D. 220 on an embassy to Elagabalus which secured city rank and the title of Nicopolis for Emmaus, and established a library in the Pantheon for Severus Alexander. His principal works were the *Chronographies* in five books, a synchronization of sacred and profane history from the Creation to A.D. 221, which was the basis of Eusebius' *Chronicle*, and *Of Kéoroi* in twenty-four books, a miscellany of information, chiefly relating to magic, on various topics ranging from medicine to tactics. He also wrote a letter to Origen, in which he questioned the authenticity of the story of Susannah, and a letter to a certain Aristides, in which he harmonized the two genealogies of Christ.

H. Gelzer, *Sextus Julius Africanus*, 1880-98; W. Reichardt, *Die Briefe des Sextus Julius Africanus an Aristides und Origenes*, 1909.
A. H. M. J.

JULIUS (3) CANUS or **KANUS**, a philosopher whose uncompromising reproaches offended Caligula and led to his execution (*Sen. Dial.* 9. 14. 4-9).

JULIUS (4) CEREALIS, epic and pastoral poet friendly with Martial (*11. 52. 1* and *16-18*).

JULIUS (5) EXSUPERANTIUS, in his *opusculum*, preserved in a Sallust manuscript, describes the civil war of Marius and Sulla to the death of Sertorius. The dependence upon Sallust (*Jugurtha* and *Histories*) in subject-matter, without understanding of Republican institutions or personalities, and in style, without feeling for phraseology, points to the fourth to fifth century A.D., when Sallust was in fashion.

Edited by C. Bursian (1868); G. Landgraf-C. Weyman, *Archiv für lat. Lex.* xii (1902), 561.
A. H. McD.

JULIUS (6) GABINIANUS, SEXTUS, mentioned in Suetonius' list of rhetors, was an eminent teacher in Gaul in the Flavian age (*Hieron. Ab Abr.* 2092 = A.D. 76; *Tac. Dial.* 26. 11).

JULIUS (7) MODESTUS, freedman of Julius Hyginus (Augustus' *libertus*), followed his patron's broad treatment of grammar (*Suet. Gram.* 20).

JULIUS (8) OBSEQUENS (probably 4th c. A.D.) composed tables of prodigies from 249 to 12 B.C. (extant for 190-12 B.C.; the earlier part and perhaps an introduction lost). Based on the epitomized Livian tradition, further 'contaminated', or on consul lists to which Livian details of prodigies were added, it represents late heathen justification of the forms of the old faith.

Edited by O. Jahn (1853); O. Rossbach (1910), with Livian *Periochae*.
A. H. McD.

JULIUS (9) PARIS (4th c. A.D.), epitomator of Valerius Maximus; *Teuffel* 279. 9; cf. *JANUARIUS NEPOTIANUS*.

JULIUS (10) ROMANUS (3rd c. A.D.) wrote an extensive grammatical work entitled *Μεγάλη*, of which considerable fragments are preserved by Charisius (q.v.).

Cf. *Teuffel*, § 279. 3; *Schanz-Hosius*, § 603.

JULIUS (11) SECUNDUS, among recent orators specially mentioned by Quintilian (*Inst.* 10. 1. 118, 3. 12). Like M. Aper, another of the *fortunes* in Tacitus' *Dialogus*, he came from Gaul. A quiet and refined speaker, he also wrote a biography of Julius (q.v. 1) Africanus.
J. W. D.

JULIUS (12) TIRO (full name *CIL* ii. 3661 *C. Julius Cf. Gal. Tiro Gactulicus*), given in Suetonius' list of rhetors next after Quintilian's name (Reifferscheid wrongly emended to *M. Tullius Tiro*). Pliny mentions a case about his will (*Ep.* 6. 31. 7).

JULIUS (13) VALERIUS ALEXANDER POLEMIUS (3rd-4th c. A.D.) composed a Latin version of a Greek novel on Alexander the Great by 'Aisopos' or 'Pseudo-Kallisthenes'. Its linguistic peculiarities betray his alien extraction. He was perhaps also author of the *Itinerarium Alexandri* (on Alexander's eastern campaigns), presented to Constantine's son, Constantius.

J. W. D.

JULIUS (14) VICTOR, GAIUS (4th c. A.D.), author of an *ars rhetorica* largely and closely based on Quintilian.

C. Halm, *Rhet. lat. min.* 373.

JULIUS, see also *AGRICOLA, ATTICUS, AUGUSTUS, CAESAR, CALLISTUS, CIVILIS, CLASSICIANUS, EURYCLES, FRONTINUS, GERMANICUS, GRAECINUS, MAXIMINUS, NERO (4), PAULUS, PHILIPPUS, PHILOPAPPUS, SACROVIR, SEVERUS (3), SOLINUS, TIBERIUS, VINDEX*.

JUNIUS (1) CONGUS, MARCUS, a friend regarded by Lucilius as a reader to whom he would have his satires appeal (595 f. Marx). A satire in bk. 26, possibly, indeed, the whole book, was addressed to him. He wrote a legal treatise *de potestatibus* and perhaps an historical work (*Cichorius, Unters. zu Lucilius*, 121 ff.).
J. W. D.

JUNIUS (2) OTHO, rhetor, praetor A.D. 22; formerly an elementary schoolmaster, he owed his advancement to Sejanus (*Tac. Ann.* 3. 66). A master of innuendo, he wrote four books of *colores*, 'complexions to be put on cases' (*Sen. Controv.* 2. 1. 33).

JUNIUS (3) NIPSUS, MARCUS (perhaps 2nd c. A.D.), *grammaticus*; author of treatises on mensuration, replacement of boundaries, and surveying of rivers.

JUNIUS, see also *ARULENUS, DRUTUS, GALLIO, SILANUS*.

JUNO, an old and very important Italian goddess, in functions resembling Hera (q.v.), with whom she was anciently identified. There is no doubt that she was closely connected with the life, especially the sexual life, of women (hence indirectly with the moon, and therefore theorists ancient and modern have made her a moon-goddess; see Roscher in his *Lexikon* ii. 578 ff., cf. *Juno und Hera*, (1875), p. 1 ff.). This is shown among other things by the fact that she either assimilates the minor deities *Lucina*, who makes the child see the light of day, *Opigena*, who brings help to women in childbirth, *Cinxia*, *nomen* of the bride's girdle, *Iterduca*, who brings her to her new home, and several other such vague figures, or else these are titles of hers which tended to assume independent existence as goddesses attendant on women (references in Roscher, *Lex.* 579 ff.). But she developed wider functions and became a great goddess of the State (probably for the same reason as Hera), notably at Lanuvium, where she was worshipped as *Sospita* or *Sispos* and shown armed and wearing a goatskin cloak, and, under the Etruscan kings, at Rome also, where as *Juno Regina* she forms one of the Capitoline triad with Jupiter and Minerva (q.v.); see Wisniewa, *RK* 187 ff. Concerning her origin there is much doubt. Wisniewa (*ibid.* 181) would derive her name from the root of *juvenis*, *junix*, etc., with the meaning 'young woman', 'bride', and her functions from the individual *junx* who is to a woman what the *genius* (q.v.) is to a man (*Juno mea*, *Petr. Sat.* 25. 4; cf. *Lyndamus* 6. 45; *Seneca, Ep.* 110. 1). Others, notably J. Wharmouth (as in *Foundation*

of *Rom. Italy* (1937), 159 f.), suppose the individual *iuno* secondary and late and support a derivation of the name from the same root as that of *Iuppiter*, despite the difficulty that no such forms as **Diuno*, *(*D*)*iuno* ever occur, as would be expected. The views are not wholly exclusive of each other; the *numen* which watches over women and their functions might from the beginning have been thought of now as appearing in each individual woman, now as forming a great reservoir of power on which all women drew, and these have developed respectively into the individual *iunones* and the great goddess.

Her most interesting festival is the Nonae Caprotinae, see CAPROTINA. It was commonly alleged in antiquity that she was connected with the Lupercalia (see Wissowa, op. cit. 185, but *contra*, Rose in *Mnemos.* xl. 389 f.). The Kalends of every month were sacred to her (Macrob. *Sat.* i. 15. 18), and in the old ceremony of announcing at the new moon the date of the Nones (Varro, *Ling.* 6. 27, whereon see Goetz and Schoell) she was addressed as Juno Covella, showing some connexion with the moon. An important festival was the Matronalia of 1 Mar., also the foundation-day of the temple of Juno Lucina (Wissowa, *ibid.*). Cf. MONETA. H. J. R.

JUNO MONETA, TEMPLE OF, see CAMILLUS (2) and CAPITOL and COINAGE, ROMAN, para. 11.

JUNONIA, see CARTHAGE, para. 8, and COLONIZATION, ROMAN.

JUPITER (*Iuppiter*), the Italian sky-god, *Diou-pater*, the first member of the name being etymologically identical with that of Zeus (q.v.), and the god himself an inheritance from pre-ethnic days among the Wiro-speaking population. Primitively it would appear that he was simply the power (*numen*) of the sky, manifesting itself in various ways. As *Iuppiter Lapis* (see Gellius i. 21. 4; Livy i. 24. 8, cf. FETIALES; 30. 43. 9; Festus, p. 102. 11 Lindsay; Rose in *Customs King* (1936), 56 ff.) he was incorporated in one or all of sundry stones used in taking oaths and presumably supposed to be thunderbolts; they were probably neolithic implements. As *Iuppiter Feretrius* he appears to have been a holy tree (Livy i. 10. 5-7; Dion. Hal. *Ant. Rom.* 2. 34. 4; Rosc, op. cit. 54 ff.). How old his association with the Ides of every month may be (Macrob. *Sat.* i. 15. 15) we cannot say, but it probably is very ancient; he is naturally worshipped at the time of full moon, when the light from the sky is most powerful. Like Zeus he is also associated with rain (*Iuppiter Elicius* originally, perhaps, see Wissowa, *RK* 121, but regularly spoken of as connected with the ritual of thunderstorms, see Valerius Antias, fr. 6 Peter; Ov. *Fasti* 3. 291 ff.). It is also as sky-god that he was worshipped at the Vinalia (Rustica) on 19 Aug., when the flamen *Dialis* (see FLAMINES) offered a ewe-lamb to him and cut the first grapes 'inter exta caesa et porrecta' (Varro, *Ling.* 6. 16). His development into a personal and to some extent anthropomorphic god seems to have been more complete in the rest of Italy than in Rome, and it is also outside Rome that signs are to be found of an early association with Juno (q.v.), and of connexions with the underworld (cf. Zeus Chthonios, etc.); see C. Koeh, *Der römische Juppiter* (1937) and cf. Rose in *Gnomon* xiv. 255 ff. In Rome, apart from Greek and Etruscan influence, he remains almost purely a sky-god and not very sharply personal.

2. His festivals, besides the Vinalia, not only Rustica but Meditrinalia on 11 Oct., where his connexion with the goddess Medittrina is obscure (see Varro, *ibid.* 21; Festus, p. 110. 21 Lindsay; *Fasti Amiternini* on 11 Oct.; Wissowa, op. cit. 115), and Priora, 23 Apr. (Varro 16; Pliny, *HN* 18. 287; Ov. *Fasti* 4. 863 ff., whereon see Frazzer), include the *nundinae* or market-days, when the

flaminica *Dialis* sacrificed a ram to him (Macrob. *Sat.* i. 16. 30); also the very obscure *Poplifugia* on 5 July (see Rose in *CQ* xxviii. 157) and an unnamed festival on 23 Dec. (Macrob. i. 10. 11 and *Fasti Praenestini* on that date), apparently because the winter solstice occurs about then. His oldest associates in Roman cult are Mars and Quirinus, e.g., 'Numa' ap. Fest., p. 204. 13 ff. Lindsay; the first *spolia opima* go to Jupiter, the second to Mars, the third to Quirinus.

3. The Etruscan kings introduced (shortly before their fall according to tradition, supported by the fact that the oldest calendar-festivals do not include those of the Capitol) the cult of *Iuppiter Optimus Maximus*, i.e. the best and greatest of all Jupiters, in which the god, in his Capitoline temple, built in the Etruscan manner and with three *cellae*, was associated with Juno and *Minerva* (qq.v.), apparently a purely Etruscan grouping. From then on his cult became more splendid. The oldest games, *Ludi Capitolini* (15 Oct., Plut. *Rom.* 25; see, further, Wissowa, *ibid.* 117), are indeed connected with *Iuppiter Feretrius* and have peculiarities in their celebration which may be pre-Etruscan; but the *Ludi Romani* (which seem to have originated from games celebrated on the occasion of a triumph; see below) of 4-19 Sept., the *Ludi Plebei* of 4-17 Nov., and the attendant *epula Iouis* (cf. EPULONES) were among the greatest feasts of the year. To this temple also came the triumphs, in which the general, in the full costume of a king (and so in that of Jupiter, whom he did not impersonate) drove at the head of his army to do honour to the god (see Marquardt, *Staatsverw.* ii². 582 for references).

4. In the moral and political sphere Jupiter was associated not only with war but with treaties and oaths of all kinds, a development, as the cult of *Iuppiter Lapis* shows (see above), from his functions as sky-god and wielder of thunderbolts, wherewith he can punish the perjurer; cf. ZEUS, and see also FETIALES. Hence it is that he seems to be connected in some way with *Fides* (q.v.); cf. also SEMO SANCUS.

5. For his Roman shrines see Platner-Ashby, 291 ff. Outside Rome, but within her sphere of influence in historical times, his most noteworthy solemnity was the *feriae Latinae*, celebrated yearly, but not on a fixed date, on the Alban Mount. Here he bore the title *Latiaris*, in his capacity of god of the Latin League. The ritual was in some respects archaic, milk and not wine being used for libation (Cicero, *Div.* i. 18, whereon see Pease for further details); the chief Roman magistrate for the time being was in charge, and representatives of all the cities of the League were present to claim their share of the sacrificial meat (*carnem petere*) and take part in the ritual, which as usual must be exactly observed (Livy 41. 16. 1-2).

Jupiter is the *interpretatio Romana* (q.v.) of a number of foreign sky-gods. H. J. R.

JURISPRUDENCE. *Iurisprudentia* was, according to Ulpian's definition (*Dig.* i. 1. 10. 2), 'diuinarum humanarumque rerum notitia, iusti uel iniusti scientia'. The first part of this definition refers to ancient times, when knowledge of law and of its practical application was a monopoly of the patrician pontifical board, the second defines the later jurisprudence, when knowledge of law was secularized by the publication of the XII Tables (see TWELVE TABLES), by *ius Flavianum* (see FLAVIUS 1), and in larger measure by public legal teaching, exercised at first by Tib. Coruncanus (q.v.). The activity of the jurists was very extensive: drafting legal forms for legal transactions, wills, etc. (*cavere*), assisting litigant parties in procedural questions and forms (*agere*), and giving opinions (*responsa*) on questions of law addressed to them by private individuals, magistrates, or judges. *Responsa* were given by writing or orally; some jurists combined responding activity with teaching, discussing in public

the practical cases submitted to their opinion. From the time of Augustus *respondere* acquired an official character: it could be practised by jurists authorized by the emperor (*ius respondendi*). *Responsa* delivered henceforth *ex auctoritate principis*, in writing and sealed, had actually (if not legally) a decisive authority in the trial for which they were issued; but under Hadrian they definitely received binding force, even those issued in similar cases by defunct jurists. If different opinions were produced the judge had a free hand.

Jurisprudence remained for a long time a vocation of the nobility: the Republican jurists belonged to senatorial families and occupied the highest offices (as pontiffs, consuls, praetors); under the Principate the prominent offices in the administration of Rome and the provinces were often occupied by jurists, who always enjoyed high authority in public life. Jurisprudents had a wide influence on the development of law, as members of the *consilia* of magistrates, especially of the praetors, whom they advised in the composition of new edicts and *formulae* and, later, as legal advisers of emperors. As counsellors of *iudices* (q.v.) they controlled jurisdiction in large measure, and as teachers and writers they promoted the evolution of legal science—a distinguished achievement of Roman culture which was wholly wanting in Greece. The writings of the jurists were of different types: comprehensive treatises on the law as a whole (*Digesta*), on the *ius civile*, or on the praetorian edict; collections of *responsa* or practical cases discussed in school (*Quaestiones*, *Disputationes*); text-books for beginners (*institutiones*); concise manuals (*regulae*, *sententiae*); notes to (*libri ad . . .*) or epitomes from (*libri ex . . .*) works of other jurists; monographs on statutes, *senatus consulta*, or single institutes or magistracies. The scientific elaboration of the law began at the end of the Republic: the first systematic treatise of private law, by Q. Mucius Scaevola (q.v. 4), was the model followed by later jurists. Augustus founded a legal library in the temple of Apollo on the Palatine, which became a centre of law-teaching (*instituere* for beginners, *instruere* for advanced scholars). The schools produced rivalry and controversies which furthered the evolution of law and legal science. With the last representatives of the schools of Sabinians and Proculians (see SABINUS (2), MASURIUS), Celsus, and Salvius Julianus (qq.v.), Roman legal science reached the height of its development under Trajan and Hadrian. The literary production of the jurists was mostly based on practical experience: they were always in contact with actual legal practice, and had a keen eye for its requirements, as is proved by the innumerable decisions of practical cases, which take up more room in their works than mere theoretical or doctrinal deliberations. The number of known names of jurists is less than a hundred. For individual jurists see the special articles; for the influence of jurisprudence on the development of the law see LAW AND PROCEDURE, ROMAN, I, DIGESTA, TRIBONIANUS.

The decay of the Roman jurisprudence began c. A.D. 250. A revival of legal science came in the fifth century from the schools in the Eastern part of the Empire, especially that of Berytus; but its importance was far inferior to that of the classical Roman legal science (from Augustus till the Severi).

For bibliography see LAW AND PROCEDURE, ROMAN, I. A. Berger, *PF*, s.v. 'Jurisprudentia'; S. Riccobono, *Jurisprudentia* (Nuova Digesto Italiano vi, 1935); B. Blöndi, *Officium e methodi della scienza giuridica romana* (Scritti in onore di C. Ferrini. University of Pavia, 1943); F. Schulz, *History of Roman Legal Science* (1946).

A. B.

JUSTINIAN (FLAVIUS PETRUS SABBATIUS JUSTINIANUS), Roman Emperor of the East, A.D. 527-65. Justinian was called by his uncle, the elderly Emperor Justin, to assist him in 518 and, after a short period of joint rule, succeeded without question in 527. His wife, Theodora, was crowned with him.

2. Justinian had a strong sense of his imperial rank and mission. In the East his policy was not aggressive, but he held Persia in check by a war fought in Syria and Mesopotamia, 527-32, and by further campaigns from 540 onwards, centring largely round the district of Lazica near the Black Sea. In the Balkans he had to deal with a succession of threats from the barbarians—Huns, Slavs, Bulgars, and, finally, Avars. At home his authority was shaken in 532 by the famous 'Nike' riots, when the two circus factions, the Greens and the Blues, combined to set up a rival emperor, Hypatius. Theodora moved the wavering Justinian to a final effort when all seemed lost and the revolt was drowned in blood.

3. But it was in the West that the ambitions of Justinian found their full scope in the resolve to reassert the majesty of the Empire, where necessary by force of arms. First came Africa. Hilderic, king of the Vandals, was driven out by Gelimer and appealed to Justinian in 531. The great general Belisarius, with a small but efficient army, consisting mainly of cavalry, captured Carthage and won the battles of Decimum and Tricamarum. After a series of revolts Africa remained in the firm possession of the Empire. Next came the turn of the Ostrogoths. Belisarius occupied Sicily (535), took Naples and Rome (536), and defended the capital against Witigis, successor of Theodahad (537-8). Jealousies between Belisarius and other generals, notably the eunuch Narses, hazarded success, but in 540 Witigis surrendered at Ravenna and the West was re-won.

4. The gallant prince Totila revived the Gothic cause (541-52), and Belisarius, hampered by rivalries and insufficient support, could gain no decision. Victory finally fell to Narses at the battles of Taginae and Mount Vesuvius (552). Franks and Alamanni were driven from the north, Narses as imperial exarch at Ravenna ruled Italy, and even a part of eastern Spain resumed its allegiance to Constantinople.

5. Justinian's financial administration, notably under John of Cappadocia, was terribly oppressive. He built on the grand scale; the Church of Hagia Sophia is his great monument. He aspired to impose peace on the Church, vexed by the monophysite heresy, and found a formula of unity at the Council of Chalcedon. But his supreme achievement was the great codification of Roman law (*Digesta* or *Pandectae*, *Institutiones*, and *Novellae*, qq.v.), carried out under Tribonian (530-4).

6. The long reign of Justinian ended in gloom, with storms gathering and plague ravaging the Empire. In his personality there was a sinister and unlovely element that antagonized his contemporaries, but he had a grand conception of his office and translated much of it into fact.

IL M.

JUSTINUS, MARCUS JUNIAN(I)US (Justin), made an epitome in Latin of Pompeius Trogus' *Historiae Philippicae*, probably in the third century A.D. It is an unequal work, but preserves the main lines of the original (cf. the report of Mithridates' speech in 38. 4-7). The epitome was widely read in the Middle Ages.

JUSTITIA, see IUSTITIA.

JUSTUS, a hellenized Jew of Tiberias, an opponent of Josephus when the latter was commander of Galilee (A.D. 66-7). He fled to Agrippa II, who protected him against charges of rebellion and later appointed him his secretary, but eventually dismissed him for forgery. After Agrippa's death Justus published a history of the war, which Josephus criticises severely in his autobiography. It is possible that this history formed part

of a work entitled *Ἰουδαίων βασιλέων τῶν ἐν τοῖς στέμμασι*, which covered Jewish history from Moses to the death of Agrippa II. He also wrote commentaries on the Scriptures.

A. H. M. J.

JUTURNA, see CASTOR AND POLLUX.

JUVENAL (DECIMUS IUNIUS IUVENALIS), greatest of Roman satiric poets, wrote with relentless impersonality and was little known during his lifetime, so that no detailed account of his career is possible. He came from Aquinum (3. 319). Shortly after A.D. 100, when he published his first extant satires, he was middle-aged (1. 25, 49); and he was writing at least as late as 127 (13. 17; 15. 27): so that he was born between 45 and 65, probably about A.D. 50. All his extant poems were published under Trajan and Hadrian. Like Martial—who knew him well (Mart. 7. 24, 91; 12. 18)—he was miserably poor (cf. *Satires* 1, 3, 5, 7), lived in Rome as a client of the rich, and acquired a small competence in later life (cf. 11, 12). He is mentioned by nobody else until the fourth century, and never writes as if he knew any distinguished contemporary.

2. He says nothing of his youth; but the scholia have a tradition that he was banished for lampooning a court favourite. His terror of satirizing living persons (1. 155 f.), his tone of fierceness, hopeless, indiscriminate rancour, his penetrating hatred of Domitian, and the mildness of his later work make it probable that Domitian, if anyone, exiled him. Since any property he had would be confiscated, when he returned in 96 he would be as poor as he appears in his early poems. On a votive tablet from Aquinum (*CIL* x. 5382) the broken name '... nius Iuvenalis' is found. If the poet dedicated it, he was once a magistrate of Aquinum and a knight in the imperial service. Perhaps his failure to obtain promotion led him to write the lampoon which ruined him. Certainly the chief impetus to his satire was a bitter sense of failure and injustice, reminiscent of the exiled Swift; focused on Domitian's principate, it gradually faded in intensity with advancing years.

3. Works. Juvenal left sixteen hexameter satires, in five books averaging 750-800 lines each and apparently arranged in the order of publication. The last two books are noticeably weaker and vaguer than the rest. In book I, 1, the introduction, explains that J. cannot help writing satire when he sees the corruption of Rome, but that for safety he will attack only the dead; 2, beginning with gibes at hypocritical moralists, broadens into a savage polemic against sodomy; 3 shows why J.'s friend Umbricius is leaving Rome, where honest Romans cannot earn a living and poverty entails frightful discomfort and danger; 4 tells how Domitian summoned his council to discuss the cooking of a monster turbot; 5 describes the client's dinner at his patron's home, where insolent slaves serve him cheap food while his host laughs to see him squirm.

Book II (after A.D. 115, cf. 6. 407 f.) consists of 6, a vast, ruthless diatribe against immoral and affected women.

In book III (date unknown) 7, after complimenting some literary-minded emperor (Hadrian?), exposes the misery of litterateurs lacking patrons; 8 reproaches the aristocrat who thinks nobility superior to virtue; 9 is a repulsive dialogue in which a catamite expounds the troubles of his vocation.

Book IV (date unknown) contains 10, a magnificent declamation on the folly of men in desiring hurtful things instead of courage, health, and sanity; 11, an

invitation to dinner, contrasting decent moderation with contemporary extravagance and archaic austerity; 12, relating a friend's escape from shipwreck, with reflections on false and true friendship.

In book V (incomplete; about A.D. 127) 13 is a cynical consolation to a friend cheated of some money; 14 discusses the influence of parents' sins upon children, emphasizing the danger of greed; 15 describes an Egyptian lynching, adding disquisitions on man's inhumanity to man; 16 is a fragment ironically expounding the advantages of being a soldier.

4. Although J. speaks as a moralist, he poses not as a philosopher but as an ordinary man (1. 30, 79; 13. 21, 120) who feels that the world is out of joint, and writes satire as a protest rather than a remedy. His denunciations of folly, meanness, vulgarity, and vice gain enormous force from the fascinated accuracy with which he describes their practitioners and victims. His bitterness often seems to be dictated by literary fashion or exaggerated by personal rancour. Yet (despite Tac. *Ann.* 3. 55) there can have been no great change in the morality of the Roman plutocracy since it was attacked by Seneca and others. Domitian's moral crusade and Martial's callous frankness show that J. told the truth, even if he confined himself to its blacker side.

5. He retained the variety characteristic of satire, adding a more lofty and sustained tone of invective. His memorable epigrams have seldom been surpassed, and he is an amusing, though cruel, parodist. In his vast vocabulary, colloquialisms and queer foreign words jostle the big phrases of epic and rhetoric. His poems, often condemned for structural laxity, have at best quite as clear a pattern as is compatible with the quasi-improvisatory tone of satire. He is the last Roman poet to use the full range of the hexameter, which he adapts to every mood, although his rhythm is graver than that of earlier satirists. His work had a profound influence in the Middle Ages, and is the model for most modern versatists.

JUVENCUS, GAIUS VETTIUS AQUILINUS, a Spanish presbyter of high rank, about A.D. 330 took the Gospel narrative (especially the Matthew Gospel) as he found it in an Old-Latin text, and turned it into an epic in four books of hexameters (*Evangeliorum libri IV*, an average of 800 lines to each book), in which Virgil's influence is everywhere evident.

Best ed., I. Huemer, *CSEL* xxiv (1891).

K

For Greek proper names beginning with K see under C.

KAIROS, personified Opportunity. He had an altar at Olympia (Paus. 5. 14. 9), and Ion of Chios (cited there) called him the youngest son of Zeus (i.e. opportunity is god-sent) in a hymn possibly composed for this cult. That he was a little more substantial than most personifications is perhaps indicated by Antimachus, fr. 32 Wyss, where Kairos is one of Adrastus' horses. He has no mythology, but was a favourite subject in art, especially from Lysippus onwards. Then or later he was shown with a long forelock, but bald behind (Posidippus in *Anth. Plan.* 4. 275; see Sauer in Roscher's *Lexikon*, s.v.). Hence, by a gross mistranslation of his name, our phrase 'to take time by the forelock'.

Material in A. B. Cook, *Zeus* ii. 859 ff.

H. J. R.

KANEPHOROI (κατηφόροι) were usually young women who bore baskets or vessels (κανῆ) in religious processions. In the Panathenaic procession the young women were chosen from noble houses, and were required to be of good family (Harpocration, Photius, Hesychius s.v.), unmarried, and of unsullied reputation; hence 'to be fit to carry the basket' is to live chastely (as Menander, *Epit.* 221 Allinson), and to reject a candidate was a grave insult (Thuc. 6. 56. 1). They were dressed in splendid raiment; hair and garments were decked with gold and jewels; they were powdered with white barley-flour and wore a chain of figs (ισχάδων ὀρμαθός). They carried vessels of gold and silver, which contained all things needed in the sacrificial ceremony: first-fruits, the sacrificial knife, barley-groats (ὄλαα), and garlands. Erichthonius was said to have introduced Kanephoroi at the Panathenaea. Certainly the institution was very old, and its object was doubtless to secure the efficacy of the sacrificial materials by letting them touch nothing that was not virginal and therefore lucky and potent.

Kanephoroi are also found in other Attic cults, e.g. those of Apollo, Dionysus, and Isis, and in the cult of Zeus Basileus at Lebadea.

KANUS or **CANUS**, see **JULIUS** (3).

KAPELOS (κάπηλος), see **COMMERCE**, paras. 2 and 11.

KARNEIA, see **CARNEA**.

KASIOS (Κάσιος, less correctly Κάσσιος), **ZEUS**. An oriental god, possibly Semitic, but the etymology of the name is uncertain. He is plainly connected with Casius, a mountain near Antioch on the Orontes, and also one near Pelusium, on both of which he had a cult. He was also worshipped (owing to the similarity of the names?) at Cassiope in Coele Syria. The evidence for his worship, which is Hellenistic and Imperial, is largely archaeological, and his original nature is conjectural. He may have been a mountain- or weather-god, thus leading to his identification with Zeus.

See further Roscher, *Lex.* ii. 972-4; *PIW* x. 2163-7; A. B. Cook, *Zeus* ii. 906, 981, 1191.

H. J. R.

KERES, malignant spirits, the bringers of all sorts of evil. They pollute and make unclean (Plato, *Leg.* 937 d, like the Harpies), cause blindness (Eur. *Phoen.* 953), other diseases (Soph. *Phil.* 42), old age and death (Mimnermus fr. 2. 5 f. Diehl), spiritual blindness (δάρ), misfortune, and troubles in general (cf. Emped. fr. 121

Diehl, Semon. 1. 20 Diehl). In its most frequent sense of death or death-bringer K. is used almost as a common noun. Sometimes it must be rendered 'fate', as when Achilles is given the choice between two Keres (*Il.* 9. 411), but it is never neutral or favourable in sense. K. can also mean the souls of the dead, as in the cry at the all-souls festival (end of the Anthesteria, q.v.) *θύραζε κῆρες, οὐκέτ' Ἀνθεστήρια* (the only certain instance—but see R. Cranzsynice in *Eranos* 45, 100 ff.: the weighing of Keres in *Il.* 22. 210 ff. may reflect an earlier weighing of souls (Malten in *PIW*, Suppl. iv. 895; M. P. Nilsson, *Homer and Mycenae*, 267 f., fig. 56)). From this use earlier writers (Crusius, Rohde) posited 'ghosts' as the original meaning of K., but this is convincingly denied by Malten (*PIW*, Suppl. iv, s.v.). Malten concludes that K. is originally a predicative word (like *θεός*, Wilamowitz, *Platon* i. 348) meaning harmful (ἡ κηραίνειν, *ἀκηρατός*). As to their form, literary descriptions suggest birds of prey, similar to Harpies or Sirens; it is hard to identify any figures on monuments as Keres.

W. K. C. G.

KERYX (κήρυξ), see **HERALDS**.

KEYS AND LOCKS. The primitive Greek door-fastening was a horizontal bolt working in staples behind the door (μοχλός *θύρας*, *ὄχεύς*, *sera*, *claustrum*). From the outside the bolt was drawn by a strap passing through a hole in the door; it was withdrawn by inserting through a second hole a bar (κλεις, *clavis*) bent twice at right angles, so that its end engaged in a groove in the bolt. This bar is the 'temple key' of Greek art. Subsequently a slot was cut in the bolt, into which a vertical peg (βάλανος) fell as the bolt moved forward; then a βαλαρίστρον had to be employed to hook up the peg before the bolt could move back. This seems to be the 'lock of Penelope' (*Od.* 21. 46); it remained long in use, with growing complexity of the slots and correspondingly of the prongs of the key. The *clavis Laetadaemonia* of Pliny, with three teeth, is probably one of these variants. The modern form of lock in which the key rotates the bolt on a pivot is not found before Roman times, but is then common, as are movable padlocks. The key in art is often a symbol of power, as when Hecate holds the key of Hades (κλειδοῦχος, *clavigera*); to give or take back the household keys was a Roman form of divorce.

British Museum Guide to Greek and Roman Life, s.v. 'Keys'; R. Vallois, *Dar.-Sag.*, s.v. 'Sera'.

KIBOTOS (κιβωτός), see **FURNITURE**.

KNOSSOS, see **CNOSSOS**.

KOINE, see **DIALECTS (GREEK)**.

KOLAKRETAI (κολακρέται, probably from *κόλον* and *ἀγρίων*, 'collectors of legs' of sacrificial animals for distribution among kings and priests), an old-established financial magistracy in Athens (known also at Cyzicus). They became later overseers of the State-treasury. They paid out money for shipbuilding, for public buildings, for the pay of dicasts (*Ar. Vesp.* 695), and for some religious purposes. The office was seemingly abolished in the revolution of 411 B.C., and not re-established, its general duties being handed over to the *Hellenotamiai*.

KOLLEMATA (κολλήματα), see **ROOFS**, I. 4. (q.v.).

A. W. G.

KOMOS (κῶμος), *see* COMEDY (GREEK), ORIGINS OF.

KORDAX, *see* COMEDY (GREEK), ORIGINS OF, para. 2, and DANCING.

KORE, *see* DEMETER, PERSEPHONE, MYSTERIES.

KRONOS, youngest son of Heaven and Earth and leader of his brethren the Titans (q.v.). By advice of his mother he castrated his father, who therefore no longer approached Earth but left room for the Titans between them. Kronos then married his sister Rhea, and there were born to them Hestia, Demeter, Hera, Hades, Poseidon, and Zeus, all of whom (or all the males), save the last, he swallowed, because he was fated to be overcome by one of them. Rhea, by counsel of her parents, wrapped a stone in swaddling-clothes when Zeus was born, and hid him away in Crete (cf. CURETES, ZEUS); Kronos swallowed the stone, thinking it to be his son. Later, by the contrivance of Earth, Kronos vomited up all those he had swallowed, and was overcome by them after a desperate struggle (Hes. *Theog.* 137-8, 154 ff., 453 ff., and many later authors, who differ only in minor details).

This story is so extraordinary and so unlike normal Greek mythology that it is pretty certainly pre-Hellenic; Andrew Lang long ago pointed out (*Myth, Ritual and Religion* (1887), chap. 10) its resemblance to the Maori myth of Tane Mahuta; for legends of swallowing *see* Stith Thompson, F913. Another group of stories represents Kronos as king of the Golden Age (ὁ ἐνὶ Κρόνου βίος; Hes. *Op.* 111) or of a distant wonderland (ibid. 169, if genuine; Pind. *Ol.* 2. 70; Plut. *De def. or.*

420 a, etc.). Hence, through his identification with Saturnus (q.v.), his position as civilizer of Italy.

It is therefore very likely that Kronos is a god of the pre-Hellenic population. His festival, the Kronia, was celebrated at Athens and elsewhere (Deubner, *Attische Feste*, 152 ff.; Farnell, *op. cit. infra*, p. 20) at harvest-time, masters and slaves feasting together; here and there, as at Olympia (Paus. 6. 20. 1), we find him with a priesthood and a sacrifice. He may have been a god of agriculture; this is not inconsistent with the human sacrifice to him in Rhodes (Porphyry, *Abstin.* 2. 54), even if that is not an Oriental rite, since human sacrifices in connexion with agricultural ceremonies are well attested (see Frazer, *GB*³, index under *Sacrifices, human*). At all events he had a somewhat grim reputation, leading to his being identified with foreign gods of formidable character (e.g. [Plato], *Minos* 315 c, Dion. Hal. *Ant. Rom.* 1. 38. 2).

Literature. Cult: Farnell, *Cults of the Greek States* i. 23 ff. Mythology: M. Mayer in Roscher's *Lexikon*, art. 'Kronos'; M. Pohlenz in *PW*, art. 'Kronos'. H. J. R.

KRYPTeia, the Spartan secret police, in which young Spartiatae, selected for their intelligence, were authorized by the ephors to patrol the remoter parts of Laconia and to murder secretly helots reputed dangerous to the State. To justify this conduct, the ephors on entering office declared war unconditionally on the helots. Plutarch, who is reluctant to follow Aristotle in ascribing the *Krypteia* to Lycurgus, believes that it dated from after the helots' revolt of 464 B.C., and quotes the murder of 2,000 helots in 424 B.C. (Thuc. 4. 80) as typical of its methods.

Plut. *Lyc.* 28.

A. M. W.

KTISTAI (κτίσται), *see* CITY-FOUNDERS.

L

LABEO, ATTIVS (1st c. A.D.), an unscholarly ('indoctus') translator of both *Iliad* and *Odyssey* into Latin hexameters (Pers. 1. 4 and 50 with the scholia).

LABEO, *see also* ANTISTIVS (2), CORNELIVS (4).

LABERIUS, DECIMVS (c. 115-43 B.C.), together with Publilius Syrus elevated to literary standards the popular southern Italian *mimus* (q.v.), in Rome called also *fabula riciniata*. The surviving 43 titles and 155 lines (Ribbeck, *CRF*) do not offer enough material to let us understand the value of his work or of this type of play, in which women were allowed to act for the first time in Rome. Unfortunately his fame has been connected with two things which do not throw any light upon the development of his dramatic art, viz. the performance requested by Caesar (Macrobian. *Sat.* 2. 7), and the grammarians' interest in his uncommon words.

See G. Malagoli, 'Cavaliere e Mimo', *Atene e Roma* viii (1905), 188-97; H. Reich, *Der Mimus, Ein Litterarentwickelungsgeschichtlicher Versuch* (1903). R. M.

LABIENVS (1), TITVS (c. 100-45 B.C.), served under Scrvilius (q.v. 2) as *tribunus militum* in Cilicia (c. 78-74). In 63 as *tribunus plebis* he conducted the prosecution of C. Rabirius for *perduellio*, and obtained the re-enactment of the *Lex Domitia* sanctioning election to priesthoods (*see* LEX, LEGES). Appointed *legatus* of Caesar, he acted as his principal subordinate in Gaul (58-51), taking full command in his absence, and he was entrusted with the independent conduct of important operations (e.g. against the Treveri 54-53 and Parisii 52—the latter a strategical and tactical masterpiece). Caesar may have intended him for consul in 48 (a very doubtful inference from *BGal.*

8. 52. 2), but at the beginning of 49 he deserted to Pompey. There is reason to believe that Labienus was always a partisan of Pompey, also of Picenian origin (R. Syme, *JRS* xxviii. 113-25). He fought at Pharsalus and in the African campaign, and died in the final campaign of Munda.

Münzer, *PW* xii. 259-70.

C. E. S.

LABIENVS (2), QUINTVS, son of (1) above, was sent to Parthia by Cassius to solicit help against Antony and Octavian. Philippi marooned him in Parthia; but in winter 41-40 B.C. he invaded Syria with Parthian help and defeated Antony's governor, Decidius Saxa; with Saxa's troops he overran part of Asia Minor, and put on his coins the shameful title 'Parthicus Imperator'. In 39 he was defeated and killed by Ventidius (q.v.). W. W. T.

LABIENVS (3), TITVS, Augustan orator who combined an older eloquence with a modern vigour in furious invectives which earned him the nickname of 'Rabienus' (Sen. *Controv.* 10. *praef.* 4 ff.). When his books, like those of Cassius (q.v. 9), were burned by senatorial decree, L. refused to survive them. Caligula restored their works to circulation (Suet. *Cal.* 16).

See H. Peter, *HRRel.*; *Prosop. Rom.* s.v.

J. W. D.

LABYRINTH (λαβύρινθος, probably derived from a pre-Greek word), a building of complicated plan, constructed by Daedalus for King Minos of Crete, from which nobody could escape. The original labyrinth was located at Cnossos (Cleidemus in Plut. *Thes.* 19), but some later writers identified it with a quarry near Gortyn. The Minotaur lived in the labyrinth and was killed there by Theseus (Catull. 64). By extension Greeks called all kinds of

architectural mazes labyrinths, especially, in Egypt, the funeral temple of Amenemhet III (Hdt. 2. 148; H. Kees in *PIW* xii. 324). An inscription found in Rome records the construction of a labyrinth in the reign of Septimius Severus (Kaibel, *Epigr. Gr.* 920).

A dance with complicated figures performed in Delos and at Cnossos in memory of the delivery of Athenian youths and maidens from the Minotaur is said to have been an imitation of the labyrinth (Plut. *Thes.* 21).

The labyrinth is represented on coins of Cnossos, on Greek vases, and in Roman mosaics (L. Shear, *Arch.* 1923). Even on the walls of a house in Pompeii we find a graffito of the labyrinth inscribed: 'hic habitat Minotaurus'.

R. Eilmann, *Labyrinthos* (1931); W. F. J. Knight, *Cumaeum Gates* (1936). G. M. A. H.

LACERNA, see **DRESS**, para. 4.

LACHARES, Athenian general after Ipsus (301 B.C.), friend of Cassander. In 298-297 he used his mercenary troops to crush an attempted usurpation by his colleague Charias, but shortly after employed them to make himself tyrant. He abolished compulsory military service at Athens and stripped the gold from Athena's statue to pay his troops. His opponents rallied against him in the Piraeus and in 296-295 besieged Athens with the aid of Demetrius Poliorcetes. After a determined resistance he fled to Boeotia, leaving Athens in Demetrius' hands (294). Of his later adventures nothing certain is known.

G. De Sanctis, *Riv. fil.* 1928, 1936 (chronology as above); W. S. Ferguson, *CPhil.* 1929 (Lachares tyrant from 300; fall of Athens 295). F. W. W.

LACHESIS, see **FATE**.

LACONIA (ἡ Λακωνική [γῆ or χώρα], and *Laconica* are the usual forms; these are derived from *Λάκων*, a short and unofficial, but convenient, version of *Λακεδαιμόνιος*), the south-eastern district of the Peloponnese, bounded on the north by Argolis and Arcadia, on the west by Messenia, and on the south and east by the Aegean Sea. The land-frontiers gave rise to prolonged disputes with Argos, in the seventh and sixth centuries over possession of Thyreatis, with Arcadia at various points and dates, and with Messenia over the *Ager Dentheleatis* (on the W. foot-hills of Taygetus, cf. Tac. *Ann.* 4. 43, etc.; *JG* v. 1, 1431).

Geographically it is a mountainous limestone-region, comprising in the eastern portion the chain of Mt. Parion, rising to nearly 6,000 ft. near the Argive frontier, which runs south-south-east and sends off subsidiary spurs extending towards Cape Malea, and in the western portion Mt. Taygetus, which runs nearly north to south and forms a high ridge (culminating in a peak of c. 7,800 ft. overlooking the plain of Sparta), and continues southward at a lower elevation to form the promontory ending in Cape Taenarum (*Matapan*). Between these masses lies the valley of the Eurotas, which flows into the Laconian Gulf; its principal tributary, the Oenus, coming from the north-east, joins it just above the Sparta, and smaller streams flow from Taygetus through the Spartan plain to join it farther south.

By far the most fertile region is the plain of Sparta, lying between Taygetus and the Eurotas, dominated at its north end by the low hills on which stood Sparta (q.v.). This plain, together with the rest of the Eurotas valley down to the sea and the adjoining coastal plains, as well as a fertile region west of Gytheum, the harbour and arsenal of Sparta, formed the territory of the *Spartiatæ*, cultivated for them by their helots. The remainder of Laconia, which includes a few smaller fertile areas, both coastal and inland, was the territory of the *perioikoi*. After 146 B.C. the great majority of their communities were incorporated to form a κοινὸν τῶν

Λακεδαιμονίων, which was transformed by Augustus into the Κοινὸν τῶν Ἐλευθερολακῶν, independent of Sparta; the latter comprised twenty-four members, which had dwindled to eighteen by the Antonine age (Paus. 3. 21. 7).

A. M. W.

LACTANTIUS (*Caecilius Firmianus qui et Lactantius*, A.D. ?250-?317), 'the Christian Cicero', a pupil of Arnobius (q.v.) and native of the province Africa, became a Christian in mature years. He received an appointment as professor of rhetoric from Diocletian, and held it for a considerable time before the persecution broke out which brought an end to his tenure. Part of his life was spent at Nicomedia in Bithynia, and when very old he was appointed by Constantine to educate the Prince Crispus in Gaul.

His works include: *De Opificio Dei*, which contains a description of the body and soul of man, and is a sort of supplement to the fourth book of Cicero's *De Re Publica*; *Divinae Institutiones* (A.D. 304-13), greatest of all his works, which was written against two opponents of Christianity and is a comprehensive survey of all the arguments then available in favour of the new religion (after 314 an epitome was issued, composed by Lactantius himself); *De Ira Dei*, an able discussion of the problem with which it deals, correcting the false conclusions of the chief philosophical schools. Doubts have been cast on the authenticity of the *De Mortibus Persecutorum*. The work deals with the Diocletian persecution, which was abortive, and is historically valuable, whether L. or some contemporary be the author. A quaint poem *De ave Phoenice*, a medley of heathen and Christian elements, is generally believed genuine.

Ed. J. L. Büchemann (1739); S. Brandt and G. v. Laubmann (*CSEL* xix, xxvii, 1890-3-5); R. Pichon, *Lactance* (1921); *Phoenix* (with trans.), J. W. and A. M. Duff, *Minor Latin Poets* (Loeb, 1934). A. S.

LACYDES of Cyrene succeeded Arcesilaus as head of the Middle Academy in 241-240 B.C., and held the position till at least as late as 224-223, after which the headship was probably in commission till Carneades became head; Lacydes died in 206-205. He is sometimes described as founder of the New Academy, but in truth he simply emphasized the scepticism which was already well developed in Arcesilaus. He seems to have made no important contribution to philosophy.

PIW xii. 530.

W. D. R.

LAELIUS (1) (MAJOR), GAIUS, a *novus homo* who owed his political advancement to his commander and friend Scipio Africanus. In Spain (210-206 B.C.) he commanded the fleet at New Carthage and fought at Baeula and Ilipa. He shared in Scipio's African campaign (204-202), defeating Syphax (q.v.), capturing Cirta, and commanding one wing at Zama. He was plebeian aedile (197), praetor in Sicily (196), consul with L. Scipio (190), proconsul in Gaul (188), and ambassador to Perseus (174) and to some Celtic tribes (170). He lived to meet Polybius (160), to whom he was a valuable source of information about Scipio Africanus, even if his memory of Scipio's early life was somewhat dimmed by age.

H. H. S.

LAELIUS (2) (MINOR), GAIUS, named *Sapiens* for his Stoic learning, the friend of Scipio Aemilianus, accompanied Scipio against Carthage, and, as praetor in 145, fought in Spain. Consul in 140, he proposed land settlement on *ager publicus*, presumably in a Scipionic scheme of reform, but withdrew before the landowners' opposition. He rejected Tiberius Gracchus' policy, opposed the re-election of tribunes, and pronounced the *laudatio* over Scipio Aemilianus. A leader in the Scipionic Circle, he was cultured and eloquent.

Cicero, *Rep. 2*; *Acad. Q. 1*, 43; Appian, *Proc.* 125-6; Tacitus, *Ag. Gracch.* 8; H. Mazon, *OGP* I, 122, 224. A. H. M. D.

LAELIUS (3) ARCHELAUS, a friend of Lucilius, who, like Vettius Philocomus, lectured and commented on Lucilius' satires.

Suet. *Gram.* 2.

LAESTRYGONES, a race of cannibal giants encountered by Odysseus (q.v. and see **ANTIPHATES**). In their country the night is so short that men going out with the flocks to pasture meet those coming back (*Od.* 10. 82 ff.), apparently a vague echo of some traveller's tale of northern conditions in summer (cf. Crates in schol. *ibid.* 86). Their city, Laestrygonia, is described as the 'lofty town of Lamos', a name suggesting Lamia (q.v.), i.e. their royal family is descended from King Bogey. The ancestors, as usual, tried to locate the country in the neighbourhood of Magna Graecia, either in Sicily (*Thuc.* 6. 2. 1) or at Formiae (*Cic. Att.* 2. 13. 2), when they did not suppose it completely fabulous, as it is.

H. J. R.

LAEVINUS, see **VALERIUS** (5).

LAEVIUS, MELISSUS (? Suet. *Gram.* 3), early in the first century B.C. wrote *Erotopaegnia* (*fantaisies galantes*). Other titles seem to refer to the same work or sections of it, but opinions differ. Surviving fragments suggest a cleverish, rococo, unlatin latinity. Ignored apparently for two centuries, Laevius was then desultorily read and admired by archaizing illuminati. Morel, *FPL*. See **ALEXANDRIANISM** and **LYRIC POETRY**, **LATIN**, para. 3.

E. P. B.

LAMACHUS (d. 414 B.C.), Athenian general. He was *strategus* as early as c. 435 and was a well-known member of the war-party before 425, when he appears as a blustering soldier in the *Acharnians* of Aristophanes. In 415 he was appointed with Alcibiades and Nicias to conduct the expedition to Sicily. He advocated an immediate attack on Syracuse, but was overborne by his colleagues. The rapid progress of the Athenian blockade in 414 was largely due to his energetic leadership and terminated abruptly when he was killed in a skirmish. Aristophanes in later plays pays tributes to his heroism.

Thucydides, bk. 6.

H. D. W.

LAMBAESIS (modern *Lambèse*), a Roman camp in Numidia north of the Aurès range. Trajan moved the Third Augusta Legion there to control the route which led north from the Sahara through Vescera (*Biskra*) and Calceus Herculis (*El Kantara*). Military roads enabled the legate to reinforce the auxiliaries in Numidia and the Mauritanias. Hadrian visited Lambaesis (A.D. 128); his address to the troops was inscribed on a column, and much of it survives (Dessau, *ILS* 2487 and 9133-5). The legion was disbanded by Gordian III (238), but Valerian restored it to its old quarters (253).

Lambacsis is the finest example of a Roman fortified camp extant. It contains an *arcus quadrifons* (usually called the *praetorium*), legionary head-quarters, offices, storerooms, chapels, messrooms, baths, and latrines. Platforms along the walls served as artillery emplacements, and at the four corners are rounded re-entrant towers. An amphitheatre was built outside the walls, and married-quarters were erected after Septimius' army reforms; these grew into a substantial town with its own baths, arches, and temples.

W. N. W.

LAMENT, see **DIRGE**, **EPICIDIUM**.

LAMIA, a child-stealing nursery bogey, Ar. *Vesp.* 1035= *Pax* 758 (where she is apparently bisexual) and often. The schol. on *Pax* says she was daughter of Belus and Libya (see **DANAUS**), whose children Hera destroyed because Zeus was her lover, whereat she became savage with grief; more refs. in Roscher's *Lexikon* ii. 1819. For a later conception of her see Philostr. *VA* 4. 25. H. J. R.

LAMIA, the principal city of Malis, situated near the Malian Gulf. Its strong acropolis commanded the chief route from Thessaly to central Greece. Lamia perhaps was not founded until the close of the fifth century, but it soon dominated Malis and developed rapidly, especially after Spartan control of Heraclea (q.v. 4) terminated. In the Lamian War Antipater was blockaded in Lamia for some months (323-322). In the third century the city prospered under Aetolian hegemony, but in 190 it was sacked by Acilius Glabrio.

Y. Béquignon, *La Vallée du Spercheios* (1937).

H. D. W.

LAMPADIO, GAIUS OCTAVIUS, a Roman scholar of the second century B.C., prompted by the influence of Crates of Mallos to take a literary interest in early Latin poets (Suet. *Gram.* 2). He arranged in seven books the *Bellum Punicum* of Naevius.

LAMPOON (GREEK). The tradition of abusive and satirical verse seems to have been indigenous to the Greeks. An early example can be seen in the verses with which Archilochus assailed Lycambes, or later those with which Hipponax attacked Bupalus. The form was recognized by the word *ἰαμβος*, used for any poetry which abused (cf. Procl. ap. Phot. *Bibl.* 321 a 28, Ael. *VH* 3. 40, Poll. 2. 54). Hence it was applied to the satirical verses of Xenophanes and Timon. See also **ALCAEUS** (3) OF MESSENE.

C. M. B.

LAMPOON (LATIN). The lampoon, which in Italy grew out of the *opprobria rustica* of the *versus Fescennini* (Hor. *Epist.* 2. 1. 145 ff.), was employed as a prophylactic against the evil eye at weddings and in the *carmina triumphalia* of the soldiers. Apart from such privileged occasions, the *carmen famosum* was forbidden by a law of the XII Tables (Bruns, *Pont.* 28 f.). But, in spite of the law, political and personal enmity often found vent in such poems. The poet Naevius was imprisoned for his lampoons on the Metelli; Catullus and Bibaculus were famous for their lampoons (Tac. *Ann.* 4. 34); the Emperor Augustus was not above writing them himself (Macrob. *Sat.* 2. 4. 21). During the Empire the writing of political lampoons was punished under the law of *maiestas*, while the pseudonymous private lampoon in various metres was raised to the position of a literary genre by Martial. The favourite metre for the popular lampoon was the trochaic tetrameter: an example may be found in Bücheler, *Carmina epigraphica* 231 (*CIL* iv, 1939, tab. 23, 10) from a wall in Pompeii.

R. M. H.

LAMPROCLES (early 5th c. B.C.), Athenian musician and poet, teacher of Damon (schol. Pl. *Alc.* 118 c), exponent of the mixo-Lydian mode (Plut. *De mus.* 16), composer of dithyrambs (Ath. 491 c) and of a famous hymn to Athene quoted by Aristophanes (*Nub.* 967).

Text: E. Diehl, *Anth. Lyr. Graec.* ii, pp. 123-4. Criticism: U. von Wilamowitz-Moellendorf, *Textg. d. gr. Lyr.* (1900), pp. 84-5.

C. M. B.

LAMPS (λύχνος, *lucerna*) were used not only to illumine interiors and, more rarely, exteriors, but as votive offerings to deities and as tomb-furniture. The commonest materials were bronze and clay. Primitive lamps are known in neolithic Greece and the Minoans and Mycenaeans used them freely. Later their use died out; Homer has only a single reference to lamps (*Od.* 19. 34). About 600 B.C. they were reintroduced into Greece from the East, where a simple 'cocked-hat' form is found throughout the early Iron Age. In Italy outside the Greek cities the use of lamps, apart from some isolated Etruscan examples, does not begin before the third century. The earliest Greek lamps in clay are wheel-made in the form of open saucers; later the body is deepened and the top covered. After 200 most lamps are moulded and have decoration in relief. Hellenistic lamps

are rounded or oval and limit the decoration to the rim. The typical lamp of the early Roman Empire is circular with decoration on the top; in the later Empire the oval shape reappears. More elaborate specimens with many nozzles are not uncommon, while the forms of the metal lamps are extremely varied.

H. B. Walters, *British Museum Catalogue of Lamps* (1914); O. Broneer, 'The Terracotta Lamps' in *Corinth* iv. 2 (U.S.A., 1930); S. Loeschcke, *Lampen aus Vindonissa* (1919). F. N. P.

LAMPUSACUS, a Phocaeen foundation in the northern Troad with a good harbour. Its strategic position guarding the eastern entrance to the Hellespont explains the city's economic prosperity and historical significance. Hence, too, sprang its attempt to check the elder Miltiades' domination of the Chersonese. In the sixth and fifth centuries Lampusacus passed successively under Lydian, Persian, Athenian, and Spartan control. It was assigned by Artaxerxes I to Themistocles, whom it supplied with the wine for which it was famous. Its tribute of twelve talents as a member of the Delian Confederacy, and its gold coinage in the fourth century, attest its commercial well-being. Attempts to assert its independence against Persia and Athens were quickly repressed, but in the fourth century Lampusacus enjoyed lengthy periods of self-government. Its prosperity continued during the Hellenistic age and under the Roman Republic (Cic. 2 *Verr.* 1. 24. 63) and Empire.

W. Leaf, *Strabo on the Troad* (1923), 92.

D. E. W. W.

LANA, see **APEX**.

LANISTA, see **GLADIATORS**.

LANUVIUM, nowadays *Lanuvio*, an ancient Latin city in the Alban Hills (Cato fr. 58 P.; Strabo 5. 239). In 338 B.C. Rome dissolved the Latin League, granted Lanuvium Roman citizenship, and officially adopted its famous cult of Juno Sospes (Livy 8. 14; Cic. *Nat. D.* 1. 83; for ancient remains, G. Bendinelli, *Monumenti Antichi* 1922, 292). Although it suffered in the Civil Wars (App. *BCiv.* 5. 24), Lanuvium, unlike many Latian towns, continued to flourish even in Imperial times (however, reject *Lib. Colon.*, p. 235). Milo, Roscius, and Antoninus Pius were born there (Cic. *Mil.* 27; *Div.* 36; S. H. A. *Ant. Pius* 1; *Comm.* 1). Lanuvium was often confused with Lavinium: hence its medieval name *Civita Lavinia*.

G. B. Colburn, *AJArch.* xviii (1914); A. E. Gordon, *Cults of Lanuvium* (U.S.A. 1938). E. T. S.

LAOCOÖN, a legendary Trojan prince, brother of Anchises and priest of the Thymbracian Apollo or (in some accounts) of Poseidon. Of his story as it was told by Arctinus in the *Iliupersis*, by Bacchylides, and by Sophocles in a tragedy bearing his name we know little. According to the generally accepted tale (Verg. *Aen.* 2. 40-56, 199-231; Apollod. *Epit.* 5. 17-18), he protested against the proposal to draw the Wooden Horse within the walls of Troy, and two great serpents coming over the sea from the island of Tenedos killed him and his two sons (in Arctinus one son, in Quint. Smyrn. 12. 444-97 Laocoön himself escaped). According to Hyginus (*Fab.* 135. 1) the serpents were sent by Apollo to punish him for having married in spite of his priesthood,* in Quint. Smyrn. and Virgil, by Athena on account of his hostile attitude to the Horse. The story is famous not only from the dramatic pathos of Virgil's rendering, but as the subject of one of the most famous examples of ancient sculpture, the marble group now in the Vatican which depicts father and two sons in their death-agony. This, a masterpiece of the Pergamene school, was the work of three Rhodian sculptors, Agasander, Polydorus, and Athenodorus, of the second half of the first century. In

* But see Rose's note there.

Roman times it was exhibited in the palace of the Emperor Titus, and in Pliny's view (*HN* 36. 37) surpassed all other works of painting and sculpture. Lessing made it the text for his famous essay of 1766 on the difference between poetry and the fine arts.

R. A. B. M.

LAODAMEIA, see **PROTESILAUS**.

LAODICE (1), in mythology, a stock name for women of high rank, meaning 'princess' (cf. CREON, CREUSA), e.g. (a) a daughter of Priam, see ACAMAS, DEMOPHON, (b) a daughter of Agapenor, q.v.; she founded the temple of Paphian Aphrodite in Tegea (Paus. 8. 53. 7, cf. 5. 3); (c) daughter of Agamemnon (*Il.* 9. 145), later replaced by Electra (q.v.). H. J. R.

LAODICE (2), probably a niece of Antiochus I, married her cousin Antiochus II, by whom she had two sons and two daughters. Antiochus repudiated her and her children in favour of Berenice (daughter of Ptolemy II), whose son (born 251 B.C.) became heir-apparent. The result, when Antiochus died, was a war of succession, in which Egypt supported Berenice's son ('Third Syrian', or 'Laodicean War', 246-241). Tradition gives Laodice a great share in inspiring and organizing the resistance (especially in Asia Minor) which enabled her eldest son to succeed as Seleucus II. G. T. G.

LAODICEA AD LYCUM (*Λαοδικεία ἐπὶ Λύκῳ*, also called *Λ. τῆς Ὀρέας*), a city founded by Antiochus II (261-246 B.C.) and called after his wife Laodice (q.v. 2). It occupied the site of an older city on a flat hill overlooking the valley of the Lycus a few miles east of its junction with the Maeander; its territory was bounded by the rivers *Λύκος* and *Καῖρος*, symbolized as Wolf and Boar on its coins. It lay on a great trade-route and was one of the most prosperous cities in Asia; it was the head of a *conventus* and one of the 'Seven Churches' of the Apocalypse. Diocletian made it the *metropolis* of the province of Phrygia. W. M. C.

LAOMEDON, legendary king of Troy, for whose genealogy see DARDANUS. For his relations with Hercules see HERACLES; for his dealings with Apollo and Poseidon see *ibid.* Apart from this he has little place in mythology, the most interesting feature of his legend being the story of his grave, which lay over the Scaean Gate and ensured the safety of the city so long as it was undisturbed (Servius on *Aen.* 2. 241, cf. Plautus, *Bacch.* 955; see W. F. J. Knight in *CJ* xxviii. 257 ff.). This undoubtedly refers to some kind of magical precaution, whether or not originally associated with Troy. H. J. R.

LAPIS MANALIS, see **STONES**, **SACRED**.

LARCIUS (? **LARGIUS**) **LICINUS** (1st c. A.D.) wrote a *Cicero-mastix*. Its reprehensible audacity in criticizing the orator is coupled by Gellius (17. 1. 1) with that of Asinius Gallus.

LARENTALIA, see **ACCA LARENTIA**, **LAPES**.

LARES (older **LASES**, Arval hymn; Henzen, *Acta Arualium*, p. cciv. 33). The etymology and consequently the connexion, if any, with the names *Larentia* (*Acca*, q.v.), *Larunda*, *Lara*, and Etruscan *Lars* and *Larth* are very uncertain (Boehm, *op. cit.* infra, 806 f.). As to their origin there are two principal theories, supported respectively by Santer and by Wissowa and W. Warde Fowler.

(1) They are the ghosts of the dead. Santer starts from the *Lex Familiaris*, and supposes him closely connected with the cult of the dead, because (a) if a bit of food falls on the floor during a meal, it is proper to burn it before the *Lares* (Pliny, *HN* 28. 27; see N. F. M. G. Walters, *Antique Folklore* (1935), 95 ff., but contra, Rose

in *Gnomon* xii. 390). Now the floor is a notorious haunt of ghosts; the food, therefore, has gone to the ghosts' region and so is formally given to the ghosts. (b) At the Compitalia, or festival of the cross-roads (cross-roads being again a favourite place for ghosts, cf. *HECATE*), it was the custom to hang up a male or female puppet for each free member of a household, a ball for each slave (*Festus*, p. 272. 15 Lindsay, cf. pp. 108. 27; 273. 7), that the Lares, says *Festus*, might spare the living and take these surrogates instead. This is a quite reasonable precaution against ghosts. (c) The connexion, which he assumes, with Larentia and the Larentalia definitely connects them with chthonian ritual.

(2) Wissowa points out that the Roman dead are honoured not in the house but at their graves; the hearth is the place of Vesta and the *di Penates* (q.v.), and the *Lar (familiaris)*, a later intruder. The ceremonial at the cross-roads is easily enough explained when it is remembered that a *compitum* is properly and originally the place where the paths separating four farms meet (*Gromatici*, p. 302. 20 ff., Lachmann; schol. Pers. 4. 28). This has no ghostly associations, but it regularly had a chapel of the Lares. That the *Lar familiaris* (Lar of the servants, rather than of the household generally, in origin) was brought into the house by the farm-slaves is likely, cf. Warde Fowler, *Roman Essays*, p. 61.

The Lares, then, are originally deities of the farm-land. From this, and from the secondary cult in the houses, they expand (apart from purely theoretical developments of the use of their name to signify ghost or *daimon*) (1) into guardians of any cross-way, including one in a city. Hence grew up in Rome the *collegia compitalicia*, associations of small people, mostly freedmen, who tended the shrines, and their festival. These are somewhat doubtfully said to have been restored by Augustus, after having been suppressed by Julius, with the addition of his own Genius (q.v.; *Ov. Fasti* 5. 145, whereon see Frazer, but see L. Delatte in *Ant. class.* vi (1937), 103 ff.); (2) into guardians of roads and wayfarers, *Lares viales*, including travellers by sea, *Lares permarini*; (3) into guardians of the State in general, *Lares praestites*; see especially Wissowa, *Ges. Abh.* 274 ff.; *Ovid*, *ibid.* 129 ff., and Frazer thereon.

Like all Roman deities the Lares have no mythology. *Ovid* (*Fasti* 2. 599 ff.) has a story of their begetting by Mercurius on Lara, manifestly a late invention and quite possibly his own. For another alleged mother see *MANIA*. In one version (Pliny, *HN* 36. 204) of the wonderful birth of Servius (q.v.) Tullius his father is the *Lar familiaris*; a late anthropomorphizing (for a different one see *Ovid*, *Fasti* 6. 627) of an old folk-tale, that he or some other remarkable person was born of a woman fertilized by the fire.

Since the cult of the *Lar familiaris*, whatever its origin, became universal, see for many examples in popular art Boyce in *Am. Ac. Rome* xiv, *lar* or *lares* is used, like *penates*, by metonymy for 'home', 'house'; *lararium* is 'private chapel'.

Good conspectus, with bibliography, Boehm in *PIW*, s.v. H. J. R.

LARGUS, see *SCRIBONIUS* (3).

LARISSA, the principal city of Thessaly, dominating the fertile plain of Pelasgiotis, with an acropolis on a low hill protected by the river Peneus. It was the first Thessalian city to strike coins, and its earliest issues, struck on the Persian standard, reflect both the medism of the Alcadae (q.v.) and their influence over the Larissans. C. 400 B.C. Larissa was weakened by party struggles, and although it formed the centre of aristocratic opposition to the tyrants of Phocaea, its efforts were seldom successful without external support. Jason won Larissa before 374, but it resisted his successors by enlisting aid first from Thebes and later from Philip of Macedon. This policy led to the Macedonian annexation

of Thessaly, and Larissa remained in Macedonian hands until liberated by Rome in 196, after which it became the capital of the new Thessalian League and enjoyed considerable prosperity.

F. Stählin, *Das hellenische Thessalien* (1924), 94-9. H. D. W.

LARNAX (λάβραξ), see *FURNITURE*.

LĀRUNDA, an extremely obscure Roman goddess, said to be Sabine (Varro, *Ling.* 5. 74, cf. E. C. Evans, *Cults of the Sabine Territory* (1939), 227 ff.), and generally supposed to be chthonian (Wissowa, *RK* 234). The quantity of the first syllable (known from Ausonius, *Techmop.* 8. 9 (p. 161 Peiper), 'nec genius domuum, Larunda progenitus Lar') suggests a possible connexion with Acca Larentia (q.v.). The ancients equate her with Lāra, said by *Ovid* (*Fasti* 2. 599 ff.) to be mother of the Lāres (see Frazer *ad loc.*; Lactantius, *Div. Inst.* 1. 20. 35). The quantity, however, is against this. Probably this identification is meant by Philoxenus, p. 225 (*LA* 66), Lindsay-Laistner, *Larunda*: δαῖμόνων μήτηρ, cf. [Placidus], p. 66 (*L* 15) Lindsay-Pirie, 'Larunda: quam quidam Maniam dicunt', but the reading is doubtful. If right, cf. Varro, *Ling.* 9. 61, 'videmus enim Maniam matrem Larum dici'. For the Mother of the Lares cf. Henzen, *Act. Arval.* 145, and add Dessau, *ILS* 9522, on which see L. R. Taylor in *AJArch.* 29 (1935), 299 ff.; E. Tabeing, *Maier Larum* (1932). The most probable explanation of the occurrence of this un-Roman genealogy in a sacred document is that it had been affected by the theories mentioned above.

H. J. R.

LASUS (b. c. 548-545 B.C., Suidas), son of Charminus, of Hermione, lived at the court of Hipparchus, where he disclosed the forgeries of Onomacritus (*Hdt.* 7. 6). Rival of Simonides (schol. *Ar. Vesp.* 1410), he composed hymns (*Ath.* 467 a, 624 e) and dithyrambs, of which he was a pioneer in Athens (schol. *Pind. Ol.* 13. 25; schol. *Ar. Av.* 1403; Clem. Al. *Strom.* 1. 16).

LATERANUS, see *PLAUTIUS* (6).

LATIFUNDIA. It was a characteristic of ancient Oriental large estates that commercial, industrial, and lending enterprises were interrelated with agriculture. The primitive serf estates of archaic Greece and Italy were broken up, except in backward countries like Thessaly, as a consequence of democratic movements. Imitation of the *ergasterion* (see *INDUSTRY*) produced the slave estate of classical Greece, which was larger than the normal peasant holdings, used scientific handbooks on agriculture, and produced with a view to high profit. The Hellenistic large estates and the Italian *latifundia* originated in a blending of Oriental and Greek estate systems in Hellenistic and, perhaps, Carthaginian territories. The division of labour and the wide economic activities of Oriental estates were preserved, and very cheap labour became most important. Hellenistic estates like the *dorea* ('concession') of Ptolemy II's minister Apollonius (q.v. 3) used more free workmen than slaves, in spite of being actively engaged in the slave trade. The West exploited cheap slave labour with an unrivalled mercenary spirit and cruelty.

The Roman *latifundium* originated in distributions of the *ager publicus* in the early second century B.C., as soon as the wealth of the Roman upper class had sufficiently increased to imitate Eastern landlords. The *villa* with its slave *familia* was much stronger economically than the surrounding peasants, because only large owners had capital for introducing new crops and breeds. In consequence, a large number of peasants in Italy and even in the provinces lost their homesteads. *Latifundia*, with *villa urbana*, *villa rustica*, *instrumentum vocale*

(= slaves), *semivocale* (= cattle), and *mutum* (furniture and implements) became characteristic of all Roman provinces.

A change came as soon as slave labour ceased to be cheap, and the *familia* gave way to the *colonus*, who learned all the methods of *latifundium* agriculture useful to him. A new Late Roman type of large estate arose, which later became a model for the Middle Ages. Most of the soil was in the hands of *coloni*, who cultivated small tracts in accordance with the teachings of Cato, Varro, and Columella (qq.v.), as far as the economic situation permitted. Enterprises in trade, craftsmanship, and banking, as well as small garrisons, remained on the estates. These Late Roman estates, together with State and Church institutions, remained as islands of classical culture and experience during the difficult times of the Germanic, Slavic, and Islamic conquests. See AGRICULTURE, PASTURAGE.

F. M. H.

LATIN LANGUAGE. Latin was originally the language of the city of Rome and the Latian plain, and it was only as Rome's power extended that her language spread itself over the ancient Western world. It belongs to the Italic branch of the Indo-European family of languages and is thus akin to Greek, Germanic, Celtic, etc.; within Italy its nearest relative is Faliscan, and next are the Italic dialects proper, Oscan and Umbrian (qq.v.). When and whence Italic came into Italy cannot be stated exactly, but it must have come over the Alps and Apennines from somewhere in Europe before the eighth century B.C. Besides the numerous Italic dialects there were in Italy also Greek in the south and on the coast, Celtic in the north, and the non-Indo-European language of Etruria. All these exerted more or less influence upon Latin. Borrowings from Celtic were confined to a few words, e.g. *petrorritum*, *gacsum*, *carrus*, and the Greek influence, though considerable, did not come in till late. From Etruscan came names such as *Sulla*, *Caesar*, and many with an -n-suffix, e.g. *Perperna*, *Sisenna*, *Maccenas*. Etruscan also are technical terms such as *histrio*, *subulo*, *persona*, *putcal*, *canillus*, and perhaps even such common words as *urbs* and *amare* (infinitive). The substitution of breathes for voiced sounds in words like *sporta* (<σπορτα), *catanitus* (<κατάνιθος), the aspirate in names like *Gracchus*, *Cethegus*, and the weakening or disappearance of syllables which resulted from the shifting of the word-accent as in Pollux (<Πολύδεύκης) are probably due to Etruscan. This theory receives support from the Etruscan names of the old Latin tribes, *Ramnes*, *Tities*, *Lucrees* (cf. *Lucumo*), and it is now generally accepted that the Latin alphabet is derived not directly from Greek but is partly of Etruscan origin.

2. Outside Italy the Italic group (including Latin) has its closest affinity with Celtic, and the number of morphological innovations which both groups share gives much plausibility to the theory that their pre-ethnic speakers must have lived in close association after the separation of the Indo-European peoples. Both groups show

- (a) extension of the abstract-noun stems in -ti- by an -n-suffix, e.g. *men-ti-on-em*;
- (b) superlative formation in -issimos, e.g. *acerrimus* (<**acgr-issimos*);
- (c) genit. sing. of -o-stems in -i: e.g. *filii*, O. Ir. *magi*;
- (d) medio-passive formation in -r: *sequitur* = Ir. *sechadar*;

Both Celtic and Italic are divided into two sub-families, a Goidelic and a Brythonic, and an Oscan-Umbrian and a Latin-Faliscan respectively, which differ in the same way in their treatment of Indo-European g. Thus Latin has *quod*, *quinque* while Oscan has *ped*, *pomp*; Irish has *céle* (five), Welsh *pump*; Gaelic has *Mac* (e.g. MacDonald), Welsh *ap* (e.g. Powell < Ap Howell).

3. The most striking feature of Latin is its accentuation. In Indo-European the accent was predominantly *musical* and was unrestricted. In the historical period of Latin, while remaining *musical*, it was restricted by the tri-syllabic law dependent on the quantity of the penult. In the intervening period, however, it became strongly *stress* and shifted to the first syllable of the word. This resulted in the transformation of words by

- (a) syncope: *ardere*, *audere* (cf. *aridus*, *avidus*);
- (b) umlaut: *tenco*, *capio* (cf. *retineo*, *retentum*; *incipio*, *inceptum*);
- (c) iambic shortening: *benē*, *vidē* (cf. *rectē*, *audē*).

Thus all short vowels in open position in medial syllables either disappeared or were narrowed to *i* or *e*, and diphthongs became monophthongs, e.g. *cacdo*, *claudio* (cf. *occido*, *excludo*).

4. Other vocalic changes were the reduction of (accented) diphthongs *ai*, *ei*, *oi*, *eu*, e.g. *aces* (*aĩθω*), *dico* (*δίκωμι*), *ūnus* (*ōνς*), *umentum* (*ζένυος*).

5. Of the consonants original *j* and *ɥ* were lost very early, the former between any two vowels (e.g. *trēs* <**trejes*), the latter between two similar vowels if the first was accented, e.g. *audī* < *audvī* (but not in *amāvī* or *avārus*). Where *i* occurs between vowels it equals *ij*, e.g. *Maia*. Initially *dy-* became *b-*, e.g. *bis* (cf. *duo*). In the second century A.D. Latin *v* (pronounced *w*) came to be sounded like English *v* (cf. *vox*, Fr. *voix*), and Latin *b* in certain positions developed the same sound (cf. *habere*, Fr. *avoir*). Hence late spellings like *Victorinus*, *birtus*. Between 450 and 350 B.C. intervocalic -s- became -r-, e.g. *gero*: *gestum*. Therefore, words such as *rosa*, *miser* are non-Latin, while in *causa*, *fusus* there was originally not -s- but -ss-.

6. The chief innovations in morphology are:

- (a) loss of the dual number;
- (b) new forms of genitive singular and nominative plural in -o- and -ā- stems;
- (c) new adverbial forms in -ē-, -m, -iter;
- (d) rise of the so-called 5th declension;
- (e) confusion of consonantal stems with stems in -i and the disuse of the *u* declension in adjectives, e.g. *ἡδύς* but *suavis*;
- (f) confusion of primary and secondary personal terminations in the verb;
- (g) almost complete disappearance of non-thematic conjugations;
- (h) fusion of aorist and perfect forms and of active and middle endings in what we call the perfect;
- (i) complete fusion of conjunctive and optative into one mood.

7. Latin syntax has restricted case-usage more sharply than Greek except in the ablative, which combined ablative, locative, and sociative-instrumental uses from which developed the characteristically Latin ablative absolute. In the verb there is great extension of the subjunctive, particularly in dependent clauses, and a very complex and strict system of *oratio obliqua* and sequence of tenses.

8. As a vehicle of literature Latin, unlike Greek, appears at first as crude and unpolished in both verse and prose. The pioneer efforts of Ennius, however, to graft on Latin the artistic excellences of Greek were ably seconded by Lucretius and Catullus and culminate in the full glory of Latin poetry in the *Aeneid* of Virgil and of prose in the resonant periods of Cicero and the rich smoothness of Livy. The rhetorical style reaches its height in the Ovidian elegiac and the brilliant epigram of Tacitus. In the hands of the greatest masters Latin was shown to be the worthy vehicle of the thought of a great imperial race.

A. Meillet, *Épouse d'une histoire de la langue latine* (1921); Stolz-Schmalz, *Lat. et die Gr. et Rom. 5th ed.* (1911); Mann (Müller's Handbuch, 1918); J. Marquardt, *De Latine* (1917).

LATIN, SILVER. The period of Silver Latin is broadly from A.D. 17 to 130, but the literary decline which marks it began even before Livy's death. The loss of political liberty and the practice of barren declamation led to a striving after novelty in which forced expression, exaggerated emphasis, antithesis, and epigram were cultivated for the express purpose of winning applause. Though the diction of Seneca is still fairly classical, all these faults abound in his works, and thereafter the same vein of rhetoric runs through the literature, reaching its height in Tacitus, the greatest of Silver writers. Quintilian has well summarized its faults when he says (bk. 8 proem) 'nihil iam proprium placet, dum parum creditur disertum, quod et alius dixisset' and 'tum demum ingeniosi scilicet, si ad intelligendos nos opus sit ingenio'. The chief features of Silver Latin are:

- (1) words borrowed for prose from the poets, especially Virgil;
- (2) words in new (frequently poetical) meanings;
- (3) new formations of agent-nouns in *-tor*, *-sor*, and abstracts in *-sus*, *-ura*, *-mentum*;
- (4) as in poetry, use of simple instead of compound verbs;
- (5) freer use of cases, e.g. dative of purpose, ablative of separation without preposition, ablative of duration of time, instrumental ablative even of persons, etc.;
- (6) present and perfect subjunctive in *oratio obliqua* after secondary tenses;
- (7) subjunctive of indefinite frequency and its extension to relative conjunctions;
- (8) interchange of *quin* and *quominus*;
- (9) *quamvis*, *quanquam* with subjunctive even when denoting facts;
- (10) *tanquam*, *quasi*, *velut* to express, not comparison, but alleged reason.

P. S. N.

LATIN, SPOKEN. Colloquial Latin (*sermo cotidianus*) means the easy everyday Latin of cultured people in which, as Quintilian says, 'cum amicis, coniugibus, liberis, servis loquimur'. The plays of Plautus and Terence are written mostly in this style, just as in a modern comedy of manners the language is the ordinary speech of polite society. Thus Cicero tells us that the speech of nobly born Roman ladies, e.g. Laelia, was strongly reminiscent of the language of Plautus, and Terence has always been considered a model of familiar, but elegant, latinity. Particularly important are the letters of Cicero, especially those written to his 'second-self' Atticus, or, e.g., to Paetus, to whom he says: 'Quid tibi uideor in epistulis? nonne plebeio sermone agere tecum? epistulas uero cotidianis uerbis texere solemus.' Characteristic features of this style are (1) the frequency of diminutives; (2) interjections; (3) very free syntax; (4) use of Greek words and tags, as we nowadays use French; (5) wide use of forms intensified by *per-* or weakened by *sub-*, e.g. *subinuidere*. The same style in verse is found in Horace's *Satires* and *Epistles*, and there are occasional lapses into colloquialism in other writers, e.g. Catullus. On a somewhat lower level are the *Bellum Africanum* and *Bellum Hispaniense*, while in the *De Architectura* of Vitruvius we have what might be called the Latin of business life. Very important, too, is the *Satyricon* of Petronius with its descending scale of urbanity from the cultured familiarity of Encolpius to the coarse vulgarity of Echion and Habinnas.

J. B. Hofmann, *Lateinische Umgangssprache*, 1925 (2nd ed. with additions 1936). P. S. N.

LATIN, VULGAR. Vulgar Latin is that form of the Latin language which was used by the uneducated classes in Italy and the provinces. We know it from (1) inscriptions, (2) a few texts such as the *Satyricon* of Petronius, *Peregrinatio Aetheriae*, *Mulomedicina Chironis*, *Appendix*

Probi, and (3) the early development of the Romance languages. It differs from classical Latin mainly in a disregard of seemingly unnecessary distinctions, a desire for greater regularity in word-form, and a striving after emphasis. Vowels are slurred and confused, final *-m*, *-s*, *-t* are dropped, *b* is confused with *v*, *s* with *x*; hence forms like *oli*, *plevis*, *milex*. Analogy creates *nura*, *aprus*, *acrum*, and syncope *uechus*, *oclus*, *viridis*, *frigda*. *Caelus* and *caelum* are pronounced *caelo*, whence confusion of gender (e.g. *vinus*, *fatus*); and the break-up of declension leads to a greatly increased use of prepositions (e.g. *ab+ante*, *de+intus*). The infinitive and accusative construction disappears in favour of clauses with *quia*, *quoniam*, *ut*; and new perfect and future tenses are formed by auxiliary verbs, *habere*, *debere*, e.g. *qui nasci habent* (= *nascuntur*). There is great activity in word-composition, especially diminutives of nouns (e.g. *ossucula*, *oricla*, *audaculus*) and frequentatives and intensives of verbs (e.g. *ausare*, *contenebricare*). Many common words become obsolete and are replaced by others, e.g. *magnum*, *edere*, *ludus*, *senex*, *ignis*, *ferre*, *emere* by *grandis*, *manducare*, *iocus*, *vetulus*, *focus*, *portare*, *comparare*. Finally, the word-order of Vulgar Latin is simpler and more rational, e.g. 'Haec est autem vallis ingens et planissima, in qua filii Israel commemorati sunt his diebus, quod sanctus Moyses ascendit in montem Domini' (*Peregrinatio Aetheriae*, 2. 2).

Report on literature of 1925-36 by T. Børgel, *Bursian Jahresh.* 270 (1940), 256-405. P. S. N.

LATIN LEAGUE, see *LATINI* and *LATIUM*.

LATIN LITERATURE, HISTORY OF, see *APPENDIX* at the end of this work.

LATIN NAME, see *LATINI* and *IUS LATII*.

LATINI. The inhabitants of the plain of Latium—a people of mixed stock, predominantly 'cremators' but including a late wave of 'inhumators'—lived originally in numerous small communities, *populi*, which gradually coalesced or were forcibly amalgamated between the sixth and fourth centuries B.C. into larger States, the greatest of which was Rome. The *populi* formed confederations for religious purposes. The largest was the cult-group of Jupiter Latialis on the Alban Mount, the presidency of which passed early to Rome but was of no political significance. The 'league of Ferentina', based on a shrine of Diana in the territory of Aricia, was from the sixth to the fourth century the political centre of all Latium, where the representatives of the independent *populi* deliberated on equal terms, elected federal officers, and decided on joint policy. These conditions, interrupted by the partial ascendancy of the Etruscan kings of Rome, were reaffirmed by the Cassian treaty (see *CASSIUS* (1)) and continued during the troubled period of the fifth century till, in the fourth, Rome began to encroach seriously on her neighbours. Eventually, in 338, Rome incorporated the smaller States and reduced the larger to subject allies. The characteristics of the later Latin Name were fixed in this early period by the continuous tradition of social and political equality between the Latins. Even the establishment of federal colonies drawn from all the Latin peoples, and the sharing of booty won in federal wars, persisted unchanged after 338 (see *IUS LATII*, *COMMERCIIUM*). Henceforth the Latin Name consisted of the few remaining *populi Latini* and an ever-growing number of Latin colonies, of which the man-power was increasingly drawn from Rome. These colonies were autonomous States subject to Rome only in foreign policy, but dependent for their existence upon the Roman law establishing them. This autonomy remained unchallenged even when Rome in the second century assumed the supervision of all Italy, since her edicts were only advisory. The Latin

Name provided Rome with numerous troops *e formula togatorum*, and garrisoned Italy at strategic points with loyal colonies. The Latins by their origin and special social position formed an intermediate category between Romans and the foreign *socii Italici* (see *SOCII*), and were commonly associated by Rome in many material privileges with Roman citizens. Though in 209 twelve colonies objected to the strain of continuous military service and were later punished (but not by diminution of civic rights), the Latins remained continuously loyal till the abuse by Roman commanders of their *imperium* at the expense of individual Latins led to a demand for the *ius provocacionis*, which, after the rebellion of Fregellae (125), may have been granted by the tribune Drusus in 122; for the Latins took no major part in the Social War, accepting the Roman citizenship by the *Lex Julia*. After 89 B.C. *Latium* became a purely legal concept (see *IUS LATII*).

ANCIENT SOURCES: Livy and Dion. Hal. *Antiquities*, passim, are basic, but retroject Roman supremacy to earliest period. Scattered references in Cato, Cicero, Gellius, Pliny *HN*, Varro, etc. Also Gaius, *Digest*.

MODERN LITERATURE: (a) Republic: K. J. Beloch, *Der italische Bund* (1880); *Röm. Gesch.* (1926); G. De Sanctis, *Stor. Rom.*; T. Frank, *Roman Imperialism*; M. Gelzer, 'Latium' in *PIW*; Mommsen-Marquardt, *Manuel* vi. 2 (*Röm. Staatsr.* iii. 1), especially for legal aspects; E. T. Salmon, *JRS* 1936, for second century; A. Rosenberg, *Ihermes* liv; A. N. Sherwin-White, *The Roman Citizenship* (1939). (b) Empire: E. G. Hardy, *Six Roman Charters*; Hirschfeld, *Kl. Schr.* xlii; H. M. Last, *CAH* xi, ch. 11. See also *MUNICIPIUM*.

A. N. S.-W.

LATINI IUNIANI were a class of Latins who originated with the *Lex Iunia* (probably 17 B.C.). Previously a private arrangement between *dominus* and *servus* gave actual liberty to slaves but left them legally in bondage; the *Lex Iunia* gave statutory freedom to slaves informally manumitted, and defined their rights. They had *ius commercii* (see *COMMERCII*); but they could not receive legacies or make a will, and on death their property reverted to their patron. Their children were free-born Latins and so enjoyed *Latinitas* which might lead to Roman citizenship. Manumissions which did not comply with certain conditions of the *Lex Aelia Sentia* (A.D. 4), e.g. about the age of the slave or the manumitter, conferred only *Latinitas Iuniana*; but repetition (*iteratio*) of manumission when the conditions could be fulfilled gave citizenship. By the same law a Junian Latin could obtain citizenship for himself and his wife when his child became one year old. *Latinitas Iuniana* was abolished by Justinian in A.D. 531.

See Gaius i. 29, 30; 3. 63; *Inst. Iust.* 3. 7. 4. *CAH* x 429, 434, 450; R. H. Barrow, *Slavery in the Roman Empire* (1928), 184-6; A. M. Duff, *Freedmen in the Early Roman Empire* (1928). R. H. B.

LATINUS, eponymous hero of the Latini (q.v.). Hesiod (*Theog.* 1011-16) makes him the son of Circe and Odysseus and king of the Tyrrhenians. Timaeus first connects him with Aeneas, whose daughter Rhome Latinus married and had as sons Rhomus (in Roman tradition Remus) and Romulus, founders of Rome. Cato's version (probably also that of Naevius and Ennius) is that Latinus betroths his daughter Lavinia to Aeneas; Turnus, to whom she was formerly promised, makes war with Latinus on Aeneas, Latinus is killed, and Aeneas becomes king of the Latins. In Livy's version (1. 2) Latinus is killed fighting with Aeneas against Turnus. Virgil (*Aen.* bks. 7-12) in the main follows Cato's version, but makes Latinus son of Faunus and the nymph Marica. Latinus, a weak and vacillating character, takes no part in the war and only emerges from his palace to propose concessions to Aeneas (bk. 11) and to arrange the single combat of Turnus and Aeneas (bk. 12). C. B.

LATIUM, lying between the Apennines and the Tyrrhenian Sea in western Italy, originally was a small area about the Albanus Mons (q.v.). By 500 B.C., however, it stretched from the Tiber to the Circeian promontory

(*Latium Vetus*). Subsequently Latium embraced Volscian, Auruncan, and Hernican territories, and by Strabo's time included Mons Massicus and Sinuessa (*Latium Adiectum*). Augustus amalgamated Latium with Campania, and after A.D. 292 the name Campania prevailed; consequently Latium is still called *Campagna*. Eastern Latium (the Apennine slopes and Trerus valley) and Central Latium (an undulating plain embracing the Alban Hills and Pomptine Marshes) supported large herds; subterranean drainage channels, excavated apparently in pre-Roman times, aided flourishing agricultural operations. Western Latium contained extensive forests. Latium was well watered and possessed sulphur springs, abundant volcanic building-materials (tufas, travertine, basalt, pozzolana), and a road network (ultimately developed into *Viae Latinae*, Appia, etc.). Human habitation commenced c. 1150 B.C. The prehistoric Aborigines (=Ligurians? or Sicels? Ciaceri identifies the two) apparently did not speak Latin. In historical times Latium was peopled by Latini, traditionally a mixed race and presumably an amalgam of Aborigines and various Bronze and Iron Age invaders: 'Southern Villanovans' (who probably introduced Latin into Latium), Sabelli, Etruscans, and apparently Picenes (=Illyrians). The Latini inhabited mutually independent settlements on knolls or mountain slopes, but from early times grouped themselves together for religious, and ultimately for political, purposes. There were several Latin federal sanctuaries (at Albanus Mons, Ardea, Aricia, Lavinium, and elsewhere) and therefore probably several Latin Leagues, although tradition is explicit about only one—that led by Alba Longa (q.v.). When Rome destroyed Alba (c. 600 B.C.) she allegedly succeeded her as leader of this league. However, when the Roman monarchy fell (508 B.C.) the Latini (led apparently by Tusculum, Aricia, Lanuvium, Lavinium, Corn, Tibur, Pometia, Ardea; Cato, *Orig. fr.* 58 P.) threw off any predominance Rome possessed, but failed to subordinate her to themselves (see *REGILLUS LACUS*). In 493 B.C. Rome and the Latin League signed a defensive alliance (*Fœdus Cassianum*) against threatening Volsci and Aequi. For Rome's subsequent relations with the Latini see *LATINI*, *IUS LATII*.

Depopulation of Latium began c. 300 B.C., caused chiefly by the centripetal pull of Rome, various wars (Pyrrhic, Hannibalic, Civil), the growth of *latifundia*, and malaria (which, however, reached its full virulence much later). The Augustan poets mention, and exaggerate, the desolation of Gabii and other places; Pliny, significantly, records towns that had utterly disappeared. Other towns (e.g. Tibur, Praeneste, Antium) undoubtedly became fashionable resorts, and in Imperial times Latium contained numerous opulent villas. In general, however, its towns failed to revive. Pasturage ousted agriculture (Pliny, *Ep.* 2. 17) and, after the Barbarian Invasions, Latium assumed that derelict appearance which it bore until recently.

LATRUNCULI, see *CAPIES*.

LAUDATIO FUNEBRIS, the funeral oration, originally part of the rites of the Roman *gens*, developed into a public *laudatio*, pronounced by a *scribae*, later over women as well as men, e.g. Catulus' mother. It retained

its traditional character, linking praise of the deceased with glorification of his ancestors, covering public and (probably) private life, and describing outstanding events. The encomiastic treatment, when the *laudationes* were published, tended to falsify history (Livy 8. 40. 4; 27. 27. 13; Cicero, *Brut.* 16. 62). The occasion gave rise to propaganda, e.g. the *Catonēs* and *Anticatonēs* on the younger Cato. The *laudatio* played an important part in the rise of Roman biography.

LAUREA, MARCUS TULLIUS, one of Cicero's freedmen, wrote an epigram on the hot springs which burst out at Cicero's villa soon after his death (Plin. *HN* 31. 7-8): see Baehrens, *FPR* 316; Morel, *FPL* 80.

LAURIUM, near Cape Sunium in Attica, was one of the largest mines in the Greek world. Silver was mainly sought, but other minerals, especially lead, were also produced. The mine was probably discovered in the early Iron Age; it flourished in the fifth century B.C., richer deposits having been tapped about 483. Here first scientific exploitation was developed, assisted by the simplicity of the geological formation. Narrow shafts, furnaces, cisterns, and washing-tables are visible. It was worked less actively in the fourth century B.C., but revived about 320. In the third century it suffered under the low prices of silver, but in the second century it was exploited ruthlessly until the revolt of the slave workers in 103. A few tailings were reworked in the first century A.D., and the mine closed soon after; but an attempt was made to reopen it in the fourth century.

O. D.

LAUS (or **LAUDATIO**) **PISONIS**, a panegyric in 261 respectable hexameters, is addressed by a poet under twenty (ad fin.) to a Calpurnius Piso, best identified with the conspirator of A.D. 65. He is praised as an impressive speaker in law courts and Senate, accomplished in music and athletics, and a 'draw' when playing the game of *latrunculi*. Such qualities suit Tacitus' description (*Ann.* 15. 48) of the figure-head in the plot against Nero, and the last point strongly suggests identity with Juvenal's 'Piso bonus' (5. 109), whose renown in *latrunculi* the scholiast records. Hubaux (*Les Thèmes bucoliques*, p. 185), however, maintains that the poem concerns L. Calpurnius Piso, consul with Nero in 57.

The authorship is uncertain. Among several authors advocated Lucan belongs at least to the right period. Haupt at one time claimed the work for Calpurnius Siculus; more recently Ferrara (op. cit. infra), using metrical and other evidence, held this ascription to be impossible.

The poet pleads poverty, but feels confident of fame if he wins Piso—even Virgil needed a Maccenas (230-5). He promises to immortalize his patron (246-58); and the absence in Calpurnius Siculus of any fulfilment of this promise tells against the belief that he wrote the *Laus Pisonis*.

LAVINIUM, nowadays *Pratica di Mare*, an ancient Latin city (often confused with Lanuvium). Its inhabitants were called Laurentes, later Laurentes Lavinates (Livy 1. 14; Dessau, *ILS* 1371). Lavinium was a member of the Latin League. The Romans revered it for its Aeneas traditions, its Venus temple common to all Latins, its cults of Vesta and Penates (O. Seeck, *Rh. Mus.* 1913, p. 11), and its loyalty in the Latin

War. However, like most Latian towns, Lavinium fell into decay. Apparently there was no town of Laurentum at *Tor Paterno*, *Castel Fusano*, or elsewhere, although Lavinium was called Laurolavinium in late times. However, see G. Bendz, *Opus. Archaeol.* i (1934).

LAW AND PROCEDURE, ROMAN. I. CIVIL LAW.

The beginning and end of the historical development of Roman law are marked by two legislative works, both unique in universal legal history, though diametrically opposed in origin, nature, and structure—the XII Tables and Justinian's Codification. In the intervening thousand years the Romans did not produce any codification; the XII Tables were never officially abolished and remained operative (although in a restricted measure) even until the legislation of Justinian. The XII Tables, a collection of the principal rules of the oldest Roman law, originated in ancient customs (*more maiorum*): they are the germ from which the Roman civil law was evolved. This evolution was promoted and influenced by the increase in the political importance of the State, its new economic and social structure, its spiritual progress (contact with Greece and its civilization), and finally its constitutional organization and administration, all of which reacted on the legal institutions, customs, and doctrines. Three main periods may be distinguished in the history of Roman law, coinciding roughly with three constitutional stages: (a) from the XII Tables to the end of the Republic, ending in a century of rapid development after 150 B.C. (at which date accordingly some scholars fix the beginning of the next period); (b) from Augustus to Diocletian: in this period Roman law reaches the summit of its development, thanks chiefly to the co-operation of legal science, to which it owes its influence on modern codifications; (c) the Late Empire, under which the evolution of law took a new turn in spite of the decadence of legal science. In Justinian's code Roman law was unified.

2. The most characteristic mark of the oldest law was its rigorous formalism: in transactions as well as in judicial proceedings, legal effect could as a rule be given only by the use of solemn, oral, inflexible forms; the will of the parties, if not expressed in the set form, was without any effect. The poverty of primitive economic and social life was accurately reflected in the scantiness of legal forms: two institutions, *manipatio* and *stipulatio* covered, in their different and always extending applications, most of the exigencies of legal business. The small rustic community excluded foreigners from participation in the institutions and forms of the *ius Quiritium* (citizen law); the ancient Roman family, under the unlimited control of the *pater familias*, preserved its exclusive organization.

3. In later times, however, the narrow and rigorous norms of the law no longer met needs arising out of commercial contact with other peoples, which grew considerably with the occupation of new territories and dominion over the Mediterranean world. Commercial relations with foreign nations imperatively required the abolition of a cast-iron formalism which took into account only the spoken word (XII Tables: 'uti lingua nuncupasset, ita ius esto!'); the will of the parties could no more be disregarded. The hard formalistic provisions descending from ancient Roman tradition now produced many unjust decisions: this is the sense of the famous saying of Cicero (*Off.* 1. 33): 'summum ius summa iniuria'. Hence informal contracts, indispensable in commercial

relations, such as *emptio-venditio*, *mutuum*, *pignus*, *societas*, and the like, were gradually introduced; *stipulatio* was extended to transactions with foreigners; special courts (*recuperatores*) were constituted for controversies with non-citizens, and a new magistrate (*praetor peregrinus*) was appointed to protect their interests. This new stratum of private law, common to all free persons, exempt from burdensome forms and governed by equity, which dominated procedure and the judge's decision in controversial cases (*iudicia bonae fidei*), brought about a rejuvenescence of the law, the more so as Roman jurisprudence contributed considerably in its own way to an amalgamation of the new views and constructions, the *ius gentium* with those of the old *ius civile*.

4. Another factor which contributed materially to the release of private law from the fetters of the ancient formalism was the *ius praetorium* (*honorarium*; see *IUS CIVILE*). The reform of the civil procedure initiated by the *Lex Aebutia* empowered the directing magistrate with procedural prerogatives, authorizing him to instruct the judge to take into consideration particulars of the matter at dispute, not recognized by the *ius civile*. Ordinary and extraordinary praetorian remedies (various *exceptiones*, *actio doli*, *actiones in factum*, *restitutio in integrum*, and so on) served to exclude a rigorous application of the inexorable *ius civile*, when it appeared too iniquitous, or to fill up its deficiencies and even, if necessary, to correct it with the object of basing the decision on principles of equity, unknown to the ancient law. The praetorian law, continuously modernized by the mechanism of *edicta*, profited in a large measure by the activity of jurists: the suggestions by the legal advisers, members of the *consilia* of the praetors on the one hand, and *responsa* by the jurists on the other, often led on to general innovations in *edicta* or to the application of a special remedy in a particular trial. In practice, this activity of the praetors signified the recognition of new types of agreements or facts which otherwise could not be taken into consideration. Thus arose a dualism between two systems: some fundamental institutions of the *ius civile* (e.g. wills, successions *ab intestato*, ownership) acquired a counterpart in an analogous institution of the praetorian law depending on other forms and rules. A less important part was played in the Republican period by the legislative activity of *comitia* and *concilia plebis*: a few statutes dealt merely with particular points of some parts of the private law (guardianship, inheritance, or the like), others only introduced limits into existing institutions (*usufructus*, interest, donation). The *Lex Aquilia*, with its detailed provisions concerning damage to property, is an exceptional case. The contribution of *senatus consulta* to private law was no larger.

5. Under the Principate the legislative activity of the assemblies soon came to an end: a series of *Leges Iuliae*, promoted by Augustus, was the last instance of comitial legislation. On the other hand, the Senate developed a greater activity. Several reforms, especially in the law of inheritance, modernized the ancient norms in a sense more appropriate to the necessities of practical life. A large part of the senatorial legislative activity must be put to the account of the emperors, whose initiative in legal matters increased more and more, until finally the Senate's decisions became a simple approval of imperial motions. But the emperors did not content themselves with this indirect legislative activity: their constitutions exercised an important direct influence on the development of the law. Their decisions in particular trials, though relating in the first instance to special cases, subsequently acquired general force, either directly, if the emperor enlarged them into a general rule, or indirectly by virtue of their high authority, being observed as binding precedents by imperial officials, or recognized as such by the emperor (or his delegates) in his later decisions. In the same way the imperial rescripts, though

legally limited on particular questions, when submitted to the decision of the emperor, became not infrequently *de facto* the source of important substantial innovations in the law.

6. This happened particularly in the *cognitio extra ordinem*, where the imperial judges adopted the principles of the new law created by the emperors, and, not being bound either by the *ius civile* or by the *ius honorarium*, had full discretion in giving effect to the demands of justice and equity. After the codification of the praetorian edict under Hadrian, jurisdiction by *cognitio* took over the innovatory function previously discharged by the praetors, but without having at its disposal their organ of publicity (*edicta*). New norms concerning the *patria potestas*, the patrimonial capacity of the *filius familias*, the protection of slaves against their *domini*, the *fideicommissa*, were introduced by the operation of the new proceedings. The influence of *cognitio* on the progress of the law was doubtless very considerable not only in this period, but also in later times, for by its operation new legal ideas were applied in legal practice. But if the period of the Principate is called the period of classical Roman law, it is above all because of its scientific elaboration by the jurists. The direct influence of the jurists on legal evolution, already established in the preceding period, did not diminish in this one: they were members of the emperor's *consilium* and of the Senate, and from the time of Augustus their *responsa* probably acquired official and binding character. But the law of this period owes its description as 'classical' to legal science and literature. The works of the jurists had not only an instructive and educative influence on generations of jurists, and contemporarily an influence on all legislative and judicial activity; the jurists also undertook the task of levelling the discrepancies which existed between the different coexisting strata of legal norms, *ius civile*, *gentium*, and *honorarium*, and of preparing gradually their simplification and fusion. Starting from practical cases, the Roman jurists arrived at theoretical problems, from single decisions at the formulation of general rules, from the analysis of legal facts and forms at the construction of legal categories. The questions in which legal science was most influential were: recognition of informal bindings and agreements, together with the abolition of abstract (formal) transactions in respect of agreements endowed with *causa*, regard to the intention of the parties (*voluntas, mens, animus*) in transactions *inter vivos* and in wills, promotion of the validity of written documents, elaboration of the conception of *dolus* and *culpa*, extension of the sphere of contracts governed and interpreted by ethical principles (equity), changes in the organization of the family, and so forth.

7. New problems arose from the conquest of provinces to which the Romans conceded from the first the right of organizing their legal life according to their own laws. Only the persons upon whom Roman citizenship was conferred (individually, regionally, or by groups) were obliged to observe in their legal relations the Roman *ius civile*. Differences between the various legal systems gave rise to misunderstandings which were submitted to the decision of the emperor, who decided not infrequently in favour of the provincial law. (Diocletian's tendency to repress provincial customs and bring the old civil law into universal operation was not followed by his successors, least of all by Justinian.) The general bestowal of Roman citizenship by *Carsacalla* (A.D. 212) simplified the legal situation, but unavoidably some conceptions of local law penetrated the law of the Empire and vice versa, a phenomenon which is brought into particularly clear view in Egypt by the Graeco-Egyptian papyri which illustrate legal practice in this province.

8. The last period, the Late Empire, brought about essential transformations in the law: the gradual disappearance of the praetors and the *ius honorarium* in all

its manifestations, cessation of the *responsa prudentium*, the decay of jurisprudence and the consequent drying up of this source of legal ideas, so exuberant in the foregoing period, and the abolition of the classical system of civil proceedings with all its marvellously organized mechanism of remedies. The entire legislative activity was now concentrated in the hands of the emperors. The imperial constitutions, now commonly called *leges* (the previous term for statutes created by the people), assume the character of general binding norms, without territorial restriction. On the other hand, the works of the classical jurists constituted a body of law (now simply called *ius*, to distinguish it from the *leges*), from which *cognitio* drew the rules for its decisions. Their importance grew even greater, since their official character as a source of law was recognized by the 'Law of citations' of Theodosius II. The legal schools which arose in this period in the West and East (where that of Beirut enjoyed a particularly high reputation) were not able to continue the tradition of the classical jurists, however meritorious they might be in the training of practising lawyers. Their contribution to the progress of legal development was, so far as can be proved, rather insignificant, though efforts have been made by some scholars to exalt it.

9. But this period of more than two centuries was not an age of stagnation. The frequently changing imperial legislation produced a temporary state of chaos in some parts of the law; but a comparison of the classical law with the law crystallized in Justinian's work shows essential differences not only in particular points, but also in general rules and doctrines. All this cannot be merely a result of Justinian's reforms. The formation of Justinian's law is one of the most discussed problems in the latest romanistic literature. The question is not only which innovations belong to Justinian and which are post-classical, but also what factors influenced the reforms introduced by Justinian or any others of post-classical times. The solution depends above all on a just separation of the classical law from later innovations. This usually involves the difficult problem of correctly appraising the genuineness or spuriousness of the texts collected in Justinian's codification, and of determining whether the alterations effected in them are legislative measures of Justinian or merely a recognition of a legal state, of doctrines and views which existed already before the Emperor's compilation. It cannot be denied that the interpolations are innumerable, but a moderate and methodically unassailable criticism, free from exaggerations and fantasy, shows that apart from alterations which were necessary in consequence of the new imperial legislation, such as the abolition of obsolete forms, institutions, and conceptions, and the reform of civil procedure, and apart from interpolations of merely formal or paraphrastic and not substantial character, and from more or less harmless glosses which Justinian's compilers found in the manuscripts excerpted by them—a great deal of pretended Byzantine innovations originated in ideas suggested and developed by classical jurists. If the post-classical innovations and those of Justinian are reduced to their right limits, the character of the whole codification acquires another aspect: there is no necessity to see in the emperor's work the result of foreign influence.

10. If the law wears another appearance in the period from Constantine to Justinian, this is the effect of a spontaneous, organic, and natural development. The fusion of the different legal orders, already initiated in the classical period by the jurists, was now completed in the practice of the courts, without any intervention or co-operation of foreign forces. *Cognitio extra ordinem* applied in its judicial activity the most recent and advanced views, at the cost of the ancient *ius civile*, which was thus condemned to disappear. Symptoms of

this process of fusion, or of the replacement of institutions of the old *ius civile* by modern ones, created or developed by *ius honorarium*, *gentium*, or the *cognitio* can be observed in different fields of private law: agnatic and cognatic inheritance, *bonorum possessio* and *hereditas*, *legata* and *fideicommissa*, civil and praetorian ownership and possession, fusion of modes of constituting servitudes, *tutela* and *cura*, development of *stipulatio* into a written transaction, whereby only the assent of the parties is pronounced orally as a mere formality, and so forth.

11. It is self-evident that the law could not remain untouched by reactions of a political, economic, social, and cultural character (Greek civilization, philosophy, and late rhetoric). The theory of the spontaneous and organic evolution of the Roman law is contested by some scholars in favour of Hellenistic influences, which by a gross over-estimation are considered sufficient to qualify this period of Roman law as Graeco-Oriental. Undoubtedly some institutions of the Hellenistic East appear in the latest law and with Justinian (e.g. *arrha sponsalicia*, *donatio propter nuptias*, appointment of a woman as a *tutor*, *manumissio in ecclesia*). A contact with Greek legal ideas and customs existed in the history of Roman law from early times, and tendencies to assimilate it to provincial law, especially that of the Greek East, are already discernible in the preceding period. The fourth and subsequent centuries favoured these tendencies, since the centre of gravity of the Empire had been transferred to the East. But all this does not justify us in speaking of an orientalizing of Roman law. Roman law conserved its national character in this period and in Justinian's codification, as it did before in spite of multiple and sometimes fundamental alterations to which it had to submit in the course of several centuries.

12. One new factor, however, impressed its mark on some institutions of the latest Roman law: Christianity. Its most notable influence appears in the law of marriage (divorce), of family (restriction of *patria potestas*), and of slavery, in the protection of the weak, in the attenuation of the individualistic rigidity of the Roman ownership, and an increasing regard for social interests. The conception of equity, considered before as the tendency to the realization of plain justice, in conformity with the common legal conscience, became a larger one under the influence of Christian charity; it was now governed by humanity and benignity. But the influence from this quarter also failed to alter the structure and physiognomy of Roman law as a whole. In his great codification Justinian simplified all the different legal orders which came into being during the centuries of the mighty expansion of Rome to a unitary system. He made it in a singular manner, which has sometimes been criticized too harshly by posterity; but his work, composed of old but indestructible material, fortunately did not completely cover the phases in the evolution of the Roman civil law, which was destined to become the foundation of most codifications of the world up to the present.

II. CIVIL PROCEDURE. The Roman civil trial from earliest times showed a characteristic feature: the division into two stages. The first took place before a magistrate, in *iure* (ius signifies here the place of magisterial jurisdiction), who conducted the proceedings from the beginning to their culminating point, *litis contestatio*. This was a formal agreement concluded between the litigants under the magistrate's supervision and with his co-operation, and contained a formulation of the principal points of the question at issue, which had to be examined and decided in the second stage by the *iudex* (q.v.). He was a private person empowered to investigate the case and to pass the sentence by a special order (*iussum iudicandi*) of the magistrate delivered by consent of both the parties. This bipartite division of the trial (whose origin is much disputed) was an ingenious combination of official jurisdiction and private arbitration, from which it differs in that the *iudex* was obliged to accept the commission conferred upon him by the magistrate and the litigants, and was bound by their agreed definition of the matter in dispute. Only in the first stage, in *iure*, were certain formalities observed; the second stage, *apud iudicem*, was conducted without any prescribed form. Two systems are to be distinguished in the proceedings before the magistrate: *legis actiones*, the earlier one, and *formulae*.

2. *Legis actio* was a solemn procedure of a rigidly formal character, wherein the plaintiff (*is qui agere vult*; after the *litis contestatio* he was called *actor*) and the defendant (*is cum quo agitur, reus*) had to assert their rights in oral forms prescribed by law or custom. This system was known already in the time of the XII Tables, which dealt with it at length, as has been confirmed by the newly discovered fragments of Gaius (q.v. 2). There were five types of *legis actiones*. The most usual, applicable to claims of ownership and to claims originating in obligations, was the *legis actio sacramenta*, proceedings combined with a kind of wager between the parties, who both deposited a fixed sum of money (*sacramentum*, q.v.). The winner (the party whose assertion was declared right by the judge) received his *sacramentum* back, while the loser's *sacramentum* was forfeited to the State. The other types were (1) *per iudicis postulationem* for claims based on *stipulatio* (q.v.) or for disputes about the division of property belonging to several persons; (2) *per condictionem* (of later date) for recovery of *certa pecunia* or *certa res* in particular cases. These were of greater simplicity and did not require a *sacramentum*. The last two *legis actiones* were methods of execution: the one (*per manus iniectionem*) against the person of the condemned debtor, the other (*per pignoris capionem*) against his property.

3. *Legis actiones* were supplanted by the formulary system, in which the matter in dispute was defined in a written document (*formula, concepta verba*) in place of the oral forms of the *legis actio*. But the written *formula* was rather elastic and adaptable to the particular details of the case, though its structure was based on some permanent essential parts: the *intentio* (concise formulation of the plaintiff's claim) and the *condemnatio*, by which the judge was authorized to condemn or to discharge the defendant, if it appeared from the results of the evidence produced that the defendant ought, e.g., to pay a certain sum to the plaintiff, or if a particular matter of fact, on which the plaintiff based his claim,

was verified. To suit the complexities of each case the *formula* might be extended by additional clauses, e.g. by a *demonstratio*, which served to determine more precisely the matter at issue when the *intentio* was indefinite (*incerta*); or by an *exceptio*, a clause on behalf of the defendant excluding his condemnation, if he should make a statement which would make the condemnation appear unjust. The composition of the *formula*, which was variously worded to suit each case and might contain special clauses, was not easy; but model *formulae* were published in the praetor's edict. The parties, therefore, were often forced to consult jurists, the more so as the reforming activity of judicial magistrates introduced more and more new forms or modifications in existing forms. The praetors were authorized to admit the application of a new form in cases which previously had not been recognized by the law and appeared worthy of judicial protection. The development of the system of *formulae* and their mechanism was of the highest importance for the development of private law.

4. The formulary process was introduced officially by a statute, *Lex Aebutia* (probably after 150 B.C.), the details of which are unknown. It was not obligatory for all kinds of lawsuits, but became so by an amending law of Augustus (*Lex Iulia iudiciorum privatorum*). In trials assigned to the centumviral court (see CENTUMVIRI) proceedings by *legis actio* remained untouched. The origin of the formulary system was not purely Roman; written forms seem to have been used before the passing of the *Lex Aebutia* in international issues wherein the Senate had to adjust differences between Greek communities and in trials before the *praetor peregrinus*. In actions between *peregrini* the *legis actio* was not practicable and the magistrate had a larger liberty in conducting the trial; the whole proceedings depended on his *imperium*. On these elements is based the distinction between *iudicium legitimum* (where the parties and the private judge, *unus iudex*, were Roman citizens and the proceedings took place within a mile of Rome) and *iudicium quod imperio continetur*. In the latter, whereat the above-mentioned conditions were not fulfilled, the course of the trial was left to the discretion of the magistrate invested with *imperium*; there was no protection of the parties against the arbitrary action by the magistrate, who decided the case either in his own person or by a delegate on whose appointment the parties had no influence.

5. This unlimited authority of the judicial magistrate became predominant in the third and last system of Roman civil procedure, *cognitio extra ordinem* (see *iudicium privatorum*) or *extraordinaria*, which was unlike the normal bipartite proceedings with a private judge. This system was first applied in exceptional cases in which the place of the private *iudex* was taken by a public functionary as delegate of the magistrate or of the emperor. It came into regular use under the Late Empire, though it continued to be called 'extraordinary', even when the older systems had disappeared. The transition to the new system was gradual, and externally some institutions of the classical procedure were maintained for a long while, as for instance the bipartition, or the written *formula*. But the fundamental characteristic feature was always the same: the whole proceeding was official; the same functionary held the trial in his hands till its final decision by sentence, and if he delegated the trial and passing of sentence to another person, this deputy depended only on him. With the increase of absolutism the former democratic institutions of the classical process were condemned to disappear.

6. Roman juridical language had two expressions for a civil lawsuit: *actio* and *iudicium*. Both terms originally had separate meanings, which were enlarged by the development of the procedure, so that from early times they overlapped, particularly when used to indicate a

special kind of action by its technical name (e.g. *doli, mandati, tutelae, communi dividundo, in factum*, and so on). *Actio* signified originally the activity of the plaintiff who initiated the trial, but subsequently came to denote the whole proceedings, and especially their first stage *in iure*. But *actio* had also a material sense. A famous definition (Dig. 44. 7. 51) qualifies *actio* as 'ius quod sibi debetur, iudicio persequendi', where the difference between the material *actio* and the formal *iudicium* is evident. *Iudicium* signifies generally the second stage of the classical lawsuit, connected with the *iudex*, but it is often used to indicate the entire trial or only its final act, the sentence; frequently it refers to the written *formula*. In the language of the compilers *iudicium* acquired a very wide application and was often interpolated in the place of classical mentions of the first stage, *in iure*, after the bipartition had been abolished.

7. The classical trial began with an extra-judicial private act, *in ius vocatio*, by which the plaintiff personally summoned the defendant to follow him before the magistrate. The XII Tables contained detailed provisions for cases in which the defendant disobeyed the summons on grounds of physical disability. It is noteworthy that they began merely by stating the absolute duty of the party summoned to go with the plaintiff immediately: 'si in ius uocat, ito.' The only manner of avoiding an immediate appearance before the magistrate (which could be enforced in case of resistance) was for the summoned party to give a guarantor (*vinde*). In the formulary system summons remained a mere private act, the plaintiff being obliged to announce to the defendant the claim and the form which he wished to apply against him. In the extraordinary procedure the summons was issued in writing with the assistance of an official. Finally the summoning was performed exclusively by a judicial functionary without any co-operation of the plaintiff.

8. The magistrate began by trying some preliminary questions such as the competence of the court, the personal capacity of the litigants, and their legitimation to be plaintiff or defendant in the intended lawsuit. A negative result of this examination made further litigation superfluous; *denegatio actionis* by the magistrate put an end to the trial. Other cases where the litigation was finished *in iure* were: acknowledgement of the plaintiff's claim by the defendant (*confessio*) or his oath (in special matters only) that he did not owe anything to the plaintiff. Normally, however, the stage *in iure* was devoted to the concluding of an agreement between the litigants (approved by the magistrate) about the matter in dispute to be submitted to the decision of the judge. In the formulary process there might often be long discussions about the composition of the *formula*, especially when the case and the appropriate form were not provided in the praetor's edict and the plaintiff tried to obtain the protection of his right by a new form adapted to the particularities of the case (*actio in factum*). The contractual character of the *litis contestatio* required the co-operation of both the parties; neither of them could frustrate the achievement of this act by repeated refusal of the other's proposals, the plaintiff being exposed to *denegatio actionis*, the defendant to an executive measure applied by the magistrate on behalf of the plaintiff (*missio in possessionem*).

9. The *litis contestatio*, as the name declares, was performed in the presence of witnesses. After its completion another trial on the same claim was debarred, and the judge's sentence was determined by the condition of the case at the moment of the *litis contestatio*, especially in regard to the fruits or the alienation of the object at issue and the like.

10. The second stage of the trial was governed by the private *iudex*. This was occupied by the pleadings of the parties and their advocates (see ADVOCATUS) and citation of evidence, the assessment of which depended wholly

on the discretion of the judge. The classical Roman procedure did not provide for an appeal against the judge's sentence; it was the *cognitio extraordinaria* which broke this principle (see APPELLATIO). If the defendant lost the case, he was obliged to carry out his obligations under the sentence within a fixed term (thirty days according to the XII Tables; various in later development; extended to a maximum of four months by Justinian). But a sentence could be annulled by an extraordinary remedy such as *restitutio in integrum*. If the condemned debtor did not carry out the terms of the sentence the creditor could proceed to a forcible execution of his rights, which always took place with the co-operation of public officials. Personal execution (*manus iniectio*) was the rule; real execution on objects forming part of the property of the debtor (*pignoris capio*) was admitted only for distraints of a sacral or public character. Real execution eventually became prevalent, but not exclusive. The formulary procedure comprised a special *actio iudicati* for execution of the sentence, wherein a contumacious debtor risked a condemnation on the double value of the object in dispute and an immediate authorization of the creditor to seize his property. The *cognitio extraordinaria* softened the rigid earlier forms of execution by restricting it to single objects instead of the whole property. This development in post-classical times was in conformity with the new tendencies of the civil procedure under the Late Empire. Other innovations were the admission of appeals to the emperor's jurisdiction and of claims addressed directly to him (giving rise to a new form of proceedings to be determined by imperial rescripts), the introduction of new procedures for abbreviating the trial and reducing its costs. All these and other reforms gave a new character to the latest Roman procedure. Some features of this new procedure as it existed in Justinian's time outlasted a series of centuries and passed into modern legislations.

II. A strange procedural institution, partly of administrative character, was provided in classical Roman law by the *interdicta*. These were orders or prohibitions issued by the magistrate without long investigations and addressed as a rule to a particular person. Their object was to give immediate protection to menaced or violated interests of the plaintiff. If the defendant ignored the interdict, the case was tried under conditions highly unfavourable to him. The private interests protected by *interdicta* were such as were requisite for the maintenance of public order, for instance possession, rights of succession, mortgage, servitudes, some personal rights, and the like. *Interdicta* could be applied for a direct protection of public interests, for instance with regard to roads and rivers. The interdiction proceedings were a kind of magisterial cognition; eventually the fundamental differences between *actio* and *interdictum* became effaced.

III. CRIMINAL LAW AND PROCEDURE. In the evolution of Roman criminal law we can distinguish three phases governed by different fundamental ideas not unknown in criminal law of other ancient nations. The older phase is characterized by the principle of private revenge; then followed the period of composition between offended and offender, first voluntary and sporadic, later obligatory. But even in this phase the beginnings of a new system can be observed: intervention of the State in punishing some crimes, especially those directed against the structure or existence of the community (a characteristic feature of the last phase). The State now takes in its hands the repression of offences, not only those which menace the public order or interest directly, but also those affecting private property or interests. The separate systems cannot be distinguished by exact dates, as none of them was completely replaced by the next one, but generally speaking the first phase falls in the Regal period, the XII Tables represent a combination of the first two systems, while in the advanced Republic the intervention of the State, hitherto exceptional, becomes more and more common. Under the Principate it gains dominance, and under the Late Empire and Justinian it becomes exclusive, having absorbed nearly the whole field of private criminal law. A survival of the idea of vengeance is found in the *noxae deditio*, the surrender of the wrongdoer (slave or child under *patria potestas*) to the person wronged.

2. The Romans did not create an organic body of statutes relating to criminal law. The XII Tables are, as the fragmentary remains of Tables VIII and IX show, a mosaic of various penal provisions but not a code. They were restricted to such criminal matters as interested a primitive peasant community, and therefore could not suffice for the State in its further development. The copious legislation of the Republic did not solve the problem, as these *leges* dealt only with single crimes, and it is noticeable that some offences were even treated by several *leges* voted within a relatively short period of time, e.g. the *crimen repetundarum* (see *REPETUNDAR*) or *ambitus* (q.v.). The various *Leges Corneliae* (of Sulla) and *Juliae* (of Caesar and Augustus); it is not always certain which of them was the author) with their different courts and proceedings for particular crimes were as far from a systematic treatment or a coherent code as the later legislation of the Empire, which, though creative in particular details, made no attempt to codify. Extensive interpretation of earlier statutes to cover new facts (wherein the Senate co-operated as long as it remained active), or modification of penalties in the direction of greater or lesser severity, constitutes all the legislative activity of these times in substantive criminal law. The procedure *extra ordinem*, it is true, caused the introduction of new ideas into the general doctrines of penal law; and imperial constitutions applied some novel conceptions; but all these, being sporadic and exceptional, did not give an impulse to systematic and comprehensive elaboration.

3. The jurists of the second century A.D.—the best period of classical jurisprudence—did not contribute to the development of criminal law in so great a measure as to that of civil law. A compilation analogous to the *Edictum perpetuum* in civil law would certainly have roused their interest in criminal matters; and it is very instructive to learn how fertile was their contribution to doctrines of private delicts, with which the praetorian edict dealt (cf. the excellent elaboration of *iniuria*, *Dig.* 47. 10), in comparison with their modest part in public criminal law. The effect of the interpretative work of all

these more or less authoritative elements (imperial rescripts and edicts, *senatus consulta*, practice of *cognitio extra ordinem*, jurisprudence) was that offences quite different from those which were described and made punishable in Republican statutes were subjected to the statutory penalties. Thus (1) Sulla's *Lex Cornelia testamentaria* (*munimaria*, called also *de falsis*), which originally dealt with falsification of wills and of coins, was extended not only to the forgery of documents and the assumption of false names, titles, or official rank, but even to corruption in litigation, as when a juror, accuser, witness, or advocate was bribed, in which case both giver and receiver were punishable. Even a juror who *constitutiones principum neglexit* was punished according to this statute. (2) The penalties of the *Lex Cornelia* against murderers and poisoners were extended in later times to magistrates, jurymen, and witnesses who contributed to an unjust capital sentence. (3) The *Lex Julia de ambitu* was applied to cases of pressure exercised on a jurymen by the accuser or the accused, though the original field of the statute was electoral corruption.

4. Under the Late Empire criminal legislation is directed more to penalties than to the doctrinal treatment of offences. The punishableness of some delicts varied under the influence of political or religious points of view; the creation of new categories of crimes in this long period is restricted to abduction and offences against the Christian religion after its recognition by the State. The profession of Christianity had at one time been prosecuted as *crimen maiestatis* (see *PERDUELLIO*). Justinian's legislative compilations show the first endeavour to collect the scattered provisions of public and private criminal law into a systematic whole. The *Digest*, books 47-9, and the *Code*, book 9, give a well-arranged design of criminal law, procedure, and penalties. The compilers, of course, found some help in works of the latest classical jurists, who in just appreciation of the difficulties created by this fluctuating and uncertain state of criminal legislation dealt with these matters in monographs: *de iudiciis publicis* (Marcianus, Macer, Paulus), *de poenis* (Paulus, Saturninus, Modestinus), *de cognitionibus* (Callistratus). But all these and similar works, though doubtless meritorious and useful, aimed rather at collecting material than at creative criticism or presentation of new ideas. Even the terminology distinguishing different categories of offences does not show that stability and precision which is so excellent a feature of Roman legal language. The terms most used are *crimen*, *delictum*, *maleficium*; but it can hardly be affirmed that these expressions had a particular exclusive sense, though generally *crimen* indicates more serious offences directed against the State or public order, whilst *delictum* is rather used for delicts against private property or personal integrity and of no great harmfulness. The meaning of *maleficium* as a general term is still less technical, especially as it was used for designating sorcery and magic arts. All endeavours to bring order into classical texts by allotting to these terms an exclusive technical sense and removing all inconvenient texts as interpolated break down because of the indiscriminate use of these terms in texts not suspected of interpolation.

5. For the distinction between public and private offences we likewise lack any precise definition or statement of distinguishing marks; and yet it was of fundamental importance for Roman criminal law. This distinction rested upon a practical rather than a doctrinal differentiation of offended interests, and found its visible consequences in the fields of procedure and penalties, which differed greatly in the two spheres. The Roman jurists dealt more with *iudicia publica* and private *actiones poenales* than with the distinction between the interests violated as public or private, and the post-classical and Justinian classification into *delicta privata*, *crimina extraordinaria*, and *iudicia publica* (*Recht. Dig.* 47. 2;

47. 11; 48. 1) was also made from a procedural point of view.

6. The private delicts form a group apart: the wrongdoer is exposed to an action by the person wronged, the effect of which is that he must pay a pecuniary penalty to the plaintiff (to be distinguished from another *actio* by which the restitution of the *res* or compensation is claimed—*rei persecutio*). The procedure was that of private suits; the State as such did not show any interest in the prosecution of these offences. The principal forms were theft (*furtum*, q.v.), robbery (*rapina*, theft combined with violence), damage to property (see *DAMNUM*), and physical assault (*iniuria*). The XII Tables already recognized this kind of offence, by laying down fixed penalties, e.g. double or triple the value of the stolen object in some cases of theft, and in the case of *iniuria* a tariff of 25 to 300 *asses* in proportion to the seriousness of the assault. Some Republican statutes (e.g. the *Lex Aquilia* for damage to property, *Lex Cornelia* for *iniuria*) continued the work; praetorian reforms and subsequently the jurists contributed considerably to the perfection of the law on the subject. Praetorian reforms took into account new types of *iniuria* committed by infractions of the moral integrity of a person, such as insult or defamation, and new forms of offences, such as threats (*metus*), deceit (*dolus*), malicious corruption of other people's slaves, and the like. Praetorian law also introduced a category of actions for misdemeanours which, though less serious, affected public interests, e.g. damage to the *album* (q.v.) of magistrates, violation of sepulchres, and pouring liquids or throwing things out into the streets. In such cases anyone, *quivis ex populo* (hence the name *actiones populares*), could be plaintiff and claim the penalty. The private prosecution of offences was in later times greatly restricted in favour of *cognitio extra ordinem*, to which more serious cases were assigned till finally it was absorbed by public prosecution.

7. The special domain of criminal law is, however, the second group of crimes prosecuted by public organs in *iudicia publica*. The oldest law knew the intervention of the State, as avenger of offences against its security or against public order, only in exceptional cases such as treason (*perduellio*, q.v.), desertion to the enemy, or special forms of murder (*parricidium*, q.v.). For the evolution of this group the series of criminal *leges* of the last century of the Republic (*Corneliae*, *Iuliae*, see *supra*) were of the greatest importance. They instituted special criminal courts for particular crimes, extending in large measure the competence of the State to the prosecution and punishment of criminal acts. A survey of the various kinds of crimes allotted to the *quaestiones perpetuae* shows that they comprehended not only offences against the State, its security and organization, or public order in the widest sense of the word, but also the more serious offences against life, personal integrity, private interests (falsification of wills and documents, serious injuries), and morality (adultery). (For the procedure before these courts see *QUAESTIO*.)

8. However, even with the help of the Senate, imperial constitutions, and the jurists, this legislation covered only part of the offences needing repression. Furthermore, the *quaestiones* operated only at Rome and tried Roman citizens only (not women or slaves or *peregrini*). Augustus introduced juries into some provinces (see the Cyrene Edicts), but they had no jurisdiction over Roman citizens. These and other deficiencies were made good by a new kind of procedure called *extra ordinem*, as not being subordinated to *ordo iudiciorum*. The trials in these *iudicia publica extra ordinem* were always conducted by public officials. Jurisdiction was exercised—apart from political offences and senatorial matters reserved for the Senate—chiefly by the emperor and the prefects, in the provinces by *praesides* and *procuratores* as his delegates. The sphere of *cognitio extra*

ordinem became, thanks to the emperor's policy, more and more extensive and superseded the *quaestiones*, which are not mentioned after Alexander Severus. On the strength of new legislative provisions new forms of offences arose (called later *crimina extraordinaria*), e.g. fraud (*stellionatus*), participation in illicit corporations, displacing of boundary stones, special types of theft (*fures balnearii*, *nocturni*), and the like. Whilst in *quaestiones* only the penalty laid down by the statute could be pronounced, the imperial judges had discretion in grading the penalty according to their appreciation of all the facts of the case. From the earliest times the intention of the wrongdoer was taken into consideration; even the legendary law of Numa on parricide (see *PARRICIDIUM*) required that the murderer had acted *sciens dolo*; the analogous expression in Republican laws was *sciens dolo malo*.

9. More adequate differentiation between different states of mind was developed in the practice of the *cognitio extra ordinem*, influenced also by imperial constitutions. In appreciating the atrocity of the act and depravity of its author the judge considered the intensity and persistence of the delinquent's will (*dolus*), the question whether the act had been committed with premeditation or on sudden impulse, whether it had been provoked by a moral offence (e.g. murder of an adulterous wife when caught in the act) or was due to drunkenness ('per uinum'). A late classical jurist, Claudius Saturninus, known only by a treatise on penalties, distinguished seven points to be taken into consideration in determining the punishment: reason, person, place, time, quality, quantity, and effect (*Digest* 48. 19. 16.). Judicial liberty, however, gave occasion for arbitrariness: the third century, with the decline of imperial authority, brought anarchy into criminal jurisdiction. Under the Late Empire the absolute determination of the penalties—now more severe than formerly—was restored, the discretion of the judge in the infliction of punishment having been abolished. But in contrast to the trial before *quaestiones* appeal was admitted *extra ordinem*. From the third century onwards a distinction was made between *honestiores* (q.v.) and *humiliores*, the latter being punished more severely than distinguished persons. There is no further trace of the old Republican principle of equality of all citizens in the eyes of the criminal law which had been expressed in the rule '*privilegia ne inroganto*' ascribed by Cicero to the XII Tables.

10. The magistrates invested with *imperium*, acting personally or by delegates, were in general the organs of criminal justice. From early times their power of punishment was restricted by the rule that a sentence *de capite civis* could be passed only by decision of the people assembled in *comitia* (see *IUDICIA POPULI*). The magistrate could, however, apply by informal procedure coercive measures (*coercitio* in a narrower sense) against disobedient or recalcitrant citizens, e.g. prison, castigation, and fines (*multae*); foreigners, slaves, and women were also subjected to *coercitio*. The oldest stage of criminal proceedings before the magistrate was governed by the inquisitorial principle: the magistrate initiated the prosecution at his discretion; he controlled the investigation and production of evidence, he passed the sentence. During the struggle of the orders the jurisdiction of *tribuni plebis* in criminal matters was established especially for political offences and abuses committed by patrician magistrates. Sulla's reform, however, aimed at superseding the jurisdiction of *comitia* and plebeian tribunals and completed the new system of *quaestiones*. This procedure was a compromise between the former criminal proceedings (the jury now representing the popular element) and principles of civil procedure, as the accused had a voice in the choice of jurymen. But the criminal trial preserved its own forms, distinct from the bilateral, contractual character of civil proceedings. The *quaestiones*

the Peloponnesian War, while the accusation of piracy constantly made against the Aetolians implies that their standard was lower than those of other States. Nor were all foreigners treated alike, but barbarians were shown less consideration than closely related States. Yet there was always a line which could not be overstepped without incurring censure.

6. Roman expansion, at first glance, seems to leave less scope for development of international law in Rome than in Greece. It must not be forgotten, however, that Rome's early organization of Italy was based on international law and that the existence of free and allied cities also outside Italy and the control of States not formally annexed caused the Roman Empire to be governed for long largely by a modified form of international law.

LEAD. Metallic lead was discovered early, but little used in primitive cultures. Even at Laurium much was thrown away; but the Romans needed for water-pipes all that they produced. Lead was extensively used for desilvering pyritical ores and for alloying with copper to save tin, both processes being known in pre-Roman times.

Lead mines were mainly exploited for silver, the lead being regarded as a by-product. Of the various deposits in Greece the most important were at Laurium (q.v.). There were extensive workings in Anatolia. Of pre-Roman origin are the mines of Sardinia and Etruria. Spain, Gaul, and Britain were exploited actively by the Romans, and many stamped Roman pigs have been found there. In the Late Empire mines were opened in the Balkans; the workings in Africa are of doubtful date.

LECTUS, see FURNITURE.

LECÝTHION, see METRE, GREEK, III (2).

LEDA, in mythology, daughter of Thestius king of Aetolia, wife of Tyndareus, and mother of the Dioscuri and Helen (qq.v.), but see below. Zeus approached her

in the shape of a swan (a very favourite subject in art, see Höfer-Bloch in Roscher's *Lexikon* ii. 1925 ff.) and begat Helen and Polydeuces (Apollod. 3. 126); Castor was begotten by Tyndareus the same night (ibid.). Hyginus (*Fab.* 77) adds Clytaemestra (see CLYTEMNESTRA), whose name has perhaps fallen out of the text of Ps.-Apollodorus; but the whole story is told in a number of different ways, Helen being regularly daughter of Zeus (but of Tyndareus, Hyg. 78. 1), the Dioscuri both his sons in Homer. The most noteworthy variant (Apollod. ibid. 127) is that Helen was daughter of Zeus and Nemesis; both parents having been transformed into birds, Nemesis (q.v.) laid an egg, of which Leda took care; when Helen was hatched out from it she passed for Leda's daughter. This is obviously a reconciliation of two conflicting stories. Leda is everywhere mother of Clytaemestra, and frequently, as [Eur.] *IA* 1-2, she has a third daughter, called there Phoebe, Timandra in Apollod. loc. cit. and elsewhere, even a fourth (Apollodorus), Phylonea, who was made immortal by Artemis. Again, Helen was hatched from an egg laid by Leda, not Nemesis (Eur. *Helena*, 257-9, a doubtfully authentic passage, but the earliest mention surviving, if genuine). The egg is, indeed, a central feature in the story, and was alleged to be preserved in Sparta down to Pausanias' time (Paus. 3. 16. 1); it may therefore be conjectured to go back to some very old tale of deities in bird-shape (Minoan-Myeenaean? cf. Nilsson, *Minoan-Myeenaean Religion*, ch. 10). It may well be older than Homer and the lack of mention of it in his poems due to his dislike of the grotesque; later Greeks disbelieved the story (Eur. *Hel.* loc. cit.) or made fun of it (Cratinus in Athenaeus, 373 e).

The latest literature is S. Eitrem in *PW*, s.v.

H. J. R.

LEGATI. During the last two centuries of the Roman Republic provincial governors and generals were authorized by the Senate, and in exceptional cases by law (e.g. *Lex Gabinia* for Pompey in 67 B.C.), to choose *legati* to serve on their staff. These *legati*, whose number seems to have varied from two to fifteen, were regularly senators and often experienced officers, but had no fixed range of duties. Thus the elder Scipio accompanied his brother as *legatus* to the war against Antiochus, and Marius in his old age functioned in a similar capacity. Caesar was the first to employ *legati* as commanders of individual legions or detachments, and this experiment provided a precedent for Augustus.

In the imperial army of the first two centuries A.D. each legion (except those in Egypt) was with its *auxilia* commanded by a *legatus legionis*, who was normally of praetorian but sometimes of quaestorian status. If there was more than one legion in a province, the supreme command lay with the governor, who was regularly a *legatus Augusti pro praetore* of consular status; where the garrison was a single legion its commander was also the provincial governor.

When Septimius Severus raised his three new legions he gave the command of each, not to a *legatus*, but to an equestrian *praefectus*. Gallienus removed senators from all military commands.

Legati Augusti pro praetore was also the title of commissioners appointed to undertake some special work, such as the census or a levy of recruits.

A. von Domaszewski, *Die Rangordnung des römischen Heeres* (1908); H. M. D. Parker, *The Roman Legions* (1928). H. M. D. P.

LEGATUM (legacy), see FIDEICOMMISSUM.

LEGION. 1. EARLY REPUBLIC. Although the origin of the legion may be as old as the Republic, its early history is very uncertain. The first trustworthy account is that of Polybius, which reflects the conditions of the third century B.C. In addition to 300 cavalry each of the four legions composing the two consular armies contained 4,200 infantry, drawn up in three lines of *hastati*,

principes, and *triarii*, the two former 1,200 and the latter 600 strong, while 1,200 poorer citizens provided the light-armed troops (*velites*). The legion was divided into 30 maniples, 10 to each line, and 60 centuries. The commanding officer was the consul, who had under him 6 military tribunes and 60 centurions. Inside the legion the tactical unit was the manipulus, which had a *signum* and was commanded by the senior of its two centurions. During the Punic Wars the legions were greatly increased in size and number.

2. **MARIUS TO CAESAR.** By the Marian reforms (a) eligibility for service was extended to the *capite censi* and the legions became volunteer forces of professional soldiers; (b) each legion, now 6,000 strong, received an *aquila*; (c) the cohort permanently superseded the manipulus for tactical purposes. The cavalry and *velites* were abolished.

There were no changes in the junior commands, except that Caesar began to appoint *legati* of his own choosing to command separate legions in his army.

3. **THE PRINCIPATE.** Out of the forces of the triumvirs Augustus established a standing legionary army of a size requisite for imperial defence and pacification. In 15 B.C. the number of legions, each comprising some 5,000 foot-soldiers and a mounted bodyguard 120 strong, was 28, which, by the loss of 3 in A.D. 9, was reduced to 25. In the next two centuries additions were made and losses sustained, but the total did not exceed 30 (i.e. about 150,000 men) till Septimius Severus raised 3 new legions. Each legion bore a number, which was not infrequently duplicated, and a title honorific to itself or its creator.

The commander was a senatorial *legatus*, except in Egypt, where an equestrian *praefectus* was employed. This latter practice was extended by Severus to his new legions, and Gallienus eliminated senators from the army.

In the Julio-Claudian period the legions were enlisted mainly from Italy and Gallia Narbonensis. As citizenship became more widely extended the provinces provided the greatest number of recruits, till in the late second century local recruiting became the rule. The period of service was fixed by Augustus first at 16 and then at 20 years *sub aquila*, with an additional 4 and 5 years respectively *sub vexillo*. The Flavians abolished the veteran corps and made 25 years the total legionary service. The legionary received pay rising from 225 *denarii* under Augustus to 750 under Caracalla, and on his discharge a pension from the *aevarium militare*.

4. **CONSTANTINE.** Legions were now included both in the Field and Garrison armies. The units, composed entirely of foot-soldiers, were only 1,000 strong, and in status ranked below the cavalry *rexillationes* and picked auxiliary contingents of infantry.

E. Ritterling and W. Kubitschek, *PIV*, s.v. 'Legio'; H. M. D. Parker, *The Roman Legions* (1928). A. von Domaszewski, *Die Rangordnung des römischen Heeres* (1908). H. M. D. P.

LEGIS ACTIO, see LAW AND PROCEDURE, ROMAN, II. 2.

LELEGES (*Λελεγες*), a tribe mentioned, *Il.* 10. 428, 21. 86, as allied with Troy and occupying Pedasus in the Troad. Later writers give them a wide distribution. In Herodotus (1. 171) Carians 'formerly called Leleges' occupied the Islands and manned King Minos' navy. Philip of Theangela (in Caria) says that Leleges were to Carians as helots to Spartans (*Ath.* 6. 272). Hesiod located Leleges as aborigines in Locris, and Aristotle in Acarnania, Aetolia, Boeotia, and Megaris (*Strabo* pp. 321-2). Pausanias (3. 1. 1) makes Lelex the first king of Laconia. Like the Pelasgi (q.v.) they seem to have been extensively postulated as 'aborigines'. We cannot associate them with any particular archaeological discoveries.

A. E. P.

LEMNOS, an island of the north-east Aegean. The lava from its volcano (reputed to be the forge of Hephaestus, but extinct in historical times) gave it high fertility, and it grew considerable wheat crops. In the *Iliad* it figures as a victualling centre for the Achaeans at Troy, but it is doubtful whether it had a Greek population before the sixth or fifth century. According to Herodotus (6. 137-40) its early inhabitants were 'Pelasgians', and an undeciphered inscription (*IG* xii. 8. 1; probably of the 6th c.), which seems to have affinities with Etruscan, suggests a settlement of proto-Etruscans from Asia Minor. Lemnos received Athenian colonists after its seizure by the younger Miltiades in his capacity as ruler of the Thracian Chersonese, c. 500 B.C. It was organized as an Athenian cleruchy c. 450, and after a brief period of Spartan domination (404-393) was recovered by Athens. From the time of Philip II of Macedon it passed occasionally into the possession of various Hellenistic dynasts, but it was again in Athenian hands from 307 to 295 and from 281 to 202. In 166 it was definitely attached to Athens by the Romans.

M. C.

LEMURIA, 9, 11, 13 May, on which days apparently kinless and hungry ghosts, *lemures* (Wissowa's doubts, *PIV*, s.v. 'Lemuria', col. 1932, that such a word originally existed seem unjustifiable), were supposed to prowl about the houses. Ovid (*Fasti* 5. 419 ff.) describes the ritual of feeding and getting rid of them, but his assertion (443) that they were addressed as *manes patrum* is incredible.

See Rose in *Univ. of California Pubs. in CPhil.* 1941, 89 ff., and AFTER-LIFE, para. 8. H. J. R.

LENAEA, a Dionysiac festival celebrated in Athens on the 12th day of the month Gamelion (Jan.-Feb.), which in other Ionian calendars is called Lenaeon. The name is derived from *λήνη*, maenad. The official Athenian name, *Διονυσία τὰ ἐν Ἀγναιῶν*, proves that it took place in this sanctuary, which is believed to have been situated west of the Acropolis. Very little is known of the rites. There was a procession and it is said that the *dadouchos* of Eleusis officiated in the Lenaeon *αἵρες*. The chief importance of the festival lies in the dramatic performances; it seems that originally comedy was preferred to tragedy. The attempt to connect with the Lenaea vase pictures, representing the mixing of the wine and (occasionally) a dance of Maenads, is to be rejected; they belong to the Anthesteria.

M. P. Nilsson, *Studia de Dionysii atticis* (1920), 109 ff.; L. Deubner, *Attische Feste*, 123 ff. Much has been written on the so-called 'Lenaevasen'; the last paper by Deubner, *JDAI* xlix (1934), 1 ff.

M. P. N.

LENAEUS, POMPEIUS, a learned freedman of Pompey's, taught in Rome and, loyal to his patron's memory, attacked the character and style of Sallust who had described Pompey as '*oris probi, animo inuerecundo*' (*Suet. Gram.* 15). He wrote also on pharmacology (Pliny, *HN* 25. 5). Della Corte, *La poesia di Varrone ricostituita* (1938), 33, bases the spelling *Lenius* on manuscripts of the elder Pliny.

J. W. D.

LENTULUS (1), LUCIUS CORNELIUS, served under Scipio Africanus in Spain, where he remained from 206 to 201 B.C. as a *praefectus* with proconsular imperium, which was constantly prolonged, despite his election as curule aedile for 205. He claimed a triumph in defiance of precedent, but received an *oratio*. He served in north Italy as consul (199) and proconsul (198). In 196 he was sent on an ineffective diplomatic mission to Antiochus III to mediate on behalf of Egypt.

H. H. S.

LENTULUS (2), PUBLIUS CORNELIUS, legate in Greece (172-171 B.C.), curule aedile (169), envoy to Persius after Pydna, became praetor in 166 or 165, reorganizing the

ager Campanus, and consul *suffectus* in 162. In 156 he negotiated with the kings of Asia Minor. *Princeps senatus* from 125, he opposed C. Gracchus.

Livy 42. 37 and 47; 45. 4; Granius Licinianus 28, p. 9; Cicero *Leg. Agr.* 2. 30. 82; Polyb. 32. 16. A. H. McD.

LENTULUS (3) CLODIANUS, GNAEUS CORNELIUS, cos. 72 B.C. with L. Gellius Poplicola, legitimized grants of citizenship made by Pompey. In the war against Spartacus he was defeated more than once. Censor with Poplicola in 70, he ejected from the Senate sixty-four members. He was Pompey's legate against the pirates (67) and supported the *Lex Manilia* (66).

F. Münzer, *PIW* iv. 1380.

A. M.

LENTULUS (4) SURA, PUBLIUS CORNELIUS, was expelled from the Senate shortly after his consulate (71 B.C.), but was elected to a second praetorship in 63. His personal ambition led him to join the conspiracy of Catiline, and after the latter's flight from Rome he became the ringleader in the city. His overtures to some Gallic envoys who played him false provided Cicero with documentary proof of his guilt. He was arrested with four of his associates (3 Dec. 63) and was compelled to lay down his office. Two days later, after a historic debate in the Senate, the five prisoners were strangled on Cicero's orders.

J. M. C.

LENTULUS (5) SPINTHER, PUBLIUS CORNELIUS, an agreeable aristocrat, lavish in his aedileship (63 B.C.) and praetorship (60), who was active as consul (57) in promoting Cicero's recall. Next year Cicero vainly tried to preserve for Spintner as governor of Cilicia the right, procured during his consulate, of restoring Ptolemy Auletes. Before leaving Cilicia in 53 Spintner was saluted *imperator*, and he triumphed in 51. In 49 he fled from Asculum before Caesar's advance, and surrendered at Corfinium with Domitius; he abused Caesar's clemency and was executed after Pharsalus.

G. E. F. C.

LENTULUS (6) MARCELLINUS, GNAEUS CORNELIUS, was *patronus* of the Sicilians against Verres (70 B.C.) and legate of Pompey (67). In 61 he opposed Clodius. In 60 he was praetor and then governor of Syria; in 57 he supported the restoration of Cicero's property. As consul (56) he opposed the triumvirs and prevented a war for the restoration of Ptolemy XI Auletes.

F. Münzer, *PIW* iv. 1389.

A. M.

LENTULUS (7) CRUS, LUCIUS CORNELIUS, consul 49 B.C., and a determined advocate of civil war. Later in 49 he administered Asia, and thence brought two legions to Dyrrhachium; after Pharsalus he fled to Egypt, and arrived to meet his death the day after Pompey's. It is possible (though see **BALBUS** (2)) that, after fighting against Sertorius, Lentulus gave Balbus Roman citizenship and his name Cornelius; in any case they were close friends, and Balbus persistently begged Lentulus to keep the peace. But Lentulus, according to Caesar, was made desperate by debt; and all authors, including Cicero, whom he had befriended in 58 and 49, describe him as lazy, luxurious, and pretentious.

Cicero, *Att.* 6. 1. 23; 8. 9. 4; 11. 6. 6; *Fam.* 8. 4. 1; *Brutus*, 268; Caesar, *BCiv.* 1. 4. 2; 3. 96. 1; Velleius, 2. 49. 3, 51. 3.

G. E. F. C.

LENTULUS (8), GNAEUS CORNELIUS. A Lentulus of this name, either the consul of 18 B.C. or the consul of 14 B.C. (probably the latter), operated at an unknown date against Sarmatians and Dacians. One or other of them was accused in A.D. 24 of conspiracy against Tiberius, but he was not prosecuted, and died in 25.

*PIR*³, C 1378-9; R. Syme, *The Roman Revolution* (1939), 400.

A. M.

LENTULUS (9) GAETULICUS, GNAEUS CORNELIUS, was consul in A.D. 26 and legate of Upper Germany, possibly in succession to his brother, in 30-9. As a lax disciplinarian he was popular with his own army and also with the Lower German legions, commanded by L. Apronius, his father-in-law. An attempt to indict him in 34 as an associate of Sejanus failed. In 39 he appears to have led a conspiracy by which the Emperor Gaius was to be murdered at Moguntiacum. Gaius was forewarned of the plot and Gaetulicus was executed. He was an erotic poet, regarded by Martial (1 *praef.*) as one of his models. Nine epigrams in the *Greek Anthology* may be by him.

Baehr, *FPR*, p. 361.

J. P. B.

LEOCHARES, sculptor, probably Athenian. Pliny places his *floruit* in 372 B.C., but Leochares is mentioned in a letter of Plato written after 366 as 'young and good'. Selected works: *dated*, (1) Isoerates, dedicated by Timotheus presumably before his banishment in 356 (the surviving bust (Winter, *KB* 317. 5) derives from a later statue). (2) Signature from the Acropolis, about 350. (3) West side of Mausoleum, after 351. Slabs 1020, 1021 of the Amazonomachy (Winter, *KB* 304. 2) with tall, slim, dramatic figures are probably by Leochares. (4) Gold and ivory group of Philip, Alexander, Amyntas, Olympias, and Eurydice in the Philippeum at Olympia, dedicated after Chaeronea, 338. (5) (with Lysippus, q.v.) Alexander's lion hunt, bronze, after 321. *Undated*, (6) Ganymede. Pliny's description of the eagle 'parcentem ungibus ctiām per uestem puero' fits the marble group in the Vatican (Winter, *KB* 299. 1), which must therefore be the basis of attribution to Leochares. *Attributed*, (7) Apollo Belvedere in the Vatican (Winter, *KB* 299. 2-4), Roman adaptation of fourth-century original (Leochares made an Apollo in Athens). (8) Artemis of Versailles (Winter, *KB* 312. 3). (9) Hypnos (Winter, *KB* 299. 6). Nos. 3, 6-9 are all theatrical compositions of tall, slim figures.

Overbeck, 508. 1177-8, 1301-16, 1491; F. Winter, *JDAI* 1892, 164; P. Wolters and J. Sieveking, *JDAI* 1909, 171; O. Deubner, *Hellenistische Apollogestalten*, 46. T. B. L. W.

LEON (1) of Byzantium, prominent as one of the leaders of his city who claimed Athenian support against Philip of Macedon. He conducted the successful resistance to Philip's siege, 339 B.C., but when the city later made terms Philip secured his death. If he died c. 338 various historical works on Philip, the Sacred War, and Alexander should probably be assigned to a later Leon.

FHG ii. 329.

G. L. B.

LEON (2) of Pella (? late 4th c. B.C.), wrote a book on the Egyptian gods, in the form of a letter from Alexander the Great to his mother, in which the gods are represented as in origin human kings, the discoverers of agriculture and other means of human subsistence.

FHG ii. 331-2; *PIW* xii. 2. 2012-14.

LEONIDAS (1), king of Sparta, succeeded his elder brother Cleomenes (whose daughter Gorgo he married) c. 487 B.C. In 480 he was commissioned to hold Thermopylae with 4,000 Peloponnesians and contingents from Thebes and central Greece, apparently as a vanguard of the entire Peloponnesian levy. He held the main pass for two days, but his Phocian allies fled before a Persian corps advancing by the mountain path of Anopaea and allowed Leonidas to be outflanked. The other Greek forces dispersed, but Leonidas and 300 companions remained to cover the retreat of the fleet from Artemisium and, after inflicting heavy losses, fell fighting. Forty years later Leonidas' body, which Xerxes is alleged to have maltreated, was buried at Sparta. Simonides' epigram and *threnos* inaugurated a long series of eulogies on the heroes of Thermopylae.

Ch. Lenschau, *PIW*, s.v.; G. De Sanctis, *Riv. fil.* 1925, 122 ff.; F. Mühlner, *Klio* 1935, 228-41. P. T.

LEONIDAS (2) of Tarentum, one of the greatest Greek epigrammatists, led a poor wandering life in the early third century B.C. The Anthology contains about a hundred of his epigrams, three-quarters of which are dedicatory poems or epitaphs, usually artificial—e.g. epitaphs on a drunkard, on a diver half-eaten by sharks. There are no real love-poems, no convivial poems. Almost all his poetry deals with the life of the very poor, among whom he reckons himself (*Anth. Pal.* 7. 302, 736); nevertheless it is highly elaborate, full of grand compound words and odd technical terms, and the flow of the sentences within the verse is mannered and rhetorical. This contrast may be decadent, but it is fascinating. L. took many themes and patterns from his predecessors, but enlarged and enriched them all. The Romans greatly admired him, he was imitated by Propertius (3. 7. 7) and Virgil (*Ecl.* 7. 29), and all later epigrammatists use some of his devices.

J. Geffcken, *Jahrb. f. Philol.* suppl. xiii (1896), is fundamental; B. Hansen, *de L. Tarentino* (1914); E. Bevan, *Poems of L. translated* (1931). G. H.

LEONIDAS (3) of Alexandria, an astrologer who turned poet and was patronized by Nero, Vespasian, and Domitian. His datable poems fall between A.D. 55 and 85. There are over forty of them in the Anthology—thirty being *isopsephia*, so composed that the letters in each couplet, if read as numbers ($\alpha = 1$, $\beta = 2$, etc.), make the same sum. Both these and his other epigrams are negligible except for the ingenuity characteristic of what Juvenal calls 'the hungry Greekling'.

K. Radinger, *Rh. Mus.* 1903; P. Perdrizet, *Rev. Ét. Grec.* 1904; C. Cichorius, *Röm. Stud.* c. viii. 12 (1922). G. H.

LEONNATUS (c. 358–322 B.C.), a Macedonian noble related to the royal house, accompanied Alexander to Asia, became one of his personal 'Bodyguard' in 332 and (after 328) a prominent general, distinguishing himself in an independent command on the return from India. As satrap of Hellespontine Phrygia (323) he reinforced Antipater in the Lamian War; but he was defeated and killed in Thessaly by the Greek insurgents. His character lacked moderation and stability, and he would probably have fared badly against cooler heads in the age of the 'Successors'.

Berve, *Alexanderreich*, no. 466.

G. T. G.

LEONTIADES, Theban oligarch. After surrendering the Cadmea to Phoebeidas in the midst of peace (382 B.C.), he caused the Spartans to execute the democratic leader Ismenias. At the liberation of Thebes in 379, he was killed immediately.

Xen. *Hell.* bk. 5; Diod. bk. 15; Plut. *Pel.*

V. E.

LEONTINI was founded by Naxos in fertile Sicel territory in eastern Sicily (729 B.C.). Although at first independent and prosperous, Leontini in the fifth century became subject, first to Gela, but soon to Syracuse, traditional enemy of the Chalcidian cities. It remained under Syracusan domination except for occasional interludes until Hieron's death (216). Provoked by an incident here, the Romans attacked Syracuse (215) and made Leontini a *civitas censoria* which later suffered in the Servile War (104; hence Cicero's exaggerated description 'misera ciuitas atque inanis'). Leontini was traditionally the abode of Homer's Laestrygonians, the place where wheat first grew, the realm of Panaetius (Sicily's earliest tyrant), and the birthplace of Gorgias the sophist. Saracens finally destroyed it (A.D. 848).

Polyb. 7. 6 (excellent description); Strabo 6. 272 f.; Thuc. bk. 6; Diod. bk. 11–23; Cic. *Verror.* 1. 62; J. Bérard, *Bull. Soc. Ét. Sic.* 1924. E. T. S.

LEOSTHENES (d. 322 B.C.), an Athenian, perhaps general at Athens in 324–323, having probably served as captain of mercenaries in Asia previously (Tarn, *CAH*

vi. 455). With acute political insight he organized the return and maintenance at Tænarum of mercenaries disbanded by Alexander's satraps (324); he negotiated secretly with Athens and (later) Aetolia for their employment in an anti-Macedonian war. The Lamian War (323–322) was his opportunity. He commanded the Greek army and inspired its devotion, and his death at the siege of Lamia was a heavy blow to the Greek cause.

Berve, *Alexanderreich*, no. 471.

G. T. G.

LEOTYCHIDES, king of Sparta c. 545–469 B.C., succeeded the exiled Demaratus (c. 491 B.C.) with aid of Cleomenes I (q.v.). In the Aeginetan War he apparently secured the granting of a truce to Athens and delivery of hostages by Aegina. In 479, as commander-in-chief of the allied fleet, he fomented the revolt of Chios and Samos, and decisively defeated the Persians in a land and sea battle at Mycale. He led another combined Greek force on a punitive expedition against the medizing aristocracies in Thessaly (c. 477). He took Pagasae and perhaps Pherae, but failed to capture Larissa. He was tried at Sparta on a charge of bribery (probably c. 476), but he escaped condemnation by retiring to Tegea. An earlier namesake (with whom Leotychides has often been confused) subdued Messenia in the Second Messenian War (see *MESSENIA*).

K. J. Beloch, *Griech. Gesch.* (1912 ff.), i, pt. 2, 179 ff.; ii, pt. 2, 190 ff.; J. Johnson, *Hermathena* 1931; J. Kroymann, *Sparta und Messenien*, 3 ff. (1937); L. R. Shero, *Trans. Am. Phil. Ass.* 1938, 516 ff. P. T.

LEPIDUS (1), MARCUS AEMILIUS, the censor of 179 B.C., appears first on the embassy to Greece, Syria, and Egypt in 200, delivering the Roman ultimatum to Philip V. Curule aedile (193), praetor in Sicily (191), he became consul (187), constructing the Via Aemilia, and as triumvir (183) founded Mutina and Parma. Pontifex Maximus (180) and censor (179) with M. Fulvius Nobilior, he reformed the Comitia Centuriata and carried out a large building programme, including the Basilica Aemilia. Consul again (175) in Liguria, he was decemvir for land settlement there (173). From his censorship to his death in 152 he was *princeps senatus*. Well-born and handsome, combining liberal culture with observance of tradition, he was pre-eminent in the Senate, and his name marks the pacification of Cispadane Gaul.

Polyb. 16. 34; Livy 31. 18; 38. 42 ff.; 39. 2; 40. 45–6, 51–2. F. Münzer, *Röm. Adelsparteien und Adelsfamilien* (1920), 170; De Sanctis, *Stor. Rom.* iv. 1, 629; H. Mattingly, *Roman Coins* (1928), 76; A. H. McDonald and F. W. Walbank, *JRS* 1937, 192, 195; A. H. McDonald, *JRS* 1938, 162. A. H. McD.

LEPIDUS (2), MARCUS AEMILIUS, elected consul for 78 B.C. with the young Pompey's assistance, despite the opposition of Sulla, sought while Sulla yet lived to revive the *populares*. He proposed the restoration of confiscated lands, recall of exiles, and eventually the restoration of tribunician authority. Raising an army in Cisalpine Gaul, whose resources he was the first to realize, he marched on Rome to enforce his programme and obtain a second consulship, but was driven out of Italy by the proconsul Catulus with the help of Pompey and the *S.C. ultimum* to Sardinia, where he died. His supporters joined Sertorius in Spain, but were later pardoned.

Rice Holmes, *Roman Republic* i. 363–9. See also under *SULLA*.

A. N. S.-W.

LEPIDUS (3), MARCUS AEMILIUS, the Triumvir, son of (2), was praetor urbanus in 49 B.C., governor of Hither Spain in 48, consul in 46, and Caesar's *magister equitum* in 45 and 44. He supported Antony after the murder of Caesar, but shortly left Rome for Gallia Narbonensis and Hither Spain. In the War of Mutina he eventually joined Antony, took part in the conference near Bononia, and was appointed Triumvir with Antony and Octavian, receiving the additional province of Further Spain. In

42 (consul II) he remained in charge of Italy. After Philippi he was deprived of his provinces by his colleagues, who contemplated ousting him from the Triumvirate on the allegation of intrigues with Sextus Pompeius, but he supported Octavian in the Perusine War and was given Africa and Numidia. He played an independent part in the campaign of 36 against Sextus Pompeius, and laid claim to Sicily, but Octavian won over his army and compelled him to retire into private life. He was Pontifex Maximus from 44 till his death in 13 (or 12) B.C.

Lepidus lacked the character and energy to use the opportunities which high birth and Caesar's favour placed in his way. His wife was Junia, sister of Brutus.

Ancient sources: Cicero, *Letters and Philippics*; Velleius, bk. 2; Plutarch, *Caesar and Antony*; Appian, *BCiv.* bks. 2-5; Dio Cassius, bks. 41-50 and 54. Modern literature: F. Brügemann, *De M. Aem. Lepidi Vita*, Diss. Münster (1889); Drumann-Groebe, *Gesch. Roms* i. 9-17.

LEPIDUS (4), MARCUS AEMILIUS, son of the Triumvir (3) and Junia (sister of Brutus). In 30 B.C. (less probably 31) he conspired to assassinate Octavian but was detected by Maecenas and executed. His wife Servilia committed suicide.

Velleius 2. 88; Appian, *BCiv.* 4. 50. Drumann-Groebe, *Gesch. Roms* i. 17. G. W. R.

LEPIDUS (5), MARCUS AEMILIUS, consul in A.D. 6 and son of L. Aemilius Lepidus Paullus, was legate of Tiberius in the war against the Dalmatians (9). In 14 he governed Hispania Citerior, in 21 Asia. He was father of Aemilia Lepida, wife of Drusus, Germanicus' son. Augustus probably described him as 'capax imperii, sed aspersionis' (*Tac. Ann.* i. 13).

Rohden, *PW* i. 562; *PIR*³, A 369; R. Syme, *The Roman Revolution* (1939), 433 n. 4. A. M.

LEPIDUS (6), MANIUS AEMILIUS, consul A.D. 11, was a friend of Augustus and Tiberius, and was celebrated by Tacitus for his dignity. In 21 he declined the proconsulate of Africa, and in 26 he accepted that of Asia. He died in 33.

Robden, *PW* i. 551; *PIR*³, A 363.

LEPTIS (or **LEPCIS**) **MAGNA**, an African port, easternmost of the Three Cities of Tripolitania. Sidonian sailors founded Lebqi about the sixth century B.C. in rich agricultural country. It traded in goods brought from the Fezzan through Garamantian territory, and exported corn and oil. The Leptitans were usually on bad terms with their Tyrian neighbours at Oea (q.v.); as late as A.D. 70 Oea combined with the Garamantes to attack its rival. Septimius Severus beautified Leptis, his native city, with ornate public buildings. It was very prosperous in the third century, but was sacked by raiding tribes from the Fezzan in the fourth. Refortified by the Byzantines, it was soon destroyed by Berbers.

The ruins of Leptis Magna are the most extensive and imposing in Roman Africa. They include a hippodrome with seating for 50,000, the harbour, baths, palaestra, forum, theatre, amphitheatre, and Septimius' *arcus quadrifrons*.

LESBIAN, see DIALECTS, GREEK.

LESBONAX of Mytilene (2nd c. A.D.), sophist, author of probably the earliest collection of love-letters extant, and of three declamations (imaginary addresses to 5th-c. Athenians) embodying reminiscences of Thucydides and written in spirited and figurative style (Norden, *Ant. Kunstpr.* i. 390). J. W. H. A.

LESBOS, the largest of the islands off the coast of Asia Minor, lying athwart the entrance to the Gulf of Adramyttium, roughly triangular in shape, but with two

landlocked bays cutting deep into the hills on the southern side. The fertile soil and mild climate supported five cities: Mytilene (overshadowing but never completely dominating her neighbours), Methymna, Eresus, Antissa, and Pyrrha. The Aeolian immigrants, who formed the chief element in the population, turned to the sea, as well as to agriculture, for a livelihood, as their secondary colonization and their participation in founding the Hellenium at Naucratis show. This widening of horizons must have helped to stimulate the intense intellectual and cultural life among the aristocratic classes during the Golden Age of the late seventh and early sixth centuries B.C., represented by the poets Arion, Sappho, and Alcaeus, and the statesman Pittacus. Lesbos later had a distinguished philosophical tradition: Theophrastus came from Eresus, and in the fourth century Aristotle and Epicurus, in the first century Cratippus, resided for a time on the island.

Longus, *Daphnis and Chloe* (a vivid picture of life on Lesbos in the third century A.D.). L. Büchner, *PW*, s.v. 'Lesbos'.

D. E. W. W.

LESCHEs of Mytilene (?7th c. B.C.), epic poet, to whom the *Ilias Parva* is almost universally attributed. See AGON HOMERI ET HESIODI and EPIC CYCLE.

EGF, pp. 3, 36-48.

LETO (Λητώ, Lat. **LATONA**), a Titaness, daughter of Coeus and Phoebe, 'gentle to men and to the deathless gods' (Hesiod, *Theog.* 404 ff.). She is one of the few Titans who have a cult in historical times, although generally it is together with her children (see Sauer in Roscher's *Lexikon* ii. 1966 ff.), and some of her temples had pious legends connected with them, see Semos of Delos in Athenaeus, 614 a (the Letoön on Delos), Nicander in Ant. Lib. 17, cf. LEUCIPPUS (the Letoön at Phaestus). The etymology of her name is quite obscure, though Wilamowitz-Moellendorf (cf. APOLLO (Oxford, 1908), p. 31). It is almost certainly not Greek. (For her cult in Lycia, cf. W. H. Buckler, *JHS* lv (1935), 78; in Phrygia, L. Robert, *Villes d'Asie mineure* (1935), 128.) But her chief importance is as mother of Apollo and Artemis (qq.v.). Homer (*Il.* 24. 605 ff.) and Hesiod (*Theog.* 918-20) merely say she bore them and give no details; we may conjecture that many famous shrines of one or both deities claimed to be the birthplace, but for some reason, perhaps not unconnected with the great 'Homeric' hymn to the Delian Apollo, Delos imposed its claims on nearly the whole Greek world, other legends, as those of Tegyra in Boeotia (Plutarch, *Pelopidas*, 16), Zoster in Attica (Semos in Steph. Byz. p. 611, 5 Meineke, cf. Paus. i. 31. 1), and even Delphi (Naevius in Macrobi. *Sat.* 6. 5. 8), fading into obscurity.

According to the Hymn Leto was delivered of Apollo (but not Artemis, 16) 'leaning against Cynthus' mountain' in Delos (26; her gigantic size needed this huge prop), for none of the other islands dared to let so terrible a god be born in it, and even Delos was afraid till reassured by an oath of Leto (83 ff.) that Apollo would make his temple there. But Leto was in labour nine days and nights, because Hera would not let Eileithyia go to her (97 ff.) till the other goddesses sent her word and promised her a great fee; she then came without Hera's knowledge or consent and Leto was delivered. Callimachus in his fourth Hymn follows a somewhat different account; Hera forbade any land to afford Leto refuge and set Ares and Iris to see that they did not, but at last Delos ventured to disobey (202 f.), and was forgiven because she was once the nymph Asteria (q.v.). A later story (Hyginus, *Fab.* 160, 3) makes Poseidon overreach Hera; the waves were washing over Delos, therefore it was not land.

A curious legend is preserved by Aristotle (*Hist. An.*, 580^a15 ff.). Leto, as mother of the 'wolf-god' (cf.

APOLLO), took the form of a she-wolf to deceive Hera, and so journeyed from the Hyperborean country to Delos in twelve days. Therefore there are but twelve days of the year in which she-wolves bring forth.

Besides the literature cited in the text see the art. 'Leto' in *PIW* and the handbooks of mythology.

H. J. R.

LETTERS (Greek). We may distinguish four kinds of letter:

(1) Purely personal communications, almost exclusively represented by papyri. These are valuable as evidence both of the language commonly spoken and written in Hellenistic and later ages and of contemporary social and economic conditions.

(2) Letters written by, or attributed to, persons of note, statesmen, orators, philosophers, etc., which have survived because they possessed an interest not confined to their actual addressees. Few are even doubtfully genuine. The spurious letters are sometimes real forgeries; more often they are school exercises or inventions intended to illustrate the characters of famous men. The deliberate forgeries belong mostly to the last two centuries B.C., and may have been partly due, as Galen asserts of literary forgeries in general, to the eagerness of the Attalids and Ptolemies to acquire, and pay for, additions to their libraries. The second sort is chiefly the product of the age 100 B.C.-A.D. 200; amongst the oldest are those of Anarcharsis (which imposed on Cicero), Hippocrates, and Diogenes the Cynic. The famous letters of Phalaris, exposed by Bentley, may be as late as fifth century A.D.

The most important surviving collections are those of Isocrates, Plato, and Demosthenes; some at least of these—in the case of Plato the majority—have strong claims to authenticity. Many of them are 'open' letters: this is probably true of all Isocrates' letters (in v he speaks explicitly of 'readers', though the actual addressee is Alexander); the largest and most important of Plato's (vii and viii), sent to the friends of Dion, are in the main a defence *urbi et orbi* of his participation in Syracusan politics; on the other hand, vi and xiii are real private letters of first-rate interest. Of the six letters of Demosthenes all except v belong to his exile (324-323 B.C.); the two longest (ii and iii) have the best claim to authenticity. Each letter in such collections must be judged separately, for a genuine nucleus may attract spurious accretions.

The practice of collecting letters is specially characteristic of the philosophical schools; those of Aristotle were much admired in antiquity, but they cannot have included the six printed in Hercher. We know also of collections by Theophrastus, Epicurus, Arcesilaus, and Carneades. Of genuine letters in later antiquity the most important are those of Julian and Libanius.

(3) The letter as a medium of philosophic or scientific exposition, or of literary criticism: e.g. the three long letters of Epicurus, and the three 'literary' letters of Dionysius of Halicarnassus. The practice may have originated in the schools of philosophy, when the head wished to instruct absent pupils. The long 'hortatory' letters of Isocrates (*Or.* 2 and 3) belong, at least from one point of view, to this type. Writers adopting this form for scientific exposition include Archimedes and Eratosthenes.

(4) 'Imaginative' letters, designed to entertain readers by recreating the lives and manners of real or imaginary persons of a bygone age. The master of this style is Alciphron (end of 2nd c. A.D.); it owes much to the New Comedy, and is the germ of the historical novel, and of such works as Richardson's *Pamela* and *Clarissa*.

R. Bentley, *A Dissertation upon the Epistles of Phalaris* (1696); F. Blom, *Die Antike Briefsammlung* (1877-83), pt. iii, 426-55 (Theophrastus); J. Howard, *The Platonic Epistles* (1922); R. Hercher, *Fragmenta Graeca* (1873), new edition in preparation by J. Sykutris; R. C. Jebb, *The Style of Isocrates* (1873), ii, 319-55 (Hippocrates); F. Naugle, *Plutarch Epistulae* (1898); R. Mueseler, 'Isocrates' in *PIW*; Valentin Rose, *Antiquis Fragmentis* (Teubner,

1886), 411-21; J. Sykutris, 'Epistolographie' and 'Sokratikerbriefe' in *PIW*; *Die Briefe des Sokrates und der Sokratiker* (1913); F. Susemihl, *Gesch. griech. Litt. Alex.* (1892), ii, 579-601; V. Weichert, *Introd. to Demetrius Tōtoi epistoloiol* (Teubner, 1910); U. von Wilamowitz-Moellendorf, *Unechte Briefe in Hermes xxxiii* (1898), 495 ff. R. II.

LETTERS (Latin). Letter-writing was, next to Satire, Rome's most distinctive legacy to the world's literature. In the self-contained communities of independent Greece there was comparatively little need or scope for correspondence; but as Rome became the hub of the Mediterranean world written communication gained in importance. Landowners visiting their estates in Italy, senators on military or administrative service in the provinces, merchants and tax-farmers, students and exiles, all needed to be kept in touch with the capital, and every traveller went laden with letters he had been asked to deliver, often in return for letters of introduction to influential persons (*epistulae commendaticiae*), such as are found among Cicero's extant correspondence (*Fam.* 13). Men of wealth and position in Cicero's time had among their slaves couriers (*tabellarii*) who could cover fifty Roman miles a day, and the companies of tax-farmers had their own postal service (*publicanorum tabellarii*). Later Augustus, in order to maintain close contact with his provincial governors, instituted a system of post-couriers along the main routes of the Empire, but there was still no organized postal system for private correspondence.

2. Letters were normally written with a reed pen (*calamus*) and ink (*atramentum*) on papyrus (*charta*). Pages were pasted together, as in the case of books, to form a roll which was tied with thread and sealed. Notes written off-hand to persons at no great distance were sometimes scratched with a *stilus* on wax-covered folding tablets (*codicilli*); the recipient could erase the message and use the same tablets for his reply (*Cic. Fam.* 6. 18. 1; *Plin. Ep.* 6. 16. 8). To Atticus, his most intimate friend, Cicero generally wrote in his own hand ('suo chirographo') unless for some special reason (*Att.* 2. 23. 1, 8. 13. 1); but it was usual for persons of rank to employ an amanuensis (*librarius* or *scriba ab epistulis*). Cicero's secretary, Tiro, appears to have kept copies of letters dictated to him (*Fam.* 7. 25. 1), and to have pasted together in rolls (*volumina*) those which Cicero thought best worth keeping. It is no doubt to this practice that we owe the preservation of Cicero's *Epistulae ad Familiares*, though his intention, expressed in 44 B.C. (*Att.* 16. 5. 5), of revising and publishing a selection of letters remained unfulfilled. His letters to Atticus and to his brother Quintus were preserved by their recipients, and the former probably remained unpublished for a century after his death (see *CICERO*).

3. Cicero himself (*Fam.* 2. 4) classified letters under three heads, news-letter, 'genus familiare et iocosum', and 'genus seuerum et graue'. To the first of these categories belong his letters to Atticus, which, more than any other document of antiquity, show history in the making, and discuss with absolute frankness all that is in the writer's mind; also the vivid and somewhat cynical letters of M. Caelius Rufus, seventeen of which are preserved (*Fam.* 8). The second type is well represented by Cicero's letters to C. Trebatius Testa, M. Fadius Gallus, and L. Papirius Pactus (*Fam.* 7. 6-27, 9. 15-26); the third perhaps best of all by the letter of condolence addressed to Cicero, on the death of his daughter Tullia, by Sulpicius Rufus (*Fam.* 4. 5). This last, together with such letters as those in which Cicero asks the historian Lucceius to immortalize his consulship (*Fam.* 5. 12), or expresses his distaste for the *Ludi* exhibited by Pompey in 55 B.C. (*Fam.* 7. 1), may be taken as representing the type of letter which was to serve as a model for the younger Pliny. Close on a hundred letters from other correspondents are preserved along with Cicero's; of these

perhaps the most distinctive in character and style are those of Q. Metellus Celer (*Fam.* 5. 1), M. Cato (*Fam.* 15. 5), M. Antonius (*Att.* 10. 8 a), P. Vatinius (*Fam.* 5. 9-10), C. Asinius Pollio (*Fam.* 10. 31-3), and C. Matus (*Fam.* 11. 28), and the letter in which Cicero's son, writing to Tiro, gives a glimpse of student life at Athens (*Fam.* 16. 21).

4. The correspondence of Augustus was extant in the time of Suetonius (*Aug.* 71, 76; *Claud.* 4, etc.), and Macrobius (*Sat.* 1. 24. 11) quotes a letter of Virgil. But the Augustan age has left us only the verse epistles of Horace and Ovid, and from the Claudian and Flavian dynasties we possess only the *Epistulae Morales* of the younger Seneca (q.v.). With these authors the epistolary form is a mere literary convention, and although Seneca was undoubtedly influenced by the recently published *Epistulae ad Atticum*, his letters to Lucilius are essentially the ramblings of a philosopher; their ancestry should be sought rather in the epistles of Epicurus.

5. That life under the Empire afforded neither the material nor the freedom of expression for letter-writing in the true Ciceronian tradition is evident even when we come to the second great collection of Latin letters, published under the liberal rule of Trajan. The letters of Pliny the Younger (q.v.) resemble Cicero's in that they cover a wide range of topics and reflect the life, interests, and personality of their author; but they do so deliberately and selectively. Their writing belongs, not to the urgent business of living, but to the tranquil detachment of literature. The tenth book, consisting of letters exchanged between a responsible official and his emperor, stands alone as representing the practical side of Pliny's activities. Certain of Statius' *Silvae* are poetical epistles.

6. The correspondence of Fronto (q.v.) with Marcus Aurelius and others owes nothing to the literary tradition of Seneca or Pliny. Much of its subject-matter is purely academic, but the affectionate exchanges of gossip between master and pupil have something of the unselfconscious intimacy of Cicero's letters to Atticus, and their style and diction, quaintly compounded of colloquialism and pedantry, add both to their interest and to their charm.

7. The literary epistle reappears in the fourth century with Symmachus, last of the pagan prose-writers, and Ausonius, first of the Christian poets, some of whose *Epistles* are in prose. In a long list of letter-writers extending through the two following centuries the outstanding names are those of Ambrose, Jerome, Paulinus of Nola, Augustine, Sidonius Apollinaris, and Cassiodorus.

Cf. H. Peter, *Der Brief in d. röm. Lit.* (1901).

R. G. C. L.

LEUCAS, an island of the Ionian Sea, opposite the coast of Acarnania. It derived its name from the white limestone cliffs on its west coast. Its south-west promontory, C. Leucas, has a sheer drop of 2,000 ft.; suspected criminals were hurled from it, and if they survived the ordeal were rescued in boats (Strabo 10. 452). The shallow waters between its north-east coast and the mainland were liable to be closed to navigation by the formation of a sand-bar. The early Corinthian colonists cut through this spit (Strabo, *ibid.*), but in the fifth century ships had to be hauled across it (Thuc. 3. 81, 4. 8). Leucas was occupied by Corinthian settlers under the tyrant Cypselus. In the Persian Wars it furnished contingents to the Greek fleet at Salamis and to the army at Plataea, and it gave active assistance to Corinth in the Peloponnesian War. After a brief alliance with Athens against Philip of Macedonia it passed into the hands of various Hellenistic rulers (Cassander, Agathocles, Pyrrhus), but c. 250 it joined the Acarnanian League, of which it became the capital. The Romans besieged and captured it in 197; in 167 they detached it from Acarnania and constituted it a free city.

Bürchner and 'Mauil, *PIW*, s.v. Leukas'.

M. C.

LEUCE COME (Λευκή Κώμη, 'White Village'), on the Red Sea, probably *Sherm Wehj*, possibly *El Haura*. Nabataean Arabs here received in small ships Eastern wares for Petra and the West. A due (25 per cent.; *Peripl. M. Rubr.* 19) was levied there (perhaps under Roman control: in 25 B.C. Aelius Gallus, on an expedition to S. Arabia, landed there). It seems to have declined after Nabataea became a Roman province (A.D. 106). It may be Ptolemy's *Αἶψα*.

Strabo, 16. 780-1; *Peripl. M. Rubr.* 19; *Plut. Ant.* 51; *Cosmas* 2. 143; *Warmington, Indian Commerce*, 16, 334-5. E. H. W.

LEUCIPPUS, 'person who keeps white horses', hence 'rich man, noble'. Name of fifteen mythological characters, see Stoll in Roscher's *Lexikon*, s.v., but especially (1) father of Hilaëira and Phoebe, cf. *DIOSCUR*; (2) a young Cretan, turned from a girl into a boy by a miracle of Leto (Anton. Lib. 17).

LEUCIPPUS (3) (*fl.* c. 440 B.C.), originator and joint author with Democritus (q.v.) of the Atomic theory, a native of Miletus (not Elea or Abdera, as suggested ap. Diog. Laert. 9. 30). He may have visited Elea after 450: he is associated with Parmenides in philosophy in spite of their views appearing to be directly opposed (Theophrastus ap. *Simpl. in Phys.* 28. 4), and he 'heard' Zeno (D.L. *ibid.*). There is no evidence that he visited Abdera or settled there. His existence was denied by Epicurus (ap. D.L. 10. 13), but the authority of Aristotle, who mentions him repeatedly, should dispose of any doubts.

WORKS. Two in the Democritean corpus are attributed to him: (1) *The Great World System* (Μέγας διάκοσμος); (2) *On Mind* (Περὶ νοῦ). From (2) comes the sole fragment (quoted by Aëtius): 'Naught happens for nothing, but all things from a ground and of necessity.'

For the Atomic theory see *DEMOCRITUS*. The main outlines are due to L., the detailed working out to Democritus. Attempts by Diels, Dyroff, Burnet, and Bailey to separate their respective contributions reveal few major differences. Aristotle suggested the metaphysical derivation of Atomism from Eleaticism (see *Gen. Corr.* 324^b 35 f. and cf. *Phys.* 187^a f.), convincingly demonstrated by Burnet (*EGP* 333 f.). L.'s atoms, apart from their infinity and mobility, have the other characteristics of Parmenides' One Being. Diogenes Laertius (9. 31 f.) preserves an interesting account of L.'s cosmology, the formation of a 'world' from an initial vortex (δίνη), an occurrence repeated innumerable times throughout infinite space. In other respects L. is a reactionary, and follows Anaximander's tradition of a drum-shaped earth.

Leucippus' importance in the history of thought is immense. This Milesian gave the final Greek answer to Thales, and by pure speculation anticipated modern theories of matter.

1. Ancient sources: Diels, *Vorsokr.*⁵ (Kranz, 1934-7); Ritter and Preller¹⁰ (1934). 2. Modern Literature. (i) General: Zeller-Nestle, *Philosophie der Griechen* 1. 2¹ (1922) (Engl. Transl. 1881); Th. Gomperz, *Greek Thinkers* i (1901); J. Burnet, *Early Greek Philosophy*⁴ (1930) and *Greek Philosophy, Part i. Thales to Plato* (1914); L. Robin, *La Pensée grecque*² (1932); H. Cherniss, *Aristotle's Criticism of Pre-Socratic Philosophy* (U.S.A., 1935). (ii) Special: A. Dyroff, *Demokritstudien* (1899); C. Bailey, *The Greek Atomists and Epicurus* (1928); A. Hamelin, *La Pesanteur de l'atome dans le système de Démocrite* (1888); L. Mabileau, *Histoire de la philosophie atomistique* (1895). *PIW* xii. 2266. A. J. D. P.

LEUCON, writer of Old Comedy who lived during the Peloponnesian War (Suid.). In his *Φράγες* he attacked Hyperbolus (fr. 1)—probably as a βαρβαρος who had no clansmen (φράγες).

FCG ii. 749-50; *CAF* i. 703-4.

LEUCOS LIMEN (Λευκός Λιμὴν, 'White Haven'), *Kosseir*, Egyptian port on the Red Sea, was connected with Coptus on the Nile by a track with stations and intervisible beacons, but was less important in Oriental trade than Berenice and Myos Hormos (qq.v.).

LEUCOTHEA (probably 'white goddess', perhaps 'runner on the white [foam]'), a sea-goddess identified early (*Od.* 5. 333-5) with Ino daughter of Cadmus, for reasons unknown. For her story see *ATHAMAS*. It is an old suggestion (see Farnell, *Cults* ii. 637) that she has Semitic connexions (through the 'Phoenician' Cadmus) and her son Melicertes is Melqart; but this is unproved and unnecessary, for his name may be Greek, 'Honey-cutter', i.e. a minor deity of bee-keeping. He is also called, or identified with, Palaemon ('the Wrestler'), again for uncertain reasons. Children are said to have been sacrificed to him (schol. *Lycoph.* 229).

Eitrem in *PIW*, s.v.; L. R. Farnell, *JHS* 36 (1916), 36 ff. H. J. R.

LEX (1), (cf. *ligare*, to bind) signifies an agreement binding on the contracting parties. *Lex privata* means a contract signed by private individuals. *Lex publica* is an agreement between two parties of whom at least one is invested with magisterial authority and represents the State. Two types of *lex publica* must be distinguished according to the procedure followed and the authority enacting the law: a *lex rogata* results from the co-operation of the magistrate and the people, a *lex data* proceeds from the unilateral action of the magistrate. The *leges regiae*, of which the extant fragments are in all likelihood forgeries of the Republican age, were probably *leges datae*, but the laws of the early Republic were indisputably *leges rogatae*, despite the small share of the lower classes in legislation. *Plebiscita*, too, were formally *leges rogatae*, since they were passed in assemblies summoned and presided over by a plebeian magistrate, although in practice they could hardly be regarded as laws until the right of the plebeians to legislate for the whole community was recognized. After the *Lex Hortensia* (c. 287 B.C.) (see *HORTENSIVS* 1) the terms *lex* and *plebiscitum* were used indiscriminately. The *lex rogata* was divided into four categories: (1) a *lex perfecta* invalidated an act prohibited by the terms of the law itself; (2) a *lex minus quam perfecta* penalized any person performing an act which the law forbade, but did not invalidate; (3) a *lex plus quam perfecta* both invalidated an act which it prohibited and penalized the offender; (4) a *lex imperfecta* neither invalidated an act which it prohibited nor punished the offender.

2. In order to be valid a *lex rogata* had to pass through three stages: (1) *legislatio* or public announcement by a magistrate of the draft of the *lex* (*promulgatio*), and the summoning by him of an assembly to debate it at a date not earlier than a *trinudium* (q.v.) after the *promulgatio*; (2) *rogatio*, or the polling in the assembly, where debate, not amendment, was allowed; (3) *publicatio*, or the publication of the Bill in due form and time. Copies of laws enacted had to be kept in the *aerarium* (q.v.), engraved on wooden, and later bronze, tablets. Any enactment could be legally abrogated by subsequent legislation.

3. A *lex data* was issued by a Roman magistrate, and depended on his authority only, provided that senatorial approval was previously secured. It generally concerned either aliens (individuals and communities), or statutes issued by the Roman Republic, which the new law was intended to amend. In Republican times *leges datae* were mainly concerned with provincial administration and municipal statutes. They were issued by magistrates *cum imperio*, appointed to organize a province, or to reform its administration (see *PROVINCIA*), or as municipal statutes granted (also by a magistrate *cum imperio*) to cities both inside and outside Italy.

4. Laws conferring unlimited power upon dictators (e.g. on Sulla and Caesar) or on triumvirs *rei publicae constituendae*, were also *leges datae*, as the reformers thus appointed could legislate without the people's co-operation or approval. Moreover, they were exempted from the obligations and restrictions of ordinary legislation. These exceptional legislative measures therefore mark an

intermediary stage between Republican and Imperial legislation. The theory and practice of the Hellenistic monarchies, and the political philosophy of Cicero and his age, tended to make belief in leaders and emperors as the living source of law widespread. Consequently the emperors were regarded as *legibus soluti* and as alone competent to give laws to their subjects. From Tiberius onwards the *comitia* were no longer summoned for legislation, and the distinction between *lex data* and *lex rogata* thus ended. The imperial constitutions finally covered all the field originally covered by the *leges datae* (grants of citizenship, municipal statutes, founding of new cities, enfranchisement of slaves, etc.).

5. *Lex* also indicated a contract between the State and a private individual (e.g. a middleman) to whom the State leased the exploitation of public land (e.g. a mine, estate), or the collection of the provincial taxes, etc. Similarly the regulations affecting a locality, or building, reputed to be holy (e.g. a wood, common, temple, altar) were termed *leges*.

Mommsen, *Röm. Staatsr.* iii². 308 ff.; É. Cuq, in *Dar.-Sag.* iii. 1107 ff.; E. Weiss, *PIW*, s.v. P. T

LEX (2), **LEGES**. Individual Roman laws are generally treated in this work under the name of the magistrate who introduced them. The following list contains cross-references and occasional explanation. For a detailed list and discussion see G. Rotondi, *Leges publicae populi Romani* (1912).

ACILIA

- (1) *de intercalendo* (191 B.C.), see *GLABRIO* (1).
- (2) *de repetundis* (123 B.C.), see *GLABRIO* (2).
- (3) (*Acilia*) *Calpurnia de ambitu* (67 B.C.) imposed perpetual incapacity to hold office as a penalty for electoral corruption.

AEDUTIA

- (1) *de magistratibus extraordinariis* (? 154 B.C.) prohibited the election to an extraordinary magistracy of the man who had proposed its institution.
- (2) *de formulis* (*de legis actionibus*), see *LAW AND PROCEDURE*, ROMAN, I. 4; II. 4.

AELIA

- (1) *Aelia et Fufia* (c. 150 B.C.), two separate but similar laws of uncertain content. They regulated the use of auspices by magistrates and probably established the right of magistrates and tribunes to obstruct the holding of assemblies through the announcement of unfavourable auspices (*obnuntiatio*). They probably forbade the holding of legislative assemblies in the interval between the announcement of consular elections and the elections themselves. See W. F. McDonald, *JRS* 1929, 164 ff.; S. Weinstock, *JRS* 1937, 215 ff.
- (2) *Aelia Sentia* (A.D. 4) regulated the manumission of slaves and completed the work begun by the *Lex Fufia Caninia*. Cf. *CAH* x. 433-4. See *SLAVERY*, LAW OF.

AEMILIA of M. Aemilius Scaurus (consul 115 B.C.), of uncertain content, which concerned the distribution of freedmen among the tribes.

ANTONIA

- (1) *de Termessibus* of a tribune C. Antonius and his colleagues (? 71 B.C.; cf. *CAH* ix. 896) concluded an alliance between Rome and the Pisidian city of Termessus. Dessau, *ILS* 38.
- (2) *leges Antoniae*, a variety of measures passed by the triumvir M. Antonius (q.v. 4), included laws to abolish dictatorship, to readjust provincial commands (*de permutatione provinciarum*), to confirm Caesar's *acta*, and to grant *prosecutio* to those convicted *de maiestate* and *de vi*.

APPULEIA: various *leges* of Saturninus (q.v. 1) in 103 and 100 B.C.

AQUILIA, *de damno*, see LAW AND PROCEDURE, ROMAN, I. 4; III. 6.

ATERNIA-TARPEIA (454 B.C.) fixed the maximum fine which magistrates could impose (Gell. 11. 1).

ATINIA, *de tribunis plebis in senatum legendis* (before 102 B.C.) (Gell. 14. 8. 2).

AURELIA

(1) *de tribunicia potestate* (75 B.C.), see COTTA (1).

(2) *iudiciaria* (70 B.C.), see COTTA (3).

BAEBIA, *de praetoribus* (? 181 B.C.), enacted that four and six praetors should be elected in alternate years (Livy 40. 44. 2); it was not long observed. Cf. De Sanetis, *Stor. Rom.* iv. 504 ff.

CAECILIA DIDIA (98 B.C.), see DIDIUS (1) and COMITIA.

CAELIA, *tabellaria* (107 B.C.), of the tribune C. Caelius Caldus, extended vote by ballot to cases of *perduellio* which had been excepted in the *Lex Cassia*.

CALPURNIA

(1) *de repetundis* (149 B.C.) established a permanent court to try cases of extortion. Cf. W. G. Ferguson, *JRS* 1921, 86. See REPETUNDAE and PISO (1).

(2) *de civitate sociorum* (89 B.C.), of uncertain content, perhaps empowered generals to grant citizenship for distinguished military service. (Sisenna, frs. 17, 120 Peter).

(3) *de ambitu*, see LEX ACILIA, no. 3, above.

CANULEIA, *de conubio patrum et plebis* (445 B.C.). See CANULEIUS.

CASSIA

(1) *tabellaria* (137 B.C.), of the tribune L. Cassius Longinus, introduced vote by ballot in the *iudicia populi*, except in cases of *perduellio*. See VOTING and cf. LEX CAELIA above.

(2) *de plebeis in patricios adlegendis* (45 B.C.) empowered Caesar to create patricians (Tac. *Ann.* 11. 25). See PATRICIUS.

CINCIA, *de donis et muneribus* (204 B.C.), of the tribune M. Cincius Alimentus, forbade gifts which might defeat justice and certain donations above a given amount. See ADVOCATUS, PATRONUS.

CLAUDIA, *de nave senatorum* (218 B.C.). See CLAUDIUS (7).

CLODIAE: various *plebiscita* proposed by P. Clodius (q.v. 1), tribune in 58 B.C.

CORNELIAE

(1) Various *leges* passed by Sulla (q.v.). See also LAW AND PROCEDURE, ROMAN, III. 3.

(2) Laws of Cinna (q.v. 1), consul in 87 B.C., including the distribution of the new citizens in the thirty-five tribes.

(3) *Cornelia Pompeia de comitiis centuriatis et de tribunicia potestate* (88 B.C.). App. *BCiv.* 1. 59; Livy, *Epit.* 77.

DOMITIA, *de sacerdotiis* (104 B.C.), of the tribune Cn. Domitius Ahenobarbus, virtually abolished co-optation for the priestly colleges and substituted election by seventeen tribes. It was abrogated by Sulla, but renewed by a *lex* of Labienus in 63 B.C.

FANNIA, *sumptuaria* (161 B.C.), limited the sums to be spent on entertainments.

FLAMINIA, *agraria*. See FLAMINIUS.

FUFIA CANINIA, *de manumissione* (2 B.C.), limited the number of slaves a master might liberate by will. Cf. *GAH* x. 432. See SLAVERY, LAW OF. See also LEX AELIA (2) above.

GABINIA

(1) *tabellaria* (139 B.C.) introduced ballot in the election of magistrates.

(2) Various *leges Gabiniae* (67 B.C.) of the tribune Gabinius (q.v. 2), which included the establishment of a command against the pirates (for Pompey), the forbidding of the lending of money to provincials in Rome, and *de senatu legatis dando*, which fixed February as the month of audience for foreign *legati* to the Senate.

GENUCIAE, see GENUCIUS.

HIERONICA was not strictly a *lex*. See HIERON II.

HIRTIA (? 46 B.C.) gave Caesar the right of making peace and war.

HORTENSIA, see HORTENSIVS (1).

ICILIA, see ICILIUS.

DE IMPERIO VESPASIANI is the name given to the content of a bronze inscription (*ILS* 244) of which only the end survives. It is part of an enactment which conferred powers on Vespasian. Although the phrasing suggests a *senatus consultum*, it is, however, a *lex rogata*; the People who passed it into law allowed the formulation of the preliminary *S.C.* to stand. The surviving fragment enumerates specific privileges. The problem is to deduce what the missing part contained, whether it conferred on Vespasian (a) *imperium*, i.e. is a *lex de imperio* (Ulpian records that Vespasian received his *imperium* by a *lex regia*), (b) *tribunicia potestas* (this is unlikely), (c) all his powers (the jurists of the second and third centuries conceived that all imperial power had been bestowed on Augustus by a single enactment), or (d) 'a consolidated grant of miscellaneous rights additional to those which formed the main basis of the imperial position', i.e. the right to do what Vespasian's predecessors had done by virtue of either special enactment or their own *auctoritas* (so H. Last, *GAH* xi. 404 ff.).

IULIAE. It is doubtful whether certain *leges Iuliae* were enacted by Caesar or by Augustus.

(1) *de civitate Latinis et sociis danda* (90 B.C.), see CAESAR (2).

(2) *Leges* of Julius Caesar (q.v.) in 59 B.C. (*agraria*, *de publicanis Asiae*, *de actis Pompeii*, *de Ptolemaeo Aulete*, *de pecuniis repetundis* (cf. *PIW* xii. 2389), *de provinciis*), and in 49-44 B.C. measures which included *de pecuniis mutuis* (to relieve debtors); *de civitate Transpadanis danda*; *frumentaria* (reducing the number of recipients of free corn); *de collegiis* (see CLUBS, ROMAN); *iudiciaria* (see TRIBUNI AERARII); *sumptuaria*; *de maiestate* (see MAIESTAS); *de re pecuaria* (that at least one third of Italian herdsmen should be freemen); *de provinciis* (limiting provincial promagistracies to one year for ex-praetors, to two years for ex-consuls); *Lex Iulia municipalis* (so-called; it was a collection of various statutes, drafted by Caesar and later incorporated in one general bill and carried by Antony. Cf. E. G. Hardy, *Roman Laws and Charters* i. 136 ff.).

(3) *Leges* of Augustus included *de maiestate* (see MAIESTAS and PERDUELLIO); *de vi*; *de ambitu* (18 B.C.; excluding from office for five years men convicted of bribery; see also LAW AND PROCEDURE, ROMAN, II. 3); *de adulteriis coeercendis* (18 B.C.; cf. *GAH* x. 443 ff.; see ADULTERY); *de maritandis ordinibus* (18 B.C.; cf. *GAH* x. 448 ff.; see MARRIAGE); *de senatu*; *de viresima hereditatum* (A.D. 6; levied a 5 per cent. tax on legacies which was paid into the *aerarium militare*); *de magistratibus* (12 B.C.); *de collegiis* (see CLUBS, ROMAN); *de tutela*; *de iudiciis*

privatis (see LAW AND PROCEDURE, ROMAN, II. 4); *de iudiciis publicis* (A.D. 7; see *QUAESTIO*).

- (4) *Iulia Papiria* (430 B.C.) is said to have introduced payment for fines in bronze instead of in sheep or oxen. See *COTNAGE* (ROMAN), para. 1.

IUNIA

- (1) *de peregrinis* (126 B.C.) of the tribune M. Junius Pennus, expelling from Rome all non-citizens.
- (2) *de manumissione* (? 17 B.C.), see *LATINI IUNIANI*, *SLAVERY* (LAW OF).
- (3) *Iunia Licinia* (62 B.C.) ordered the deposition in the Atrarium of a copy of promulgated laws.

LICINIA

- (1) *rogatio Licinia agraria* (c. 145 B.C.) proposed some land settlement.
- (2) *Licinia Mucia* (95 B.C.), proposed by L. Licinius Crassus and Q. Mucius Scaevola, expelled Latins from Rome. See *CRASSUS* (3).
- (3) *Licinia Pompeia*, two measures passed by Crassus and Pompey: (a) *de tribunicia potestate* (70 B.C.), which restored full competence to the tribunate, and (b) *de provincia Caesaris* (55 B.C.), which prolonged Caesar's Gallic command for five more years (until ? 13 Nov. 50 or 1 March 49).
- (4) *Licinia Sextia* (367 B.C.), see *STOLO*.

LIVIAE, see *DRUSUS* (1) and (2).

MAENIA, *de patrum auctoritate* (q.v.).

MAMILIA

- (1) *de coniuratione Iugurthina* (110 B.C.) established a court of inquiry. See *MAMILIUS* (3).
- (2) *Mamilia Roscia Peducaea Alliena Fabia* (Bruns, *Fontes*⁷, 15) perhaps belongs to Caesar's land legislation of 59 B.C. or is more probably a later supplement to it (55 B.C.). Cf. M. Cary, *JRS* 1929, 113 ff. It has also been assigned to the tribune Mamilius (109 B.C.).

MANILIA, see *MANILIUS* (2).

MINUCIA, *de liberis* (before 90 B.C.), established that sons of parents who had not *conubium* should take the status of the inferior parent.

MUNATIA AEMILIA (42 B.C.) authorized the Triumvirs to grant citizenship and exemption from taxes.

OCTAVIA, *frumentaria* (? c. 120 B.C.), modified the *Lex Sempronia frumentaria* by raising the prices.

OGULNIA, see *OGULNIUS*.

OPPIA, see *OPPIUS* (1).

ORCHIA, *sumptuaria* (181 B.C.), limited the number of guests at entertainments.

OVINA, see *OVINIUS*.

PAPIA (64 B.C.) made all non-citizens liable to eviction from Rome.

Papia Poppaea (A.D. 9) completed the *Lex Iulia de maritandis ordinibus*.

PAPIRIA

- (1) *tabellaria* (131 B.C.) carried by Carbo (q.v. 1), who also proposed a *rogatio de tribunis plebis reficiendis*.
- (2) *seminciaria* (89 B.C.) of the tribune C. Papirius Carbo, made the *as* seminciarius.

PITRONIA, *de servis* (A.D. 61), forbade masters arbitrarily to send their slaves to fight wild beasts.

PINARIA FURIA (472 B.C.) regulated the quadrennial period of intercalation.

PLAUTIA, *de circumscriptione adulescentium* (c. 193-192 B.C.), see *GUARDIANSHIP*.

PLAUTIA

- (1) *de vi* (between 78 and 63 B.C.).
- (2) *de reditu Lepidanorum*. For date see *CAH* ix. 896.
- (3) *Plautia Papiria* (89 B.C.), see *PLAUTIUS* (1).

POETELIA, see *POETELIUS*.

POMPEIA

- (1) *de Transpadanis* (89 B.C.). See *STRABO* (1).
- (2) various *leges* of Pompeius Magnus, which included *de parricidio* (q.v.); *iudiciaria* (55 B.C.?; limiting the magistrate in the choice of *iudices*); *de vi* (52 B.C., simplifying the procedure and increasing the penalty of the *lex Plautia*); *de ambitu* (52); *de provinciis* (52, prescribing a five-year interval between a magistracy and a provincial command); *de iure magistratum* (52, renewing the obligation for candidates to register in person). See also *LEGES LICINIAE POMPEIAE*, above.

PORCIAE, *de provocations* or *de tergo civium*. Three laws—see J. Carcopino, *La Rép. romaine* ii. 144; A. H. McDonald, *JRS* 1944, 19.

- (1) The tribune P. Porcius Laeca extended the right of *provocatio* in capital cases to Roman citizens in Italy and the provinces (199 B.C.).
- (2) M. Porcius Cato, as praetor (198) or less probably as consul (195), prohibited the scourging of citizens without appeal.
- (3) Military officers were deprived of the right of summary execution by the consul L. Porcius Cato (154) or later (c. 150-135).

PUBLILIAE, see *PUBLILIUS* (1) and (2) and *PATRUM AUCTORITAS*.

PUPIA, *de senatu diebus comitialibus non habendo*. See *SENATUS*, 1 b.

QUINCTIA: proposed by T. Quinctius Crispinus, consul 9 B.C., for the preservation of aqueducts (Bruns, *Fontes*⁷, no. 22).

ROSCIA

- (1) *theatralis* (67 B.C.), see *ROSCIUS* (2).
- (2) *de civitate Transpadanorum* (49 B.C.) mentioned in *Tab. Atestina* (Bruns, *Fontes*⁷, p. 101); its content is uncertain.

RUBRIA

- (1) A bill of the tribune Rubrius in 122 or possibly 123 B.C. to found a colony at Carthage. An attempt to repeal it in 121 led to disorder and C. Gracchus' death; it was repealed soon afterwards.
- (2) A partly extant law of uncertain date, which regulated jurisdiction in Cisalpine Gaul and may be supplementary to Caesar's Transpadane law. See E. G. Hardy, *Roman Laws and Charters* i. 110 ff.

RUFILIAE, *de iure Siculorum*, *de re frumentaria*, etc., were *leges datae* of the proconsul P. Rupilius, regulating the condition of Sicily in 131 B.C.

SAENIA, see *PATRICIUS*.

SCHEBONIAE, *rogationes* of Curio (q.v. 2), tribune 50 B.C.

SEMPRONIAE of Tiberius and Gaius Gracchus. See *GRACCHUS* (3) and (4).

Sempronia de pecunia credita (193 B.C.), of M. Sempronius Tuditanus, extended to *socii* and the *nomen Latinum* the laws about loans (Livy 35. 7).

SERVILIA

- (1) *iudiciaria*, see *CASSIUS* (1).
- (2) *de repetundis*, see *CLAUDIA*.
- (3) *rogatio Servilia agraria*, see *BULLIUS*.

SULPICIAE of Sulpicius Rufus 88 B.C.). See *BUTUS* (1).

TERENTIA

- (1) *de libertinorum liberis* (189 B.C.), see CULLEO.
- (2) *Terentia Cassia frumentaria* (73 B.C.), see CASSIUS (4).

THORIA, agraria. Sp. Thorius was, according to Appian (*BCiv.* 1. 27), the author of a measure (of 119 B.C.; cf. Cic. *Brut.* 136) which (a) abolished the land commission established by the Graeci, (b) granted perpetual tenancy to *possessores* of *ager publicus*, and (c) reimposed rent on this. More probably Thorius was the author of the agrarian law of 111 B.C. (Cic. *Brut.* 36, 136) which has been partially preserved on the back of a bronze tablet with the *Lex Acilia*; this laid down (a) that all public land dealt with by the Graecian commissioners should become the private property of its occupants, (b) the abolition of rent, (c) all colonies and municipia were given security of tenure in *ager publicus* which had been granted to them, (d) the system of *possessio* was abolished, (e) lands in Africa and at Corinth were dealt with. Cf. *AjPhil.* 1935, 232.

TITIA, de IIViris reipublicae constituendae (27 Nov. 43 B.C.), gave legal status to the Second Triumvirate.

TREBONIA, de provinciis consularibus (55 B.C.), see TREBONIUS.

TULLIAE of Cicero in his consulship (63 B.C.)

- (1) *de ambitu* forbade anyone to exhibit a public show for two years before he was a candidate, and extended the penalty established by the *Lex Calpurnia* to ten years.
- (2) *de legionibus liberis* limited the privilege of *libera legatio* to one year.

VALERIAE

- (1) of Valerius Poplicola (509 B.C.), see VALERIUS (1).
- (2) *Valeriae Horatiae* (449 B.C.), see VALERIUS (2).
- (3) *de provocatione* (300 B.C.) of the consul M. Valerius Corvus. See PROVOCATIO.
- (4) *de aere alieno* (86 B.C.), see VALERIUS (8).

VARIA, de maiestate (90 B.C.), instituted a *quaestio extraordinaria* against those who had aided the rebel allies.

VATINIAE of the tribune P. Vatinius (q.v.) in 59 B.C., including the conferring on Caesar of the Gallic command.

VIBIAE. The consul C. Vibius Pansa (42 B.C.) carried some *leges* (confirming Caesar's *acta*, founding colonies, and abolishing the dictatorship) to replace similar laws of Antony which had been abrogated.

VILLIA, annalis (180 B.C.), see VILLIUS.

VISELLIA (A.D. 24) granted full citizenship to Junian Latins who served in the *Vigiles* for six years and debarred all who were not *ingenui* from gaining municipal magistracies unless supported by the Princeps.

VOCONIA, de mulierum hereditatibus (169 B.C.). Cf. *PW* xii. 2418. H. H. S.

LEX CURIATA DE IMPERIO (the term probably being a part of the official wording) was the measure by which the Comitia Curiata conferred *imperium* on magistrates who could not enter office unless and until their election was thus ratified (except censors, whose election was ratified by the Comitia Centuriata). The traditional view that in the regal period *imperium* was conferred upon the king by a *lex curiata de imperio* is probably, whether the Roman monarchy was hereditary or elective, an anticipation of Republican times. The *lex curiata* was carried soon after the election, e.g. not later than 1 March for magistrates appointed at the beginning of the year.

The Comitia Curiata, however, soon ceased to be summoned, and thirty lictors were chosen to act as representatives of the thirty tribes. With the introduction of proconsular and propraetorian *imperium* the *lex curiata* soon became a pure formality. Towards the end of the Republic it was often disregarded or suspended, and it ceased to be in force in the Imperial age.

Mommsen, *Röm. Staatsr.* p. 609 ff.; W. Liebenam, *PW* iv. 1826 ff.; G. W. Botsford, *The Roman Assemblies* (1909), 188 ff. P. T.

LEXICA SEGUERIANA, so named from a former MS.-owner, or Bekkeriana, from the editor (*Anecd. Bekk.* i), are I, Phrynichus the Atticist (excerpts); II, Anonymus Antatticista; III, *Περὶ συντάξεων*; IV, *Δικῶν ὀνόματα*; V, *Λέξεις ῥητορικαί*; VI, *Συναγωγή χρησίων λέξεων*. Of the last Bekker prints only A: Bachmann adopts this and edits the rest (B, etc.) in his *Anecd.* i. P. B. R. F.

LIBATIONS, see WORSHIP (HOUSEHOLD), SACRIFICE.

LIBELLUS was a petition to the emperor by a party to a judicial suit at Rome. It was answered by a *subscriptio* appended to it, which the emperor himself signed (S.H.A. *Comm.* 13). The official who dealt with *libelli* was the *a libellis*, who was a personal secretary of the emperor. The post of a *libellis* no doubt existed from the time of Augustus, but it is prominent first under Claudius, when it was held at first, perhaps, by Polybius (Seneca, *Consolatio ad Polybium* 6. 5) and then by Callistus. It was in the hands of freedmen until the reign of Hadrian, after which its holders were *equites* (S.H.A. *Hadr.* 22). The jurists Papinian and Ulpian (qq.v.) held the post.

J. P. B.

LIBER PATER, Italian god of fertility and especially of wine, commonly identified with Dionysus (q.v.). Concerning his origin and relation to Jupiter (I. Liber) divergent views have been held, see Wissowa, *RK*², p. 138; Altheim, *Hist. Rom. Rel.* 125, 149. But it is certain that he was an independent god when the festival calendar was completed, for it contains his feast, the Liberalia of 17 Mar. He had, however, no temple, or none of any importance, in Rome (see Platner-Asby, pp. 316, 321). This may be explained by the fact that his feast would be chiefly rustic and have little to do with the city. According to Verg. *G.* 2. 385 ff. it was a merry occasion, and characterized by crude songs, doubtless traditional, and the use of masks, which apparently were hung on trees; they may have been intended to scare away evil influences.

Liber had, however, an important cult in Rome along with his partner Libera as associate of Ceres on the Aventine (cf. CERES); but we have too little information about the ritual there to say anything definite about the manner of his worship. It appears to have been Greek in origin, like everything about that temple.

By a sort of play on words (*Liber—liberi*) the Liberalia became a favourite day for boys to put on the *toga virilis* (*Ov. Fast.* 3. 771). It was a day of feasting (Wissowa, op. cit. 299), but the native and Greek elements are not easily dissociated.

He has no mythology of his own, simply taking over that of Dionysus. H. J. R.

LIBERALIA, see LIBER PATER.

LIBERTAS, the personification of personal liberty, the condition of a free man. She was given a temple in or about 238 B.C. by Ti. Sempronius Gracchus, consul in that year, on the Aventine (Livy 24. 16. 19); it was restored by Augustus (*Mon. Ancyr.* 4, 6; 10, 11 of the Greek version). Here, as commonly, she was associated with Jupiter, like Liber (q.v.): (*aedem*) *Iovis Libertatis* (Augustus *ibid.*, but cf. Platner-Asby, p. 296 f.). How

old her cult is we do not know, but certainly later than the 'calendar of Numa', which contains no mention of her. Under the Empire *libertas* comes to mean political liberty, not only in republican declamations, as Lucan 7. 432 ff., but in official language, to signify constitutional government, especially as opposed to usurpation or tyranny (see Wissowa, *RK* 139). H. J. R.

LIBERTUS, see FREEDMEN.

LIBITINA, Roman goddess of burials, which were registered at her grove; Dion. Hal. *Ant. Rom.* 4. 15. 5, cf. Plutarch, *Quaest. Rom.* 23. Both identify her with Venus (q.v.), a mere confusion with Lubentina.

LIBO, see SCRIBONIUS.

LIBRA, see WEIGHING-INSTRUMENTS.

LIBRARIES. I. GREEK. In the article on *Books* it is noted that writing was probably available from the date of the composition of the Homeric poems downwards, but in these primitive ages books probably existed only for the use of rhapsodists, actors, singers, and the like. There is no trace of a reading public until about the end of the fifth century. Athenaeus (1. 4) names Poly-crates of Samos and Pisistratus as traditional owners of collections of books. Euripides owned books (*ibid.*), and Socrates refers to the accessibility of books (Pl. *Ap.* 26 d, *Phd.* 97 b, 98 b; *Xen. Mem.* 1. 6. 14), but evidently reading and the ownership of books were far from common, and provided the basis of Aristophanic jests at 'highbrows' (Denniston, *CQ* xxi. 117). Aristotle is said (Strabo 13. 1. 54) to have been the first collector of books, and to have taught the kings of Egypt to set up libraries. In the fourth century Aristotle (*Rhet.* 1413^b 12) recognizes the existence of authors whose works were intended to be read (*ἀναγνώσκειν*) rather than recited, naming the dramatist Chaeremon and the lyric poet Licymnius. Beyond doubt the foundation of the Library at Alexandria marks an epoch in bibliographical history. It appears to have been founded, in connexion with the Museum, by Ptolemy I, under the direction of Demetrius of Phalerum, but greatly extended by Ptolemy II, whom some regarded as the real founder. It is variously said to have contained from 100,000 to 700,000 volumes (Aristeas, ed. Thackeray ap. Swete, *Introduction to the O.T. in Greek*, p. 520; also ed. P. Wendland (Teubner) and Meehlam (1935); Tzetzes ap. Ritschl, *Opusc.* i. 8, *Die alexandrinische Bibliotheken*; Gell. 6. 17; Amm. Marc. 22. 16); but book-counting is notoriously an inexact science. At its head were placed a series of distinguished scholars, Zenodotus, Eratosthenes, Aristophanes of Byzantium, Aristarchus; Callimachus and Apollonius Rhodius worked there, but were apparently not chief librarians. It became the great centre of literature in the Hellenistic world, and the practice of its copyists was probably decisive in the forms of book-production. Classified catalogues (*πίνακες*) of its contents were drawn up under the direction of Callimachus, and no doubt continued by his successors. A second, smaller library was established at the Serapeum.

According to Plutarch (*Caes.* 49) the great library was burnt when Caesar was besieged in Alexandria. Dio Cassius (42. 38), however, says only that the 'store-houses of corn and books' were so destroyed. Later legend magnified this into the total destruction of the great Library, or of both libraries (Sen. *Tranq.* 9; Oros. 6. 15; Gell. 6. 17); but this is very improbable.

The chief rival of the Alexandrian Library was that of Pergamum, founded by Eumenes II (see *BOOKS*). This is said to have contained 200,000 volumes when Antony presented it to Cleopatra (Plut. *Ant.* 58). Perseus of Macedonia had a library (Plut. *Ant.* 28); and no doubt there were also libraries in the other principal Hellenistic towns.

Of private libraries there is little mention. The discoveries of literary papyri in Egypt is proof of private collections of books; but no particulars are on record. A third-century papyrus from the Fayum contains a fragment of an inventory of a library, comprising 132 rolls of philosophy (100 opisthograph) and 296 of medicine (*Arch. Pap.* 11. 277). With the beginning of the Hellenistic age the habit of reading set in, and libraries, public and private, seem to have become common.

II. LATIN. At Rome, apart from archives of official documents, there is no trace of libraries before the first century B.C. Lucullus is recorded to have possessed a large library, which he made freely accessible, especially to Greeks (Plut. *Luc.* 42). Atticus and Cicero had considerable collections of books. Caesar commissioned Varro to assemble a library for him (Suet. *Iul.* 44), but the project was not consummated. The first public library in Rome was founded by C. Asinius Pollio (Plin. *HN* 7. 30; 35. 2); but the decisive impulse was given by Augustus, who founded two libraries, one (the Porticus Octaviae) in the Campus Martius, the other on the Palatine. Both were connected with temples and comprised separate Greek and Latin libraries and a hall or reading-room in which conversation was possible (Gell. 13. 19). This model was generally followed. Tiberius, Vespasian, and Trajan built libraries in Rome, and Hadrian at Athens, all in connexion with temples. Eventually there are said to have been twenty-six in Rome alone, and the gift of a library to a provincial town was a recognized form of public munificence. The younger Pliny gave one to Como (*Ep.* 1. 8. 2), and remains of libraries, also the result of private benefactions, have been found at Ephesus and Timgad.

Private libraries also became so fashionable that Seneca (*Tranq.* 9) declares that a library is considered as essential to a house as a bath, and that the idlest people fill their houses with books from mere ostentation. Suidas (s.v. 'Epaphroditus') mentions a private library of 30,000 volumes. A specimen of a private library was found in the excavation of Herculaneum in 1752. It was a room about 12 ft. square, lined with bookcases ornamented with inlaid woods. In the middle was a table for readers. In the presses (*plutei, armaria*) of such libraries the rolls lay on shelves or in pigeon-holes (*nidi, foruli*), or stood in boxes (*capsae, scrinia*) with projecting *tituli*. Portraits of authors were often inserted in the woodwork of the presses, or stood as busts upon them. The younger Pliny had a book-case let into the wall of his bedroom (*Ep.* 2. 17. 8), a fashion afterwards followed in medieval monasteries.

LIBRI LINTEI, see *BOOKS*, II. 1.

LIBUM, see *CARUS*.

LIBYA was the Greek name for the continent Africa. The relation of Libya to Asia was at first in dispute. Until c. 500 B.C. it was regarded as part of Asia; when it came to be regarded as a separate continent its frontier was drawn along the Nile, or to west of Egypt, but after Herodotus it was fixed at Suez.

The north coast was opened up by the Phoenicians, and a Carthaginian, Hanno (c. 490?), followed the Atlantic coast to Sierra Leone (or perhaps Kamerun). The east coast was known to the early Egyptians as far as Somaliland; in the first two centuries A.D. Greek pioneers sailed to C. Delgado. The story that Phoenicians had circum-navigated Libya (Hdt. 4. 42) found little credence, and the attempt by Eudoxus (q.v.) to sail round ended in failure.

Inland exploration was carried on under the Ptolemies by way of the Atbara and Blue Nile to Abyssinia; some Roman soldiers under Nero reached the swamps of the White Nile to the south of Khartoum. But these obstructed further advance, and it was probably by journeys from the east coast that knowledge was obtained of the 'Mountains of the Moon' (Kilimanjaro and Ruwenzori?) and lakes (Victoria and Albert Nyanza) of central Africa, and of the Nile's sources. The Sahara was traversed c. 500 B.C. by some natives from Tripoli, who found the Niger near Timbuctoo (Hdt. 2. 32-3); a Roman officer, Julius Maternus (c. A.D. 100?), reached the Sudanese steppe, probably near Lake Chad. But there is little evidence of trans-Saharan trade before the Middle Ages.

In the general opinion of the Greeks Libya was a right-angled triangle (with the right angle at Suez); it lay wholly north of the equator (its southernmost parts being too hot to inhabit), and it was water-girt. But later exploration of the east coast suggested the theory (accepted by Ptolemy), that east Africa was joined by land to SE. Asia.

Cary-Warmington, *Explorers*, 45 ff., 62 ff., 86 ff., 165 ff. E. H. W.

LICENTIUS, of Tagaste, friend and (probably) relation of St. Augustine, to whom (A.D. 395) he addressed 154 hexameters, declaring himself unable to understand Varro's encyclopaedia without St. Augustine's guidance, and asking for a copy of the latter's work *De Musica*. The poem is preserved with St. Augustine's reply (Aug. *Ep.* 26 g). It hardly justifies St. Augustine's description of Licentius as 'poeta paene perfectus', its language being unoriginal and often obscure; its prosody, however, is fairly correct (shortening of final o, as is usual in late poetry; actual mistakes 'Pelöpum', 'Maeötidum'), and the hexameter is built with care (no spondee word in the fifth foot, etc.).

See Baehrens, *FPR* 413-19; Zelzner, *De carmine Licentii* (diss. Breslau, 1915). O. S.

LICINIANUS, see **LICINIUS** (1), **VALERIUS** (20).

LICINIUS (1), **VALERIUS LICINIANUS**, a comrade-in-arms of Galcrius, came into sudden prominence at Carnuntum in A.D. 308, when he was raised directly to the rank of Augustus. On the death of Galerius in 310 he prepared to contest the inheritance with Maximinus, but concluded peace on the Hellespont on the basis of *uti possidetis*. In 312 he formed a close alliance with Constantine, marrying his sister, Constantia, and, after Constantine had destroyed Maxentius, himself conquered Maximinus (313). In 315 he quarrelled with Constantine, lost a sharp but indecisive war, ceded part of Illyricum, and allowed his nominee, Valens, to fall. His infant son, Licinius, was made Caesar beside Crispus and Constantine II. From c. 320 new difficulties arose. Licinius withdrew his favour from the Christians and revived the persecution. In 323 Constantine attacked and won decisive victories on land and sea. Licinius was sent into retirement at Thessalonica, then accused of plotting and put to death (324). His colleague, Martinian, fell with him.

CAH xii. 348 ff.; Parker, *Roman World*, 257 ff., 307 f. H. M.

LICINIUS (2) **IMBREX**, Latin poet, called by Gellius 'an old writer of comedies', whose *palliata* entitled *Neaera* he cites (13. 21. 16; 15. 24).

LICINIUS, see also **CRASSUS**, **GALLIENUS**, **LUCULLUS**, **MACER**, **MUCIANUS**, **MURENA**, **STOLO**, **SURA**, **VALERIANUS**.

LICIN(I)US PORCIUS, see **PORCIUS LICINUS**.

LICINUS, **LARCIUS** (?**LARGIUS**), see **LARCIUS**.

LICTORES (cf. *licere*, to call) formed a corporation, divided into several *decuriae*, of attendants on magistrates, whom they accompanied continuously both in Rome and abroad. They were of low birth, sometimes freedmen. In the town they wore the toga; out of it, and in the triumphal procession, a red coat (*sagum*); at funerals, a black mourning-dress. They preceded their particular magistrate in single file, the one nearest to the magistrate being styled *lictor proximus* or *summus*. They announced the approach of the magistrate and removed everyone, except Vestal Virgins and *matronae*, from the path. Each *lictor* bore a bundle of *fascies* (q.v.). Originally *lictors* often acted as executioners. Their number varied according to the rank of the magistrate. Each consul had six *lictors* until c. 300 B.C. and thereafter twelve. A dictator had originally twelve and subsequently twenty-four, since he united in his person the power of both consuls. The *praetor urbanus* had two *lictors*. The emperors were attended by twelve *lictors*, until Domitian doubled the number. Their *fascies* were *laureati* (i.e. bound with branches of laurel) like those displayed by the victorious generals (*imperatores*) of the Republican armies. The institution of *lictors* goes back to the regal period, and probably was of Etruscan origin.

Mommsen, *Röm. Staatsr.* i², 355 f., 374 ff.; G. De Sanctis, *Riv. fil.* 1929, 1 ff.; C. Lécrivain, *Dar.-Sag.*, iii. 2, 1239 ff.; B. Kübler, *PIV*, s.v. P. T.

LICYMNIUS (1), in mythology, brother of Alcmena and uncle of Heracles (q.v.). He was the only son of Electryon to escape the Taphii (see **AMPHITRYON**), and when Amphitryon and Alcmena left for Thebes he accompanied them (Apollod. 2. 55. 57). He met his death when an old man at the hands of Tlepolemus (q.v.; *Il.* 2. 661-2). The reason is variously given. Pindar (*Ol.* 7. 27 ff.) says Tlepolemus struck him in anger 'as he came from the bowers of Midea', whether that means the town or his mother, Electryon's concubine; the reason for the quarrel is not given. Others, as Diod. Sic. 5. 59. 5, say it was an accident; but all agree that Tlepolemus left for Rhodes, where he founded the Dorian settlement, led his people before Troy (Homer, loc. cit.), and was killed by Sarpedon (*Il.* 5. 628 ff.). H. J. R.

LICYMNIUS (2), of Chios, dithyrambic poet and rhetorician, teacher of Polus (Pl. *Phdr.* 267 c). Aristotle says that his works were better to read than to hear (*Rh.* 1413^b14). Also wrote on language (ibid. 1414^b15).

Text: Diehl, *Anth. Lyr. Graec.* ii. 131-2.

LIGARIUS, **QUINTUS**, a Sabine by extraction, was legate in Africa of the governor C. Considius Longus in 50 B.C.; remaining with the Pompeians, he fought in 49 and 46. After Thapsus he was banished. When Caesar was about to pardon him he was accused by Q. Aelius Tubero, whose father he had not acknowledged as governor of Africa in 49, on account of his conduct there. Cicero defended him and obtained acquittal. He joined the conspirators in 44, however, and died soon after, probably not in the proscriptions. A. M.

LIGHTHOUSES. Although the Piraeus had been indicated at night by open fires on columns in the fifth century B.C., and the use of towers as day beacons began in the Hellenistic age, the first true lighthouses seem a result of the growing commerce in the Roman Empire. The Pharos at Alexandria bore a lantern by the reign of Nero, and subsequently towers at the mouths of numerous harbours and on some dangerous coasts, as at Sestos, were crowned by lanterns or open fires within a wall. The largest such tower, the Alexandrian Pharos, built about 300-280 B.C. by Sostratus of Cnidus (Strabo 17. 1. 6) 'for the safety of sailors', rose 300 feet to the top of

the crowning statue, and was composed of three stories, respectively square, hexagonal, and round. Other light-houses, apart from the Colossus at Rhodes, imitated this arrangement to some extent. The stump of a Roman lighthouse may be seen inside Dover Castle.

LIGHTING. The ancients knew two methods: the burning of oil in a lamp (see LAMPS), and the combustion of a solid substance. In Minoan and in classical times lamps were preferred for indoor illumination, and in the Roman Empire they were sometimes employed for streets and on exteriors of buildings. The torch (*λαμπάς*) was more generally used out of doors and also for interiors during the early Iron Age. The Greek torch was generally of wood (*δαῖς*), a branch or a bundle of twigs (*δερή*). The Italians preferred candles of tallow (*candela*) or wax (*cercus*), and the abundance of these materials explains the late adoption of the lamp in Italy. Lanterns were also freely used, candles or lamps enclosed within horn or (in Imperial times) glass. Torches were also used for signalling in warfare.

F. N. P.

LIGURIANS. The Ligures of classical times lived on the eastern half of the French Riviera and along the north-west coast of Italy around Genoa. They were divided from the Iberians by the Rhône and from the Etruscans by the Arno. Ancient writers and modern anthropologists and archaeologists, however, suggest that they once occupied a much wider area. The accepted theory is that they migrated from north Africa in neolithic times and passed by way of Spain to France and Italy. Their path is traced by graves and habitations. Brizio's theory, that Ligurians were the originators of Lake-dwellings and of Terramare, has been generally discarded.

Of the language nothing has survived except a few place-names; these are consistent with the view that it was pre-Aryan. Terminations such as *-asc-*, *-esc-*, *-usc-*, frequent over a wide area of France and Italy, are claimed as Ligurian. Instances are 'Giubiasco', 'Cerinasca', 'Veraglasca'. Some inscriptions from the Italian lakes are not necessarily Ligurian (Rhys, *Proc. Brit. Ac.* 1913). Rude stelae of men and women found near Spezia are not earlier than the first century B.C., but many of the rock-drawings of the Maritime Alps (copies in Bordighera Museum) belong to the Bronze Age; they represent men, oxen, weapons, implements, ploughs, probably with a religious motive. A colony of Ligurians settled near Bellinzona about 600 B.C. and acted as transport agents in the traffic between Italy and the upper Rhine. The Ligurians probably nowhere rose above a state of quite rude barbarism. The chief tribes were the western Salluvii and Oxybii, the eastern Ingauni and Apuani. Roman campaigns (238-230 B.C.) resulted in the partial submission of the Apuani, the occupation of Luna, and the freeing of Pisa, which the Ligurians had seized from the Etruscans. After Ligurian support of Mago (q.v. 2) sporadic fighting occurred until the Romans reduced the Ingauni (181) and Apuani (180); 40,000 Apuani were deported to Samnium. The desire to win easy 'Ligurian triumphs', rather than strategic needs, probably caused some further fighting. In securing the coast road to Massilia and Spain the Romans repulsed the Oxybii who had raided Massiliote ports (154). Liguria formed one of the Augustan *regiones* of Italy.

D. R. MacL.

LILYBAEUM (nowadays *Mazara*), the westernmost city of Sicily, founded in 394 B.C. by Carthage to replace Motya (q.v.), which Dionysius had sacked. Its

excellent harbour had been used earlier; but Diodorus' statement (11. 86) that Lilybaeum already existed in 454 is erroneous. Lilybaeum quickly became a great military and commercial stronghold, impregnable alike to Pyrrhus (276) and the Romans, whose protracted but vain siege of it is famous (250-242). Rome, however, acquired Sicily by treaty, and with it Lilybaeum, which she apparently made a *civitas decumania*, the seat of a quaestor. As the principal port of communication between Sicily and Africa Lilybaeum was a flourishing place, a '*civitas splendidissima*' during Cicero's quaestorship there (*Verr.* 5. 10). It became a *municipium* under Augustus and a *colonia* under Septimius Severus (?), and remained an important port until the sixteenth century, when its harbour was blocked with boulders.

E. T. S.

LIMES originally meant a pathway, especially the strip of open land along which a column of troops advanced into enemy territory. Hence it came to mean a military road, with fortified posts and signal-towers, and finally a frontier. The Roman Republic had no proper frontiers. Only the boundaries of the old province of Africa were marked by a ditch—a Carthaginian heritage. The foundations of a frontier system were laid by Augustus, but Domitian was the first to organize permanent defences on some frontiers. After the conquest of the Wetterau he constructed along the new German frontier a series of small earth forts and wooden signal-towers. An earth rampart of the Dobrudja with forts is perhaps of the same period. Hadrian was responsible in Germany as in Britain for the construction of a continuous barrier. In Germany it took the form of a palisade; in Britain the Wall of Hadrian (q.v.) probably had been preceded, under Trajan, by a *limes* corresponding to the Stanegate. A *limes* of Trajanic-Hadrianic times has been traced in the Dobrudja. The *limes*, besides its military purpose, helped to bring barbarians under fiscal control. This system of fortifications was employed on other frontiers during the second century A.D., and assumed forms corresponding to the varying geographical and military conditions. In Africa and along most of the Danubian frontier the forts were never linked by ramparts. Antoninus Pius advanced the frontier both in Germany and in Britain. A new palisade was erected between Miltenberg and Ingelhof in Germany, where the wooden towers had gradually been replaced by stone ones. In Britain the new Wall of Antoninus (q.v.) did not totally supersede Hadrian's Wall. About the time of Caracalla a great earth wall and ditch were built in Upper Germany and a stone wall in Raetia. In Germany the palisade was retained as an essential part of the scheme; the forts of the German *limes* were a few hundred yards behind the watch-tower line, while the line of the palisade was determined by the watch-towers. The troops employed on the *limes* were generally auxiliary cohorts or *numeri*. The cohorts were on an average 1½ miles apart on the Antonine Wall, 4½ miles apart on Hadrian's, 7 in Germany, between 10 and 20 in Syria. The *limes* gradually deprived the Roman army of the idea of offensive and did not prove sufficient, as a rule, to check serious attacks. The German *limes* was abandoned under Gallienus. In Britain, though the Antonine Wall was abandoned under Commodus, Hadrian's Wall was occupied until the time of Magnus Maximus. The Syrian *limes* was thoroughly reorganized by Diocletian and his successors, especially to check cavalry-attacks, and lasted until the Arab invasion. For the late developments of frontier defence see LIMITanei.

E. Fabricius, *PN.* s.v. *Il Limes romane* (1909) is a survey of unequal value. For Germany, etc., see O. Hogen, *Arch. Jahrb.* 1914, p. 1; B. W. Henderson, *Five Roman Empires* (1927), ch. 6; and the standard works by E. Fabricius and others: *Der ehemalige römisch-deutsche Limes* (1924 ff.); *Der römische Limes in Ostdeutsch-*

(1900 ff.). Good plates in *Germania Romana, Ein Bilder-Atlas*³ (1924). For Syria: A. Poidebard, *La Trace de Rome dans le désert de Syrie* (1934); R. Monterde and A. Poidebard, *Le Limes de Chalcis, organisation de la steppe en haute Syrie romaine* (2 vols. 1945). For N. Africa: J. Guey, *Mélanges d'arch.* 1939, 177-248. For Britain see under WALL OF HADRIAN, WALL OF ANTONINUS.

For new research: *Germania*; JRS; *Berichte der röm.-germ. Kommission*. A. M.

LIMITANEI (or *Riparienses*) was a generic term for Constantine's Frontier Army, which was stationed permanently in garrison outposts. It comprised cavalry (*cunei equitum, equites*) and infantry (*legiones, cohortes*), and was commanded by *duces*. It later developed into a local militia whose members farmed the frontier lands.

R. Grosse, *Römische Militärgeschichte*, 63-70. H.M.D.P.

LINDUM (*Lincoln*) lay in the territory of the Coritani, whose capital was Ratae (*Leicester*). It began as a fortress for Legio IX Hispana soon after A.D. 43 (*CIL* vii. 183, 188; *Eph. Epigr.* ix. 1111), and its *munimenta* are presumably referred to by Tacitus (*Ann.* 14. 32). Tombstones of Legio II Adiutrix (of A.D. 71-86/8) are also known there (*CIL* vii. 185, 186). Soon after 71 Legio IX Hispana was advanced to Eboracum (q.v.) and Lindum became a colony, perhaps contemporary with Glevum (*Gloucester*), founded by Nerva. The new town, with colonnaded main streets, small *insulae*, and noble gates (*JRS* xxviii. 182), occupied the hill-top north of the river Witham, and doubled its size in Roman times. The river was probably a trade-route (*JRS* xi. 102). Lindum was an important road-centre and perhaps the seat of a bishopric (F. Havcrfield, *Arch. Ael.*, 1918, 24; S. N. Miller, *Eng. Hist. Rev.* xlii. 79-80). I. A. R.

LINGUISTICS, COMPARATIVE, see PHILOLOGY, COMPARATIVE.

LINUS (*Ἴλιος*). An old and apparently mournful-sounding song (*Il.* 18. 570, which shows that it was not always sung on mournful occasions, for there it is at a vintage; but it may be a lament for the 'death' of the grapes, a custom widely paralleled, see Frazer, *GB* vii. 216 and the whole chapter) contained the sounds αἴλιον, interpreted as meaning 'alas for Linus'. The song was called a Linus (Homer, *ibid.*), and the question was asked who Linus was and why he should be bewailed. Argos said he was a son of Apollo and Psamathe, a local princess; she exposed him, he was devoured by dogs, and the city plagued by Apollo till satisfaction was made (Paus. i. 43. 7-8). In central Greece, Linus was son of Amphimarus and Urania, killed by Apollo for saying he was as good a singer as the god (Paus. 9. 29. 6). A third variant made him Heracles' music-teacher, whom his pupil killed with a blow from a cithara (Apollod. 2. 63). A favourite modern explanation (Frazer, *loc. cit.*) is that αἴλιον is Phoenician, *ai lanu*, 'woe to us!' This is not impossible, cf. LITYERSES. H. J. R.

LIPARA, see AEOLIAE INSULAE.

LITAI, see PERSONIFICATIONS.

LITERARY CRITICISM IN ANTIQUITY. I. GREEK. Literary criticism is concerned with literature on its aesthetic side, and consists of attempts at theorizing, legislating, judging, and appreciating. In Greek literature it is represented by a series of pronouncements, inspired by various causes and assuming different forms, which embody doctrines of intrinsic and historical value, and thus form an important chapter in the history of Greek thought and taste (see RHETORIC). The beginnings of Greek criticism date from the sixth century B.C., when the philosophers Xenophanes and Heraclitus condemned Homer on moral grounds, and Theaganes and Anaxagoras in defence advocated an allegorical interpretation. Then in the fifth century speculation on poetry tentatively emerged, traces of poetic theory being

found in Pindar, in Sophistic philological writings, and in the *encomia* of Gorgias. Meanwhile literary judgements were appearing in comedy; and with Aristophanes' shrewd estimates of Aeschylus and Euripides in the *Frogs* serious judicial criticism had also begun.

2. In the century following, a new phase of critical activity was inaugurated by Plato. Viewing literature in its relation to social and political life, he treated incidentally in his *Dialogues* of current literary abuses, discussed the place of poetry in an ideal State, and dealt with many aspects of poetic theory. His censures of contemporary literature, often in parody form, are of considerable interest. Of interest, too, is his much-discussed rejection of poets from his commonwealth (*Resp.* 607 a)—a perplexing pronouncement in the light of all the evidence, best understood perhaps, not as dogmatic and final, but as a challenge made, on behalf of philosophy, to the place hitherto held by poetry as the main avenue to truth. Most valuable, however, is his positive and constructive theorizing, in which he appears as a pioneer of lasting and beneficent influence. In his pages were first set forth basic doctrines concerning the nature and art of poetry, consisting of earlier theories reinterpreted and transformed, besides original and daring suggestions, which reveal, often intuitively, the innermost spirit and the technique of art. Working from first principles and applying psychological methods in his discussions, he began that larger and more philosophical criticism which gave inspiration and direction to later effort.

3. On the foundations thus laid Aristotle in his *Poetics* built, modifying and developing the teaching of Plato on rational and systematic lines, with a view to including the study in his philosophical scheme. Basing his doctrines on an analysis of existing Greek poetry, and making use of psychological and historical methods, he sets forth a comprehensive theory of the poetic art, concluding with an exposition of sound methods of forming literary judgements. On poetry in general he throws light from various angles, pointing out, for instance, its element of universal truth, its aesthetic function, and its emotional value, revealing at the same time basic principles of the literary art, while also imparting much studio-wisdom in the form of practical hints for the poet. And this he supplements by an illuminating treatment of the various forms or 'kinds' of poetry. Dealing mainly with tragedy as the representative form, he submits canons of the dramatic art, principles relating mostly to plot and characterization; and in addition he supplies notes on comedy and the epic, all of which retain in some measure their validity. Hardly less significant, however, is the guidance he gives in judicial criticism, when, condemning contemporary judgements based on verbal details or on tests of morality, reality, and the like (cf. Zoilus *Ὀμφομάστιξ*), he further maintains that aesthetic criteria are all that matter, and illustrates his teaching by reasoned appreciations of Homer and the great dramatists. Of the value of the work and its far-reaching influence there can be no question; though it has obscurities and defects and is devoid of literary grace. In literary history it represents the first 'Apology' and the first *Art* of poetry; but it is in its seminal quality that it stands unrivalled. In establishing original and profound doctrines of poetry, and in inaugurating new and effective methods of both theorizing and judging, it opened men's eyes to more fruitful conceptions of art and made aesthetic judgement possible. Its importance in the history of criticism can scarcely be overrated.

4. Under the changed conditions of the Hellenistic period critical activities assumed a new form, which, while representing a decline from earlier efforts, was yet to influence subsequent developments at Rome. The outstanding feature was the abandonment of the philosophical approach to literature for one of a scholastic

kind; and the main business now became the systematizing of poetic technique for school purposes, though the textual and historico-critical labours of Alexandria and Pergamum were in the meantime preparing the way for sounder criticism. The nature of the new system may roughly be gathered from the *Poetics* of Neoptolemus of Parium (3rd c. B.C.)—a work now lost, but partly reconstructed from the *Περὶ ποιημάτων* of Philodemus of Gadara—in which poetry was treated schematically under the heads of *ποίησις*, *ποίημα*, *ποιητής*, and a static view of literature was taken, according to which earlier poetic forms were regarded as fixed genres and models, each with its distinctive formal characteristics. Certain problems were also discussed, namely, whether native endowment (*φύσις*) or technical training (*τέχνη*) was more important for the poet, whether thought or form constituted the essence of poetry, and, again, whether the poet's aim was to teach or to delight. Of these problems (all handed down as unfinished controversies to later generations) one in particular influenced later discussions, as a result of the supreme value attached to artistic form by Heraclodorus, Andromenides, Crates of Mallos, and others. Nevertheless, the system of poetics thus forming did not emerge unchallenged. Callimachus, under Alexandrian influences, was already urging a break with classical forms, while stressing the prime importance of neat and careful workmanship; and his doctrine found expression in the later verses of Simylus (q.v. 1). Nor was the period without its advance in judicial criticism, though the irrational methods condemned by Aristotle still held the field. From Eratosthenes, however, and more especially from Aristarchus, came sounder estimates of Homer; and further evidence of increasing interest in aesthetic matters was supplied by appreciations of earlier poets in the *Greek Anthology*.

5. Towards the close of the first century B.C. Greek criticism underwent further and more substantial developments. Owing to the rapid hellenization of Rome, and the desire of Romans to emulate the ancient literature of Greece, Hellenistic teaching was now subordinated to the larger purpose of clarifying contemporary views concerning Greek classical ideals and standards; and in the Augustan period and the following century Caecilius, Dionysius of Halicarnassus, 'Longinus', and Demetrius took up the task, treating primarily of style—the then current problem—but revealing at the same time many important principles of literature. Now, for the first time since the days of Aristotle and Theophrastus, the subtleties of Attic prose were explored under the guidance of those earlier authorities; such matters as the effects of an artistic word-order, the euphonious qualities of words in isolation or in combination, or the reasoned use of figures, being discussed in original and illuminating fashion. This teaching was illustrated by appreciations of Greek writers (both of poetry and prose), which threw further light on the form and spirit of classical literature. Equally significant, however, was the advance in critical achievement bound up with these activities, and seen most clearly in the works of Dionysius of Halicarnassus and 'Longinus'. By Dionysius, for instance, a return was made to Aristotle's inductive theorizing; perspective and weight were added to literary judgement by his use of historical and comparative methods; while to the actual appreciation of literature he made substantial and lasting contributions, of which his penetrating judgements of *Lysias*, *Thucydides*, and *Demosthenes* are examples. Yet greater was the performance of 'Longinus', whose unflinching insight into the essentials of literature opened up a new world of critical possibilities. Apprehending clearly the imaginative and emotional effects of all great literature, he succeeded in capturing the spirit of Greek art; and with his grasp of principle, his wide-ranging tastes, his infectious enthusiasm, and, not least, his suggestive comments on literature

and literary criticism itself, he made of criticism not only a stimulating study but also the most potent of instruments for the appreciation of the literary art.

6. In the meantime the last effective phase of Greek criticism was represented by the efforts of Plutarch and Dio Chrysostom to interpret Greek culture—and incidentally Greek literature—for Imperial Rome, as a result of the Hellenic revival towards the end of the first century A.D. The main interest of their critical work is of an historical kind: it bore witness to the persistence of Hellenistic traditions, and to the fact that classical ideals were already fading. This is seen, for instance, in Plutarch's ethical theory of poetry, and yet more clearly in his judgements of Homer, which (like those of Dio) perpetuated Alexandrian methods and standards. Both, however, were interested in aesthetic questions, and whereas Plutarch's main effort was directed to restoring poetry to its former place as a prime factor in education, Dio's greatest achievement was his masterly appreciation of Aeschylus, Sophocles, and Euripides in his *Comparisons*. Apart from this but little criticism of value was forthcoming, rhetorical displays of the Second Sophistic movement absorbing all attention. Lucian made war on the literary impostures of his day; Philostratus (q.v. 3) threw fresh light on aesthetic theory in defining the artistic process as being, not 'imitation', but 'creative imagination' (*φαντασία*). For the rest, however, literary comment now fell under the sterile treatment of rhetoricians, grammarians, and philologists, and was ultimately silenced in the dark days that followed.

II. LATIN. Latin literary criticism consists of that running commentary on literature and literary matters to which, in various forms, Roman writers contributed from the second century B.C. onwards. As yet an occasional by-product of contemporary literary activities, though ultimately the result of aesthetic interests inspired by earlier philosophical, rhetorical, and grammatical studies, this criticism nevertheless constitutes a considerable body of literary theorizing and judgements which throw valuable light on contemporary thought and taste. Its immediate causes, apart from earlier Greek teaching, were certain urgent questions which arose from time to time; and to their solution Cicero, Horace, the elder Seneca, Tacitus, and Quintilian were the main contributors.

2. Already in the Scipionic circle the critical spirit had appeared. Terence's replies to detractors and his searching comments on dramatic technique were among the first-fruits; and they were followed by Lucilius' remarks on poetic diction and satire, together with fragments of Hellenistic teaching. More far-reaching was the criticism evoked by the clash of styles in Republican oratory, which led to Cicero's exposition of rhetorical principles (*see Rhetoric*), his pronouncement on the Asianist-Atticist problem, and his illuminating survey of the development of oratory. Animated throughout his dialogues by a reasoned admiration for the doctrine and practice of the classical Greeks, he condemns the Asianist excesses of Hortensius and the colourless correctness of Calvus and Brutus; and indicating the limitations of *Lysias* and *Thucydides* as models, he commends *Demosthenes* as the supreme guide in style. Equally significant was his judicial criticism where he reveals his reverence for Ennius and his dislike for the neoterics (q.v.). Using comparative and historical methods, he submits appreciations

of Greek and Roman orators, and inculcates a sense of the continuity of literature. With him thus begins a classical reaction in literary theory, accompanied by wider conceptions of the critical function.

3. Further developments were witnessed under Augustus, when the main problem became that of creating a great national poetry; and Horace, amidst the confused counsels of the archaizing and Alexandrian schools, prescribed the poetic forms and standards of classical Greece. In his *Satires* he incidentally expounds his theory of satire, in his *Epistles* (Book 2) he outlines his programme of reform, and in the *Ars Poetica* (based on the *Poetics* of Neoptolemus of Parium) he submits principles and rules for the guidance of poets. What he advocates is an imitation of ancient Greek masterpieces; by which he meant, not a slavish copying, but a process of re-creation, the evolution of something new, by adapting Greek measures to the Roman lyre. His doctrines, though coloured by his experience, are primarily derivative in kind; he does not arrive at his theories by an analysis of actual literature. Alexandrian influence, moreover, is seen in his work, notably in his demand for careful workmanship and polish. But among the principles he propounds are many that treat of essentials; he commends his teaching in memorable phrase, and his lasting achievement was the establishment of classicism in poetic theory.

4. With the decline of literature (1st c. A.D.) critical effort assumed new functions, turning naturally to a consideration of the nature and causes of that decline. A valuable commentary on contemporary oratory was forthcoming in the specimens collected by the elder Seneca, which, apart from the light it throws on Augustan declaimers and declamations, embodies many sound judgements, condemns all departures from simplicity and good taste, and commends Cicero as the model for Roman orators. Persius followed, waging war on the affectations and insincerities of contemporary poets; and Petronius in his *Satyricon* attacked Lucan for his choice of an historical subject and his omission of epic machinery from his *Civil War*. Meanwhile not without interest were the attempts made to account for the decline by viewing literature in its relation to social life. Thus the two Senecas attributed it to the decay of morality; Petronius to debased taste fostered by declamation in the schools; while Velleius Paterculus in his history explained it as a natural sequel to a period of great literary achievement.

5. Nor was criticism of a more constructive kind wanting, though petty but futile attacks on Virgil continued throughout the century. Manilius, for one, had proposed fresh themes for poetic treatment, and Petronius had recalled the part played by imagination and passion in the poetic process. Martial, again, advanced claims for a realistic treatment of life, commented on the epigram as a literary genre, and condemned the growth of antiquarianism; while the younger Pliny in his *Letters* reflected contemporary literary tastes. More significant was the contribution of Tacitus in his *Dialogue*, where he commended the oratory of the Ciceronian age, but suggested also that changed conditions called for expression more lively, less formal. He further maintained that oratory had declined because of the cessation of Republican strife; and these shrewd comments marked a new phase of literary theorizing. With him criticism ceased to be dogmatic and final; and in upholding the relativity of literary standards he successfully challenged a more rigid classicism. Similar tendencies had been seen in Quintilian's *Institutio*; in his doctrine of a modified classicism, his sense of the need for literary development, his enlightened conception of Imitation, and his wide-ranging survey of literary history, limited though it was in aesthetic appreciation. In him culminated the movement begun by Cicero, the effort to

maintain, amidst shifting and conflicting influences, the highest artistic standards then known. The attempt, it is true, was only partially successful; for with Fronto and Gellius came later one of the periodic revivals of archaism. But many good things had meanwhile been said, and the way prepared for future critical activities.

LITERARY PATRONAGE, see PATRONAGE.

LITERATURE, GREEK and LATIN, HISTORY OF, see APPENDIX at the end of this work.

LITERNUM, a Roman citizen colony on the Campanian coast, founded in 194 B.C. but soon derelict (Livy 34. 45): nowadays *Torre di Patria*. The disillusioned Scipio Africanus Maior retired and possibly was buried there (Livy 38. 52, 53, 56; Seneca, *Ep.* 86). Later the Via Domitiana, like the modern railway, somewhat increased its importance.
E. T. S.

LITTERATOR, chiefly used of the elementary instructor in reading and writing whose teaching was continued by the *doctrina* of the *grammaticus* (q.v.). See EDUCATION, III. 3.

LITTERS (*lecticae*) were introduced into Rome from the east: Cicero (*Verr.* 5. 27) associates them with the kings of Bithynia. They are first mentioned in the second century B.C. and were common in the following century. They were provided with curtains and sometimes with glass windows (Juv. 3. 239). They were carried on poles by slaves, of whom as many as eight might be required. At first they were used in the city only by women and invalids, but later they were freely employed by both sexes in the city and outside. Restrictions on their use were sometimes imposed by the government (Suet. *Jul.* 43, *Claud.* 28).
G. H. S.

LITTLE ILIAD, see EPIC CYCLE.

LITURGY. At Athens in the fifth and fourth centuries B.C. certain public functions were compulsorily conferred upon the richer citizens and metics. Of these liturgies some, like the trierarchy (q.v.), were occasional, others were imposed regularly, according to a fixed order of rotation. These included the *choregia* (q.v.: the production of a chorus at the musical and dramatic festivals), the *gymnasiarchy* (q.v.), *ἐστίασις* (the provision of a banquet for a tribe at festivals), *ἀρχυθεωρία* (the leadership of a public delegation to a foreign festival), *ἵπποτροφία* (the maintenance as a knight of a horse). To some liturgies nominations were made by a magistrate, e.g. by the archon to the tragic *choregia*, to others by the tribes, e.g. to the cyclic *choregia* and *ἐστίασις*. A person nominated might challenge another whom he considered better able to bear the expense, and the latter might either undertake the liturgy or exchange properties with his challenger, or appeal to the courts (see ANTIDOSIS). A liturgy involved the holder both in personal service (though he might employ a deputy) and in expense. In some cases the State made an allocation, but this did not by any means cover the costs.

In the Hellenistic age no clear line was drawn between *ἀρχαὶ* and *leitourgyiai*. Both were filled by popular election; neither imposed any obligatory expenditure in theory, but both in fact often involved a heavy personal outlay; both might in the last resort be compulsorily imposed. Immunity was in this age often granted, not only from liturgies, but from magistracies, and the term 'liturgy' came to denote minor offices, which were onerous but did not carry much authority.

In Roman municipal law a sharp distinction was drawn between *honores* and *munera*; *honores* qualified their holder for a seat on the council; the *immunitas* conferred by the Roman government meant exemption from *munera*. These rules were also applied in the Greek East, and offices must therefore have been definitely classified into ἀρχαί and λειτουργίαι. In time the distinction became blurred; immunity (ἀλειτουργησία) by the early third century included exemption from magistracies. By this time the most important and onerous liturgies were imperial, such as the collection of tribute.

In Egypt a liturgy meant a compulsory State office. Compulsion was little used in the Ptolemaic or early Roman period, but from the latter part of the first century A.D. became commoner, till every post below the rank of στρατηγός or βασιλικός γραμματεὺς became a liturgy. Qualified persons were nominated by the scribes of the metropoleis and villages to be *strategi*, who themselves appointed to lower posts, and for higher posts submitted the names to the *epistrategus*, who drew lots between them. When councils were instituted in the metropoleis, many of the more important officers were elected by them.

V. Thumser, *De civic Atheniensium muneribus eorumque immunitate* (1880); J. Oehler, *Plw*, s.v. 'Leitourgia'; F. Oertel, *Die Liturgie, Studien zur Ptolemäischen und Kaiserlichen Verwaltung Ägyptens* (1917).

A. H. M. J.

LITYERSES. 'Some say that he was a son of Midas, and that he challenged all and sundry to a contest in reaping, and maltreated those who were overcome by him. But, encountering a stronger reaper, he met his death. Some say that it was Heracles who killed him' (Pollux 4. 54, who says that Lityerses is the Phrygian reapers' song). His source is uncertain, cf. Crusius in Roseher's *Lexikon*, s.v. It would seem, therefore, to be a traditional song with a story to explain it, cf. LINUS. H. J. R.

LIVIA (58 B.C.—A.D. 29), daughter of M. Livius Drusus Claudianus, married Tiberius Claudius Nero (q.v. 3), whom she accompanied in his flight after the Perusine War. Nero divorced her in 38 to enable her to marry Octavian (Augustus), whose affection and esteem she retained till his death in A.D. 14. Her beauty, dignity, intelligence, and tact well fitted her for her high position. Augustus valued her counsel, and she appears to have exercised a restraining influence upon him. A natural fondness for power may explain allusions to friction between her and Tiberius, but suggestions that she had any part in the deaths of Marcellus, Gaius Caesar, Lucius Caesar, or Germanicus do not deserve serious consideration. Livia bore two sons to her first husband—Tiberius (later emperor) and Drusus (q.v. 3). She became 'Julia Augusta' under the will of Augustus.

Velleius, bk. 2; Tacitus, *Ann.* bk. 1-5; Dio Cassius, bks. 48 ff. Modern literature: V. Gardthausen, *Augustus u. seine Zeit* (1891 etc.); H. Willrich, *Livia* (1911). G. W. R.

LIVILLA (Livina), daughter of Drusus (q.v. 3) and Antonia minor and granddaughter of Livia (q.v.), born c. 13 B.C., was married to Gaius Caesar (grandson of Augustus), and after his death to Drusus, son of Tiberius. She was executed in A.D. 31 on evidence of complicity in the murder of her husband.

Tacitus, *Ann.* bk. 4; Dio Cassius 57. 22 and 58. 11. G. W. R.

LIVIVS (1) ANDRONICUS, Lucius (c. 284-c. 204 B.C.), early Latin poet, a Greek (?) born at Tarentum, was brought a slave to Rome in 242, was manumitted, and took his master's name Lucius Livivus; he became a teacher of Greek and Latin literature, then also an actor, stage-manager, and writer of *saturnae*, 'medleys', for the stage, then of street-plays. By public request, 240 B.C., he composed and acted in the first Latin comedy and the

first Latin tragedy, both having Greek models and metres (see *DRAMA, ROMAN*, para. 1). Others followed, ousting the old *saturnae* into literature for reading only. Failure of L.'s voice caused the institution of the *cantor* to sing *cantica* to an actor's gestures. In 207 L. officially composed an expiatory hymn (the first real lyric in Latin), and the *collegium* of playwrights and actors was founded.

Livivus' works, popular at first, were later regarded as rough though impressive. Fragments: (i) about forty-six lines (early work) of the first Latin epic the *Odissia*, a rude prosy paraphrase-translation, into Latin saturnians, of Homer's *Odyssey*. (ii) About forty lines from tragedies on Greek models—*Achilles*, *Aegisthus*, *Ajax Mastigophorus*, *Andromeda*, *Danae*, *Equos Troianus*, *Hermiona*, *Tereus*. (iii) Lines from *comediae palliatae*.

Text of fragments: E. H. Warmington, *Remains of Old Latin ii* (Loeb, with translation); H. de la Ville de Mirmont, *Ét. s. l'ancienne poés. lat.* (1903), 5-201; G. Pascoli, *Epos* (Livorno; 2nd ed. 1911; *Odiss.* pp. 1-6); O. Ribbeck, *Staen. Romanorum Poesis Fragmenta* (2nd ed.; 3rd ed. Teubner. Plays). E. H. W.

LIVIVS (2), TITUS (Livy) (59 B.C.—A.D. 17), the Roman historian, was born in Patavium (Padua) at the height of the old Venetic city's prosperity and fame; the circumstances of his early years may well have influenced the growth of his character. We know little of his life. His daughter married a rhetorician, Magius, and his son may have been a writer, followed by Pliny. He himself wrote philosophical dialogues, historical in tendency, and his advice on rhetoric to his son (Quint. 10. 1. 39) shows his place in the Ciceronian tradition. At Rome he entered the Imperial literary circle, gave readings of his work, and won Augustus' interest in his historical task (4. 20. 7) and appreciation of his republican sentiment (Tac. *Ann.* 4. 34); he encouraged Claudius in his historical studies (Suet. *Claud.* 41). His work reflects knowledge of the Empire, presumably gathered in travel, but he must have spent most of his time at work in Rome or in Padua, where he died.

2. The history of Rome (*ab urbe condita libri*), which he began at thirty and continued for forty years, was composed in 142 books. Bks. i-v covered from the origins to the Gallic sack of Rome, vi-xv reached the beginning of the Punic Wars, xvi-xx treated the First Punic War, xxi-xxx the Second Punic War, xxxi-xlv the Macedonian and Syrian Wars. As the work grew under his hand the pentad and decade arrangement had to be modified. The destruction of Carthage appeared in bk. li, Ti. Gracchus in lvii, the defeat of the Cimbri in lxviii, the opening of the Social War in lxxi, Marius' death in lxxx, Sulla's death in xc, Caesar's consulship in ciii, Pharsalus in exi, Caesar's death in cxvi, Aetium in cxxxiii, the death of Drusus (9 B.C.) in cxlii. Bks. cix-cxvi were entitled *belli civilis libri*.

3. The proemium reflects the situation after Augustus' proposed social legislation in 28 B.C.; bk. i. 19. 3 was published after 27 B.C. and before 25 B.C.; bk. xxviii. 12 presupposes Agrippa's Spanish campaign of 19 B.C. Bk. lix followed Augustus' quotation of Metellus' speech on marriage in 18 B.C. If bk. cxvi was published after Augustus' death (A.D. 14), it was presumably accompanied by several subsequent books, since Livy could scarcely have written twenty-one books in the three years before his death. He probably died pen in hand, the work closing with Drusus' death.

4. Of this immense work only thirty-five books are extant: i-x, xxi-xlv. For the lost books we have a palimpsest fragment of bk. xci, cited fragments and excerpts, and the epitomized, perhaps slightly 'contaminated' tradition of the *Periochae* (q.v.) and the Oxyrhynchus Epitome of bks. xxxvii-xl, xlviii-lv; also, in basis, the work of Florus, Granius Licinianus, Aurelius Victor, Eutropius and Festus, Orosius and Cassiodorus, Julius Obsequens.

5. Livy stood at the peak of annalistic historiography, and was able to develop the work of the Sullan annalists. Valerius Antias from the beginning, and Claudius Quadrigarius from the Gallic sack (bk. vi), appear to have provided the basis of composition; they are cited throughout the work. The set annalistic arrangement allowed easy transition from source to source and the incorporation of episodic material; in bks. i-x Licinius Macer, Aelius Tubero, and (indirectly) Fabius Pictor and Calpurnius Piso, in bks. xxi-xxx Coelius Antipater and Polybius, in xxxi-xlv Polybius, supplement Valerius Antias and Claudius Quadrigarius; afterwards Posidonius, and perhaps Sulpicius Galba, Sisenna, Caesar, and Augustus' *Memoirs*, among others, were used in the same way.

6. In accordance with contemporary historiographical practice, Livy does not cite his authorities, except in cases of dispute or doubt, and often, e.g. in the comparison of casualty figures, this may be conventional. As a rule he adapted the source material with scarcely more than literary and stylistic elaboration, apparently without 'contamination', if we may judge from his reproduction of Polybius and the common inconsistency of the annalistic narrative. There is always a certain negligence in his treatment of context, with obvious discrepancies, repetitions, and chronological divergences; this is most striking in his use of Polybius, where the Olympiad yearly divisions are forced within the narrative based on the Roman year. The reason appears to lie in his undue dependence upon narrative form in constructing his work, beginning with the Sullan histories. This acceptance of the annalistic tradition in both matter and form largely explains his lack of source criticism; the authority of the *Annales Maximi*, persisting in its literary development, limited criticism to detail, and here Livy, with characteristic sincerity and restraint, refused to argue on grounds of mere probability or rationalize without full evidence.

7. Yet, even granting this, he falls short in critical methods, except perhaps in the discussion of figures and finance. His defective treatment of the problem of Cossus' *spolia opima* (4. 19), his neglect of the *libri lintei* when two sources cited the same passage differently (4. 23), not to mention again the inconsistencies in his narrative, reflect his subservience to written authority, and show literary procedure over-simplifying the task of historical composition. Livy had little knowledge of Roman institutions. His inexperience in military matters affects his description of battles: his ignorance of the phalanx, for example, is unpardonable; he is, however, better on ships. He does not falsify events, but his literary elaboration often makes his narrative conventional and misleading. His ignorance of conditions in early Rome and in the East leaves blemishes on his historical reconstruction, which is always coloured by his Augustan idealism. In the later books, no doubt, his increasing command over his material and his better understanding of events raised the critical level of his work.

8. Yet Livy's purpose in the first instance was not to analyse the process of history in the light of institutions or circumstances. He set himself to give Rome a history that in conception and style should be worthy of her imperial rise and greatness, and in influence lend understanding to the Augustan moral recovery. He depicted in general the life and character, the policies and personalities of the past and the later decay of discipline; in particular, the social morale of early Rome, the 'integrity of the immobile virtues' against Hannibal, the policy of Republican freedom against the Hellenistic monarchies, and the consequences of luxury and avarice in the later age. His patriotism and sense of Roman dignity dominate his narrative, without excluding wider sympathy or appreciation.

9. His genius lay in his power of vivid historical reconstruction, visualizing scenes and people, and conveying his impression by description and interpretation. His natural historical feeling developed under the influence of Hellenistic psychological knowledge, now established in Rome, and his literary talent was trained in Hellenistic historiographical theory and Roman rhetoric; the annalistic tradition gave him material and form. Cicero had defined his task, and the patriotic inspiration of Augustus gave life to his composition. In his first books his narration, fitting the subject-matter, has poetical colour and style: it is the prose epic of Rome, ranking with the *Aeneid*. The later books take on a more regular prose form, but show equally brilliant conception of events, understanding of personal and mass psychology, and careful literary presentation. The feeling for atmosphere, as well as the principle of variation, allowed the set appearance of formal notices and prodigy tales.

10. In detail Livy's composition followed the Isocraean canons of brevity, economy, and verisimilitude, with the devices of literary elaboration, characterizing speeches, and the dramatic Peripatetic technique. The style conformed to the Ciceronian requirements of 'varietas colorum, collocatio uerborum', and 'tractus orationis lenis et aequabilis' in historical narration (e.g. for the sake of homogeneity, Livy (27. 37) would not quote Livius Andronicus); but composition and style had their own varying character, suitable to the different elements in the annalistic tradition. Livy's 'clarissimus candor' and 'lactea ubertas' reflect the lucidity and continuity of his thought, but the style is not purely periodic: it corresponds to the mode of the passage, poetic or formal, elaborate or plain, expository or rhetorical, depending on the complexity of ideas or rhythm of the narrative. Even stylistic irregularity or strained word usage may occur to convey a nuance, departing from the pure Latinity of the capital. This may justify the charge of 'Patavinitas', if Pollio's jibe was not directed at the moral and romantic tone of Livy's work.

11. The command of his theme and its expression, the love of truth where it could be found, the deep seriousness and wide humanity, give life to Livy's historical achievement: his work captures the imagination and moves the spirit. It is Augustan, with the faults as well as the merits of the time, and it falls below modern critical standards. Yet it reproduces tradition faithfully, without the defective rationalization practised in both ancient and modern times; for this modern criticism may be grateful. In his presentation of persons and events, the flesh and blood of history, he ranks among the great historians.

12. His success was immediate and lasting. His work was used by historians and epic poets; an epitome had appeared for common use by the time of Martial (14. 190); his speeches were collected. In the Middle Ages, Dante praised 'Livio che non erra'. The Renaissance saw him in high favour, and printing made him a popular author. Machiavelli discoursed on the First Decade. Niebuhr and Lewis began the critical examination of his early tradition, and historical study has continued it. Our new knowledge of Hellenistic historiography has revealed the secrets of his composition, and syntactical study is throwing light on his style.

LIVIVS, *see also* DRUSUS, SALINATOR.

LOBON of Argos (perhaps 3rd c. B.C.) was a literary forger, author of a work (perhaps in verse) on poets (Diog. Laert. I. 34. 112), in which he ascribed verses fabricated by himself to the Seven Sages and works in prose to early poets, e.g. Aristaeus, Semonides, Pindar. His treatise seems to have been extensively used by Suidas.

LOCI COMMUNES, *see* COMMUNES LOCI.

LOCKS, *see* KEYS.

LOCRIEPIZEPHYRII (Λοκροὶ Ἐπιζεφύριοι), a Dorian city in the 'toe' of Italy, was founded c. 700 B.C., apparently by Opuntii (East Locrians), although its settlers probably included Ozolae (West Locrians), fugitive slaves, and Lacedaemonians. Oenotri (= Sicels?) previously inhabited the site. Locri's oligarchy, The Hundred Houses, reputedly governed excellently: the town possessed Europe's earliest written legal code (attributed to Zaleucus, q.v.). Locri defeated Croton at the Sagras battle (6th c.), founded its own colonies (Hipponium, Medina; before 450), and usually was friendly with Syracuse who supported it against its rival Rhegium (q.v.). Brutian, Pyrrhic, and Hannibalic Wars caused some decline, but Locri was still a considerable town, allied to Rome, in Polybius' day; Polybius knew it intimately (12. 5 f.). Apparently Saracens finally destroyed it.

LOCRI. Eastern Locris, comprising the mainland coast of the Euboean Straits from Thermopylae to Larymna, and Western Locris, comprising the valley of Amphissa and the northern coast of the Corinthian Gulf from Naupaetus to near Crisa, were separated from one another by Doris and Phocis, probably the results of an invasion through an early Loerian State occupying central Greece. As late as the fifth century B.C. the two divisions of Locris, known as 'Opuntian' and 'Ozolian', possessed a joint franchise. Their territory being mainly infertile and hemmed in by stronger States, the Locrians played little part in history. Opuntian Locris united round a centre at Opus, where the assembly of the Thousand drawn from noble families met, founded Locri in south Italy, and began to coin in the fourth century B.C. But Ozolian Locris remained backward and without unity (Thuc. I. 15). Both areas were curtailed by their neighbours, Opuntian Locris losing Thermopylae to the Thessalians and Daphnus to the Phocians, whereby Eastern Locris split into Hypocnemidian and Opuntian Locris, and Ozolian Locris losing Naupaetus to Athens. The valley of Amphissa, traversed by the route from Doris to the Corinthian Gulf, was of strategic importance and became involved in the Sacred Wars (q.v.).

LOCUSTA (LUCUSTA), a noted poisoner of Gallic origin, was employed by Agrippina to poison Claudius and by Nero for Britannicus. Nero took with him on his flight a poison prepared by her. Galba executed her.

LOGAOEDIC, *see* METRE, GREEK, III (5).

LOGIC. For the history of Greek logic the following works may be consulted: C. Prantl, *Geschichte d. Logik im Abendlande* (4 vols., 1855-70); L. Rabus, *Logik u. Metaphysik*, vol. i (1868); F. Ueberweg, *System d. Logik u. Geschichte d. logischen Lehren* (1874, Engl. Transl. 1871); R. Adamson, *A Short History of Logic* (1911); T. Zieher, *Lehrbuch d. Logik* (1920); H. W. Blunt, art. 'Logic' in *Enc. Brit.*; Herbertz, *Das Wahrheitsproblem in d. griechischen Philosophie* (1913); E. Hoffmann, *Die Sprache u. d. archaische Logik* (1925); W. Lutoslawski, *The Origin and Growth of Plato's Logic* (1905); N. Hartmann, *Platons Logik d. Seins* (1909); J. Stenzel, *Studien z. Geschichte d. platonischen Dialektik von Sokrates zu Aristoteles* (1931, Engl. Transl. 1940); H. Maier, *Die Syllogistik d. Aristoteles* (3 vols., 1896-1900).

W. D. R.

LOGISTAI, Athenian magistrates: (1) A body of ten chosen by lot from their own members by the Boule; its duties were to examine the accounts of magistrates in each prytany, and thus to prepare for the final *euthyna*. (2) A body of thirty (later ten) chosen by lot from all citizens. They conducted the examination of accounts at the end of the magistrates' term of office (*see* EUTHYNA). They also assisted the *Hellenotamiai* (q.v.) in checking the contributions of the allies in the Delian League, and calculating the one-sixtieth part set apart for Athena.

A. W. G.

LOGOGRAPHERS. Until the late sixth century B.C., historical and biographical traditions were oral, like the 'myths' about sacred rites and cults, and other anecdotes, romances, folk-tales, and proverbial lore. Epic verse, Homeric and Hesiodic, had canonized much. The first prose transcripts from this fluid folk-memory are ascribed, in natural knowledge to Thales and Anaximander (qq.v.), in human affairs to Hecataeus, also of Miletus, whom Herodotus describes (2. 143) like Anaxop (2. 135) as *λογγραφός*, Homer being *ἑποποιός* (2. 120).

and Sappho *μουσοποιός* (2. 135). Later critics distinguish these early *λογογράφοι*, as mere compilers, from the first 'historians', Herodotus and Thucydides, who recomposed and interpreted similar sources to illustrate such larger themes as the Persian or the Peloponnesian War. Hecataeus (fr. 1), like Herodotus and Thucydides, derides contemporary 'Greek stories', and like Hesiod (*Th.* 24-8) professes veracity; yet Heraclitus (fr. 40 Diels) couples him with Pythagoras and Xenophanes as a man of more knowledge than judgement.

Principal types of such compilation are: (1) *Genealogies*, especially of families which 'went up to a god' like that of Hecataeus himself (Hdt. 2. 143). Like Hesiod's *Theogony* they codified aristocracies at a time when social prerogatives of birthright were challenged. (2) *Chronologies*, cross-referring pedigrees to official lists; kings of Sparta and of Athens, priestesses of Hera at Argos, Olympic and Carneian victors. (3) *Periegesis* or *Periodoi*, descriptions of particular regions and especially of Greek cities with their institutions, resources, and local events, from their reputed foundations (*Κτίσεις*). (4) *Histories* only begin when (a) the rise of Persia needed explanation, and Persian conquest linked regional descriptions together into *Περσικά*; (b) Persian aggression drew Greek cities into concerted resistance and counter-attack, worthy of record in *Ἑλληνικά*. (5) Eventually, Herodotus (q.v.) explicitly includes both Greek and alien deeds (1. 1) in a single *History* and seeks the cause of the quarrel. Fragments in *FHG* i and *FGH* i; L. Pearson, *Early Ionian Historians* (1939), full bibliography.

Principal *logographers* are Acusilaus, Charon, Damastes, Hecataeus, Hellanicus, Pherecydes, Scylax, Xanthus; see these. The first author of town-histories was Cadmus of Miletus; Dionysius of Miletus wrote *Περσικά*, the first general survey of Oriental history; Eugon (Euagon) of Samos wrote a chronicle of his own city; Herodorus of Heraclea Pontica, a contemporary of Hecataeus, wrote on Heracles, Orpheus and Musaeus, the Argonauts, and the Pelopids. *FHG* ii. 27, 28, 30; *FGH* i. 31. Of a few others little is known but their names. J. L. M.

LOGOS, in its origin a psychological idea ('thought' and 'thought-as-expressed'), acquires a metaphysical meaning in Greek philosophy, as the self-actualizing rational principle of the universe. In Heraclitus (Bywater 1, 2, 23, 71, 92, 93; Diels 115, 126 a) it is the rationality of the world-process, the law of change, which comes to self-consciousness in the philosopher. Fructified by Aristotelian teleology, the Logos becomes in Stoicism the dynamic rational principle active in the world-whole and its parts (*λόγος σπερματικός*, *λόγοι σπερματικοί*), and the ethical *ὁρθὸς λόγος* common to gods and men and the medium of communion with the Divine; the conception becomes religious in popular Stoicism and Hellenistic syncretism (Hermes-Logos, etc.). In Philo it is both the active intelligent world-principle, as in Stoicism, and the sum of the Platonic Ideas, which for Philo are thoughts in the mind of God; both the Divine Thought-thinking and the Divine Thought-thought, the instrument and the plan of God, and the unique mediator between God and His creatures; in its soteriological aspect it is equated with the Jewish Wisdom and Word of God, and typified by a great variety of Old Testament figures (cf. especially Quisner. *div. hcr.* 42, *GW.* 205-6). For Philo, as for the Greeks, the Logos is neither personal nor impersonal; the assertion of its hypostatic distinction from God (*δεύτερος θεός*, etc.) has always reference to the limitations of human knowledge (so Bevan, against Heinze); in the last resort the Logos is God Himself in His relative aspect (so Drummond and Lebréton). In Neoplatonism Logos is subordinate to Nous. But the second-century Apologists, notably Justin Martyr, equate the conception with the pre-existent and incarnate Christ in their presentation of Christianity as the revealed

philosophy, and so establish its long association with Christian theology.

GENERAL LITERATURE. M. Heinze, *Die Lehre vom Logos in der griechischen Philosophie* (1872); A. Aall, *Der Logos, Geschichte seiner Entwicklung in der griechischen Philosophie und der christlichen Literatur* (2 vols. 1896-8); J. Lebréton, 'Les Théories du Logos au début de l'ère chrétienne', *Études (Revue de la Compagnie de Jésus)* vol. cvi (1906); R. P. Lagrange, 'Le Logos d'Héraclite' and 'Vers le Logos de Saint Jean', *Revue Biblique* 1923.

SPECIAL SUBJECTS. (Stoicism) A. Schmiedel, *Die Philosophie der mittleren Stoa*, 1892. (Hellenistic syncretism) E. Krebs, 'Der Logos als Heiland im ersten Jahrhundert', *Freiburger Theologische Studien* 1910. (Philo) J. Drummond, *Philo Judaeus* (2 vols. 1888); H. A. Kennedy, *Philo's Contribution to Religion* (1919); and especially E. R. Bevan, essay on 'Hellenistic Judaism' in *The Legacy of Israel* (1927). (Justin Martyr) E. R. Goodenough, *The Theology of Justin Martyr* (Jena 1923). J. L. MATTHEWS.

LOLLIA PAULINA was a woman of distinguished ancestry and very great wealth. She was forced to abandon her marriage with P. Memmius Regulus in order that she might marry the Emperor Gaius in A.D. 38. Divorced by him in the following year, she was an unsuccessful candidate for the hand of Claudius after Messalina's death in 48. Agrippina secured her banishment (on the charge of consulting astrologers) in the following year, and she was driven to suicide. J. P. B.

LOLLIUS (1) **PALICANUS**, MARCUS, tribune in 71 B.C., obtained from Pompey the restoration of the powers of the tribunate. He supported the *lex iudiciaria* of Aurelius Cotta. His humble Picene origin and political sentiments prevented his election to the consulship in 67. A. M.
